(v) All vouchers covering expenditures under ch. 108, if duly drawn and approved in accordance with the provisions of the Wisconsin statutes applicable to the disbursement of state funds, shall be paid from the administration fund by the state treasurer, without regard to the sources from which this fund is derived. The treasurer of the unemployment reserve fund, however, shall maintain a separate record of all moneys received for the administration fund as interest on delinquent payments under ch. 108, and of all moneys (other than the contributions paid by certain "exempted" employers for January 1936) received for the administration fund as contributions for months ending prior to February 1936, namely the month in which federal grants were first authorized for the administration of ch. 108, and of all expenditures made from said moneys. He shall charge against said moneys such expenditures and transfers heretofore made by the industrial commission as the commission may by resolution decide were not properly and validly chargeable against federal grants (or other funds) received for the administration fund in or after February 1936. Said moneys shall not be expended or available for expenditure in any manner which would permit their substitution for (or a corresponding reduction in) federal funds which would in the absence of said moneys be available to finance expenditures for the administration of ch. 108. But nothing in this section shall prevent said moneys from being used as a revolving fund, to cover expenditures (necessary and proper under ch. 108) for which federal funds have been duly requested but not yet received, subject to the charging of such expenditures against such funds when received. The industrial commission may also, by resolution duly entered in its minutes, authorize to be charged against

said moneys any expenditures which it deems proper and desirable under ch. 108, provided the commission in such resolution finds that no other funds are available or can properly be used to finance such expenditures. So much of the moneys specified in this subsection as the industrial commission may from time to time direct shall be invested in United States bonds, and the interest received thereon and the proceeds therefrom shall be included in said moneys.

(w) Any amount appropriated for employment security administration pursuant to s. 108.161 shall be available for expenditure accordingly, and shall not lapse; but any unexpended remainder thereof shall be restored pursuant to that section.

Paragraph (x), omitted here, relates to appropriations pursuant to s. 108.161, for employment security buildings.

Wisconsin Income Tax

Contributions Paid by Employers. *Under Ch. 71, each employer may treat his U. C. contributions as a business expense for Wisconsin income tax purposes.*

Benefits Received by Workers. *U. C. benefits are no longer taxable under the Wisconsin income tax law.*

Hospital Service Corporations

S. 182.032 (5) of the statutes excludes from Ch. 108 the employes of non-profit hospital service corporations.

Lien on Public Improvement Contracts

Ss. 289.16 and 289.53 (1) of the statutes now provide a lien, for the unemployment compensation contributions required by Ch. 108, as to contractors on public improvement projects.

Bonds of Nonresident Contractors

S. 71.10(14) of the statutes requires a surety bond of certain nonresident contractors, to guarantee the payment of various taxes and of required unemployment compensation contributions.

HISTORICAL NOTE

Chapter 20, Laws of Special Session 1931-1932, became law on January 29, 1932. But only Sections 1, 3 and 4 of that chapter, relating to voluntary plans, took immediate effect. (Sections 2 and 5 of that chapter, which included Chapter 108 of the permanent statutes, took legal effect on June 27, 1934.)

SUMMARY LISTING of 1965 CHANGES

in Wisconsin's U. C. Law

108.02 (5) (g) 8.	Created, to exclude insurance agents paid solely by commissions.
17.	Created, to exclude federal "anti-poverty" beneficiaries.
(8) (a), (b)	Amended, to change the law's contribution "payroll" base from $3,000 to $3,600, starting in 1966. See also 108.18 (10).
(c)	Amended, to tie in with any change in the federal tax base.
(d)	Amended. If the federal tax base goes up to $4,000 or more, Wisconsin's experience rates will go down, by one-tenth per cent on payroll, for each of 3 years.
108.04 (1) (b)	Amended, to separate the 2 present provisions.
(4) (f)	Amended } Mainly clarifying, as to working
(g)	Created } students.
(6)	Amended, to tighten the disqualification in disciplinary suspension cases.
(7) (c)	Amended, to eliminate the term "compelling personal reason" and a variety of such cases, by limiting the provision to illness cases.
(e)	Repealed, thereby shifting benefit charges in certain quit cases from the fund's balancing account, to employer accounts.
(11) (a)	Amended, so that administrative penalties (benefit forfeiture) may be applied where a claimant wilfully conceals material facts.
(15) intro.	Amended, as to employes who have been retired, to take account of the retirement pay they could claim, even if they haven't yet claimed it.
108.05 (2) (h)	Created, to allow a few days for making any needed changes as to the top benefit rate.
108.06 (2) (b)	Repealed, in view of the change in 108.06 (2) (c).
(c)	Amended, to apply a single (0.8) ratio to all of a claimant's credit (work) weeks in figuring his potential benefit duration. (But the over-all limit of 34 benefit weeks in a benefit year is not lengthened.)
108.061 (3) (g), (5), (6) & (7).	Repealed. Obsolete.
108.141 (5)	Amended, to clarify and extend the authorization to operate any new federal–state program of recession benefits, with partial federal financing.

108.16 (6) (h)	Amended, to credit the law's new solvency contributions to the fund's balancing (solvency) account.
(12)	Created. Suspends the "transfer" provisions of 108.16 (11)—through June 1969, pending adequate experience with the new solvency safeguard.
(13)	Repealed. Obsolete.
108.161 (1m)	Created, to assure the proper crediting of certain federal moneys.
(4) (d)	Amended, to take account of revised federal time limits.
108.18 (1) (a), (b)	Amended, to provide for the new solvency contribution, and to assure its proper crediting.
(2) (a)	Amended — Clarifying changes, in line with the new solvency contribution rates, and with any downward adjustment of experience rates under 108.02 (8) (d) or 108.18 (10).
(3) intro.	"
(b)	"
(5m)	Created
(8)	Created. SOLVENCY CONTRIBUTIONS. Provides a more equitable method for safeguarding the fund's balancing (solvency) account by requiring a solvency contribution from every employer, at a uniform rate on each employer's contribution "payroll" for each calendar year, to be credited to the fund's solvency account. Employers whose normal rate is under 3.7% will not have to pay their solvency contribution as a current "extra"—unless they so elect. In deficit cases, however, the overdrawn employer must add the solvency rate to his normal experience rate.
(9)	Created. SOLVENCY RATES. The solvency rate for 1965 is 0.25%. For 1966 and each subsequent calendar year, the needed solvency rate will be set annually, in advance, under a self-adjusting formula.
(10)	Created. Reduces all experience rates by 0.1% for 1966, and by 0.2% for 1967 and 1968—to ease the transition to the new $3,600 taxable wage base which applies from 1966 on.
108.20 (8)	Repealed and recreated, as to certain operating costs.
(9)	Amended, to delete obsolete language and to assure the full use of special federal money for buildings.

NOTE—This TEXT reflects the current numbering of the relevant state and federal statutes, plus various changes effected by "revision" and other bills, through August 1965.

Wisconsin's standard abbreviations are used in referring to a statutory *ch*apter, *s*ection, *sub*section or *par*agraph.

FACTS YOU SHOULD KNOW

about

CLAIMING UNEMPLOYMENT BENEFITS

under

WISCONSIN'S U. C. LAW

(Chapter 108, Wis. Statutes)

Administered by the

INDUSTRIAL COMMISSION OF WISCONSIN UNEMPLOYMENT COMPENSATION DEPARTMENT

July, 1966

UC-10
WIS. 5-65

It is **important** that you **read** and **understand** this folder. It explains your rights and responsibilities under the Wisconsin Unemployment Compensation (U. C.) Law. If you have any questions, be sure to ask when filing your claim.

STARTING YOUR CLAIM

If you become unemployed, and are able to work and available for work:

1. register for work with a public employment office; and

2. start a claim for unemployment benefits in the same office.

A list of the Wisconsin offices appears on the back of this folder.

WEEKLY REPORTING

The law uses *calendar weeks* — which begin Sunday and end Saturday.

You can't get credit for a *calendar week* of no wages unless you:

1. register for work and file a claim for benefits WITHIN the week; and

2. after the week is over, turn in your claim form for that week, promptly, but no later than 4 weeks after its close.

TAXES TO PAY BENEFITS

Only employers pay taxes to finance unemployment benefits paid under Wisconsin State Law. Your employer makes no deductions from your pay check for U. C. purposes.

COVERED WORK

Work which earns benefit rights is called *covered* employment. For work to be covered under the Wisconsin Unemployment Compensation Law it must be:

1. for an employer *covered* by that law; and

2. in a type of work not specifically *excluded* by law.

Generally an employer is *covered* by the U. C. Law if he has 4 or more workers for at least 20 weeks in a calendar year. A few smaller employers have voluntarily chosen to come under the law.

Examples of work specifically *excluded* under the law are: agricultural work, domestic work in a private home, work for certain religious, charitable or educational organizations.

QUALIFYING EMPLOYMENT

To qualify for Wisconsin U. C. benefits at all, you need 18 weeks of covered work with one or more employers in the 52 weeks before you start a new claim.

A few cases may qualify with 14 to 17 weeks in that period. Ask your claims office.

BASE PERIOD

When you file a new (beginning) claim for benefits, your rights will be based on your work and wages in the 52-week period prior to the week in which you filed your claim. This is called your *base period*. In some instances of long workmen's compensation or termination pay, that base period may be lengthened. Ask your claims office.

Be sure to list ALL employers in your base period. Otherwise, you may lose some benefits. Tell us right away about every employer you had.

Every worker should keep a complete record as to every employer.

BENEFIT YEAR

A benefit year begins with the week in which you file a valid claim and lasts 52 weeks. Once a benefit year has started, its rights cannot be increased by later covered work.

Such later work builds credits, but only for a future year. Those credits cannot be used until the current benefit year ends.

SCHEDULE OF BENEFITS

The number of weeks for which benefits may be paid during a benefit year depends on the number of weeks you worked for each employer in your base period.

The following table shows the number of benefit weeks from each employer for a given number of work weeks.

No. of Work Weeks	Benefit Weeks	No. of Work Weeks	Benefit Weeks
1	1	23	18½
2	1½	24	19
3	2½	25	20
4	3	26	21
5	4	27	21½
6	5	28	22½
7	5½	29	23
8	6½	30	24
9	7	31	25
10	8	32	25½
11	9	33	26½
12	9½	34	27
13	10½	35	28
14	11	36	29
15	12	37	29½
16	13	38	30½
17	13½	39	31
18	14½	40	32
19	15	41	33
20	16	42	33½
21	17	43 or more	34
22	17½		

34 is the top number of benefit weeks which may be paid in any benefit year.

The weekly rate at which your benefits are paid from a given employer depends on your *average weekly wage* with that employer for work weeks in your base period. All work weeks are used in figuring the average. Overtime weeks tend to increase the average while short weeks decrease it.

The following table shows the benefit rate which results from a given average weekly wage.

Average Weekly Wage	Benefit Rate
Under $16.	None
$ 16. to 19.	$11
19.01 to 22.	12
22.01 to 24.50	13
24.51 to 27.	14
27.01 to 29.50	15
29.51 to 32.	16
32.01 to 34.	17
34.01 to 36.	18
36.01 to 38.	19
38.01 to 40.	20
40.01 to 42.	21
42.01 to 44.	22
44.01 to 46.	23
46.01 to 48.	24
48.01 to 50.	25
50.01 to 52.	26
52.01 to 54.	27
54.01 to 56.	28
56.01 to 58.	29
58.01 to 60.	30
60.01 to 62.	31
62.01 to 64.	32
64.01 to 66.	33
66.01 to 68.	34
68.01 to 70.	35
70.01 to 72.	36
72.01 to 74.	37
74.01 to 76.	38
76.01 to 78.	39
78.01 to 80.	40

Average Weekly Wage	Benefit Rate
$ 80.01 to $ 82.	$41
82.01 to 84.	42
84.01 to 86.	43
86.01 to 88.	44
88.01 to 90.	45
90.01 to 92.	46
92.01 to 94.	47
94.01 to 96.	48
96.01 to 98.	49
98.01 to 100.	50
100.01 to 102.	51
102.01 to 104.	52
104.01 to 106.	53
106.01 to 108.	54
108.01 to 110.	55
110.01 to 112.	56
112.01 to 114.	57
114.01 or more	58

The top benefit rate may move up or down on January 1 or July 1. If the average weekly wage for ALL workers goes up enough, then the top benefit rate moves up. If that average wage goes down enough, the top benefit rate goes down.

WAITING PERIOD

Before you can draw benefits in a given benefit year, you must serve one waiting week. No benefits are payable for that week. But you must file a claim for the week and meet all the same requirements you would have to meet to get a benefit check.

FIRST CHECK

The first check is due a few days after your third weekly visit.

The first week is a waiting period without benefits. The second week will be paid for, but only after it is over and reported. In the **third** week you report about the **second** week. The first check can usually be mailed a few days later unless your case is disputed.

ELIGIBILITY

When you file a claim for benefits for either a waiting period or a check you must meet these eligibility requirements.

1. Be unemployed, in that calendar week. That means you did no work, and got no pay for that week; or if you did some work, you earned less pay than your weekly benefit rate.

   Be sure to tell us about ALL wages, earned IN or received FOR a week. "Wages" include every form of pay for work done, dismissal, holiday and vacation pay, value of room and board, tips, working off a bill or debt. Under some conditions, with notice to you, retirement pay (including social security) will be treated as wages.

2. You must be physically *able to work.* You can't draw benefits if you can't work.

3. You must be *available for work.* This means you must be ready and willing to take any suitable employment offered to you. You can't draw benefits if you don't want a job.

PARTIAL UNEMPLOYMENT

If you get some pay, but less than your weekly benefit rate, for a calendar week in which you did all the work your employer had for you, you may be eligible for benefits. This is called *partial unemployment.*

To get benefits for a week of partial unemployment you must file a claim for that week, promptly, within 4 weeks after its close.

Be sure to report all your (gross) pay or wages FOR each week from all employers. If your wages are half or more of your benefit rate, a half check may be paid; if under half, a full benefit check.

DISQUALIFICATIONS

Although you may meet the *reporting, qualifying* and *eligibility* requirements, you may be *disqualified* for various reasons. Some examples are listed below.

If your employer says you quit or were discharged, your benefits are held up while we investigate the facts. We get your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. A copy is sent to you and one to the employer.

You or the employer can *appeal* the decision within the time limit it shows. An *appeal* means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

If you get a job offer take it, unless there's a reason for refusing it which could be *good cause* under the Wisconsin U. C. Law. The same thing is true if the employment service tells you about a job — go see the employer.

If you don't have good cause the law stops (postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

A pregnant woman can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before the week in which the child is expected to be born or for 4 weeks after the week in which the child was born. Then she must notify her last employer that she is able to work and available for work. She must also establish that she has personally applied for work each week with employers in her area.

This same search for work is required in other instances; for example if you are self-employed or an owner of a family corporation. Your claims office will instruct you.

No benefits are payable if you lost your employment because of a labor dispute in your employer's establishment.

FRAUDULENT CLAIMS

Answer ALL the questions on your weekly claim forms and the supplemental questionnaire, "Statement on Ability to Work and Availability for Work," honestly and completely.

Report ALL your WORK and WAGES each week you claim, even if you haven't been paid yet. Report the total pay earned, not just the take home pay.

A claimant who fails to report his wages or fails to report a job offer is filing a *fraudulent* claim.

The penalties for *fraud* are severe:

1. Jail — up to 30 days for each week's fraud.

2. Court fines — up to $100 for each fraud.

3. Recovery of any fraud benefits.

4. Benefit losses — up to 3 benefit weeks cancelled for each fraud week.

KEEP A RECORD

Keep a record of each benefit check you get. The UC-30 benefit determination which will be mailed to you after you establish your eligibility has space on the back for recording each check. Be sure to do it.

CASH YOUR OWN CHECKS

No one but you should endorse and cash your benefit checks. Each U. C. check requires you to identify yourself when you are cashing it.

FEDERAL EMPLOYMENT

You may be eligible for benefits based on recent federal employment or on recent service in the armed forces. Ask your claims office.

Office Hours

Monday - Friday

7:45 AM - 11:45 AM

12:30 PM - 4:30 PM

Many smaller cities are served once a week by a travelling claims taker. Contact the nearest full time office to ask where and when.

FACTS YOU SHOULD KNOW

about

CLAIMING UNEMPLOYMENT BENEFITS

under

WISCONSIN'S U. C. LAW

(Chapter 108, Wis. Statutes)

Administered by the

INDUSTRIAL COMMISSION OF WISCONSIN UNEMPLOYMENT COMPENSATION DEPARTMENT

January, 1967

UC-10
WIS. 11-66

It is **important** that you **read** and **understand** this folder. It explains your rights and responsibilities under the Wisconsin Unemployment Compensation (U. C.) Law. If you have any questions, be sure to ask when filing your claim.

STARTING YOUR CLAIM

If you become unemployed, and are able to work and available for work:

1. register for work with a public employment office; and

2. start a claim for unemployment benefits in the same office.

A list of the Wisconsin offices appears on the back of this folder.

WEEKLY REPORTING

The law uses *calendar weeks* — which begin Sunday and end Saturday.

You can't get credit for a *calendar week* of no wages unless you:

1. register for work and file a claim for benefits WITHIN the week; and

2. after the week is over, turn in your claim form for that week, promptly, but no later than 4 weeks after its close.

TAXES TO PAY BENEFITS

Only employers pay taxes to finance unemployment benefits paid under Wisconsin State Law. Your employer makes no deductions from your pay check for U. C. purposes.

COVERED WORK

Work which earns benefit rights is called *covered* employment. For work to be covered under the Wisconsin Unemployment Compensation Law it must be:

1. for an employer *covered* by that law; and

2. in a type of work not specifically *excluded* by law.

Generally an employer is *covered* by the U. C. Law if he has 4 or more workers for at least 20 weeks in a calendar year. A few smaller employers have voluntarily chosen to come under the law.

Examples of work specifically *excluded* under the law are: agricultural work, domestic work in a private home, work for certain religious, charitable or educational organizations.

QUALIFYING EMPLOYMENT

To qualify for Wisconsin U. C. benefits at all, you need 18 weeks of covered work with one or more employers in the 52 weeks before you start a new claim.

A few cases may qualify with 14 to 17 weeks in that period. Ask your claims office.

BASE PERIOD

When you file a new (beginning) claim for benefits, your rights will be based on your work and wages in the 52-week period prior to the week in which you filed your claim. This is called your *base period*. In some instances of long workmen's compensation or termination pay, that base period may be lengthened. Ask your claims office.

The top benefit rate may move up or down on January 1 or July 1. If the average weekly wage for ALL workers goes up enough, then the top benefit rate moves up. If that average wage goes down enough, the top benefit rate goes down.

WAITING PERIOD

Before you can draw benefits in a given benefit year, you must serve one waiting week. No benefits are payable for that week. But you must file a claim for the week and meet all the same requirements you would have to meet to get a benefit check.

FIRST CHECK

The first check is due a few days after your third weekly visit.

The first week is a waiting period without benefits. The second week will be paid for, but only after it is over and reported. In the **third** week you report about the **second** week. The first check can usually be mailed a few days later unless your case is disputed.

ELIGIBILITY

When you file a claim for benefits for either a waiting period or a check you must meet these eligibility requirements.

1. Be unemployed, in that calendar week. That means you did no work, and got no pay for that week; or if you did some work, you earned less pay than your weekly benefit rate.

   Be sure to tell us about ALL wages, earned IN or received FOR a week. "Wages" include every form of pay for work done, dismissal, holiday and vacation pay, value of room and board, tips, working off a bill or debt. Under some conditions, with notice to you, retirement pay (including social security) will be treated as wages.

2. You must be physically *able to work.* You can't draw benefits if you can't work.

3. You must be *available for work.* This means you must be ready and willing to take any suitable employment offered to you. You can't draw benefits if you don't want a job.

PARTIAL UNEMPLOYMENT

If you get some pay, but less than your weekly benefit rate, for a calendar week in which you did all the work your employer had for you, you may be eligible for benefits. This is called *partial unemployment.*

To get benefits for a week of partial unemployment you must file a claim for that week, promptly, within 4 weeks after its close.

Be sure to report all your (gross) pay or wages FOR each week from all employers. If your wages are half or more of your benefit rate, a half check may be paid; if under half, a full benefit check.

DISQUALIFICATIONS

Although you may meet the *reporting, qualifying* and *eligibility* requirements, you may be *disqualified* for various reasons. Some examples are listed below.

If your employer says you quit or were discharged, your benefits are held up while we investigate the facts. We get your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. A copy is sent to you and one to the employer.

You or the employer can *appeal* the decision within the time limit it shows. An *appeal* means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

If you get a job offer take it, unless there's a reason for refusing it which could be *good cause* under the Wisconsin U. C. Law. The same thing is true if the employment service tells you about a job — go see the employer.

If you don't have good cause the law stops (postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

A pregnant woman can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before the week in which the child is expected to be born or for 4 weeks after the week in which the child was born. Then she must notify her last employer that she is able to work and available for work. She must also establish that she has personally applied for work each week with employers in her area.

This same search for work is required in other instances; for example if you are self-employed or an owner of a family corporation. Your claims office will instruct you.

No benefits are payable if you lost your employment because of a labor dispute in your employer's establishment.

FRAUDULENT CLAIMS

Answer ALL the questions on your weekly claim forms and the supplemental questionnaire, "Statement on Ability to Work and Availability for Work," honestly and completely.

Report ALL your WORK and WAGES each week you claim, even if you haven't been paid yet. Report the total pay earned, not just the take home pay.

A claimant who fails to report his wages or fails to report a job offer is filing a *fraudulent* claim.

The penalties for *fraud* are severe:

1. Jail — up to 30 days for each week's fraud.
2. Court fines — up to $100 for each fraud.
3. Recovery of any fraud benefits.
4. Benefit losses — up to 3 benefit weeks cancelled for each fraud week.

KEEP A RECORD

Keep a record of each benefit check you get. The UC-30 benefit determination which will be mailed to you after you establish your eligibility has space on the back for recording each check. Be sure to do it.

CASH YOUR OWN CHECKS

No one but you should endorse and cash your benefit checks. Each U. C. check requires you to identify yourself when you are cashing it.

FEDERAL EMPLOYMENT

You may be eligible for benefits based on recent federal employment or on recent service in the armed forces. Ask your claims office.

12:30 PM - 4:30 PM

Many smaller cities are served once a week by a travelling claims taker. Contact the nearest full time office to ask where and when.

FACTS YOU SHOULD KNOW

about

CLAIMING UNEMPLOYMENT BENEFITS

under

WISCONSIN'S U. C. LAW

(Chapter 108, Wis. Statutes)

Administered by the

INDUSTRIAL COMMISSION
OF WISCONSIN
UNEMPLOYMENT
COMPENSATION DEPARTMENT

July 1967

UC-10
WIS. 4-67

It is **important** that you **read** and **understand** this folder. It explains your rights and responsibilities under the Wisconsin Unemployment Compensation (U. C.) Law. If you have any questions, be sure to ask when filing your claim.

STARTING YOUR CLAIM

If you become unemployed, and are able to work and available for work:

1. register for work with a public employment office; and

2. start a claim for unemployment benefits in the same office.

To start your claim you need:

1. a record of where you worked in the last 52 weeks; and

2. your social security card.

A list of the Wisconsin offices appears on the back of this folder.

WEEKLY REPORTING

The law uses *calendar weeks* — which begin Sunday and end Saturday.

You can't get credit for a *calendar week* of no wages unless you:

1. register for work and file a claim for benefits WITHIN the week; and

2. after the week is over, turn in your claim form for that week, promptly, but no later than 4 weeks after its close.

TAXES TO PAY BENEFITS

Only employers pay taxes to finance unemployment benefits paid under Wisconsin State Law. Your employer makes no deductions from your pay check for U. C. purposes.

COVERED WORK

Work which earns benefit rights is called *covered* employment. For work to be covered under the Wisconsin Unemployment Compensation Law it must be:

1. for an employer *covered* by that law; and

2. in a type of work not specifically *excluded* by law.

Generally an employer is *covered* by the U. C. Law if he has 4 or more workers for at least 20 weeks in a calendar year. A few smaller employers have voluntarily chosen to come under the law.

Examples of work specifically *excluded* under the law are: agricultural work, domestic work in a private home, work for certain religious, charitable or educational organizations.

QUALIFYING EMPLOYMENT

To qualify for Wisconsin U. C. benefits at all, you need 18 weeks of covered work with one or more employers in the 52 weeks before you start a new claim.

A few cases may qualify with 14 to 17 weeks in that period. Ask your claims office.

BASE PERIOD

When you file a new (beginning) claim for benefits, your rights will be based on your work and wages in the 52-week period prior to the week in which you filed your claim. This is called your *base period*. In some instances of long workmen's compensation or termination pay, that base period may be lengthened. Ask your claims office.

Be sure to list ALL employers in your base period. Otherwise, you may lose some benefits. Tell us right away about every employer you had.

Every worker should keep a complete record as to every employer.

BENEFIT YEAR

A benefit year begins with the week in which you file a valid claim and lasts 52 weeks. Once a benefit year has started, its rights cannot be increased by later covered work.

Such later work builds credits, but only for a future year. Those credits cannot be used until the current benefit year ends.

SCHEDULE OF BENEFITS

The number of weeks for which benefits may be paid during a benefit year depends on the number of weeks you worked for each employer in your base period.

The following table shows the number of benefit weeks from each employer for a given number of work weeks.

No. of Work Weeks	Benefit Weeks	No. of Work Weeks	Benefit Weeks
1	1	23	18½
2	1½	24	19
3	2½	25	20
4	3	26	21
5	4	27	21½
6	5	28	22½
7	5½	29	23
8	6½	30	24
9	7	31	25
10	8	32	25½
11	9	33	26½
12	9½	34	27
13	10½	35	28
14	11	36	29
15	12	37	29½
16	13	38	30½
17	13½	39	31
18	14½	40	32
19	15	41	33
20	16	42	33½
21	17	43 or more	34
22	17½		

34 is the top number of benefit weeks which may be paid in any benefit year.

The weekly rate at which your benefits are paid from a given employer depends on your *average weekly wage* with that employer for work weeks in your base period. All work weeks are used in figuring the average. Overtime weeks tend to increase the average while short weeks decrease it.

The following table shows the benefit rate which results from a given average weekly wage.

Average Weekly Wage	Benefit Rate
Under $16.	None
$ 16. to 19.	$11
19.01 to 22.	12
22.01 to 24.50	13
24.51 to 27.	14
27.01 to 29.50	15
29.51 to 32.	16
32.01 to 34.	17
34.01 to 36.	18
36.01 to 38.	19
38.01 to 40.	20
40.01 to 42.	21
42.01 to 44.	22
44.01 to 46.	23
46.01 to 48.	24
48.01 to 50.	25
50.01 to 52.	26
52.01 to 54.	27
54.01 to 56.	28
56.01 to 58.	29
58.01 to 60.	30
60.01 to 62.	31
62.01 to 64.	32
64.01 to 66.	33
66.01 to 68.	34
68.01 to 70.	35
70.01 to 72.	36
72.01 to 74.	37
74.01 to 76.	38
76.01 to 78.	39
78.01 to 80.	40

Average Weekly Wage	Benefit Rate
$ 80.01 to $ 82.	$41
82.01 to 84.	42
84.01 to 86.	43
86.01 to 88.	44
88.01 to 90.	45
90.01 to 92.	46
92.01 to 94.	47
94.01 to 96.	48
96.01 to 98.	49
98.01 to 100.	50
100.01 to 102.	51
102.01 to 104.	52
104.01 to 106.	53
106.01 to 108.	54
108.01 to 110.	55
110.01 to 112.	56
112.01 to 114.	57
114.01 to 116.	58
116.01 to 118.	59
118.01 to 120.	60
120.01 or more	61

The top benefit rate may move up or down on January 1 or July 1. If the average weekly wage for ALL workers goes up enough, then the top benefit rate moves up. If that average wage goes down enough, the top benefit rate goes down.

WAITING PERIOD

Before you can draw benefits in a given benefit year, you must serve one waiting week. No benefits are payable for that week. But you must file a claim for the week and meet all the same requirements you would have to meet to get a benefit check.

FIRST CHECK

The first check is due a few days after your third weekly visit.

The first week is a waiting period without benefits. The second week will be paid for, but only after it is over and reported. In the **third** week you report about the **second** week. The first check can usually be mailed a few days later unless your case is disputed.

ELIGIBILITY

When you file a claim for benefits for either a waiting period or a check you must meet these eligibility requirements.

1. Be unemployed, in that calendar week. That means you did no work, and got no pay for that week; or if you did some work, you earned less pay than your weekly benefit rate.

   Be sure to tell us about ALL wages, earned IN or received FOR a week. "Wages" include every form of pay for work done, dismissal, holiday and vacation pay, value of room and board, tips, working off a bill or debt. Under some conditions, with notice to you, retirement pay (including social security) will be treated as wages.

2. You must be physically *able to work*. You can't draw benefits if you can't work.

3. You must be *available for work*. This means you must be ready and willing to take any suitable employment offered to you. You can't draw benefits if you don't want a job.

PARTIAL UNEMPLOYMENT

If you get some pay, but less than your weekly benefit rate, for a calendar week in which you did all the work your employer had for you, you may be eligible for benefits. This is called *partial unemployment.*

To get benefits for a week of partial unemployment you must file a claim for that week, promptly, within 4 weeks after its close.

Be sure to report all your (gross) pay or wages FOR each week from all employers. If your wages are half or more of your benefit rate, a half check may be paid; if under half, a full benefit check.

DISQUALIFICATIONS

Although you may meet the *reporting, qualifying* and *eligibility* requirements, you may be *disqualified* for various reasons. Some examples are listed below.

If your employer says you quit or were discharged, your benefits are held up while we investigate the facts. We get your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. A copy is sent to you and one to the employer.

You or the employer can *appeal* the decision within the time limit it shows. An *appeal* means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

If you get a job offer take it, unless there's a reason for refusing it which could be *good cause* under the Wisconsin U. C. Law. The same thing is true if the employment service tells you about a job — go see the employer.

If you don't have good cause the law stops (postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

A pregnant woman can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before the week in which the child is expected to be born or for 4 weeks after the week in which the child was born. Then she must notify her last employer that she is able to work and available for work. She must also establish that she has personally applied for work each week with employers in her area.

This same search for work is required in other instances; for example if you are self-employed or an owner of a family corporation. Your claims office will instruct you.

No benefits are payable if you lost your employment because of a labor dispute in your employer's establishment.

FRAUDULENT CLAIMS

Answer ALL the questions on your weekly claim forms and the supplemental questionnaire, "Statement on Ability to Work and Availability for Work," honestly and completely.

Report ALL your WORK and WAGES each week you claim, even if you haven't been paid yet. Report the total pay earned, not just the take home pay.

A claimant who fails to report his wages or fails to report a job offer is filing a *fraudulent* claim.

The penalties for *fraud* are severe:

1. Jail — up to 30 days for each week's fraud.

2. Court fines — up to $100 for each fraud.

3. Recovery of any fraud benefits.

4. Benefit losses — up to 3 benefit weeks cancelled for each fraud week.

KEEP A RECORD

Keep a record of each benefit check you get. The UC-30 benefit determination which will be mailed to you after you establish your eligibility has space on the back for recording each check. Be sure to do it.

CASH YOUR OWN CHECKS

No one but you should endorse and cash your benefit checks. Each U. C. check requires you to identify yourself when you are cashing it.

FEDERAL EMPLOYMENT

You may be eligible for benefits based on recent federal employment or on recent service in the armed forces. Ask your claims office.

FACTS YOU SHOULD KNOW

about

CLAIMING UNEMPLOYMENT BENEFITS

under

WISCONSIN'S U. C. LAW

(Chapter 108, Wis. Statutes)

Administered by the

DEPARTMENT OF INDUSTRY, LABOR AND HUMAN RELATIONS UNEMPLOYMENT COMPENSATION DIVISION

JAN. 1968

UC-10
WIS. 11-67

It is **important** that you **read** and **understand** this folder. It explains your rights and responsibilities under the Wisconsin Unemployment Compensation (U. C.) Law. If you have any questions, be sure to ask when filing your claim.

STARTING YOUR CLAIM

If you become unemployed, and are able to work and available for work:

1. register for work with a public employment office; and

2. start a claim for unemployment benefits in the same office.

To start your claim you need:

1. a record of where you worked in the last 52 weeks; and

2. your social security card.

A list of the Wisconsin offices appears on the back of this folder.

WEEKLY REPORTING

The law uses *calendar weeks* — which begin Sunday and end Saturday.

You can't get credit for a *calendar week* of no wages unless you:

1. register for work and file a claim for benefits WITHIN the week; and

2. after the week is over, turn in your claim form for that week, promptly, but no later than 4 weeks after its close.

TAXES TO PAY BENEFITS

Only employers pay taxes to finance unemployment benefits paid under Wisconsin State Law. Your employer makes no deductions from your pay check for U. C. purposes.

COVERED WORK

Work which earns benefit rights is called *covered* employment. For work to be covered under the Wisconsin Unemployment Compensation Law it must be:

1. for an employer *covered* by that law; and

2. in a type of work not specifically *excluded* by law.

Generally an employer is *covered* by the U. C. Law if he has 4 or more workers for at least 20 weeks in a calendar year. A few smaller employers have voluntarily chosen to come under the law.

Examples of work specifically *excluded* under the law are: agricultural work, domestic work in a private home, work for certain religious, charitable or educational organizations.

QUALIFYING EMPLOYMENT

To qualify for Wisconsin U. C. benefits at all, you need 18 weeks of covered work with one or more employers in the 52 weeks before you start a new claim.

A few cases may qualify with 14 to 17 weeks in that period. Ask your claims office.

BASE PERIOD

When you file a new (beginning) claim for benefits, your rights will be based on your work and wages in the 52-week period prior to the week in which you filed your claim. This is called your *base period*. In some instances of long workmen's compensation or termination pay, that base period may be lengthened. Ask your claims office.

Be sure to list ALL employers in your base period. Otherwise, you may lose some benefits. Tell us right away about every employer you had.

Every worker should keep a complete record as to every employer.

BENEFIT YEAR

A benefit year begins with the week in which you file a valid claim and lasts 52 weeks. Once a benefit year has started, its rights cannot be increased by later covered work.

Such later work builds credits, but only for a future year. Those credits cannot be used until the current benefit year ends.

SCHEDULE OF BENEFITS

The number of weeks for which benefits may be paid during a benefit year depends on the number of weeks you worked for each employer in your base period.

The following table shows the number of benefit weeks from each employer for a given number of work weeks.

No. of Work Weeks	Benefit Weeks	No. of Work Weeks	Benefit Weeks
1	1	23	18½
2	1½	24	19
3	2½	25	20
4	3	26	21
5	4	27	21½
6	5	28	22½
7	5½	29	23
8	6½	30	24
9	7	31	25
10	8	32	25½
11	9	33	26½
12	9½	34	27
13	10½	35	28
14	11	36	29
15	12	37	29½
16	13	38	30½
17	13½	39	31
18	14½	40	32
19	15	41	33
20	16	42	33½
21	17	43 or more	34
22	17½		

34 is the top number of benefit weeks which may be paid in any benefit year.

The weekly rate at which your benefits are paid from a given employer depends on your *average weekly wage* with that employer for work weeks in your base period. All work weeks are used in figuring the average. Overtime weeks tend to increase the average while short weeks decrease it.

The following table shows the benefit rate which results from a given average weekly wage.

Average Weekly Wage	Benefit Rate
Under $16.	None
$ 16. to 19.	$11
19.01 to 22.	12
22.01 to 24.50	13
24.51 to 27.	14
27.01 to 29.50	15
29.51 to 32.	16
32.01 to 34.	17
34.01 to 36.	18
36.01 to 38.	19
38.01 to 40.	20
40.01 to 42.	21
42.01 to 44.	22
44.01 to 46.	23
46.01 to 48.	24
48.01 to 50.	25
50.01 to 52.	26
52.01 to 54.	27
54.01 to 56.	28
56.01 to 58.	29
58.01 to 60.	30
60.01 to 62.	31
62.01 to 64.	32
64.01 to 66.	33
66.01 to 68.	34
68.01 to 70.	35
70.01 to 72.	36
72.01 to 74.	37
74.01 to 76.	38
76.01 to 78.	39
78.01 to 80.	40

Average Weekly Wage	Benefit Rate
$ 80.01 to $ 82.	$41
82.01 to 84.	42
84.01 to 86.	43
86.01 to 88.	44
88.01 to 90.	45
90.01 to 92.	46
92.01 to 94.	47
94.01 to 96.	48
96.01 to 98.	49
98.01 to 100.	50
100.01 to 102.	51
102.01 to 104.	52
104.01 to 106.	53
106.01 to 108.	54
108.01 to 110.	55
110.01 to 112.	56
112.01 to 114.	57
114.01 to 116.	58
116.01 to 118.	59
118.01 to 120.	60
120.01 to 122.	61
122.01 or more	62

The top benefit rate may move up or down on January 1 or July 1. If the average weekly wage for ALL workers goes up enough, then the top benefit rate moves up. If that average wage goes down enough, the top benefit rate goes down.

WAITING PERIOD

Before you can draw benefits in a given benefit year, you must serve one waiting week. No benefits are payable for that week. But you must file a claim for the week and meet all the same requirements you would have to meet to get a benefit check.

FIRST CHECK

The first check is due a few days after your third weekly visit.

The first week is a waiting period without benefits. The second week will be paid for, but only after it is over and reported. In the **third** week you report about the **second** week. The first check can usually be mailed a few days later unless your case is disputed.

ELIGIBILITY

When you file a claim for benefits for either a waiting period or a check you must meet these eligibility requirements.

1. Be unemployed, in that calendar week. That means you did no work, and got no pay for that week; or if you did some work, you earned less pay than your weekly benefit rate.

   Be sure to tell us about ALL wages, earned IN or received FOR a week. "Wages" include every form of pay for work done, dismissal, holiday and vacation pay, value of room and board, tips, working off a bill or debt. Under some conditions, with notice to you, retirement pay (including social security) will be treated as wages.

2. You must be physically *able to work.* You can't draw benefits if you can't work.

3. You must be *available for work.* This means you must be ready and willing to take any suitable employment offered to you. You can't draw benefits if you don't want a job.

PARTIAL UNEMPLOYMENT

If you get some pay, but less than your weekly benefit rate, for a calendar week in which you did all the work your employer had for you, you may be eligible for benefits. This is called *partial unemployment.*

To get benefits for a week of partial unemployment you must file a claim for that week, promptly, within 4 weeks after its close.

Be sure to report all your (gross) pay or wages FOR each week from all employers. If your wages are half or more of your benefit rate, a half check may be paid; if under half, a full benefit check.

DISQUALIFICATIONS

Although you may meet the *reporting, qualifying* and *eligibility* requirements, you may be *disqualified* for various reasons. Some examples are listed below.

If your employer says you quit or were discharged, your benefits are held up while we investigate the facts. We get your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. A copy is sent to you and one to the employer.

You or the employer can *appeal* the decision within the time limit it shows. An *appeal* means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

If you get a job offer take it, unless there's a reason for refusing it which could be *good cause* under the Wisconsin U. C. Law. The same thing is true if the employment service tells you about a job — go see the employer.

If you don't have good cause the law stops (postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

A pregnant woman can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before the week in which the child is expected to be born or for 4 weeks after the week in which the child was born. Then she must notify her last employer that she is able to work and available for work. She must also establish that she has personally applied for work each week with employers in her area.

This same search for work is required in other instances; for example if you are self-employed or an owner of a family corporation. Your claims office will instruct you.

No benefits are payable if you lost your employment because of a labor dispute in your employer's establishment.

FRAUDULENT CLAIMS

Answer ALL the questions on your weekly claim forms and the supplemental questionnaire, "Statement on Ability to Work and Availability for Work," honestly and completely.

Report ALL your WORK and WAGES each week you claim, even if you haven't been paid yet. Report the total pay earned, not just the take home pay.

A claimant who fails to report his wages or fails to report a job offer is filing a *fraudulent* claim.

The penalties for *fraud* are severe:

1. Jail — up to 30 days for each week's fraud.

2. Court fines — up to $100 for each fraud.

3. Recovery of any fraud benefits.

4. Benefit losses — up to 3 benefit weeks cancelled for each fraud week.

KEEP A RECORD

Keep a record of each benefit check you get. The UC-30 benefit determination which will be mailed to you after you establish your eligibility has space on the back for recording each check. Be sure to do it.

CASH YOUR OWN CHECKS

No one but you should endorse and cash your benefit checks. Each U. C. check requires you to identify yourself when you are cashing it.

FEDERAL EMPLOYMENT

You may be eligible for benefits based on recent federal employment or on recent service in the armed forces. Ask your claims office.

12:30 PM - 4:30 PM

Many smaller cities are served once a week by a travelling claims taker. Contact the nearest full time office to ask where and when.

HIGHLIGHTS OF WISCONSIN'S UNEMPLOYMENT COMPENSATION LAW

A. Background

Unemployment compensation in this country dates back to the depression of the 1930's when millions suffered from unemployment. Wisconsin was the first state to pass a law calling for weekly compensation to the unemployed. Three years later Congress passed the Social Security Act of 1935 which included, among other famous provisions, a federal program to induce all remaining states to pass unemployment insurance laws. A state-by-state system of unemployment compensation laws developed, with minimum federal control. The major objectives of the unemployment compensation program are:

1. to provide a laid-off worker with adequate money benefits to tide him over until he can find work again, and
2. to help stave off nation-wide depression by keeping up purchasing power through the payment of millions of dollars of unemployment benefits.

B. Financing

Employers are required to finance the cost of state unemployment compensation programs by paying a payroll tax. In Wisconsin, this payroll tax is accumulated into separate employer reserve accounts. A worker, laid off from a particular employer, will receive benefits out of that employer's reserve account. Under Wisconsin's experience-rating system, the amount of tax an employer pays depends on the level of his reserve fund. If an employer can keep layoffs to a minimum and keep sufficient money reserves, his tax will be lowered or be nil. If an employer has many layoffs, and constantly depletes his reserve account (like AMC), that employer's tax will be at the highest rate allowed under the law. This system of raising and lowering the tax rate was devised to encourage employers to stabilize employment in order to get the advantage of a lower tax.

Q. CAN YOU SEE ANY DANGERS IN A SYSTEM THAT REWARDS EMPLOYERS WITH A LOWER TAX, WHEN THEY KEEP WITHDRAWALS TO A MINIMUM?

C. Who is eligible for unemployment benefits?

Most working men and women who are laid off from work are eligible for unemployment benefits. The amount and duration of benefits are based on a person's work and wages for each particular employer he has worked for in the previous year. However, before a person can draw benefits, he must meet the eligibility requirements listed below:

1. He must work for an employer with four or more employees.

All employers who employ four or more employees must pay into the unemployment compensation fund (with certain exceptions) and, therefore, his employees would be eligible for benefits.

Employees working for employers with three or less employees, for religious or charitable organizations, for smaller governmental units or for agricultural enterprises are not eligible.

Employees of the federal government, of the State of Wisconsin, of the City of Milwaukee and servicemen with an honorable discharge are eligible.

2. He must work 18 weeks in the previous year.

An employee must have worked in at least 18 weeks in the 52-week period immediately preceding his first claim for benefits. These 18 weeks do not have to be for one employer, they can be for 18 different employers.

3. He must average at least $16.00 per week.

A person must maintain a $16.00 average weekly wage in order to be eligible for benefits from a particular employer's account.

4. He must be physically able to work and available for work.

A person's health must be good enough to be able to do some work. He must be substantially in the job market and looking for work.

5. He must serve a waiting-period week.

A person must put in one week a year in which he meets all the eligibility requirements for unemployment compensation, but he does not get paid for that one week.

6. He must register each week at a state employment office.

A laid-off worker must register at the Wisconsin State Employment

Office (or some other state employment office) each week he expects to get unemployment compensation.

7. He must report and pick up a claim form from an unemployment compensation office.

A person filing for unemployment compensation must report and pick up a claim form from the unemployment compensation department each week. This is in addition to registering for work. Both visits are necessary.

8. He must return a claim form after each week is over.

After each week of unemployment, the person must return his unemployment compensation claim form (UC 17) to the unemployment compensation department.

Example: A person reports to an unemployment compensation office during his first week of lay-off. At that time, he picks up a claim form applying to that week. But he cannot turn it in that week because he does not know if he will end up doing any work that week. The unemployment compensation law defines a week as ending at midnight on Saturday. Since it is always possible he could work on Saturday, he cannot fill out the claim form accurately until after the close of the week. Therefore, he turns it in on his second visit to the unemployment compensation office. At that time, he picks up a new claim form, covering the second week of unemployment, which he will turn in the third week of unemployment, etc.

Q. WHEN A PERSON HAS TO ESTABLISH A WAITING PERIOD, DO YOU SEE WHY HE MAY NOT GET HIS FIRST CHECK UNTIL HIS FOURTH WEEK OF UNEMPLOYMENT?

9. He must not be disqualified under any other section of the law. (See Section H. on disqualifications.)

D. <u>How much are benefits?</u>

The top benefit rate is $59.00 for the first six months of 1967.

1. The top benefit rate of $59.00 is paid to persons who start their claim after January 1, 1967, and who average $118.00 per week or over. No matter how high a person's earnings, he cannot receive a higher benefit rate. This top rate is set by law to represent 52½% of the average weekly wages of all covered workers in the state. It is re-figured every six months for new claims.

Q. DO YOU THINK $59.00 IS AN ADEQUATE AMOUNT OF MONEY FOR THE TOP RATE? WOULD YOU ADVOCATE A DEPENDENT'S ALLOWANCE?

2. Lower benefit rates are figured at 50% of the person's average weekly wage with an employer.

Q. WHAT WOULD A PERSON'S BENEFIT RATE BE WHO AVERAGES $110.00 A WEEK?

E. How long do benefits last?

Thirty-four weeks is the longest a person can draw unemployment benefits. This is based on at least 43 weeks of work in the previous year. If a person has worked less than 43 weeks, the number of weeks he can draw benefits is scaled down accordingly. Every time a person works for an employer, he builds up benefit rights. He may be entitled to as little as one-half week of benefits or as many as thirty-four depending on how long he worked for a particular employer.

Q. WHAT HAPPENS TO THE LONG-TERM UNEMPLOYED -- GENERALLY SOMEONE OVER 50 WHO IS UNSKILLED? SHOULD THE STATE PROGRAM PAY MORE THAN 34 WEEKS? SHOULD THE FEDERAL GOVERNMENT STEP IN WITH SOME KIND OF PROGRAM?

F. Partial and Full Unemployment

If a person earns less than his benefit rate for a particular week (either in the form of wages, holiday pay, vacation pay, etc.), he is still entitled to unemployment compensation, either in the form of a whole check or a half-check. If his earnings are less than one-half of his benefit rate, he is entitled to a full check. If his earnings fall between one-half and all of his benefit rate, he is entitled to a half-check.

G. Wages Must be Reported Accurately

The gross amount of wages received for a given week must be reported accurately on the claim form for that week. Wages include holiday pay, vacation pay, dismissal pay, salaries, bonuses, incentives, board, room and anything of value received from an employer for services performed. Failure to report wages is usually considered a fraudulent claim for unemployment compensation. Penalties include cancellation of future weeks of unemployment compensation, possible fines and even jail sentences.

1. All wages and any job offer must be reported for the week in which

the wages or job offer occurred.

2. Vacation pay must be reported for the week or weeks which are being considered the weeks of vacation, regardless of when the person receives the check for his vacation.

H. Disqualification Sections of the Law

The unemployment compensation law in Wisconsin has a harsh or restrictive disqualification section designed to deny unemployment compensation to persons under special circumstances. In certain types of cases, such as a quit without good cause or a discharge for misconduct, it is up to the employer to raise the denial issue. If benefits are finally denied after an investigation and possible appeals, and if this is the only employer in the picture, then all potential benefits are wiped out. There is no possibility of drawing benefits based on a person's work for that employer.

Q. UNDER SOME STATE LAWS, BENEFITS ARE ONLY SUSPENDED FOR SIX WEEKS AFTER WHICH THE CLAIMANT CAN DRAW BENEFITS BASED ON HIS PAST WORK FOR THAT EMPLOYER. WHAT ARE THE PRO'S AND CON'S OF EACH SYSTEM?

The following pages explain briefly the important disqualification sections of the law.

1. If a person quits a job without good cause, benefits are denied.

If a person does not have a compelling reason for quitting, benefits are denied. However, if an employee can prove he quit for one of the following reasons, he can get benefits.

a) If he quits to take another job and works in seven subsequent weeks

b) If he quits because he was physically unable to do the work assigned to him, but he can do other general work

c) If he quits because of the health of a member of his immediate family, and he is now available for work

d) If he quits for good cause attributable to the employer (such as--if the employer moves out of town)

2. If a person is discharged for misconduct connected with his employment, benefits are denied.

A discharge for misconduct is a serious event. Sometimes the

employer has ample proof of misconduct, but other times, it is a borderline case depending upon how you evaluate the events leading up to the discharge.

a) Misconduct is loosely defined as any wilful, deliberate or substantial disregard of the employer's interests. This could include excessive absenteeism, tardiness, gross negligence, theft, dishonesty, drunkeness, insubordination, etc.

b) A discharge for inefficiency is not grounds on which to deny unemployment compensation. If an employee is discharged because he is unable to meet the production standards required by the employer, he is still eligible for benefits.

3. If a person refuses a job referral or refuses a job offer without good cause, benefits are suspended.

a) A person is allowed a six-weeks canvas period to canvas the labor market for a job of equal skill and comparable rate of pay to his previous job. During these six weeks, if the Employment Service refers him to a job, or if he receives a job offer on his own, he can turn it down only if it does not compare favorably to his former job.

b) After six weeks, a person has to look for and take a lesser job. He is expected to take any work so long as it does not pay a sub-standard rate of pay or have other sub-standard conditions connected with it.

4. If a person fails to return to work on a recall, benefits are denied.

If a person is unemployed and fails to return to work at the time of recall, benefits are denied. If the employer could not notify the employee of the recall because of a faulty or outdated address, this is considered the employee's fault.

5. If a person is physically unable to work or substantially unavailable for work, benefits are suspended.

No one can get unemployment compensation benefits if he is in poor health and unable to work or if other personal circumstances keep him from working. As soon as he can do some work again, benefits can be paid.

6. If a person has been notified by his employer of further work available in a particular week, but he does not do all the work there is available to him, benefits are denied.

Example: If a person has been on layoff and called in to work on Thursday and Friday, but doesn't start back until Friday (no matter what the reason), benefits are denied for that week if the employer raises the issue. Even if the employee could have earned only partial wages on Thursday and Friday, he is not entitled to any benefits for that week.

7. If a woman is laid-off and is pregnant, she can get benefits up to a certain suspension period.

A pregnant woman who is able to work can get benefits up until ten weeks prior to the week the child is expected. Benefits are then suspended until four weeks after the week the child is born and until she notifies her employer that she is willing to work again.

8. If a person is unemployed because of a strike in the establishment where he is employed, benefits are denied. Strikers cannot get unemployment compensation and neither can anyone else employed by the firm.

Q. IN NEW YORK STATE, STRIKERS CAN GET UNEMPLOYMENT AFTER SIX WEEKS. DO YOU THINK THIS IS REASONABLE?

I. Appeal Procedure

In every case of a disputed claim for unemployment compensation, the department goes to great lengths to try to determine the merits of the case. An investigation is made and an initial determination is issued, either allowing or denying benefits. A person has a perfect right to appeal any adverse decision all the way to the Industrial Commission, without charge to him. He can be represented by a union official or lawyer at any step of the way. The following are steps in the appeal procedure:

1. After an Initial Determination is mailed, the person has ten days to file an appeal. He can do this by going to his unemployment compensation office and they will help him fill out the appeal form, or he can do it himself. But it must be done within ten days of the mailing date.

2. A hearing is scheduled and a notice of the hearing is sent to both the worker and the employer. The hearing is conducted by a trial examiner representing the Industrial Commission. He tries to get all the facts on the table. This is the only hearing that will be held, no matter how far up the case is appealed. The person appealing should bring all information and evidence supporting his objection to the Initial Determination. If a person is represented by a lawyer, the lawyer can only charge 10 per cent of the maximum benefits at issue in the case.

3. The trial examiner issues an Appeal Tribunal Decision. If the worker disagrees with this decision, he has ten days to appeal the case to the Industrial Commission. The procedure in filing this appeal is the same as in filing the first appeal. The Industrial Commission will issue a decision and notify the parties to the dispute.

4. Any further appeal is through the courts. So far the appeal

precedure has been part of the unemployment compensation procedure, but a further appeal goes to the Circuit Court of Dane County and then to the Wisconsin State Supreme Court. Both higher levels require hiring a lawyer.

J. Some Proposed Changes in Wisconsin's Unemployment Compensation Law

A number of changes have been proposed in Wisconsin's Unemployment Compensation Law and in the federal law which controls all the state programs (under the Social Security Act). These changes would mean an inevitable raise in the payroll tax and, therefore, have been opposed by most employer groups. There has been a continuing tugging and hauling in Congress and in State legislatures between these forces which would like unemployment compensation to pay substantially higher benefits and cover more workers and those forces which oppose any such extensions. Arthur Altmeyer, one-time administrator of the Social Security Act, estimates that average unemployment compensation benefits pay only 35 per cent of the average loss in wages and 20 per cent of the workers have no coverage. The AFL-CIO nationally have taken a strong position for strengthening unemployment compensation programs across the country. In order for unemployment compensation to be a more current and vital program, continuing political pressure will have to come from unions and working people who are most affected by the inadequacies of the program.

Following are some changes which have been proposed for the unemployment compensation program in Wisconsin:

1. Extend coverage to employers with one or more employees.

The law now applies to employers with four or more employees. Persons working for smaller firms (from one to three employees) should be eligible for benefits. (Change Section 108.02 (4) (d))

2. Extend coverage to include non-profit, charitable, religious and agricultural enterprises.

Persons working for hospitals and other denominational institutions need coverage. Farm workers are in particular need of protection against seasonal layoffs. Farms which employ four or more persons

should cover their workers with unemployment compensation as they have been required to do under workmen's compensation. (Change Section 108.02 (4) (a))

3. Increase the wage-base on which the employer tax is paid from $3,600 to $5,600.

In order to finance a broader program of unemployment comepnsation, additional revenues should be raised by increasing the wage-base on which employer taxes are paid. Under the present law, only the first $3,600 of each employee's wages are taxed. This should be increased to $5,600 which is less than the wage-base used in applying the Social Security tax. (Change Section 108.02 (8) (b))

4. Eliminate the one-week waiting period.

The one-week waiting period is an annoyance and causes unnecessary delay in receiving benefits. The program should be in good enough financial condition to be able to pay benefits for the first week of unemployment. (Change Section 108.04 (3))

5. Eliminate the provision which cancels out all benefits in the cases of discharge for misconduct or a quit without good cause.

Under Wisconsin law, if an employee is found to be discharged for misconduct or have quit without good cause, all known potential claim for benefits is wiped out if there is only one employer. It is felt that the maximum penalty should be a delay of benefits rather than a denial. If an employee is still unemployed after six weeks. After that time, his continuing unemployment is caused by lack of job opportunities in the labor market and he should not be further penalized by his own conduct in quitting or being discharged. (Change Sections 108.04 (5) and (7) (a))

6. Extend unemployment compensation benefits beyond 34 weeks for the long-term unemployed.

Under a strengthened federal-state program of unemployment compensation, additional benefits would go to those who use up all their state allowance. Payments should continue up to 52 weeks, if needed, so long as the unemployed worker maintains his eligibility. Benefits should be payable during an approved training period.

7. Increase the maximum benefit rate.

Under the law, an individual's benefit rate is supposed to be 50 per cent of his average weekly wage. However, there is a maximum benefit rate which places a limitation on this formula. The maximum benefit rate is based on 52½ per cent of the average weekly wages of all covered workers in the State. For those who fall within this 52½ per cent, it is true that their benefit rate will amount to 50 per cent of their average weekly wage. But for the higher paid workers, they will receive a progressively smaller proportion of their wage loss. In order to attain a benefit rate of 50 per cent for the majority of these higher paid workers, the maximum benefit rate should be increased to 66 and 2/3 per cent of the average

weekly wage in the State. (Change Section 108.05 (2) (c))

8. Eliminate the provision which requires the Industrial Commission to oppose further strengthening of federal standards.

This little known section of the law makes it mandatory that the Director of the Unemployment Compensation Law, or through some other representative of the Industrial Commission, oppose any further strengthening of federal standards over state unemployment compensation programs. The Industrial Commission is directed to lobby against federal standards, a position opposed by the AFL-CIO. (Change Section 108.14 (14))

Useful Criteria in the Identification
of
Certain Occupational Health Hazards

Compiled by

DIVISION OF INDUSTRIAL HYGIENE
UTAH STATE DEPARTMENT OF HEALTH

1942

INTRODUCTION

THE information presented in this pamphlet has been compiled from a number of scientific sources, much of which has been copied verbatum. The only purpose and excuse for this effort is that it brings together under one cover and in a simple and usable form certain information to aid and guide plant management, the physician, the industrial hygienist, compensation officials, etc.

This information is not to be accepted as being conclusive since there is still a great amount of scientific research necessary before the effects of many industrial hazards are definitely known.

Those who are interested in more detailed information relative to the causes and effects of specific hazards are referred to the original sources of these data and to numerous other authoritative books, reprints and reports which are available in the industrial hygiene library of the Utah State Department of Health.

The compilers wish to acknowledge their indebtedness to the following authors and organizations from whose published works this information was compiled and also all those contributing to these publications: The U. S. Public Health Service, U. S. Department of Labor, California State Department of Industrial Relations, Medical Research Council of the Industrial Health Research Board, the Fidelity and Casualty Company of New York, Chemical and Metallurgical Engineering, M. B. Jacobs, Louis Schwartz, and Louis Tulipan.

The detailed work of this compilation was carried out by Dr. J. L. Jones, Director, Mr. Jack Neal, Engineer, and Mr. Robert L. Peterson, Chemist, Industrial Hygiene Division, Utah State Department of Health

This pamphlet has been prepared in five major sections as follows:

Section I. Classification of potential hazards by chief industry.

Section II. Classification of potential hazards by occupation.

Section III. Important physical properties and principal uses of certain toxic substances with chief diagnostic signs and symptoms of injury or other disabilities.

Section IV. Miscellaneous hazards of occupation with chief diagnosic signs and symptoms of injury or other disabilities.

Section V. Occupational dermatoses.

Section VI. Table of chemical warfare agents showing persistency, toxicity, physiological action, and first aid.

Section VII. Oral manifestations of occupational disease.

In view of this grouping, there is of necessity a certain amount of duplication.

TABLE OF CONTENTS

Subject	Pages
SECTION I.	
Classification of Potential Hazards by Chief Industry	7
SECTION II.	
Classification of Potential Hazards by Occupation	17
SECTION III.	
Important Physical Properties and Principal Uses of Certain Toxic Substances, with Chief Diagnostic Signs and Symptoms of Injury or Other Disability	49
SECTION IV.	
Miscellaneous Hazards with Chief Diagnostic Signs and Symptoms of Injury or Other Disability	63
SECTION V.	
Occupational Dermatoses	69
SECTION VI.	
Table of Chemical Warfare Agents Showing Persistency, Toxicity, Physiological Action, and First Aid	79
SECTION VII.	
Oral Manifestations of Occupational Disease	83

SECTION I.

CLASSIFICATION OF POTENTIAL HAZARDS BY CHIEF INDUSTRIES

CLASSIFICATION OF POTENTIAL HAZARDS BY CHIEF INDUSTRIES*

Advertising Signs and Novelties Manufacture (not exclusively wood, metal or celluloid)

Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.**
Aniline
Arsenic or its compounds
Benzol or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadium or its compounds
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Halogenated hydrocarbons
Lead or its compounds
Mercury or its compounds
Methanol
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Airplane and Airplane Parts Manufacture

Acetanilide or its compounds
Acids and alkalies, N. O. C.
Aniline
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Carbon monoxide
Chromium or its compounds
Cyanogen or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Halogenated hydrocarbons
Lead or its compounds
Magnesium
Manganese or its compounds
Methanol
Nitrogen oxides
Oil (mineral or paraffin)
Petroleum products or their fumes
Radium eminations
Roentgen rays
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Animal By-Products Plants

Acrolein
Anthrax
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Cyanogen or its compounds
Dermatitis venenata
Glanders
Hydrogen sulphide
Petroleum products or their fumes
Xylol or its nitro, nitroso and amino derivatives

Arms Manufacture

Acids and alkalies, N. O. C.
Antimony or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Chromium or its compounds
Cyanogen or its compounds
Dermatitis venenata
Halogenated hydrocarbons
Lead or its compounds
Mercury or its compounds
Nitrogen oxides
Nitroglycerin
Petroleum products or their fumes
Phosphorous or its compounds
Roentgen rays
Silicon dioxide
Sulphur dioxide
Zinc and its compounds

Artificial Silk Manufacture

Acids and alkalies, N. O. C.
Ammonia
Aniline
Carbon bisulfide
Chlorine or its compounds
Cyanogen or its compounds
Dermatitis venenata
Halogenated hydrocarbons
Hydrogen sulphide
Lead or its compounds
Methanol
Nitrogen dioxide
Sulphur dioxide

Asbestos Good Manufacture

Benzol or its nitro, nitroso and amino derivatives
Dermatitis venenata
Tellurium or its compounds
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Automobile Body Manufacture

Acetaldehyde or its compounds
Anthrax
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Chromium or its compounds
Halogenated hydrocarbons
Lead or its compounds
Methanol
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Automobile Garages or Repair Shops

Acids and alkalies, N. O. C.
Carbon monoxide
Dermatitis venenata
Lead or its compounds
Methanol
Oil (mineral or paraffin)
Petroleum products or their fumes

Automobile Radiator Manufacture

Acids and alkalies, N. O. C.
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Carbon monoxide
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Battery Manufacture

Acids and alkalies, N. O. C.
Antimony or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Chromium or its compounds
Dermatitis venenata
Lead or its compounds
Manganese or its compounds
Mercury or its compounds
Pitch
Tar
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Beverages Manufacture

Acids and alkalies, N. O. C.
Chlorine or its compounds
Dermatitis venenata

Bootblacking and Hat Cleaning Establishments

Acetanilide or its compounds
Ammonia
Aniline
Benzol or its nitro, nitroso and amino derivatives
Carbon monoxide
Dermatitis venenata

*Industries are arranged alphabetically and designated in bold type. **N. O. C. (Not Otherwise Classified)

PAGINATION INCORRECT

Halogenated hydrocarbons
Methanol
Petroleum products or their fumes
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Brass or Coppper Goods Manufacture
Acids and alkalies, N. O. C.**
Antimony or its compounds
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Carbon dioxide
Carbon monoxide
Chromium or its compounds

Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Cable and Wire Manufacture
Acids and alkalies, N. O. C.
Carbon monoxide
Cyanogen or its compounds
Dermatitis venenata
Lead or its compounds
Oil (mineral or paraffin)
Petroleum products or their fumes
Zinc and its compounds

Candy Manufacture
Dermatitis venenata

Carbon Paper or Typewriter Ribbon Manufacturing
Benzol or its nitro, nitroso and amino derivatives
Dermatitis venenata
Halogenated hydrocarbons
Methanol
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Carpet or Rug Manufacture
Aniline
Anthrax
Arsenic or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Glanders
Halogenated hydrocarbons

Ceramics Manufacture
Anitimony or its compounds
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Chromium or its compounds
Dermatitis venenata
Fluorine and its compounds
Friction (pressure or vibration)
Lead or its compounds
Manganese or its compounds
Mercury or its compounds
Petroleum products or their fumes
Selenium or its compounds
Silicon dioxide
Sulphur dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Cigar and Cigarette Manufacture
Carbon dioxide
Dermatitis venenata
Friction (pressure or vibration)

Cleaning and Dyeing Establishments
Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Ammonia
Aniline
Antimony or its compounds
Arsenic or its compouds
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Carbon tetrachloride
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Halogenated hydrocarbons
Hydrogen sulphide
Lead or its compounds
Manganese or its compounds
Methanol
Petroleum products or their fumes
Picric acid
Toluol or its nitro, nitroso and amino derivatives
Vanadium or its compounds
Xylol or its nitro, nitroso and amino derivatives

Clock and Watch Manufacture
Acids and alkalies, N. O. C.
Chromium or its compounds
Dermatitis venenata
Lead or its compounds
Radium eminations
Silicon dioxide

Coke Manufacture (Coal tar products)
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Ammonia
Aniline
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Bitumen
Carbon monoxide
Chromium or its compounds
Cresols
Cyanogen or its compounds
Dermatitis venenata
Phenol and its compounds
Pitch
Sulphur dioxide
Tar
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Contractors (all kinds, N. O. C.)
Bitumen
Carbon monoxide
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Methyl choloride
Pitch
Poisonous plants
Silicon dioxide
Tar

Cosmetics and Dentifrices Manufacture
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Dermatitis venenata
Halogenated hydrocarbons
Mercury or its compounds
Methyl chloride
Phenol and its compounds

Dairy Products Manufacture
Acids and alkalies, N. O. C.
Carbon dioxide
Chlorine or its compounds
Dermatitis venenata
Friction (pressure or vibration)

*Industries are arranged alphabetically and designated in bold type. **N. O. C. (Not Otherwise Classifie.)

Distilleries
- Carbon dioxide
- Dermatitis venenata
- Methanol

Drugs, Medicine, and Pharmaceutical Preps. Mfg. (not ingredients mfg.)
- Acetanilide or its compounds
- Aniline
- Arsenic or its compounds
- Benzol or its nitro, nitroso and amino derivatives

Silicon dioxide
Tar
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Painting, Varnishing, Lacquering, Enameling, Paper Hanging, Etc.

Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.**
Ammonia
Aniline
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Bitumen
Carbon bisulfide
Carbon tetrachloride
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration
Halogenated hydrocarbons
Lead or its compounds
Manganese or its compounds
Mercury or its compounds
Methanol
Petroleum products or their fumes
Phenol and its compounds
Pitch
Silicon dioxide
Tar
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Paper and Pulp Manufacture

Acids and alkalies, N. O. C.
Arsenic or its compounds
Chlorine or its compounds
Dermatitis venenata
Hydrogen sulphide
Sulphur dioxide

Paper Goods Manufacture

Aniline
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Pitch
Tar

Photo-Engraving and Engraving

Acetaldehyde or its compounds
Acids and alkalies, N. O. C.
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Mercury or its compounds
Methanol
Nitrogen oxides
Toluol or its nitro, nitroso and amino derivatives
Vanadium or its compounds
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Photography, X-Ray (including taking, developing and printing)

Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Aniline
Benzol or its nitro, nitroso and amino derivatives
Chlorine or its compounds
Chromium or its compounds
Cresols
Cyanogen or its compounds
Dermatitis venenata
Lead or its compounds
Mercury or its compounds
Methanol
Phenol and its compounds
Picric acid
Roentgen rays
Selenium or its compounds
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Printing (incl. pubishing, lithographing, etc.)

Acetanilide or its compounds
Aniline
Antimony or its compounds
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Carbon monoxide
Chromium or its compounds
Cyanogen or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Mercury or its compounds
Methanol
Nitrogen oxides
Petroleum products or their fumes
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Quarrying and Mining (sand, gravel, gypsum, limestone granite, etc.)

Carbon monoxide
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Hydrogen sulphide
Lead or its compounds
Nitrogen oxides
Silicon dioxide

Rolling Mills (brass, copper, aluminum)

Carbon monoxide
Dermatitis venenata
Lead or its compounds
Roentgen rays

Rolling Mills (iron and steel)

Acids and alkalies, N. O. C.
Acrolein
Carbon monoxide
Chromium or its compounds
Dermatitis venenata
Roentgen rays

Rubber Goods Mfg. (synthetic rubber)

Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Aniline
Antimony or its compounds
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Carbon tetrachloride
Chlorine or its compounds
Chromium or its compounds
Dermatitis venenata
Halogenated hydrocarbons
Lead or its compounds
Methanol
Petroleum products or their fumes
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Saw Mills, Planing Mills, Cabinet Shops

Dermatitis venenata
Friction (pressure or vibration)
Halogenated hydrocarbons
Methanol
Poisonous plants
Silicon dioxide

*Industries are arranged alphabetically and designated in bold type. **N. O. C. (Not Otherwise Classified)

Sewage Disposal Plants
Acids and alkalies, N. O. C.
Ammonia
Carbon dioxide
Carbon monoxide
Chlorine or its compounds
Dermatitis venenata
Hydrogen sulphide

Shell Loading Depots
Dermatitis venenata
Mercury or its compounds
Nitrogen oxides
Nitroglycerin
Picric acid
Toluol or its nitro, nitroso and amino derivatives

Ship Building
Acids and alkalies, N. O. C.**
Cadmium or its compounds
Chlorine or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Pitch
Zinc and its compounds

Shoe and Shoe Sundries Manufacture
Acetanilide or its compounds
Ammonia
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Dermatitis venenata
Halogenated hydrocarbons
Methanol
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Silverware Manufacture
Acids and alkalies, N. O. C.
Anthrax
Dermatitis venenata
Nitrogen oxides

Slaughter and Packing Plants
Anthrax
Dermatitis venenata
Glanders

Smelting and Refining of Metal (ferrous)
Acids and alkalies, N. O. C.
Arsenic or its compounds
Carbon monoxide
Chromium or its compounds
Cyanogen or its compounds
Dermatitis venenata
Lead or its compounds
Manganese or its compounds
Ozone
Silicon dioxide
Vanadium or its compounds
Zinc and its compounds

Smelting and Refining of Metal (non-ferrous)
Acids and alkalies, N. O. C.
Antimony or its compounds
Arsenic or its compounds
Cadmium or its compounds
Carbon bisulfide
Carbon monoxide
Chlorine or its compounds
Cyanogen or its compounds
Dermatitis venenata
Hydrogen sulphide
Lead or its compounds
Magnesium
Manganese or its compounds
Mercury or its compounds
Methanol
Nitrogen oxides
Ozone
Phosphorus or its compounds
Radium eminations
Selenium or its compounds
Silicon dioxide
Sulphur dioxide
Tellurium or its compounds
Zinc and its compounds

Soap or Soap Powder Manufacture
Acids and alkalies, N. O. C.
Acrolein
Ammonia
Benzol or its nitro, nitroso and amino derivatives
Carbon tetrachloride
Cresols
Dermatitis venenata
Hydrogen sulphide
Nitrogen oxides
Pitch
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Sporting Goods Manufacture
Acids and alkalies, N. O. C.
Ammonia
Benzol or its nitro, nitroso and amino derivatives
Chromium or its compounds
Dermatitis venenata
Lead or its compounds
Methanol
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Steel and Iron Fabrication (Inc. Sheet metal)
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Roentgen rays

Stone and Mineral Products Manufacture
Dermatitis venenata
Friction (pressure or vibration)
Pitch
Silicon dioxide
Tar

Stores, N. O. C.
Dermatitis venenata

Sugar Refineries
Acids and alkalies, N. O. C.
Carbon dioxide
Chlorine or its compounds
Dermatitis venenata
Silicon dioxide
Sulphur dioxide

Synthetic Resins and Products Manufacture
Acetaldehyde or its compounds
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Chlorine or its componds
Cresols
Cyanogen or its compounds
Dermatitis venenata
Hydrogen sulphide
Methanol
Phenol and its compounds
Pitch
Selenium or its compounds
Sulphur dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitrosos and amino derivatives

Textile Manufacture (Inc. wool preparation)
Acids and alkalies, N. O. C.
Anthrax
Carbon bisulfide
Carbon monoxide
Chlorine or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Glanders
Halogenated hydrocarbons
Lead or its compounds

Textile Finishing (Inc. bleaching, dyeing, etc.)
Acetaldehyde or its compounds
Acetanilide or its compounds
Acids and alkalies, N. O. C.
Ammonia
Aniline
Antimony or its compounds
Arsenic or its compounds
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Carbon monoxide
Carbon tetrachloride
Chlorine or its compounds
Chromium or its compounds

*Industries are arranged alphabetically and designated in bold type. **N. O. C. (Not Otherwise Classified)

Cyanogen or its compounds
Dermatitis venenata
Hydrogen sulphide
Lead or its compounds
Manganese or its compounds
Mercury or its compounds
Methanol
Nitrogen oxides
Petroleum products or their fumes
Phenol and its compounds
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Textile Goods Manufacture

Acids and alkalies, N. O. C.
Arsenic or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Methanol
Pitch
Silicon dioxide

Tobacco Handling

Acids and alkalies, N. O. C.**
Arsenic or its compounds
Dermatitis venenata

Tool Manufacture

Acids and alkalies, N. O. C.
Carbon monoxide
Chromium or its compounds
Dermatitis venenata
Lead or its compounds
Silicon dioxide
Zinc and its compounds

Toys (not exclusively wood, metal, or celluloid)

Acids and alkalies, N. O. C.
Arsenic
Benzol or its nitro, nitroso and amino derivatives
Cadmium or its compounds
Chromium or its compounds
Dermatitis venenata
Halogenated hydrocarbons
Lead or its compounds
Silicon dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives
Zinc and its compounds

Transportation and Transportation Equipment Repairing

Carbon monoxide
Dermatitis venenata
Friction (pressure or vibration)
Lead or its compounds
Petroleum products or their fumes
Zinc and its compounds

Tire Retreading and Vulcanizing

Acetanilide or its compounds
Aniline
Antimony or its compounds
Benzol or its nitro, nitroso and amino derivatives
Carbon bisulfide
Carbon tetrachloride
Chromium or its compounds
Dermatitis venenata
Halogenated hydrocarbons
Hydrogen sulphide
Lead or its compounds
Methanol
Petroleum products or their fumes
Sulphur dioxide
Toluol or its nitro, nitroso and amino derivatives
Xylol or its nitro, nitroso and amino derivatives

Wood Products Manufacture and Treatment

Acetanilide or its compounds
Acids and alkalies, N. O. C.
Arsenic or its compounds
Chromium or its compounds
Dermatitis venenata
Friction (pressure or vibration)
Halogenated hydrocarbons
Lead or its compounds
Mercury or its compounds
Methanol
Petroleum products or their fumes
Pitch
Silicon dioxide
Tar
Zinc and its compounds

Wool Spinning and Weaving

Dermatitis venenata
Friction (pressure or vibration)

*Industries are arranged alphabetically and designated in bold type. **N. O. C. (Not Otherwise Classified)

SECTION II.

CLASSIFICATION OF POTENTIAL HAZARDS BY OCCUPATION

CLASSIFICATION OF POTENTIAL HAZARDS BY OCCUPATION*

Abrasives Workers
Free silica
Heat
Inorganic dusts (excluding asbestos)
Organic dusts

Acetaldehyde Workers
Acetaldehyde
Mercury and its compounds

Acetanilide Workers
Aniline and other amino, nitro, and nitroso compounds of benzol

Acetic Acid Makers
Hydrochloride acid
Mercury and its compounds

Acetone Workers
Acetone
Mercury and its compounds

Acetylene Workers
Acetone
Ammonia
Arsine
Carbon disulphide
Carbon monoxide
Chloride of Lime
Chromium compounds
Inorganic dust
Phosphine (see also carbide makers and welders)

Acid Dippers
Arsine
Cyanogen compounds
Dampness
Hydrochloric acid
Nitrous fumes and nitric acid
Sulphuric acid

Acid Finishers (glass)
Hydrochloric acid
Lead and its compounds
Sulphuric acid

Acid Makers (see particular acid)

Acridine Workers
Acridine

Acrolein
Acrolein

Actors
Lead and its compounds

Agricultural Workers (see farmers)

Air Hammer Operators
Repeated motion, shock, etc.

Airplane-Dope Makers
Acetone
Amyl acetate
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Formic acid
Methyl cellosolve (etheylene glycol, monomethyl ether)
Tetrachlorethene (acetylene tetrachloride)

Airplane-Hanger Employees
Benzine
Benzol
Carbon tetrachloride

Airplane Pilots
Altitude (rarefied air, decreased atmospheric pressure)
Carbon monoxide

Airplane Pilots—Crop Dusting
Altitude (rarefied air, decreased atmospheric pressure)
Arsenic and its compounds
Carbon monoxide
Lead and its compounds

Alcohol Distillery Workers
Amyl acetate
Amyl alcohol
Benzol
Formic acid
Mercury and its compounds
Methanol

Aldehyde Pumpmen
Acetaldehyde
Methanol

Alkali Salt Makers
Carbon dioxide
Chlorine
Dampness
Hydrochloric acid
Hydrogen sulphide
Sulphur dioxide

Alloy Makers
Beryllium
Carbon monoxide
Cobalt
Heat
Magnesium
Manganese
Nickel
Selenium
Vanadium

Aluminum Extractors
Hydrofluoric acid
Manganese

Alum Workers
Sulphuric acid

Amalgam Makers
Mercury and its compounds

Amber Workers
Lead and its compounds

Ammonia Workers
Ammonia
Calcium cyanamide (cyanamide)
Carbon monoxide

Ammonium Salt Makers
Ammonia
Carbon disulphide
Cyanogen and its compounds
Heat
Hydrochloric acid
Sulphuric acid

Ammonium Sulphate Makers
Sulphuric acid

Amyl-Acetate Worker
Amyl-acetate
Amyl alcohol

Amyl Alcohol Workers
Amyl alcohol

Amyl-Nitrite Makers
Amyl alcohol

Aniline Dye Makers (see dye makers)

Aniline Workers
Aniline
Arsine
Benzol and its homologues (xylol and toluol)
Chromium compounds
Hydrochloric acid
Nitro benzol and nitroso compounds of benzol
Nitrous fumes and nitric acid

Animal By-Products Workers
Acrolein
Anthrax and glanders
Dampness
Dermatitis
Fungus infections
Septic infections
Undulent fever

Animal Hair Dressers (see hair workers)

Anmal Handlers
Anthrax and glanders
Fungus infections
Septic infection

Annealers
Ammonia
Heat

Antifreeze Makers
Ethylene glycol
Methanol

Antimony Extractors (refiners)
Antimony
Heat

*Occupations are arranged alphabetically and designated in bold type

PAGINATION INCORRECT

Antimony Fluoride Extractors
Hydrofluoric acid

Antipyrine Makers
Phenyl hydrazine

Arsenic Roasters
Arsenic
Heat

Art-Glass Workers
Amyl acetate
Benzine
Hydrofluoric acid
Lead and compounds
Methanol
Turpentine

Artificial-Amber Makers
Formaldehyde

Artificial Flower Makers
Arsenic and compounds
Chromium and compounds
Lead and compounds
Mercury and compounds
Methanol
Repeated motion, pressure and shock

Artificial Gem Makers
Thallium

Artificial Ice Makers
Ammonia
Dampness
Sudden variation of temperature
Sulphur dioxide

Artificial Leather Makers
Acetone
Amyl acetate
Aniline and other homologues of benzol
Arsenic and compounds
Benzol
Butanone (methyl ethyl ketone)
Butyl alcohol
Heat
Methanol
Nitrous fumes and nitric acid
Sulphuric acid

Artificial Manure Makers (see fertilizer makers)

Artificial Pearl Makers
Acetone
Acetylene tetrachloride
Amyl acetate
Lead
Nitrous fumes and nitric acid

Artificial Rubber Makers (see rubber makers, synthetic)

Artificial Silk Makers (see rayon)

Artificial Stone Makers
Tar and pitch

Asbestos Miners (see also miners)
Asbestos dust

Asbestos Prducts Workers
Asbestos dust
Benzol
Formaldehyde
Heat
Tar and pitch

Ashmen
Inorganic dust
Organic dust

Ashphalt Workers
Heat
Pitch and tar

Automobile Mechanics (see garage workers)

Automobile Painters (see also painters)
Benzol and its homologues
Dampness
Methanol

Automobile Radiator Cleaners
Oxalic acid

Aviation Personnel (flying) (see also airplane pilots)
Altitude (rarefied air, decreased atmospheric pressure)

Aviators (see airplane pilots)

Babbitt Metal Worker
Antimony
Lead and its compounds

Babbitters
Antimony
Lead and its compounds

Bacteriologists
Infections

Bakers
Carbon dioxide
Carbon monoxide
Organic dust
Sudden variations of temperature
Ultra violet and infra red rays

Baking Powder Makers
Carbon dioxide
Inorganic dust
Organic dust

Balloon (hydrogen) Workers
Arsine

Balloon Inflators
Carbon monoxide

Barbers
Infections
Repeated motion, pressure and shock

Barium Carbonate Makers
Barium
Hydrogen sulphide

Bar-Mill Workers (iron and steel)
Heat

Barometer Makers
Mercury and its compounds

Basic Slag (artificial manure) Workers
Inorganic dust

Batch Makers (glass works) (see glass makers)

Batch Makers (rubber works) (see compounders rubber)

Baters (tannery)
Anthrax and glanders

Bath-house Attendants
Infections

Battery (dry) Makers
Amyl-acetate
Benzol and its homologues (xylol and toluol)
Chromium and its compounds
Hydrochloric acid
Inorganic dust (no free silica)
Lead and its compounds
Manganese
Mercury and its compounds
Organic dust
Tar and pitch

Battery (storage) Makers (see storage battery makers)

Beamers (textiles)
Organic dust

Beamhouse Workers (tannery)
Anthrax and glanders
Dampness

Beatermen (paper and pulp)
Chlorine
Dampness

Beauty Parlor Operators
Benzol and its homologues (xylol and toluol)
Infections

Bed Rubbers (stone)
Free silica
Inorganic dusts

Bench Molders (see molder foundry)

Benzene Workers (see benzol workers)

Benzine (petroleum workers)
Benzine

Benzol Parifiers
Benzol
Sulphuric acid

*Occupations are arranged alphabetically and designated in bold type

Benzol-Stillmen
Benzol
Heat

Benzol Workers
Benzol

Beryllium Alloy Workers
Beryllium

Beryllium Extractors
Hydrofluoric acid

Bessemer-Converter Workers (iron and steel)
Carbon monoxide
Heat

Beta-Still Operators (beta naphthol)
Heat
Sulphuric acid

Bevelers
Inorganic dust (no free silica)

Bicyclists
Repeated motion, pressure and shock

Billet Mill Workers (iron and steel)
Heat

Bisque-Kiln Workers
Carbon monoxide
Free silica
Heat
Inorganic dust (no free silica)

Blacksmiths
Carbon dioxide
Carbon monoxide
Cyanogen
Heat
Lead
Repeated motion pressure and shock
Ultra violet and infra red rays

Blanket Makers
Anthrax and glanders

Blasters
Free silica
Carbon monoxide
Hydrogen sulphide
Inorganic dust (no free silica)
Nitrous fumes and nitric acid

Blast Furnace Workers
Carbon dioxide
Carbon monoxide
Cyanogen
Heat
Hydrogen sulphide
Phosphine
Sulphur dioxide

Bleachers
Chloride of lime
Chlorine
Chromium
Heat
Hydrochloric acid
Hydrofluoric acid
Nitrous fumes and nitric acid
Oxalic acid
Ozone
Phosgene
Potassium hydroxide
Sodium hydroxide
Sulphur dioxide
Sudden variations of temperature

Bleachery Driers
Heat

Bleaching Powder Makers
Arsine
Chloride of lime
Chlorine
Manganese

Blenders (motor fuel) (see gasoline blenders)

Blockers (felt hats)
Carbon monoxide
Heat

Blooders (tannery)
Lead

Blooming-Mill Workers (iron and steel)
Heat

Blowers
Mercury compounds
Organic dust

Blowers (glass manufacturing) (see glass blowers)

Blowers-Out (zinc smelting)
Heat
Zinc

Blue Print Paper Makers
Chromium

Blue Prine Paper Makers
Aniline and other amino compounds and its homologues
Oxalic acid

Bluers (revolvers)
Heat

Boiler Cleaners and Washers
Carbon monoxide
Dampness

Boiler-Room Workers
Carbon dioxide
Carbon monoxide
Heat

Boneblack Makers
Ammonia
Phosphorus

Bone Renderers, Extractors, Etc.
Anthrax and glanders
Acrolein
Cyanogen
Heat
Sulphur dioxide

Bookbinders
Acrolein
Amyl-acetate
Arsenic and its compounds
Lead
Methanol
Oxalic acid

Bottle-Cap Makers
Lead

Bottlers (mineral water)
Carbon dioxide
Hydrogen sulphide

Brake-Lining Makers
Asbestos dust
Benzol and its homologues (xylene and toluol)

Brass Founders
Antimony and its compounds
Arsenic and its compounds
Carbon dioxide
Carbon monoxide
Copper
Heat
Lead and its compounds
Phosphorus
Sulphur dioxide
Zinc

Brass Polishers (see also polishers and cleaners metal)
Lead and its compounds

Braziers
Heat
Lead and its compounds
Ultra violet and infra red rays
Zinc

Brewers
Amyl alcohol
Carbon dioxide
Carbon monoxide
Dampness
Fungus infections
Formaldehyde
Heat
Hydrofluoric acid
Sudden variations in temperature
Phenol
Sulphuric acid

Brick Burners
Carbon dioxide
Carbon monoxide
Heat
Lead

Brick Layers
Inorganic dust (no free silica)

Brick Makers
Dampness
Free silica

*Occupations are arranged alphabetically and designated in bold type

Heat
Hydrofluoric acid
Inorganic dust (no free silica)
Lead
Magnesium
Manganese
Sulphur dioxide

Briquet Makers

Arsenic and its compounds
Tar and pitch

Bromine Makers

Aniline and its amino derivatives
Bromine
Chlorine

Bronze Powder Makers

Acetone
Zinc

Bronzers

Ammonia
Amyl acetate
Arsenic and its compounds
Arsine
Benzine
Benzol
Cyanogen
Hydrochloric acid
Hydrogen sulphide
Inorganic dusts (no free silica)
Lead
Manganese
Mercury and its compounds
Methanol
Zinc

Broom Makers

Anthrax and glanders
Chlorine
Formaldehyde
Organic dust
Sulphur dioxide

Blowers (gum barrels)

Cyanogen
Lead
Mercury and its compounds
Petroleum

Brushers (felt hats)

Mercury and its compounds
Organic dust

Brush Makers

Anthrax and glanders
Formaldehyde
Lead and its compounds
Methanol
Organic dust
Tar and pitch

Buffers

Free silica
Inorganic dust (no free silica)
Organic dust

Buffers (rubber)

Amyl acetate
Benzine
Lead and its compounds

Bulb (mercury) Makers

Mercury and its compounds

Buoy Makers

Phosphine

Burners (Enameling)

Heat
Lead

Burnishers (metals)

Antimony and its compounds
Benzine
Carbon tetrachloride
Sulphuric acid
Trichlorethylene

Burners (Needles)

Free silica
Organic dust

Burr Filers

Free silica
Organic dust

Butchers

Infections
Sudden variations of temperature

Button Makers

Acetone
Chloride of lime
Formaldehyde
Infections
Inorganic dust (no free silica)
Organic dust

Butyl Acetate Makers

Butyl alcohol

Butyl Alcohol Makers

Butyl alcohol

Butyl Cellosolve Makers

Ethylene oxide

Cable Makers

Lead

Cable Splicers

Carbon monoxide
Dampness
Hydrogen sulphide
Lead and its compounds
Turpentine

Cadmium Alloy Makers

Cadmium

Cadmium and Cadmium-Compound Makers

Arsine
Cadmium

Cadmium Platers (see also electro platers)

Cadmium

Cadmium Vapor Lamp Makers

Cadmium

Caisson Workers

Carbon dioxide
Carbon monoxide
Compressed air
Dampness
Hydrogen sulphide
Sudden variations of temperature

Calcium Carbide Makers (see carbide makers)

Calcium Cyanamide Makers

Calcium cyanamide
Heat
Inorganic dust (no free silica)

Calenderers (rubber)

Inorganic dust (no free silica)
Sudden variations of temperature

Calico Printers (see textile printers)

Camphor Makers

Amyl acetate
Aniline and its derivatives
Hydrochloric acid
Turpentine

Candle Makers

Acrolein
Aniline and its derivatives
Arsenic and its compounds
Chromium and its compounds
Sulphuric acid

Candy Makers

Heat
Sudden variations of temperature

Canners

Arsenic and its compounds
Carbon dioxide
Dampness
Heat
Lead
Sudden variation of temperature
Septic infections

Can Sealers

Benzol and its homologues (xylol and toluol)

Cap Loaders

Mercury and its compounds

Cappers (window glass)

Heat

Carbanilide Makers

Carbon disulphide

*Occupations are arranged alphabetically and designated in bold type

Carbide Makers
Ammonia
Carbon monoxide
Heat
Inorganic dust (no free silica)
Organic dust

Carbolic Acid Makers
Benzol and its homologues (xylol and toluol)
Phenol
Sulphur dioxide
Sulphuric acid

Carbonated-Water Makers
Carbon dioxide

Carbon Black Workers
Heat
Organic dust

Carbon Brush Makers
Inorganic dust (no free silica)
Organic dust

Carbon Dioxide Makers
Carbon dioxide

Carbon-Disulphide Makers
Carbon disulphide
Hydrogen sulphide

Carbonic Acid Makers
Carbon dioxide

Carbonizers (shoddy)
Arsine
Hydrochloric acid
Organic dust
Sulphuric acid

Carbon Paper Makers
Organic dust

Carbon Printers (photography)
Chromium compounds

Carbon-Tetrachloride Workers
Carbon disulphide
Carbon tetrachloride
Phosgene
Sulphur chloride

Carders (asbestos)
Asbestos dust

Carders (textiles)
Organic dust

Card Grinders (textile)
Inorganic dust (no free silica)
Organic dust

Carpenters
Repeated motion, pressure and shock, etc.

Carpet Cleaners
Anthrax and glanders
Organic dust

Carpet Makers
Anthrax and glanders
Arsenic and its compounds
Organic dust

Carroters (felt hats)
Arsenic and its compounds
Mercury and its compounds
Nitrous fumes and nitric acid

Cartridge Cup Washers
Dampness

Cartridge Dippers
Hydrochloric acid
Nitrous fumes and nitric acid
Sulphuric acid

Cartridge Felt and Wad Makers
Dampness

Cartridge Makers
Lead
Mercury and its compounds

Cartridge Shot Shell Paraffin Dippers
Dampness
Sudden variation of temperature

Case Hardeners
Cyanogen compounds
Heat

Casters (metal) (see foundries and also particular metal)

Casting Cleaners (foundry) (see also acid dippers)
Inorganic dust containing free silica
Inorganic dust (no free silica)

Cast Scrubbers (electroplaters)
Benzine
Benzol and its hemologue (xylol and toluol)

Catchers (iron and steel)
Heat

Cattle Salesmen
Anthrax and glanders
Undulant fever

Cellulose Formate Makers
Formic acid

Cellulose Makers
Dampness
Hydrogen sulphide
Sodium hydroxide
Sulphur dioxide
Sulphuric acid

Cellulose Products Makers (see rayon, pyroxyline plastics, lacquers)

Cementers (rubber)
Acetylene tetrachloride
Benzine
Benzol and its homologues (xylol and toluol)
Butyl alcohol
Carbon disulphide
Carbon tetrachloride
Dichlorethylene
Methanol
Trichlorethylene
Turpentine

Cement (Portland) Workers
Arsenic and its compounds
Carbon monoxide
Heat
Inorganic dust contaning free silica
Inorganic dust (no free silica)
Selenium and its compounds

Cement (rubber, plastic, etc.) Mixers
Acetone
Acetylene tetrachloride
Ammonia
Amyl acetate
Benzine
Benzol and its homologues (xylol and toluol)
Carbon disulphide
Carbon tetrachloride
Dioxan
Lead
Pyridine
Sulphur chloride
Tar and pitch

Ceramic Workers (see pottery workers)

Chambermaids
Infections

Chambermen (sulphuric acid)
Sulphur dioxide
Sulphuric acid

Charcoal Burners
Carbon monoxide
Organic dust

Charcoal Workers
Carbon monoxide
Organic dust

Charcoal Workers (sugar refining)
Heat
Sudden variations of temperature

Chargers (furnace) (see also particular metal)
Carbon monoxide
Heat
Inorganic dust (no free silica)
Inorganic dust containing free silica

Charges (smelting and refining) (see also particular metal)
Carbon monoxide
Heat
Inorganic dust (no free silica)
Inorganic dust containing free silica

*Occupations are arranged alphabetically and designated in bold type

Chasers (steel)

Inorganic dust containing free silica

Chauffeurs

Benzine
Carbon monoxide
Dampness
Repeated pressure, motion and shock
Sudden variations of temperature

Chemists (analytical)

Acetaldehyde
Acetanilide
Alkalies
Antimony and compounds
Arsenic and compounds
Benzol and its homologues (xylol and toluol)
Cadmium and its compounds
Carbon disulphide
Carbon monoxide
Carbon tetrachloride
Chlorine and its compounds
Chromium and its compounds
Cyanogen and compounds
Formaldehyde
Hydrochloric acid
Hydrogen sulphide
Lead or its compounds
Methanol
Mercury or its compounds
Nitrous fumes, and nitric acid
Oils (paraffin and mineral)
Phosphorus
Sulphuric acid
Zinc

Chemists (radium research)

X-rays, radium and other radio active substances (radio-thorium, mesothorium, etc.)

Chimney Masons

Carbon monoxide

Chimney Sweepers

Arsenic and its compounds
Carbon monoxide
Inorganic dust (no free silica)
Tar and pitch

Chippers

Inorganic dust (containing free silica)
Inorganic dust (no free silica)
Lead and its compounds

Chloride-of-Lime Makers

Chloride of lime
Chlorine

Chlorinated Diphenyl Makers

Chlorinated diphenol

Chlorinated Napthalene Workers

Chlorinated naphthalene

Chlorinated Rubber Makers

Carbon tetrachloride

Chlorine Compound Makers

Hydrochloric acid

Chlorine Makers

Chlorine
Hydrochloric acid
Manganese
Mercury and its compounds

Chlorodiphenol Makers

Benzol and its homologues (xylol and toluol)

Chloroform Makers

Acetone
Carbon tetrachloride
Chloride-of-lime
Methyl chloride

Chrome Workers

Chromium and its compounds

Chromium Platers (see also electroplaters)

Chromium and its compounds

Cigar Makers

Fungus infections
Lead
Nicotine
Organic dust

Clay and Bisque Makers (pottery)

Dampness
Inorganic dust (no free silica)
Inorganic dust (containing free silica)
Sudden variations of temperature

Clay-Plug Makers (pottery)

Dampness
Inorganic dust (no free silica)

Clay-Product Workers (see pottery workers)

Cleaners (metal) (see polishers and cleaners, metal)

Clerks

Repeated motion, shock, vibration, etc.

Clothes Pressers

Carbon monoxide
Heat

Cloth Preparers (see also bleachers)

Heat
Dampness

Cloth Singers

Carbon monoxide

Clutch Disk Impregnators

Benzol and its homologues (xylol and toluol)

Coal Carbonizers

Hydrogen sulphide

Coal Miners (see miners)

Coal Passers

Organic dust
Inorganic dust (no free silica)

Coal Tar Workers (see also coke over workers)

Aniline and its derivatives
Benzol and its homologues (xylol and toluol)
Carbon monoxide
Cresol
Cyanogen compounds
Heat
Phenol
Tar and pitch

Cobbers (asbestos)

Asbestos

Cobblers

Anthrax and glanders
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Organic dust
Repeated motion, shock, pressure, etc.

Coin Makers

Nickel
Silver

Coke-Oven Workers (see also coal tar workers)

Ammonia
Benzol and its homologues (xylol and toluol)
Carbon monoxide
Heat
Hydrogen sulphide
Sulphur dioxide
Tar and pitch

Cold Storage Plant Workers (see refrigerating plant workers)

Collar (fused) Makers

Acetone
Methanol
Methyl cellosolve

Collodion Makers

Nitrous fumes and nitric acid

Colored Paper Workers

Arsenic and its compounds

Colorers (marble)

Chromium compounds

Colorers (white) of Shoes

Lead and its compounds

Color Makers

Acetylene tetrachloride
Ammonia
Aniline and its derivatives
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (xylol and toluol)
Bromine

*Occupations are arranged alphabetically and designated in bold type

Cadmium
Chlorine
Chromium and its compounds
Cobalt
Dimethyl sulphate
Heat
Inorganic dust (no free silica)
Lead and its compounds
Manganese
Mercury and its compounds
Methyl bromide
Methyl chloride
Naphthols
Selenium compounds
Sulphuric acid
Thallium

Comb Makers
Acetone
Organic dust

Compositors
Alkalies
Aniline and its derivatives
Antimony and compounds
Benzine
Benzol and its homologues (xylol and toluol)
Inorganic dust (no free silica)
Lead and its compounds
Repeated motion, shock, pressure, etc.
Turpentine

Compounders (rubber)
Aniline and its homologues
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (xylol and toluol)
Chromium compounds
Inorganic dust (no free silica)
Lead and its compounds

Compressed Air (caisson) Workers (see caisson workers)

Compressed Air (pneumatic tool) Workers (see pneumatic tool workers)

Concentrating Mill Workers (see also oil flotation plant workers)
Dampness
Inorganic dust (containing free silica)
Inorganic dust (no free silica)
Lead
Manganese
Selenium compounds

Coners (felt hats)
Mercury and its compounds
Organic dust

Confectioners (see candy makers)

Construction Workers
Dampness
Inorganic dust (containing free silica)
Inorganic dust (no free silica)

Cooks
Carbon monoxide
Infections
Sudden variation of temperature
Ultraviolet and infra red rays

Copper Founders
Arsenic and compounds
Copper

Copper Miners (see miners)

Coppers Refiners and Smelters
Antimony and its compounds
Arsenic and its compounds
Carbon monoxide
Copper
Heat
Hydrofluoric acid
Lead and its compounds
Manganese
Selenium compounds
Sulphur dioxide
Tellurium and compounds

Coppersmiths
Arsenic and its compounds
Copper

Copper (strip) Roller-Mill Workers
Acrolein

Cordage Factory Workers
Anthrax and glanders
Tar and pitch

Core Makers
Acrolein
Carbon monoxide
Carbon tetrachloride
Heat
Inorganic dust (containing free silica)
Inorganic dust (no free silica)
Zinc

Cork Workers
Organic dust

Corn-Products Workers
Dampness
Heat
Sudden variations of temperature

Cosmetic Workers
Arsenic and its compounds
Mercury and its compounds
Methyl cellosolve
Nitrobenzol and other nitro compounds of benzol or its homologues

Cotton Mill Workers
Dampness
Heat
Inorganic dust (no free silica)
Organic dust

Cottonseed-Oil Workers
Heat

Cotton Twisters
Organic dust
Repeated motion, shock, pressure, etc.

Cranemen (glass industry)
Heat

Cranemen (iron and steel)
Acrolein
Carbon monoxide
Heat
Inorganic dust (containing free silica

Cranemen (non-ferrous)
Arsenic and compounds
Heat
Inorganic dust (containing free silica)
Lead and compounds
Selenium and compounds
Sulphur dioxide
Zinc and compounds

Crayon (colored) Makers
Chromium and its compounds
Lead and its compounds

Creosoting-Plant Workers
Dampness
Phenol
Tar and pitch

Creosol-Soap Makers
Creosol

Cresylic-Acid Makers
Creosol

Crucible Mixers
Inorganic dust (no free silica)
Organic dust

Crucible-Steel-Department Employees
Heat

Crushermen (clay and stone)
Inorganic dust (no free silica)
Inorganic dust (containing free silica)

Crushers (asbestos)
Asbestos dust

Cupola Men (foundries)
Carbon dioxide
Carbon monoxide
Heat

Curers, Vapor (rubber) (see vulcanizers)

Curriers (tannery)
Anthrax and glanders
Arsenic and compounds
Benzine
Organic dust

Cut-Glass Workers
Arsenic and its compounds
Inorganic dust containing free silica
Lead

*Occupations are arranged alphabetically and designated in bold type

Cutlery Makers
- Amyl alcohol
- Inorganic dust containing free silica
- Inorganic dust (no free silica)
- Lead

Cutters (oxyacetylene and other gases) (see welders)

Cyanamide Makers
- Calcium cyanamide
- Heat
- Inorganic dust (no free silica)

Cyanide Workers
- Ammonia
- Cyanogen compounds

Cyanogen Makers
- Cyanogen
- Hydrogen sulphide
- Mercury and its compounds

Dairy Workers
- Anthrax and glanders
- Undulant fever

Damascening Workers
- Nitrous fumes and nitric acid

Dancers
- Repeated motion, shock, pressure, etc

Dead Animal Handlers (see also animal by-products workers)
- Infection

De-Brasers
- Nitrous fumes and nitric acid

Decorators (pottery)
- Arsenic and its compounds
- Benzine
- Benzol and its homologues (xylol and toluol)
- Lead and its compounds
- Mercury and its compounds
- Turpentine

Degreasers
- Benzine
- Benzol and its homologues (xylol and toluol)
- Carbon disulphide
- Carbon tetrachloride
- Chlorinated naphthalenes
- Dichlorethylene
- Dichlorethyl ether
- Dioxan
- Methylene chloride
- Tetrachlorethane
- Trichlorethylene

Denatured Alcohol Workers (see particular denaturant)

Dental Workers
- Lead
- Mercury and its compounds

Dentists
- Mercury and its compounds
- X-ray, radium and other radio active substances

Depliatory Makers
- Barium
- Thallium

Detinning Workers
- Chlorine

Detonator Cleaners
- Mercury and its compounds

Detonator Fillers
- Mercury and its compounds

Detonator Packers
- Mercury and its compounds

Devil Operators (felt hat)
- Mercury and its compounds
- Organic dust

Diamond Cutters
- Inorganic dust (no free silica)
- Organic dust
- Repeated motion, shock, and pressure

Diamond Polishers
- Lead and its compounds

Diatomaceous Earth Workers
- Inorganic dust containing free silica

Dichlorethylene Workers
- Dichlorethylene

Digester-House Workers (paper and pulp)
- Heat
- Hydrogen sulphide
- Sudden changes of temperature
- Sulphur dioxide

Dimethyl-Sulphate Makers
- Arsine
- Dimethyl-sulphate
- Methanol
- Nitrous fumes and nitric acid
- Sulphuric acid

Dinitrobenzol Workers
- Nitrobenzol and other nitro compounds of benzol

Dinitrophenol Workers
- Dinitrophenol (1-2-3)

Dioxan Makers
- Dioxan

Dippers (Gun Cotton)
- Nitrous fumes and nitric acid

Dippers (rubber)
- Benzine
- Benzol and its homologues (xylol and toluol)
- Carbon tetrachloride

Dippers (see also acid dippers)
Dish-Washers
- Fungus infections

Disinfectant Makers (see also insecticide makers)
- Acetalydehyde
- Aniline and its derivatives
- Arsenic and its compounds
- Benzol and its homologues (xylol and toluol)
- Bromine
- Carbon dioxide
- Chloride of lime
- Chlorine
- Cresol
- Cyanogen
- Formaldehyde
- Mercury and its compounds
- Ozone
- Phenol
- Picric acid
- Sulphur dioxide
- Thallium
- Trichlorethylene

Divers
- Carbon dioxide
- Carbon monoxide
- Compressed air (increased atmospheric pressure)

Doffers (textile)
- Dampness
- Heat
- Organic dust

Dog Pound Workers
- Infections

Dope Workers (see airplane dope makers)

Dressers (glass)
- Heat

Dresser Tenders (textile)
- Dampness
- Heat
- Sudden variation of temperature

Driers
- Methanol
- Sudden variation of temperature

Driers (lacquer)
- Ultraviolet and infra red rays

Driers (rubber)
- Benzine
- Benzol and its homologues
- Carbon disulphide

Drier Workers (foundry)
- Carbon monoxide

Drillers (rock)
- Inorganic dust containing free silica
- Inorganic dust containing no free silica

Drivers (see chauffeurs)

Drop Forgers
- Heat

*Occupations are arranged alphabetically and designated in bold type

Dry Cleaners

Acetylene tetrachloride
Amyl acetate
Benzine
Benzol and its homologues (xylol and toluol)
Carbon disulphide
Carbon tetrachloride
Dichlorethylene
Ethylene dichloride
Methanol
Oxalic acid
Sudden variation of temperature
Tetrachlorethylene
Trichlorethylene
Turpentine

Drying Room Workers (miscellaneous)

Carbon dioxide
Carbon monoxide
Sudden variation of temperature

Dye Makers

Acetaldehyde
Acetone
Acridine
Ammonia
Aniline and its derivatives
Antimony and its compounds
Arsenic and its compounds
Arsine
Barium
Benzol and its homologues (xylol and toluol)
Bromine
Butyl alcohol
Carbon dioxide
Carbon tetrachloride
Chloride of lime
Chromium compounds
Cresol
Cyanogen
Dimethyl sulphate
Dinitrophenol (1-2-3)
Dioxan
Ethyl Bromide and ethyl chloride
Formaldehyde
Formic acid
Furfural
Heat
Hydrochloric acid
Hydrogen sulphide
Lead
Manganese
Mercury and its compounds
Methanol
Methyl bromide
Methyl cellosolve
Methyl chloride
Methylene chloride dichloromethane
Naphthols
Nitrobenzol and other nitro compounds of benzol and its homologues
Nitrous fumes and nitric acid
Oxalic acid
Phenol
Phenyl hydraxine
Phosgene
Picric acid (trinitrophenol)
Pyridine
Sodium hydroxide
Sudden variation of temperature
Sulphur dioxide
Sulphuric acid
Thallium
Trichlorethylene
Turpentine
Uranium
Vanadium

Dyers (see also mordanters and other preparatory process workers)

Acetone
Ammonia
Amyl acetate
Aniline and its derivatives
Antimony and its compounds
Arsenic and its compounds
Benzine
Chromium and its compounds
Dichlorethylene
Formaldehyde
Hydrochloric acid
Hydrofluoric acid
Lead and its compounds
Manganese
Methanol
Nitrous fumes and nitric acid
Oxalic acid
Phenol
Picric acid
Pyridine
Sudden variation of temperature
Sulphur chloride
Titanium oxide
Uranium
Vanadium

Electrical Condenser Makers

Chlorinated diphenols
Chlorinated naphthlenes

Electrical Transformer Makers

Chlorinated diphenols
Chlorinated naphthalenes

Electricians

Ozone
Ultra violet light and infra red rays

Electric Induction Furnace Workers

Mercury and its compounds

Electric Linemen (see also cable splicers)

Ultra violet and infra red rays

Electrode Makers

Organic dust
Tar and pitch

Electrolytic Process (copper) Workers

Arsine

Electroplaters

Acetylene tetrachloride
Antimony and its compounds
Arsenic and its compounds
Arsine
Benzine
Benzol and its homologues (xylol and toluol)
Cadmium
Carbon disulphide
Carbon tetrachloride
Chlorinated naphthalenes
Chromium compounds
Cyanogen compounds
Dampness
Formic acid
Hydrochloric acid
Hydrofluoric acid
Lead and its compounds
Mercury and its compounds
Nickel
Nitrous fumes and nitric acid
Potassium hydroxide
Sulphuric acid
Trichlorethylene

Electrotypers (see also electroplaters)

Ammonia
Antimony and its compounds
Inorganic dust
Lead and its compounds
Organic dust
Sudden variation of temperatures

Elevator Operators

Repeated motion, pressure and shock, etc.

Embalmers

Formaldehyde
Mercury and its compounds

Embalming Fluid Makers

Mercury and its compounds

Embossers

Mercury and its compounds

Embroidery Workers

Lead and its compounds

Emery Wheel Makers

Inorganic dust (no free silica)
Lead and its compounds

Enamelers

Acetylene tetrachloride
Amyl acetate
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (xylol and toluol)
Carbon disulphide
Carbon monoxide
Chromium and its compounds
Dampness
Heat
Inorganic dust containing free silica
Lead and its compounds

*Occupations are arranged alphabetically and designated in bold type

Manganese
Nickel
Repeated motion, pressure, shock, etc.
Turpentine

Enamel Makers

Acetylene tetrachloride
Amyl acetate
Antimony and its compounds
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (xylol and toluol)
Carbon disulphide
Carbon monoxide
Chromium compounds
Hydrochloric acid
Hydrofluoric acid
Lead and its compounds
Manganese
Methyl cellosolve
Nitrous fumes and nitric acid
Turpentine

Engineers (stationary)

Carbon monoxide
Heat
Inorganic dust (no free silica)
Sudden variation of temperature

Engravers

Benzol and its homologues (xylol and toluol)
Copper
Hydrochloric acid
Inorganic dust (no free silica)
Lead and its compounds
Mercury and its compounds
Nitrous fumes and nitric acid
Oxalic acid
Repeated motion, shock, pressure
Sodium Hydroxide
Sulphuric acid

Etchers

Arsine
Hydrochloric acid
Hydrofluoric acid
Nitrous fumes and nitric acid
Phenol
Sulphuric acid

Ether Makers

Sulphuric acid

Ethyl Benzene Makers

Ethyl benzene

Ethyl Bromide Makers

Ethyl bromide

Ethyl Chloride Makers

Ethyl chloride

Ethylene Dibromide Makers

Bromine
Ethylene dibromide

Ethylene Dichloride

Ethylene dichloride

Ethylene Oxide Makers

Ethylene oxide

Examiners Using Fluoroscope or X-Ray

X-Rays

Excavation Workers

Inorganic dust (containing free silica)

Explosives Workers (see also particular occupation)

Acetaldehyde
Acetone
Ammonia
Amyl acetate
Amyl alcohol
Aniline and its deravatives
Antimony
Benzol and its homologues (xylol and toluol)
Bromine
Carbon dioxide
Carbon disulphide
Chromium and its componds
Cresol
Dampness
Dinitrophenol (1-2-3)
Formaldehyde
Lead and its compounds
Mercury and its compounds
Methanol
Nitrobenzene and other nitro compounds of bezol and its homologues
Nitroglycerin
Nitrous fumes and nitric acid
Phenol
Phosphorus
Picric acid
Pyridine
Sulphuric acid

Exterminators and Fumigators (see insecticide makers)

Extractor Operators (soap)

Dampness
Sudden variation of temperature

Extractors (gold and silver) (see gold and silver refiners and extractors)

Extractors (oils and fats)

Acetone
Acetylene tetrachloride
Benzine
Benzol and its homologues (xylol and toluol)
Carbon disulphide
Dichlorethane
Trichlorethylene

Farmers

Anthrax and glanders
Arsenic and its compounds
Calcium cyanamide
Fungus infections
Infections.
Lead and its componnds
Nicotine
Undulant fever

Fat Renderers

Acrolein
Anthrax and glanders
Hydrogen sulphide
Magnesium
Ozone
Sudden variations of temperature
Sulphuric acid

Feather Curers

Arsenic and its compounds
Organic dust

Feather Workers

Aniline and other amino compounds of benzol and its homologues
Arsenic and its compounds
Benzine
Benzol and its homologues (xylol and toluol)
Methanol
Organic dust
Septic infections
Sulphur dioxide
Turpentine

Felt Hat Makers (see also particular occupation)

Carbon monoxide
Heat
Mercury and its compounds
Methanol
Nitrous fumes and nitric acid
Organic dust
Sudden variations of temperature
Sulphuric acid

Felt Makers

Anthrax and glanders
Heat
Hydrogen sulphide

Ferrosilicon

Arsenic and its componnds
Arsine
Prosphine

Fertilizer Makers (see also phosphate mill employees)

Acrolein
Ammonia
Anthrax and glanders
Arsenic and its compounds
Arsine
Benzol and its homologues (xylol and toluol)
Carbon dioxide
Cyanimide
Cyanogen compounds
Dampness
Hydrochloric acid
Hydrofluoric acid
Hydrogen sulphide
Inorganic dust containing free silica

*Occupations are arranged alphabetically and designated in bold type

Inorganic dust containing no free silica
Magnesium
Manganese
Nicotine
Nitrous fumes and vapors
Organic dust
Septic infections
Sulphur dioxide
Sulphuric acid

Fiberizers (asbestos)
Asbestos

Fiber Workers
Organic dust

Filament Makers and Finishers (incandescent lamps)
Amyl acetate
Carbon monoxide
Methanol
Thallium

File Cutters
Inorganic dust, no free silica
Lead and its compounds

Filers
Antimony and its compounds
Inorganic dust, no free silica
Lead and its compounds

Filling Station Workers
Benzine
Carbon monoxide
Lead
Tetraethyl lead

Film Makers (see photographic film makers)

Filter Press Workers
Dampness

Finishers (leather)
Organic dust

Fire Extinguisher Makers
Carbon dioxide
Carbon tetrachloride
Ethyl bromide and ethyl chloride
Ethylene dibromide
Methyl bromide

Firemen (city)
Carbon monoxide
Dampness
Heat
Phosgene
Sudden variation of temperature
Sulphur dioxide

Firemen (stationary)
Carbon monoxide
Heat
Inorganic dust (no free silica)
Sudden variation of temperature
Ultraviolet and infrared rays

Fireworks Makers (see also explosive workers)
Antimony and its compounds
Arsenic and its compounds
Barium
Manganese
Mercury and its compounds
Phosphorus
Picric acid
Thallium

Fishermen
Dampness
Septic infections
Sudden variation of temperature
Tar and pitch

Fish Market Workers
Infections

Flangers (felt hats)
Carbon monoxide
Sudden variation of temperature

Flateners (glass)
Heat

Flavoring Extract Makers
Amyl acetate
Amyl alcohol
Benzol and its homologues (xylol and toluol)
Butyl alcohol
Nitrobenzol and other nitro compounds of benzol and its homologues

Flax-rettery Workers
Hydrogen sulphide

Flax Spinners
Heat
Organic dust

Flint Workers
Free silica
Inorganic dust containing no free silica

Floor Molders (see molders—foundry)

Floor Polish Makers (see polish makers)

Flour Mill Workers
Fungus infections
Organic dust

Flue Cleaners
Carbon monoxide
Inorganic dust containing no free silica
Sulphur dioxide
Tar and pitch

Flue Dust Recoverers (sulphuric acid manufacturing)
Thallium

Flush Tenders (aluminum)
Dampness

Fly Paper Makers
Arsenic and its compounds

Food Irradiators
Ultraviolet and infrared rays

Forestry Workers
Infections

Forgemen
Heat

Formaldehyde Workers
Formaldehyde

Formers (felt hats)
Mercury and its compounds
Organic dust

Formic Acid Workers
Formic acid
Oxalic acid

Foundry Workers (see also particular metal)
Carbon dioxide
Carbon monoxide
Heat
Inorganic dust containing free silica
Inorganic dust containing no free silica
Ultraviolet and infrared rays

Freight Handlers
Anthrax and glanders

Frosters (glass and pottery)
Chromium compounds

Fruit Essence Makers (see flavoring extract makers)

Fruit Preservers
Sulphur dioxide

Fullers (textiles)
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Dichloroethyl ether
Tetrachlorethane (acetylene tetrachloride)

Fulminate Mixers
Cyanogen compounds
Mercury and its compounds

Fumigant Makers (see insecticide makers)

Fumigators and Exterminators (see insecticide makers)

Fur Carders
Anthrax and glanders
Organic dust

Fur Clippers
Anthrax and glanders
Organic dust

*Occupations are arranged alphabetically and designated in bold type

Fur Cutters

Anthrax and glanders
Organic dust

Fur Handlers

Anthrax and glanders
Hydrogen sulphide
Mercury and its compounds
Organic dust

Furnace Workers (see also particular metal)

Carbon dioxide
Carbon monoxide
Heat
Inorganic dust containing no free silica
Ultraviolet and infrared rays

Furniture Polishers

Amyl acetate
Benzine
Chromium compounds
Methanol
Organic dust
Petroleum
Repeated motion, pressure, shock, etc.
Turpentine

Fur Preparers

Anthrax and glanders
Formaldehyde
Mercury and its compounds
Nitrous fumes and nitric acid
Organic dust

Fur Pullers

Anthrax and glanders
Organic dust

Fusel Oil Workers

Amyl alcohol

Fused Quartz Workers

Inorganic dust containing free silica

Galvanizers

Acrolein
Ammonia
Arsenic and its compounds
Arsine
Benzine
Dampness
Heat
Hydrochloric acid
Lead and its compounds
Nitrous fumes and nitric acid
Sulphur dioxide
Sulphric acid
Trichlorethylene
Zinc

Garage Workers

Acrolein
Benzine
Carbon monoxide
Lead and its compounds
Tetraethyl lead

Garbage Workers

Septic infections

Gardeners

Arsenic and its compounds
Calcium cyanamide
Lead and its compounds
Nicotine
Undulant fever

Gas (illuminating) Workers

Ammonia
Arsine
Benzol and its homologues toluol and xylol
Carbon monoxide
Cyanogen compounds
Heat
Hydrofluoric acid
Hydrogen sulphide
Phenol
Sudden variations of temperature
Tar and pitch
Trichlorethylene

Gasoline Blenders

Aniline and other amino compounds of benzol and its homologues
Benzine
Benzol and its homologues (toluol and xylol)
Ethyl benzene
Ethylene dibromide
Lead and its compounds
Nitrobenzol and other nitro compounds of benzol and its homologues
Tetraethyl lead

Gasoline Engine Workers

Acrolein
Benzine
Carbon monoxide

Gas Purifiers

Ammonia
Cyanogen compounds
Hydrogen sulphide
Phenol

Gassers (textile)

Carbon monoxide

Gatherers (glass)

Heat

Gelatine Makers

Acrolein
Anthrax and glanders
Sulphur dioxide

Germicide Makers (see disinfectant makers)

Gilders

Amyl acetate
Benzine
Benzol and its homologues (toluol and xylol)
Cyanogen compounds
Mercury and its compounds
Methanol
Nitrous fumes and nitric acid
Pyridine

Glass Blowers

Heat
Inorganic dust containing no free silica
Ultraviolet and infrared rays

Glass Colorers

Cadmium
Chromium compounds
Cobalt
Selenium compounds
Tellurium compounds

Glass Cutters

Dampness
Inorganic dust containing no free silica

Glass Etchers

Formaldehyde
Hydrofluoric acid

Glass Finishers

Dampness
Hydrochloric acid
Hydrofluoric acid
Inorganic dust containing no free silica
Lead and its compounds
Sulphuric acid

Glass Furnace Workers (see also glass mixers)

Carbon monoxide
Heat
Inorganic dust containing free silica
Inorganic dust containing no free silica
Ultra violet and infra red rays

Glass Mixers

Antimony and its compounds
Arsenic and its compounds
Barium
Hydrochloric acid
Inorganic dust containing free silica
Inorganic dust containing no free silica
Lead and its compounds
Magnesium
Manganese
Selenium compounds
Sodium hydroxide
Thallium
Uranium
Vanadium

Glass Polishers

Lead and its compounds

Glass (safety) Makers

Butyl alcohol

*Occupations are arranged alphabetically and designated in bold type

Methanol
Tetrachlorethane

Glaze Dippers (pottery)

Antimony and its compounds
Arsenic and its compounds
Chromium compounds
Dampness
Hydrochloric acid
Lead and its compounds
Manganese

Glaze Mixers (pottery)

Antimony and its compounds
Arsenic and its compounds
Hydrochloric acid
Inorganic dust containing free silica
Inorganic dust containing no free silica
Lead and its compounds
Manganese

Glost-kiln Workers

Carbon monoxide
Lead and its compounds
Sudden variations of temperature

Glove Makers (leather preparers) (see also tannery workers)

Dampness
Organic dust

Glue Workers

Acrolein
Ammonia
Anthrax and glanders
Benzine
Benzol and its homologues (xylol and toluol)
Carbon dioxide
Carbon disulphide
Carbon tetrachloride
Creosol
Dampness
Hydrochloric acid
Hydrogen sulphide
Nitrobenzol and other nitro compounds of benzol and its homologues
Organic dust
Septic infections
Sudden variations of temperature
Sulphur dioxide
Sulphuric acid
Trichlorethylene

Glycerine Refiners

Oxalic acid

Gold Beaters

Inorganic dust containing no free silica
Repeated motion, pressure, shock, etc.

Gold and Silver Refiners and Extractors

Arsenic and its compounds
Arsine
Bromine
Chlorine
Cyanogen compounds
Formaldehyde
Hydrofluoric acid
Inorganic dust containing no free silica
Lead and its compounds
Mercury and its compounds
Sulphur chloride

Grain Elevator Workers

Carbon dioxide
Fungus infections
Organic dust

Granite Workers (see stonecutters)

Graphite Workers

Heat
Inorganic dust containing no free silica
Organic dust

Grinders (colors) (see color makers)

Grinders (metals)

Antimony and its compounds
Dampness
Inorganic dust containing free silica
Inorganic dust containing no free silica
Lead and its compounds
Repeated motion, pressure, shock, etc.

Grinders (rubber)

Antimony and its compounds
Lead and its compounds
Organic dust

Grinding Wheel Makers

Inorganic dust containing free silica
Inorganic dust containing no free silica

Grooms

Fungus infections

Guncotton Dippers

Nitrous fumes and nitric acid
Sulphuric acid

Guncotton Pickers

Organic dust

Guncotton Washers

Dampness

Gypsum Workers

Hydrogen sulphide
Inorganic dust containing no free silica
Sudden variations of temperature

Hair Workers

Anthrax and glanders
Dampness
Mercury and its compounds
Organic dust
Septic infections

Hammermen

Repeated motion, pressure, shock, etc.

Handlers of Putrid or Decomposing Animal Products

Septic infections

Hardeners (felt hats)

Mercury and its compounds
Methanol

Hardeners (see temperers)

Harness Makers

Organic dust

Hat Makers (felt) (see felt hat makers)

Heel Makers (shoe)

Organic dust

Hemp Workers

Organic dust

Hide Workers

Fungus infections

Horn Workers

Organic dust

Horse Handlers

Infections

Hospital Attendants

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Hothouse Workers (see also gardeners)

Sudden variations of temperature

Hot Rod Rollers (iron and steel)

Heat

Housemaids

Repeated motion, pressure, shock, etc.

House Wreckers

Inorganic dust containing free silica
Inorganic dust containing no free silica

Hunters

Infections

Hydraulic Construction Workers

Dampness

Hydraulic Miners

Dampness

Hydrochloric Acid Makers

Arsine
Hydrochloric acid
Hydrogen sulphide
Sulphuric acid

*Occupations are arranged alphabetically and designated in bold type

Hydrocyanic Acid Makers

Cyanogen compounds
Sulphuric acid

Hydrofluoric Acid Makers

Hydrofluoric acid

Ice (artificial) Makers (see artificial ice makers)

Ice Cream Makers

Ammonia
Carbon dioxide
Dampness
Sudden variations of temperature

Imitation (see artificial)

Incandescent Lamp Makers (see particular occupation)

Amyl acetate
Carbon monoxide
Lead and its compounds
Mercury and its compounds
Methanol
Thallium

Incandescent Mantle Hardeners

Hydrofluoric acid
Pyridine
X-rays, radium, and other radioactive substances (radiothorium, mesothorium, etc.)

Ink Makers

Ammonia
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (xylol and toluol)
Bromine
Carbon monoxide
Carbon tetrachloride
Chlorine
Chromium compounds
Cresol
Formaldehyde
Hydrochloric acid
Lead and its compounds
Mercury and its compounds
Methanol
Methyl cellosolve
Nitrobenzol and other nitro compounds of benzol and its homologues
Oxalic acid
Potassium hydroxide
Silver
Turpentine
Vanadium

Insecticide Makers (see also disinfectant makers)

Arsenic
Barium
Benzine
Bromine
Carbon dioxide
Carbon disulphide
Carbon monoxide
Carbon tetrachloride
Cresol
Cyanogen compound
Dichlorethylene
Dioxan
Ethylene dichloride
Ethylene oxide
Formaldehyde
Infections
Lead and its compounds
Mercury and its compounds
Methyl bromide
Methyl formate
Nicotine
Nitrous fumes and nitric acid
Phosphorus
Sulphur chloride
Sulphur dioxide
Tetrachlorethane
Thallium
Trichlorethylene
Turpentine

Inspectors Using Fluoroscope or X-ray

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.

Instrument Dial (luminous) Painters

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.

Insulation (sound, heat) Workers

Inorganic dust containing free silica
Inorganic dust containing no free silica

Insulators (wire)

Antimnoy and its compounds
Arsenic and its compounds
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Chlorinated diphenyls
Chlorinated naphthalenes
Ethylene dichloride
Tar and pitch

Iodine Makers

Chlorine

Iron and Steel Workers (all departments) (also see particular occupation and alloy makers)

Arsenic and its compounds
Carbon monoxide
Heat
Inorganic dust containing no free silica
Titanium oxide
Ultraviolet and infrared rays

Ironers

Carbon monoxide
Repeated motion, pressure, shock, etc.
Sudden variations of temperature

Irradiators (food)

Ultraviolet and infrared rays

Japan Makers

Arsenic and its compounds
Benzine
Lead and its compounds
Methanol
Sudden variations of temperature
Turpentine

Japanners

Arsenic and its compounds
Benzine
Lead and its compounds
Turpentine

Jewelers

Amyl acetate
Arsine
Cyanogen compounds
Hydrochloric acid
Inorganic dust containing no free silica
Lead and its compounds
Mercury and its compounds
Nitrous fumes and nitric acid
Repeated motion, pressure, shock, etc.
Sulphuric acid

Junk (metal) Refiners

Heat
Inorganic dust containing no free silica
Lead and its compounds
Zinc

Jute Workers

Inorganic dust containing free silica
Inorganic dust containing no free silica
Organic dust

Kiln Tenders

Carbon monoxide
Heat

Knitters

Repeated motion, pressure, shock, etc.

Knitting Mill Workers

Organic dust

Labelers (paint cans)

Lead and its compounds

Laboratory Workers

Carbon monoxide
Mercury and its compounds

Laboratory Workers (radium research)

X-rays, radium and other radioactive substance (radiothorium, mesothorium, etc.)

Lace Makers

Organic dust

*Occupations are arranged alphabetically and designated in bold type

Lacquerers

Acetone
Amyl acetate
Amyl alcohol
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Carbon tetrachloride
Ethyl benzene
Ethylene dichloride
Formic acid
Lead and its compounds
Methanol
Methylene chloride
Pyridine
Tetrachlorethane
Trichlorethylene
Triorthocresyl phosphate
Turpentine

Lacquer Makers

Acetaldehyde
Acetone
Ammonia
Amyl acetate
Amyl alcohol
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (toluol and xylol)
Butanone
Butyl alcohol
Carbon tetrachloride
Cellosolve
Chlorinated diphenyls
Chlorinated naphthalenes
Dioxan
Ethylene dichloride
Formaldehyde
Formic acid
Hexon
Hexanone
Lead and its compounds
Methanol
Methyl cellosolve
Methylene chloride
Nitrous fumes and nitric acid
Pentanone
Pyridine
Tetrachlorethane
Trichlorethylene
Triorthocresyl phosphate
Turpentine

Lampblack Makers

Organic dust
Petroleum
Phenol

Lamps (electric (see incandescent lampmakers)

Lapidaries

Inorganic dust containing no free silica

Lard Makers

Acrolein

Lasters (shoes)

Dampness
Methanol
Organic dust
Sudden variations of temperature

Lathe Turners

Repeated motion, pressure, shock, etc.

Laundry Workers

Carbon monoxide
Chloride of lime
Chlorine
Dampness
Formaldehyde
Heat
Ozone
Sudden variations of temperature

Lead Arsenate Makers

Arsenic and its compounds
Lead and its compounds

Lead Burners

Arsine
Lead and its compounds

Leadfoil Makers

Heat
Lead and its compounds

Lead Miners (see also miners)

Lead and its compounds

Lead Pipe Makers

Lead and its compounds

Lead Platers (on iron)

Mercury and its compounds

Lead Salts Makers

Lead and its compounds

Lead Smelters

Antimony and its compounds
Arsenic and its compounds
Cadmium
Carbon monoxide
Heat
Lead and its compounds
Selenium compounds
Sulphur dioxide
Tellurium compounds

Leather Workers (see also tannery workers)

Amyl acetate
Anthrax and glanders
Barium
Carbon tetrachloride
Hydrochloric acid
Methanol
Organic dust
Trichlorethylene

Lehr Tenders (glass)

Heat

Letter Sorters

Repeated motion, pressure, shock, etc.

Levermen (iron and steel)

Heat

Lifters Over (glass)

Heat

Lime Burners

Arsine
Carbon dioxide
Carbon monoxide
Heat
Inorganic dust containing no free silica
Selenium compounds

Lime Kiln Chargers

Carbon dioxide
Carbon monoxide
Inorganic dust containing no free silica

Lime Pullers (tannery)

Anthrax and glanders
Dampness

Lime Workers

Inorganic dust containing no free silica

Linen Workers

Organic dust

Linoleum Makers

Acrolein
Amyl acetate
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Chromium compounds
Dampness
Heat
Inorganic dust containing no free silica
Lead and its compounds
Manganese
Methanol
Organic dust
Sudden variations of temperature
Sulphuric acid
Turpentine

Linotypers

Antimony and its compounds
Carbon monoxide
Lead and its compounds

Linseed Oil Boilers

Acrolein
Carbon dioxide
Lead and its compounds

Litharge Workers

Lead and its compounds

Lithographers

Aniline and other amino compounds of benzol and its homologues
Arsenic and its compounds
Benzine
Benzol and its homologues (xylol and toluol)
Chromium compounds
Hydrochloric acid
Inorganic dust containing no free silica
Lead and its compounds

*Occupations are arranged alphabetically and designated in bold type

Mercury and its compounds
Nitrous fumes and nitric acid
Oxalic acid
Repeated motion, pressure, shock, etc.
Sulphuric acid
Tetrachlorethane
Turpentine

Lithopone Makers
Barium
Cadmium

Lithotransfer Workers
Lead and its compounds

Locksmiths
Repeated motion, pressure, shock, etc.

Longshoremen
Anthrax and glanders
Manganese

Lumbermen
Sudden variations of temperature

Luminous Dial Factory Workers
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Luters (zinc smelting)
Heat
Zinc

Lye Makers
Potassium hydroxide

Machinists
Petroleum
Repeated motion, pressure, shock, etc.

Magnesium Alloy Makers
Magnesium

Mail Carriers
Dampness
Infections

Mail Sorters
Repeated motion, pressure, shock, etc.

Manganese Dioxide Workers
Manganese

Manganese Grinders
Manganese

Manganese Ore Separators
Manganese

Manganese Steel Makers
Manganese

Manometer Makers
Mercury and its compounds

Manure Handlers
Undulant fever

Marble Cutters
Inorganic dust containing no free silica

Marblers (glass)
Heat

Masons
Dampness
Inorganic dust containing free silica
Repeated motion, presure, shock, etc.

Masseurs
Infections

Match Factory Workers
Antimony and its compounds
Carbon disulphide
Chromium compounds
Dampness
Hydrogen sulphide
Inorganic dust containing no free silica
Lead and its compounds
Organic dust
Phosphorus
Potasium hydroxide

Mattress Makers
Anthrax and glanders
Organic dust

Meat Inspectors
Anthrax and glanders
Infections
Undulant fever

Meat Packing Employees (see packing house employees and slaughterhouse)

Mechanics (gas engines)
Carbon monoxide
Petroleum

Melters (foundry, glass)
Heat

Mercerizers
Hydrochloric acid
Sodium hydroxide
Sulphuric acid

Mercury Alloy Makers
Mercury and its compounds

Mercury Boiler Workers
Mercury and its compounds

Mercury Bronzers
Mercury and its compounds

Mercury Miners (see also miners)
Mercury and its compounds

Mercury Pump Workers
Mercury and its compounds

Mercury Salt Workers
Mercury and its compounds

Mercury Smelters
Carbon monoxide
Heat
Mercury and its compounds
Sulphur dioxide

Mercury Solder Workers
Mercury and its compounds

Mercury Still Cleaners
Mercury and its compounds

Mercury Switch Makers
Mercury and its compounds

Mercury Vapor Lamp Makers
Mercury and its compounds

Metallizers
Cadmium
Lead and its compounds
Selenium compounds
Zinc

Metal Polishers and Cleaners (see polishers and cleaners) (metal)

Metal Polish Makers (see polish makers)

Metal Turners
Inorganic dust containing no free silica

Metal Workers (see particular occupation)

Metal Washers
Benzine

Methane (synethetic) Makers
Carbon monoxide

Methyl Alcohol Workers
Acetone
Methanol
Carbon monoxide

Methyl Bromide Makers
Bromine
Methanol
Methyl bromide

Methyl Chloride Makers
Hyrochloric acid
Methanol
Methyl chloride

Methyl Compound Makers
Methanol

Methylene Chloride Workers
Methylene chloride

Mica Strippers or Splitters
Inorganic dust containing no free silica

Mica Workers
Inorganic dust containing no free silica

Microscopists
Repeated motion, pressure, shock, etc.

Milkers
Fungus infections
Repeated motion, pressure, shock, etc.

*Occupations are arranged alphabetically and designated in bold type

Milk Inspectors
Undulant fever

Millers
Fungus infections

Millinery Workers
Aniline and other amino compounds of benzol and its homologues
Benzine
Benzol and its homologues (toluol and xylol)
Methanol
Turpentine

Mineral Earth Workers
Inorganic dust containing no free silica

Miners
Asbestos
Carbon dioxide
Carbon monoxide
Dampness
Heat
Hydrogen sulphide
Inorganic dust containing free silica
Inorganic dust containing no free silica
Manganese
Nitrous fumes and nitric acid
Repeated motion, pressure, shock, etc.
Silver
Sudden variations of temperature

Minkery Workers
Anthrax and glanders

Mirror Silverers
Acetaldehyde
Ammonia
Benzol and its homologues (toluol and xylol)
Cyanogen compounds
Dampness
Formaldehyde
Formic acid
Lead and its compounds
Mercury and its compounds
Silver
Sudden variations of temperature

Mixers (felt hats)
Organic dust
Mercury and its compounds

Mixers (rubber)
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Carbon tetrachloride
Chromium compounds
Inorganic dust containing no free silica
Lead and its compounds
Sudden variations of temperature

Mixing Room Workers (miscellaneous)
Inorganic dust containing no free silica
Organic dust

Mold Breakers (foundry)
Inorganic dust containing free silica
Inorganic dust containing no free silica

Mold Breakers (pottery)
Carbon monoxide

Molders (asbestos)
Asbestos

Mold Breakers (foundry)
Inorganic dust containing free silica
Inorganic dust containing no free silica

Monotypers
Antimony and its compounds
Carbon monoxide
Lead and its compounds

Mordanters
Amyl alcohol
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Chloride of lime
Chromium compounds
Cyanogen compounds
Formic acid
Nitrous fumes and nitric acid
Vanadium

Motion Picture Film Workers (see also pyroxylin plastics workers)
Amyl acetate
Butyl alcohol
Carbon monoxide
Tetrachlorethane

Motion Picture Machine Operators
Mercury and its compounds
Nitrous fumes and nitric acid
Ultraviolet and infrared rays

Motion Picture Studio Workers and Actors
Ultraviolet and infrared rays

Motormen
Sudden variations of temperature

Mottlers (leather)
Amyl acetate
Methanol

Muffle Tenders
Heat

Mule Handlers
Infections

Muriatic Acid Makers (see hydrochloric acid makers)

Muriatic Acid Mixers (see acid mixers)

Musical Instrument Makers
Lead and its compounds

Musicians
Repeated motion, pressure, shock, etc.

Napthylamine Workers
Aniline and other amino compounds of benzol and its homologues

Neon Lights Lettermakers
Carbon monoxide

Nickel Extractors
Nickel

Nickel Platers (see also electro platers)
Dampness

Nickel Purification Workers (mond process)
Nickel
Nickel carbonyl

Nitraniline Workers
Aniline and other amino compounds of benzol and its homologues

Nitrators
Nitrobenzol and other nitro compounds of benzol and its homologues
Nitrous fumes and nitric acid
Sulphuric acid

Nitric Acid Workers
Ammonia
Lead and its compounds
Nitrous fumes and nitric acid
Sulphuric acid

Nitrobenzene Workers (see nitrobenzol workers)

Nitrobenzol Workers
Benzol and its homologues (toluol and xylol)
Nitrobenzol and other nitro compounds of benzol and its homologues
Nitrous fumes and nitric acid
Sulphuric acid

Nitrocellulose Workers (see also pyroxylin plastics workers)
Acetone
Amyl acetate
Amyl alcohol

*Occupations are arranged alphabetically and designated in bold type

Arsine
Benzol and its homologues (toluol and xylol)
Methyl cellosolve
Nitrous fumes and nitric acid
Sulphuric acid

Nitroglycerin Makers

Arsine
Lead and its compounds
Nitroglycerin
Nitrous fumes and nitric acid
Sulphuric acid

Nitrous Oxide Workers
Nitrous fumes and nitric acid

Nurses

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.

Oilcloth Makers (see linoleum makers)

Oilers

Petroleum

Oil Extractors (see extractors) (oils and fats)

Oil Flotation Plant Workers (see also concentrating mill workers)

Hydrogen sulphide
Petroleum
Sulphur dioxide

Oil Purifiers
Sulphuric acid

Oil Refiners (see petroleum refiners)

Oil Well Workers

Hydrogen sulphide
Petroleum

Open Hearth Department Workers (iron and steel)

Carbon monoxide
Heat

Ore Concentrating Mill Workers (see concentrating mill workers)

Oxalic Acid Makers

Cyanogen compounds
Nitrous fumes and nitric acid
Oxalic acid
Potassium hydroxide

Oxyacetylene Cutters (see welders)

Ozonators
Ozone

Packing House Employees (see also slaughterhouse workers)

Dampness
Heat
Hydrogen sulphide
Infections
Septic infections
Sudden variations of temperature
Undulant fever

Painters

Acetone
Amyl acetate
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Carbon disulphide
Carbon tetrachloride
Chromium compounds
Lead and its compounds
Manganese
Mercury and its compounds
Methanol
Nitrous fumes and nitric acid
Repeated motion, pressure, shock, etc.
Trichlorethylene
Turpentine

Painters (luminous watch and instrument dials)

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Painters (tar)

Tar and pitch

Paint Makers

Acetone
Amyl acetate
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (toluol and xylol)
Cadmium
Carbon disulphide
Carbon tetrachlorid
Chlorinated diphenyls
Chlorinated naphthalenes
Chrominum compounds
Dampness
Hydrochloric acid
Lead and its compounds
Magnesium
Manganese
Mercury and its compounds
Methanol
Phenol
Pyridine
Selenium compounds
Sodium hydroxide
Sulphuric acid
Tar and pitch
Titanium oxide
Trichlorethylene
Turpentine
Uranium

Paint Remover Makers

Benzine
Benzol and its homologues (toluol and xylol)
Butanone
Carbon tetrachloride
Cresol
Dichloroethyl ether
Dioxan
Furfural
Methanol
Methylene chloride
Phenol
Tetrachlorethane
Trichlorethylene

Paint Removers

Acetone
Amyl acetate
Benzine
Benzol and its homologues (xylol and toluol)
Carbon tetrachloride
Dichloroethyl ether
Inorganic dust containing no free silica
Lead and its compounds
Methylene chloride
Phenol
Tetrachlorethane
Trichlorethylene

Pair Heaters (tin plate)

Heat

Paper Box Makers

Repeated motion, pressure, shock, etc.

Paper Glazers

Arsenic and its compounds

Paperhangers

Arsenic and its compounds
Chromium compounds
Inorganic dust containing no free silica
Lead and its compounds

Paper Makers (see also particular occupation)

Ammonia
Amyl acetate
Arsine
Chlorine
Chromium compounds
Dampness
Formaldehyde
Fungus infections
Heat
Hydrochloric acid
Hydrofluoric acid
Hydrogen sulphide
Magnesium
Potassium hydroxide
Sodium hydroxide
Sulphur dioxide
Sulphuric acid
Sudden variations of temperature
Titanium oxide

Paper Money Makers

Chromium compounds

*Occupations are arranged alphabetically and designated in bold type

Paraffin Workers
- Acetone
- Benzol and its homologues (toluol and xylol)
- Carbon disulphide
- Carbon tetrachloride
- Ethylene dichloride
- Petroleum

Parakeet Handlers
- Infections

Paris Green Workers
- Arsenic and its compounds

Parrot Handlers
- Infections

Patent Leather Makers
- Amyl acetate
- Carbon monoxide
- Lead and its compounds
- Methanol
- Oxalic acid
- Ozone
- Sudden variations of temperature
- Sulphuric acid
- Turpentine

Pavers
- Heat
- Repeated motion, pressure, shock, etc.
- Tar and pitch

Pencil Makers
- Acetone
- Aniline and other amino compounds of benzol and its homologues
- Arsenic and its compounds
- Benzol and its homologues
- Chromium compounds (toluol and xylol)
- Pyridine

Perfume Makers
- Acetone
- Ammonia
- Amyl acetate
- Aniline and other amino compounds of benzol and its homologues
- Benzine
- Benzol and its homologues (toluol and xylol)
- Butyl alcohol
- Carbon tetrachloride
- Cresol
- Dichlorethylene
- Ethyl bromide and ethyl chloride
- Formic acid
- Hydrochloric acid
- Methanol
- Methyl chloride
- Methylene chloride
- Napthols
- Nitrobenzol and other nitro compounds of benzol and its homologues
- Phenol
- Potassium hydroxide
- Sulphuric acid
- Trichlorethylene

Petroleum Refiners
- Acetone
- Acrolein
- Ammonia
- Aniline and other amino compounds of benzol and its homologues
- Benzine
- Benzol and its homologues (toluol and xylol)
- Carbon monoxide
- Dampness
- Dichloroethyl ether
- Heat
- Hydrochloric acid
- Hydrogen sulphide
- Lead and its compounds
- Methylene chloride
- Nitrobenzol and other nitro compounds of benzol and its homologues
- Petroleum
- Sodium hydroxide
- Sulphur dioxide
- Sulphuric acid
- Trichlorethylene
- Turpentine

Pewter Makers
- Antimony and its compounds

Pharmaceutical Workers
- Acetone
- Acrolein
- Aniline and other amino compounds of benzol and its homologues
- Antimony and its compounds
- Arsenic and its compounds
- Benzol and its homologues (toluol and xylol)
- Bromine
- Calcium cyanimide
- Carbon dioxide
- Carbon tetrachloride
- Chloride of lime
- Dinitrophenol
- Dioxan
- Ethyl bromide and ethyl chloride
- Ethylene dibromide
- Ethylene dichloride
- Formic acid
- Magnesium
- Manganese
- Mercury and its compounds
- Methyl bromide
- Methyl chloride
- Methylene chloride
- Naphthols
- Nitroglycerin
- Nitrous fumes and nitric acid
- Organic dust
- Phenol
- Phenyl hydrazine
- Phosgene
- Phosphorus
- Picric acid
- Potassium hydrixide
- Sodium hydroxide
- Sulphuric acid
- Tellurium compounds
- Tetrachlorethane
- Tetrachlorthylene
- Trichlorethylene
- Turpentine
- Uranium

Phenol Makers
- Benzol and its homologues toluol and xylol
- Phenol
- Sulphuric acid

Phenyl Hydrazine Workers
- Phenyl hydrazine

Phosgene Makers
- Carbon monoxide
- Chlorine
- Phosgene

Phosphate Extractors
- Hydrochloric acid

Phosphate Mill Workers (see also fertilizer makers)
- Dampness
- Hydrofluoric acid
- Inorganic dust containing no free silica
- Phosphorus
- Sudden variations of temperature

Phosphine Workers
- Carbon monoxide
- Phosphuretted hydrogen

Phosphor-bronze Workers
- Phosphorus

Phosphoretted Hydrogen Workers
- Phosphuretted hydrogen

Phosphoric Acid Makers
- Cyanogen compounds
- Nitrous fumes and nitric acid
- Sulphuric acid

Phosphorus Compound Makers
- Hydrogen sulphide
- Phosphorus

Phosphorus Evaporated Machine Operators
- Dampness
- Phosphorus
- Sudden variations of temperature
- Sulphuric acid

Phosphorus Extractors
- Hydrofluoric acid
- Phosphorus
- Phosphuretted hydrogen

Phosphorus (red) Makers
- Phosphorus
- Phosphuretted hydrogen

*Occupations are arranged alphabetically and designated in bold type

Photoengravers
- Ammonia
- Amly acetate
- Benzol and its homologues (toluol and xylol)
- Chromium compounds
- Methanol
- Nitrous fumes and nitric acid
- Potassium hydroxide

Photographers (see also photographic material workers)
- Methanol
- Ultraviolet and infra red rays

Photographic Film Makers (see also pyroxylin-plastics workers)
- Amyl acetate
- Bromine
- Butyl alcohol
- Nitrous fumes and nitric acid
- Silver

Photographic Material Workers (see also photographic film makers)
- Acetaldehyde
- Acetone
- Ammonia
- Aniline and other amino compounds of benzol and its homologues
- Barium
- Benzol and its homologues (toluol and xylol)
- Chlorine
- Chromium compounds
- Cresol
- Cyanogen compounds
- Formaldehyde
- Hydrochloric acid
- Mercury and its compounds
- Phenol
- Picric acid
- Sulphuric acid
- Tellurium compounds
- Trichlorethylene
- Turpentine
- Uranium
- Vanadium

Photograph Retouchers
- Lead and its compounds

Photogravure Workers
- Cromium compounds
- Nitrous fumes and nitric acid

Physicians
- Carbon dioxide
- Mercurv and its compounds
- X-rays, radium, and other radioactive substances (radiothorium, mesothorium, etc.)

Picklers
- Arsine
- Cyanogen compounds
- Dampness
- Heat
- Hydrochloric acid
- Hydrofluoric acid
- Nitrous fumes and nitric acid
- Sulphuric acid

Picric Acid Makers
- Benzol and its homologues (toluol and xylol)
- Nitrous fumes and nitric acid
- Phenol
- Picric acid
- Sulphuric acid

Pigeon Fatteners
- Fungus infections

Pigment Makers (see color makers)

Pile Drivers
- Repeated motion, pressure, shock, etc.

Pilots (airplane) (see airplane pilots)

Pipe Fitters (see also particular liquid piped)
- Lead and its compounds

Pitch Workers
- Arsenic and its compounds
- Cresol
- Heat
- Tar and pitch

Planer Men (stone)
- Inorganic dust containing free silica
- Inorganic dust containing no free silica

Plasterers
- Anthrax and glanders
- Dampnes
- Inorganic dust containing no free silica

Plasters of Paris Workers
- Inorganic dust containing no free silica

Platers (see electroplaters and metallizers)

Platinum Extractors
- Bromine

Plumbers (see also particular substance piped)
- Arsine
- Carbon monoxide
- Lead and its compounds

Pneumatic Tool Workers
- Inorganic dust containing no free silica
- Repeated motion, pressure, shock, etc.

Policemen
- Carbon monoxide
- Dampness

Polishers and Cleaners (metal)
- Benzine
- Benzol and its homologues (toluol and xylol)
- Cyanogen compounds
- Hydrochloric acid
- Inorganic dust containing free silica
- Inorganic dust containing no free silica
- Lead and its compounds
- Methanol
- Organic dust
- Oxalic acid
- Pyridine
- Repeated motion pressure, shock, etc.
- Silver
- Trichlorethylene
- Turpentine

Polish Makers
- Amyl acetate
- Aniline and other amino compounds of benzol and its homologues
- Benzine
- Benzol and its homologues (toluol and xylol)
- Carbon tetrachloride
- Cyanogen compounds
- Dioxan
- Inorganic dust containing no free silica
- Methanol
- Nitrobenzol and other nitro compounds of benzol and its homologues
- Oxalic acid
- Trichlorethylene
- Turpentine

Porcelain Makers (see pottery workers)

Porters
- Repeated motion, pressure, shock, etc.

Potassium Hydroxide Makers
- Potassium hydroxide

Pot Fillers (glass)
- Heat

Potlifters (iron and steel)
- Heat

Pot Pullers (foundry)
- Heat

Pot Room Workers (aluminum foundry; carbide plant)
- Heat

Pot Setters
- Heat

Pottery Workers (see also particular occupation)
- Arsenic and its compounds
- Carbon dioxide
- Carbon monoxide
- Chromium compounds
- Cobalt
- Dampness
- Heat
- Hydrochloric acid

*Occupations are arranged alphabetically and designated in bold type

Hydrofluoric acid
Inorganic dust containing no free silica
Inorganic dust containing free silica
Lead and its compounds
Manganese
Mercury and its compounds
Seleniuum compounds
Sulphur dioxide

Pouncers (felt hats)
Inorganic dust containing free silica
Inorganic dust containing no free silica
Organic dust

Pourers (foundry)
Heat

Powder Makers (see smokeless powder makers)

Preparers (tannery)
Anthrax and glanders
Dampness
Septic infections

Preservative Makers and Handlers
Formaldehyde

Pressers
Carbon monoxide
Repeated motion, pressure, shock, etc.

Pressmen (oil refining)
Dampness
Petroleum

Pressmen (printers) (see printers)

Pressroom Workers (rubber)
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Sudden variations of temperature

Primers (explosives)
Mercury and its compounds

Printers
Aniline and other amino compounds of benzol and its homologues
Antimony and its comopunds
Arsenic and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Carbon monoxide
Carbon tetrachloride
Cyanogen compounds
Inorganic dust containing no free silica
Lead and its compounds
Mercury and its compounds
Methanol
Tetrachlorethylene
Turpentine

Printers Textile (see textile printers)

Puddlers (iron and steel)
Carbon monoxide
Heat
Manganese

Pullers Out (felt hats)
Heat

Pulp Mill Workers (see also paper makers)
Dampness
Heat

Putty Makers
Benzine
Carbon disulphide
Inorganic dust containing no free silica
Lead and its compounds

Putty Polishers (glass)
Inorganic dust containing no free silica
Lead and its compounds

Pyridine Makers
Pyridine

Pyrites Burners
Arsenic and its compounds
Heat
Hydrogen sulphide
Inorganic dust containing no free silica
Selenium compounds
Sulphur dioxide

Pyroxylin Plastic Workers
Acetalydehyde
Acetone
Acrolein
Amyl acetate
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Arsine
Benzine
Benzol and its homologues (toluol and xylol)
Butyl alcohol
Carbon monoxide
Carbon tetrachloride
Cyanogen compounds
Dichlorethylene
Dioxan
Ethylene dibromide
Hydrogen sulphide
Lead and its compounds
Methanol
Methyl cellosolve
Nitrous fumes and nitric acid
Organic dust
Sulphuric acid
Tetrachlorethane
Triorthocresyl phosphate

Quarrymen
Inorganic dust containing free silica
Inorganic dust containing no free silica
Repeated motion, pressure, shock, etc.

Quartz Workers
Inorganic dust containing free silica

Radioactive Paint Makers
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Radioactive Water Makers
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Radiologists
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Radio Tube Makers
Mercury and its compounds

Radium Miners
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Radium Ore Reduction Workers
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Radium Specialists
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Rag Workers
Anthrax and glanders
Organic dust
Septic infections

Rayon Makers
Ammonia
Amyl acetate
Arsine
Butyl alcohol
Carbon disulphide
Chlorinated diphenyls
Chlorine
Cyanogen compounds
Dichlorethylene
Dampness
Dioxan
Formaldehyde
Heat

*Occupations are arranged alphabetically and designated in bold type

Hydrochloric acid
Hydrogen sulphide
Methanol
Methylene chloride
Nitrous fumes and nitric acid
Oxalic acid
Sodium hydroxide
Sulphuric acid
Tetrachlorethane

Reclaimers (rubber)

Aniline and other amino compounds of benzol and its homologues
Benzol and its homologues (toluol and xylol)
Carbon disulphide
Hydrochloric acid
Lead and its compounds
Phenol
Sulphuric acid

Red Lead Workers

Lead and its compounds

Refiners (metals) (see also particular occupation)

Arsenic and its compounds
Arsine
Carbon monoxide
Heat
Hydrochloric acid
Lead and its compounds
Mercury and its compounds
Nitrous fumes and nitric acid
Sulphur dioxide
Sulphuric acid

Refiners (sugar) (see sugar refiners)

Refrigerating Plant Workers

Ammonia
Carbon dioxide
Dampness
Methyl chloride
Ozone
Sudden variations of temperature

Refrigerator (mechanical) Makers and Repair Men

Acrolein
Ethyl bromide and ethyl chloride
Methyl bromide
Methyl chloride
Methyl formate
Sulphur dioxide

Resins (synthetic) Makers

Acetaldehyde
Acetone
Chlorinated diphenyls
Chlorinated napthalenes
Cresol
Dichloroethyl ether
Formaldehyde
Furfural
Methanol
Methyl cellosolve
Organic dust
Oxalic acid
Phenol
Selenium compounds
Trichlorethylene
Vinyl chloride

Riveters

Lead and its compounds
Repeated motion, pressure, shock, etc.)

Road Repairers

Heat
Inorganic dust containing free silica
Inorganic dust containing no free silica
Tar and pitch

Roentgenologists

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Roller Coverers (cotton mill)

Heat
Organic dust

Rollers (metals)

Heat

Roll Setters (iron and steel)

Heat

Roll Wrenchers (iron and steel)

Heat

Roofers

Lead and its compounds
Sudden variations of temperature
Tar and pitch

Roofing Material Workers

Asbestos
Heat
Inorganic dust containing no free silica
Tar and pitch

Rope Makers

Organic dust
Tar and pitch

Rotogravure Workers

Benzol and its homologues (toluol and xylol)

Roughers (iron and steel)

Heat

Rubber Cement Makers (see cement mixers (rubber)

Rubber Glove Makers

Benzine

Rubberized Asbestos Board Makers

Benzine

Rubber (synthetic) Makers

Acetalydehyde
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Chlorine
Chloroprene (2-chlorobutadiene)
Cresol
Nitrous fumes and nitric acid
Sulphur chloride

Rubber Tire Builders

Benzine
Benzol and its homologues (toluol and xylol)

Rubber Workers (see also particular occupation)

Acetone
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Arsenic and its compounds
Barium
Benzine
Benzol and its homologues (toluol and xylol)
Carbon disulphide
Carbon tetrachloride
Chromium compounds
Ethylene dichloride
Formaldehyde
Formic acid
Inorganic dust containing no free silica
Inorganic dust containing free silica
Lead and its compounds
Magnesium
Methanol
Nitrous fumes and nitric acid
Organic dust
Phenol
Pyridine
Sodium hydroxide
Sudden variations of temperature
Tellurium compounds
Tetrachlorethane
Trichlorethylene
Turpentine

Sagger Makers

Dampness
Inorganic dust containing no free silica
Lead and its compounds

Sailors

Carbon monoxide
Sudden variations of temperature
Repeated motion, pressure, shock, etc.

Salt Extractors (coke oven byproducts)

Ammonia
Sulphuric acid

Salt Preparers

Heat
Inorganic dust containing no free silica
Sudden variations of temperature

*Occupations are arranged alphabetically and designated in bold type

Sand Blasters
Inorganic dust containing free silica
Inorganic dust containing no free silica

Sand Cutters
Inorganic dust containing free silica

Sanders
Inorganic dust containing free silica
Inorganic dust containing no free silica

Sanding Machine Operators
Inorganic dust containing free silica
Inorganic dust containing no free silica

Sandpaperers (enameling and painting auto bodies, etc.)
Inorganic dust containing no free silica
Lead and its compounds

Sandpaper Makers
Inorganic dust containing free silica
Inorganic dust containing no free silica

Sand Pulverizers
Inorganic dust containing free silica

Saw Filers
Inorganic dust containing no free silica

Sawmill Workers
Organic dust

Sawyers
Repeated motion, pressure, shock, etc.

Sawyers (stone)
Inorganic dust containing free silica
Inorganic dust containing no free silica

Scissors Sharpeners
Inorganic dust containing no free silica
Repeated motion, pressure, shock, etc.

Scourers (belts)
Benzol and its homologues (toluol and xylol)

Scourers (metals)
Benzine
Carbon tetrachloride
Nitrous fumes and nitric acid
Sulphuric acid
Trichlorethylene

Scourers, Wood Lasts (shoes)
Organic dust

Scouring Powder Makers
Inorganic dust containing free silica
Inorganic dust containing no free silica

Scrapers (foundry)
Inorganic dust containing free silica
Inorganic dust containing no free silica

Screen Tenders (pulp mill)
Dampness

Screen Workers (lead and zinc smelting)
Inorganic dust containing no free silica
Lead and its compounds

Scrubwomen
Repeated motion, pressure, shock, etc.

Sealers (incandescent lamps)
Carbon monoxide

Sealing Wax Makers
Arsenic and its compounds
Turpentine

Seamstresses
Repeated motion, pressure, shock, etc.

Selenium Refiners
Selenium compounds

Sewage Purification Workers
Chlorine

Sewer Workers
Ammonia
Benzine
Carbon dioxide
Carbon monoxide
Dampness
Hydrogen sulphide

Sewing Machine Operators
Repeated motion, pressure, shock, etc.

Shade Cloth Makers
Benzine
Benzol and its homologues (toluol and xylol)

Shale Oil Workers (see petroleum refiners)

Shavers (felt hats; fur; tannery)
Anthrax and glanders
Dampness
Organic dust
Septic infections

Shearers
Infections
Undulant fever

Sheep Dip Makers
Arsenic and its compounds

Sheet Metal Workers
Lead and its compounds

Shellackers
Amyl acetate
Benzine
Benzol and its homologues
Carbon and its compounds (toluol and xylol)
Lead and its compounds
Methanol
Turpentine

Shellac Makers
Ammonia
Amyl acetate
Benzine
Benzol and its homologues (toluol and xylol)
Butyl alcohol
Lead and its compounds
Methanol
Turpentine

Shell Fillers
Dinitrophenol
Nitrobenzol and other nitro compounds of benzol and its homologues
Nitroglycerine
Picric acid

Shepherds
Anthrax and glanders
Infections

Sherardizers
Zinc

Shingle Stainers
Benzine

Shipyard Workers
Tar and pitch

Shoddy Workers
Anthrax and glanders
Arsine
Chlorine
Hydrochloric acid
Organic dust
Septic infections
Sulphuric acid

Shoe Dyers
Lead and its compounds
Nitrobenzol and other nitro compounds of benzol and its homologues

Shoe Factory Operatives (see also particular occupation)
Acetone
Amyl acetate
Anthrax and glanders
Benzine
Benzol and its homologues (toluol and xylol)
Carbon tetrachloride
Methanol
Organic dust

*Occupations are arranged alphabetically and designated in bold type

Tetrachlorethane
Trichlorethylne
Turpentine

Shoe Finishers
Ammonia
Amyl acetate
Amyl alcohol
Benzine
Benzol and its homologues (toluol and xylol)
Methanol
Sudden variations of temperature

Shoe Heel (wood) Coverers
Acetone
Amyl acetate
Benzine
Benzol and its homologues (toluol and xylol)
Methanol

Shoemakers (see cobblers)

Shooting Gallery Workers
Mercury and its compounds

Shot Makers
Antimony and its compounds
Arsenic and its compounds
Lead and its compounds

Shove in Boys (glass)
Heat

Shifters
Inorganic dust containing no free silica
Organic dust

Silicon Alloy Makers
Inorganic dust containing free silica

Silk Weighters
Lead and its compounds
Tin

Silk Workers
Organic dust
Septic infections

Silo Workers
Carbon dioxide

Silverers (mirror) (see mirror silverers)

Silver Foil Makers
Silver

Silver Melters
Carbon monoxide
Cyanogen compounds
Silver
Sudden variations of temperature

Silver Miners
Arsenic and its compounds

Silver Nitrate Makers
Silver

Silver Platers (see electroplaters
Silver

Silversmiths
Silver

Singers (cloth)
Carbon monoxide

Sintering Plant Workers
Inorganic dust (no silica)

Sizers (felt hats)
Heat
Mercury and compounds

Skimmers (glass)
Heat
Ultraviolet and infrared rays

Slag Workers
Heat
Inorganic dust (no silica)

Slate Workers
Inorganic dust (free silica)
Inorganic dust (no free silica)

Slaughter House Workers
Anthrax and glanders
Dampness
Infections
Septic infections
Undulant fever

Slip Makers (pottery)
Dampness
Inorganic dust (no free silica)
Lead and its compounds

Slushers (porcelain-enameling)
Lead and its compounds

Smelters (see particular metal)
Heat
Inorganic dust (free silica)
Inorganic dust (no free silica)
Sulphur dioxide

Smokeless Powder Makers
Acetone
Amyl acetate
Amyl alcohol
Benzol and its homologues
Nitrobenzol and other nitro compounds of benzol
Nitrous fumes and nitric acid
Nitroglycerin
Phenol
Picric acid

Smoothers (glass)
Dampness
Inorganic dust (no silica)

Soap (abrasive) Workers
Inorganic dust (no free silica)
Inorganic dust (free silica)

Soap Makers
Acetylene tetrachloride
Acrolein
Amyl acetate
Arsenic and its compounds
Benzol and its homologues toluol and xylol
Carbon tetrachloride
Dampness
Dichlorethyl ether
Dichlorethane
Formaldehyde
Formic acid

Sulphuric acid

Sulphate Makers
Sulphuric acid

Sulphides Makers
Hydrogen sulphides

Sulphide Cooks (pulp mill)
Heat
Sudden variations of temperature
Sulphur dioxide

Sulphur Chloride Makers
Chlorine
Hydrochloric acid
Hydrogen sulphide
Sulphur chloride

Sulphur Dioxide Makers
Carbon monoxide
Sulphur dioxide

Sulphurers (malt and hops)
Sulphur dioxide

Sulphur Extractors
Carbon disulphide

*Occupations are arranged alphabetically and designated in bold type

Sulphuric Acid Workers
- Ammonia
- Arsenic and its compounds
- Arsine
- Hydrogen sulphide
- Lead and its compounds
- Nitrous fumes and nitric acid
- Selenium and its compounds
- Sulphur dioxide
- Sulphuric acid
- Vanadium

Sulphur Miners
- Hydrogen sulphide
- Sulphur dioxide

Sumackers (tannery)
- Anthrax and glanders
- Dampness

Surgical Dressing Makers
- Phenol

Tablehands (tannery)
- Anthrax and glanders
- Dampness

Table Operatives (iron and steel)
- Heat

Table Turners (enameling)
- Inorganic dust (no free silica)
- Lead and its compounds
- Sudden variations of temperature

Tailors
- Repeated motion, pressure and shock

Takers Down (glass)
- Carbon monoxide
- Heat

Talc Workers
- Inorganic dust (no free silica)

Tallow Refiners
- Acrolein
- Carbon disulphide
- Septic infections
- Sulphuric acid

Tank Cleaners (see also particular chemical)
- Arsine
- Benzine
- Benzol
- Hydrofluoric acid
- Tar and pitch
- Tetraethyl lead

Tank Men
- Dampness
- Heat

Tannery Workers
- Ammonia
- Amyl acetate
- Aniline and other amino compounds of benzol and its homologues
- Anthrax and glanders
- Arsenic and its compounds
- Benzine
- Chloride of lime
- Chromium and its compounds
- Cyanogen and its compounds
- Dampness
- Formaldehyde
- Formic acid
- Hydrochloric acid
- Hydrogen sulphide
- Lead and its compounds
- Mercury and its compounds
- Oxalic acid
- Picric acid
- Septic infections
- Sodium hydroxide
- Sulphur dioxide
- Sulphuric acid

Tapers (airplanes)
- Acetylene tetrachloride

Tappers (smelting) (see also particular metal)
- Heat

Tar (distillery) Workers
- Arsenic and its compounds
- Cresol
- Heat
- Tar and pitch (see coal tar workers)

Taxidermists
- Anthrax and glanders
- Arsenic and its compounds
- Mercury and compounds
- Organic dust
- Septic infections

Tear Gas Makers (see war gas makers)

Teazers (glass)
- Carbon monoxide
- Heat

Telegraphers
- Repeated motion, pressure, and shock, etc.

Telephone Linemen (trench work) (see also cable splicers)
- Carbon monoxide
- Dampness

Temperers
- Carbon dioxide
- Carbon monoxide
- Cyanogen compounds
- Heat
- Lead and its compounds
- Mercury and its compounds
- Petroleum
- Sulphuric acid

Tetraethyl Lead Makers
- Bromine
- Lead and its compounds
- Tetraethyl lead

Textile (asbestos) Workers
- Asbestos dust

Textile Comb Makers
- Inorganic dust (no free silica)

Textile Finishers (see particular occupation)

Textile Printers
- Amyl acetate
- Aniline and other amino compounds of benzol and its homologues
- Antimony and its compounds
- Arsenic and its compounds
- Cadmium
- Carbon monoxide
- Chlorine
- Cromium and its compounds
- Cyanogen and its compounds
- Formaldehyde
- Heat
- Hydrochloric acid
- Lead and its compounds
- Manganese
- Mercury and its compounds
- Methanol
- Nitrous fumes and nitric acid
- Phenol
- Sudden variations in temperature
- Sulphuric acid
- Turpentine
- Vanadium

Textile Workers (see particular occupation)
- Dampness
- Heat
- Organic dust
- Sudden variations of temperature

Thallium Workers
- Thallium

Thermometer Makers
- Mercury compounds
- Methyl chloride
- Thallium

Thread Glazers
- Heat
- Sudden variations of temperature

Tile Makers (see also pottery workers)
- Dampness
- Heat
- Inorganic dust (free silica)
- Inorganic dust (no free silica)
- Lead and its compounds
- Sudden variations of temperature
- Uranium

Tin Foil Makers
- Heat
- Lead and its compounds

Tinners
- Acrolein
- Ammonia

*Occupations are arranged alphabetically and designated in bold type

Arsenic and its compounds
Arsine
Dampness
Heat
Hydrochloric acid
Lead and its compounds

Tin Plate Mill Workers (see iron and steel workers)

Tin Recovery Workers
Chlorine

Tire Builders (see rubber tire builders)

Tobacco Denicotinizers
Ethylene dichloride
Trichlorethylene

Tobacco Moisteners
Carbon dioxide
Dampness

Tobacco Seedling Treaters
Benzol and its homologues (xylol and toluol)

Tobacco Workers
Nicotine
Organic dust

Tongsmen (iron and steel)
Heat

Tool Makers
Inorganic dust (no free silica)

Top Fillers (foundry)
Inorganic dust (no free silica)
Heat
Carbon monoxide

Towermen (sulphuric acid) (see also sulphuric acid workers)
Arsine
Nitrous fumes and nitric acid
Sulphur dioxide
Sulphuric acid

Toy Makers
Amyl acetate
Arsenic and its compounds
Lead and its compounds

Transfer Workers (pottery)
Lead and its compounds
Turpentine

Transparent Wrapping Materials Workers
Acetone
Carbon disulphide
Hydrochloric acid
Hydrogen sulphide
Sodium hydroxide
Sudden variations of temperature
Sulphuric acid

Trappers
Infections

Treaders (rubber)
Benzine
Benzol and its homologues (xylol and toluol)

Tree Sprayers (see sprayers tree)

Trichlorethylene Workers
Trichlorethylene

Trinitrotoluol
Benzol and its homologues (xylol and toluol)
Nitrobenzol and other nitro compounds of benzol and its homologues

Tube Makers (glass)
Heat

Tubulators (incandescent lamps)
Carbon monoxide

Tumbling Barrel Worker
Inorganic dust (free silica)
Inorganic dust (no free silica)

Tunnel Workers
Carbon dioxide
Compressed air (increase atmospheric pressure)
Hydrogen sulphide
Inorganic dust (free silica)
Inorganic dust (no free silica)
Nitrous fumes and nitric acid

Tunners-Out (glass)
Heat

Turpentine Extractors
Heat
Turpentine

Type Cleaners
Benzine
Methanol

Type Founders
Antimony and its compounds
Lead and its compounds

Type Melters
Acrolein
Lead and its compounds

Type Setters (see compositors)

Typists
Repeated motion, pressure, and shock, etc.

Ultramarine Blue Makers
Sulphur dioxide

Upholsterers
Anthrax
Methanol
Organic dust

Uranium Miners
Uranium
X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Uranium Workers
Uranium
X-ray, radium and other radioactive substances (radiothorium mesothorium, etc.)

Vanadium Steel Workers
Heat
Vanadium

Vapor Curers (see vulcanizers)

Varnishers
Acetaldehyde
Acetone
Amyl acetate
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Benzine
Benzol and its homologues (toluol and xylol)
Butyl alcohol
Carbon tetrachloride
Dichlorethylene
Ethylene dichloride
Formic acid
Lead and its compounds
Methanol
Tetrachlorethane
Trichlorethylene
Turpentine

Varnish Makers
Acetaldehyde
Acetone
Acetylene tetrachloride
Amyl acetate
Ammonia
Amyl alcohol
Aniline and other amino compounds of benzol and its homologues
Barium
Benzine
Benzol and its homologues (xylol and toluol)
Butyl alcohol
Carbon tetrachloride
Chlirinated dyphenyls
Chlorinated hydrocarbons
Dichlorethylene
Diethylene dioxide
Ethylene dichloride
Hexone
Lead and its compounds
Manganese
Methanol
Methyl cellosolve
Ozone
Phenol
Sodium hydroxide
Sulphur dioxide
Sudden variations of temperature
Turpentine
Trichlorethylene

Varnish Remover Makers
Benzine
Benzol and its homologues toluol and xylol
Dichloroethyl ether
Hexanone
Pentanone
Tetrachlorethane

*Occupations are arranged alphabetically and designated in bold type

Varnish Removers

Benzine
Benzol and its homologues (toluol and xylol)
Dichloroethyl ether
Hexanone
Pentanone
Tetrachlorethane

Vatmen

Carbon dioxide
Dampness
Heat

Vat Varnishers (see varnishers)

Vault Workers

Carbon dioxide

Velvet Makers

Arsenic and its compounds
Heat

Veterinarians

Anthrax and glanders
Infections
Septic infections
Undulant fever

Vignetters

Hydrochloric acid

Vinegar Workers

Carbon dioxide
Heat

Vintners

Carbon dioxide

Vinyl Chloride Makers

Vinyl chloride

Vulcanizers

Ammonia
Aniline and other amino compounds of benzol and its homologues
Antimony and its compounds
Benzine
Benzol and its homologues (toluol and xylol)
Carbon dioxide
Carbon disulphide
Carbon tetrachloride
Chromium compounds
Dampness
Heat
Hydrogen sulphide
Methanol
Selenium compounds
Sudden variations of temperature
Sulphur chloride
Sulphur dioxide

Vulcanizers (steam)

Wallpaper Printers

Arsenic and its compounds
Chromium compounds
Heat
Lead and its compounds
Sudden variations of temperature

Warehouse Workers

Anthrax and glanders

War Gas Makers

Arsine
Benzol and its homologues (toluol and xylol)
Bromine
Chlorine
Cyanogen compounds
Dimethyl sulphate
Phosgene
Picric acid
Sulphuric chloride

Warming House Employees (guncotton)

Sudden variations of temperature

Washers

Dampness

Washers (metal) see also degreasers)

Benzine

Washwomen

Dampness
Repeated motion, pressure, shock, etc.

Watch Dial (luminous) Painters

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Watchmakers

Repeated motion, pressure, shock, etc.

Water Gilders

Mercury and its compounds

Waterproofers (paper and textile)

Benzine
Benzol and its homologues (toluol and xylol)
Carbon tetrachloride
Chromium compounds
Formaldehyde
Tar and pitch

Water Purifiers

Barium
Chloride of lime
Chlorine
Ozone

Wax Makers (see also petroleum)

Benzol and its homologues (toluol and xylol)
Chlorinated diphenyls
Chlorinated napthalenes
Ozone
Sulphuric acid
Tetrachlorethane
Turpentine

Wax Ornament Makers

Acrolein
Arsenic and its compounds
Chromium compounds

Weavers

Organic dust
Repeated motion, pressure, shock, etc.

Weavers (asbestos)

Asbestos

Weighers

Inorganic dust containing no free silica
Organic dust

Welders

Arsenic and its compounds
Benzol and its homologues (toluol and xylol)
Cadmium
Carbon monoxide
Chromium compounds
Copper
Heat
Hydrofluoric acid
Lead and its compounds
Manganese
Mercury and its compounds
Nitrous fumes and nitric acid
Ozone
Phosphorus
Phosphuretted hydrogen
Selenium compounds
Ultraviolet and infrared rays
Zinc

Well Workers

Carbon dioxide

White Lead Workers

Carbon dioxide
Lead and its compounds

Window Shade Makers

Benzine
Benzol and its homologues (toluol and xylol)

Wire Drawers

Arsenic and its compounds
Hydrochloric acid
Sulphuric acid

Wirers (incandescent lamps)

Amyl acetate

*Occupations are arranged alphabetically and designated in bold type

Wood Alcohol Distillers

Acetone
Carbon monoxide
Methanol

Wooden Heel Workers

Anthrax and glanders

Wood Last Scourers (shoes)

Organic dust

Wood Polishers (see furniture polishers)

Wood Preservers

Arsenic and its compounds
Dinitrophenol (1-2-4)
Mercury and its compounds
Phenol
Sulphuric acid
Tar and pitch

Wood Stainers

Chromium compounds
Lead and its compounds

Woodworkers

Benzine
Methanol
Organic dust

Wool Carders

Anthrax and glanders
Organic dust

Wool Scourers

Acetone
Ammonia
Anthrax and glanders
Dampness
Sudden variations of temperature

Wool Spinners

Anthrax and glanders
Organic dust

Wool Workers (see also particular occupation)

Anthrax and glanders
Organic dust

Wringers (guncotton)

Nitrous fumes and nitric acid

X-ray Machine Makers

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

X-ray Photographers

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

X-ray Technicians

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

X-ray Tube Makers

X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)

Yeast Makers

Acetaldehyde
Carbon dioxide
Hydrofluoric acid
Sulphuric acid

Zinc Chloride Makers

Arsine
Chlorine
Hydrochloric acid

Zinc Electrode Makers

Mercury and its compounds

Zincers

Cyanogen compounds

Zinc Miners (see also miners)

Arsenic and its compounds
Lead and its compounds
Manganese

Zinc Smelters and Refiners

Antimony and its compounds
Arsenic and its compounds
Carbon monoxide
Heat
Inorganic dust containing free silica
Inorganic dust containing no free silica
Lead and its compounds
Manganese
Seleninum compounds
Sulphur dioxide
Tellurium compounds
Zinc

Zoological Technicians

Undulant fever

*Occupations are arranged alphabetically and designated in bold type

SECTION III.

IMPORTANT PHYSICAL PROPERTIES AND PRINCIPAL USES OF CERTAIN TOXIC SUBSTANCES, WITH CHIEF DIAGNOSTIC SIGNS, AND SYMPTOMS OF INJURY OR OTHER DISABILITY

SECTION III

IMPORTANT PHYSICAL PROPERTIES AND PRINCIPAL USES OF CERTAIN TOXIC SUBSTANCES WITH CHIEF DIAGNOSTIC SIGNS OF INJURY OR OTHER DISABILITY

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Acetaldehyde	Liquid	Dangerous	None adopted. Less toxic than formaldehyde	Organic synthesis; silvering mirrors; dye mfg.; disenfectants; rubber mfg.; explosives	In the form of vapor thru respiratory organs and mucous membranes	Irritation of mucous membranes of eyes and respiratory tract, dyspnea and cough, acceleration of heart, profuse night sweats.
Acetanilide (Also see Aniline)	White leaf crystals	None	None adopted. Less toxic than aniline	Medicine; addition to cellulose ester "dopes" and lacquers; dye, paint and rubber mfg.	Thru respiratory and digestive organs	Cyanosis or blueness of lips and finger tips, mental confusion, dizziness.
Acetone	Liquid	Explosive	200 p.p.m. (1)	Organic synthesis; solvent; varnishes; lacquers; mfg. of celluloid; mfg. of chloroform; airplane-dope	Direct action on skin; thru respiratory organs	Irritation of skin and mucous membranes of eyes and respiratory tract.
Acetylene	Gas	Explosive	None adopted, but 90,000 p.p.m. bearable for 1 hour	Organic synthesis; illumination; oxy-acetylene welding and cutting of metals	Thru respiratory organs	Headache, nausea, general malaise, feeling of suffocation, vertigo.
Acridine	Colorless crystalline needles	None	None adopted	Dye mfg.; acridine workers	Exerts effect in any state of aggregation on skin and mucous membranes	Irritation of skin and mucous membranes of eyes and respiratory tract, violent sneezing.
Acrolein	Liquid	Slight	3.3 p.p.m.	Organic synthesis; mfg. of military poison gas; refrigerants; soap and varnish mfg.	As vapor thru respiratory organs and mucous membranes; direct action on skin	Excessive irritation of skin and mucous membranes of eyes and respiratory tract; bronchial catarrh dyspnea.
Aluminum	Metal; dust	Explosive	None adopted	Metal alloys; paint		Not generally regarded as an industrial poison.
Amino Compounds (Also see Aniline)	Crystals; powder; liquid	None	See specific compound	Organic synthesis; dye mfg.; photographic developers; paints; disinfectants; varnishes; printing	Respiratory organs, digestive tract and absorption thru skin	Pallor followed by cyanosis, especially of lips and finger tips, weakness, somnolence, irritability, mental confusion, headache and vertigo, muscular tremor and convulsions, eczematous eruptions, weak pulse, brownish discoloration of blood and urine, disorders of the bladder, (tumors, etc.).
Ammonia	Gas	Explosive	100 p.p.m.	Organic preparations; refrigeration; bronzing; electro-plating; galvanizing; dye and color mfg.; sugar refining	As a gas thru respiratory organs	Irritation of respiratory passages, cough and dyspnea, pulmonary edema, bronchitis, severe irritation of eyes, conjunctivitis, caustic action on skin.
Amyl Acetate	Liquid	Explosive	400 p.p.m.	Preparation of flavoring compounds; bronzing liquids; metallic paints; perfumery; soap	As vapor thru respiratory organs	Irritation of mucous membranes of eyes, nose, throat and bronchial tubes; headache and vertigo, drowsiness, oppression in chest, cough, nausea.
Amyl Alcohol	Liquid	Dangerous	55.6 p.p.m.	Organic synthesis; brewing; paint and rubber mfg.; lacquers, varnishes	As vapor thru respiratory organs	Irritation of eyes and respiratory tract, headache and vertigo, dyspnea and cough, nausea, vomiting, diarrhea.
Aniline	Oily Liquid	None	5 to 7 p.p.m.	Organic synthesis; dye mfg.; rubber industry; paint and varnish mfg.; disinfectants; explosives	Absorption thru skin. Thru respiratory and digestive organs	Acute:—Muscular weakness, vertigo, pallor, cyanosis of lips, slow pulse, fainting, possible death. Chronic:—Nervous symptoms, disturbances of sensibility and equilibrium, nausea, vomiting, diarrhea, eczema.
Antimony and Its Compounds	Crystals; powder; metal	Dangerous	None adopted	Metallurgy; paints; mordant; storage batteries; electrotypers; enameling; lead and zinc mining and smelting	Direct action on skin. As dust or vapor thru respiratory organs; digestive tract and mucous membranes	Inflammation of mucous membranes of nose, mouth and throat. Intestinal disorders. Irritation and eczematous eruptions of the skin. Metal fume fever (usually associated with lead and arsenic in most of its industrial uses.
Arsenic	Crystals	None	None adopted	Medicine; arsenic salts; metallurgy; insecticides; lead, copper and zinc mining and smelting	As gas and dust thru respiratory organs; mucous membranes and digestive organs	Toxic effects on digestive system, liver, kidneys, circulatory system and heart. Loss of hair and nails. Perforation of septum. Local ulceration. Metal fume fever.

*The "probable safe concentrations" listed in this column have been compiled from numerous sources. But four, namely, carbon monoxide, hydrogen sulphide, carbon disulphide and benzol (benzene) have been completed by the American Standards Association. A number of others are in the process of completion. The concentration designated for cadmium represents an emergency standard completed by the A. S. A. These five are the only concentrations adopted by Utah, however, most of the others are based on a wide experience and have been recommended by reliable sources.

(1) Parts per million.

PAGINATION INCORRECT

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Arsenic Compounds (Except Arsine)	Crystals; power	Dangerous	(Trioxide) 0.5 mg./cu.m.(1)	Analytical chemistry; paint pigments; medicine; depilatory agent; leather industry; copper, lead and zinc mining and smelting; dye and varnish mfg.; paints, laquers	See Arsenic	Acute poisoning:—Constriction of the esophagus, pains in stomach, vomiting, diarrhea, bluish skin, headache, faintness, loss of consciousness, convulsions, death. Chronic poisoning; persistent headache, sleeplessness, gastric disturbances, vomiting, diarrhea, catarrh of the mucous membranes, skin diseases, loss of hair and nails, chilliness, weakness of the muscles.
Arsine (Arseniuretted-hydrogen)	Gas	Slightly	1 p.p.m.(2)	Organic synthesis; military poison gas	As gas thru respiratory organs	Severe headache, nausea, vomiting, hemoglobinuria, gastric disorders; shivering and chills, jaundice.
Barium and Compounds	Metal; crystaline powder	Explosive	None adopted	Paint mfg.; sugar refining; fire works mfg.; dye mfg.; insecticides	Direct action on skin; ingestion of soluble salts	Dermatitis, whitening and loss of hair, paralysis, acceleration of the heart, cyanosis of the skin, gastric pain and vomiting.
Bezine (Naptha-gasoline)	Liquid	Explosive	1000 p.p.m.	Solvent; motor fuel; dry cleaning; paint, varnish, soap mfg.; rubber industry	Vapor, thru respiratory organs and at times by absorption thru skin	Headache, vertigo, nausea, vomiting cough, irregular respiration, weakness of heart, muscular twitching, drowsiness, "Naptha jag," dermatitis.
Benzol (Benzene)	Liquid	Explosive	75-100 p.p.m.	Solvent; motor fuel; paint and varnish removers; organic preparations; airplane industry; dye and varnish mfg.; rubber industry; welders; dry cleaning	Vapor, thru respiratory organs; reabsorption thru skin	Headache an vertigo, gastrointestinal disturbances, hemorrhages, purpura, injury to blood-forming organs with marked but varied changes in the blood picture—slight polycythemia followed by leukopenia, erythropenia, anemia, and so forth; injury to blood vessels, heart, liver, kidneys, and nervous system; marked susceptibility to infection, local irritation, (bronchitis, conjunctivitis, gingivitis, and so forth). In acute poisoning; inebriation, staggering gait, twitchings, convlusions, and loss of consciousness. Note:—The effects of toluol and xylol differ from those of benzol particularly as regards their effects on the blood and blood-forming organs. Neither of these compounds produce the changes in the blood characteristic of benzol. It is important to note however that the toluol and xylol used in industry are frequently mixed with benzol.
Beryllium	Metal; powder	None	None adopted	Metal alloys	Fumes thru respiratory tract	Metal fume fever (see Zinc). Severe lung injury has been reported from the extraction of beryllium, but this is thought to be due to the fluorine compounds used in the process of extraction.
Brass (Zinc)	Metal	None	15 mgs./cu.m.	Metallurgy; organic synthesis; welding; brass foundries	As a dust or fumes, irritating respiratory system and entering alimentary canal	Headache, general malaise, irritation of throat, cough, slight nausea, severe chills with fever, profuse perspiration, muscular pains, exhaustion. Metal fume fever.
Bromine	Liquid	None	1 p.p.m.	Organic synthesis; dyes; bromides; military poison gas; explosives	As a vapor thru respiratory system	Irritation of air passages, bronchitis, conjunctivitis, skin eruptions, brownish discloration of skin and mucous membranes.
Butanone (methylethyl ketone)	Liquid	Slight	None adopted	Pyroxylin mfg.; artificial leather mfg.; paint removers; cosmetic mfg.	Absorption by skin, respiratory tract and mucous membranes	Irritation of eyes and nose (Warning odor.)
Butyl Acetate	Liquid	Dangerous	400 p.p.m.	Lacquer mfg.; straw hat mfg.; leather mfg.; plastics; safety glass	Mucous membranes; fumes and vapors thru respiratory tract	(See Amyl Acetate)
Butyl Alcohol (n-Butanol)	Liquid	Dangerous	100 p.p.m.	Mfg. fruit essences; organic synthesis; artificial leather; perfumes; dye mfg.; varnishes	Direct action on skin; as a vapor thru respiratory system	No case of industrial poisoning has been reported, but it has been considered a contributing cause in a number of cases of poisoning. Animal experimentation showed marked dermatitis, early liver degeneration, a definite decrease in red-blood cells, with an absolute and relative lymphocytosis.
Cadmium	Metal	None	.1 mg./cu.m.	Alloys; cadmium salts; dental amalgam; electro plating; storage batteries; lead and zinc smelters	Fumes thru respiratory tract	Loss of appetite, weakness, nausea, vomiting, rapid pulse, fatty degeneration of liver, inflammation of kidneys, inflammation of lungs, cough, soreness of chest. Metal fume fever.
Calcium Cyanamide	Crystals	None	None adopted	Fertilizers; nitrogen products; farming	Direct action on skin. As a dust thru the respiratory organs, digestive tract, and visible mucous membranes	Severe irritation of nose, throat, eyes, and skin. Conjunctivitis, tonsilitis, laryngitis, bronchitis, dermatitis.

*See Note Page 51. (1) Milligrams per cubic meter. (2) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Carbon Dioxide	Gas	None	5,550 p.p.m. (1)	Aerating water, wine, beer, etc.; mfg. of soft drinks; fire extinguisher; refrigerant; chemical reagents; mining	In form of gas by inhalation	Large quantities cause sudden death by suffocation. Smaller quantities—vertigo, disturbances of respiration, ringing in ears, headache, dyspnea, drowsiness, muscular weakness.
Carbon Disulphide	Liquid	Explosive	20 p.p.m.	Solvent; varnishes; preservative; insecticides; mfg. of carbon tetrachloride; enameling	In form of vapor thru respiration. Absorption thru skin.	Headache, vertigo, weakness, psychical effects, disturbances of sensation, digestive disturbances, polyneuritis, irritation of skin.
Carbon Monoxide	Gas	Explosive	100 p.p.m.	Not an article of commerce —caused by incomplete combustion	As a gas thru respiratory system	Acute:—Slow pulse, vertigo, headache, nausea, redness and suffusion of skin, dyspnea, fever, marked leukocytosis, coma and death. Chronic:—Headache, nausea, vomiting, anemia, palpitation, insomnia, failure of memory.
Carbon Tetrachloride	Liquid	None	100 p.p.m.	Solvent; fire extinguishers; cleaning compounds; airplane dope; dye, paint and lacquer industries	As vapor thru respiratory organs	Irritation of nose, throat and eyes. Nausea, cough, headache, marked excitement, vomiting, vertigo, mental dullness, confusion. Injury to liver, jaundice, nephritis, dermatitis, narcosis.
Cellosolve (monoethyl Ethylene Glycol)	Liquid	Slight	500 p.p.m.	Lacquer mfg.; paint mfg.; solvent for nitro-cellulose	Mucous membranes; vapor thru respiratory tract	U. S. Bureau of Mines found that men exposed to 0.6% for a few seconds reported the atmosphere to be irritating to the eyes and have a very disagreeable odor. However, actual examinations of workers in lacquer and paint manufacture by the British Factory Dept. in 1934 revealed very little evidence of any injury to health from the use of cellosolve.
Chloride of Lime	Powder	Explosive	None adopted	Textile bleaching; organic synthesis; disinfectant; deodorizer; dye mfg.	As a gas thru inhalation; as vapor and dust irritating eyes, lungs and skin	Bronchitis, dyspnea, asthma, conjunctivitis, eczema, ulcers of the skin.
Chlorinated Diphenyls	Solids	None	1 mg./cu.m.	Electrical equipment; lacquer mfg.; paint mfg.; rayon mfg.; wax makers	Direct action on skin; vapors thru respiratory tract	Acneform skin eruptions, jaundice, and atrophy of liver.
Chlorinated Hydrocarbons						(See specific hydrocarbon such as carbon tertachloride, etc.)
Chlorinated Naphthalenes	Solids	None	"Penta" 0.5 mg./cu.m. (2) "Tri" 5.0 m./cu.m. above "tri" 1.0 mg.cu.m.	Degreasing; paint mfg.; lacquer mfg.; wax makers; electrical equipment mfg.	Direct action on skin; vapor thru respiratory tract	Acneform skin eruptions, jaundice and atrophy of liver.
Chlorine	Gas; liquid	Explosive	1 p.p.m.	Organic synthesis; textile bleaching; water purification; military poison gas; chlorination	As a gas thru respiratory system	Acute:—Large quantities cause cardiac paralysis, smaller quantities cause burning and stinging of the skin with formation of blisters, papules; cough, dyspnea, bronchitis, spasm of the glottis; perspiration; feeble pulse. Chronic:—Gastritis, anemia, nasal and bronchial catarrh, furunculosis, decayed teeth.
Chlorobenzene (Monochloro benzene)	Colorless liquid	Slight	75 p.p.m.	Solvent for cellulose acetate, resins, oils, fats, lacquers; and as a dry cleaning compound	Vapors thru respiratory tract	Acute:—Severe somnolence to loss of consciousness with cyanosis. Blood changes described as similar to nitrobenzol derivatives. Chronic:—Headache, giddiness.
Chlorodinitrobenzol						(See Nitrobenzol)
Chloroform	Liquid	None	100 p.p.m.	Solvent for fats, oils, rubber, waxes and resins; artificial silk mfg.	Vapor thru respiratory tract	Feeling of warmth, irritation of nose, throat and skin, loss of reflexes, shallow respiration, unconsciousness, paralysis, cardiac and respiratory failure.
Chloronitrobenzol						(See Nitrobenzol)
Chloroprene (2-chlorobutadiene)	Liquid	None	None adopted; 0.3 mg/liter may cause toxic symptoms	Synthetic rubber	Direct action on skin; vapor thru respiratory tract	Narcotic properties but is mainly characterized by its injurious effect on the liver and toxic effect on the kidneys and circulation. Chloroprene vapors mixed with air cause a primary irritation of the respiratory tract.

*See Note Page 51. (1) Parts per million. (2) Milligram per cubic meter.

PROPERTIES AND USES OF TOXIC SUBSTANCES WITH DIAGNOSTIC SIGNS OF INJURY

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Chromium compounds	Metal; crystals	Dangerous	.1 mg./c.m. (1)	Fur dyeing; metallurgy; electroplating; chromium salts; printing; tanning	As dust and fumes irritating respiratory mucous membranes and skin	Bronchitis, bronchopneumonia, otitis, conjunctivitis, gastritis, anemia, nephritis, eczema, ulcers of the skin and mucous membranes, ulceration and perforation of the nasal septum.
Cobalt	Metal	None	None adopted	Glass mfg.; steel alloy makers; pottery mfg.	Vapor thru respiratory tract	A case of poisoning with severe damage to the liver and kidneys was reported from a French tile factory. Animal experiments reveal polycythemia. Metal fume fever (see Zinc) has been reported.
Copper	Metal	None	None adopted	Metallurgy; electrical equipment; chemical apparatus; copper salts; alloys; coinage	As dust from filings irritating the respiratory mucous membranes; and thru the alimentary canal	Bronchitis, vomiting, gastritis. (See Zinc.)
Cresol (Cresylic Acid)	Liquid	Dangerous	None adopted	Wood preservative; disinfectants; synthetic resins; explosives; insecticides	As a vapor thru the respiratory organs and visible mucous membranes. Direct action on skin.	Toxic effects resemble those of phenol. The chief symptoms are irritation and erosion of skin and mucous membranes, and nephritis.
Cyanogen and compounds	Gas; crystals	Dangerous (Gas)	18 p.p.m (2)	Extraction of gold and silver from ores; photography; dyeing; printing; electroplating; organic synthesis; military poison gas; insecticide; steel mfg.	As gas or dust thru respiratory system; as liquid or solid form thru the skin	Acute:—Exposure to large amounts of hydrogen cyanide causes death from asphyxia almost immediately. Exposure to lesser amounts causes irritation of eyes and mucous membranes, headache, dizziness, nausea, vomiting; diarrhea, shortness of breath; palpitation of the heart, trembling, muscle cramps, shallow breathing, convulsions, unconsciousness. Hydrogen cyanide and cyanide solutions also cause skin eruptions. Chronic:—Exposure to small amounts of cyanide compounds over a long period of time is reported to cause loss of appetite, weakness, nausea, muscle cramps, unsteady gait, paralysis of arms and legs, psychoses.
Dichloro-ethylene	Liquid	Slight	100 p.p.m.	Varnishers; rayon mfg.; dry cleaning; perfume mfg.	Mucous membranes; vapor thru respiratory tract	Irritant and narcotic properties. Post mortem findings of men overcome by the vapors of dichlorethylene show an excess of fat in the blood suggesting death from embolism rather than asphyxiation.
Dichloroethyl Ether	Liquid		15 p.p.m.	Textile industry; treating lubricating oils, synthesis of new chemical compounds	Vapor thru respiratory tract, mucous membranes	Irritation of eyes and nose, nausea, marked irritation of respiratory passages and lungs.
Dimethyl Sulphate	Liquid	None	None adopted; minimum lethal conc. 97 p.p.m. 10 min. exposure	Methylating agent for amines and phenols; perfume mfg.	As a gas thrus the respiratory organs; as a fluid, irritating the skin	Burns of skin and mucous membranes, pains in neck and thorax, lacrimation, conjunctivitis, photophobia, edema or cornea, ulcers of bronchial mucosa with aspiration, pneumonia, convulsions, paralysis, coma, death.
Dinitrobenzol						(See Nitrobenzol)
Dinitrophenol (1-2-4)	Crystalline solid	None	None adopted; less toxic than nitrobenzol	Explosive mfg.; dye mfg.; wood preserving	Thru digestive tract; direct action on skin	Burning thirst, sweating, panting, excitement, high fever, patchy yellow skin, and convulsions. After ingestion, evidence of liver and blood damage have been observed. Bilateral cataracts have also occurred as a sequella.
Dioxan (Diethylene Dioxide)	Liquid	Explosive	1000 p.p.m.	Lacquer mfg.; rayon mfg.; dye mfg.; varnish mfg.	Thru mucous membranes; vapor thru respiratory tract; absorption thru skin	Headache, vertigo, drowsiness, irritation of eyes, nose, throat, and lungs, gastric disturbances injury to liver and kidneys.
Ethyl Benzene	Liquid	Explosive	Less than 1000 p.p.m. similar to gasoline	Anti-knock gasoline; lacquer mfg.; general solvent	Mucous membranes; vapor thru respiratory tract	Causes warning symptoms such as irritation to the eyes and respiratory passages before dangerous concentrations are reached.
Ethyl Bromide	Liquid	Explosive	1700 p.p.m.	Refrigeration; anesthetic	Vapor thru respiratory tract; mucous membranes tory organs	(See Methyl Chloride)
Ethyl Chloride	Gas	Explosive	20,000 p.p.m.	Medicine, local anesthetic; organic synthesis, refrigeration; solvent, perfume mfg.	As a gas thru the respiratory organs	Dizziness, drunkenness, apathy, persistent somnolence, loss of power in the legs, uncertain gait, disturbances of vision. (See Methyl Chloride)

*See Note Page 51. (1) Milligrams per cubic meter. (2) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Ethylene Dibromide	Liquid	None	None adopted	Gasoline blending; plastic mfg.; fire extinguisher mfg.	Vapor thru respiratory tract; mucous membranes	Irritation of eyes and respiratory tract, vomiting, headache, anorexia, pallor, weakness, vertigo.
Ethylene Dichloride	Liquid	Explosive	100 p.p.m. (1)	Organic synthesis; solvents; anesthetic; thinner for lacquer	As a vapor thru respiratory tract; mucous membranes	Irritation of eyes and nose, vertigo, static and motor ataxia, retching, unconsciousness—death if exposure is prolonged.
Ethylene Oxide	Gas (room temp.)	Explosive	Less than 250 p.p.m.	Insecticides; cellosolve mfg.; synthesis of organic compounds	Mucous membranes; vapor thru respiratory tract	Headache, vomiting, dyspnea, diarrhea, irritation of mucous membranes of nose and eyes, vertigo, nausea, lymphocytosis, dullness, disturbances of respiration and of heart action, pulmonary edema.
Ethyl Ether (Sulphuric (Ether)	Colorless liquid	Dangerous	400 p.p.m.	Solvent; diluent; denaturant, and extracting agent; mfg. of medicinals; anesthetic	Vapors thru respiratory tract	Stupor, also slight irritation of mucous membranes, loss of appetite, headache, and loss in weight. Anesthesia, unconsciousness, paralysis, death.
Ethyl Silicates	Liquid	Slight	Less than 500 p.p.m.	Silica-gel mfg.; waterproofing agent; glass mfg.	Mucous membranes; vapor thru the respiratory tract	Animal experimentation shows these compounds to be toxic, but no cases have been reported from industrial exposure.
Fluorine and Its Compounds						See Hydrofluoric Acid)
Formaldehyde	Liquid	None	20 p.p.m.	Organic synthesis; dyestuffs; rubber goods; inks; leather tanning; phenol and creosol; synthetic resins and lacquers	As vapor thru the respiratory organs and mucous membranes; skin irritant	Irritation of mucous membranes, conjunctivitis, bronchitis, dyspnea, severe dermatitis, destruction of finger nails; degeneration of the liver.
Formic Acid	Liquid	Explosive	None adopted	Dyeing industry; leather tanning; rubber mfg.; reducing agent	Vapor thru mucous membranes; direct action on skin	(See also Formaldehyde) Dermatitis (blisters, ulcerations, necrosis), irritation of mucous membranes of eyes, nose and throat.
Furfural	Liquid	Explosive	None adopted	Dye mfg.; varnish mfg.; resin mfg.; paint remover	Vapor thru mucous membranes	Vapors are irritating and may be dangerous to eyesight
Gasoline (Benzine)	Liquid	Explosive	1000 p.p.m.	Fuel for internal combustion engines; solvent; paint mixing; rubber cements	(See Benzine)	(See Benzine)
Hexanone (Methyl-butyl ketone)	Liquid	Slight	Less than 1500 p.p.m. (Ample warning)	Lacquer mfg.; varnish removers; solvent	Vapor thru mucous membranes	According to the U. S. Bureau of Mines, men exposed to 0.23, 0.65 and 2.0 percent vapor in air, pronounced the atmosphere extremely disagreeable even for a short time (¼ to 1 minute) because of strong odor and irritation to eyes and nasal passages. One-tenth of 1 per cent was found to have a strong odor and moderate eye and nasal irritation. Concentrations producing no marked symptoms and apparanetly harmless to guinea pigs after one exposure of several hours have distinct warning properties of both odor and irritation that are very disagreeable to human beings.
Hexone (Methyl Iso Butyl ketone)	Liquid	Slight	None adopted 100 p.p.m. (Ample warning)	Solvent; lacquer mfg.	As a vapor thru nasal mucous	Irritation of conjunctival and nasal mucosa.
Hydrochloric Acid	Liquid	None	10 p.p.m.	Chrome tanning; leather industry; organic synthesis; dyestuffs; chlorides; medicine, in organic preparations	As a gas thru the respiratory system; direct action on the skin and visible mucous membranes	Violent coughing, dyspnea, bronchitis, destruction of teeth, contraction of throat, coma, caustic action on skin.
Hydrocyanic Acid	Liquid	None	20 p.p.m.	Chemical analysis; medicine; insecticide; organic synthesis; military poison gas	As fumes thru the respiratory system. Does not irritate the respiratory mucosa	In non-fatal doses: Vertigo, marked pallor, great prostration, feeble pulse and voice and cold sweats. The urine and exhaled breath may possess an odor of bitter almonds. Itching in the nose, with watery discharge and irritation of the throat. Large doses are instantly fatal.
Hydrofluoric Acid	Liquid	None	3 p.p.m.	Ceramics; brewing and yeast; etching glass	As gas thru the respiratory organs. Direct action on the skin and mucous membranes.	Conjunctivitis, bronchial catarrh, ulceration of the nostrils, gums and oral mucous membranes, ulcers of the cuticle, suppuration under the finger nails. Caustic action on skin.
Hydrogen Sulphide						(See Sulphuretted hydrogen)
Iodine	Crystals	None	.05 to 1.0 p.p.m.	Dye mfg.; soaps, germicide; pharmaceutical mfg.	As a vapor thru respiratory system and mucous membranes	Irritation of mucous membranes of eyes and nose, inflammation of lungs.

*See note page 51. (1) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Iron Carbonyl						(See Nickel Carbonyl)
Iron Oxide	Fumes	None		Welding	Fumes thru respiratory tract	Metal fume fever.
Lead	Metal	None	0.15 mg./cu.m. (1)	Chemical apparatus; storage batteries; lead pigments; solder; alloys; piping; insulator; mining and smelting	As vapor or dust thru the respiratory organs, and digestive tract	Weakness, pallor, metallic taste in the mouth and fetid breath, lack of appetite, deposit of lead line on gums and presence of lead in urine. These symptoms are associated with anemia, gastritis, constipation, loosening of teeth, pain in the joints, paralysis, abdominal cramps and colic. Stippled red blood corpuscles.
Lead Compounds	Crystals; powder	Dangerous (Nitrates)	.15 mg./cu.m.	Medicine; lead salts; weighting silk; paint pigments; insecticides	As vapor or dust thru the respiratory organs and digestive tract. Thru the skin	(See Lead).
Magnesium	Metal	Explosive	15 mg./cu.m.	Alloys; paint mfg.; glass mfg.; rubber mfg.; magnesium refining; aeroplane parts.	As dust and fumes thru respiratory tract; particles under skin.	Metal fume fever. (See Zinc)
Manganese Dioxide	Solid; powder	None	5-50 mgs./cu.m.	Steel alloys; mining; match mfg.; glass mfg.; dry cell batteries	Fumes and dust thru respiratory tract	Languor and sleepiness, stolid mask-like facial expression, low monotonous voice, muscular twitching, varying from a fine tremor of hands to gross rythmical movements of arms, legs, trunk and head; cramps and stiffness of muscles in legs, increase in tendon reflexes, ankle and patellar clonus, retropulsion and propulsion, slapping gait, uncontrollable laughfer and crying. Metal fume fever. (See Zinc)
Mercury	Liquid metallic element	None	.1-.2 mg./cu.m.	Mercury salts; thermometers; mercury vapor lamps; chemical processes	As vapor and dust thru respiratory organs. As solid thru the skin	Chronic inflammation of the gums and muocus membrane of the mouth; loss of teeth, necrosis of the jaw, ulcers in the mouth and pharynx, chronic gastritis, enteritis, anemia, furunculosis, anesthesia, mental depression, tremors of the hands and muscles of the face.
Methane	Gas	Explosive	None adopted	Coal mining; processing of coal	Gas thru respiratory tract	Headache, drowsiness (chief danger is from xeplosion).
Methyl Alcohol (Methanol)	Liquid	Explosive	100 to 200 p.p.m. (2)	Solvent for varnish gums; organic synthesis; fuel general solvent; dye mfg.	As vapor by inhalation	Irritation of eyes and respiratory passages, vomiting, vertigo, dyspnea, fatal paralysis of the heart, chills, thirst, dilated immobile pupils, optic neuritis, blindness, abdominal cramps, paralysis, delirium, coma.
Methyl Bromide	Liquid	None	50-100 p.p.m.	Organic synthesis; anilin dye making	As gas thru the respiratory organs and mucous membranes	Irritation of respiratory passages, muscular twitchings, cramps, convulsions, disturbance of sight, fever, delirium, coma. Nervous symptoms—unsure gait, heightened reflexes, loss of visual acuity, loss of memory, irritable temper—may persist for a long time. (See note under Methyl Chloride)
Methyl Cellosolve (Ethylene Glycol Mono-methyl Ether)	Liquid	Slight	Less than 25 p.p.m.	Solvent; laquer mfg.; fused colar mfg.; varnish making; dye mfg.; areoplane dope; solvent, resin, nitrocellulose	As a vapor thru respiratory system	While it is not positively established, recent studies suggest that methyl cellosolve may affect the blood and blood-forming organs and the nervous system.
Methyl Chloride	Gas	None	500 p.p.m.	Medicine; refrigeration; dye mfg.; chloroform mfg.; thermometers	As a gas thru the respiratory organs	Progressive drowsiness, insomnia, headache, vertigo, nausea, anorexia, apathy, staggering gait, mental confusion, weakness, visual disturbances, tremors, presence of formates and acetone in urine. NOTE: The U. S. Bureau of Mines studied the acute response of guinea pigs to a single exposure to vapors of methyl chloride, methyl bromide, ethyl bromide, and ethyl chloride. According to this Bureau all four produced similar symptoms, including excitement, loss of equilibrium, inability to walk, rapid pulse, convulsive rapid respiration with rales, frothy (often blood-tinged) exudate from nostrils. The signs of lung irritation were not as pronounced for exposure to ethyl chloride as for the other compounds. The gross pathology was quite similar for all four of these alkyl halides and was characterized by congestion, hemorrhage, and edema of the lungs, and by injury to the vascular system, as shown by the tendency toward hemorrhage. Congestion was present in

*See note page 51. (1) Milligrams per cubic meter. (2) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Methyl Chloride (Cont.)						the organs of all groups, but parenchymal degeneration was most marked in those exposed to methyl-bromide vapors. A distinct delayed effect of exposure was noted with methyl bromide and methyl chloride, to a lesser extent with ethyl bromide, but was not observed with ethyl chloride.
Methylene Chloride (Dichloromethane)	Lqiuid	None	None adopted but less toxic than methyl chloride	Solvent: cellulose, fats, oils, resins, rubber; anesthetic cleaning fluids; artificial silk mfg.	Vapor thru respiratory tract	Headache, giddiness, stupor-irritability, numbness and tingling in the limbs, labored breathing, rapid weak pulse, cyanosis and possibly some degree of chronic anemia.
Methyl Formate	Liquid	Dangerous	Less than 1500 p.p.m. (1)	Fumigants; refrigerant	Aa s vapor thru respiratory tract	According to the U. S. Bureau of Mines, men exposed for one minute to 0.15% vapor in air noticed the pleasant ethereal odor of methyl formate, but experienced no nasal or eye irritation or other signs or symptoms. While the odor of methyl formate is distinct and noticeable in concentrations which are relatively safe from the standpoint of producing acute poisoning, owing to its pleasant nature and the occurrence of olfactory fatigue it is doubtlful whether the odor of methyl formate will serve as an effective warning of harmful conditions of exposure.
Naphtha	Liquid	Dangerous	5000 p.p.m.	Rubber mfg.; paint mfg.; solvent	As vapor thru respiratory tract	(See Benzine)
Naphthols	Crystalline	None	None adopted	Dye mfg.; chemical mfg.	Direct action on skin; may be absorbed thru skin. As vapor thru respiratory organs	Irritation of skin and kidneys. Injury to cornea and lens. In addition restlessness, vomiting, delirium, convulsions, and later, somnolence, paralysis, coma, and death.
Naphthylamines						See aniline and other amino compounds of benzol and its homologues.
Nickel	Metal	None	None adopted	Alloys; electroplating; storage battery mfg.	Direct action on skin when in solution; as dust thru respiratory system	The only lesion reported to be caused by nickel, apart from the toxic effects of nickel carbonyl, is nickel eczema. This condition is reported mostly among nickel platers who are exposed to many dermatis-producing substances. Some authorities question whether nickel is the responsible agent.
Nickel Carbonyl	Liquid	Explosive	None adopted	Production of metallic nickel	As a gas thru the respiratory organs	Giddiness, headache, nausea, constipation, dyspnea, cough, retrosternal soreness and epigastric pain, sleeplessness, cyanosis, edema of lungs, pain in the loins, hemorrhages—especially in the brain and the adrenals. Metal-fume fever. (See Zinc.)
Nicotine	Dust; liquid	None	5mg./cu.m. to 30 mg./cu.m. (2)	Tobacco production; insecticides; fertilizer	Absorption thru skin as a liquid; as a dust thru respiratory system	Acute cases may be fatal. In less severe cases there may be severe prostration, gastric upsets, cardio-vascular collapse, precordial distress, dyspnea. Toxic amblyopia has been reported by some authorities to be a chronic effect of nicotine poisoning.
Nitraniline						(See Aniline.)
Nitric Acid & Nitrous Fumes	Liquid	Explosive when in contact with combustible material	10-40 p.p.m.	Organic synthesis; mfg. of dyestuffs, drugs, explosives, celluloid and nitrates; metallurgy; medicine; photo engraving	As vapor thru respiratory system, and direct action on the skin	Irritation of air passages, spasmodic cough, dyspnea, pulmonary edema, bronchitis, feeling of suffocation, pain in chest, digestive disturbances, peripheral vasodilatation, methemoglobinemia and its sequelae, and depression of the central nervous system, corrosion of teeth, severe burns on the skin. Continued exposure to diluted fumes is said to cause chronic inflammation of the respiratory tract and a general disability characterized by headache, sleeplessness, anorexia, gradual loss of strength, dyspepsia, constipation, and ulcers on the lips and mucous membranes of the mouth and pharynx.
Nitro-benzol & Other Compounds of Nitro-benzol	Liquid	Dangerous	1-5 p.p.m.	Perfumes; mfg. of aniline; mfg. of dust preventatives; mfg. of inks; explosives; gasoline blenders; shell fillers	As a vapor thru respiratory system; absorption thru skin	Cyanotic face and lips, somnolence, headache, vertigo, nausea and vomiting; odor of bitter almonds in breath; unsteady gait, tremors, muscular twitching, and other manifestations of nerve injury; anemia, visual disturbances, methemoglobin formation, presence of hematoporphyrin, albumin, and sometimes free poison in urine; eczematous eruptions.

*See note page 51. (1) Parts per million. (2) Milligrams per cubic meter.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Nitro-Glycerine	Liquid	Explosive	10-40 p.p.b. (1)	Explosives; medicine; shell fillers; pharmaceuticals	Inhalation of vapor thru respiratory tract; absorption thru skin	Redness of face and conjunctivae, intense headache, mental disturbances, vertigo, fainting, tremors, burning sensations in throat and stomach, nausea, vomiting, colic. Chronic:—Digestive disturbances and neuralgia.
Nitro-Naphthalene	Crystals	Explosive		Deystuffs	See Nitro benzol)	(See Nitro benzol.)
Oxalic Acid	Crystalline solid	None	None adopted	Bleaching; dyeing; shoe polishes; dry cleaning; dye mfg.; bookbinding	Direct action on skin and mucous membranes as dust	Local caustic action on skin, bluish discoloration and brittleness of nails, irritation of mucous membranes, including those of esophagus, stomach and intestines; peripheral circulatory trouble, cardiac weakness, nervousness, convulsions.
Ozone (O^3)	Gas	Explosive	1 p.p.m.	Oxidizing agent; bactericide; bleaching oils, waxes, textiles, etc.	As a gas thru respiratory tract	Irritation of eyes and respiratory tract, headache, cough, pulmonary edema, depression and coma.
Pentanone (Methyl Prophyl ketone)	Liquid	Dangerous	1500 p.p.m.	Organic solvent; lacquer mfg.	As a vapor, direct action on mucous membranes	Irritation of eyes and nasal passages; larger doses cause narcosis.
Perchlorethylene						(See Tetra Chlorethylene.)
Petroleum & Its Volatile Products	Liquid; solids	Dangerous	(See Benzine)	Motor fuels; lubricants	As a solid, direct action on skin; as a vapor thru respiratory organs	(See also Benzine.) Irritation to skin and respiratory organs; may cause acute inflammation to the lungs and headache, sensory disturbances, etc. Workers in petroleum refineries are subject to acne, keratosis, epithelioma, and melanosis from petroleum, paraffin, and petroleum residue. Workers exposed to petroleum oils and greases in a number of industries are subject to folliculitis, boils and papillomas.
Phenol (Carbolic Acid)	Crystalline solid	Slight when heated	None adopted	Phenol, formaldehyde, resins mfg.; germicides; chemical mfg.	As a vapor thru digestive tract and respiratory tract; direct action on skin and mucous membrane; absorption thru skin	Erosion of the skin, eczema, gangrene, irritation of the respiratory organs and eyes. Symptoms of acute poisoning following splashing with phenol or inhaling its vapors include: Headache, vertigo, nausea, tinnitus, fainting, dyspnea, excitement convulsions, respiratory paralysis. Symptoms of chronic exposure include: Emaciation, vomiting, diarrhea, anorexia, headache, vertigo, nephritis, degeneration of liver, circulatory disturbances.
Phenyl Hydrazine	Crystals or liquid	None	None adopted	Organic synthesis; reagent in anlytical chemistry	Absorption thru skin	Vesicular eruption, burning of skin, diarrhea, granular degeneration of red cells, methemoglobin, weakness.
Phosgene	Liquid	None	1 p.p.m.	Lethal gas; dystuff mfg.; chlorinating agents; bleaching sand for glass mfg.	As a vapor thru respiratory system	Irritation of eyes, bronchitis; erosion of lung tissue, intense dyspnea and pulmonary edema, cyanosis, feeble heart, death in coma.
Phosphorus	Crystals	Explosive	0.7 p.p.m. as trichloride	Mfg. rat poison; prdouction of phosphorus; alloys; explosives; fire works; insecticides	As a vapor thru respiratory system; as a solid thru digestive system	Increasingly severe toothache, digestive disturbances, swelling and ulcertation of the gums and buccal membrane, loosening and falling out of the teeth, suppuration and destruction of jawbone with fistulous channels burrowing through the cheek, meningeal inflammation, emaciation. Necrosis of the bones, other than the jawbone, has also been reported. A different type of poisoning marked by generalized systemic effects is also recognized.
Phosphuretted Hydrogen (Phosphine)	Gas	Dangerous	2 p.p.m.	Blast furnaces; welding; acetylene work; phosphorus extraction; organic preparations	As a gas thru respiratory organs	Oppression in chest, headache and vertigo, gastro-intestinal irritation, dyspnea, general debility, tinnitus aurium, tremors and convulsions, pain in the region of the diaphragm and feeling of chill. Symptoms similar to those of phosphorous poisoning are said to have resulted from prolonged exposure to low concentration of phosphine.
Picric Acid (Trinitrophenol)	Crystals	Explosive	None adopted	Explosives; medicine; dyeing silk; disinfectant; dye mfg.; photography; tanning	As dust thru respiratory system; direct action on skin	Gastritis, vomiting, diarrhea, vertigo, coryza, decomposition of the blood, convulsions, yellow discoloration of the skin and conjunctivae, inflammation of mucous membranes.
Potassium Hydroxide	Deliquescent pieces, lumps or sticks	Dangerous	None adopted	Soap mfg.; bleaching; medicine; reagent in analytical chemistry; ink mfg.; metal mfg.; soap mfg.	Direct action on the skin as dust attacking the visible mucous membranes and digestive organs	Deadly if swallowed. Severe chemical burning of the skin and mucous membranes. Formation of deep seated and persistent ulcers, loss of nails.

*See note page 51. (1) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Pyridine	Liquid	Dnagerous	None adopted	Denaturant for alcohol; medicine; solvent in rubber, paint and other industries; explosives; paint mfg.	As a vapor thru the respiratory organs; direct action on the skin	Hoarseness, laryngitis, headache, vertigo, tremors, choking, weakness of the extremities, eczema.
Radium						(See Radiant Energy, Sec. IV.)
Selenium Compounds	Semi-metallic crystals	None	None adopted	Glass mfg.; paint mfg.; alloys; anti-oxidants; lead and zinc smelting; welding; cement mfg.	Direct action on skin as dust; fumes or vapors, thru respiratory tract and digestive tract	Dermatitis, pallor, gastro-intestinal disturbances, garlicky odor of breath and perspiration, irritation of nose and throat, coating of tongue, metallic taste in mouth and nervousness.
Silver & Its Compounds	Metal; crystals	None	None adopted	Mirror silvering; coin mfg.; silverware; indelible ink mfg.; photography	Absorption thru and direct action on skin	Dermatitis, caustic action. Argyrosis, a grayish-blue or black discloration of the skin and mucous membranes, is the chief effect reported in industry.
Sodium Hydroxide	Deliquescent pieces, lumps and sticks	Dangerous	None adopted	Petroleum refining; tanning; soap industry; textile industry; organic synthesis; medicine; rubber industry	Direct action on the skin. As dust attacking the visible mucous membranes; digestive tract	Severe chemical burning of the skin and mucous membranes. Formation of deep seated and persistent ulcers, loss of nails. Deadly if swallowed.
Sulphur Chloride	Liquid	None	None adopted	Rubber mfg.; insecticide; dyeing textiles; medicine; war gas; vulcanizing	As a vapor thru mucous membranes of eye and respiratory tract	Irritation of mucous membranes of eyes and respiratory tract.
Sulphur Dioxide	Gas	None	10 p.p.m. (1)	Artificial ice industry; bleaching; preservative for beer, wine, and meats; cellulose and paper industry; mining and smelting	As a gas thru the respiratory organs	Bronchitis, coughing, bluish discoloration of mucous membranes, spasmodic laryngitis, angina, bronchpneumonia, dyspnea, bloody sputum, digestive disorders.
Sulphuretted Hydrogen (Hydrogen Sulphide)	Gas	Explosive	20 p.p.m.	Reagent; analytical chemistry; in sewers; tanning; coal gas mfg.; soda mfg.; frequently mixed with other harmful gases; mining and smelting; paper makers	As a gas thru the respiratory system	Acute poisoning: Disorganization of blood, burning pains in the eyes, nose, and throat, cough, conjunctivitis, gastritis, dyspnea, dumbness, slow pulse, headache perspiration, contracted pupils, convulsions, paralysis. Chronic poisoning: Conjunctivitis, exhaustion, dyspnea, pallor, slow pulse.
Sulphuric Acid	Dense oily liquid	Dangerous	2.0 p.p..m	Fertilizers; petroleum refining; explosives; organic synthesis; inorganic preparations; leather and textile industries; metallurgy; chemicals	As a vapor thru the respiratory system; locally as a cutaneous irritant	Acute and chronic bronchitis, bronco-pneumonia, decay of teeth. On the skin local pain, redness, edema, ulceration.
Tar & Pitch	Solid; viscous liquid	Slight	None adopted	Preserving wood; roofing; road repair; insulating paint mfg.; creosote mfg.	Vapors thru respiratory tract; direct action on skin	Melanosis, tar itch, acne, eczema, or psoriasis, ulcers of the skin and cornea, warts, epitheliomatous cancer, loss of appetite, nausea, diarrhea, headache, vertigo, irritation of the respiratory tract, conjunctivitis, albuminuria, edema, ischuria.
Tellurium Compounds	Semi-metallic and crystals	None	None adopted	Coloring of glass; rubber mfg.; refining of lead, zinc and copper	Absorption thru skin; dust and fumes thru the respiratory tract; direct contact with skin	Garlic-like odor of breath and of secretions and excretions, suppression of sweat, dryness of the mouth Dry itching skin, metallic taste, anorexia, nausea, vomiting, indegistion, constipuation, and somnolence
Tetrachlorethane Acetylene Tetrachloride)	Liquid	None	10 p.p.m.	Varnish mfg.; solvent for greases, waxes and cellulose acetate; artificial silk mfg.; airplane dope; dry cleaning; rubber mfg.	As a vapor thru the respiratory tract	Severe headache, nausea, insomnia, abnormal fatigue, enlargement and tenderness of the liver, delirium, vomiting of blood abdominal pains, gastro-intestinal disorders, general discontent and nervousness, coma, and death.
Tetrachlorethylene (Perchlorethylene)	Liquid	None	200 p.p.m.	Solvent; degreaser; dry cleaner; printing; soap mfg.	As a vapor thru upper respiratory passages and mucous membranes	Irritation of eyes, tightness in frontal sinuses, increased perspiration of hands and increased secretion of mucous from nasal passages, nausea, elation, faintness, dizziness, dyspnea, retarded mental activity, headache, and visual disturbances.
Tetraethyl Lead (Also see lead & its compounds)	Liquid	Dangerous	None adopted	Added to motor fuel gasoline in order to eliminate the knock in the internal combustion engine	Highly absorbed thru the skin. As a vapor thru the respiratory system	Insomnia, slight fall in blood pressure, and in body temperature, stippled red blood cells, tremors, sudden violent twitching, excretion of lead in the urine, vertigo an dheadache, nausea and vomiting, tremors, loss of weight, anorexia, lead encephalopathy.

*See Note Page 51. (1) Parts per million.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Tetryl (Trinitrophenylmethylnitramine)	Powder; crystals	Explosive	None adopted	Mfg. of explosives	As a dust thru respiratory tract and direct action on skin	Abdominal pain, asmatic attacks, hemorrhage from mucosa, headaches and giddiness; dermatitis.
Thallium & Compounds	Metal; crystals; powder	None	None adopted	Glass mfg.; color mfg.; thallium salts; luminous paint mfg.; insecticides; dye mfg.	As vapor or dust thru the respiratory organs and digestive tract	Loss of appetite, fatigue, albuminuria, joint pain, loss of hair, optic neuritis and blindness.
Thorium						(See Radiant Energy, Sec. IV.)
Tin	Metal	None	None adopted	Tin plate; silk weighing; dye mordant	As fumes thru respiratory organs	Not generally regarded as industrial poison. Reported to cause feeling of chilliness in the chest, pain in the throat, heaviness in the stomach, anemia and traces of tin in urine and feces.
Titanium Oxide	Crystalline	None	None adopted	Paint mfg.; dyeing; paper mfg.; steel alloys		Used as a substitute for white lead in the manufacture of paint. No ill effects have been reported as a result of its use in industry.
Toluol	Liquid	Explosive	200 p.p.m. (1)			(See Benzol.)
Trichlorethylene	Liquid	None	200 p.p.m.	Degreasing; dye mfg.; solvent; insecticide; chemical mfg.; paint mfg.; varnish mfg.; rubber workers	As a vapor thru the respiratory system	Effects not fully established. Symptom of acute poisoning include excitement, drunkenness, dullness, nausea, vomiting, unconsciousness; sequelae include headache, vertigo, anorexia, disturbed heart action. Severe irritation of the respiratory passages has also been reported, but this effect is ascribed by some authorities to the action of its decomposition products, phosgene, and hydrochloric acid. Chronic exposure is said to result in injury to the trigeminal and optic nerves. Impurities in trichlorethylene, it has been suggested, may be the cause of these injuries. Other effects are addiction and skin irritation.
Trinitrophenol	Liquid	Explosive	None adopted	Explosives; match mfg.; leather mfg.; glass mfg.		(See Picric Acid.)
Trinitrotoluol (TNT) (Also see Nitrobenzol)	Monoclinic needles	Explosive	None adopted	Explosives	As dust or fumes thru the respiratory mucous membranes, and thru the pores of the skin. Thru gastro-intestinal tract.	Bitter taste in the mouth, headache, nausea with white frothy vomiting, griping abdominal pain, increase in blood pressure, severe nose bleed, dermatitis, gastritis, urine dark colored and contains blood.
Triorthocresyl Phosphate	Liquid	None	None adopted	Lacquer mfg.; plastic mfg.	Thru digestive tract	No clear-cut cases have been reported from industry. It is not highly volatile, but if absorbed it may cause paralysis of extremities. (This was the cause of the epidemic of so-called "Jake Leg," several years ago.)
Turpentine	Liquid	Explosive	200--700 p.p.m.	Solvent; paints; varnishes; lacquers; medicine; wax mfg.; printing; photographers; dye mfg.; ink mfg.; dry cleaning	As a vapor thru the respiratory passages. As fluid it acts on the epidermis	Irritation of mucous membranes of eye, nose and upper air passages, bronchial inflammation, salivation, headache, vomiting, abdominal pain and vertigo, state of excitement resembling drunkeness, irritation of kidneys and bladder, strangury, odor of violets in urine, severe irritation of skin.
Uranium	Metal; crystals	None	None adopted	Dye mfg.; tile mfg.; paint mfg.; uranium mining; photography	Direct action of radiant rays on skin. Thru respiratory organs	Uranium, reported to be one of the most toxic of metals, is a source of radiant energy. A high frequency of cancer of the lungs in Czechoslovakian miners of uranium is believed to be due to the radioactivity of the ore. Very little has been published on the effects on man of exposure to uranium salts. The conditions reported include purpura of the legs, raduction of leukocytes, as well as diminution of red corpuscles, a reduction in urinary elimination of nitrated salts, and an increase in the chlorides. Experiments on animals with uranium nitrate are reported to show nephritis, glycosuria, albuminuria, gastro-intestinal disorders, degeneration of liver, affections of nervous system.
Vanadium	Metal	None	None adopted	Steel alloying; dye mfg.; glass and porcelain mfg.; ceramics; ink mfg.; vanadium steel workers	Fumes and dust thru respiratory tract. Digestive tract and mucous membranes	Anemia, cachexia, irritation of respiratory tract, dry cough resulting in hemorrhages, diarrhea or constipation, emaciation involvement of kidneys, hysterical manifestations, melancholia.

*See Note Page 51. (1) Parts per million. (2) Milligrams per cubic meter.

Toxic Substance	Ordinary State	Fire Hazard	Probable Safe Concentration*	Principal Uses & Processes Producing Potential Hazard	Mode of Entrance into Body	Diagnostic Signs and Symptoms
Vinyl Chloride	Gas	Slight	500 p.p.m. (1)	Organic synthesis, principally resins.	As a gas thru upper respiratory tract	The U. S. Bureau of Mines reported that men exposed to 2.5% for approximately 3 minutes soon began to feel dizzy and disoriented as to space and size of surrounding objects and complained of a burning sensation in the soles of the feet. They immediately recovered on leaving the camber, and complained only of a slight headache which lasted about 90 minutes.
Xylol	Liquid	Explosive	200 p.p.m.			(See Benzol.)
Zinc	Metal	Dangerous (dust)	15 mg. cu. m. (2)	Metallurgy: organic synthesis; galvanizing; boiler plates; zinc smelting; brass foundries	As dust and as a vapor thru the respiratory system	Metal-fume fever characterized by: Irritation of respiratory tract, dryness of throat, dry cough, malaise, headache, nausea, severe chills with fever, pains in limbs, shaking in limbs, sweating, leukocytosis. Metal-fume fever may also be caused by fumes of lead, mercury, manganese, cadmium, arsenic, antimony, and many other metals. Metal-fume fever resulting from metals which may cause systemic poisoning should be regarded as a warning that continued exposure may have more serious effect.

*See Note Page 51. (1) Parts per million. (2) Milligrams per cubic meter.

SECTION IV.

MISCELLANEOUS HAZARDS OF OCCUPATION WITH CHIEF DIAGNOSTIC SIGNS AND SYMPTOMS OR OTHER DISABILITY

SECTION IV

MISCELLANEOUS HAZARDS OF OCCUPATION WITH CHIEF DIAGNOSTIC SIGNS AND SYMPTOMS OF INJURY OR OTHER DISABILITY

Hazards	Diagnostic Signs and Symptoms
A. Abnormalities of Air Pressure a. Compressed air (increased atmospheric pressure)	Pruritis and rash; excruciating pain in abdomen and extremities, joints and muscles; painful pressure in chest; aphasia and asphyxia; monoplegia and paraplegia; dyspnea, vertigo; Meniere's syndrome.
b. Altitude; rarefied air (decreased atmospheric pressure)	**Acute altitude sickness (anoxia)**—Sleepiness, headache, altered respiration, fatigue, psychological impairments, unconsciousness, and respiratory failure. Warning symptoms preceding unconsciousness are not always present. There may be even a feeling of freedom from care because of the dulling effect on the sensory nervous system. The effects of anoxia after a flight may be more severe than the subjective symptoms noticed while flying. There may be persistent fatigue, severe headache, nausea, vomiting, dizziness, abnormal behavior, mental confusion, and muscular weakness. **Chronic altitude sickness**—Repeated exposure to anoxia (even without symptoms of acute altitude sickness) results in bodily and mental fatigue, irritability, insomnia, marked deterioration in efficiency, and disregard for danger in the air. **Aeroembolism**—The symptoms depend on the location and volume of the air bubbles, and may manifest themselves as joint pains, itching, formication, pulmonary pain and edema, neuritis, paralysis, convulsions, and coma. **Middle-ear disturbances.**
B. Abnormalities of Temperature and Humidity a. Heat	**Heat Stroke**—Dizziness, nausea, acute pain in the head, skin dry and hot, face red or purple, breathing difficult, high temperature, unconsciousness. **Heat exhaustion**—Pallor, cold moist skin, rapid shallow breathing, weak pulse, body temperature subnormal or slightly elevated. **Heat cramps**—Spasms of muscles of the extremities or of the abdominal wall.
b. Sudden variations of temperature	Respiratory infections, neuralgic and rheumatic affections.

PAGINATION INCORRECT

Hazards	Diagnostic Signs and Symptoms
C. Dampness	Respiratory, neuralgic, and rheumatic affections.
D. Infections a. Anthrax	(External) Begins as small red spot or papule in the skin with no pain but an itching, burning sensation. This later has a blister indented in the center and surrounded by severe swelling. Next, the center becomes black and the blister may break and discharge a bloody fluid. The black depressed area has an elevated border of small vesicles. Regional lymph nodes become enlarged and tender and often suppurate. High fever, headache, restlessness, insomia, have also been noted. (Internal) Pulmonary anthrax, of which there has been almost none in America, has no external lesions and is always rapidly fatal. Intestinal anthrax is not an industrial hazard.
b. Glanders (Equinia or Farcy)	Primarily a disease of the horse, ass, or mule, glanders may be conveyed to man by the nasal and other secretions of affected animals. It is caused by Bacillus malei, which enters the human system through a break in the skin or mucous membrane and produces symptoms after an incubation period of a few days to a week. The constitutional effects are fever, malaise, headache, and pain in the joints and muscles. When the bacillus enters by way of the skin, a red painful swelling occurs at the site of entry and breaks down to form a rapidly spreading ulcer. The adjacent glands become swollen and tender and frequently develop abscesses. As the disease progresses, similar lesions appear on other parts of the skin. Large areas of infiltration discharging purulent material from numerous openings frequently occur. Characteristic nodules of farcy buds form along the lymphatics at a distance from the site of inocculation and tend to break down into discharging ulcers. In acute cases there is a characteristic bloody and offensive nasal discharge. High fever, rigors, vomiting, diarrhea, and feeble, rapid pulse lead to delirium, coma and death.
c. Fungus infections	Fungus infections may be due to a wide variety of fungi. They may be local or systemic. Many of them are of mild clinical importance, others may produce marked disability and death. Skin diseases are caused by monilia, yeasts, dermatophytes, sporotrichum, blastomycetes, as well as a great many other fungi. Fungus disease of the lungs may be due to blastomycetes, actinomyces, monilia, coccidioides immitis, cryptococcus, and aspergillus. The symtoms are largely those of tuberculosis, from which it is often most difficult to differentiate. The X-ray film may also closely resemble tuberculosis. The sputum usually reveals large numbers of fungi of predominantly one type.

Hazards	Diagnostic Signs and Symptoms
d. Septic infections	Boils, carbuncles, folliculitis, cellulitis, localized lymphangitis, erysipelas.
e. Undulant fever (Brucellosis)	
f. Other infectious diseases, frequently of occupational origin, and especially worthy of mention, are as follows: Psittacosis, Rabies, Ringworm, Rocky Mountain Spotted Fever, Tentanus, Weil's Disease.	Weakness, profuse sweating, chills, fever, headache, usually bilateral and frontal, constipation, loss of weight, hacking nonproductive cough, general aching. Reddish, widely separated skin lesions accompanied by intense itching and burning among veterinarians have been attributed to Brucella infections.
E. Radiant Energy a. X-rays, radium and other radioactive substances (radiothorium, mesothorium, etc.)	Severe dermatitis usually on hands and arms, loss of nails, burns, destruction of skin, injury to joints, necrosis of bone, cancer, anemia, leukemia, leukopenia, sterility.
b. Ultra violet and infra red rays	Burns, conjunctivitis, electrical ophthalmia, photophobia, retinitis, cataract, dermatitis.
F. Repeated Motion, Pressure, Shock, Etc.	Pain of muscle used, set up by a myositis, bursitis, synovitis, or other local changes of a chronic inflammatory nature; trembling, cramp. Among pneumatic-tool workers also vasomotor disturbances: local anemia of hand followed by hyperemia, cyanosis, and burning sensation.
G. Defective Illumination	Nystagmus, eyestrain, deficient vision due to astigmatism or hyperopia, headache, giddiness. Eyestrain contributes to neurasthenia.

H. Dust

Hazard	Probable Concentration in Million Particles Per Cu. Ft. of Air	Diagnostic Signs and Symptoms
a) Inorganic Dust Containing Free ilica (Silica) i.e., quartz, flint, opal, granite, pottery, etc.	Total count x % silica = 5 *(Kansas, Minnesota, Oklahoma, Wisconsin) < 10% silica = 50 > 10% silica = 10 (Idaho) 25-35% silica = 10 Over 75% silica = 5 *(California, Colorado) Over 90% silica = 5 *(Connecticut) Total dust = 50* (Oklahoma)	Cough, dyspnea, pleuritic pains, deficient chest expansion, dullness, diminished resonance, colds, pleurisy, tuberculosis, hemoptysis.

*Recommended by Industrial Hygiene Units of the States indicated.

H. DUST (Continued)

Hazard	Probable Concentration in Million Particles Per Cu. Ft. of Air	Diagnostic Signs and Symptoms
(b) Inorganic Dust (except asbestos) Containing No Free Silica i.e.: Alundum Carborundum Cement Feldspar Mica Pyrophyllite talc Silicates Slate Talc	 15 *(Oklahoma) 15 *(Oklahoma) 15 *(California, Colorado) 10 *(North Carolina) 50 *(Michigan) 10 *(North Carolina) 25 - Milling, 10 - Mining *(North Carolina) 15 *(Oklahoma) 50 *(Michigan) 15 *(California, Colorado) 50 *(Michigan) 15 *(California, Colorado)	Exposure to inorganic dusts containing no free silica has been found in some instances to be associated with simple linear fibrosis (non-specific benign fibrosis-Gardner) not associated with disability. The exact relationship of various dusts to this type of fibrotic reaction is not entirely clear.
(c) Asbestos	15 *(South Carolina) 5 *(California, Colorado, Michigan, North Carolina, Oklahoma, Pennsylvania)	Cough, dyspnea, pallor, clubbing of fingers, diminished chest expansion.
(d) Organic Dust (i.e., coal textile dust, flour, sugar, wood, leather, feathers, plants, wool, etc.)	50 *(Michigan, California, Colorado)	Irritation of the skin and upper air passages; allergic effects; asthma.

*Recommended by Industrial Hygiene Units of the States indicated.

SECTION V.

OCCUPATIONAL DERMATOSES

OCCUPATIONAL DERMATOSES

CAUSES OF OCCUPATIONAL DERMATITIS

The agents that have been found to produce dermatoses in occupation may be divided into four main groups as follows:

I. **Mechanical**
- Friction
- Pressure
- Trauma

II. **Physical**
- Heat
- Cold
- Water
- Electricity
- Sunlight
- Roentgen-ray and Radium

III. **Chemical**
- Acids
- Alkalis
- Plant Poisons

IV. **Biological**
- Bacteria
- Fungi
- Animal parasites

In different occupations one or more of these causes are found to predominate, but any or all may be present. The farm laborer, for example, is more exposed to heat, cold, and the actinic rays of the sun than the miner, but he is also subject to traumatic injuries, fungous infections, animal parasites, chemical irritants in fertilizers and insecticides, and to plant poisons.

Mechanical Agents — Mechanical agents give rise to callosities, hygromata, tenosynovitis, cuts and abrasions. Wounds of the skin readily become infected with bacteria and fungi and can also become the site of malignant growths or new areas of psoriasis, lichen planus, and similiar skin diseases already present on other parts of the body.

Physical Agents—Physical agents act on the skin in various ways. High temperatures cause perspiration, softening of the horny layers of the skin, and combined with friction, produce intertrigo and the so-called "heat rashes" common among workers exposed to hot ovens, such as stokers and steel makers. Exposure to heat may also produce dermatitis with slight scaling and venectasia, or erythema ab igne.

Hot Water—Hot water softens the epithelium and renders the skin vulnerable to the action of substances such as mild alkalis that would not otherwise affect it. Dishwashing and laundry work are examples of occupations in which maceration of the skin in hot water helps to cause dermatitis.

Cold—Cold, especially when accompanied by dampness, produces pernio, frostbite, and in some hypersensitive individuals urticarial lesions have been known to develop from this cause.

Electricity—Electricity causes occupational burns from short circuits, live wires, and bare wires among linesmen and others engaged in electric power production.

Radium and Roentgen-ray—Radium and roentgen-ray dermatitis, burns, and cancers are occupational diseases to which radiologists and technicians are subject. Prolonged exposure to solar radiation such as occurs among farmers, sailors, and others engaged in outdoor occupations, produces melanosis and proliferative changes in the skin ,which in some instances become epitheliomatous in character. Solar radiation, especially at the seashore and in high altitudes, causes inflammation of the skin, resulting in sunburn that may become sufficiently severe to incapacitate photosensitive persons. Blonds are more susceptible to severe sunburn than brunettes, but even brunettes can become photosensitized if they come in contact with photosensitizing substances suchas coal tar, eosin, pitch, asphalt, certain petroleum oils, and photosensitizing plants such as certain grasses, figs, and those containing oil of bergamot.

Chemical Agents — Chemical agents are the predominating causes of dermatoses in manufacturing industries. These can be divided into two groups: (1) Substances that will cause burns or dermatitis on normal skin, and which we call Primary Irritants, and (2) those which will provoke dermatitis only in hypersensitive persons, and which we will call Specific Irritants.

The Primary Irritants can again be divided into Inorganic and Organic groups, as follows:

Principal Primary Irritant

Inorganic:

1. **Acids (including some of their salts)**
   - Sulphuric
   - Nitric
   - Hydrochloric
   - Hydrofluoric
   - Chromic
   - Arsenious
   - Phosphoric
2. **Alkalies**
   - Alkaline sulphides
   - Sodium hydrate and carbonate
   - Potassium hydrate and carbonate
   - Ammonium hydrate and carbonate
   - Barium hydrate and carbonate
   - Calcium oxide hydrate and carbonate
   - Sodium silicate and metasilicate
   - Tri-sodium phosphate
   - Calcium cyanamide
3. **Irritant Elements and Salts**
   - Sulphur and sulphides
   - Mercuric iodide, bichloride, nitrate
   - Chromates and bichromates
   - Nickel chloride and sulphate
   - Zinc chloride
   - Arsenics and arsenates
   - Antimony chloride and sulphide
   - Sodium
   - Potassium
   - Phosphorus

Organic:

1. **Acids, anhydries (and some salts)**
   - Oxalic
   - Carbolic
   - Cresylic
   - Formic
   - Acetic
   - Lactic
   - Malleic
   - Phthalic
   - Hydrocyanic
   - Abietic

PAGINATION INCORRECT

2. **Solvents**
   - Turpentine
   - Petroleum distillates
   - Carbon bisulphide
   - Benzol
   - Toluol
   - Alcohols
   - Carbon tetrachloride
   - Trichlorethylene
   - Amyl acetate
   - Liquid chlorinated phenols
   - Liquid chlorinated benzols
3. **Essential Oils**
4. **Some Dye Intermediates**
   - Di-nitro-chlor-benzol
   - Phenyl hydrazine
   - Sulphonic acids
5. **Acne Producers**
   - Petroleum oils
   - Pitch
   - Tar
   - Paraffin
   - Solid chloronaphthalenes
   - Solid chlorobenzols
   - Solid chlorodiphenyls
   - Solid chlorophenols

Principal Specific Irritants

These affect only hypersensitive persons. The hypersensitivity may be congenital or acquired by contact with the chemical. Certain chemicals are powerful sensitizers: of these, dinitrochlorbenzol and paraphenylendiamine are notable examples.

Hypersensitive persons readily become sensitized to the primary skin irritants. Such persons will develop a dermatitis from dilutions of these substances too weak to affect normal individuals, or will be burnt by them on shorter exposure than would affect normal skins.

1. **Dye Intermediates**
   - Aniline and compounds
   - Chlor compounds
   - Nitro compounds
   - Acridine and compounds
   - Anthracene and compounds
   - Naphthalene and compounds
   - Benzidine and compounds
   - Benzanthrone and compounds
   - Naphthylamines

*Primary irritants.

2. **Dyes**
   - Fur and Hair: Paraphenylendiamine; Anline Black; Paramido phenol
   - Leather: Chrysoidine; Bismarck Brown; Nigrosine; Amido-azo-toluene; Amido-azo-benzene
   - Fabric: Crystal and Methyl Violet; Malachite Green; Metanil Yellow; Brilliant Indigo, 4 G; Erio Black; Hydron Blue; Indanthrene Violet, R. R.; Ionamine, A. S.; Pyrogene Violent Brown; Orange Y; Safranine; Sulphanthrene Pink; Rosaniline
3. **Photo Developers**
   - Metol
   - Paraphenylendiamine
   - Hydroquinone
   - Para-amido-phenol
   - Pyrogallol
   - Bichromates
4. **Rubber Accelerators and Antioxidants**
   - Hexamethylene tetramine
   - Guanidines
   - Mercapto benzo thiazole
   - Tetramethyl thiuram monosulphide and disulphide
   - Para toluidine
   - Ortho toluidine
   - Tri-ethyl tri-methyl triamine
   - Phenyl bet naphthylamine
5. **Soaps**
   - Containing excess of free alkali
   - Containing perfumes
   - Containing antiseptics
6. **Insecticides**
   - *Creosote
   - Nicotine
   - *Tar
   - Pyrethrum
   - *Mercury compounds
   - *Phenol compounds
   - *Petroleum distillates
   - Arsenic compounds
   - *Fluorides
   - *Lime
7. **Cosmetics**
   - Those containing irritant or photosensitizing dyes, essential oils, and perfumes
8. **Oils**
   - Cutting oils
   - Coning oils
   - Sulphonated oils
   - Linseed oil
   - Mustard oil
   - Coconut oil
   - Castor oil
   - Cashew nut oil
   - Tung oil
9. **Resins**
   - Natural: Pine rosin; Wood rosin; Burgundy pitch; Japanese lacquer; Dammar; Copal
   - Synthetic: Phenol formaldehyde; Urea formaldehyde; Chlorinated waxes; Chloro-naphthalenes; Chloro-benzols; Chloro-diphenyls; Cumaron
10. **Coal Tar and Its Derivatives**
    - Acridine
    - Anthracene
    - Phenanethrene
    - Carbazole
    - Pyridine
    - Fluorene
11. **Explosives**
    - Trinitrotoluol
    - Tetranitro-methylaniline
    - Tetranitro-methylaniline
    - Fulminate of mercury
    - Nitroglycerine
    - Dinitrophenol
    - Dinotrotoluol

Ammonium nitrate
Lead styphnate
Picric acid and picrates
Potassium nitrate
Sensol
Sodium nitrate

Plants—Many plants, especially those belonging to the Rhus family, irritate so large a percentage of people that they may be classed practically as primary irritants. Indeed, Bloch showed that while only the hypersensitive were irritated by primula abconica it was possible to produce dermatitis in all people if the toxin of the plant was applied in sufficient concentration. The toxic properties of plants vary with the season and the stage of their growth. Rhus toxicodendron (poison ivy) is more irritating in the late spring and summer when the leaves are green than in the autumn when they begin to change color.

Some plants are poisonous only when grown in certain localities. For instance, castor beans grown in some places are toxic, while those indigenous to others are harmless. The same is said to be true of the chinawood tree and the cocobolo.

Some plants are photosensitizers. Certain grasses, dandelion, wild parsnip. and trefoil are examples. The juice of figs is also said to be photosensitizing.

The following woods, especially when being sandpapered and polished, have been found to be poisonous to a considerable percentage of workers:

West Indian Mahogany	Spurge
West Indian Boxwood	Machineel (Cuba)
West African Ebony	Rungus wood
West African Boxwood	Cocobolo
West African Mahogany	Silver Fir
Brazilian Walnut	Silver Spruce
	Cedar
	Teak
	California Redwood
	Satinwood
	Cocus wood

The following plants also are known to have produced dermatitis among certain workers:

Daffodile (Amaryllidacea)

Rhus family { Poison Ivy, Poison Sumac, Poison Oak, Japanese lacquer

(The irritant in these plants is an oil called toxicodendrol)

Mango
Cashew nut (Irritant in an oil called Cardol)

Dog bane, Oleander } (Apocnaceae)

Cow parsnip (Aracear)

Satinwood, Alder } (Betulaceae)

Prickly Pear (Cactaceae)

Hops, Hemp } (Cannabinaceae

Orange, Grapefruit, Lemon, Lime } Chief irritant is a terpene called Limonene

May weed, Ox-eyed daisy, Pyrethrum flower, Chrysanthemum, Camomile, Sunflower, Ragweed, Marigold } (Compositae)

(Shave grass (Equisitaceae)
Hyacinth
Orris root (Irideae)
Laurel (Lauraceae)
Cinnamon (Leguminosae)
Tulip (Liliaceae)
Asparagus
Cloves (Myrtaceae)
Vanilla (Orchidaceae)

Primrose { Primula obconica, Primula senensis, Primula fairinosa (Primulaceae)

Marsh marigold (Ranunculaceae)
Rue (Rutaceae)

Tomato, Tobacco } (Solanaceae)

Celery, Cow Parsnip, Angelica } (Umbelliferae)

Fig, Nettle } (Urticaceae)

Biological Agents—Biologic agents often cause or complicate occupational dermatoses. They may be divided as follows:

1. **Bacterial Infections**
   - Infected occupational wounds
   - Folliculitis, caused by staphylococci and streptococci
   - Boils, caused by staphylococci and streptococci
   - Anthrax of hide handlers
   - Glanders of cattle handlers
   - Vaccinia of cattle handlers
   - Impetigo of cattle handlers
   - Erysipeloid of animal product handlers
   - Verruca Necrogenica of cadaver handlers
   - Butcher's Pemphigus
2. **Fungi**
   - Monilia (Kitchen workers)
   - Yeasts (Bakers and fruit handlers)
   - Dermatophytes { Animal caretakers, Fur handlers, Wool sorters, Hide handlers, Barbers, Bath attendants
   - Sporotrichosis, Blastomycosis — Horticulturists
3. **Parasites**
   - Ground Itch (Uncinariasis) { Miners, Farmers, Laborers
   - Mange (Acarus Sarcoptes and Demodex) Dog handlers
   - Grain Itch (Pediculoides) { Wheat handlers, Straw handlers, Linseed handlers, Corn handlers, Handlers of other grains

Carpoglyphus passularum (Dried fruit handlers)

(Caterpillar dermatitis, caused by urticating hairs (Horticulturists)

These various causative factors may be classified by their action on the skin as follows:

1. **Keratin Solvents,** such as alkalies and soaps.
2. **Fat Solvents,** such as turpentine, petroleum distillates, and volatile hydrocarbon solvents.
3. **Desiccators of Hyroscopic Agents,** which take the water out of the skin, such as sulphuric acid, powerful alkalis, and calcium oxide.
4. **Protein Precipitants,** such as heavy metal salts, which form albuminates in combining with the skin.
5. **Oxidizers,** which by their strong affinity for the hydrogen in water will liberate oxygen. Examples are chlorine gas, peroxide of hydrogen, chromic acid and its salts.
6. **Hydrolizers.** Some substances tend to hydrolize when coming in contact with moisture of the skin, and thus form irritating compounds. An example of this class is hexamethylenetetramine, which on hydrolizing first forms formaldehyde and later goes on to formic acid.
7. **Keratogenic Agents.** Certain substances act as stimulants to the keratin-forming cells of the skin and are apt to cause new growths. Arsenic, petroleum and its products, and aniline compounds are examples of this class.
8. **Sensitizers.** There is still another group, to which the skin becomes sensitive after exposure for varying lengths of time.. These substances may be called anaphylactoid in their action. The nitro and nitroso compounds and certain plants and fungi belong to this class.
9. **Photosenitizers.** Certain chemicals and plants have a photo-sensitizing effect on the skin. Workers exposed to coal tar, petroleum, and many of their derivatives are exceedingly susceptible to dermatitis solaris and develop marked melanosis. Photosensitivity has been reported from contact with figs and certain meadow grasses, and also from some dyes, such as Brom fluorescin and Rhodamine B.

PHYSICAL AND MECHANICAL CAUSES OF INDUSTRIAL DERMATOSES CLASSIFIED BY OCCUPATION, LESION AND LOCATION

Occupation	Lesion	Location	Cause
Asbestos workers (carders, weavers, mattress makers)	Corns, warts	Palms, fingers	Penetration of fibers
Bakers	Callosities	Palmar and cubital surface of little finger	Pressure on kneading board
Band Jobbers	Excoriations, thickening	Ulnar side of the hands	Friction of twine dragged through rollers
Basket makers	Thickening	Ulnar side of the palms	Hammering canes with clenched fist
	Callosity and broadening	Thumbs	Bending and intertwining hard cane
	Cicatrices, rhagades	Palmar surface of fingers and the hands	Innumerable cuts from handling materials
Blacksmiths	Hygromata	Palms, fingers	Heat and pressure
Burnishers of metal	Multiple callosities	Hands	Pressure of tools
Butchers (dry smokers)	Hyperkerotosis	Palms	Hot water and resin used in depilation of hides
Cane cutters	Tenosynovitis crepitans	Wrists	Continuous movements
Carpenters, joiners	Thickening, hygromata	Thumbs, index fingers	Pressure of plane
Cotton mill workers:			
Winders	Thickening	Right index finger	Guiding yarn into clearer slot
Doffers	Thickening	Web between the thumb and the forefinger	Friction from replacing bobbins
Cutters of clothing	Callosities	Thumb, fingers	Pressure of shears
Cutters of fustian	Papilloma	Inner side of the thumb joint	Pressure of shears
Diamond cutters (rounders)	Deformity	Thumb, forefinger	Pressure
Engravers	Callosities	Palmar surface of little finger	Pressure of engraving tools

CLASSIFIED BY OCCUPATION, LESION AND LOCATION

Occupation	Lesion	Location	Cause
File cutters	Hypertrophy	Right little finger	Pressure
Fishermen	Dermatitis	Hands	Handling of cables and ropes wet with salt water, especially if skin is abraded
	Frostbite	Hands	Exposure to cold
Flax spinners	Callosities	Hypothenar eminence of left hand	Blows from the flyer
Flax hacklers	Callosities	Right index finger	Pulling flax off pins
Glove makers	Callosities, deformities	Hands and fingers	Pressure on knife and scissors
Grinders of lenses	Thickening	Middle finger	Friction from abrasives
Glass blowers	Keratosis rhagades	Palms	Heat from blowpipe, stock grease containing pitch
Harp players	Thickening	Fingertips	Friction from strings
Hatters:			
Plankers	Callosities	Thenar eminence, fingers	Rolling cylinder with hands
Felt-hat sizers	Keratosis, rhagades	Palmar surface from wrist to fingertips	Friction and immersion in hot and cold water
Straw-hat makers	Callosities, deformities	Palms and fingers	Picking and plaiting straw
Hod carriers	Thickening	Shoulders	Weight bearing
Housemaids	Bursae	Knees	Kneeling on hard floors
Lathe workers	Hygromata	Palms	Pressure and friction
Leather cutters	Callosities	Right index finger	Friction from tools
Miners	Callosities	Hands	Friction from tools
Coal miners	Blue-black tatooing	Upper half of the body	Impregnation of skin with coal dust
	Bursae	Knee, hands and elbow	Undue friction
Moulders	Scars from burns	Dorsum of feet	Droppings of molten metal
Musicians	Chronic tenosynovitis	Long extensor of thumb	Due to position of hands in holding drumsticks
Porters:			
Alabaster blocks	Fibrolipoma with superfluous hair	Shoulders	Weight bearing, friction
Boxes, cases, etc.	Callosities	Shoulders	Weight bearing, friction
Timber	Hygromata	Hands	Carrying logs
Potters	Horny thickening, atrophy of skin	Left Hand	Friction of revolving lathe
Printers, compositors	Callosities	Fingertips	Pressure of type
Shoemakers:	Callosities	Folds of fingers, thigh above patella	Pressure of tools
Knockers	Trophic	Fingers	Vibration
Cobblers	Scars from cuts	Right thigh	Cutting leather
Stenographers	Tenosynovitis crepitans	Wrists	Excessive movement
Stone workers	Hygromata, tattooing, pigmentation	Dorsa of hands	Impregnation with particles
Sugar workers	Callosities	Between fingers	Manipulating machine cutting cubes
Violinists	Thickening	Fingertips	Friction from strings
	Fibro-fatty pad	Left jaw	Friction from instrument
Washerwomen	Callosities	Inner surface of forearms	Friction against edge of washtub

CLASSIFIED BY OCCUPATION AND TYPE OF IRRITANT

PRIMARY IRRITANTS

Occupation	Irritants
Acetylene makers	Calcium carbide
Acid workers	Acids
Alkali-salt makers	Caustic alkali
Artificial-flower makers	Caustic alkali, dyes, solvents
Auto washers and cleaners	Solvents, potassium cyanide
Battery (dry) makers	Acids, zinc chloride, ammonium salts, charcoal
Beatermen (paper and pulp)	Caustic alkali, dyes
Bleachers (cloth)	Acids, bleaching powder, caustic alkali, hydrogen peroxide, sodium silicate
Bricklayers	Lime
Cap loaders	Mercury compounds
Carbide makers	Calcium carbide
Carbolic-acid makers	Caustic alkali, phenol
Cardboard stickers	Sodium silicate
Carroters (felt hats)	Acids, mercury compounds
Cartridge dippers	Acids, soap
Cementers (rubbers shoes)	Benzine, coal-tar products, naphtha, methyl alcohol
Cement workers	Lime, pitch, rosin
Chemical workers	See specific chemical in
Chromium platers	Chromium compounds, sulphuric acid
Cloth preparers	Acids, caustic alkali, lime, soap, potassium salts, sodium salts, sodium silicate
Cotton sizers	Acids, zinc chloride, arsenic salts, phenol, aluminum salts, calcium salts, magnesium salts
Curriers (tannery)	Paraffin, benzine
Degreasers	Solvents
Dentists	Procain, mercury, cocaine
Detonator cleaners	Mercury compounds
Detonator fillers	Mercury compounds
Detonator packers	Mercury compounds
Dishwashers	Caustic soaps, grease
Disinfectant makers	Formaldehyde, cresol
Druggists	Bleaching powder, soap, iodoform, sodium salts
Dry cleaners	Dirt, benzine, carbon tetrachloride
Dye makers	Acids bezine, caustic alkali, coal-tar products, turpentine, antimony compounds, barium salts, calcium salts, cresol, dextrines, ferro-cyanides, formaldehyde, gums, lead salts, phenol, potassium chlorate
Electroplaters	Acids, benzine, caustic alkali, lime, potassium cyanide, soap, nickel, sulphate, chromic acid

PAGINATION INCORRECT

There is authority for the statement that at least 25% of employee absenteeism from non-occupational illnesses is directly traceable to oral conditions.

1. In 2,469 employment medical examinations in 1928, Sappington discovered 15,491 defects of all kinds—an average of 6.3 per person.

2. Another large industrial concern found that more than 95% of its employees had defective teeth and diseased gums.

3. In three store clinics in Boston, with a total of 2,605 cases diagnosed and recorded, clean mouths were found in 19.9%; fair mouths in 53%; and neglected mouths in as many as 27.1%.

4. Black, in his investigation of the prevalence of dental infections, found that 78 of every 100 persons averaging 35 years of age had infected teeth.

5. Kramer examined 10,000 men in a steel plant. The most common type of defect among the old employees was dental impairment (42%).

. . . In the main, too little is being done. The average medical examination does not include x-rays of the teeth, which is the only way a real diagnosis or prognosis can be made. And the average follow-up is more desultory than insistent.

. . . In a survey of non-occupational illnesses and injuries in a major oil refinery, aside from the "dental conditions" themselves, the three types of diseases which are directly traceable to oral conditions (arthritis, gastro-intestinal, and genito-urinary) caused 67% of the total days lost. This is not to say that all of the days lost from these particular diseases were actually due to oral sepsis. The point is that from the nature and the effects of oral sepsis, they might have been.

—Abstract from an article in Industrial Medicine, entitled "Dental Services in Industry", 11:157-162 (April, 1942) by Harold A. Hooper, D.D.S., Dental Consultant, Chicago, St. Paul, and Pacific Railroad.

"It follows, therefore, that the close cooperation of physician and dentist in the handling of these cases is much to be desired. This is especially true in those cases in which dental foci of infection produce chronic degenerative diseases, which lower the productivity of the employee, besides shortening his span of life . . ."

—Editorial, Rocky Mountain Medical Journal, January, 1942.

In the first draft, 188,000 selectees were rejected from military service because of dental defects. This great number of rejections emphasizes a deplorable lack of physical fitness and reminds us that manpower can be our greatest waste.

LABOR'S ECONOMIC REVIEW

PUBLISHED BY AFL-CIO

Vol. 3, No. 8-9 August-September, 1958

In Brief

14,200 workers are killed annually on the job; 85,000 are permanently impaired; 1,823,000 are temporarily-totally disabled producing the goods and services providing the world's highest standard of living.

Workmen's compensation, the oldest of our social insurances, is failing to meet the needs of these injured workers. Rehabilitation is in order.

For less than an additional 2 cents per man-hour of labor, our society could provide a workmen's compensation program which would furnish medical care as long as needed, rehabilitation to the extent necessary to overcome as much of the disability as possible and cash benefits to provide a reasonable standard of living to all workers injured on the job.

20 Years in Retreat

WORKMEN'S COMPENSATION

On January 31, 1908, President Theodore Roosevelt asked the Congress to enact workmen's compensation legislation to protect United States Government employees injured on the job. In the same message, the President urged legislation to protect workers in private employment.

Within the year, Congress enacted the first law granting workmen's compensation benefits to a limited number of government employees.

Within a decade, most of the States had enacted workmen's compensation programs, and by 1948 all the States, Alaska, Hawaii and Puerto Rico had accepted workmen's compensation. As a consequence, American workers today believe when they are injured on the job that medical care will be furnished them as long as they need it, rehabilitation will be provided to the extent necessary to give them every opportunity to overcome as much of their disability as possible, and cash benefits will be paid in amounts adequate to maintain a reasonable standard of living for themselves and their family for the duration of the disability or dependency.

Unfortunately for the dependents of the 14,200 who were killed last year, the 85,000 permanently physically impaired and the 1,823,000 temporarily disabled to the extent that they were off the job at least one full day, workmen's compensation benefits failed to meet their needs.

Goals

Many organizations have reviewed the needs of workers who have sustained job-incurred injuries. A most concise definition of goals to meet the needs of injured workers has been prepared and adopted by the American Medical Association:

"1. Rehabilitation (including medical care) of the occupationally disabled;

"2. Assured, prompt and adequate indemnity for the occupationally disabled or their survivors; and

"3. Minimal costs to employers and society commensurate with the above provisions." [1]

In principle, the goals of labor and the goals of the American Medical Association and the International Association of Accident Boards and Commissions are the same.

In spite of the commendable efforts of the State Central Bodies of the AFL-CIO to gap the distance between the accepted goals of workmen's compensation and the benefits provided for job-injured workers by State legislation, the gap has not been bridged.

Today millions labor unprotected by workmen's compensation. Only three out of four workers are protected by workmen's compensation against the hazards of injury on the job. State legislatures have applied numerical exemptions; have failed to recognize the hazards of industrial disease; have bowed to the pressure of the agricultural industry; have declared certain industries non-hazardous; and in many States have made coverage voluntary. State administrative rulings and court decisions have often narrowed the area of statutory protection by interpretation. When these various exclusions of coverage are joined together, more than 15 million workers for one reason or another are unprotected by insurance against a job-sustained injury.

Coverage

Elective or Compulsory? Approximately one-half of the States provide compulsory workmen's compensation coverage. The remaining States permit election of coverage in one form or another. If the argument that compulsory coverage of all employers exposed State legislation to attack on the grounds of constitutionality were once true, such argument is no longer valid.

Today, the retention of elective coverage stands as a formidable weapon against labor's efforts to make workmen's compensation an effective program. Employers can and have threatened to escape coverage if benefits were improved. Workmen's compensation ought not to be a "catch what you can" program.

Numerical Exemptions. In the beginning it was thought that if small employers were included under workmen's compensation the administrative burden would be so heavy that prompt adjudication of claims would be impossible. The experience of 24 jurisdictions which make no exemptions based on the number of employees proves that numerical exemptions are unnecessary.

But today many States exempt employers of less than two to less than fifteen workers, the number varying in different jurisdictions. [2]

On the whole, small employers have insufficient assets to protect either the injured worker or the business without compensation insurance. Both should be protected; compulsory workmen's compensation should immediately be enacted in all States which provide numerical exemptions.

Agricultural Workers. The needs of an injured worker should not be determined by his occupation. Although agriculture is one of the more hazardous occupations in our society, agricultural workers (except in Ohio, Hawaii and Puerto Rico) labor unprotected. Eleven States extend limited coverage to agricultural workers. The remaining States and Territories place the risks of injury on the job on the men, women and children who contribute so substantially to our food supply.

Hazardous Employment. Twelve States still retain reference to "hazardous" and "extra-hazardous" employment in their workmen's compensation acts.

Although a number of State courts have recently broadened the scope of "hazardous" occupations, many persons injured on the job are denied compensation because the State limits compensation to hazardous occupations. The Supreme Court of Oklahoma recently held that a filling station unless operated in conjunction with a repair shop was not "hazardous."

[1] "Medical Relations in Workmen's Compensation," A Guide Adopted by the American Medical Association, December, 1955, p. 3.

[2] NOTE: "State Workmen's Compensation Laws," Bulletin 161 (Revised) U. S. Dept. of Labor, August 1957, is the most useful source for comparison of State laws.

Occupational Diseases. Mississippi, Wyoming and Montana make no provision for workmen's compensation for persons injured by an occupational disease. An additional 18 States and Territories limit coverage to a schedule of occupational diseases. Eleven States which extend full coverage of occupational diseases either do not pay benefits for partial disability or limit the benefits payable if the disease is asbestosis or silicosis. Moreover, time limitations for filing and other restrictive wording create legal barriers to compensation for many persons injured by an occupational disease.

Radiation Diseases. The rapidly increasing use of atomic energy for peaceful purposes has exposed many workers to injury different from the experience of other occupational diseases. Scientific experiments today indicate that exposure can kill directly, can bring death indirectly as by cancer, or bring death earlier without relation to known diseases. There is no experience under workmen's compensation to guide us in the protection of persons in the third category. However, for those killed directly or by causally related diseases, workmen's compensation can afford protection for workers and their families.

Today, no State can say: all workers other than casual are afforded protection against the hazards of injury on the job.

Medical Care

Cost of Medical Care. Foremost among the benefits of workmen's compensation should be the medical care furnished to the injured worker.

Although the students of workmen's compensation point out that the inclusion of medical benefits represents the most important progress made in the program over the 50-year period, it should be pointed out that one-fourth of the States still limit by amount or time the medical care furnished workers suffering "accidental" injuries and half of the States still limit the medical care for those injured by occupational disease. To deny further treatment to the individual workman who still needs medical care after being disabled for a period such as six months is nothing but a cruel abdication of responsibility.

Nor is cost the prohibitive factor to unlimited medical benefits. In 1953, the cost experience of States with statutory provisions for unlimited medical benefits which report to the National Council on Compensation Insurance indicated that medical and hospitalization benefits amounted to 23 cents for every $100 of covered payroll[3]—on the average, a little more than ½ cent an hour. At best, therefore, if we accept the national figures measuring the increased cost of medical and

hospitalization care, unlimited medical and hospitalization cost would not exceed at the outside more than three-fourths of a cent per hour or less than 30 cents for every $100 of covered payroll. For an almost negligible increase in cost, all States could furnish unlimited medical benefits to workers injured on the job.

Selection of Physician. The National Association of Manufacturers recently reaffirmed its position that it was in the welfare of injured employees that the company should retain the exclusive right to choose the doctor.

Three-fourths of all workers covered by workmen's compensation must today accept the doctor chosen by the employer or his insurance carrier.

The AFL-CIO opposes this position, because the doctor now has a patient who is in fact not his client. Many times a dispute arises (1) in determining whether or not the injury was causally connected with the occupation, or (2) in evaluating the extent of disability. The volume of conflicting medical testimony indicates that the client-doctor relation too often outweighs the doctor-patient relation.

The American Medical Association has recognized that the company-selected doctor relationship is ethically untenable. The A.M.A. has said: "Disabled employees should have the *right* to accept physicians' services provided by employers, *or to select* another attending physician from a register of all other physicians in the community *willing and qualified* to perform the essential services."[4]

Unlimited medical care is vital to any acceptable workmen's compensation program. The AFL-CIO, as recently as December 1957, stated that an injured worker should have free choice of a qualified doctor. Such a goal can be best implemented by a medical panel. Since the administrative agency has no personal or financial interest in the selection of willing and qualified doc-

[3] "Illustrative Nation-wide Cost Estimate for Workmen's Compensation Programs with Broader Coverage and Higher Benefit Levels," Research & Statistics, Note No. 2, 1955, U. S. Dept. of Health, Education and Welfare, p. 2.

[4] "Medical Relations in Workmen's Compensation," A.M.A., Dec. 1955, p. 4.

tors for medical panels, their appointment should be a responsibility of the administrative agency. To be sure, the appointments should be made in co-operation with the respective medical societies of the separate jurisdictions. As the adopted report of the A.M.A. points out, "The administrative agency must have more than adjudication and appeals functions; it must have an affirmative duty to see that the intent of the law is carried out." To gain co-operation with the medical profession and to achieve the best in medical care, every administrative agency should have a full-time medical director.

Rehabilitation. Workmen's compensation should be dedicated to the proposition that injured workmen should have every opportunity to overcome as much of their disability as possible. But few States have attempted to provide adequate rehabilitation programs.

Only 13 States, Alaska, Hawaii and the District of Columbia have provisions for special maintenance or other compensation of the injured worker during the rehabilitation period. Only Florida, Massachusetts, Minnesota, Missouri, New Jersey, New York, West Virginia and Hawaii have special rehabilitation divisions within their workmen's compensation agency. Only Oregon, Rhode Island, Washington and Puerto Rico have established rehabilitation centers to provide injured workers with modern rehabilitation care. Ohio through its exclusive State Fund provides rehabilitation care through a contractual arrangement with Ohio State University. Medical science has made great progress in the know-how of rehabilitation. The new knowledge and techniques should be put to use for disabled workers. All State compensation acts should provide maintenance benefits and rehabilitation provisions. State agencies should be empowered and given the necessary technical personnel to supervise their rehabilitation programs.

Sub-Standard Indemnity Benefits

The American labor movement believes that an injured worker and his family ought not be condemned to a substantial reduction in living standards during the rehabilitation period. Temporary-total disability is properly measured in wage loss. However, indemnity of permanent-partial and permanent-total impairment should be determined in relation to the injured worker's permanent impairment of earning capacity.

Temporary-total Indemnity Benefits. Most States provide that an injured worker shall receive benefit amounts between 60 and 66⅔ percent of his wage loss while suffering a temporary-total disability. However, the low maximum amounts which are also written into the laws make this impossible.

"In 1939 . . . half the laws provided a maximum of less than $20 a week and $25 was the highest amount payable under the State laws. These dollar maximums were nevertheless high enough so that, in virtually every State, a worker receiving the average weekly wage (as shown by unemployment insurance data) could receive under workmen's compensation the proportion of his wage loss specified in the statute. . . . Since 1939, all but seven States have increased their dollar maximum amounts by at least 75 percent; in 20 jurisdictions the increases have amounted to more than 100 percent. As of August 1957, three-fourths of the laws provided maximum weekly benefits (including allowances for dependents) of $35 or more, with 17 providing $45 or more.

"These higher maximums, however, had still not caught up with rising weekly wages, which had increased from 1939 to 1956 for the average worker covered under unemployment insurance by 210 percent—from $26.17 to $87.17.

"Consequently, *only* seven programs (including the system for Federal employees), with 9 percent of the covered workers, had weekly maximums that were high enough in 1957 to permit the statutory percentage to be effective for workers with average wages though not for many workers with higher-than-average wages." [5]

The left column of the chart on page 55 shows for each State the actual proportion of weekly wages that a worker in receipt of the average 1956 wage would have received in benefits during a period of total-temporary disability under the statutory percentages and maximums effective in August 1957.

In 1951, the U.S. Department of Labor calculated a City Worker's Family Budget to show how much was needed for what it called a "modest

[5] Skolnik, Alfred M., "Trends in Workmen's Compensation: Coverage, Benefits and Costs," Social Security Bulletin, Vol. 21, No. 8, August 1958, p. 11.

but adequate" standard of living. Recently, the AFL-CIO Research Department adjusted the 1951 figures for changes in prices and federal taxes since that date. Today, at least $4,656 a year must be earned by a city worker to support a family (wife and 2 children) on a "modest but adequate" standard of living. This means at least $90 a week.

The average weekly wage in 1956 was $81.17. "For the country as a whole, a single worker with average wages received a weekly rate of compensation, weighted by coverage, estimated at $38.96 or 48 percent of the nationwide average weekly wage." [6] 92.4 percent of single workers with average wages received less than 60 percent of their average weekly wage.

The years from 1939 to 1958 present a grim story of retreat for those who believe that workmen's compensation should provide cash benefits in amounts adequate to maintain a reasonable standard of living for the injured worker and his family.

Permanent-total Disability. Although the loss of adequate workmen's compensation is a serious problem to the worker temporarily but totally disabled, the hardship in most cases is short-lived. The worker, however, who suffers a permanent-partial or a permanent-total disability stands to suffer the remainder of his life. His benefits replace even a lesser amount of his wage loss.

Eighteen jurisdictions place a maximum dollar amount on indemnity benefits for a permanent-total disability. These maximums range from less than $9,000 to $20,000.

Seven States stipulate the maximum number of weeks for which benefits shall be paid. These vary from 400 weeks in Louisiana to 550 weeks in New Mexico. Twenty-five jurisdictions, therefore, stipulate a maximum amount either by dollars, by weeks or by both.

By this device, State legislatures have evaded their responsibility to the most seriously impaired workers and to their families.

The average incurred loss per case for permanent-total disability in 1954 was $16,758. While wages between 1939 and 1954 had increased 185 percent, the cost per case of permanent-total injury had increased only 178 percent.

Permanent-partial Disability. Most permanent-partial disabilities are compensated in accordance with a schedule of benefit amounts. One illustration will suffice to show the unbelievable range of benefit amounts paid by the various States for a single loss. For the loss of an arm (at shoulder) Wisconsin pays an amount equal to 500 times the injured worker's basic benefit amount; Vermont pays 170 weeks. Four States pay less than 200 weeks; 24 States pay 200 or more but less than 250; 12 States pay 250 or more but less than 300; 10 States pay 300 or more but less than 350; 1 State pays more than 350 weeks. Unfortunately, the basic wage is low in many States which pay benefits for a fewer number of weeks, thereby compounding the hardship.

In 1954, the average incurred loss for a *major permanent-partial* was $5,010. Major parts of a body bring bargain prices for an employer in today's workmen's compensation market.

Financing Workmen's Compensation

In 1956, total benefit payments, medical and compensation, amounted to $1,002 million. In 17 jurisdictions, representing two-fifths of the covered workers, these benefits amounted to less than ½ of 1 percent of covered payroll in 1956, and in 37 jurisdictions, representing 86.1 percent of the covered workers, amounted to less than 7/10 of 1 percent of covered payroll. [7] "Only in six States with 6 percent of covered employment did benefit payments absorb as much as 1 percent of payroll." [8] The right column of the chart on page 55 breaks down the benefits as percent of payroll by States.

The estimated cost of workmen's compensation to the employers as a percent of covered payroll in 1956 was .92 percent and in dollars amounted to $1,630 million. Substantially, general administration, policywriting, claims investigation and adjustment, safety, taxes and profit consumed the difference between $1,002 million in benefit payments and the $1,630 million set aside by employers.

Employers insure their risk either with a stock

[6] Skolnik, p. 12.

[7] Skolnik, p. 11.
[8] Skolnik, p. 9.

or mutual (private) carrier, with a State Fund (competitive or exclusive) or self-insure. Over the past ten year period the expense ratios of the mutual and stock companies have averaged respectively between three and four times as much as the exclusive and competitive State Funds. As a result, exclusive and competitive State Funds return a greater portion of the premium dollar to injured workers.

The attack against a workmen's compensation program geared to the needs of injured workers is spearheaded by the private insurance carriers. From the dollars paid by consumers for services and set aside by employers for injured workers comes the revenue to fight improved legislation.

In February 1957, the AFL-CIO said: "The time is overdue for a complete investigation of the generosity toward agents, brokers, officials and stockholders of insurance companies compared with the harsh treatment to injured workers. Employers should be required to testify as to why they have tolerated such exorbitant insurance costs—and this testimony laid beside the chronic excuses made by industry as to why it cannot pay decent benefits for the injured." State legislatures should be encouraged to make inquiry into the insurance of workmen's compensation at their regular sessions in 1959.

State Administration

Wyoming, New Mexico, Louisiana, Alabama and Tennessee administer their workmen's compensation laws through the courts. Forty-three States and all the Territories administer their laws through separate commissions or their labor department.

The inherent nature of the court system precludes supervision of medical care, rehabilitation, vocational rehabilitation, the assurance of prompt benefits, and the promotion of safety and health activities.

In 1956, total administrative costs were $17.4 million. Thirty-five percent of this total was met by legislative appropriation and 65 percent by assessments on the carriers (private, self-insurers and State Funds.)

Unfortunately, inadequate funds have crippled many State administrations from doing the job needed to be done. Recently, the Michigan Department of Workmen's Compensation was unable to hold referee hearings for 10 days because it had no funds to pay court stenographers.

On the whole, State administrators prefer to have departmental costs financed through assessments rather than legislative appropriation. Since general funds of States may be hard-put to meet rising costs of government, workmen's compensation may fare better if supported by an assessment against the insurance carriers.

Legislation Needed

In the beginning, workmen's compensation was a marked improvement over the common law. Legislatures have failed to fit their programs to the needs of injured workers.

To remedy the neglect, the Second Constitutional Convention of the AFL-CIO, December 1957, adopted the following objectives:

"Compulsory workmen's compensation must be extended to all workers. Provision must be made for free choice of a qualified doctor, full medical care, hospitalization and, when needed, rehabilitation. Weekly indemnity benefits must be established in amounts equal to at least two-thirds of average weekly wages during disability. And adequate provision must be made for dependents during dependency.

". . . establishment of a workmen's compensation department with right to appeal to an appeals board which has no administrative responsibilities and from which appeal on matters of law only can be made to the highest court in a State will provide a workable procedure to achieve equity and promptness in granting awards to workers injured on the job.

". . . workmen's compensation should be insured through an exclusive state fund in order that benefits can be made adequate at the least cost to society and that safety and rehabilitation programs can be coordinated with administrative efficiency.

"We support the enactment of a Federal Workmen's Compensation Act. Short of this the Congress of the United States should enact legislation fixing minimum standards of workmen's compensation."

This issue of Labor's Economic Review was prepared by Mr. Clinton Fair, Assistant Director, AFL-CIO Department of Social Security.

States Can Afford to Do Better

1 Maximum weekly benefit for temporary total disability, August 1957, as percentage of weekly wage, 1956 (Column 1)

2 Total Benefits as percent of covered unemployment insurance payroll, 1956 (Column 2)

[1] Lower figure represents benefit for single worker; higher figure represents benefit maximum all dependents.
[2] Benefits may not exceed period of time or amount indicated.
[3] Lower figure represents payments to widow only; higher figure represents benefit maximum all dependents.
[4] Additional benefits for dependents.
[5] Plus $2.30 for each totally dependent.
[6] "W" means payment to widow until death or remarriage; "C" means payment to children until 18. Some jurisdictions have variations of this general principle.
[7] Limited benefits for occupational disease in Arizona and Utah.
[8] Limited benefits for silicosis and asbestosis: Arkansas, Illinois, Maine, Nevada, Texas, Vermont. In West Virginia no allowance for medical treatment for silicosis.
[9] 250 weeks in cases of total dependency; 312.5 weeks in cases of surviving widow and one or more dependent minor children.
[10] Thereafter reduced benefits for children only until 18.
[11] Additional specific cases—rehabilitation, constant attendant, etc.
[12] Period may be extended; amount may be increased not to exceed $375.
[13] $1000 maximum for hospital service and supplies and $500 for medical and surgical services. Commission may authorize an additional $1000.
[14] In extreme cases, Commissioner may require employer to furnish care for a longer period. In case of silicosis, additional period is limited to 90 days.
[15] $35.00 for 13 weeks, then $40; plus $4 for each total dependent.
[16] Additional benefits for dependent child; in Massachusetts, benefits continue until 18, or over 18 if incapacitated, and to widows during periods they are not fully self-supporting.
[17] In case of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.
[18] A separate act provides for payment of $65 per month from public funds to persons totally disabled from silicosis, if they have been residents of Montana for 10 years.
[19] Benefits set in accordance with a "wage and compensation schedule."
[20] Initial amount for surgical and medical services limited to $450. In addition, hospital services, orthopedic appliances, and prostheses are allowed for first 6 months. Board may order further medical, surgical and hospital services after end of the first 6 month period.
[21] Also hospital benefits not to exceed $700.
[22] Full coverage permissible.
[23] Plus $2 for each dependent child under 21.
[24] May be extended for 1 year including the first 60 days.
[25] Under certain conditions, medical benefits terminate.
[26] Additional benefits payable from Children's Fund to widow for children under 16 (13% of widow's benefit is the weekly or monthly allowance made for each dependent child); or for children over 16 if mentally or physically incapacitated.

NOTE: For a more complete comparison of the laws, write to the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. for State Workmen's Compensation Laws (Bulletin 161, Revised) published by the Bureau of Labor Standards, U. S. Department of Labor. The above material based on that publication.

Stretching a Point

Albany, N. Y.—(PAI)—Shooting paper clips out of an office window with a rubber band can be considered part of a job under certain circumstances, the New York court of appeals has ruled.

James Johnston, a Staten Island mesesnger, was doing just that when a paper clip backfired and injured his eye. The court declined to set aside a workmen's compensation award of $228.64, saying the activity was sufficiently close to his regular job. The accident occursed while he was waiting for messages to deliver.

INDUSTRIAL COMMISSION

OF

WISCONSIN

RALPH E. GINTZ, *Director of Workmen's Compensation*

WORKMEN'S COMPENSATION

Thirtieth Report

July 1, 1958 to June 30, 1960

FOREWORD

General

This report covers administration of the workmen's compensation act for the biennium ended June 30, 1960. Cases cited are arranged in chronological order. The index is both by alphabetical and by topical subject.

Administration of the compensation act is under the Director of Workmen's Compensation, who in turn is directly responsible to the Industrial Commission of three members. Approximately 60 employes, including 8 hearing examiners, are employed in administration of the act.

For the year ended June 30, 1960, benefits paid were over 13½ million dollars. In addition to benefits tabulated a substantial sum has been paid for medical benefits not reported to the commission because reports are not required in cases where disability results for less than three days. In other cases, medical benefits are by contract so that no fixed sum can be reported in an individual case.

Uncontested Cases

Currently over 28,000 reports of injury per year are being made to the commission by about 63,800 employers subject to the act. Some of these cases are reported in error. Approximately 90 per

without contest

cent of compensable cases are processed by the commission through reports and correspondence without dispute or formal intervention. The commission's function is to make certain that proper reports are filed and that compensation is paid on an adequate and legal basis. This requires a great deal of detailed examination by expert personnel trained to analyze law and compute benefits in different types of cases, some involving trivial sums and others many thousands of dollars.

It is the commission's policy not to approve final settlements in cases in which no contest arises. When the commission determines that proper benefits have been paid, the case is placed on file. If later it is discovered that additional benefits are due, the matter is reactivated and the employer or insurance carrier is required to make additional payment. Cases so handled may be reopened within six years from the date of last payment of compensation, and further benefits ordered on proper showing.

The law provides that where valid dispute exists, parties may compromise their differences and submit proposed settlement to the commission. If approved, the compromise may be reviewed within one year from the date of filing or of the award of the commission. If no action is taken within that period, the settlement becomes absolutely final and no further benefits can be collected. Compromise agreements are approved only when it is shown that a genuine dispute has resulted. Parties are required to submit supporting statement and further investigation may be carried out by the commission in order to make certain that a real dispute exists which warrants compromise. If the commission concludes that on the basis of reasonable probability full liability should be assumed, the compromise is rejected and if the employer or carrier fails to assume full liability, formal hearing is ordered.

The checking of reports is a task which is of vital importance. The commission must be certain that full facts are correctly reported in order to make certain that proper benefits are paid. In this function, the commission relies principally upon the reports of employers and insurance companies. The large majority of employers are insured. A comparatively small number are permitted exemption from insurance. Where the employer is "self-insured" he makes all reports. Where he carries insurance, he makes first report of injury to the Industrial Commission (as well as to his

carrier) and subsequent reports are made by the insurer. The law requires employers to make report of injury on the fourth day after beginning of disability due to accident or to occupational disease provided some disability exists after the third day following the date of injury. On the eleventh day, report is to be filed showing that payment has commenced or giving the reason for failure to pay. No further report need be made except as compensation is stopped for whatever reason. If dispute has arisen, a memorandum must be attached advising the nature of controversy. When "settlement" is made, this must be promptly reported to the commission on final report form, accompanied by the copy of receipt signed by the employe. If reports are properly made, this closes the case subject to reopening if further claim is timely made by an employe. Where disability lasts more than three weeks or any permanent disability results physician's report is supplied detailing the elements which constitute disability and stating the doctor's opinion as to the extent of disability which has resulted. These reports are reviewed in the light of standards and administrative rules adopted by the commission.

The commission is at all times empowered to make full investigation of any and all questions. Before a case is closed, the reports which are filed are carefully analyzed and used as checks against each other. An extensive follow-up system is employed to make certain that reports are filed.

When the employer's report of injury is received, the employe is sent a letter advising him of his rights and duties. He is also sent a little booklet which answers many questions usually asked by injured employes and their dependents. He is invited to write to the commission if dispute develops or if he has doubt upon any point. In most cases, the employe is therefore able to determine for himself whether or not proper benefits are being received. In case of doubt, the commission is prepared to act for him in clearing up misunderstanding. Employes are encouraged to appear before the commission's representatives for interview if correspondence does not suffice. They are thus saved time and expense which would result from formal hearings.

Where injury occurs because of violation of a safety order or statute, 15 per cent increased compensation becomes payable by the employer and cannot be assumed by the insurer. Where the

employer's report indicates that injury may so have resulted, the commission's safety division investigates the circumstances of injury. If it appears that injury was due to violation of an order or law, the employer is advised. If liability is admitted, increased compensation is paid; if not, formal hearing is had, following which a decision is made. Likewise, where injury occurs because of willful failure of the employe to use a safety device or to observe a rule adopted by the employer for his safety, compensation may be reduced 15 per cent.

Cases involving employment of minors in violation of the child labor law call for payment of double or treble compensation by the employer and are similarly handled.

As one of the principal objectives of the law was to insure that employes should receive prompt and continuous payment of compensation as and when due, the commission has made an especially intensive drive to insure the accomplishment of these factors. Statistics which have been developed indicate gratifying results—results which are not paralled by the record of any other state.

As wage basis is the "heart" of the compensation system, special attention is paid to the checking of earnings as reported by the employer. An injured employe receives compensation of 70 per cent of weekly wage, with maximum compensation of $54.00 per week for temporary and $40.00 for permanent disability, regardless of the amount of wage. Correspondence is constantly in process in order to acquire definite information. Very substantial sums have been recovered for employes because of this process.

In over 10 per cent of compensated cases some permanent disability results. It is the commission's function to determine the extent of disability and to apply legal provisions in order to determine benefits which become due. In addition to checking of reports the commission calls employes in for interview so that examiners of the commission may view disability and check it with the physician's report. If it is found that proper compensation is not being paid, correspondence is conducted with the employer or insurer. If dispute then still exists, formal hearing is ordered.

Contested Cases

The law provides that where dispute cannot otherwise be adjusted, formal hearing may be held upon application by either

party. Hearings are conducted at county seats and at other points throughout the state. This avoids expense of parties in appearing and producing witnesses at Madison. Hearings are conducted by law-trained examiners who hear and decide cases in the same manner as does a judge. These examiners have broad powers of independent investigation and are not bound solely by testimony presented at hearing. Their duty is to obtain all essential facts, make all necessary investigation, and to apply pertinent law in reaching their decision. A stenographic record is made of all testimony taken. While proceedings are more informal than in courts of law, orderly procedure is maintained, and records are made upon which there may be appeal to the commission and to the courts.

Examiners make the primary decision, which becomes final unless there is petition for review to the commission as a body. This results in speed of hearing and decision. Uniformity is achieved by the provision for review by the commission as a body. These reviews are based upon the record made and upon such further investigation, hearing, oral argument or briefs as may be found desirable in individual cases. Usually the review is upon the record made at the time of hearing. It is intended that no further hearing shall be had except as diligence can be shown or as undue hardship might result. The commission had full power to take any and all steps necessary to safeguard the interests of parties.

During the biennium between July 1, 1958, and July 1, 1960, the total number of petitions for review from examiners' decisions to the commission as a body was 705. This number of cases constitutes about 31 per cent of the total number of matters decided by examiners during this period. The number of cases reviewed is explained by the fact that it costs nothing to appeal; therefore many persons who feel aggrieved file a petition for review. ?

Either party may, within 30 days from the date of mailing of a decision of the commission, begin an action for review in the Circuit Court of Dane County. From the decision of the Circuit Court there may be further appeal to the Supreme Court within 30 days from entry of judgment. Appeal to the commission may be upon either questions of fact or law. Appeals to the courts can be only

upon questions of law. Appeal to the courts may be made only where the decision of the examiner has been reviewed by the commission as a body.

Compensation Insurance

It is the commission's duty to make certain that employers subject to the compensation act insure their risks, unless they are permitted to self-insure, and to determine what employers shall be exempt from insurance.

This duty is one which involves considerable difficulty and detail. The work is facilitated by the filing of reports upon all policies issued by the insurance carriers. This makes it possible to see that employers who have taken out a policy either renew it at expiration, insure with some other company, or satisfy the commission that for good reason insurance is no longer required. The commission also checks lists of employers in given industries or towns to determine which have failed to insure and then to ascertain their status. This function involves a great deal of detail since there are over 63,000 employers in Wisconsin who carry insurance. The commission estimates that there are probably 5,000 employers subject to the act who are violating the law by failing to insure. Without special personnel for this task no substantial progress can be made in reducing the number of violations. The commission believes that to provide good service, both to employers and employes, several persons should be assigned for this purpose. Many employers are innocently unaware of the fact that they are subject to the compensation act. Others, through inadvertence, or by willful intention, have failed to provide insurance. Many employers are unable to assume the cost of compensation benefits, which in a single case may amount to many thousands of dollars.

The duty of passing upon applications by employers to carry their own risk under the compensation act involves less work but is equally responsible. On July 1, 1960, there were approximately 160 employers who were permitted to "self-insure." These employers, however, had about one-sixth of the total pay roll of the state. They are required to file with the commission a sworn statement of assets and liabilities indicating financial responsibility sufficient to meet any claim which may arise. The commission has the power to require a deposit of bonds or other securities in trust

to insure that liability will be met. The commission is reluctant to permit self-insurance except as employers are able to make strong financial showing and to set up administrative machinery to insure speed and adequacy in payment comparable to that provided by good insurance carriers. Generally speaking, employers of a small number of employes are not permitted to assume their own risks,—this in view of the fact that a catastrophe might wipe out all of their assets and thus leave employes without compensation. Most employers who assume their own liability provide excess insurance in case liability from a single accident exceeds a specified amount, not less than $15,000.

WILLIAM W. KRUEGER

vs.

WEST BEND ALUMINUM COMPANY

BENJAMIN GRAFF

vs.

WEST BEND ALUMINUM COMPANY

EUGENE LENTZ

vs.

WEST BEND ALUMINUM COMPANY

July 22, 1958

Vacation pay does not affect eligibility for compensation.

On July 22, 1958, the commission issued decisions in these three cases which involved the issue of whether compensation payments are to be continued during weeks of paid vacation. Injuries were sustained previous to a general plant shutdown for paid vacation in all three cases and the applicants were temporarily totally disabled during the vacation periods.

It was held that the claimants were entitled to workmen's compensation for their disability during paid vacation. While vacation pay is conceded to be wages, it is not considered to be earnings for the period in question within the meaning of Subs. 102.43 (5). Vacation pay accrues on the basis of past service.

Subs. 102.30 (1) provides that liability for compensation shall not be reduced or affected by insurance, contribution or other benefit, and vacation pay is considered to be other benefit within the meaning of this subsection. It was also considered that one who is disabled is also unable to use his vacation period for the customary or normally intended purpose of a vacation.

ARDEN L. THORSBAKKEN

vs.

RED CROSS DRUG COMPANY

July 30, 1958

Internal derangement of knee compensable.

The applicant was employed by the respondent as a pharmacist. Upon three occasions during September and October, 1957, his left knee locked as he arose from a squatting position while at work. He had squatted to place merchandise weighing approximately one pound on the lower display shelf. On the last occasion of his knee locking, which was on October 16, the pain was much more severe and it took one-half hour for him to manipulate it to unlock it. The only medical evidence was two verified reports on Form A-16-b, which made a diagnosis of internal derangement of the knee and attributed the condition to such accidental injury. Some question may be raised as to whether stooping and squatting constitutes an accident within the meaning of the compensation act, but it was felt that this activity did involve stress and strain to the knee, and in view of the *undisputed* medical evidence, the commission reversed the examiner and found that the claim was compensable.

MRS. GWEN SNITKO

vs.

CITY OF MILWAUKEE

August 11, 1958

School crossing guard's injury held compensable.

Applicant was employed by the respondent as a school crossing guard stationed at a corner one block from the school. During the noon period applicant reported for duty at approximately 11:50 a.m. and remained on duty at her corner until the children ceased coming from school, which was usually about 12:15 p.m. She was then free to do and to go as she pleased until the children started returning after lunch at about 12:30 p.m. On January 20, 1958, applicant left her corner at 12:15 p.m. and went to the rest room in the school. She noticed some children playing in the snowbank and getting into the street near the school as she was returning to her station. She slipped and fell on the sidewalk and fractured her wrist as she stopped to reprimand the children.

The commission held that applicant's injury was compensable. It was considered part of her work to protect and guard the school children not only at her station but in the vicinity of the school, and also that the personal comfort doctrine applied to her going to the school rest room. See *Krause vs. Western Casualty and Surety Co., et al*, #170 August Term of the 1957 Wisconsin Supreme Court.

(This case was confirmed by the Circuit Court of Dane County on April 24, 1959.)

ROBERT KRAMER

vs.

E. C. KOENIG

September 5, 1958

Accountant injured on public sidewalk not in course of employment.

The respondent had an accounting business and office in Merrill, Wisconsin, and applicant was employed by him as an accountant. On January 23, 1956, applicant was doing accountant work for a client of the respondent in the office of the client across the street from respondent's office. Applicant spent the entire morning in the client's office and went home for lunch at noon. After lunch he proceeded toward the client's office where he was to work for another two or three days. Under these circumstances it had been customary to go directly to the client's office without reporting to respondent's office. On the way to the client's office applicant stopped at the bank to cash his personal pay check. He slipped and fell on the public sidewalk about 40 feet from the entrance to the client's office. Applicant was not reimbursed for any travel expense in servicing such accounts.

The commission affirmed the examiner's finding that injury was not sustained while applicant was performing service growing out of and incidental to his employment, and that injury did not arise out of his employment. Applicant had not reached the premises of his employer or the premises of the client on whose premises service was to be performed. See 102.03 (1) (c).

(This case was dismissed on stipulation by the Circuit Court of Dane County on April 27, 1959.)

CITY OF MILWAUKEE

vs.

DOROTHY E. SHEAHAN, WIDOW (John E. Sheahan, Deceased)

October 20, 1958

Death of city fireman shortly after collapse at fire held compensable.

The deceased, who was 50 years of age, worked as a fireman for the respondent approximately 24½ years. On the evening of December 29, 1957, he responded to a fire call and entered a building which was filled with thick smoke. He staggered back up the basement stairway and directed his men to get masks. He then collapsed immediately and died a short time later. There was snow and ice on the ground, and the weather was cold. An autopsy was not performed but there was medical testimony that the deceased died from acute coronary insufficiency due to stress and smoke inhalation. There was also medical testimony that death was caused by a coronary occlusion or thrombosis due to arteriosclerotic coronary arteries.

The commission affirmed the examiner's finding that death was due to the employment and death benefit was awarded to the widow.

MRS. HELEN ZSCHOCK (Albert Zschock, Deceased)

vs.

WISCONSIN BRIDGE & IRON COMPANY

November 17, 1958

Children born out of wedlock held dependent.

Accidental compensable injury and death on July 11, 1957, have been admitted. The issue was concerning division of death benefits as between the widow and two children of the deceased. The evidence established that the widow and deceased were married July 24, 1954, and they lived together as man and wife until his death. There were no children of that marriage but the deceased left two daughters who were born in 1949 and 1951. He had never been married to the mother of the children and she in fact was married to another man at the time she lived with the deceased. Birth records and other circumstances overcame the presumption of the legitimacy of the children. The mother was in fact married to another person at the time of the deceased's death. The deceased had made some contribution to the support of the children.

The examiner found that the deceased was obligated to support the children and that it was equitable to divide the death benefit with 50 per cent to the widow and 25 per cent to each of the daughters, whose shares were placed on deposit in a bank for their future needs subject to withdrawals only upon authorization from the commission.

(This case was reversed by the Circuit Court of Dane County on December 8, 1959, and was affirmed by the Supreme Court on October 4, 1960.)

MRS. ARDINA ENDERBY

vs.

FIRST TRINITY LUTHERAN CHURCH OF MARINETTE

January 6, 1959

Church worker held to be a volunteer.

Applicant was a member of the respondent church. During church services on the Sunday before May 29, 1957, the pastor requested that some of the ladies clean the church and kitchen. Applicant and 6 or 7 other ladies responded and did the cleaning on May 29, 1957. They received luncheon with funds provided by the Mission Society of the church but did not receive any wages for their services. The applicant sustained injury when she fell from a small ladder while cleaning the center light in the kitchen.

The examiner and the commission held that the applicant was a volunteer and not an employe under contract of hire, express or implied. She was not required to do this work and would not have lost any church rights if she had not volunteered to help.

(This case was confirmed by the Circuit Court of Dane County on May 9, 1960.)

FOUR WHEEL AUTO DRIVE COMPANY

vs.

DUANE HOFFMAN

January 6, 1959

Injury due to horseplay compensable.

Applicant sustained injury when some unknown employe apparently threw a firecracker into or near the place where he was working as a sander. He believed that the firecracker had even gone into the welding helmet, which came off when he fell over from fright at the time of the explosion. Applicant sustained a 23.5 per cent loss of hearing in his right ear, which the examiner and commission held to be compensable since he was the innocent victim of horseplay.

ETHEL KOMPAS

vs.

MILWAUKEE COUNTY

January 27, 1959

Review of compromise dismissed.

Application was filed for an alleged back injury and the respondent denied that injury arose out of employment. Hearing was held and the parties subsequently agreed to a compromise settlement, which was approved. Surgery had been performed previous to the compromise agreement.

Application was made for review of the compromise and after hearing the examiner found that although additional extensive treatment and disability had resulted subsequent to the compromise agree-

ment, and that such treatment and disability were not then anticipated, the principal issue had been whether injury arose out of employment. The examiner found that there was no change in the evidence on that issue of injury and the compromise was therefore confirmed.

(This case was confirmed by the Circuit Court of Dane County on March 29, 1960.)

WESTERN-KNAPP ENGINEERING COMPANY

vs.

EINO HIETALA

April 28, 1959

Interlocutory order sustained.

Hearing was scheduled March 4, 1959, upon motion of the Industrial Commission since the insurance company claimed 15 per cent decreased compensation because of intoxication. The examiner dismissed such claim for decreased compensation and awarded full primary compensation by an interlocutory order reserving jurisdiction as to all issues. The injury had occurred July 8, 1958, and compensation had been paid for 2 weeks and 4 days' temporary total disability. Issue had not been raised concerning any further disability or treatment.

The insurance company petitioned for review objecting only to the interlocutory aspect of the order, conceding that jurisdiction be retained for the statutory six years, but objecting to an indefinite reservation. The commission felt that since the only issue at the hearing was whether compensation should be reduced by 15 per cent a dismissal of that issue would not affect or preclude further claim for primary compensation within the statutory six years. The examiner's order was modified accordingly.

CLARENCE DURAND

vs.

JANE BAUMGART, WIDOW (Donald Baumgart, Deceased)

April 28, 1959

Fatal injury while being transported from work by employer compensable.

The deceased sustained a fatal injury August 29, 1957, in an automobile accident. The issue was whether injury and death occurred in the course of and arose out of employment with the respondent.

The deceased and the respondent, who was engaged in road construction work, both resided in Oconto and were married to sisters. The deceased asked the respondent for a job and informed him that he would be without transportation beginning the latter part of August when his wife took their car to Madison for a teaching job she had near there. The respondent agreed at the time deceased asked for employment to take him to and from work after his wife left with their car. There was no other means of transportation readily available and the deceased met his death while he was being

transported home from work by the respondent and after his wife had moved to Madison. It was held that there was an undertaking to transport the deceased to and from work as a part of the contract of employment, and that death benefits were due the widow.

BURD PISTON RING COMPANY

vs.

BILLY G. HUFFSTUTLER

April 28, 1959

Employer liable for medical charge of consultant.

Accidental compensable injury was admitted and compensation was paid. The only issue was liability for medical expense for treatment at the Mayo Clinic. Applicant was attended and treated by Dr. Lotz of Eau Claire following his injury and Dr. Lotz referred him to the Mayo Clinic for specialized consultation and treatment of the injury. The examiner found that the insurance company was responsible for these charges and his order was affirmed by the commission.

CLARENCE KRESSIN, GUARDIAN OF JEAN AND

ROY KRESSIN, JR.

vs.

MRS. ROSEMARY KRESSIN, WIDOW OF

ROY A. KRESSIN, DECEASED

and

HARLEY-DAVIDSON MOTORS COMPANY

August 4, 1959

Death benefits reassigned between widow and children.

A fatal accident and death on May 14, 1958, were admitted. The only issue was reassignment of death benefits as between the surviving widow and two minor children, 11 and 14 years of age, pursuant to 102.51 (6).

There was no estrangement but the wife had for some time prior to May 14, 1958, been confined in a Milwaukee county institution for mental illness. She was released previous to May 14, 1958, but was not permitted to live in the same household with the children and the deceased, except for limited visitation privileges. A brother of the deceased was appointed guardian over the minor children following the death of the father.

The examiners concluded that two-thirds of the primary death benefit should go to the widow and one-third to the guardian of the two minor children, who are eligible for benefits under 102.49. Payments by the State under such section were not affected and will likewise go to the guardian. This division was affirmed by the commission subject to reassignment in the event of any substantial change in the circumstances of the parties.

GLORIA JEAN SACKETT, CLIFFORD VERNON SACKETT, BRENDA JOYCE SACKETT AND LORRAINE LOCKMAN

vs.

MRS. SHIRLEY SACKETT

and

SENN CONSTRUCTION COMPANY, INC.

August 4, 1959

Death benefits apportioned between widow and children of previous marriage.

Fatal accidental injury September 19, 1958, was admitted. The only issue was apportionment of death benefits under the provisions of 102.49 (3).

The applicant Lorraine Lockman and the deceased had three children of their marriage, who were born in 1950, 1951 and 1953. Mrs. Lockman obtained a divorce July 15, 1954, and married her present husband, Mr. Lockman, in July, 1955. Following the marriage she and her children lived with Mr. Lockman in the State of Oregon, and the deceased did not make any payments for the support of the three children.

The applicant, Mrs. Shirley Sackett, married the deceased in 1956 and had a posthumous child born December 20, 1958. All parties were apparently in equal need.

The examiner distributed the primary death benefit with three-fourths to the widow and one-fourth to a savings institution for the future needs of the three children. The state payments under 102.49 were awarded directly to each of the mothers. This apportionment was affirmed by the commission.

NORBERT BROST

vs.

ARTHUR JOHNAS

December 11, 1959

Liability for treatment by Veterans Administration.

The respondent and insurance carrier had not provided necessary treatment, which the applicant obtained at the Veterans Administration at Wood, Wisconsin. The commission held that even though the applicant as a veteran did not incur liability or expense for such treatment by the Veterans Administration, the expense for such treatment was incurred *on behalf* of the applicant. See Subsection 102.42 (1). It was concluded that the respondent and insurance carrier are, therefore, liable to the Veterans Administration for the reasonable charges of necessary treatment.

Before treatment was provided by the Veterans Administration applicant was required to sign a power of attorney and an agreement assigning any civil rights of action for recovery of the treatment expense and specifically referring to workmen's compensation statutes. Claims under workmen's compensation are not assignable in Wisconsin but this did indicate intention not to provide the treatment gratuitously where other right of action existed.

WILLIAM H. VOGES

vs.

VOGES SERVICE, INC.

December 28, 1959

Employe on special errand covered.

The respondent operates a filling station on Atwood Avenue in Madison during the daytime, and also operates a 24 hour towing and wrecker service in connection therewith. Applicant or one of the other employes took the wrecker or tow truck home each night to answer service calls that were received. Applicant took the tow truck home with him on the evening of February 13, 1959, and parked it on the street adjacent to his home. About 1:00 a.m. on February 14, he received a telephone call from the sheriff's department to repair a flat tire on a police car. Applicant had been sleeping but he got up and prepared to answer the call. He slipped and fell as he was going down the steps from the porch of his home. It was not necessary to report to the filling station or office of the respondent and he regularly made these service calls directly from his home.

The commission held that the applicant was covered by the workmen's compensation act at the time of his injury; that he sustained injury while performing services growing out of and incidental to his employment; and that the accident causing injury arose out of his employment with the respondent.

HELGA SOLBERG, WIDOW (August Solberg, Deceased)

vs.

A. J. PITTELMAN AND FRANCES PITTELMAN

February 15, 1960

Estranged wife not eligible for death benefits.

Fatal injury June 19, 1959, was admitted. Applicant is the widow of the deceased. There has not been any legal separation but because of the deceased's drinking habits, abuse and his failure to support the family applicant had not lived with him since 1941. There were 7 children of this marriage, all of whom were married and not dependent upon deceased at the time of his death. The deceased never contributed to the support of the applicant or the children since the separation in 1941. Applicant had not seen the deceased for at least two years previous to his death. They did not correspond or have any contact or communications with each other.

It was concluded that the applicant and the deceased were not living together as man and wife and that there was an estrangement. The applicant was not allowed any death benefits as a dependent. The respondent and insurance carrier were ordered to pay burial allowance of $350 plus $11,000 to the state treasury pursuant to the provisions of 102.49 (5), as amended effective April 1, 1959.

(This case is pending in the Circuit Court of Dane County.)

MRS. ROSE BONDAR, MOTHER (Irene Bondar, Deceased)

vs.

CHAIN BELT COMPANY

February 16, 1960

Mother held totally dependent upon daughter.

Accidental injury March 5, 1953, resulting in death on April 8, 1958, and a maximum wage were admitted. Treatment was provided and compensation was paid for the disability during the lifetime of the deceased. The only issue was the extent of dependency of the applicant, the mother of the deceased. The respondent did not contest the claim but the State of Wisconsin did have a potential claim under 102.49 (5) in the event the applicant was not wholly dependent upon the deceased.

The applicant was a widow and did own a two-family home free of any incumbrances. She and the deceased lived in the lower portion which had a rental value of approximately $30 a month and the upper portion rented for $30 a month. The property had been purchased in 1929 for $9,000, but there was no evidence introduced as to its value in 1953. The real estate taxes were $342.00 a year. The repairs and taxes paid in 1953 exceeded the total rental value of the premises. The applicant had no income of her own besides this rent from the upstairs portion, which was not sufficient to maintain the premises. The commission concluded that the applicant therefore did not actually provide lodging for herself or the deceased and that she was totally dependent upon the deceased for support.

STATE OF WISCONSIN AND

FOX RIVER PAPER CORPORATION

vs.

JOHN A. SLATTERY

ESTATE OF MARGARET SLATTERY (John Slattery, Deceased)

March 31, 1960

Handicapped adult son held partial dependent.

Maximum wage and accidental compensable injury on December 2, 1950, resulting in death on September 28, 1957, were admitted. Compensation was paid in the sum of $11,571.53, leaving $16.27 due to the estate of the deceased. Burial allowance of $300 was paid.

The issues were the extent of dependency and liability for death benefit. The applicant was a son of the deceased, having been born on May 28, 1930. He sustained a brain injury in 1945, which affected him mentally and caused epileptic seizures. He was 20 years of age when his father was injured on December 2, 1950, and he did work earning wages as follows: in 1950, $848; in 1951, $1,611; in 1952, $2,438; in 1953, $2,412; and in 1954, $1,553. Deceased was a paraplegic due to his injury. Applicant's condition became worse after 1954, and he attempted suicide in February, 1957, after which he was confined in Mendota State Hospital. He was conditionally reafter by his sister following his father's death September 28, 1957. In 1958 he was re-committed at his own request.

leased to his father, the deceased, on May 7, 1957, and was looked

The commission found that the applicant was not incapacitated from earning at the time of his father's injury and as of such date he was not solely and wholly dependent for support upon the deceased, although he did live with the deceased and was partially dependent upon him. The deceased's wife, Margaret, died in 1952, and therefore was not a dependent under the provisions of 102.51. The commission determined that the applicant was a partial dependent under the provisions of 102.48 (2) and was entitled to death benefit equal to twice the average annual earnings of the deceased, or $4,650, and that pursuant to the provisions of 102.49 (5) the sum of $2,500 was due to the State of Wisconsin.

HELEN D. TANNER, WIDOW (Willis Tanner, Deceased)

vs.

CHARLES E. RUNIONS CONSTRUCTION COMPANY

March 23, 1960

Death four days after surgery on knee due to shock and emotional distress.

The deceased, who was born August 30, 1916, sustained injury to his right knee June 11, 1958. He worked on June 12 but limped and evidenced considerable pain when he saw the doctor on June 13. He was hospitalized on June 16 and had surgery on June 17 for removal of a medial meniscus which had been torn. He continued to complain of severe pain, he developed abdominal discomfort and became very constipated, and he died of a myocardial infarction on June 21. There was some hearsay evidence that deceased had fainting spells about a week previous to the injury. Autopsy was done and the findings were: (1) myocardial infarction, (2) pulmonary congestion, (3) congestion of the liver, spleen, kidneys, (4) recent minisectomy — right, (5) coronary atherosclerosis, (6) peritoneal adhesions. There was testimony that death was due to shock and emotional distress resulting from the injury and treatment thereof. The commission so held and awarded death benefits to the widow.

TOWN OF WOODVILLE

vs.

MRS. HATTIE STOMMEL, WIDOW (Roland J. Stommel, Deceased)

April 5, 1960

Repairing own car in employer's garage not in course of employment.

Maximum wage and fatal injury on November 24, 1956, were admitted. The principal issues were whether injury and death occurred in the course of and arose out of employment. The deceased was employed by the respondent to do road work. He owned a Model A Ford truck, which he sometimes used in the course of his employment, and he received reimbursement from the respondent for mileage on some of these occasions. Deceased was not required to own or to use the truck to perform his work and use of the truck was discretionary with him. The respondent did not pay for any parts, repairs or gasoline used in the truck. It did not pay wages for the time deceased spent in repairing the truck.

The deceased sustained fatal injury on Saturday afternoon while

repairing a spring on the Ford truck in the respondent's garage, which was heated. The commission concluded that he was not performing services in the course of his employment and that his injury did not arise out of his employment.

The commission was of the opinion that this case was to be distinguished from the Columbia Highway Commission and the Fels cases.

In the Columbia Highway Commission case, 201 Wis. 301, the employer supplied gas and oil, paid for minor repairs on the cars and increased the compensation of the foreman in consideration of the fact that he used his own automobile in performing his work. Repairs were made on the employer's premises during usual working hours.

In the Fels case, 269 Wis. 294, it was a condition of the employment that Fels furnish his own truck to haul gravel. He was responsible for repairs and furnished gas and oil. He was paid a set amount per yard for the gravel hauled, and this covered the use of the truck and his wage. Injury occurred while Fels was working on his truck during working hours at a garage stall, which was leased by his employer and was therefore in effect the premises of the employer. Repairing the truck was a necessary incident to Fels' employment and the truck was customarily left in the respondent's gravel pit at the close of the day's work.

(This case was confirmed by the Circuit Court of Dane County on April 15, 1960.)

CHICKEN DELIGHT #4

vs.

DENNIS SOBCZAK

June 9, 1960

Employe not in course of employment while going for ice cream.

Applicant was employed to deliver lunches and meals to customers who telephone in their orders. He used the employer's truck or automobile for that purpose. The employer allowed his employes to eat any of the food prepared on the premises, and he did allow them to go to a nearby establishment for hamburgers. On September 30, 1959, the applicant's shift at work was 4:00 p.m. until midnight. At about 8:00 p.m. he requested and was given permission by the employer to go out for something to eat. He took employer's car and drove approximately one mile to get some ice cream and he was injured in an automobile accident on his return.

The commission held that a trip of a mile to obtain ice cream was not reasonably necessary for the personal comfort of the employe in this instance, and that the injury did not arise out of his employment. The respondent provided food for the applicant on its premises and had permitted him to go to a nearby establishment for hamburgers. The employe had not requested permission to use the automobile.

(This case is pending in the Circuit Court of Dane County.)

KEWAUNEE COOPERATIVE

vs.

WILLIAM S. OTRADOVECK, JR.

June 27, 1960

Service held to be volunteer.

The applicant owned and operated a farm and on January 29, 1959, he arranged for the respondent to transport two of his hogs from the farm to the livestock yards. He requested and was granted permission by the respondent's truck driver to ride along in the truck to observe the livestock auction procedure. While he was observing the procedure at the stockyard the truck driver asked him to untie a bull which was still in the respondent's truck. After applicant had performed this service he caught his wedding ring on a portion of the respondent's truck and injured the ring finger so severely that it had to be amputated.

The commission concluded that the applicant was not an employe of the respondent; that there was no contract of hire, express or implied. There was no danger or emergency and the truck driver usually unloaded the animals without assistance. There were employes of the stockyard available to help if assistance was necessary.

JOHN BACIGALUPE

vs.

STUDENT TRANSPORTATION COMPANY, INC.

June 28, 1960

Injury from dog bite compensable.

Applicant, who was 60 years of age, drove a school bus for about 12 years. On October 16, 1959, he drove 40 school children to a dairy farm in accordance with instructions given to him. He remained near his bus in the farm yard while the children toured the premises. The farmer's dog came near him several times and he spoke to the dog but did not touch it or molest it. After the children completed their tour they and the applicant were each given a small carton of milk to drink. The farmer's dog came near to the applicant, who offered it some milk from his carton. The dog did not drink any milk and stepped back a few paces. The applicant raised his arm backward to throw the carton away and the dog leaped at him, biting the hand.

The commission affirmed the examiner's order holding that injury did occur in the course of and arose out of the employment. It was found that the applicant had not deviated from his employment for any private purposes.

(This case is pending in the Circuit Court of Dane County.)

APPRENTICESHIP DIVISION

Traditionally Wisconsin has been the recognized leader in the apprenticeship field. Ours was the first state to recognize the need for a formal, well regulated system of apprenticeship training;—a system with a two-fold purpose:

1. To provide Wisconsin youth with additional educational opportunities.
2. To benefit industry by maintaining a steady flow of skilled men into our state's work force.

To accomplish these purposes the nation's first modern apprenticeship law was enacted in 1911. (Chapter 106 of Wisconsin Statutes). Since that time twenty-two states and the federal government have adopted apprenticeship laws patterned after ours.

During the past biennium our position as a leader in the field of apprenticeship has been seriously threatened. The peak load of 13,874 apprentices (occasioned primarily by training under the GI Bill for World War II veterans) in 1947 dropped to less than 6000 in 1960.

To meet this challenge the apprenticeship division has taken on a "new look". Operations have been streamlined with the emphasis on promotion of apprenticeship. Obsolete records have been disposed of in accordance with statutes. The filing system has been revamped and indentures recoded. Records will soon be under machine tabulation available through our statistical division. Deadwood in the record of number of active apprentices has been eliminated by removing suspended indentures from the active record. This move accounted for the sharp drop in the number of active indentures, however, we now have an honest record and are already showing an increase in active apprentices.

We are in a period of exploding population. The demand for highly skilled craftsmen and technicians is greater than ever before. Each year some 35,000 highschool graduates who will not go on to college will need to further their education. To assure a steady supply of craftsmen entering our work force and to assure additional educational opportunities for our youth, our apprenticeship program must be expanded. Since our law is a voluntary one (except for barbers, plumbers, watchmakers and cosmetologists) the only method by which the apprenticeship program can be expanded is through a well conceived and properly executed promotional program. The successful operation of such a plan depends on qualified personnel working in close harmony with other agencies interested in, and dependent on, a sound apprenticeship program.

Cooperative agreements designed to implement promotion of apprenticeship have been developed with the State Board of Vocational and Adult Education, the Bureau of Apprenticeship and Training, U.S. Department of Labor, and the Wisconsin State Employment

Service. The field staff is now devoting fifty percent of their efforts to planned promotional visits. A series of area apprenticeship conferences are being conducted in cities strategically located throughout the state. The purpose of these meetings is to bring apprenticeship into the public eye, to promote the program to employers not already employing apprentices and to keep labor, management and the schools aware of the latest developments in the apprenticeship field. To date these conferences have been well attended and well received.

The most important function of this division involves approval of individual apprenticeship agreements called indentures. In June, 1960, we approved indenture number 61,000. The basic workload of the division involves processing indentures. During 1958–1960 biennium the following transactions were accomplished:

Indentures Approved	2,962
Indentures Completed	2,684
Indentures Suspended	721
Indentures Cancelled	1,474
Indentures Reinstated	365
Diplomas Issued	2,876
Total Transactions	11,082

Division functions other than promotion and processing indentures are:

1. Supervision of apprentices and establishments employing apprentices.
2. Developing, approving and amending apprenticeship standards and schedules of training.
3. Approval of veterans on-the-job and apprenticeship training.
4. Cooperation with state headquarters of selective service and local draft boards in apprentice deferment program.
5. Cooperate with federal wage and hour agency and employers concerning employment of apprentices at less than federal minimum wage.
6. Prepare and issue information as may be useful to employers, schools, joint apprenticeship committees, prospective apprentices, local unions and others.
7. Issue monthly statistical report and news letter.

EMPLOYMENT SERVICE

PREFACE AND RETROSPECT

Early this year,—on the threshold of a new decade,—the U.S. Department of Labor prepared a comprehensive and projected study of the nation's manpower resources. Called "Manpower—Challenge of the 1960's,"—the booklet describes the changes in our population and labor force that are expected to take place between 1960 and 1970.

The projections are based on three assumptions:

1. Continuation of the relatively high levels of economic activity and employment which have prevailed in the United States for the past 15 years.
2. Continuation of scientific and technological advance, affecting our industrial methods of production, our medical, health, and educational services, and our consumption patterns.
3. Absence of war or any other cataclysmic event which would substantially alter the rate of our economic growth.

What's in store for Wisconsin in what might well be the 'surprising sixties'? Using the Department of Labor study as a pattern, the Wisconsin State Employment Service came up with these projections:

* the state's labor force can be expected to increase by almost 300,000 between 1960 and 1970.
* an estimated 157,000 people under age 25 will be part of this new decade labor force.
* about 109,000 additional men and women over age 45 will be in this labor force.
* only about 40,000 of the new workers will be in the age group 25 to 34.
* workers between the ages 34 to 44 will decline by 7,000.

That's the picture. Wisconsin industry will need to use more workers under age 25 and over 45. There'll be a major overhaul in the employment policies of many businesses. The sixties will bring a 'golden age' for college educated and skilled trained workers, a continued shrinking of job opportunities for the unskilled worker and an extended decline among farmers and farm workers because of mechanization.

It is against this background that the Wisconsin State Employment Service reports its activities for the 1958–1960 biennium and outlines its plans for what may prove to be the most revolutionary period of the state's industrial history.

The Wisconsin State Employment Service pledges to assist the employers and job seekers of our state to meet the "MANPOWER CHALLENGE of the 1960's".

CIVILIAN LABOR FORCE—1958–1960 BIENNIUM

(Yearly Averages)
(In Thousands)

Item	Fiscal Year		Change From Fiscal 1958–1960	
	1958–59	1959–60	Net	Per Cent
Civilian Labor Force	1,563.1	1,587.0	23.9	1.5
Unemployment	69.3	49.0	—19.7	2.8
Employment	1,488.9	1,536.5	47.6	3.2
Nonfarm Workers	1,269.2	1,326.2	57.0	4.5
Farm Workers	219.6	210.3	— 9.3	4.2
Persons Involved in Labor–Management Disputes	4.9	1.5	— 3.4	69.4

SCOPE OF PROGRAM

As a division of the Industrial Commission, WSES is primarly known for its placement service to the thousands of job seekers and employers who use it annually. The service is available to the public through a network of 26 district offices located in population and industrial centers. Outlying communities are not neglected. The same modern screening, counseling and placement techniques available at the district offices are brought to workers and employers in outlying cities through a WSES itinerant program on a part-time basis.

District WSES offices are conveniently located in the business sections of these Wisconsin cities:

Appleton	La Crosse	Rhinelander
Ashland	Lancaster	Sheboygan
Beaver Dam	Madison	Stevens Point
Beloit	Manitowoc	Superior
Eau Claire	Marinette	Watertown
Fond du Lac	Milwaukee	Waukesha
Green Bay	Neenah	Wausau
Janesville	Oshkosh	Wisconsin Rapids
Kenosha	Racine	

Trained employment specialists, rigidly selected under Wisconsin Civil Service through the Bureau of Personnel, staff the WSES program of public service at every level. Currently, about 340 people are on the WSES payroll. Administrative costs are borne by the Federal Government, financed by a payroll tax on Wisconsin employers who employ four or more workers.

Employment adjustments, though mainly a problem of individuals, vitally concern the community, the state, and the nation. Usually, such problems can be and are solved locally. However, as industrial plants are moved, reduced, or expanded, as seasonal businesses rise and fall

and as economic fluctuations occur, communities sometimes have too small, or too large a labor supply. Then help from other communities is needed. This assistance is available to all communities in Wisconsin if all job openings are placed with WSES. Having these openings available enhances the opportunity to reduce the period of unemployment. If WSES can reduce total unemployment by just one week, it would mean a saving of $726,600 to employers' unemployment compensation trust funds and workers' purchasing power would be increased by $1,500,000. These figures are based on weekly average number unemployed drawing unemployment compensation benefits for fiscal year ending June 30, 1960. The purchasing power figure is based on the take-home pay of a married man with 2 children.

FEDERAL AFFILIATION

Although an arm of state government, WSES is affiliated with sister states through the Department of Labor's U.S. Employment Service in providing a nationwide exchange of resources. WSES operates in accordance with provisions of the Federal Wagner-Peyser Act of 1933 as amended, the Serviceman's Readjustment Act of 1944, and the Employment Act of 1946. It is through this affiliation that WSES activities and processes are standardized and synchronized with approximately 1,800 community employment offices throughout the nation. This means a uniform employment service, geared to meet labor market changes and emergencies on interstate, as well as intrastate levels.

The objectives of this affiliation are embodied in an aggressive, SIX POINT PROGRAM:

1. **Placement Service**—The WSES placement service includes the recruitment, selection and referral of qualified workers to employers, and assistance to workers in finding prompt employment or re-employment.
2. **Veterans Service**—Special service provides veterans of two World Wars and the Korean conflict with the maximum of job opportunity through the use of employment service staff and facilities in supplying counseling and placement assistance.
3. **Employment Counseling**—Assists job applicants, often with the aid of occupational tests, to determine the most suitable field in which to seek employment. Counseling services are frequently sought by inexperienced youth, veterans, handicapped and older workers as well as experienced workers who have been unable to make suitable adjustment to their jobs.
4. **Employer Services**—Provides assistance to employers, labor groups, and other organizations in analyzing employment problems involving effective use of skills and ability of workers and to apply techniques and materials developed by the Employment Service that are useful in resolving such problems.

5. **Labor Market Information**—Assembled by WSES and widely circulated to serve as a basis for informed action on the part of workers, employers, labor groups, agencies and community groups concerned with employment.
6. **Community Participation**—Is a daily part of the activities of WSES. The district employment office contributes to the economic health of the community by efforts toward maximum employment. It offers important information to the community on local matters affecting employment. It collaborates with community organizations and institutions to solve employment and community problems and to stimulate industrial growth.

JOBS FILLED

Employers used WSES to fill 353,319 jobs during the biennium. Of this number, more than one-fourth of the placements were in manufacturing. The following table shows a comparison of Fiscal Years 1959 and 1960 placements.

Industry Group	Fiscal 1959		Fiscal 1960	
	Number	Per Cent Distribution	Number	Per Cent Distribution
Total	173,823	100.0	179,496	100.0
Agriculture	64,694	37.2	62,885	35.0
Construction	3,236	1.9	3,454	1.9
Manufacturing	57,088	32.9	58,630	32.7
Public Utilities	2,967	1.7	3,025	1.7
Trade—Retail and Wholesale	15,969	9.2	17,513	9.8
Finance, Insurance and Real Estate	2,172	1.2	2,479	1.4
Service	18,140	10.4	19,956	11.1
Government	9,244	5.3	11,354	6.3
All Other (1)	313	0.2	200	0.1

(1) Includes forestry and fishing; mining; and industry not specified.

OPERATIONAL DIVISIONS

TEACHERS' PLACEMENT DIVISION

The WSES has maintained a Teachers' Placement Division since 1934. This Division was established on the premise that since Wisconsin provides extensive educational opportunities for young people who select the teaching profession, the state should provide a public agency to assist them in finding job opportunities in their chosen field.

The chief objectives of the Teachers' Placement Division are: (1) to assist school administrators to obtain qualified teachers, and (2) to aid prospective and successful teachers to enter and advance in their profession.

The nature of the teaching profession demands special registration and referral procedures and placement techniques. Regardless of the teacher's professional skill, other factors often decide the teacher's employability. People in few other occupations are subject to such careful scrutiny as the teacher. Public schools are one of the largest employers in the state; school administrators have recognized the WSES Teachers' Placement Division as their best source of qualified instructors.

The WSES Teachers' Placement Division maintains the largest repository of teachers' credentials in the state. More than a third of this group re-enroll each year and are considered available for positions which represent advancement for them. The division places about half of the teachers hired by the elementary and high schools in Wisconsin each year and because there is no charge either to the teacher or the hiring official, substantial fees are saved the profession by the division.

There is a continuing shortage of teachers and the profession can no longer be classified collectively, as a poorly paid occupation. Many qualified graduates entering the field for the first time are receiving from $4,200 to $4,500, particularly women, for a nine month contract. The salary range compares favorably with that paid as an entrance wage by industry in other professional fields.

The hiring of teachers starts early in January and increases and continues at a high rate to the start of the new school term the following September. Throughout this period the division maintains office hours each day of the week, including Saturdays. It is the aim and practice of the division to maintain liaison with colleges and universities, and state and federal agencies, in order to be fully appraised of teaching trends and opportunities.

During the biennium, 3,314 teaching positions were filled by WSES, a gain of more than 155, or 4.9 per cent over the preceding biennium.

School administrators have learned from experience that they can accomplish more and obtain better results with their hiring problems when they call personally at the division office. Teachers are also encouraged to make personal visits to the division. Many contacts and appointments are made and often contracts for new positions are signed in the office.

Although no positive effort has been made to obtain out-of-state teaching job openings, several schools in Northern Illinois and the Upper Peninsula of Michigan do list openings with the division. The WSES has helped hundreds of teachers find employment in other states when they express interest in such openings.

PROFESSIONAL PLACEMENT DIVISION

This division was established in 1955 to assist employers in meeting their needs for professional personnel and to provide a referral service to job seekers trained in professional fields. The division's phenomenal

growth in early years has leveled off to a continued and steady increase in applicant service and employer acceptance. This comparatively youthful and novel service is now identified as a vital and productive unit of WSES.

The division is based in the Madison administrative office of WSES. It coordinates the program through the 26 district WSES offices and maintains a central file of applications and employer orders. Part of its function is the preparation of an employment record brochure for each qualified applicant. This brochure is used to present the applicant's qualifications to interested employers. The division works closely with universities and colleges as well as professional organizations and societies in recruiting professionally trained workers. New placement techniques and procedures are constantly under study and development. During the past biennium research on a better application form for recent college graduates was completed and a new aplication introduced. Training aids to assist professional placement interviewers were developed as a part of the constant progress in this area of WSES activities.

Each month, the division processes an average of 220 applications and district offices fill over 200 professional and managerial openings. Over 51,000 personalized employment record brochures were submitted to employers during this biennium. The current active file consists of about 700 highly qualifed applicants.

Manpower studies based on past trends and growth predict a 40 per cent increase in professional and technical occupational job opportunities during the next decade. WSES, through the Professional Placement Division, is prepared to assume its place in meeting the rapidly expanding demands for professional, technical and managerial personnel.

RURAL INDUSTRIES DIVISION

It is the responsibility of the WSES Rural Industries Division to recruit and allocate a sufficient number of agricultural workers to meet manpower needs of agricultural and food processing employers.

This is a complex problem, particularly in Wisconsin, where a multiplicity of crops creates a demand for thousands of workers during peak harvest periods. Coupled with these peak period demands is the ever-present demand for year-round farm hands. The number of farms in Wisconsin is decreasing, but the size of the farms is increasing. Farming is becoming highly mechanized, thereby making it increasingly difficult to find qualified workers.

To meet the needs of employers and workers, WSES has assigned a trained farm placement specialist to each of its 26 district offices. In addition, seasonal offices are operated at Wautoma for the pickle and vegetable crops and at Sturgeon Bay for the cherry harvest.

Service to agricultural and food processing employers has been continued through an annual worker plan, designed to schedule migrant workers to a succession of jobs in order to provide the workers with

maximum employment while in Wisconsin. The day-haul programs, which used large numbers of youth in the past, are being materially reduced through the use of mechanical devices in harvesting crops. School youth are still being used in some areas which assures employers of an adequate supply of labor to weed and harvest their crops and enables school youth to gain work experience.

Placements in agriculture and food processing for the period July 1, 1958, to June 30, 1959, totalled 82,477, compared with 81,258 for the period July 1, 1959, to June 30, 1960. This resulted in a net decline of 1,219, or 1.05 per cent. This was due to an expanded use of weed controls and further mechanization in the harvesting and processing of crops.

Considerable pre-season planning is required to collect information on the need for seasonal workers to meet the demands of Wisconsin's agriculture. Each year an estimated 12,000 out-of-state seasonal workers are needed. In addition, WSES has the responsibility for certifying the need for foreign workers. At no time during the 1958–1960 biennium were there more than 1,573 foreign workers employed in Wisconsin. Foreign workers are employed only in agriculture and then only when there are not sufficient domestic workers who are willing and able to do the work. In the certification and employment of foreign workers, WSES cooperates with the United States Department of Labor and the Immigration and Naturalization Service.

The adequacy of the housing provided by an employer of six or more migratory workers is under the jurisdiction of the State Board of Health. Each year an employer who plans to house migrants must register his housing with the Board. The Board of Health inspects the housing and either certifies the housing or recommends improvements. Through the cooperation between the State Board of Health and the WSES, any housing that is inadequate, brings a denial of service by the WSES in the clearance of an order for out-of-state workers. This denial of service is in conformity with standards issued by the Secretary of Labor. Housing for foreign labor must meet these standards, as well as those established by the State Board of Health.

The WSES cooperates with the Governor's Committee on Migrant Workers in creating a better climate of understanding between employers, communities and migrant workers.

Two reports prepared annually are available. They are the Wisconsin Post Season Farm Labor Report and the Report on the Operation of the Annual Worker Plan.

CLEARANCE SECTION

When the nationwide system of public employment offices was established in 1933 by passage of the Wagner-Peyser Act, procedures implementing the Act specifically provided that the United States Employment Service "shall assist in maintaining a system for clearing labor between the several states". Clearance can be described as an orderly and uniform system of exchanging information on job opening

characteristics and applicant qualifications, between public employment service offices on an area, state, regional, or nationwide basis.

The WSES clearance function gives workers an opportunity to locate jobs in their particular skills anywhere in the state or nation, or in a foreign country, if employment is not available in their own community. It also enables employers to find the kind of workers they need anywhere in the state or nation, if they cannot be found locally. The clearance section cooperates in the recruitment activities of the professional, executive and technical division, the farm placement division, the resort program and Bureau of Personnel's civil service system.

In filling clearance openings the WSES publishes a bi-weekly Inventory of Job Openings which lists the jobs for which suitable applicants cannot be found in the locality served by the district employment service office. It is distributed to employment offices in other states, as well as to district WSES offices.

The clearance section also arranges positive recruitment schedules (face-to-face interviews) for Wisconsin and out-of-state employers who wish to recruit within the state and for Wisconsin employers seeking workers in nearby or distant states, sometimes as far away as the East Coast. Over 28,300 clearance placements were made in the biennium ending June 30, 1960 compared with 26,900 in the previous two-year period.

RESORT AND SUMMER CAMP SECTION

Staffing the numerous resorts and more than 300 youth camps in Wisconsin is of utmost importance in a state which attracts tourists, sportsmen and campers by the thousands. Through a highly organized program which extends from January to June, WSES publicizes job openings and recruits applicants. Jobs in the state's summer resort-camp industry are performed during a recreation season which runs from June to the end of the deer season in November.

In an effort to better service boys and girls camps, placement activities for the past season were centralized in the Rhinelander district office of the WSES. Through close cooperation with the Wisconsin section of the American Camping Association this resulted in an increase of more than 40 placements over the previous season. Placements of high school and college youth, school teachers and other workers in resort and camp activities increased from 2,143 in the 1956–1957 biennium, to 2,436 in the 1958–1959 period.

SPECIAL PROJECTS

OCCUPATIONAL RESEARCH CENTER

This project is involved in obtaining accurate and current information on jobs to be incorporated in a new edition of the Dictionary of Occupational Titles. This dictionary, published by the United States Department of Labor, classifies and defines jobs. To collect this information, visits are made to plants of co-operating employers, where workers are observed in the performance of the job under study. The job is then written up in the form of a definition and classified according to a new coding structure developed by the United States Employment Service.

During the biennium, work was completed in the following industries: sheet metal, canvas products, flags and banners, and liquor. Industries currently under study include electrical controls, motorcycle and bicycle, non-alcoholic beverage, flavoring, extracts and sirups, engine and turbine, dairy products, printing and publishing, and bakery products.

SPECIAL SERVICES

EMPLOYMENT COUNSELING AND SERVICES TO SPECIAL APPLICANT GROUPS

During the period covered by this report the importance of fully utilizing the skills and potentials of the nation's work force has become increasingly evident and has brought into focus the great need for vocational counseling assistance to job applicants at WSES offices. Inexperienced youth must be provided with realistic occupational and labor market information related to their potential abilities. If the skills and abilities of older job seekers are not to be wasted, they must be assisted in their efforts to contribute their talents in the work force. Handicapped workers need help in relating their physical capacities to job opportunities. The veteran entering civilian employment often encounters problems similar to those of inexperienced youth. These and other groups with problems of job choice or job adjustment receive employment counseling services. During the past biennium, 35,701 persons were provided such services by WSES.

SERVICES TO YOUTH

The current emphasis on the identification of talent in our youth group and the need to utilize their highest abilities has made it imperative for WSES to give special emphasis to its program of services to youth. Since the majority of youth enter the labor market immediately after graduation from high school, the WSES provides employment counseling, testing and work registration services to them

at the school during their senior year. These services supplement and are coordinated with the school's guidance program. The young job seeker is given the opportunity to discuss his interests, aptitudes, school accomplishment and other factors influencing his choice of careers. Current occupational and labor market information is also made available to him by the employment counselor to assist him in reaching a realistic job choice. Several months prior to graduation, the WSES begins an intensive effort to locate suitable job opportunities for these young graduates. Frequently arrangements are made for youth to be interviewed by prospective employers prior to graduation and they are often hired before the close of school. The WSES provided services to 40,397 high school graduates of the classes of 1958 and 1959. More than half of these were assisted in making a career choice. Over 10,000 were placed in permanent jobs by the WSES. Additional thousands of students were placed in summer employment.

SERVICES TO THE HANDICAPPED

To insure that handicapped job applicants are provided with equal employment opportunities in competition with other similarly qualified applicants, WSES offers counseling and other specialized services to this segment of the work force in each of the 26 district offices. Specialized services include job development, selective placement, pre-employment interview preparation for the applicant and employer, job modification, follow-up, and referral to other agencies. Close liaison is maintained with the Vocational Rehabilitation agencies, the Veterans Administration, The Governor's Committee and local committees on Employment of the Handicapped and other public and private organizations concerned with serving disabled persons.

During the biennium ended June 1960, 4,658 disabled job seekers were provided with counseling services and 8,515 jobs were secured for handicapped workers through WSES.

SERVICES TO OLDER WORKERS

Persons in the 45 and over age group constitute an increasing portion of our work force, as evidenced by the fact that approximately 60,000 of them sought jobs through the WSES during the past biennium. As a person reaches middle age he begins to encounter difficulty in obtaining a suitable job, as shown by surveys which indicate that a worker over 45 has only half as much chance of locating a job as a worker in the younger age group. After 65 his chances are very much less.

The WSES provides specialists in each district office to assist older workers in their search for employment. These services range from helping them present their qualifications to employers in an effective manner, to assisting them, through counseling, to select new job objectives which offer greater opportunity for employment. Counseling services were provided to 2,461 job applicants, 45 and over, during the past biennium, and 40,745 placements of this group were made by the WSES during this period.

EMPLOYER SERVICES

Each day, Wisconsin employers face the problems of recruiting and selecting workers, of labor turnover, absenteeism, or other staffing problems in plant and office. These are problems which affect production, employment levels and the economic stability of a community. One of the duties of each WSES office is to recognize these problems and be prepared to assist employers to overcome them. In doing so, WSES utilizes a wide range of modern personnel tools and methods.

Over 67,500 employer contacts were made during the biennium by district WSES offices to assist in solving employment problems, explain services available and to obtain employment information.

During the period a "Sales Kit" in the form of visual aids was developed and introduced to facilitate explanation of WSES operations to employers.

Accurate and detailed job information helps employers to fully utilize workers' abilities, to define the boundaries of a job and to select suitable applicants for the job. Such information is obtained through job analysis and recorded in the form of a job specification. During the biennium, 216 job specifications were prepared to assist employers. Major coverage occurred in the manufacturing and dairying industries.

Training in the principles and use of job analysis was given in nine one-day Job Analysis Institutes in six different communities. Sixty-two participants,—including employment and plant managers, safety and personnel directors and industrial and labor relations people representing forty employers, received this training. These Institutes accomplish a two-fold objective: they help the participants in the performance of their own jobs, and they foster co-operation with WSES, especially in the placing of job orders.

To achieve the most productive utilization of manpower, information must be obtained about workers as well as jobs. One of the basic tools used to obtain worker information is the General Aptitude Test Battery. This consists of a battery of tests designed to measure nine aptitudes basic to successful performance in a large number of jobs. Aptitudes indicate a person's potentiality to learn something quickly and thoroughly. Aptitude measurements have a proven relationship to job success. This makes them useful in the selection and counseling of workers. The GATB is used by the WSES in both of these activities.

Over 96,000 individuals were tested by district WSES offices for placement and job counseling during the biennium. This includes tests given to high school students about to enter the labor market, interest tests, proficiency tests for typing and shorthand ability and specific aptitude tests—all used to assist employers in selecting workers for specific jobs. Employer Services maintains a continuous test development activity. Tests are developed according to aptitudes required for a specific job. They are administered to job applicants to determine

whether they have the aptitudes required by the job. During the 1958-1960 period, nine test batteries were developed. There are five test batteries presently under development.

Almost 1,000 employers were served by the WSES through the use of tests. Employment Service developed tests were used in five communities in the state to completely staff new industrial plants during the biennium. This testing service has served all types of concerns, from small trade and service establishments, to very large manufacturers. Various state and federal government departments have also obtained test selected job applicants.

LABOR MARKET INFORMATION

A broader public interest in labor market information is reflected in the number of inquiries received by WSES for information concerning the labor force of the state, or specified area. How many persons are currently at work? How many are unemployed? How does Wisconsin rank in comparison with other states, or with the nation as a whole? What is the work experience of persons currently seeking jobs? In what occupations are workers in demand? What are the anticipated employment trends?

These are but a few of the questions WSES is expected to answer through its labor market information program.

Labor market information is disseminated through a series of releases prepared and distributed regularly to agencies, employers or individuals requesting them.

Regularly scheduled releases include *Labor Market Letters*—issued bimonthly for 18 principal areas in the state, *Labor Force Estimates*—issued monthly, and a *Weekly Labor Market Report*—issued to district WSES offices each Monday.

In addition, other reports are prepared on a recurring basis. Comprehensive labor market reports are prepared bimonthly, covering the four major areas in the state. They are written specifically to meet the needs of the Bureau of Employment Security in Washington. Data included are used by various other government agencies in planning and programming their operations. These reports are also used by our National office as a means of assigning area classifications, and in determining areas of substantial labor surplus.

The WSES also participates in a national labor market analysis program, covering specified industries in the state. During the biennium, approximately 100 establishments in various industry groups have been surveyed. The results of these surveys are included in special releases prepared by the Bureau of Employment Security.

Previously prepared *Basic Statements* for Wisconsin cities, containing detailed information on the economic, cultural and recreational characteristics of the community and its trade area, have been updated and re-released as significant changes in the narrative have become necessary.

A number of special studies covering selected wage rate data turnover, and employment were made to meet special requests.

SPECIAL PROJECTS

There is a need for labor market information concerning specific problem areas in the labor force. Special research studies during the 1959-1960 biennium were designed to provide information concerning some of these problems. A variety of further studies are planned for the coming biennium.

1. **Area Skill Surveys**—Surveys of future manpower requirements and training resources were completed during the biennium. Reports of future skill needs were released covering Milwaukee, Brown, Manitowoc and Calumet counties. An inter-agency study of manpower requirements training resources, and educational needs for Marathon county is in process. These reports have been used as a guide in counseling and training to assist in developing needed skills.
2. **Estimating Agricultural Employment**—Analysis of the results of the survey of a sample of Wisconsin's agricultural employers during the 1957-1958 growing season resulted in improved techniques of estimating agricultural employment. A survey of a larger sample gathering greater employment detail was continued during the biennium. The results of this expanded survey will further improve agricultural employment estimates when the analysis is completed.
3. **La Crosse Reemployment Study**—A survey of Electric Auto-Lite Company employees laid off when the plant left La Crosse was made. The published report of this study contains an analysis of the problems encountered by these employees in seeking other employment. This study will prove invaluable to other communities facing similar unemployment situations.

EXPERIMENTAL RURAL AREA PROJECT

Special funds were provided early in 1959 by the Bureau of Employment Security to conduct a joint experimental rural area project in cooperation with the Department of Agriculture. The major objectives of the program were: (1) to develop methods for providing more effective basic employment services to rural low income areas, and (2) to assist in development of a program for the economic adjustment of the area.

Price county was chosen by WSES and the Agricultural Extension Service as the area in which to conduct the experiment. WSES established an office at Phillips the county seat, on July 20, 1959, with a staff consisting of the manager, two counselor-interviewers and a clerk.

To accomplish the objectives the Price county WSES office carried out the following functions:

1. Register and interview all job applicants interested in employment and assist them in locating suitable jobs.
2. Test and counsel all interested job applicants to measure occupational potential in specific fields of work.
3. Survey the employers of the county to determine current and anticipated employment requirements of existing business and industry.
4. Provide the full range of employment service facilities and service to the residents of the county.
5. Cooperate with other federal state and local agencies to assist in the economic development of the county.

By the end of March 1960, a total of 1,363 people had been registered, counseled, and classified. Of these applicants, 741 were tested with the General Aptitude Test Battery and Interest Check list. All of the county's 104 employers subject to unemployment compensation coverage were contacted by personal visit to obtain information on current and anticipated employment by occupation, age and sex.

The results of the applicant and employer surveys were incorporated in a "Manpower Resources" report. The Price county office staff interpreted the Manpower report to county and local leaders and worked with them in their economic self-improvement planning.

The project was terminated in December, 1960.

EMERGENCY MANPOWER SERVICE

CIVIL DEFENSE

The Emergency Manpower Service is a part of the Wisconsin State Civil Defense program. It is composed of three divisions of the Industrial Commission: the Wisconsin State Employment Service, Unemployment Compensation Department, and the Workmen's Compensation Division.

The responsibilities of the Emergency Manpower Services are: (1) the Wisconsin State Employment Service will determine the location of civilian manpower resources by key occupational categories after evacuation of target areas and recruit, distribute and utilize the available manpower to fill the requirements of Civil Defense Services, other government agencies and essential industries; (2) the Unemployment Compensation Department will administer the state's Unemployment Compensation Law and other federal programs which provide for unemployment benefit payments; (3) the Workmen's Compensation Division will administer the state's Workmen's Compensation Law and other federal programs which provide for the payment of compensation for injured workers.

After special Federal funds were made available on January 1, 1960, a WSES staff member was appointed as Civil Defense Co-ordi-

nator to develop and co-ordinate plans and programs involving manpower activities of the three divisions of the Industrial Commission in a mobilization period or a Civil Defense emergency. Operating procedures have been prepared and distributed to all WSES–UC district offices.

The Wisconsin State Employment Service participated in Operation Alert-1960, a three-day exercise to test operational readiness at the national, regional, state and local levels.

In co-operation with the Wisconsin Bureau of Civil Defense, the Wisconsin State Employment Service sponsored a state manpower meeting on June 21, 1960, in Madison. It was attended by selected county and city Civil Defense Directors, federal officials from agencies having substantial manpower responsibilities, their state counterparts and managers from 19 district Wisconsin State Employment Service offices. The meeting served to clarify the role of the Wisconsin State Employment Service as the manpower arm of the Bureau of Civil Defense and how the National Manpower Plan is to be handled at the various governmental levels.

VETERANS EMPLOYMENT ACTIVITIES

The Veterans Employment Service program is one of the few major veterans' benefits not administered by the Veterans Administration. There remain many people who are not aware of the fact that the Congress provided a job counseling and employment placement service for veterans. This service is provided in each of the district Wisconsin State Employment Service offices throughout the State.

There is a person designated in each of these offices whose primary responsibility is to see that veterans receive appropriate employment assistance. By special statutory authority a State Veterans Employment Representative—a Federal employee—is located with and attached to the WSES Administrative staff with the responsibility to see that adequate services are being rendered. It is through this individual that the veterans program is operated.

The approximate 500,000 veterans of all wars living in Wisconsin constitute a large segment of the population. During the biennial period July 1958 through June 1960, 69,141 veterans applied for work through WSES offices. Of this total, 4,612 were disabled veterans. For the same period, 3,347 veterans were counseled, of whom 1,340 were disabled. During the biennium, 43,065 veterans were placed in nonagricultural pursuits. Of this total, 3,312 were disabled.

All veterans, whether employes or employers, and veterans organizations, can support and utilize the district WSES office serving his area, since within this framework lies the employment service provided for veterans.

FAIR EMPLOYMENT PRACTICES DIVISION

Wisconsin's Fair Employment Practices Law (Sec. 111.31–38 Wis. Stats.) is administered by the Industrial Commission's Fair Employment Practices Division, which is headquartered in Room 3190, 634 North 2nd Street, Milwaukee.

DISCRIMINATION BECAUSE OF AGE

Wisconsin's FEP Law was amended during the 1959 session of the Legislature *to include discrimination because of age.* Therefore, it is now not only *unlawful to discriminate because of race, creed, color, national origin or ancestry, but it is now also unlawful to discriminate because of age.*

Section 111.32 (5) (b) Wisconsin Statutes now provides that:

"It Is Discrimination Because Of Age:

1. For an employer, labor organization, or person in the fields of housing, recreation, education, health and social welfare, or any licensing agency, because an individual is between the ages of 40 and 65 to refuse to hire, employ, admit or license, or to bar or to terminate from employment such individual, or to discriminate against such individual in promotion, compensation or in terms, conditions or privileges of employment.
2. For any employer, licensing agency or employment agency to print or circulate or cause to be printed or circulated any statement, advertisement or publication, or to use any form of application for employment or to make any inquiry in connection with prospective employment which applies or expresses any limitation, specification or discrimination respecting individuals between the ages of 40 and 65, or any intent to make such limitation, specification or discrimination."

While there are some specific circumstances, defined in the law (Sec. 111.32 (5) (c)), when the exercise of an age distinction is lawful, nevertheless, there are many instances in which it is unlawful. Therefore, it is being suggested, to those organizations to whom the statute is applicable, that any inquiries regarding an interpretation of Sec. 111.32 (5) (c) as it relates to a specific situation, be directed in writing to the FEP Division.

After the adoption of the age provisions, the Division received a complaint (Sec. 111.36—"Commission may receive and investigate complaints charging discrimination") to the effect that a large utility was requiring persons over the age of 40, as a consideration for employment, to waive their rights to (1) purchase and participate in the life insurance program; (2) the pension program; and (3) promotion and upgrading.

Upon investigation it was determined that the waiver program had been adopted approximately 10 years ago, and that the waiver as to promotion and upgrading does not appear to be based on age since such item has been sought from persons under the age of 40. However, in order to obviate any question in this connection, the company agreed to have its Legal Department rewrite said waiver to make it unmistakably clear that it is not relevant to age.

It was further determined that the waiver as to pension had been cancelled in August, 1956, at which time each person, who heretofore, had relinquished his rights to such program, was given an opportunity to participate.

("If the Commission finds cause to believe any discrimination is being committed, it shall immediately endeavor to eliminate the practice by conference." Sec. 111.36) It was further agreed that individuals who, after the effective date of the age provisions, *as well as those who before such date,* waived their right to purchase and participate in the Plan 9 Life Insurance Program, would now be given an opportunity to do so and thus such persons would automatically come under the other life insurance plan known as Plan 8. (Plan 8 is given to an employe at the end of one year *if* he then purchases and participates in Plan 9.) The company agreed to go along with the proposal that those waivers of Plan 9 which were effected *before* the effective date of the age provisions, also be rescinded. From a standpoint of the Division, it is a moot question as to whether an organization legally could be required to cancel waivers executed before the date of the age provisions.

The foregoing represents a brief resume of the results achieved in processing the first complaint under the age provisions.

NON-DISCRIMINATORY CONTRACTS

(Sec. 16.765, Wis. Stats.)

The 1959 Wisconsin Legislature also enacted a measure which requires all "*contracting agencies of the state*" to "include the following provision in every contract executed by them:

> In connection with the performance of work under this contract, the contractor agrees not to discriminate against any employe or applicant for employment because of race, religion, color or national origin. The aforesaid provision shall include, but not be limited to the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available for employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of the nondiscrimination clause."

The new "Contracts Law" (Sec. 16.765) was turned over to the Industrial Commission's Fair Employment Practices Division for administration.

CONFERENCES

(Section 111.35 (4)—"Confer, cooperate with and furnish technical assistance to employers, labor unions, ... in formulating programs, educational and otherwise, for the elimination of discrimination.")

In May, 1960 the Division conferred collectively with the officials of respective cab companies in one of Wisconsin's urban areas.

No Negro drivers had ever been employed by any of the four companies, excepting one, which some time ago had hired a non-white person. This employe left after a brief period of employment.

At the time of conference, each organization agreed to grant opportunity to qualified Negro persons.

As a result of the conference, one company has now employed a colored person as a driver.

It is interesting to note that the cab companies in Milwaukee have been employing Negro drivers since 1946. Both men and women are employed. The Milwaukee cab company situation was one of the first major projects undertaken by the FEP Division. Several conferences were held with company officials in 1946 pursuant to assuring the hire of Negroes. Such assurances were then given and the program was initiated at that time.

COOPERATION WITH WISCONSIN STATE EMPLOYMENT SERVICE

The WSES local offices transmit to the Division pertinent information concerning discriminatory job orders.

During the biennial period the employment service reported 65 discriminatory situations to the Division.

Those organizations which lodged a discriminatory job order were then contacted by the Division. The discriminatory specification was rescinded in those instances where, at the time of the Division contact, the job order was still open.

In each situation the Division seeks to gain an assurance that no discriminatory job orders will be lodged in the future and that job opportunity will be made available to any qualified person regardless of color. All the reports from the employment service involve race.

The discriminatory orders have involved such jobs as the following: inventory clerk; tool and die trainee; billing clerk; clerk typist; kitchen helper; pan washer; stock boy; grill cook; waitress; porter, etc.

This program is evaluated semi-annually at which time the employment service and the division collaborate in setting up an appropriate report for the Industrial Commissioners. This report calls for the following statistics:

I. Employers placing job orders with discriminatory specifications;
II. Employers placing subsequent job orders with Employment Service;
   1. Discontinuing discriminatory specifications immediately;
   2. Continuing discriminatory specifications;
      A. Further FEP division contact;
      B. Employment Service continues contacts—No present problem;
III. Employers not placing subsequent job orders with employment Service;
IV. Probable reasons for no subsequent job orders;
   1. Labor market and economic situation—et al.

It is interesting to note that rarely does an organization again cite a discriminatory specification after the FEP division has conferred with it.

The employment service reported at the end of this biennium that:

> "During the first six months of 1960, *33* employers *previously reported* as placing discriminatory orders, placed additional orders without restrictive hiring specifications."

It is significant that, in most instances, the division's contact via an employment service report, represents an initial contact.

While the division has not had time to check on the contacts it has made via employment service reports, pursuant to determining how patterns of employment may have changed, the division is nevertheless knowledgeable that in at least several places Negroes have been employed for the first time.

For example, in November, 1958, the division was confronted by a Negro man who was employed as a receiving clerk for a dealer in auto accessories with multiple stores in Milwaukee. This young man had been employed by the respective organization several months after the division had contacted the employer because of a discriminatory job order. All subsequent orders from this company, lodged with the employment service, have contained no discriminatory specifications.

The one example cited above has been paralleled in several other places which have been brought to the division's attention. For instance, an advertising firm in Milwaukee which expressed a preference for only white persons now has a number of Negroes employed.

JOB APPLICANTS

Many Negro persons contact the FEP division for assistance in securing employment commensurate with their skills and abilities.

The authorization for this kind of service is couched within the framework of Section 111.31 (3):

> "In the interpretation and application of this subchapter, and otherwise, it is declared to be the public policy of the state to

encourage and foster . . . the employment of all properly qualified persons regardless of their age, race, creed, color, national origin or ancestry. All the provisions of this subchapter shall be liberally construed for the accomplishment of this purpose."

Each job applicant's educational and employment background is first checked, and if the circumstances warrant, it is then discussed with those organizations in which there is an appropriate vacancy. These represent personal contacts by the division. They are not handled by phone. An interview of the candidate is sought. As a result of this effort in behalf of job applicants, for example:

A legal stenographer was offered a stenographic job in a prominent downtown law office in Milwaukee;

A 1959 high school graduate was employed in the office of a food processing firm in Madison;

A machine lathe operator was offered employment in production in three industrial plants;

A woman was employed as an assistant bookkeeper within a retail organization;

A woman was hired in the office of a firm which manufactures clothing;

A man was assisted with the preliminary steps pursuant to licensing as a master plumber. He secured licensing and is employed by a large plumbing contractor in Milwaukee;

A woman was employed by a nursing home as a practical nurse;

A woman was hired as a power sewing trainee;

A man was employed as a professional pharmacist after the division conferred with the State Board of Pharmacy which discussed his availability with a large drug concern;

A full-time teacher was hired by a can company for the summer period.

These are just a few of the job situations which were negotiated by the division.

It should be noted that some of the companies ultimately contacted in behalf of a job candidate were initially sought out by the division because of a complaint situation.

Many Negro persons not interested in filing a complaint, nevertheless contact the division for purposes of securing its assistance in connection with a problem.

Several examples are the following:

Inez was employed for a number of years within an industrial organization. She had frequently applied for a change to a better job but had failed to achieve it. With her permission, the FEP division conferred with the company and on the basis of the information set forth she was immediately granted the desired change to inspector;

Ernest was re-employed by a packing house when the various bottlenecks to re-employment were eliminated by the division.

RELIGIOUS DISCRIMINATION

An insurance company office in Milwaukee agreed to grant time off for religious observance, not only, as is now customary, to those who are not Jewish, but also to those who are. In addition, this organization was willing to grant employment to a young lady who, having been hired, had then been quickly denied when she expressed her inability to work during the fall Holiday season.

The division found probable cause to credit a complaint that because of religious background Richard was denied a job as salesman with a large tire and rubber company which has its midwest regional office in Milwaukee.

Therefore, a conference was had with the district manager and the district credit manager pursuant to eliminating the discriminatory practice. (Sec. 111.36 (3))

All the division's recommendations were adopted.

The District Manager quickly disseminated a written statement of policy which the division helped promulgate, and he also held a special staff meeting in order to personally discuss policy and obviate any further departure from fair employment practices.

The District Manager responded spontaneously to the recommendation that Richard now be considered for employment and an appointment for interview was immediately scheduled.

Richard was interviewed and offered employment as a salesman.

HEARING

A young Negro woman, received a phone call from a small business organization in Milwaukee in response to her work-wanted advertisement appearing in the local press.

What transpired by phone appeared in order and she was asked to report the following morning.

Upon arrival, somewhat before the appointed hour, she was confronted by a man who immediately announced that the job was filled. He gave her no opportunity to identify herself or the reason for her presence.

After this experience she sought counsel with the FEP division and reluctantly explained that it was her opinion she had been turned away because of race. The division found cause to believe that discrimination had been practiced and it tried to work out an adjustment. The division failed to eliminate the discriminatory practice (Section 111.36 (3)) and a hearing was therefore scheduled. ("In case of failure so to eliminate the discrimination the Commission shall issue and serve a written notice of hearing".)

On the basis of hearing it was determined that the young woman had been denied opportunity because of race, and she was compensated for loss of earnings.

In view of the respondent's attitude and hostility to the principle of equal job opportunity, the woman was in accord with the FEP divi-

sion's advice that it would be better wisdom for a very young lady to be employed on her first job within a more favorable atmosphere. Therefore, the division negotiated with four business and industrial organizations in which there was a vacancy commensurate with the candidate's background and she was interviewed and had an offer of employment from all four. Hence, she was already secured on the date of hearing, and the division thus talked with her employer about her availability for hearing purposes in order to obviate any complications in her new situation. He was most willing to cooperate and released her for the hearing.

In addition to the money award the respondent agreed to cease and desist from discriminating in its employment practices in the future, and agreed to comply with the provisions of Wisconsin's Fair Employment Practices Law.

STATISTICS

A total of 146 cases were processed by the Division during the biennial period.

Note: A total of *70* cases were processed during the last biennium, July 1, 1956 thru June 30, 1958.

The disposition of cases is as follows:

Probable cause found to credit allegation; case adjusted	90
No probable cause found to credit allegation of specific petition, but other questionable or provocative practices or policies found and adjusted	13
No probable cause found—specific petition dismissed. No other discriminatory practices or policies found	33
Withdrawn	1
Pending	7
Hearing	2
Speeches (employer groups; church groups; high school class; civic groups)	15
College Classes—Marquette; University of Wisconsin, Milwaukee	8
Television—WTMJ-TV, Channel 4, Milwaukee	4
Meetings—National; Local; State	201
Business and Management Contacts	868
Labor Organization Contacts	10
General Contacts (schools, WSES branch offices; clergymen et al.)	88
Interviews with Job Applicants	97
Sessions had with individual complainants and private organizations (Ex: NAACP, Milw. Jewish Council) Re: complaints	145

As a result of staff expansion the Division is now capable of rendering better service to the major urban centers in Wisconsin.

A staff person is now in the following areas, on the designated day each month, for the sole purpose of conferring with individuals who have a discriminatory problem as defined in Section 111.32 (5) (a).

Beloit	Second Friday of the month
Kenosha	Third Thursday of the month
Madison	First Tuesday of the month
Racine	Second Wednesday of the month

Section 111.35 (1) (5) authorizes the Industrial Commission, in its administering of the Fair Employment Practices Law, to investigate discrimination in employment, housing, education, recreation, health and social welfare, in the State of Wisconsin, and to make specific recommendations to the interested parties as to the methods of eliminating it.

Section 111.35 (4) states that the Commission shall:

> "Confer, cooperate with and furnish technical assistance to employers, labor unions, educational institutions and other public or private agencies in formulating programs, educational and otherwise, for the elimination of discrimination."

During the next biennial period the FEP division plans to accelerate the development of more programs for eliminating discrimination.

INDUSTRIAL SAFETY AND BUILDINGS DIVISION

The division of industrial safety and buildings consists of eight sections each of which deals with special areas of engineering and architecture for the purpose of enhancing safety in industry and public buildings. The eight sections are (1) the boiler inspection; (2) the building section; (3) the electrical section; (4) the elevator inspection section; (5) the factory inspection section; (6) the fire prevention section; (7) the mine-quarry section, and (8) the industrial safety education section.

Each section of this division functions within the scope of one or more of the Wisconsin Administrative Codes. There are 23 such codes administered by the division. Each code is developed, reviewed, or revised by advisory committee action in conformity to statutory rule making procedures.

Some sections of this division, namely, the boiler inspection section, building section, and the elevator inspection section collect fees for providing certain services. The fees are deposited in the state general fund and are not re-appropriated to the Industrial Commission.

REVENUES

Sections 101.10 (12) and (13) of the statutes were repealed and recreated by the 1959 Legislature. An important result was that the fee schedule was eliminated from the statutes and placed in an administrative code. The commission proceeded accordingly and with the assistance of an advisory committee adopted a new Fee Schedule identified as Wisconsin Administrative Code, Chapter Ind 69.

The Fee Schedule became effective on January 1, 1960. Increased somewhat, the new schedule produced greater revenues than here-

tofore. The revenue produced during the biennium for indicated services is as follows:

Activity	*Fiscal Year* 1958–1959	1959–1960
Inspection of boilers, unfired pressure vessels, and refrigeration plants	$9,075.00	$12,087.00
Examination and approval of drawings for buildings, heating and ventilation systems, structures, industrial exhaust systems, building additions and alterations, and fire escapes	58,664.11	78,652.28
Examination and approval of drawings for elevators, escalators, and dumbwaiters	1,160.00	1,750.04
Inspection of elevators, escalators, and dumbwaiters	3,060.00	6,725.00
Certificates of Competency (Boiler Inspectors)	none	930.00
Certificates of Competency (Elevator Inspectors)	none	715.00
Total Revenue Produced	$71,959.11	$100,859.32

BOILER INSPECTION SECTION

The codes administered in this section of the division are the Wisconsin Boiler and Unfired Pressure Vessel Code (Chapters Ind 41–42) and the Refrigerating Plant Code (Chapter Ind 45). A new code adopted by the commission, dealing with Anhydrous Ammonia, (Chapter Ind 43) became effective on January 1, 1960.

The number of boilers and refrigeration plants inspected during this biennium by State Boiler Inspectors are tabulated below.

	Fiscal Year 1958–1959	1959–1960
Boilers Inspected		
Internally	87	120
Externally	1,329	1,309
Corrections Ordered	1,585	2,071
Boilers Condemned	6	2
Accidents Investigated	9	4
Refrigeration Plants Inspected	730	772

Inspections of boilers in Milwaukee by boiler inspectors employed by the city were as follows:

	Fiscal Year 1958–1959	1959–1960
Boilers inspected		
Internally	303	212
Externally	545	1,102
Corrections Ordered	1,108	1,292
Boilers Condemned	4	none

Inspection reports received from insurance company boiler inspectors were as follows:

	Fiscal Year 1958–1959	1959–1960
Boiler Inspections	6,143	6,227

Certificates of Competency issued to insurance company boiler inspectors on the basis of renewals or by initial examination were as follows:

	Fiscal Year 1958–1959	1959–1960
Certificates of Competency—renewed	258	149
Applicants for Certification	15	20
Applicants Examined and Certified	13	13

Codes administered by this section are Wisconsin Administrative Codes:

Boiler and Unfired Pressure Vessels	Chapters Ind 41 and 42
Anhydrous Ammonia	Chapter Ind 43
Refrigeration Plant	Chapter Ind 45

BUILDING SECTION

The building construction boom, continuing at a high rate, noticeably strained the capacity of this section to examine and approve the thousands of project drawings, design computations, and specifications received.

To expedite the approvals and to reduce a heavy backlog, that still persists, it has been necessary to shift personnel and explore other methods to shorten the waiting period for approvals.

The following tables show the volume of business handled by this section:

	Fiscal Year 1958–1959	1959–1960
Plans Examined		
Buildings	4,674	4,738
Fire Escapes	77	92
Heating & Ventilation	3,723	3,200
Exhaust Systems (Dusts, Fumes, Vapors & Gases)	141	195
Total Plans	8,615	8,225
Interviews		
Office	6,341	5,940
Field	1,468	1,453
Building Inspections	8,818	8,496

Codes administered by this section are Wisconsin Administrative Codes:

Dusts, Fumes, Vapors and Gases	Chapter Ind 20
Spray Coating	Chapter Ind 21
Sanitation	Chapter Ind 22
Safety in Construction	Chapter Ind 35
State Building Code	Chapter Ind 50 through Ind 57
Heating, Ventilation and Air Conditioning	Chapter Ind 58
Existing Buildings	Chapters Ind 60, 61, 62, 63 and 64

ELECTRICAL SECTION

In a joint action, the Industrial Commission and the Public Service Commission appointed an advisory committee to review and recommend such revision of the existing Wisconsin State Electrical Code as the committee deemed necessary. The initial meeting took place in October, 1958. A first draft of Volume II was completed in June, 1960. Public hearings are pending.

The Electrical Section continued to act in an advisory and consulting capacity to other state departments, and to manufacturers, architects, engineers, contractors, and electrical inspectors.

The following statistics cover some of the routine activities of the section:

	Fiscal Year	
	1958–1959	*1959–1960*
Code Committee Meetings	7	13
Electrical Plans Examined	24	30
Interviews	93	112
Inspections	6	7
Accident Investigations	23	32

Codes administered by the Electrical Section are Wisconsin Administrative Codes:

Wisconsin State Electrical Code	Volumes I and II
Electric Fence Code	Chapter Ind 16
School Lighting Code	Chapter Ind 17

ELEVATOR INSPECTION SECTION

No tabulation is made of the numerous conferences and consultations that involve this section, but the number is substantial. Manufacturers, architects, engineers, owners, insurance company representatives, and others frequently require assistance in design, installation and testing the several types of elevators, escalators, and dumbwaiters.

State Elevator Specialists, in addition, accomplished the following:

	Fiscal Year	
	1958–1959	*1959–1960*
Activity		
Installations Inspected	668	1,124
Violations Discovered	984	2,125
Drawings Examined and Approved	145	175
Accidents & Injuries Investigated	20	26

Insurance company Elevator Inspectors reported the following activities:

	Fiscal Year	
	1958–1959	*1959–1960*
Number of Inspections	5,623	5,378
Violations Discovered	3,716	3,844

Certificates of Competency issued to insurance company Elevator Inspectors on the basis of renewals or by initial examinations were as follows:

	Fiscal Year 1958–1959	1959–1960
Renewals		
Active	76	73
Inactive	26	28
Total	102	101
Applicants for Examination	20	16
Applicants Examined and Certified	8	3

The Wisconsin Elevator Code is identified as Chapter 4 of the Wisconsin Administrative Code.

FACTORY INSPECTION SECTION

Principally engaged in promoting safe working conditions in all places of employment the staff of this section seeks out hazards, confers with employers regarding them, and urges prompt action to bring about compliance with the applicable administrative safety codes.

Activities for the biennium were as follows:

	Fiscal Year 1958–1959	1959–1960
Activity		
Places of employment inspected	5,753	5,353
Violations of safety rules discovered	8,631	9,056
Injuries investigated	1,563	1,517
Hearings and conferences	3,803	2,805
Injury Reports received and analyzed	26,908	28,890

Codes administered by this section are Wisconsin Administrative Codes:

General Safety	Chapter Ind 1
Dusts, Fumes, Vapors and Gases	Chapter Ind 20
Spray Coating	Chapter Ind 21
Sanitation	Chapter Ind 22
Sanitary Facilities in Railroad Terminals and Cabooses	Chapter Ind 25
Railroad Employes Welfare Facilities*	Chapter Ind 26
Safety in Construction	Chapter Ind 35

* Adopted and became effective on August 1, 1959.

FIRE PREVENTION SECTION

The title of this section is not especially indicative of its function. Athough its general purpose is to minimize potential fire hazards wherever possible, a more apt title might be the Petroleum Products Section. The administrative codes dealt with are the Flammable Liquids Code, the Liquefied Petroleum Gas Code, the Dry Cleaning

Code, and others that involve the handling and storage of products refined, transported, and stored by the petroleum and related industries.

The following table summarizes the activities of the Fire Prevention Section for the past biennium:

	Fiscal Year	
	1958–1959	*1959–1960*
Activities		
Cities and villages visited	283	568
Mercantile establishments inspected	491	848
Number with fire hazards	52	60
Total hazards discovered	126	153
Petroleum product storages inspected	622	582
Oil, gasoline, kerosene, etc.	108	68
Hazards discovered	259	160
Liquefied petroleum gas	50	130
Hazards discovered	3	17
Dry cleaning establishments inspected	25	25
Hazards discovered	12	18
Fire department facilities inspected	222	447
Educational programs (speeches and demonstrations)	90	117
Plan Approvals		
Petroleum product storages, oil, gasoline, kerosene, etc.	228	405
Liquefied petroleum gas	63	65

The Fire Prevention Section functions within the scope of the following Wisconsin Administrative Codes:

Cleaning and Dyeing	Chapter Ind 7
Flammable Liquids	Chapter Ind 8
Liquefied Petroleum Gas	Chapter Ind 9
Fire Prevention	Chapter Ind 65

MINE-QUARRY SECTION

Noteworthy with respect to new and additional activities subject to inspection by the Mine–Quarry Section are the large scale public construction programs under way throughout the state. In the Milwaukee area, for example, excavations for sewers involve the excavation and lining of vertical shafts up to 100 feet in depth with diameters up to 30 feet connected by underground tunnels up to 15 feet in diameter. In many other communities, sewer and water supply systems are being installed and expanded at rates to meet the needs of a growing population.

Another important project requiring considerable attention by the Mine–Quarry Section is the Interstate Highway. Excavations, gravel pit operations, quarrying, blasting, rock crushing, and similar operations connected with the construction of the highway extends over hundreds of miles for the length of the project.

The following table summarizes the activities:

Mine inspections	114
Trench-tunnel inspections	1,002
Quarry and pit inspections	2,731
Field conferences	3,840
Injuries investigated	131

The codes administered by the Mine-Quarry Section are:

Quarries and Pits	Chapter Ind 2
Mines	Chapter Ind 3
Explosives	Chapter Ind 5
Tunnel, Caisson, and Trench Construction	Chapter Ind 6

STATISTICAL DIVISION

The Statistical Division has been in existence since the organization of the Industrial Commission in 1911. Its function is to carry out the various Statistical programs assigned to it by the Commission. Since 1911, the Statistical Division has prepared information on a large range of subjects.

Toward the end of the 1958–1960 biennium, plans were made for the inauguration of an Injury Frequency and Severity Rate Program in cooperation with the Bureau of Labor Statistics of the U. S. Department of Labor. This program will compare the frequency and severity rates of work injuries in different areas and industries—locally, state by state, and nationally. Such rates will be especially useful in providing a norm or basis of comparison for evaluating injury experience. Under the cooperative program, the same report will be used by both the state and federal agencies. Reporting rules and all tabulating procedures will be based upon the provisions of the American Standard Method of Recording and Measuring Work Injury Experience, 16.1—1954 (R 1959).

Following is a brief description of the current programs of the Statistical Division.

WORKMEN'S COMPENSATION STATISTICS

One of the major programs of the statistical division is the preparation of workmen's compensation statistics—including the review of qualifications of self-insurers and applications for partial or divided insurance coverage privileges. (See report of Workmen's Compensation Division.)

Employers subject to the provisions of the Workmen's Compensation Act must report compensable injury cases to the Industrial Commission on Form A–12. The statistical division codes certain pertinent information from Form A–12 and its corresponding claim docket prepared by the workmen's compensation division.

All of the material in the monthly releases on reported cases is derived directly from Form A–12. Much of the data for the annual

releases on compensable settled cases also comes from this form. Reports of 28,890 work injuries were received by the Commission during the second year of the biennium as compared to 26,908 during the first year of the biennium. Of these totals 4,272 and 3,868 were cases in which the liability of the employer was self-insured.

Employers and self-insurers are rated by the time taken to send in a first report; insurance companies and self-insurers are rated by the time taken to make the first payment of compensation. First reports of injury cases are considered prompt reports if received within seven days after the date of commencement of disability. First payments of compensation are classified as prompt payments when the injured employe has received, within 15 days after the commencement of his disability, the full amount due and payable for all compensable time lost during the first 10 days after the commencement of his disability.

Fiscal Year Ending June 30	Insured Employers	Public and Private Self-insured Employers	Total for Insured and Self-insured Employers
Percentage of cases with prompt first reports			
1959	58.6	42.9	56.3
1960	56.5	41.7	54.3
Percentage of cases with prompt first payments			
1959	89.0	82.1	88.2
1960	88.3	82.4	87.6

The releases on cases reported to the Commission on Form A–12 are issued monthly. The reported cases are classified by: insurance status; sex; percentage of first reports received within 7 days; daily average number of injury cases reported, by industry; industry and agency; type of accident and agency; agency; place of occurrence of injury; and available information on the fatal injuries reported during the month. Each quarter additional tables are included.

Fiscal Year Ending June 30	Fatal Cases	Non-fatal Cases	Occupational Disease and Other Non-accidental Injury Cases	Accidental Injury Cases	Women	Men	Total No. of Cases Reported
1959	104	26,804	909	25,999	3,403	23,505	26,908
1960	116	28,774	975	27,915	3,669	25,221	28,890
% increase	11.5	7.3	7.3	7.4	7.8	7.3	7.4

Work injury cases are classified by insurance carrier and self-insurer in the following releases: Promptness of First Payment of Compensation (semi-annual); Compensable Settled Cases Classified By Insurance Status (annual); and Injury Cases With One or More Hearings (annual).

Employer violations of Industrial Commission rules are published in an annual release on double and treble liability cases of illegally employed minors, and violations of safety orders.

The annual releases on compensable settled cases are on a calendar year basis and show amount of indemnity and medical aid paid. Various reports are issued, classifying the work injury cases by: place of occurrence; industry; disability; occupation; agency; diseases of occupations and other nonaccidental injuries. Such releases do not include compromised or noncompensable cases. Special studies are also released on work injuries occurring in certain industries.

Injury cases are classified as being *settled* (or closed) as soon as the Commission's files contain evidence of full payment of all benefits due, or when the Commission has entered a final award in final settlement of the claim.

COMPENSABLE WORK INJURY CASES SETTLED, 1958 AND 1959

Year	Number of Cases					Indemnity	Medical Aid Paid in Cases on a Fee Basis		Cases with No Fee Reported—Contract Medical and Other
	Total	Kind of Disability							
		Fatal	Permanent Total	Permanent Partial	Temporary		Number of Cases	Amount	
1958	22,447	124	3	2,969	19,351	$9,799,936	20,798	$3,568,285	1,649
1959	22,363	110	7	2,663	19,583	9,529,668	20,626	3,641,916	1,737

Some reports are not given general distribution. These include requests for special studies from other departments of the state, the Wisconsin Council of Safety, Inc. and employer groups engaged in accident prevention activities.

Monthly payrolls are prepared for the Children's Additional Death Benefit Fund, Second Injuries Indemnity Fund; and Workmen's Compensation Claims Against the State of Wisconsin, and all changes and adjustments are furnished to the Bureau of Finance. Special reports are prepared on the financial condition of these funds and those receiving benefits therefrom.

Reports are collected from employers carrying their own risk under the Workmen's Compensation Act and evaluated for Commission review. Applications for partial and divided insurance coverage are also presented to the Commission for necessary approval.

The Statistical Division also undertakes special studies for the Commissioners, the Director of Workmen's Compensation, and the Advisory Committee on Workmen's Compensation Legislation.

PREVAILING WAGE RATE CERTIFICATIONS

In 1931, the Wisconsin legislature enacted two laws which are designed to insure that construction workers on public works projects are paid wage rates that are at least as high as the wage rates that prevail for their occupation in their area of the state. The statistical division administers this program.

Section 103.49—Building Construction

Under this section, the Industrial Commission certifies a list of minimum wage rates for each state contract building construction project that costs $1,000 or more. The following table shows the number of such certifications made in the last biennium.

Fiscal Year	*Number of Certifications*	*No. of Counties in Which Certifications Were Made*
1958–1959	65	27
1959–1960	93	32

In order to make these certifications, the statistical division keeps an up-to-date file of wage rate reports from construction labor unions, contractor organizations, and federal certifications. The statistical division makes special surveys from time to time as the occasion demands.

The Commission also enforces this section. There were no wage rate complaints filed under Section 103.49 in the 1958–1960 biennium.

Section 103.50—Highway Construction

Under this section, the Industrial Commission certifies one complete list of minimum wage rates for state contract highway construction work every year before May 1, for all occupations in all counties.

As an aid in determining prevailing highway wage rates, the statistical division made the following surveys.

Date	*Whom Surveyed*	*No. Surveyed*
February 16, 1959	Contractors	1,076 *A*
March 20, 1959	Unions	240
December 15, 1959	Contractors	187
March 21, 1960	Unions	213

A Includes special survey of painting and concrete finishing contractors in Wisconsin.

The lowest minimum wage rate for the occupation "Labor Miscellaneous, Unskilled", and the number of counties in which it was certified were:

Date	*Amount*	*No. of Counties*
April 30, 1959	$1.83	16
April 29, 1960	1.93	16

In the summer of 1959, Section 103.50 was amended to include truck rental rates paid to those who own and operate the truck on the project. In order to determine these rates, the following surveys were made:

Date	*Whom Surveyed*	*No. Surveyed*
December 15, 1959	Highway prime contractors	187
January 20, 1960	Larger trucking concerns	254
February 2, 1960	Smaller trucking concerns and individual truck owners	168

The law requires that a Public Hearing be held before the highway certification is made. The following Public Hearings were held in the last biennium.

Date	*No. Attending*
April 16, 1959	62
April 14, 1960	64

Section 103.50 is enforced by the Highway Commission and local District Attorneys.

* * *

The statistical division has many inquiries directed to it regarding construction wage rates on public works—both state and municipal.

OTHER PROGRAMS

Statistical releases on child labor and street trades permits are published annually from information supplied by the woman and child labor division. The permits are classified by place of residence of the child; industry; sex; and age.

The statistical division also prepares certain reports on plans approved by the building section of the division of industrial safety and buildings.

UNEMPLOYMENT COMPENSATION

1958–1960 HIGHLIGHTS. Covered employment dropped sharply in 1958, but reached a new high in 1959. Only the manufacturing and mining sectors of Wisconsin's economy did not quite reach their previous employment levels during 1959. All other industry groups showed gains.

Similarly, total wages paid to covered workers declined in 1958, but reached a new high exceeding $4 billion in 1959.

In view of those changes, U. C. benefits rose from $29.3 million in 1957 to a record $66.5 million in 1958, and then declined to $37.0 million in 1959.

Those jobless benefit payments reduced the hardship of unemployment for many thousands of laid-off workers, and helped to sustain buying power throughout Wisconsin.

In recognition of widespread unemployment and rising benefit exhaustions, the special legislative session of June 1958 extended normal benefit durations about 50% in exhaustion cases, on a temporary basis through March 1959.

At the same time, employer contribution rates were decreased, for 1959 only, under a June 1958 anti-cyclical amendment.

The 1959 legislature made two major changes in Wisconsin's U. C. law. It increased the top benefit duration from 26½ to 34 weeks and adjusted the maximum weekly benefit rate semi-annually, to be 52½ percent of the gross state-wide average weekly wage for covered work.

COVERAGE—of Employers and Workers. By June 1960 Wisconsin's U. C. law covered over 33,000 employers—mostly with 4 or more

workers. (All states have covered employers of 4 since 1956. 20 states now cover employers of 1 person.)

Wisconsin's covered employers average just over 25 workers each. In March 1959 about 22,000 of those firms employed fewer than 10 workers; 6,000 had from 10–19 workers; 3,400 had from 20–49; 1,100 had from 50–99; 650 had from 100–249; 225 had from 250–499; 100 had from 500–999; and 101 employed 1,000 or more. The 101 employers, with 1,000 or more employes, employed one-third of the workers covered by the law.

The Commission's records show, month by month, the total number of workers employed—by private employers—in work covered by Wisconsin's law. Based on those monthly figures, covered employment averaged 735,100 in 1950; 778,500 in 1951; 785,600 in 1952; 800,500 in 1953; 762,700 in 1954; 789,000 in 1955; 836,600 in 1956; 842,400 in 1957; 808,600 in 1958; and 851,900 in 1959.

MONTHLY COVERED EMPLOYMENT—1957, 1958, 1959
(rounded data)

	1957	*1958*	*1959*
January	825,200	806,900	804,600
February	824,500	792,000	796,600
March	826,100	789,800	804,400
April	832,500	789,500	822,600

Finance, etc.	35,000	35,800	154.8	165.7
Mining, etc.	3,500	3,300	17.8	17.5
Miscellaneous	1,600	1,600	6.1	6.5
Total—All	808,600	851,900	$3,694.5	$4,117.4

Public employes are omitted from the above figures; but Wisconsin's U. C. law has always covered some thousands of public employes. The law now applies to over 41,000 public workers—employed

by the State, by the City of Milwaukee, or by those cities or counties which have elected coverage. Instead of requiring U. C. reserves in such cases, the law applies a simple benefit reimbursement basis to each government unit.

In addition, under a 1954 agreement with the U. S. Department of Labor, about 22,000 federal civilian employes are covered by the unemployment compensation provisions of Wisconsin's law. Benefits paid to unemployed federal workers are financed entirely at federal expense.

In rough summary, Wisconsin's civilian labor force, comprising the employed and unemployed, totals about 1.6 million. Of that number, about 250 thousand are farm workers, and about 150 thousand are self-employed, unpaid family workers, or domestic workers, with the remaining 1.2 million being nonagricultural wage and salary workers.

About 950 thousand of those 1.2 million nonagricultural wage and salary workers have unemployment benefit protection as follows:—875 thousand in covered private employment; 60 thousand in covered government employment; and 15 thousand in railroad employment covered under federal law.

The remaining 250 thousand nonagricultural workers, not covered by unemployment compensation, consist mainly of state and local government workers, employes of non-profit organizations, and about 75,000 employes of employers having less than 4 workers.

Wisconsin's U. C. FUND—and Contributions. Wisconsin's unemployment reserve fund is held in trust, pursuant to state and federal law, to pay unemployment benefits to eligible covered workers. (The law's administration is financed separately, by federal grants.)

Wisconsin's reserve fund has now been built up since July 1934,—by contributions from covered employers only. Each employer's required payments are figured as a percentage of his covered payroll, and are credited to his experience-rating account in the state fund.

The contribution checks received from employers are deposited in a Wisconsin bank, for collection. Those collections are then transmitted to the U. S. Treasury Department in Washington, to be credited to Wisconsin's account in the federal "Unemployment Trust Fund." The amounts thus deposited are invested in federal securities, and interest earnings are duly credited to Wisconsin's account. Each week the Commission requisitions back enough of its deposits to cover its current benefit payments. Benefit checks are then drawn on a Wisconsin bank account, maintained by the Commission for that purpose.

Ever since 1937 the fund's interest earnings have been credited to its "balancing account"—which finances various benefit charges (including the "red figures" of some employer accounts) and helps to keep the whole fund adequate, even under adverse economic conditions. Those interest earnings averaged 2.65% and totalled $5.9 million in fiscal 1959; 2.78% and $6.1 million in fiscal 1960.

Under a 1957 amendment, part of the fund's current net interest (remaining after certain current charges) is credited annually to the

fund's employer accounts. Such credits totalled $1.4 million in 1957 and $1.5 million in 1958. In both years of the 1958–1960 biennium, however, current charges exceeded current earnings, so no credits to employer accounts were made in either of those two years.

During recent fiscal years Wisconsin's U. C. contribution collections have totalled:—$26.5 million in 1956–1957; $26.8 million in 1957–1958; $26.7 million in 1958–1959; and $31.7 million in 1959–1960.

On June 30, 1960, Wisconsin's U. C. benefit fund had a net reserve balance of $220 million,—after paying $92 million in U. C. benefits during the two preceding years. The fund's peak balance was $262 million at the close of October, 1957. The ensuing decline in the fund's balance was due to the heavy benefit costs of the 1957–1958 economic recession.

The law's present system for determining each year's contribution rates is designed to gradually adjust the fund's future income, in line with changing conditions. But it is worth noting, for recent years, how Wisconsin's year-end fund balances have compared to the statewide wages on which the law's benefit rights are based.

Stating each year-end balance as a ratio to that year's "taxable" (first $3,000) wages, the fund's percentages were:—12.44% in 1949; 11.80% in 1950; 11.44% in 1951; 11.56% in 1952; 11.55% in 1953; 11.45% in 1954; 11.14% in 1955; 10.74% in 1956; 10.90% in 1957; 9.70% in 1958; and 8.91% in 1959.

Stating the same year-end balances as ratios to *total* wages for covered work, the fund's percentages were:—10.17% in 1949; 9.30% in 1950; 8.57% in 1951; 8.41% in 1952; 8.15% in 1953; 7.93% in 1954; 7.46% in 1955; 6.98% in 1956; 6.91% in 1957; 6.03% in 1958; and 5.33% in 1959.

It is clear from those figures that the relative adequacy of Wisconsin's fund has declined substantially during the past decade; but this fund is still among the strongest in the nation.

EXPERIENCE RATES. Wisconsin's law has from the start included a definite system of individual employer "experience rating"—with each employer's contribution rate based on his own experience under the law. This system of setting rates is designed to charge each employer with the benefit costs of his own unemployment, and to encourage steadier jobs, so far as practicable.

Each employer's contribution rate is determined once a year, based on his own record—reflected by his account—as to payrolls, contributions and benefit payments. Employer contribution rates vary accordingly, both among employers and from year to year—based on varying experience.

The law's normal contribution schedule uses 9 possible "experience" rates, each stated as a percentage of the employer's covered payroll: —4%; 3½%; 3%; 2½%; 2%; 1½%; 1%; ½% or 0%. The highest rates apply only after an employer's benefit drains have exceeded his contributions. The lowest rates apply to an employer only when he has built up substantial reserves.

The average rate of contributions, stated as a percentage of the given year's defined (taxable) payrolls, was 1.02% for 1955; 1.09% for 1956; 1.11% for 1957; 1.09% for 1958; and 1.07% for 1959. The average rate of contributions was even lower, for each of those years, if stated as a percentage of the year's gross total wages for covered work, as follows:—0.68% for 1955; 0.71% for 1956; 0.70% for 1957; 0.68% for 1958; and 0.64% for 1959.

Wisconsin's experience rating system measures reserve adequacy by the most recent (single) year's payrolls, and limits rate jumps in bad years, to help assure a better adjustment of individual rate variations to "fat" and "lean" years—with higher rates building larger reserves in good years, to permit lower rates in bad years.

In line with that long-standing policy, Wisconsin's June 1958 amendment applied—to 1959 experience rates—one of the lower "lean year" schedules enacted in 1951. (The new 1958 device will trigger reduced experience rates, for the next calendar year, whenever benefit payments—during the 12 months ending October 31—have been heavy enough to exceed by at least $10 million a basic total equal to 1% of the gross statewide wages paid for covered work in the fiscal year ended June 30. That benefit volume was reached in 1958, for the first time, because of the recession.) The resulting reductions in Wisconsin's experience rates cut the total contributions otherwise payable for 1959 by about $6 million.

U. C. BENEFITS—under Wisconsin's Law. During the first 24 years, through August 17, 1960, Wisconsin's covered workers received over 15 million benefit checks, for weeks of partial or total unemployment. Those checks totalled over $367 million.

Here are the benefit dollars paid out under Wisconsin's U. C. law, by calendar years.

WISCONSIN U. C. BENEFITS—By Calendar Years—1936–1959

Year	Amount	Year	Amount	Year	Amount	Year	Amount
1936	$ 131,073	1942	$ 4,119,561	1948	$ 4,895,635	1954	$40,029,910
1937	2,131,576	1943	880,512	1949	19,626,899	1955	22,187,840
1938	9,511,312	1944	1,249,692	1950	13,061,616	1956	24,055,554
1939	3,663,572	1945	4,264,654	1951	7,358,376	1957	29,306,071
1940	4,548,529	1946	7,771,882	1952	14,128,778	1958	66,515,694*
1941	2,928,432	1947	3,393,102	1953	17,937,114	1959	37,030,937*

*Includes $11.8 million in temporary emergency benefits ($8.1 million in 1958 and $3.7 million in 1959).

For the last 4 fiscal years, Wisconsin's benefit payments totalled $26,495,771 during 1956–1957; $47,195,581 during 1957–1958; $56,018,970 (including $11.8 million in temporary emergency benefits) during 1958–1959; and $36,030,385 during 1959–1960.

TEMPORARY EMERGENCY BENEFITS. Because of wide-spread unemployment and rising benefit exhaustions, (Congress enacted the Temporary Unemployment Compensation Act of 1958. That Act

offered each state—as an anti-recession measure—temporary (repayable) federal financing for a limited system of extended benefits. Seventeen states accepted the federal advances, which must be repaid starting in 1963.

Wisconsin chose to enact its own system of "temporary emergency benefits" (TEB), financing them out of its own unemployment fund. (Four other states did likewise.) Wisconsin's "temporary emergency benefit" program simply lengthened the normal benefit durations of exhaustees about 50% during a 9-month period, starting in July 1958, so that maximum benefit duration—normal and temporary combined —was extended to 39½ weeks.

About 41,300 Wisconsin workers who had exhausted their normal benefit rights received temporary emergency benefits, totalling $11.8 million. If all those claimants had drawn their full TEB benefits, averaging about $33 for about 11 weeks, the total would have been $15.1 million. 57% of all TEB claimants did exhaust their full TEB rights.

TEB beneficiaries were in the main workers who during years of high level economic activity such as 1955, 1956 and early 1957 did not exhaust their normal benefits. About 85% of all TEB beneficiaries had no normal U. C. exhaustions in those three years. Less than one-half of one percent exhausted their normal U. C. benefits in each of those three years.

WEEKLY BENEFIT RATES. Each worker's benefit rights under the law are based on his employment by a covered employer. What weekly benefit payment applies to an eligible claimant depends on his own average weekly wage from the given employer, figured by dividing his gross earnings by his work weeks.

The law's schedule of weekly benefit rates, though based on each worker's own average weekly wage, is weighted in favor of the lower earnings brackets. In the higher wage brackets Wisconsin's benefit schedule pays each jobless worker about 50% of his average wage—up to the law's top benefit rate or ceiling.

A major 1959 amendment to Wisconsin's U. C. law provided that, starting in 1960, the top weekly benefit rate will be set, each January 1 and July 1, at 52½ percent of the gross state-wide average weekly wage—of Wisconsin's covered employes—for the 12-month period ended 6 months earlier. This determination is non-discretionary, being based on comprehensive wage and employment data regularly gathered and available under the law.

This semi-annual adjustment will automatically keep the law's benefit ceiling up to date. It will help assure that the majority of Wisconsin's jobless workers will be paid weekly benefits equal to 50% of their own average weekly wages.

Under this 1959 amendment, Wisconsin's top weekly benefit rate became $47 on January 1, 1960, as to new benefit determinations made through June 30, 1960. During the first half of 1960, Wisconsin's

benefits for total unemployment ranged from $11 per week up to a maximum of $47 per week, and averaged $36.22 per weekly check. The top benefit rate became $49 starting July 1, 1960.

BENEFIT DURATIONS. Experience during the 1957-1958 recession focused attention on benefit durations and exhaustions.

The first result was the enactment, by the June 1958 special session, of a system of "temporary emergency benefits." Soon after that system expired, the Legislature—in June 1959—adopted an advisory committee recommendation substantially liberalizing the benefit duration provisions of Wisconsin's law, on a permanent basis. Where the temporary emergency program extended benefit durations for *all* claimants, the 1959 amendment has given longer unemployment benefit protection to claimants with longer work histories.

How many weeks of benefit duration may apply to an eligible Wisconsin worker depends on how many work-weeks he has had in covered employment during the past year. He now needs 18 (formerly 14) such work-weeks, to qualify at all. Beyond that, the more weeks he has worked, the more rights he has built up and the more benefit weeks he may draw—if he remains unemployed and eligible.

Prior to the 1959 amendment, if a worker had 38 or more weeks of covered employment within the past year, he could draw up to 26½ weeks of benefits. If he had fewer work-weeks, his benefit weeks could equal about 70% of his actual work-weeks.

Under the 1959 amendment, the top benefit duration was increased to 34 benefit weeks, based on 45 work-weeks. No increase in benefit duration was provided for claimants who work 20 weeks or less. But somewhat higher durations were provided for all claimants with more than 20 work-weeks.

WAITING PERIOD. Wisconsin's U. C. law requires a "waiting period"—in each calendar year—of 1 calendar week of unemployment, for which no benefits can be paid. (The worker must register and claim and be eligible for that week, or it can't be counted toward his unpaid waiting period.)

The law's 1-week waiting period means that an eligible jobless worker cannot receive his first benefit check (which pays for his second week of unemployment) until about 3 weeks after his layoff.

BENEFIT CLAIMS. To secure benefits under Wisconsin's U. C. law, each jobless claimant must register for work, and must report weekly, through one of Wisconsin's public employment offices. These offices are located in 26 cities, throughout the state. Many smaller communities are served by traveling U. C. representatives, once a week.

To remain eligible, a jobless claimant must apply for any job to which a public employment office refers him and must accept any work offered him, or show good cause for his failure to do so. Whenever a claimant turns down a job without good cause, the law's "work-test" stops his benefits—until after he has worked again, in at least four weeks.

Various other qualifying, eligibility and disqualifying conditions apply. For instance, no benefits are paid to workers while they are out on strike. Benefits are suspended while a claimant is unavailable for work. An employe who is discharged for misconduct on the job, or who quits his job without adequate cause, cannot draw any benefits based on that job.

In short, the law's provisions limit its protection rather strictly,—so that benefit checks go only to laid-off workers who are genuinely unemployed.

SETTLEMENT OF DISPUTED CLAIMS. Whenever a question arises as to the possible disqualification of a claimant for benefits, an investigation is made. Based on the facts thus gathered, a Commission deputy makes an initial determination. In any case involving a dispute between employer and employe, both parties receive a written copy of the determination and either may appeal.

In 1959, 60,381 determinations on questions involving possible disqualifications were made at the initial stage. In 28,585, or 47%, of those cases the claimant was denied benefits for varying periods up to complete cancellation of his benefit rights, depending upon the issue involved.

Of the 60,381 determinations, 17,865 involved employer contests, primarily on "Quit" and "Misconduct" issues. The remaining 42,516 determinations involved questions arising through the screening of claims by the Commission's staff,—such as the claimant's availability for work, his failure to register for work with a public employment office, or his failure to apply for or accept a suitable job.

Of the 60,381 initial determinations thus made, 2,767 or 4.6% were appealed. In about two-thirds of those cases, the Commission examiner hearing the appeal affirmed the initial determination.

During 1959 the Industrial Commission, sitting as a review body, considered 537 further appeals. The Commission affirmed the examiner's decision in 93% of those cases.

Finally, 16 cases were disposed of by the Circuit Court in 1959, on appeals from Industrial Commission decisions. The Court affirmed the Commission in 4 cases, reversed the Commission in 1 case, and dismissed 11 cases.

CONTROLLING BENEFITS. The Industrial Commission's continuing efforts to control benefit claims and to prevent improper payments have always been widely supported by labor, by management and by citizens generally. Wisconsin's covered employers are kept fully informed as to benefits and have been especially helpful in keeping improper payments down to a minimum.

When an employe starts his claim, his last employer is notified and asked to report any disqualification which may apply to the claim. Further, the employer not only receives a notice of each benefit determination, but also a notice of each resulting benefit check. Wisconsin was the first state to supply such current benefit information to its employers.

Most U. C. claimants are honest. But there is always some fraud in any benefit program. A few cheaters conceal current wages while claiming U. C. benefits. The Commission uses various methods to spot such fraud. It also checks every letter (even if unsigned) which gives definite facts about a possible fraud case. U. C. cheaters do get caught, and the law's various fraud penalties are applied.

OTHER U. C. BENEFIT PROGRAMS. Along with the state jobless benefit program, the Industrial Commission currently operates two federal U. C. programs, whose benefit provisions and procedures are closely tied in with Wisconsin's U. C. law. (No claimant can receive both Wisconsin benefits and federal U. C. benefits for the same week.)

One federally financed program, called U.C.F.E., provides benefit protection to about 22,000 federal civilian employes located in Wisconsin. During the biennium ended June 30, 1960, the Commission issued 38,600 U.C.F.E. checks totalling $1,240,800.

Another federal program, called U.C.X., applies to ex-servicemen, and began operating in October 1958. Through June 30, 1960, the Commission had issued 73,700 U.C.X. checks, totalling $2,274,700.

The Industrial Commission cooperates with other state employment security agencies in administering those federal programs, as well as the respective state unemployment compensation laws.

January 1960 marked the expiration of the federal U.C.V. benefit program for unemployed "Korean" veterans. Since October 1952, when the U.C.V. program started, through January 1960, 21,200 Wisconsin veterans had received $8,337,500 in unemployment benefits under that program.

ADMINISTRATIVE COSTS. Wisconsin's administrative costs have always been relatively low, when measured by the cost of operating similar U. C. programs in fairly comparable states.

The Commission's costs of administering Wisconsin's U. C. program are almost wholly financed by federal grants made by the federal Bureau of Employment security, from Congressional appropriations.

These federal grants require the submission of budget estimates based on detailed work-load and unit cost estimates. They also involve federal auditing of all expenditures made by the Commission's U. C. Department—even though all such items (salaries, purchases, rentals, etc.) constitute state expenditures, made through the regular channels which apply to all state departments.

During 1959–1960, the Commission's U. C. Department further mechanized its benefit operations, and became responsible for cooperating in the federal B.L.S. program for current employment statistics.

Because of widely fluctuating loads—which characterize every unemployment compensation program—the Commission's U. C. staff and costs have varied widely from year to year. U. C. operating costs, including those involved in paying federal U. C. benefits, were $1,549,350 for the fiscal year 1956–1957; $1,997,026 for 1957–1958; $2,243,144 for 1958–1959; and $2,131,817 for 1959–1960.

FEDERAL LEGISLATION. During 1959-1960 there was increasing concern about adequate benefit financing, under some state U. C. laws, —and about the federal U. C. loan fund. Late in 1960 Congress tightened its loan fund provisions, thereby emphasizing the responsibility of each state for sound financing of its jobless benefit program.

Congress continues to receive sweeping proposals to impose federal "standards" on all state U. C. laws, both as to benefits and as to their financing. Most such bills would, if enacted, leave little room for state discretion, or initiative.

So far, the steady improvement of the state laws has been a major factor in defeating such proposals. As the Commission has noted in previous reports:—"the best argument against federalization is progress by the states themselves—in improving their own laws and administrative performance. The better the state laws, and the better their administration, the stronger the case against federalization—and the weaker the public demand for further centralization of government functions . . . . Suitable action by the states, to provide more adequate benefit protection for their own citizens, is the best way to head off—or defeat—renewed 'federalization' efforts."

WISCONSIN U. C. AMENDMENTS. Under Wisconsin's unemployment compensation law, the primary responsibility for recommending desirable amendments rests on the law's Advisory Committee,—which now consists of 4 employer and 4 labor members.

This representative group has functioned ever since the law's enactment. It has counselled with the Commission on administrative policy and procedure; and has jointly recommended nearly all the major amendments enacted by Wisconsin's Legislature since 1932.

Pursuant to its statutory mandate, the Advisory Committee will again hold public hearings and will seek to reach joint agreement on desirable U. C. amendments,—for consideration by the 1961 Legislature. Two legislators have been named by the Legislative Council to observe the Advisory Committee's 1960–1961 meetings.

* * *

Note: Various pamphlets and statistical tables as to the U. C. law and its operation and as to employment and wages, are available on request from the Commission's U. C. Department, 137 East Wilson Street, Madison 1, Wisconsin.

WAGE PAYMENT AND COLLECTION DIVISION

Under sections 103.39 and 101.01 the commission may investigate and attempt to equitably adjust controversies on wage claims alleged to be due. In its efforts to effect a settlement it may take an assignment of wages in trust from any employe whose claim is deemed to be valid.

Claims against employers in Milwaukee County are dealt with by the commission's branch office in Milwaukee. An attorney located in the Milwaukee office devotes a part of his time to the handling of claims filed with that office and represents the claimant in taking his claim into court. Claims against employers located elsewhere in the state are handled by the Director of the Woman and Child Labor Division located in Madison.

When a claim is filed with the commission the employer is notified and requested to acquaint the commission with his position relative to payment of the claim. If he denies its validity, the matter is set for hearing at which employer and employe are given full opportunity to present their respective claims in the matter. If the commission finds the claim to be valid and the employer refuses to pay it, the employe assigns his claim to the commission as the basis of a civil action against the employer for its collection.

The law provides that the commission may call upon the district attorneys of this state to commence these actions where necessary. Actions on claims for agreed wages against employers in the state, exclusive of Milwaukee County are commenced by the district attorney of the county in which the employer is located. Before requesting action by the district attorney's offices the claim is carefully screened and every effort is made to settle it by negotiation.

During the period July 1, 1958 through June 30, 1960, 81 claims were referred to district attorneys for action. In addition, court action was commenced on 120 claims by the commission attorney located in the Milwaukee office.

During the biennium 1,267 claims were filed and 685 claims were collected. Collections amounted to $40,722.97. As of July 1, 1960 there were 639 claims pending in the Milwaukee office and 116 claims pending in the Madison office.

WOMAN AND CHILD LABOR DIVISION

This division is charged with the administration of eight laws affecting the employment of men, women and children. They are the Child Labor, Street Trades, Women's Hours, Home Work, Minimum Wage, One Day of Rest in Seven, Wage Payment and Collection and Private Employment Agency Laws.

CHILD LABOR. The Child Labor Law provides that child labor permits are required for all minors under 18 years of age engaged in any gainful occupation, except that permits are not required for minors engaged in work usual to the home of the employer outside of school hours, nor for minors employed in agricultural pursuits.

The statutes provides that no minor under 14 years of age may be employed in any gainful occupation except that minors 12 to 14 may be employed in domestic work during school vacations, boys 12 to 14 may be employed, with labor permits, as caddies on golf courses if caddy carts are used, and minors under 14 may be employed in agriculture.

The statutory provision, that minors under 14 may be employed in agriculture, was modified by order of the commission effective June 1, 1960, to prohibit the employment of minors under 12 in certain types of industrialized agriculture.

Orders allowing the employment of minors 12 years of age and over in school lunch programs, and the use of automatic self service elevators by minors under 18 years of age during the course of their employment but not as regularly employed elevator operators, were also adopted by the commission, effective June 1, 1960.

Section 103.75 of the statutes and the orders of the commission provide rules and regulations for the issuance of certificates of age to minors, 18 to 21 years of age. Certificates of age are not required but protect the employer, as such certificates are considered conclusive evidence of the age of the applicant, in any proceeding under the labor laws and the Workmen's Compensation Act of this state, as to any act or thing occurring subsequent to the date of issuance.

STREET TRADES. The Street Trades Law regulates the employment of minors under 18 years of age in the sale and distribution of magazines, periodicals, newspapers and in street trades work on any street or other public place or from house to house. The statute originally enacted fixed a minimum of 18 years for the employment of girls and 13 years for employment of boys. In 1951 the law was amended to allow the employment of boys 12 years of age on condition that their work was limited to house to house street trades work in residential areas.

CHILD LABOR AND STREET TRADES PERMITS AND CERTIFICATES OF AGE ISSUED IN WISCONSIN. Permits and certificates of age are issued by the Industrial Commission in its Madison

and Milwaukee Offices and by persons designated by the commission to assist in their issuance. Permit officers have been designated in all cities and villages which have seasonal or other industries offering employment to minors. As of June 30, 1960, 634 permit officers were assisting the commission in the issuance of child labor and street trades permits and certificates of age. The number of child labor and street trades permits and certificates of age issued in the state are shown for the calendar years indicated.

CHILD LABOR PERMITS ISSUED IN WISCONSIN YEARS 1958 and 1959

	1958	*1959*
Total	41,545	58,765
In City of Milwaukee	9,260	14,658
In State, exclusive of Milwaukee	32,285	44,107

STREET TRADES PERMITS ISSUED IN WISCONSIN YEARS 1958 and 1959

	1958	*1959*
Total	13,116	15,323
In City of Milwaukee	3,879	4,419
In State, exclusive of Milwaukee	9,237	10,904

AGE CERTIFICATES ISSUED IN WISCONSIN YEARS 1958 and 1959

	1958	*1959*
Total	6,557	10,296
In City of Milwaukee	1,804	4,195
In State, exclusive of Milwaukee	4,753	6,101

WOMEN'S HOURS. Prior to April 1, 1957, the statutory provisions as modified by orders of the commission prohibited the employment of women in factories and laundries between 6:00 P.M. of one day and 6:00 A.M. of the following day. In 1957, after public hearings were held, the commission adopted order Ind 74.01 relating to the employment of women in manufactories and laundries during night hours under the following conditions: (1) that women so employed may not work more than 8 hours per day and 48 hours per week and (2) that a meal period of at least 30 minutes be provided and (3) that the so called One Day of Rest in Seven Law be complied with in manufactories. In addition to these conditions, no woman is to be employed on any shift that starts or stops between midnight of one day and 6:00 A.M. of the following day. This so called Night Work Order became effective April 1, 1957.

In addition to the so called Night Work Order, other orders were adopted which affect all employments covered by the Women's Hours Law. These orders are contained in chapter Ind 74 of the Wisconsin Administrative Code.

Many employers found difficulty in arranging their schedules so that women would not be employed on an evening shift beyond midnight. A petition was presented to the commission requesting that this

portion of the order be amended to permit the employment of women at night work providing no shift starts or stops between 1:00 A.M. and 6:00 A.M. of any day. The commission adopted the proposed amendment which became effective September 1, 1958.

Further hearings were held early in 1960 and revisions were made to the orders adopted in 1957. Among the new provisions is the requirement that employers found to be in violation of the Women's Hours Law must pay time and one-half the regular rate of pay for all excess hours worked. The new orders became effective June 1, 1960.

HOME WORK. The Wisconsin law provides that no owner or lessee of any factory shall send out work to be done in the home unless he has secured a permit to do so from the Industrial Commission. The permits are now issued on a yearly basis. As of June 30, 1960 there were 38 permits in effect for homework manufacture.

MINIMUM WAGE. The Minimum Wage Law provides that no employer shall pay to women and minor employes less than a living wage. Living wage is defined as a wage which will permit the employe receiving it to maintain himself under conditions consistent with his welfare; welfare is defined as reasonable comfort, physical well-being, decency and moral well-being. It applies to all women and minor employes, except legally indentured apprentices. The law makes it the duty of the Industrial Commission to determine after investigation what constitutes the living wage for women and minor employes. The commission, in carrying out this duty, adopted the first general order in 1919 and because of the changes in the cost of living has revised it at different times since. In May, 1960, following meetings with its advisory board and, after public hearings were held, the commission adopted orders revising the minimum wage rates. The rates fixed were based on the increased cost of living since the effective date of the last wage order, May 1, 1956. After the public hearings, filing and printing as required by chapter 227, the new wage orders became effective June 1, 1960.

The present order sets an hourly rate which applies to all industries, including domestic services and agriculture, with a differential based on the size of the community and the age of the minor. The minimum hourly rates in cities and villages with a population of 1,000 or more is 85¢ for women and minors, 16 years of age and over, and 75¢ for minors under 16 years of age. In cities and villages with a population of 1,000 or less, and elsewhere in the state the minimum rate is 75¢ per hour for women and minors, 16 years of age and over, and 65¢ per hour for minors under 16 years of age.

ONE DAY OF REST IN SEVEN. To relieve some employers of the hardships created by strict compliance with section 103.85, especially in cases of emergency where it was impossible to request a waiver in advance, the commission adopted order Ind 75.01 which states that twenty-four consecutive hours of rest in each calendar week shall be deemed compliance with this section. This order first became effective April 1, 1957, and is still in effect.

VIOLATIONS. During the period July 1, 1958 through June 30, 1960, inspectors in the department submitted reports showing the following violations in establishments visited. The figures below exclude inspections of establishments where no violations were found.

Child Labor

Minors employed without the required permits	1,394
Minors employed at prohibited employments	360
Minors employed in excess of the legal number of hours permitted per day	460
Minors employed in excess of the legal number of hours permitted per week	180
Minors under 18 years of age employed more than six days per week	139
Minors under 18 years of age employed outside of time of day permitted by law and special orders	253
Minors given less than legal meal period	70
Minors employed in violation of bowling alley order	75

Street Trades

Boys employed without street trades permits	100
Boys employed at prohibited employments	31

Women's Hours

Women employed in excess of the legal daily limit of hours	1,577
Women employed in excess of the weekly limit of hours	1,031
Women given less than legal meal period	182
Women employed in violation of orders for night work in factories and laundries	18

Wage Adjustments Under Minimum Wage Law

Number of persons receiving wage		736
Number of minors	543	
Number of adults	193	
Total amount of wage received		$20,948.60
Paid to minors	$12,096.85	
Paid to adults	8,851.75	

In addition to the wage adjustments shown above which resulted from field investigations an additional 310 claims for agreed wages due women and minors were collected through the Milwaukee office. The total amount collected on these claims was $9,889.74. These claims came to the attention of the commission where questions of compliance with other regulations were raised.

Inspectors' reports also showed the following miscellaneous violations:

Number of employers failing to keep adequate records		831
Number of employers engaging in home work manufacture without a home work permit		1
Number of employes in mercantile and manufacturing establishments without one day of rest in seven		85
Number of men	27	
Number of women	58	
Payment of wages not made as required by section 103.39		13

EMPLOYMENT AGENTS. Private Employment Agents are licensed under chapter 105, Wisconsin Statutes, for annual periods from July 1 of one year to June 30 of the next.

During the period from July 1, 1958 through June 30, 1960, one private employment agency was discontinued. Six new applications were received for licenses. After hearings were held, one license was granted, four were denied and one application is pending. As of July 1, 1960, eleven persons were licensed to operate private employment agencies. Ten of these agencies are located in Milwaukee and one is located in Madison.

Only five of the eleven employment agents licensed as of June 30, 1960 reported gross receipts in excess of $5,000 for the year ending June 30, 1960. One of them reported gross receipts between $5,000 and $10,000 and four of them reported gross receipts between $10,000 and $126,589.

Placements made by all licensed agencies for each of the license years were:

July 1, 1958 through June 30, 1959	6,567
July 1, 1959 through June 30, 1960	6,233

WORKMEN'S COMPENSATION DIVISION

Wisconsin has been a leader in the field of workmen's compensation since it was enacted in 1911. During the past two years over 54,000 injuries were reported and over 27 million dollars was paid out for disability benefits and medical expense. Injuries in which disability does not exceed 3 days need not be reported to the Industrial Commission, and therefore there is no record of the medical expense in such cases. Such payments are in addition to the 27 million dollars.

The maximum weekly compensation rate for temporary disability and for permanent total disability was increased from $49 to $54 in 1959, while the maximum weekly rate for permanent partial disability was increased from $37 to $40. Over 1 million employes are subject to the workmen's compensation act, and approximately 63,800 employers are subject to the act. Employers who have three or more employes are compulsorily subject while other employers may voluntarily elect to become subject. Farmers are not compulsorily subject but a small number have elected to be subject. Domestic servants also need not be covered unless the employer voluntarily elects.

Liability under the workmen's compensation act is the exclusive remedy of the employe against the employer, and it does not depend upon negligence. Those employers who are not subject to workmen's compensation may be sued at common law upon a showing of negligence resulting in injury to an employe. The Wisconsin law provides for direct payment of compensation without formality or written agreement. This assures speed in payment so that approximately 90 per cent of all first compensation checks are paid within 15 days of the

date of injury. When permanent disability results payment continues on a weekly basis for conceded disability. For many years the commission has conducted an energetic campaign to make certain that the payments of compensation are made promptly. This information has been recorded and published for the interested parties with the result that promptness in payments is the constant goal of insurance carriers.

Employers are required to report compensable injuries to the commission. Self-insured employers and insurance carriers are required to make subsequent reports as to payment. Employers make first reports on the fourth day after commencement of disability of accident or occupational disease entitling an employe to compensation. On the eleventh day a report is required showing that payment has commenced or giving the reason for not making payment. When payments are discontinued for any reason another report must be submitted, and if dispute exists a statement must be attached advising of the nature of dispute. When final payment is made it is reported to the commission and accompanied by receipt signed by the employe. Physicians' reports are required where temporary disability exceeds 3 weeks or where any permanent disability results. Reports are used as a check against each other and a follow-up system is employed to see that they are supplied promptly to the commission.

As soon as the commission receives information from any source that an employe is entitled to compensation it sends him a letter and a pamphlet containing a condensed statement and answering questions which frequently arise. The employe is informed that he may write to the commission or appear before its representative if he has further questions.

When the commission's safety department believes that injury may have been caused by a violation of a general order on safety it is investigated by a deputy of the commission. If investigation discloses that injury was due to the employer's failure to comply with a safety order or law, the employer is so advised. In such cases the employer is required to pay 15 per cent increased compensation for which insurance cannot be provided. If liability is disputed the matter is scheduled for formal hearing. Cases involving employment of minors in violation of the child labor law or at prohibited employment which entitles them to double or treble compensation are handled similarly.

"UNCONTESTED" CASES. Of the 54,000 cases reported in the last 2 years nearly 45,000 cases were found to be compensable. In over 90 per cent of these cases adjustment was reached without hearing. Many questions are adjusted through correspondence or through informal conference between the parties and the commission. The commission attempts to keep all parties fully informed as to their rights and duties, thus avoiding issues which otherwise might be raised. All cases in which adjustment is reached without formal action are termed "uncontested."

The commission adheres to its policy of not approving final settlements in "uncontested" cases. Careful inquiry is made to make certain that settlement is effected in accordance with the requirements of law. This requires careful examination by employes with good knowledge of the compensation act, court decisions, and administrative procedure. Where no formal action has been taken by the commission a case may be reopened within 6 years from the date of the last payment of compensation. The law provides for compromise settlements, which must have the approval of the commission. Unless approved they have no effect. If approved they may be reviewed within one year and confirmed or set aside. Compromise settlements are not approved except as a valid dispute is shown to exist, and that payment of less than the full claim appears to be justified.

"CONTESTED" CASES. Formal hearings are necessary in less than 10% of the cases. Hearings, in such cases, are conducted by trained law examiners, who make findings and enter orders. Their findings and orders are reviewable by the Commission, upon request of either party, as to both law and fact. The Commission's decision is reviewable by the Dane County Circuit Court and the Supreme Court on questions of law only.

From July 1, 1958, to July 1 1960, the total number of petitions for review from examiners' decisions to the commission as a body was 705. This number constitutes 31 per cent of the total number of matters decided by examiners during that period. The number of appeals is accounted for by the fact that contrary to the practice of most states no expense is involved in review by the commission. That means that in a large proportion of cases the losing party will request review. It insures that careful attention is given to all cases, and that uniformity in decision is maintained.

Original findings and orders are made by the commission's examiners following hearing. As previously noted, over one-fourth of these are reviewed by the commission as a body.

Contested cases are brought to hearing by application for adjustment of claim by either party or upon the commission's own motion. Hearings are conducted at county seats and industrial cities throughout the state, avoiding expense to parties in bringing witnesses to Madison. A complete stenographic record is made of testimony taken, although proceedings are otherwise of an informal nature.

To assist employes in presenting their claims verified reports of physicians licensed in Wisconsin may be used in lieu of oral testimony. That saves expense for claimants in producing physicians at the time of hearings. Exchange of medical reports between claimants and employers and carriers results in adjustment of many cases in which hearing would otherwise be required.

When no petition for review is filed within 20 days from the making of the order by the examiner, the order automatically becomes that of the commission as a body. Appeal may be taken to the Circuit Court of Dane County within 30 days following the commission's order upon

review. From the decision of the Circuit Court appeal lies to the Supreme Court.

COMPENSATION INSURANCE. The Industrial Commission has two duties with respect to compensation insurance: (1) it must see that employers subject to the compensation act insure their risk unless permitted to self-insure, and (2) it must pass upon applications of employers for exemption from the obligation to insure.

The duty of ascertaining that employers subject to the act insure their risk unless exempt is one involving great difficulty. The commission should have a sufficient staff so that investigation and follow-up could constantly be carried on in order to learn of employers who have failed to insure and to make certain that insurance is procured. It is roughly estimated that perhaps 5,000 employers in Wisconsin subject to the compensation act have not provided insurance, some innocently and some intentionally violating the law. The commission has in the past to a limited extent undertaken the task of canvassing employers to make certain that insurance is carried by them when subject to the act. This is a very important service, both to employers and employes. Employers who innocently violate the law have the right to know their status and to protect themselves from large awards which may be made in case of injury to employes.

The commission's work in this field is facilitated by the statutory provision that insurance companies must be members of the Wisconsin Compensation Rating Bureau and must file reports upon all compensation policies issued, canceled or terminated. This makes it possible for the commission to see that employers who have taken out policies keep insurance in force. It also makes it possible to check lists of employers to determine which of them have failed to insure. This work involves a great amount of detail in checking records of more than 63,000 employers in Wisconsin who carry compensation insurance.

The duty of determining when employers may carry their own risk under the compensation act is equally responsible. There are approximately 165 private employers, including railroads, exempted by special order of the commission from insuring payment of compensation. In 1958 and 1959 exempted private employers had an annual payroll in excess of one billion dollars.

Under the commission's Rules of Practice the state and all of its political subdivisions and all state and national banks are exempt from insurance of their liability under the compensation act, without further order of this commission.

Exempted employers may carry excess workmen's compensation insurance without requesting permission from the commission. Many self-insurers voluntarily carry such excess insurance. However, it is important to note that excess insurance must be procured from an insurance carrier licensed by the department of insurance to transact the business of workmen's compensation insurance, and that such ex-

cess coverage must be written on the basis of rates and policy form filed with and approved by the Wisconsin Compensation Rating Bureau located in Milwaukee.

Every private employer permitted to carry his own risk must file with the commission a sworn statement of assets and liabilities indicating that he is financially so situated that he can meet any claim which might reasonably arise. New statements are called for periodically for review of qualifications. In certain instances the procuring of excess insurance, the deposit of securities, the furnishing of a guaranty bond by a surety company, or the filing of a guarantee by a parent company on behalf of its subsidiary company is required to guarantee payment of compensation benefits. Self-insurers must also measure up to or exceed legal requirements as to reporting, investigating, and paying compensation claims.

Section 102.31 of our workmen's compensation act authorizes the Industrial Commission to consent to partial or divided insurance coverage by written order where the interests of the employer and employee, public or private, will not be jeopardized.

PUBLICATIONS FOR DISTRIBUTION

With the passage of Chapter 221, Laws of 1955, the Revisor of Statutes now publishes the rules of the Industrial Commission and copies of administrative rules may be purchased from the Revisor of Statutes, Room 321, N. E. Capitol, Madison.

Complete rules of the Industrial Commission, including upkeep service for one year may be obtained for the sum of $22.50, annual subscription rate for upkeep service thereafter is $5.00.

An individual code, as it is effective on a given date, without upkeep service may be obtained from the Revisor of Statutes for the sum indicated below. Upkeep service for one year on any single code equals the sale price.

Following are the codes available from the Revisor of Statutes, Room 321, N. E., Capitol:

Ch 1	Safety	$ .50
Ch 2	Quarries and Pits	.50
Ch 3	Mines	.50
Ch 4	Elevator	1.00
Ch 5	Explosives	.50
Ch 6	Trench, Excavation and Tunnel Construction	.50
Ch 7	Cleaning and Dyeing	.50
Ch 8	Flammable Liquids	.50
Ch 9	Liquefied Petroleum Gases	1.00
Ch 16	Electric Fences	.50

Apprenticeship Manual

EMPLOYMENT

The following publications are available upon request to interested persons through your nearest WSES office. Those preceded by an asterisk are available for reference only.

GENERAL

***Biennial Report**—Prepared in accordance with state law requiring a review of activities carried on by the agency. Useful to management and worker representatives, schools and libraries as reference text.

Directory—A directory listing the city, address and geographic area served by each of the 26 district WSES offices. Useful to personnel officers, employers, workers, schools, libraries, and community and state level organizations.

Your Public Employment Service—A pamphlet outlining the WSES six-point program. Lists services available through WSES offices. General, good background information on WSES functions and activities.

PROFESSIONAL PLACEMENT

***Professional & Managerial Personnel Register**—A partial listing of applicants qualified for aid seeking work in professional, managerial and technical fields. Published bi-weekly, current distribution approximately 1,800 employers. Useful to hiring officials in locating specialized personnel.

A Placement Service For Executives, Managers And Professional People—A pamphlet describing to employers and applicants the professional placement service available through the WSES.

Professional Men And Women—This Is For You—A leaflet to inform applicants and employers of the expanded professional placement network by which the employment service covers the entire U.S.

VETERANS

***Employment Services For Veterans**—Annual reports for the fiscal years 1959 and 1960 covering services to veterans in Wisconsin and the various states for these periods.

***Wisconsin Job Register**—Published monthly by veterans' employment service and distributed to county service officers, veterans' organizations, and other agencies throughout the state. Lists federal, state, city of Madison, and county of Milwaukee civil service job openings and selected job openings in private industry.

YOUTH

Here's How To Land That Job—A leaflet reviewing "Do's and Don'ts" of job-seeking, designed especially for new entrants or re-entrants into the labor market.

Job Tips For Teenagers—A leaflet containing suggestions on how to get and keep a job, includes laws and regulations pertaining to employment of minors.

Road To The Right Job—A leaflet designed primarily for new entrants into the labor market, especially for youth. Explains factors young people should consider in making job choice, useful to job-seeking graduates, school counselors, and parents.

Who's Going To Take Their Place? A leaflet directed to youth encouraging them to consider teaching as a career.

Memo To Employers—A leaflet containing facts about school supervised work-experience programs.

HANDICAPPED

Job Tips For The Handicapped—A leaflet containing suggestions to the handicapped on how to get and keep a job.

Build a Better America—A leaflet urging employment of the physically handicapped.

Mr. Employer—Remember Ability Counts—A leaflet containing testimonials from major employers who hire handicapped workers.

Manpower—A Key to Small Business Profit—A leaflet which urges small businesses to utilize handicapped workers.

***Program Guide—Jobs For The Handicapped**—A booklet published annually by the President's Committee on Employment of the Physically Handicapped as an action guide for employers, labor, public and private agencies at the community level.

OLDER WORKER

You Can Get That Job—A pamphlet containing suggestions to assist older workers in their job search.

Mr. Employer . . . Here's How You Can Get Better Results With Older Workers—A pamphlet containing suggestions to employers on making better use of older workers.

Mr. Businessman—Are You Cutting Yourself Off From One-Third Of Your Labor Supply—A leaflet portraying the advantages of hiring and retaining older workers in employment.

What Your Employment Service Is Doing About Older Workers—A leaflet describing services provided by the employment service to older job seekers.

MINORITY GROUPS

There Is More Manpower—A leaflet urging employment on the basis of qualifications, not influenced by age, sex, race, color, religion or unrelated physical limitations.

COMMUNITY DEVELOPMENT

***Basic Statements**—Detailed summary giving industrial pattern, economic characteristics and labor supply for a specific community and its trade area. The WSES has published and has available basic statements for 115 Wisconsin cities.

EMPLOYER SERVICES

Top Level Administrative Assistance—A booklet containing outline of personnel tools available to help solve problems of recruitment, hiring, absenteeism, turnover, useful to large and small employers interested in improving personnel processes.

Matching Job And Worker Through Aptitude Tests—A pictorial booklet describing the testing devices used by WSES to select qualified workers. Lists the type of tests available, occupations covered, and advantages of hiring test-selected workers. Useful to personnel directors, school counselors, and hiring officials.

***Reference Manual For In-Plant Manpower Planning**—A manual which describes actions that can be taken by employers to make more effective use of their workers.

***Training And Reference Manual For Job Analysis**—A Manual Designed for general use in planning and carrying out a job analysis program.

***Guide For Analyzing Jobs**—A pocket-sized workbook to help the job analyst determine the what, how, why and skills involved in a job.

***Industrial Job Evaluation Systems**—A booklet of value to personnel management staff as a guide to the basic principles of job evaluation.

***Suggestions For Control Of Turnover And Absenteeism**—A booklet which provides employers with practical methods for reduction of labor turnover and absenteeism.

***Industrial Services Handbook**—A comprehensive handbook which provides reference to major types of employer personnel problems with suggestions of remedial action which can be taken to solve specific problems.

***Employer Relations Sales Kit**—A set of visual aids designed to illustrate the various activities and operations of the Wisconsin State Employment Service. Can be used to explain specific ways by which the WSES can be of assistance to employers.

JOB AND EDUCATIONAL INFORMATION

***Directory of Wisconsin Educational Facilities**—An informational bulletin about educational and training opportunities in Wisconsin. Contains an occupational index showing where training may be secured for more than 100 fields of work, and fact sheets on colleges, vocational schools and other training institutions in the state.

***Job Guide For Young Workers**—A booklet describing entry occupations suitable for youth.

***Occupational Outlook Handbook**—A 700 page book describing, giving the employment outlook, and listing qualifications required in over 500 occupations.

***Dictionary of Occupational Titles—Volumes I and II and Supplement No. 1**—Define and classify about 24,000 jobs in United States industry, trades, services, professions, crafts and agriculture.

***Dictionary of Occupational Titles—Part IV**—Aids in classifying workers who have no work experience or who are are not fully trained for a specific job.

***Volume and Individual Job Descriptions**—Provide job information about a variety of jobs in major U.S. industries. Usable by personnel workers, counselors, and teachers concerned with selection, training and job classification.

Apprenticeship Training—An Investment In Your Future—A leaflet briefly describing occupations which are apprenticeable and how one goes about getting into apprenticeship training in Wisconsin.

***Worker Trait Requirements For 4,000 Jobs**—Provides estimates of worker trait requirements such as interest, temperament, aptitude, training time and physical capacity for a sampling of 4,000 jobs in the American economy.

LABOR MARKET INFORMATION

***Labor Market Letters**—Published bi-monthly by 18 district WSES offices and covering 18 designated labor market areas. Letters analyze employment trends, supply-demand situation, and outlook. Is mailed to production planners, government agencies, business administration instructors, banks and personnel people. Released to public information media in area. A summary of employment trends in the 18 areas is also published bi-monthly and is of value to multi-area employers, statewide associations, government agencies, economists and organized worker groups.

***Labor Force Estimates**—Released monthly to publicity media covering current estimates of total labor force, farm and nonfarm employment, and total unemployment in the State. Labor force estimates are also made for the Milwaukee, Madison, Racine and Kenosha standard metropolitan statistical areas.

Wisconsin Manpower Outlook—A series of special studies covering labor needs and training resources in selected occupations in specific Wisconsin areas. To date separate studies are available covering Racine county (1957-1962), Milwaukee county (1958-1963), Brown county (1959-1965), Marathon county (1959-1965) and Manitowoc-Calumet counties (1959-1965).

***Manpower—Challenge of The 1960's**—A booklet containing 17 charts describing the manpower outlook in the state of Wisconsin for the next decade. Provides a comparison of trends in population growth, occupational and age distribution of the work force, and industrial patterns between the state and the nation.

Highlights From Manpower Challenge of the 60's—A booklet containing charts and narrative describing the manpower outlook for the next decade on a nationwide basis.

***Manpower Resources of Price County, Wisconsin**—A mimeographed report containing tables and a narrative summary of the manpower potential of Price county as studied during the 1959-1960 period.

***La Crosse Reemployment Study**—A mimeographed report covering the social and economic effects of the closing of the Electric Auto-Lite Co. plant in La Crosse affecting more than 1,300 workers.

AGRICULTURE AND SEASONAL FOOD PROCESSING

Wisconsin's Seasonal Farm Labor Needs—A leaflet to inform seasonal agricultural workers and employers of labor needs in various crop areas. Lists type of worker needed, type of crop and peak time, and housing accommodations.

***Wisconsin Post Season Farm Labor Report**—Reports for the 1959 and 1960 agriculture seasons cover recruitment efforts made by the WSES to staff farm activities with local, migrant and foreign workers as the situation demands.

***Migratory Labor in Wisconsin Agriculture**—Reports for the 1959 and 1960 agriculture seasons cover all of the actions required by the WSES to bring into Wisconsin the migratory workers necessary to handle crop activities not taken care of by local labor.

***Labor Management on the Farm**—A booklet which provides practical suggestions to agricultural employers for the improvement of labor relations on their farms.

***Information Concerning Entry of Mexican Agricultural Workers Into The U.S.**—A comprehensive booklet outlining details of the migrant labor agreement between the U.S. and Mexico for the importation of Mexican Nationals.

For Employers of Contracted Mexican Workers—An outline of the employer's obligations when contracting Mexican National workers.

Migrant Farm Labor Information Station—A leaflet describing services and facilities available at the Wautoma, Wisconsin migrant labor information station.

Quia De Trabajos Agricolas En El Estado De Wisconsin—A leaflet in spanish describing to migrants the various seasonal agriculture jobs available in Wisconsin.

Quia De Trabajos Agricolas Desde El Gulfo A Los Grandes Lagos—A leaflet in spanish describing to migrants the various seasonal agriculture jobs available from the Gulf of Mexico to the Great Lakes.

***Motor Carrier Safety Regulations**—A booklet detailing transportation safety regulations applicable to carriers of migrant workers by motor vehicle.

To Drivers and Owners of Motor Vehicles Transporting Migratory Farm Workers—A leaflet briefly outlining federal regulations for the interstate transportation of migrant workers.

***Brochures**—Two booklets, illustrated—"The Cherry Industry in Door County" and "Your Job in the Corn Canning Industry". These booklets present a pictorial work description of jobs common to these seasonal activities. They cover field, plant, and warehouse operations and describe housing, wages, hours, and meals.

Fiyers—Three illustrated flyers giving information concerning the seasonal agricultural jobs of cherry picker, pea pitcher and pickle picker in Wisconsin.

WAGE COLLECTION

Wage Law—Payment and Collection.

WOMAN AND CHILD LABOR

Child Labor Law, 1958.

Regulations of Employment Agents in Wisconsin, 1958.

Street Trades Law. (Mimeographed 1960.)

Women's Hours of Labor Law. (Mimeographed 1960.)

Wage Regulations for Minors and Adult Women, 1960.

Special Orders Relating to Hours of Labor and Minimum Wage Rates for Women and Minor Employes in Factories Engaged in Canning or First Processing Perishable Fresh Fruits and Vegetables, Including Peas.

WORKMEN'S COMPENSATION

Workmen's Compensation Act, with 1959 Amendments.

19th, 20th, 21st, 22nd, 24th, 25th, 26th, 27th, 28th, 29th and 30th Reports on Administration of Workmen's Compensation Act.

Rules for Determining Loss of Visual Efficiency under the Wisconsin Workmen's Compensation Act, January, 1941.

Wisconsin Physical Examination Program, 1939.

Facts about Workmen's Compensation Law, 1959.

UNEMPLOYMENT COMPENSATION

Text of Wisconsin's Unemployment Compensation Act.

Wisconsin Administrative Code—Rules of the Industrial Commission on Unemployment Compensation.

Unemployment Compensation in Wisconsin, (reprints from prior Biennial Reports).

Contribution Instructions for Employers.

Instructions on Benefit Notices and Reports (UC–201).

Claiming Unemployment Benefits under Wisconsin's U. C. Law.

Wisconsin U. C. Digest, 1952 and Supplement, 1957—interpreting Wisconsin's U. C. Law. (Price $1.00; order from U. C. Dept.)

FAIR EMPLOYMENT

Fair Employment Act.

Non-discriminatory Contracts.

STATISTICAL

Checklist of periodic Workmen's Compensation statistical releases.

Prevailing wage rate law for state contract *highway* construction work—Section 103.49.

Prevailing wage rate law for state contract *highway* construction work—Section 103.50.

Other related public works laws on wage rates and hours of labor—Sections 66.293, 103.41, 103.42.

Annual certification of prevailing highway construction wage rates and truck rental rates.

Annual Child Labor and Street Trades Permits statistical reports.

DIRECTORY

General Offices—State Office Building, One W. Wilson St., Madison 2, Wisconsin; 794 N. Jefferson St., Milwaukee 2, Wisconsin

Employment Service, Administrative Office—105 S. Blair St., Madison 3, Wisconsin

Fair Employment Practices—Room 3190 Plankinton Building, 634 N. 2nd St., Milwaukee, Wisconsin

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

PAPER GIVEN BY

Harold W. Story - former Vice President

and General Attorney of Allis-Chalmers Mfg. Co.

May 9, 1961 at 9:20 A.M.

Wisconsin Center Building

IMPRESSIONS OF THE ADMINISTRATION AND DEVELOPMENT OF THE WISCONSIN WORKMEN'S COMPENSATION ACT

The subject assigned to me is, "Impressions of the Administration and Development of the Wisconsin Workmen's Compensation Act."

My experience in that area began with my employment in 1919 by my industrial alma mater - Allis-Chalmers Manufacturing Company.

So I will attempt to give my impressions, gathered from various sources, concerning the situation prior to 1911, which led up to the enactment of the Workmen's Compensation Act, and the highlights of the administration and development of the Act after 1919, based upon personal observations.

The Situation Before the Act

In the period of industrial activity before 1911, it appeared that bodily injury was a normal incident of manufacturing operations. Since the safety movement was in its infancy, the incidence of the disabling injury and resulting wage loss was unnecessarily extensive. Since there was no practical way for the worker to gain insurance protection, he was obliged to seek redress from the courts.

Unfortunately, the courts apparently were forced to follow what appeared to be the only available theory of employer liability, namely tort action for employer's negligence in causing the employe's injury.

But the courts allowed the employer to have the defenses of contributory negligence, the fellow servant doctrine, and assumption of risk. Able defense counsel made recovery so difficult that meager settlements were the rule. The result was a lowering of the standard of living of workers unfortunate enough to sustain industrial injury.

The situation became so socially intolerable that in the 1909 legislature Mr. Theodore W. Brazeau, an outstanding Wisconsin attorney, introduced Bill No. 189 S to establish a Workman Compensation Act. The bill did not pass but in the next legislature (1911) our revered Supreme Court Justice, E. T. Fairchild, introduced Bill 486 S which, upon passage, established our Workmen's Compensation Act.

Initially there had been the natural reluctance on the part of employers to assume the unknown cost of a new law which charged them with financial responsibility for injuries to employes which occurred without the employers fault. But once the law was in operation they assisted wholeheartedly in making the Act an instrumentality for social and economic betterment.

It is noteworthy that Wisconsin was one of the first states to pass such a law, and also that the step was taken in the face of the Act's possible unconstitutionality under the 14th Amendment to the United States Constitution.

To avoid that possibility, the acceptance of the Act by individual employers was put upon a voluntary basis - "voluntary" under the persuasion of the withdrawal of such important defenses as assumption of risk and fellow-servant doctrine. In 1917 a U. S. Supreme Court decision removed any question of constitutionality.

Participation of Various Groups in the Administration and Development of the Act

So much for events leading to the passage of the Workmen's Compensation Act. Now let's take a look at the cooperative character of its administration and the highlights of its constructive development over the past 50 years.

The statement often has been made, concerning legislation like the Workmen's Compensation Act, that the law is the skeleton and its administration the flesh and blood.

The Wisconsin Act was sound in its basic framework, and its administration by cooperating groups provided the healthy body necessary for its sturdy growth in the years to follow.

Five distinct groups, working in close cooperation, played important roles in the constructive administration and development of the Act. Those groups were:

(1) The official family of the Commission

(2) The Advisory Committee

(3) The medical profession

(4) Employer groups which created and applied safety programs

(5) Executives of employers and insurance companies throughout the state who lent their support to the Commission and their representatives on the Advisory Committee and in the Wisconsin Manufacturers Association in the application and development of the Act.

The Official Family of the Commission

The official family of the Commission comprises:

(1) The commissioners (3)

(2) The Director of Workmen's Compensation

(3) The Secretary

(4) The hearing examiners.

Necessarily the Commissioners had the most important function of the family because their attitudes and decisions established the tone and direction of the administration of the Act.

As Commissioners they should

(1) Establish the general administrative procedures for the agency;

(2) Apply the Act in the legal aspects in order to effectuate legislative intent;

(3) Establish a philosophy of administration which is a combination of humanitarian fairness and judicial correctness.

They should have the quality of leadership which convinces the Advisory Committee of the soundness of their views on (1) proposed legislative changes in the Act and (2) any difficult problem which affects the employer and employe.

They should have a Dale Carnegie "selling" approach to all cooperating groups.

They should have the intellectual integrity so vitally necessary to administrative leadership.

They should be able to communicate to their hearing examiners the philosophy of humanitarian fairness and judicial correctness because the examiners, by their decisions, actually make the factual determinations which form the basis for cash awards.

The Commissioners have met the above exacting requirements over the years. And the hearing examiners as a group have performed splendidly in carrying out their difficult task[3]. As a matter of fact their integrity and efficiency has been so generally recognized that not infrequently defense counsel have requested the examiner to conduct a hearing in his absence.

The Wisconsin Act and its administration have gained the respect and admiration of the nation. For this, great credit is due the members of the official family of the Commission who have given dedicated service. Among those the following names readily come to mind:

Commissioners

J. D. Beck, Charles H. Crownhart, John R. Commons, Fred M. Wilcox, George Hambrecht, R. G. Knutson, L. A. Tarrell, and Voyta Wrabetz (whose splendid service for many years was a powerful guiding influence);

Secretaries

Arthur J. Altmeyer and Edwin E. Witte;

Director of Compensation

Harry Nelson

Hearing Examiners

Alfred Flint, Gust P. Hof, Joseph I. Martin, Frank T. McCormick, Earle H. Pottinger and Levi B. Retelle

The Advisory Committee

The second participating group is the Advisory Committee of the Commission established in 1920. Its membership comprises (a) the Commissioners (3) (b) Employers

representatives (5) (c) Employe representatives (5) (d) Insurance company representatives (3) (advisory without vote) and (e) a legal advisor - an Assistant General Attorney.

The work of this group has shaped the development of the Act over the years. Important questions of administration and policy have been referred to it by the Commission for discussion and recommendation. But its major function has been to consider and recommend legislative changes in the Act usually in the form of benefit liberalization of some kind.

In a sense the Advisory Committee functions like a labor negotiating group. Employer and employee representatives made suggestions and counter suggestions; the Commission acts as an aggressive mediator; and the insurance representatives furnish the valuable technical and practical advice based on their experience in the insurance phase of the Act.

The recommendations presented to the legislature are in the form of proposed "agreed" bills. This procedure has produced sound legislative changes in the Act with a minimum of time expended by important committees of the legislation.

My recollection brings back the impression of congenial association with members of the Advisory Committee particularly those who functioned in the early stages of the Act. They were fine men capable of discussing with objectivity, difficult problems to the point of agreement. So, it is a pleasure to give credit to the following individuals who have given dedicated service on the Committee for many years.

<u>Employer representatives included:</u>

Fred M. Clausen (Deere & Co.), Colonel H. J. Mellum (Nash Motors), William E. Brown and B. A. Krawczyk (Allis-Chalmers), George F. Kull and his successor, Robert Ewens (Executive Director of the Wisconsin Manufacturers Association).

<u>Employe representatives included the following prominent union officials:</u>

J. F. Friedrick, Henry Ohl, Jr., John Handley, Fred E. Gastrow and George Haberman.

Insurance representatives included:

Ben Kuechle, one of the original members of the Committee; and

Legal Advisor:

Mortimer J. Levitan (who did yeoman service)

Medical Profession

The third cooperating group comprises members of the medical profession who specialized in cases covered by the Act. They constitute the backbone of the administration of the Act.

Their opinions determined (1) the length of temporary disability and (2) the percentage of permanent and partial disability; in other words, the amount of money to which a claimant is entitled for a given injury.

Their professional skill and experience have determined the existence of occupational disease, such as silicosis and loss of hearing, and its cure and suggestion for its prevention.

The group has a tremendous record for accuracy and professional integrity in rendering their decisions. A few doctors did not attain that level. With keen perception this Commission made short shrift of them.

With apologies for omissions, I wish to pay tribute to doctors who I recollect as outstanding in the group. They include:

Dr. Meyer Fox (Otologist)
Dr. Alfred Gray (silicosis)
Dr. Elston L. Belknap (Lead poisoning)
Dr. Herman C. Schumm (Orthopedic)
Dr. Frederick J. Gaenslen (Orthopedic)
Dr. Chester C. Schneider (Orthopedic)
Dr. Claude Beebe (Eye)
Dr. William E. Grove (Ear)
Dr. Thomas L. Tolan (Ear)
Dr. Wilbur Le Cron (General surgery)
Dr. Andrew J. Weber (General surgery)
Dr. John L. Garvey (Neurology)
Dr. C. C. Messmer (Eye)

Those of us who have retained doctors as consultants and witnesses in compensation cases are deeply grateful for the quality of their service.

Safety Groups

The fourth cooperating group comprised the individuals representing employers, insurance companies and other organizations dedicated to promoting safety in industry in Wisconsin.

The Act was the father of the extensive safety movement in Wisconsin. It added to the stimulus of humanitarian concern, the stimulus of self-interest in preventing pecunary loss through the payment of compensation for preventable injuries and loss of the valuable services of employes. They formed a potent combination.

Under the guiding influence of the Commission in setting up safety standards, this group created and promoted intensive safety programs for their employers and clients and for such organizations as the Wisconsin Safety Council with its 33 chapters.

The Wisconsin Manufacturers Association and the insurance groups made important contributions to the safety movement.

The Supporting Groups

The fifth group comprises executives of employer and insurance companies who have given strong support to the sound administration and development of the Act.

Directly and through their representatives functioning in cooperating groups they have given wholeheartedly their moral and financial support. I am sure that the official family of the Commission would be the first to acknowledge the significance of the contribution of this group.

Typical of this large group of farseeing industrialists who gave powerful support to the constructive administration and development of the Act were men like General Otto H. Falk, F. J. Sensenbrenner, D. Clark Everest, Harold S. Falk, and Joseph Conway.

Milestones of the Act

Now let's take a loot at a few of the important milestones in the operation and development of the Act.

In a way each session of the legislature provided a milestone in the pattern of development of the Act. But there are three milestones which made a lasting impression on me, namely the occupational disease amendment in 1919 and the resulting problem of silicosis and of loss of hearing due to continual exposure to noise.

The Silicosis Problem

When our company was confronted in 1930 with the possibility of large compensation payments because of silicosis, quick action was taken to determine the true potential of liability and to work out preventive measures to eliminate the hazard.

The best available medical advice was obtained to determine the dust concentration which could produce silicosis. (Dr. Alfred Gray gave invaluable assistance.) In our foundry - an obvious dust hazard - an intensive treatment of vacuum cleaning of walls, windows, and metal girders was carried out. Then all dust-catching surfaces were covered with a smooth surface aluminum paint.

Testing techniques were used to determine dust count in the air in all dusty areas. Changes in manufacturing operations were made wherever possible to eliminate dust hazards.

Safety devices such as respirators were supplied when the dust hazard could not be eliminated immediately.

A system of X-Ray examinations was installed to determine the presence of silicosis so that transfer and treatment could be provided.

As a result of the intensive safety program, silicosis is no longer a serious threat.

This experience demonstrated that an intensive program of prevention can and will be effective whenever a new occupational disease problem arises.

Loss of Hearing Due to Noise

Our next big problem of occupational disease was loss of hearing due to continual exposure to noise over a period.

Thanks to Drs. T. L. Tolan and W. E. Grove, Allis-Chalmers was ready for the situation which resulted from the decision in the Green Bay Drop Forge case in 1952. Here is the sequence.

In 1948, Drs. Tolan and Grove approached Allis-Chalmers with the request to work with them in connection with research being conducted by Dr. Grove and the AAOO on noise - its measurement and effect on hearing.

The research later disclosed that noise caused loss of hearing first in the higher pitches and later in the lower pitches involved in the conversational area of communication.

In 1950 a safety program was created whereby noise was abated in areas of hazard and pre-employment audio-metric examinations made.

In June 1952 an intensive program had been worked out covering (1) retesting all locations producing noise hazards (2) abatement of dangerous noise where possible (3) an examination of employes in noisy areas and transfer, if necessary, (4) pre-employment audio-metric examinations and (5) use of hearing devices where noise could not be abated.

In August 1952 a meeting of interested groups was called by the Wisconsin Manufacturers Association at which the Allis-Chalmers program was explained (by Mr. M. F. Biancardi) and scientific data obtained from the AAOO. All of the data provided by the AAOO assisted in changing the Act to a more realistic basis.

Once again the "cooperating groups" worked out a sound solution of a new occupational disease.

The New Frontier

The trend seems rather clearly outlined of an intention to charge to the employer as occupational diseases bodily ailments which in the past did not

seem to have any causal relationship with the employment.

The underlying thought seems to be to transform the Act into a kind of health insurance vehicle. This would be accomplished through the simple device of creating a legal presumption of causal relationship where evidence of such relationship cannot be medically proved.

The unfairness of the procedure is obvious. There is a sound sociological and humanitarian basis for the assertion that industry should, under the Act, bear the expense provable occupational disease but should not be expected to provide health insurance benefits in accordance with the benefit provisions of the Act.

The Medical profession has the key to the prevention of such unfairness under this Act.

Proof of Soundness of Wisconsin Act and its Administration

In a comprehensive article in the May 4 issue of The Wall Street Journal concerning Workmen's Compensation Acts, there appeared the following adverse comments concerning various state acts:

(1) High cost due to large awards for slight disfigurement without potential wage loss;

(2) High cost due to dishonesty of doctors in fostering malingering;

(3) Cutting off benefits for the totally disabled after a relatively short period;

(4) Low weekly benefit rates (1961 "Agreed" bill provides for a $60.00 rate);

(5) Failure to balance major schedules with comprehensive rehabilitation programs (as in Ontario); and

(6) Transforming a "compensation" act into a health insurance plan by granting benefits where no causal relationship exists between the condition of the claimant and his employment.

When I finished this article I suddenly realized that not one of the above criticisms applies to our Act or its administration.

The answer to this question "How Come?" is obvious. It is the intellectually honest administration and far-seeing development of our Act over the years under the combined influence of the five cooperating groups.

Conclusion

The Wisconsin Compensation Act has been a vitally important social and economic force for the past 50 years.

By and large it has been honestly and capably administered and developed because of the outstanding character of the Commission and its staff which has stimulated the effective participation of the other cooperating groups.

An essential factor in this result is the continuity of tenure of key men without interruption through partisan politics.

Let us hope that the next 50 years will repeat the record of non-partisan statesmanlike achievement of the past half century.

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Paper Given by

Carl N. Jacobs, Chairman of the Board

Hardware Mutuals

On May 9, 1961, at 9:20 A. M.

Wisconsin Center Building

Workmen's Compensation - An Evolving Concept

Implementing the Workmen's Compensation Law

For Small Business Concerns

Forty-seven years ago we used a new idea -- workmen's compensation -- as springboard to a new company.

Today it is known as Hardware Mutual Casualty Company.

But, had there been 400 Wisconsin hardware stores who wished to purchase workmen's compensation insurance in 1914, Hardware Mutuals might well be a small trade mutual today. Instead its premiums were $104,000,000 last year.

Three years after the 1911 Workmen's Compensation law became effective in Wisconsin, I was working for the Hardware Dealers Mutual Fire Insurance Company. The firm was an adolescent of 11 years, protecting hardware stores against fire loss and selling less than $170,000 in premiums annually. My father was secretary of that small firm.

Several substantial hardware stores said to us, "Why can't we protect ourselves -- and our employes -- with this new workmen's compensation insurance?" The answer, of course, was that the law forbade writing that coverage in the fire company.

Which left one alternative: Start another company to give those hardware stores this protection. The customer was far different from what you see today. A hardware store in 1914 was a dark, dusty, grimy catch-all for several trades. Out front on the sidewalk was an obstacle course of plows, rolls of wire and farm tools. In the loft you found a tinshop where utensils were repaired or roofing materials prepared. The shop itself was walled by shelves reaching to the ceiling with ladders hooked to rails for clerks to climb.

My first job in this company yet unborn was as underwriter and sales manager. We needed 400 applications for insurance to qualify for a license in Wisconsin. On the road went five salesmen, armed with only our fire company's record of paying 50% dividends since 1908.

Along with the signed application from the hardware store owner, we would get a sight draft for the premium. But we ran out of hardware stores before 400 risks were signed up.

It was then we went outside the hardware store business for the first time. Main street business -- the drug store, dry goods store, grocery store -- was our target. Our fire company's 50% dividend record impressed these businessmen too.

On August 13, 1914, sight drafts for $18,000 were deposited in the bank. Two days later we had a license to do business.

We began as specialists in the small company field. But small business casualty selling -- and service -- was a problem unto itself.

For instance -- the handling and recording of workmen's compensation claims in the small business office in those days was an orphaned task. "Let Joe do it," seemed to be the 1914 attitude. And "Joe" was usually too busy selling a cross saw or working as a tinsmith.

An injured employe would be sent to the doctor. The store owner expected the doctor to report the claim; the physician felt it the owner's responsibility. Often a month would pass before we even heard of the injury.

We have had 47 years of hard sell convincing the small businessman to report a claim immediately following the accident. But we have succeeded. Today we take pride in being high on the list in the recording of prompt payment of W. C. claims.

Prompt reporting of claims was but one of the trials in servicing small business. Accident prevention was another. In 1914 the hardware store employe was target for a multitude of injuries because of the service work performed. He might work as a tinsmith, subject to serious cuts. Or he might be climbing about on a 30 degree slope, roofing a factory.

His job description was ambiguous, to say the least.

How them to arrive at the correct job classification? The employe might clerk for an hour, then go upstairs to solder a teakettle and finally jump on a bicycle to deliver it to the customer.

As underwriting and sales manager, it was my job to figure out how to classify the work, then show the salesmen how to do it in each store. They would work with the employer figuring out the time each employe spent at each type of work.

With the resulting percentage figures, we could arrive at a premium.

Simple loss prevention devices -- such as safety glasses, machine guards, safety shoes and proper handling of materials -- were not in general small business use then. The small firm owner had not been taught the value of keeping his employe on the job by protecting him against occupational injury. So we had two selling jobs: First the policy, then the on-the-job protections.

Through the years the employer and employe, working with the insurance companies and National Safety Council, have made splendid progress in the use of these items for accident prevention.

In fact, an even greater progress has been made by employers and by the insurance companies: We have changed the entire concept of workmen's compensation. In the beginning it was designed to compensate an injured worker for lost time. Now there is a constructive philosophy. All efforts are aimed at rehabilitating the workman, returning him quickly to his job and his family.

On August 22, 1914 -- nine days after we had deposited the $18,000 in sight drafts at the bank -- claim No. 1 arrived at our office. A young man employed by the J. J. Koepsell Hardware Company, Sheboygan, Wisconsin, had suffered a severe hand cut. We did not threaten our surplus by paying the $4.50 medical claim.

But a few months later a near disaster! The telegram from Ashland, Wisconsin, read: "Man employed Dopp and Watson fell off roof. Skull fractured. Dead. Lived 30 minutes. Is inquest necessary?"

The only inquest necessary, we felt, would be the one concerning the death of a small casualty company in Stevens Point, Wisconsin: Hardware Mutuals.

The stipulated death benefit was $3600. At that moment our surplus was $2,811.05. Although assets totaled $12,549.26, we had to charge reserves against this.

Paying the full $3600 and staying in business, too, was a juggler's trick. We searched for answers and hit on the idea of buying an annuity policy based on the present value of the award, which was around $2700. Therefore, the liability could be satisfied at a current cost of around $2700 to the company.

Having a momentary $100 surplus wasn't exactly confidence building, but we were still in business.

Although the Workmen's Compensation law in Wisconsin was effective May 3, 1911, it was elective. This made it possible for us to select a date like September 1 to have policies effective because in the main we sold risks not previously insured. However, this created a problem for us in those early days. Writing, renewing and auditing policies in August, September, and Ocotber, our office force was about as busy as Christmas season in a department store.

But they rose to the occasion -- all three of us.

Our 33-1/3% dividend, dramatizing the redundancy of rates, was, again, our best sales aid. Today that dividend has been reduced to 15% for large W. C. risks and to 5% for risks with premiums of less than $250.

Bookkeeping in the small business was another stumbling block in servicing workmen's compensation risks. Our auditor would go into the shop on a payroll audit. The owner or manager would say he had no records. Perhaps if we were lucky there would be check stubs. But more often he would tell us that he just paid his people out of the till every Saturday night.

Fortunately -- or unfortunately -- passage of the federal income tax law in 1913, after several years forced the shopkeeper to systemize his record keeping and eased our auditing problems.

One name in the insurance industry recurs, and I wish to give him the credit due. The late Walter G. Cowles, Vice President, Travelers, deserves his recognition as the "Grand Old Man" in Workmen's Compensation insurance.

He saw the hodge podge that was being created. Each insurance firm had its own policy with separate endorsement pages. Standardization was lacking, making it difficult for the policy holders -- or the companies -- to compare protection, exclusions, and rates.

Mr. Cowles put all companies writing workmen's compensation on his mailing list. As a state accepted his policy, he had a copy sent to each of us. He was providing a service later performed by the bureaus.

For a small firm like ours, just beginning to seek business in new states, Mr. Cowles did a great favor.

Like Topsy, our Casualty Company grew -- largely because Workmen's Compensation was helping it grow. With this entry into small business firms, we could look around for more of their business to write. In the beginning we insured many teams against liability. Soon we were even brave enough to chase a little horseless carriage business.

Gradually the collateral business outweighed the workmen's compensation premiums in our risks. Individual auto, fire, business interruption, general liability and other protections were easier to sell after we had given good service and dividend payments to the workmen's compensation insured. Today workmen's compensation, with a $16-million premium volume, represents only 15% of the business done by Hardware Mutuals.

For 38 years -- until Mississippi in 1949 became the last state to enact a Workmen's Compensation law -- we could depend on expanding our casualty business in any state where workmen's compensation became a compulsory coverage.

We noticed in 1931, when the coverage became compulsory by law in Wisconsin, that the small-businessman took a renewed interest in our offerings. No longer did we have to sell him on the "need" and "social value" of this insurance.

I do know this: The trials of starting a Casualty Company to sell that new insurance back in 1914 will never be forgotten. The 400 original policies have now grown to approximately 38,000 Workmen's Compensation policyholders.

Indeed, Hardware Mutuals has become a big company in a large part because we specialized in writing workmen's compensation insurance for small companies.

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Paper Given by

George F. Reall, General Manager

National Council on Compensation Insurance

On May 9, 1961, at 1:30 P. M.

Wisconsin Center Building

Workmen's Compensation - An Evolving Concept

Benefits, Coverages and Costs -

Role of the National Council on Compensation Insurance

The National Council on Compensation Insurance is a voluntary, non-profit, unincorporated association of insurers. As set forth in its Constitution, the objects of the Council, to the extent permitted by law, are to collect and analyze statistical and other data for the purpose of developing classifications of risks, rules, rates, rating plans, and policy forms, all with respect to workmen's compensation and employers' liability insurance. Such is the functional purpose underlying the creation of my organization.

But there are other objectives set forth which relate to the manner in which such purposes are to be carried out, and in the last analysis the most important of these is the following: "To contribute to the public welfare by helping to achieve a high degree of success in the attainment of the social aims and advantages of the workmen's compensation system." Since the symposium at which this paper is presented is very much in the nature of an assessment of the various efforts which have given us the workmen's compensation system in the condition in which it exists today, it would seem appropriate in this case to review what a national rating organization such as the Council has done, particularly in the light of its avowed purpose to contribute to the public welfare.

The topic to which this paper must be responsive is "Benifits, Coverages, and Costs". Due to the basic limitation upon our activities as suggested in the previous paragraph, the National Council is not qualified to address itself to what are perhaps the most popular considerations suggested by the terms "benefits" and "coverages". We have no standing to comment critically on the quantity and quality of the benefits provided the injured workman under the laws of the various states. In this area our only interest is assessing any changes made in the benefit provisions of the workmen's compensation law in terms of premium effect. More will be said about this below. "Coverage" is used usually in the sense of the number of employees within the application of workmen's compensation laws, and the extent to which they are so subject. Once again, this is an area which is outside of the scope of our activities and concern. However, since part of our responsibilities is the development of policy forms and endorsements, and development of programs of insurance with respect to employers' liability, we consequently are directly concerned with coverage, but from the standpoint primarily of the employer's obligation arising from the employer-employee relationship. With respect to "costs" we should be, and we feel we are, qualified to review the programs which have been developed and the problems encountered, in our major role of ratemakers for workmen's compensation insurance.

Benefits

One of the most important activities of the National Council is the analyzing of new legislation affecting the workmen's compensation benefits provided under the laws of the several states. The work done

in this area has important consequences both before and after the enactment of benefit legislation. While a particular bill is pending, or possibly before it is introduced, there may be several requests in any one state addressed to the council for the impact of the contemplated benefit changes upon rates. Such a request may be addressed to us by an association of employers, a trade union representative, or by a member of the legislature. It should be made clear at this point that the Council does not of its own motion promulgate any preliminary estimate of legislation. In other words, it maintains a detached attitude and acts as a source of helpful information on the impact of benefit change only when such information is requested from it by any party having an apparent legitimate concern with the legislation involved.

The problems we face in valuing law amendments and the solutions of these problems are felt immediately after legislation has been enacted. This flows from the fact that as of the date the legislation becomes effective an appropriate adjustment in rates is filed with Insurance Commissioner or other supervisory authority of the state concerned. Unlike filings made on the basis of loss experience which has been incurred over a period of time, here we are faced by an adjustment made necessary by the sudden change in the benefit structure underlying the loss experience.

All this accents, then, that it is most necessary for a rating organization such as the National Council to attack the problem of benefit valuation scientifically with utmost objectivity.

A prequisite to an effective evaluation of legislative proposals affecting benefits is a clear understanding of the literal significance of the legislation and the purposes sought to be accomplished thereby. It requires a great deal of painstaking and intelligent effort to identify the extent of the changes which are being introduced. The benefit provisions of most laws have a high degree of interrelation, and a thorough study of each proposal is essential to be certain that the complete effect of the legislation is measured. The job is often complicated by the fact that many requests for valuations are in terms of several alternative proposals.

Simply stated, the valuation process is as follows: First a listing is made of all types of injury including various degrees of dismemberment, and loss of use of limbs, death cases subdivided according to conditions of dependency, etc., with the relative frequency of each type. Each type of injury is then assigned a monetary value based on the existing schedule of benefits, and the values are totaled. In another column revised values are assigned based upon the proposed legislation, and a total is made. A comparison of these two totals will provide the indicated change in costs. Actually, this cost comparison is made separately for benefit changes affecting each classification of loss used in ratemaking statistics, namely, Death, Permanent Total, Major, Minor, Temporary and Medical. The over-all change is then determined by weighting according to the distribution of losses in the particular state whose law is being analyzed. Thus, if death losses in the state constitute 2% of the total, a 40% increase in death benefits will contain only 0.8% (40% x 2%) of the over-all increase.

A reliable frequency distribution of injuries by type, in sufficient detail so as to be responsive to the classification of injuries commonly found in workmen's compensation laws, is essential to the above valuation. Such a

table is the Workmen's Compensation Injury Table based upon data collected from the Council's member companies and compiled in cooperation with the National Association of Insurance Commissioners.

Many factors must be kept in mind when calculating law amendment valuations. For instance, where legislation being appraised involves an increase in the maximum weekly compensation award, it is necessary to take into consideration the fact that not all benefits payable to injured workmen are affected for some employees may not have been earning sufficient wage to entitle them to the old maximum weekly benefit. A wage distribution table, also developed in cooperation with the National Association of Insurance Commissioners, is a necessary tool for calculating the extent to which the effect of a proposed increase in weekly award is influenced by the statutory limitations on minimum and maximum weekly benefits.

The important points to note are that the benefit evaluation procedures are standard from state to state, and that they involve a minimum of subjective treatment on the part of the rating organization. This is reassuring to people interested in receiving a prompt and fair assessment of the cost of their benefit program. Selfishly, it is also of vital interest to the Council because of the problem of administration, including the necessity of introducing premium adjustments as of the effective date of the benefit change. For example, in 1959 there were 1,700 separate legislative proposals which were reviewed to ascertain if they affected compensation costs. Approximately 280 valuations were actually made to determine the affect of changes in benefits upon workmen's compensation rates. It is important, therefore, in the interest of all concerned, that there be available an efficient valuation program.

Coverage

Workmen's compensation benefits are prescribed by state law and cannot generally be amended by action of the employer of his insurance carrier. Thus, it would seem that the problem of seeing to it that the employer was fully covered with respect to his obligations under the law would be a simple one. But the proper insurance coverage of the total responsibilities of the employer in connection with injuries to his employees is considerably more involved. In the first place, business today is decidedly more interstate in character than it was many years ago with much wider use of transportation and communication facilities. Many small operations have salesmen ranging into adjoining states, to note one very common business condition today. It becomes most important therefore, that the insurance company be prepared to offer coverage co-extensive with the job-injury exposure of the employer. This is also, to no less degree, of vital interest to the employee himself. Through the workmen's compensation policy which is in common use across the country today, the task of performing this service is made materially easier than it was some years ago. The policy states that it covers the entire obligation of the employer under the workmen's compensation law of any state listed on the face of the policy. This is an unqualified engagement. Of course, purchasing insurance cannot relieve the employer from the necessity of complying with any administrative rules of the industrial commissions or other supervisory authorities in a state where he is subject to the workmen's compensation law. But from an insurance standpoint the mere entry on the policy of

the states where operations are to be conducted secures the payment of workmen's compensation benefits to injured employees as required by law.

The coverage afforded the employer does not stop at his obligations under one or more workmen's compensation laws but also extends to common-law suits brought by employees of the insured based upon job-connected injuries. Furthermore the policy does not undertake merely to indemnify after judgment rendered, but provides legal services in the handling and defense of claims against the insured as well.

It may be asked why the so-called employers' liability coverage is important, at least where the operations insured by the policy are within the scope of workmen's compensation law. A quick answer would be, it costs nothing extra unless, of course, higher limits of coverage are requested by the insured. A more scholarly response would be to indicate just a few of the areas in respect of which the employer could have an employers' liability exposure. For example, in any state having a waterfront or navigable river exposure there is always a possibility that an employee regularly employed in an operation which is clearly subject to the state law might, nevertheless, be injured under such circumstances as would bring him within the application of maritime law.

Another opportunity for the occurrence of an employers' liability claim is an injury arising in a state where there is no workmen's compensation coverage, and the employee is deemed to have the right to bring a common-law action. Another example is found in the so-called "action-over" case where the injured employee sues a third party alleging that the latter's negligence has led to the injury. The third party might implead or otherwise involve the employer in the suit on the grounds that the latter has been the one whose negligence was "primary" or "active". In some jurisdictions, this type of suit has been held not to be barred by the exclusive remedy provisions of the compensation law. On a slightly different theory, a similar type of action-over has become quite common in areas subject to the application of the United States Longshoremen's and Harbor Workers' Act.

The foregoing represents a few known opportunities for employers' liability suits which helps to explain why this coverage is included in the Standard Workmen's Compensation and Employers' Liability Policy.

There have been other programs calculated to give more complete coverage to both employer and employee. In most states it is possible to purchase Voluntary Compensation Insurance which offers the benefits of a named workmen's compensation law to employees who are not within the coverage of the law. Another instrument of coverage worthy of note is the All States Endorsement. Briefly, if the insured incurs an unanticipated workmen's compensation obligation in a jurisdiction not otherwise included in the policy coverage, the All States Endorsement engages to reimburse him for all compensation and other benefits required of him under the particular workmen's compensation law. The endorsement clearly advised the insured that it does not constitute workmen's compensation insurance as required under the law of the state, such advice being predicated on the fact that proper filings with administrative tribunals could not be made under the

circumstances. It further requires that the insured give notice to the company before or within a reasonable time after the commencement of operations in the state concerned, although the failure to give notice does not invalidate the coverage afforded by the endorsement. Once again, this instrument is offered to afford as much possible protection to the employer and employee in cases where there is an unforeseen compensation liability.

The foregoing is not exhaustive but is calculated to show the scope and complexity of the need for coverage by both employer and employee and the manner in which the insurance industry has responded to it.

Before leaving the subject of coverage a few words might be devoted to the National Council's role in the administration of assigned risk plans throughout the country. The Council, through its local administrative bureaus, operates programs in some 23 jurisdictions whereby employers unable to secure insurance through normal channels may secure coverage with a minimum of delay for their obligations under the workmen's compensation law. In actual practice the employer is "assigned" to one of the insurance carriers operating in the State. Incidentally, the choice of the word "risk" in the description of these plans might not be a fortunate one in that the term is commonly interpreted to mean "hazard". Actually, the word here refers to an insured, or applicant for insurance, and it is common in the parlance of our industry in referring to the number of "risks" in a state to mean the number of "insureds". The point is that an employer may be insured via the assigned risk plan for reasons other than a bad loss experience or a severe loss potential. It is possible for example, that the applicant's operations are located in a remote area which makes it unattractive from an underwriting point of view. It is possible that there is a tightening of the market due to a temporary rate inadequacy in the insured's occupational classification. In any event, the assigned risk plans represent an example of a competitive industry demonstrating a high degree of responsibility in solving a problem affected with a public interest.

Costs

As a national statistical and ratemaking organization the National Council has a considerable influence on the cost to the policyholder of the insurance of his obligations under the workmen's compensation law. In some 25 jurisdictions the Council makes and files workmen's compensation and employers' liability rates for the approval of supervisory authorities. In many other states it is qualified as an advisory organization and as such assists, in varying degrees, the individual companies either directly or through separate rating organizations in the development of rates and rate-making principles.

Under the circumstances one might expect that the Council would spend a considerable amount of time and effort in doing nothing more than preparing and presenting its proposals, and addressing itself to questions arising in connection therewith. This is indeed true. As a matter of fact in the states where the Council files rates on behalf of its member companies it does so on an annual basis. Every letter transmitting our proposals carries an offer to provide on-the-scene assistance in explaining anything that is not clear to the reviewing official. In addition, many conferences

are held with trade association representatives such as local manufacturers' associations, associated industries, and contractors' associations. Naturally, we have our differences of opinion' but in most instances at least, they are not so major as to create in anyone's mind a serious doubt of the proposals complying fully with the standards of the state rating law.

As to the Council's role in determining the cost of workmen's compensation insurance, I think it would be appropriate to discuss it in three stages. The first relates to the determination of how much premium will be necessary for the state as a whole to meet the losses which are expected to be incurred for the period during which the new premium level is to be applicable. The second has to do with the apportionment, or distribution, of the over-all premium among employers according to the hazards of the occupations which are the subject of insurance. The third stage relates to the further refinement of the premium otherwise charged to the policyholder after an analysis of the relative cost of handling his insurance, and an analysis of his own loss experience.

The determination of a premium for the state as a whole which is adequate to meet expected losses and expenses is actually accomplished by calculating the indicated increase, or decrease, in the existing level of manual rates. Workmen's compensation premium is itself derived from the application of so-called "manual rates" to payrolls in $100 units. Simply stated, tha actuarial technique employed is to determine the ration of the losses incurred during the experience period being used, to the premium produced by applying the current rates to payrolls developed during such period. This loss ratio is compared to the so-called "expected" or "permissible" loss ratio which is geared to produce necessary expenses, including state taxes (not federal income taxes, however) and a modest margin for profit and contingencies. By division of these two loss ratios an over-all percentage adjustment, either upwards or downwards, of every workmen's compensation manual rate in the particular state is determined. The process is simple and at one time was deemed completely adequate in the adjusting of manual rates. More will be said about this later. However, there are one or two points which should be noted in connection with the determination of this indicated change in rate level.

In the first place, in order to derive the required payrolls and other statistical information for this calculation, there must be in force an effective program of maintaining and submitting statistics which must be applicable to all companies whose data are being used. The Council's Unit Statistical Plan is such a program. It requires the reporting of the payrolls, premiums, rates, and losses developed during the term of each and every policy issued by the insurance carriers. Furthermore, such data must be reported for each state (since the rates are based exclusively on a state's own experience) and for each and every classification of occupation which is involved in the insured's business operations. Except for certain policies of very small size, such experience is reported on a yearly basis. This produces what we call "policy year" statistics. For greater accuracy of the data it is required that all losses be valued as of six months following the end of the policy term, thus giving a maturity to the claims which have arisen. Also, for each of two additional years any case which has not been finally determined as to cost must be the subject of a later report.

In the second place, since our objective is to make the rate level adjustment in terms of today's conditions, the policy year data are brought up-to-date both on the premium and loss side of the loss ratio. To do this, payrolls are extended by current manual rates, which are not necessarily those underlying the development of the premium for some of the policies included in the statistics being used. Thus, full effect is given to past rate increases, or decreases, which might not otherwise be completely reflected in the data being used. In the same fashion, all losses are adjusted to reflect the benefit provisions of the present state workmen's compensation law.

A problem in connection with policy year statistics arises because of the inescapable lag between availability of the experience and the date upon which it is proposed to introduce an adjustment in the rate level. Take policies written in the year 1959, for example. The last such policy will expire as late as December 31, 1960. Given a requirement of six months delay before the incurred losses on that particular policy are determined, and allowing necessary time for putting the statistics together in proper form for a rate filing, the earliest feasible effective date for rates based upon the statistical data for this year is approximately January 1,1962. This lag gave rise to criticism that, particularly in a fast moving economy, rate proposals were unrealistic and unreasonable, The usual attack came in the form of a claim that, since wages were on the upgrade, appreciable increments of premium were redounding to the benefit of the insurance companies and were not properly credited in the ratemaking process. On the other hand, those opposed to specific recognition of wage trends argued, and I think logically so, that there were other forces having their play during the interval between the development of policy year statistics and the effective date of the rate proposal. Specifically, two of these forces are frequency and severity of injuries.

In any event, after considerable study there was introduced in 1949 a so-called "Rate Level Adjustment Factor" which is simply and adjustment of the rate change indicated by the policy year experience based upon the collective loss experience of all companies taken from their books of account for the most recent calendar year. This data is not separable by classification of occupation, nor indeed by individual policy. However, it does give an additional and more current indication of the trend of experience and it does reflect the movement of all factors contributing to the loss ration, including wages, frequency and severity of injuries.

That the workmen's compensation ratemaking procedures which are based fundamentally upon payrolls are not "loaded" in favor of the companies as a result of wage increases is seen in the following exhibit:

% Change Over Latest Five Policy Years	
Average Weekly Wage	+17.6
Average Cost of Indemnity Case	+27.1
Average Cost of Medical Care	+33.1

It will be noted that the average cost per case has outstripped wages over the last five policy years. Regardless of the indication, however, the use of the Rate Level Adjustment Factor gives recognition to the net effect of all of these trends.

The next stage in the determination of compensation costs is to make a fair apportionment, or distribution, according to the hazard inherent in various industry operations. This is accomplished through the use of more than 650 classifications of industry for which rates are calculated each year in each state. The classification system is an ever changing one; every year some classes are combined with others, new classes are erected to take care of new industries, and old classes are dropped because industries are no longer active.

The establishment of this detailed classification system was founded upon two broad bases. The first was an apparent one, namely, a recognition of common industries for which workmen's compensation insurance policies would be issued. Thus, the need for categories covering clothing manufacturing, carpentry work and clerical office employees was acknowledged and appropriate classifications were set up. The second basis for classification erection requires knowledge of ratemaking principles and thus may not stand out as clearly as the first. It deals with the ability of a particular industry to produce a sufficient volume of workmen's compensation statistics in a jurisdiction so that the charge for insurance will reflect the hazards of this industry. Keeping in mind that classifications are a means of recognizing the differences in hazards among industries for pricing purposes, it makes no sense to classify an operation unless there is some reasonable basis to assume that the individual classification will produce rates properly related to the hazards insured.

Classifications vary in their scope; some encompass all the operations of an industry while others only cover a narrow field. The manufacturing of products generally is handled through a single class covering everything leading up to the final completion of the product. Thus, the classification applicable to automobile manufacturing contemplates the handling of the raw materials, stamping out the body parts, operation of foundries, upholstering, etc. Among contractors, however, classifications usually are established for the different types of work in which employees are engaged, the lines being drawn close to those established by trade unions. In the construction of a building, therefore, even though one contractor's employees are doing all the work, separate classifications apply to the masons, carpenters, painters, concrete men, etc.

The National Council is often asked to establish new classifications for industries which believe they can be distinguished in some way from other employers in their classification. In order to keep costs reflective of hazards we tend to resist creation of new classifications under such circumstances unless there are valid reasons to make the distinction, and unless sufficient statistical data will be produced by the new industry alone so as to result in reliable rates. To some degree, of course, a measure of judgment enters into this decision; but this is properly so. As an example, recently the National Council was requested to consider setting up a separate classification for bowling alleys which use automatic

pin spotting machines. Bowling alleys without such automatic equipment had always been a hazardous operation for workmen's compensation insurance underwriters but the advent of automatic machinery removed employees from a dangerous area. Normally, this type of change in an industry is considered evolutionary and no special attention is needed because the ratemaking method will gradually give it effect. The use of automatic pinspotters in bowling alleys, however, caused an abrupt change in the exposure to hazard and, it was the judgment of the underwriters that a new classification be established for such employments. Actually, in a few years it is unlikely that there will be any bowling alleys that are not automatically operated and it is expected that the old bowling alleys class eventually will be rescinded.

The distribution of costs among industries is firmly bound up with the classification system through a highly developed and refined ratemaking process. Careful statistics are accumulated by classification by state so that accurate data will underlie the pricing of the insurance. Next, classifications are grouped by combining all the manufacturing industries in one unit, all the contracting classes in another, and the remaining classes into a third. (This actually a part of the over-all rate level change calculation described earlier). An analysis is then made of each classification within the group to calculate a rate indicated by the classification's own experience. Tables of credibility are used to determine to what extent the indicated rate for the classification is to be followed. For example, a classification with 20% credibility will develop a rate based 20% upon its own indications and 80% upon the existing rate as modified by the policy year change in the rate level of the group to which the classification belongs.

Actually, a classification rate is determined by parts which are related to the incidence of serious losses, non-serious losses, and medical losses, respectively. The results are then combined into one rate. There are several advantages to this procedure. In the first instance, a larger volume of experience is required before full credence is given to the indicated partial rate for serious losses than is the case with respect to the rate for non-serious losses. This procedure tends to dampen the effect of shock losses upon the rate for any one classification. Secondly, it also results in a finer pricing by classification, and consequently greater equity, since it recognizes the types of losses which are more or less characteristic of the classification. Finally, it is also the basis of a more equitable allocation of cost where compensation or medical benefits are adjusted invarying degrees by legislative enactment.

The final step in the pricing process employed in workmen's compensation insurance relates to the further modification of the premium produced by the use of manual rates, based upon the characteristics of the individual insured. As indicated earlier, distinctions among individual insured are based upon the expense of handling the risk as well as a measurement of the loss producing potential of the employer.

From the expense point of view, studies have established that there is a definite graduation of expense by size of policy, and as a result the

Workmen's Compensation Manual provides for certain procedures to implement the concept. In the first place, with respect to policies producing up to $500 of premium there is a so-called Expense Constant of $10 to provide for the additional monies necessary to meet the expenses on this size of insured. At the same time, however, there is an appropriate reduction in the rates so that the net effect is to produce the same premium over-all, but to allocate a greater share of it where it is needed.

Actually, in the case of the very small policyholder, the $10 Expense Constant is recognized as inadequate, but instead of imposing an additional loading, studies were made to determine where economies in the handling of small risks could be made. Out of this desire to keep the charge on small insureds as low as possible was born a Three-Year Fixed Rate Policy Program. Under this arrangement, policies averaging $100 a year or less can be written on a three-year term basis with a fixed rate. The feature of handling these policies once every 3 years is counted upon to answer the expense problem, at least in part.

There is an equivalent in workmen's compensation of the quantity discount found in the commercial field and I am referring to the system of Premium Discounts. For a typical National Council state the following discounts are applicable with respect to non-participating stock companies:

	Premium	Discount
First	$1,000	None
Next	4,000	9.0%
Next	95,000	14.0%
Over	100,000	16.5%

As an example, an insured developing a countrywide premium of $200,000 at manual rates would actually pay a premium of $169,800. Participating (i.e. Dividend-paying) companies usually have smaller discounts because of differences in operating procedures. Premium discounts are calculated on an interstate basis so that the insured receives the benefit of the highest discount bracket applicable to him on the basis of his countrywide premium size.

"Experience rating", is a system of introducing a price distinction based upon the loss experience of the individual policy holder. Actually there are two programs to be considered. One is called the "Experience Rating Plan" and the other is referred to as "Retrospective Rating".

The Experience Rating Plan is the more basic of the two programs since it is mandatory for eligible insureds. It involves a comparison of actual losses incurred during the experience period (which is usually three years) with the losses to be expected based upon the average of the indications of the particular classification or classifications under which the policy is written. The resulting ration("experience modification") is applied as a

"credit" or a "debit" to the premium otherwise produced at manual rates. However, the application of the modification is prospective, that is, as of the next renewal date of the policy.

The Experience Rating Plan represents another contribution to the equidy of the over-all workmen's compensation pricing program by its recognition of individual risk loss characteristics. But it is also a most valuable bridge between the concepts of insurance as a business, and as a stimulation of concern for human welfare since it provides a real and immediate incentive for safety-mindedness.

In the rating process every loss is split into a primary and an excess part; from the smallest eligible insured where no excess loss enters into the calculation of the rating, to the largest insured where all of the loss is a factor in the rating, an increasing amount of the excess loss is considered. All primary loss, of course, enters the rating. This procedure recognizes that, in general, an insured with a multitude of small losses is inherently a worse risk than one of the same size which involves a single claim, even though the dollar loss is the same. Since the emphasis is thus on the frequency of accidents rather than on the cost of any one accident, which might be unavoidable, the safety incentive is present even in the smaller premium sizes of experience rated policies.

There have been recent changes in the Experience Rating Plan which are currently being filed throughout the country. The eligibility point has been increased from an average of $500 of premium a year to $750 a year.

Retrospective rating represents another element in workmen's compensation pricing which has many valuable assets. It provides a more immediate recognition of the insured's loss experience than is possible under guaranteed cost. For insureds who feel they are in a position to pay for their own losses within a maximum limit, it provides an opportunity to derive greater benefit from better-than-average loss experience than that which is possible under the Experience Rating Plan as applied to manual rates. This is especially appealing to larger insureds with good safety programs. For risks which are unattractive as to loss experience, it offers a basis for underwriting business which otherwise might not be acceptable.

Common Questions and Misconceptions

Perhaps it would be of interest to review some of the more frequent questions and misconceptions pertaining to workmen's compensation insurance costs which we have noted over the years. Some of these questions have been answered in the course of the foregoing presentation of the Council's ratemaking procedures. I have in mind, for example, the question that, since rates are based on $100 units of payroll, and since payrolls are continually increasing, isn't there more premium being realized than anticipated; and is this reflected in the ratemaking? We dealt with this question earlier in this paper, pointing out that ratemaking procedures, including the use of calendar year data, reflect all factors affecting compensation underwriting results, including changes in wage levels, average costs per case, and fluctuations in accident frequency. Reference is also made to an earlier showing that the average cost per case has moved up much more rapidly than wages.

Loss reserves. Sometimes the use of estimates in the calculation of losses is held suspect as an inflationary influence in the rate structure. On this score, it was pointed out earlier that the statistical data, including losses, which are provided the rating organization each year on individual policies are subject to two additional yearly reportings if the data have been subject to change. Since the initial valuation of losses is made as of six months after the policy has expired, this means that two and a half years, or more, after a loss has occurred is allowed to bring it to a final valuation basis for ratemaking. Actually, very few losses have not been either finally paid or at least determined as to ultimate cost by such time. "Loss Development Factors" calculated from these additional reportings are then employed in ratemaking to counteract the element of estimate. It is surprising to see the number of times where the indications point to an under-reserving rather than an over-reserving of losses.

As to calendar year data, which is not susceptible to analysis in terms of individual claims, the element of restraint upon excessive or inadequate reserves is found in the compilation of the data itself. Thus, the "incurred loss" as used in calendar year experience is derived by adding to the loss payments during the year the difference between the loss reserves at the end of the year and the loss reserves at the beginning. Any excess in reserve, therefore, must be credited against the reserve of the next year.

It is evident, then, that there has been a painstaking program maintained to assure the employer and his insurer that his rates are not unduly influenced by unseasoned data.

How the premium dollar is spent. Occasionally the statement is heard that 60% of the compensation premium goes to pay losses; the rest goes in the pockets of the insurance company. Very often this is accompanied by a strong hint that 40% of the premium stays in the pockets of the insurance company. Therefore, it is appropriate to examine the percentage of the cost of insurance represented by expenses in the light of this statement. There are one or two points, however, which must be kept in mind in any such analysis. First, as was shown earlier in this paper, the manual rate promulgated by the rating organization for each classification of industry is only a starting point in the determination of the ultimate cost of workmen's compensation insurance to the individual employer, premium discounts being an important reducing influence in arriving at net cost.

Secondly, in the membership of the Council, for example, there are some 330 private insurance companies, all in competition for business, and all using to varying degrees the primary sales weapons of service and price. These companies will fall into various categories depending upon their operating methods, including the means of acquiring business; whether or not they pay dividends; etc.

Thus, they will differ among themselves in the amount of cost incurred in obtaining and servicing business; in the amount of premium discount allowed the policyholder; and in the amount of returns made via the dividend route. A measurement of the aggregate effect of all of these factors will present a fair estimate of the average amount of expense in the countrywide premium paid by policyholders for workmen's compensation purchased from private carriers.

An analysis of private carrier expense statistics derived from the Insurance Expense Exhibits filed with the supervisory authorities of each state, indicates that approximately 34% would represent a fair estimate of that portion of the premium dollar used for expenses, profit and contingencies. This would leave 66% for compensation and medical payments going to injured employees.

Now, where does this 34% go? As previously stated, the policy issued to the employer provides not only for the payment of claims but also for loss adjustment services including the representing of the employer before industrial commissions and courts. These services average out to approximatley 8.5%. In addition, about 2% of the premium goes for safety inspection and accident prevention work done by the insurance company. We might pause at this point to note that these essential services plus the payment of compensation and medical benefits, all of which may accurately be described as directly benefiting both employer and employee, amount to about 76.5% of the cost of insurance.

Assuming that we are dealing with a representative state taxwise, an additional 2.5% goes for state premium taxes, allowances and fees. (There is, of course, no provision in the rates for federal income taxes.) The premium structure also contemplates 2.5% for underwriting profit and contingencies. This leaves, then, about 18.5% which is spent on other operating expenses including the cost of putting business on the books, the cost of necessary personnel, office expense, printing policies, making payroll audits, maintaining statistical data and other records required by supervisory authorities, and other such expenses.

Are these expenses actually incurred? Indeed they are. All companies are required by law to report annually both losses and expenses incurred during the year. The basis of the above analyses are the aggregate data of private carriers taken from such reportings.

Before leaving the subject of operating expense involved in a private operation of workmen's compensation insurance, it should be remembered that any such analysis is only meaningful when it is made in the light of what has been accomplished. For example, in our brief review of the programs which have been developed to establish the cost of insurance, we pointed out many steps which were taken to guarantee maximum equity to the individual policyholder. Specific reference is made to the elaborate classification system, ratemaking techniques, sustems of experience rating, and premium discounts. The intense competition which exists in this business means production expense, but it also must mean a dissemination of information to employers throughout the state with respect to their responsibilities under the workmen's compensation law. In many cases it has resulted in an election by non-subject employers to purchase workmen's compensation insurance for their employees. Also, prompt investigation of injuries and prompt payment of deserving claims has, I believe, been a standard which has been maintained by these competitors. All such elements must be considered when the cost of doing business is being examined and on this basis it seems clear that the operating costs in this business have truly been reasonable. This becomes even more clear upon review of the next topic. The foregoing facts speak for themsleves and they reflect in my opinion a

most creditable performance worthy of a business affected with a strong public interest. It is all the more satisfying that this has been possible in a state of competition, with the employer left to select the insurance company with which he wishes to deal.

How Expensive is Workmen's Compensation Insurance? At times suggestions have been made that workmen's compensation rates have risen to a point where they are inimical to the economic and social interests of the states where they are applicable. In this connection, it is submitted that a review of workmen's compensation rates, past and present, should put to rest any fear that the cost of this product has constituted an undue burden to any state.

In the first place, workmen's compensation rates per $100 of payroll are today 9 per cent lower than the level of 1939. At the same time, benefits to injured employees have increased 64% over the same period.

Secondly, the average countrywide compensation insurance cost per $100 of payroll is slightly over $1.00. If we may use what seems to be a conservative assumption that 50% of the cost of doing business is allocable to wages, this means that workmen's compensation and employers' liability insurance amounts to about one-half of one per cent of the cost of doing business.

These figures speak for themsleves. They demonstrate conclusively that the workmen's compensation insurance industry has certainly operated in the public interest by providing a necessary product at a reasonable cost.

Finally, it is of interest to note that from 1955 through 1959, those being the last five calendar years which were available as of the time of this writing, the insurance companies collectively showed an underwriting gain of two-tenths of one per cent on their workmen's compensation writings.

There are one or two other questions which might still bear some attention. For example, with reference to the 2.5% in the premium dollar for underwriting profit and contingency, we are sometimes asked whether this allowance amounts to a guaranteed profit. The answer to this is "absolutely not". Based upon past experience workmen's compensation rates are set at a point where, according to the best prediction, they will be adequate to pay losses and expenses and leave 2.5% for profit. But if losses or expenses or both exceed expectations, the 2.5% will not be realized. For example, in 1959 the underwriting result was -3.3% which means that the hoped-for profit of 2.5% was never realized. In fact an additional eight-tenths of one per cent loss was suffered.

Another question, is there any recoupment of prior underwriting losses in the ratemaking process? Once again, the answer to this is an unqualified "No". Rates reflect the indicated need of the future based upon past experience, and they carry nothing "extra" for the recovery of past losses. The rates are revised annually and are derived from the latest available experience. Current rates, thus, are revised upward or downward,

depending upon that experience, to determine future rates for policies which have not yet been issued. No part of this program of manual rate-making provides for a recouping of past underwriting losses.

- - - - -

The foregoing discussion of workmen's compensation costs from the point of view of the rating organization is not intended to be a technical presentation of ratemaking and related matters, and for that reason many details have been omitted. But it is offered rather as a review of the basis of the current programs by which the premium charged the insured employer is determined. It is a standard program which is either in use, or recommended for use in all states where the Council has any status. It affords a stability of pricing practices which is a result of years of development. Although further amendments are being made, and will be made from time to time, it possesses an underlying consistency and objectivity which we believe is essential to this type of business. At the same time it is a program marked by a high degree of refinement and consideration of individual insured characteristics. These features, we feel, are welcome to supervisory authority, purchaser and company alike.

5.7.4

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Paper Given by

J. E. Linster, Vice President

Employers Mutuals of Wausau

On May 9, 1961 at 1:30 P.M.

Wisconsin Center Building

Section 4 - Safety, Accident Prevention, and Rehabilitation

Rehabilitation

It is appropriate that a substantial portion of the program for this symposium has been reserved for the discussion of rehabilitation because during the 50-year history of workmen's compensation there have been many significant and important milestones of accomplishment in the development of rehabilitation programs. Rehabilitation is an accepted function under the obligations of the various workmen's compensation acts.

There is general agreement among spokesmen for industry, insurance, labor and administrators of workmen's compensation about rehabilitation. The Chamber of Commerce of the United States, the National Association of Manufacturers, spokesmen for organized labor, representatives of insurance, medicine and administrators of workmen's compensation have made statements which indicate they are in agreement about the importance of rehabilitation in the workmen's compensation system.

The Honorable W. M. Douglas, president of the International Association of Industrial Accident Boards and Commissions, recently stated that, "The workmen's compensation process cannot be termed successful either from the standpoint of the employee or the community until the disabled worker has been restored to employment compatible with the capabilities of the claimant. All interested parties should assume responsibility for assisting injured workers obtain the proven advantages of rehabilitation."

Anniversaries are traditionally the time for looking back--an enjoyable process when we are reviewing accomplishments but I believe we can agree that we should not engage in this process in any more detail than is necessary to make a realistic appraisal of rehabilitation in the light of the milestones of progress.

Less than a decade after the enactment of the first constitutional workmen's compensation law in Wisconsin, schools of physical therapy and occupational therapy instituted programs for the training of technicians in

the technique of administering heat, massage, exercise, water and other therapy procedures. Technicians trained under these programs joined the staffs of workshops or centers in general hospitals which were beginning to provide physical therapy and occupational therapy to accomplish a reduction of permanent disability and an earlier return to employment.

Even though the value of the use of physical energies and procedures was recognized in the 1920's, as late as 1928 there was only one curative workshop in existence in Wisconsin. It was located in the City of Milwaukee and, unfortunately, did not accept industrial cases. There was an obvious need for a rehabilitation facility which would accept industrial cases.

In 1928, the leaders of Employers Mutuals of Wausau realized that something had to be done to fill this need. The men who guided the company were of the opinion that the rehabilitation of injured workers should be one of the primary objectives of the Wisconsin Compensation Law. They believed that employers did not bear the cost of surgery and medication merely because it was their moral obligation or their duty to society as a whole; the intent of the law went further than that to include also the return of the injured worker to his job or to a similar job.

As a result, a physical therapy division with a well-equipped clinic or curative workshop was organized in Wausau, Wisconsin, in 1928. This is believed to be one of the earliest operations of its kind ever undertaken by an insurance company.

In the beginning, cases were brought into the center from a large area because facilities were not available in Wisconsin. At no time, however, was it ever considered anything more than a pilot facility to be used to encourage other communities to do the same thing. From the very outset, we realized that if we were to attain our objective of bringing rehabilitation to the patient rather than bringing the patient to rehabilitation, our measure of success would have to be a diminishing case load rather than an increasing case load.

In January of this year, we discontinued operation of the center because we felt there was no longer any real need for the center. Today in Wisconsin we have well-established facilities operating in most of the larger communities. In most of the larger Wisconsin communities it is now possible to commence rehabilitation under the direct supervision of the employee's attending physician while the employee is hospitalized. With few exceptions, the employee can remain in his own community for the entire course of rehabilitation treatment.

Very few, if any, of the thousands of cases treated in these community workshops could be considered headline material. However, if it were possible and practical to collect statistics on the amount of reduction in disabilities accomplished by early and effective treatment, I have no doubt that the total would indeed be spectacular.

Another important milestone in the history of rehabilitation is the development of rehabilitation programs for war casualties by the Armed Forces and the Veterans Administration during World War II. Prior to the development of these techniques, individuals who suffered spinal injuries resulting in paraplegia or quadriplegia would have spent the remainder of their lives in hospitals, nursing homes, or their homes under nursing care.

As the new programs were developed it was found that in most cases paraplegics and quadriplegics could be returned to a reasonably active life in their community no longer in need of hospital or nursing care. Many of these men developed their abilities through further education in vocational training and now hold important positions in industry.

Around this time, pioneers in the field of medical rehabilitation such as Doctors Rusk, Kessler and Krusen provided the inspiration and leadership so necessary in the development of an understanding of this third phase of medical care--rehabilitation. They received the support of many of their associates in the profession. Through their efforts private rehabilitation centers were established to treat private patients who were flown from many parts of the country to

centers located in New York, New Jersey and in Rochester, Minnesota.

Many of the patients were employees injured in industry who had good reason to have gnawing doubts about the possibilities of their ever returning to any type of activity. The patients who were among the first to be rehabilitated at these centers demonstrated to those who were to follow what could be accomplished.

During the decade beginning in 1940, 21 private rehabilitation centers were established. Today there are private centers in most of the population centers of the United States equipped and staffed to treat the most serious disability cases. What is more important, almost without exception they are within a reasonable distance from the home of the patient. To put it another way, the patient is within visiting distance of his family and friends. This alone can be an important factor in the rehabilitation program.

In our process of looking back, we have done little more than review but a small part of the story. Time won't permit me to review all of the many important developments and name all of those who have made important contributions. I must keep my promise not to engage in the process of looking back in any more detail than is necessary. We must therefore at this time consider some of our more important current rehabilitation problems.

During the last decade I have attended many meetings and conferences devoted to a discussion of rehabilitation. National leaders in the fields of medicine, industry, insurance, labor and the administration of workmen's compensation recognize the human and economic values of rehabilitation. There have been differences of opinion about the need for legislation. Rather than talk about these differences, I prefer to emphasize one important area of agreement. The area of agreement can be stated in a few words. Rehabilitation services must be community oriented.

The purchasers of services of the rehabilitation centers and the physicians must be familiar with the rehabilitation services which are available in the community. And the people in rehabilitation programs and facilities must, by contact with the principal purchasers of rehabilitation services, keep informed about the rehabilitation needs of the community.

The statement has often been made that there is a shortage of rehabilitation centers. In some communities this is true, but recent surveys would indicate that in quite a few areas rehabilitation centers are having financial difficulties because they did not make a realistic survey of the rehabilitation needs of the area before the center was built. Some rehabilitation facilities have been erected in remote locations. Others have established programs which are too specialized, and do not provide the services which are really needed by the principal purchasers of this type of service.

Those who are completely objective about the areas where there is real need for improvement in rehabilitation agree that much could be accomplished by a better liaison between the medical profession, insurance, industry, and the people in rehabilitation programs and facilities at a community level. Through this liaison, those who really make the day-to-day decisions which affect the future of a rehabilitation program in a community will become cognizant of the human and economic value of rehabilitation. And those who provide these services will be more responsive to the needs of the community. Community committees can, through the sharing of information, plan and accomplish more effective community rehabilitation programs.

The ultimate objective of any rehabilitation program is the return of the employee to gainful employment. In appraising the effectiveness of rehabilitation in the workmen's compensation system, we too often overlook the fact that with very few exceptions employers have demonstrated their willingness to place physically handicapped workers in jobs commensurate with their abilities. Many

times the employer provides on-the-job training for the employee who must be trained for a new job. They, through their experience with the employement of the physically handicapped, are convinced that the employment of the physically handicapped is good business.

I could not properly conclude my comments about the emeployment of the physically handicapped without paying a tribute to the wonderful work of the President's, the governors', and the many county and city committees on employment of the physically handicapped who, through their efforts, have developed a better understanding of the physically handicapped.

Those of us who are familiar with the day-to-day problems of rehabilitation recognize that there is plenty of room for improvement. However, I cannot share the views of the few critics who prefer to judge the workmen's compensation rehabilitation program by the few failures which can happen in any program. I prefer to believe that with the increasing public interest in rehabilitation and with the marvelous medical and technical advances being made in this field, we can look ahead to the decade of the 60's with confidence that even greater strides will be made in this important area.

To be delivered at the Workmen's Compensation Symposium, May 9, 1961, sponsored by the School of Commerce of the University of Wisconsin.

5.17

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Remarks Given by

Elmer H. Kennedy, Supervisor of

The Dr. H. T. Buckner Rehabilitation

Center, Seattle, Wash.

May 9, 1961, at 1:30-3:15

Wisconsin Center Building

SECTION 3 - Funding Systems, Insurance, Self-Insuance, Other

THE FUNDING SYSTEM OF THE
STATE OF WASHINGTON'S EXCLUSIVE, NON-PROFIT
WORKMEN'S COMPENSATION AND MEDICAL AID PROGRAM

In case you are misled by my title as listed on the program, I had better explain that this is still Section 3, "Funding Systems, Insurance, Self-Insurance, Other." I represent that part of Section 3 designated as "other," namely, non-profit State Workmen's Compensation Funds, of which there are two types in the United States.

Competitive Non-Profit State Funds

The most numerous type of State Fund[1] is the so-called competitive non-profit State Fund which, presumably, competes with private insurance companies and furnishes a "yardstick" for measuring the effectiveness of the private insurance companies' profit motivated operation. Without disparaging in any way the many accomplishments and the devoted personnel of some of the competitive non-profit state funds, this presentation has absolutely nothing to do with them in any way as they are inherently a bastard program that was "compromised" in its legislative conception by its illegitimate background. Although some competitive state funds have made admirable records, I am just cynical enough to feel they were created in the first instance as a semantic trick to make bona fide government operated compulsory social insurance programs for whatever purpose "look bad" - why else do we find so many of them shackled with limitations and responsibilities not imposed upon the private insurance companies? And a "by-product" that is much appreciated but infrequently acknowledged by private insurance companies is the fact that so-called competitive non-profit state funds provide, without cost, an "assigned risk plan" for private insurance companies. This point is best illustrated by the following excerpt:

> "Thus, in a state *** which includes all types of carriers, it might be said generally that the biggest employers are in the main self insured; mutuals tend to get the cream of the non-self insured group; stocks

---

1. There are eleven competitive state funds if you accept the United States Bureau of Labor Standards classification, but fourteen if you include Ohio, West Virginia, and Oregon which states permit self-insurance and thereby destroy a factor that is essential in the concept of exclusive, non-profit state funds.

take the less desirable risks and the competitive state fund gets mostly those that no other carrier wants."[2]

More power to the dedicated personnel of many competitive state funds who have compiled a wonderful record of accomplishment not withstanding the fact that the "cards are stacked against them."

Having thus disposed of the illegitimate other part of the "Other" listed in the program, I shall try to proceed with the other part of my assignment, namely, "to develop fully the role of exclusive non-profit state funds in funding their Workmen's Compensation obligations."

The Misnomer - Monopolistic State Funds

You will note that I do not use the word "monopoly" with all its derogatory semantic connotations as to do so would imply, in popular usage, a program creating a situation where the price of the service has been raised materially above the price fixed by free competition. The use of the term "monopoly" was a particularly damaging semantic trick in the first two decades of this century when the "muckrackers" were arousing our nation's conscience and creating a psychological climate that led to enactment of Workmen's Compensation laws, as well as legal defenses against monopolies and other alleged social evils. The use of the term "monopolistic state fund" was promoted by the private profit motivated groups who decided that if they couldn't lick the government operated social insurance programs they would "woo" them and seduce and pervert them for their private benefit. I surmise the sons and grandsons of these groups have now graviated to Madison Avenue's lucrative fields for semantic tricks - because we do not hear Unemployment Compensation of Old Age and Survivors Insurance being branded as "monopolies." Monopoly is a dirty word in the vocabularly of the advocates of bona fide government operated social insurance programs.

Funding defined

The two definitions of "funding"[4] that appear most applicable to the "funding" of the Washington State

2. p. 132 Workmen's Compensation, Somers and Somers, 1954, John Wiley & Sons, Inc., New York.
3. pp. 124-126 Workmen's Compensation, Somers and Somers, 1954, John Wiley & Sons, Inc., New York.
4. Webster's Collegiate Dictionary.

exclusive non-profit W.C. program are: (a) "To finance" and (b) "to supply a foundation." The following technical description of "funding" is based on the financing of our W. C. obligations.

The Washington Benefit Structure

However, before we discuss the methods of financing, perhaps it would be well to examine the benefits[5] we are financing. They are:

1. Total Temporary Disability (TTD) $165 single to $310 married, per month, with 5 or more children. Unlimited duration while medically necessary. All payments based on family status, not on per cent of wages. All TTD payments in addition to other benefits allowed.

2. Total Permanent Disability (TPD) identical payments but for the life of the beneficiary and his spouse and children except the spouse's pension is terminated with a cash lump sum upon remarriage, and children's pensions terminate at age 18. Also the widow of a TPD workman has her pension reduced $40 per month after the death of her husband.

3. Fatalities. $125 for a widow without children, to $245 per month for a widow with 5 or more children for life. Same exceptions as for TPD. Orphans receive $60 per month until age 18 for each orphan up to a maximum of $300 per month for five or more orphans. It should be noted that widows of fatal accidents and widows of PTD deceased workers with children under 18 years old or the widow when 62 years old, all draw OASI benefits concurrently which, in combination with the WC pension generally equals on current award schedules 100% of the deceased husband's wages.

4. Permanent Partial Disability (PPD) Cash lump sum payments after TTD and medical care is concluded ranging from $9,750 for amputation in the upper half of the thigh to $180 for amputation of the little finger at the distal joint. For disabilities to an

---

5. For more detail on the benefit structure see Appendix A attached. The benefits listed become effective June 8, 1961.

appendage not involving amputation, the maximum allowance is 90% of the comparable amputation award. Disabilities to the trunk and cranium are rated against a maximum of $8,750. No percent of wages factor is applied.

5. Medical care including Rehabilitation. Unlimited medical care for life for conditions resulting from the injury. The medical aid act enacted in 1919 was broad enough to cover a complete rehabilitation program without amending the statute. The Rehab program, started in 1948, is housed in a $1,500,000 building and operates on a biennial budget of $1,000,000 treating 800 patients per year. (800 patients is 40% of all workers on TTD more than 90 days.)

Scope of Coverage.

It is fairly accurate to say that all workers who work with their hands, except domestic help, retail clerks, clerical personnel and farm labor are covered and many of the excepted groups have availed themselves of permissive coverage under the law. There is no numerical exception based on number of employees and for the categories covered there is absolutely no other form of insurance that may be substituted for the exclusive, non-profit state fund coverage. Approximately 450,000 workers are covered in 43,500 employer accounts. There are approximately 100,000 claims per year of which about 5,000 have some degree of Permanent Partial Disability.

The Funding Provisions and Methods

The benefits listed above are paid out of the following three funds which are financed (funded) as provided in the following excerpts from the statute: (Rem. Rev. Stat. Wn. State)

Sec. 51.16.020 - Basis for Determining Accident Fund Premiums - Cost Experience

The amounts to be paid into the accident fund shall be determined as follows: The department shall, prior to the first day of January of each year, determine for each class and subclass, a basic premium rate for the ensuing calendar year and, in so doing, shall take into consideration: First, that no class shall be liable for the depletion of the accident fund for accidents happening in any other class; second, that each class shall meet and be liable for its own accidents; third,

the cost experience of each class and subclass over the two year period immediately preceding July 1st of the year in which the basic rate is being fixed; fourth, the then condition of each class and subclass account.

The department shall also, prior to the first day of January of each year, determine the premium rate to be paid into said accident fund during the ensuing year by each employer to be credited to each class and subclass account, applicable to the employer's operations or business and, in so doing, shall take into consideration the average cost experience of each employer for each workman hour reported by him during each fiscal year in each such class or subclass over the five year period immediately preceding July 1st of the year in which the rate is being determined and, in so computing the cost experience of any employer, seventy-five percent of the average cost of pension claims shall be charged against his experience for each injury resulting in death or total permanent disability of a workman instead of the actual cost to the accident fund of such injury. The actual premium rate which any employer shall be required to pay for the accident fund shall be thirty percent of the basic rate, plus seventy percent of the employer's cost rate for each workman hour reported by him during each fiscal year over the five year period next preceding the then last July 1st but in no case shall the total rate exceed one hundred sixty percent of the basic rate.

In "experting" the amount of premium necessary to maintain the necessary reserves in the accident fund all covered employers are divided into 60 classes of comparable types of employment.

The amounts necessary to cover the life time pensions for TPD cases and widows and children of fatal accidents are computed by the State Insurance Commissioner on recognized and approved mortality and remarriage tables. The rate of interest has varied from 2% to 4% according to the provisions of the statute. Each case is a separate annuity until such time as the obligation ceases to exist, at which time the surplus reverts to the benefit of the class. (The annual report on the Annuity Reserves of the State of Washington's Department of Labor and Industry

is available but is adjudged to be too voluminous to be included as an appendix to this paper.)

In addition to the above, the Department applies the following factors in setting the premium to be sure the required accident fund reserves are not depleted.[6]

(a) The average number and average cost of claims on the books as of August 1, each year based on evaluated cost by nature and member injured for every conceivable type of injury.

(b) The workman hours and the claim costs for the preceding four years.

(c) Current factors affecting the above, such as, recessions, unusual weather, unusually expensive fatalities or TPD claims, etc.

(d) Appeal costs to both the Industrial Insurance Appeals Board and the Courts with trial by jury.

(e) Safety program costs not to exceed 4% of the accident fund and 1 - 1/2% of the Medical Aid fund or 5% of the combined funds.

History of Solvency of the Accident Fund

In almost fifty years since the law went into effect no claim has ever been defaulted as the courts have ruled that as long as the total accident fund is solvent, individual class funds can borrow and pay back with interest. At present, out of the sixty classes, two are "in the red." Steel shipbuilding, which is a boom and bust industry in our area, went "in the red" after World War II. Coal mining is a dying industry with less than 250 employees at this time. Not enough reserves were accumulated in the boom periods to care for the volume of claims generated by reopening for aggravations in the subsequent "bust" periods. Steel shipbuilding reduced its unfavorable balance 14% this past year but coal mining must await a hoped for resurgence of the industry which, we hope, is about to occur.

Basic Accident Fund Premium Rates

The basic premium rates vary from a low of $.0022 (2-1/5 mills) per manhour worked (Boeing Aircraft which is in effect,

6. For more detail on financing the Accident Fund see Dept. working papers attached as Appendix B.

but not technically so, a self-insurer) to $.29 (29¢) per manhour worked for logging, which is an extremely hazardous industry with many fatalities. The variation in total premium rates among employers becomes more extreme when the 30% and 70% factors are applied to the base rate. Many small employers never pay the rates indicated because the 170% maximum becomes effective, in which case the class absorbs the difference. This leads to the type of "levelling out" considered by some authorities to be desirable in any social insurance program.

The range from 30% of base rate to 170% of base rate is in the law on the premise that merit or experience rating will provide a profit motive to encourage the safety program and a safe working environment. It also creates desirable "side effects" in the form of re-employment of the seriously injured by the employer at the time of injury. The Forest Products industries have made an admirable record in this regard, notwithstanding the arduous nature of their work. There are undesirable side effects also; such as, the use of "claim jumpers" who resist justifiable and unjustifiable awards alike on a "grist mill" basis.

Occupational Disease

It should also be noted that Washington has unrestricted occupational disease coverage but no special fund is set up as claims are paid out of the Accident Fund in the same manner as are any other claims for injury.

So far, I have been discussing the "funding" of the Washington exclusive non-profit state Workmen's Compensation Fund in regard to the technical and statutory aspects of its financing. As my job title on the program indicates, I am not an authority on funding or the actuarial sciences, but I surmise the funding system for the Washington Workmen's Compensation Funds follows sound funding practices as any sound insurance program, either government or privately operated, must if it is to remain solvent and meet its obligations. The fact that the Washington Workmen's Compensation Funds have not defaulted on a single claim since their creation 50 years ago, plus the supreme test of survival in spite of constant profit motivated political pressure for change or abolition would appear to be irrefutable proof of the soundness of the funding of the program.

---

7. For more detail on financing the Medical Aid Fund see Dept. working papers attached as Appendix C.

Washington is most fortunate in that the authors[8] of our law forthrightly pioneered an all inclusive compulsory exclusive Workmen's Compensation law at the very time, March 1911, that the Ives decision in New York was being used to emasculate and restrict the Workmen's Compensation laws to be passed in thirty other states by 1915. The fact that the Ives decision was overthrown by the U. S. Supreme Court in 1917 did not alleviate the situation and elective laws with their unnecessarily limited coverage of industries, occupations, and injuries have remained ever since as a deadweight on the Workmen's Compensation program.[9]

The Moral Aspects of Funding

Funding is also defined as "to supply a bottom or foundation." It is this definition of "funding" that shall guide the balance of this discussion.

---

8. Harold Preston, a prominent pioneer lawyer of our state, is considered the author of our law in the sense of its legal provisions. If the ideal of exclusive, non-profit State Funds had been able to resist the profit motivated pressures and had become the pattern in the United States, Mr. Preston could well have become a national figure revered and honored as is Chief Justice Meredith in Ontario. Such was not the case and this estimable man is little known outside of our state and even there more for his principles and honesty in other legal areas rather than for his work on W.C. It is interesting to note that the firm he founded served as legal counsel, long after his death, for the proponents of a 1951 referendum to the people which nullified a non-occupational Disability Insurance program that had been passed by the Legislature for all workers covered by Unemployment Compensation. Time marches on - but not always forward - depending on your viewpoint!

9. pp. 32 and 33 - See footnotes #2 and #3.

The enabling clause of the Washington State Workmen's Compensation Law could well serve as the Magna Carta to free all Workmen's Compensation laws in the United States from their shackling limitations. I quote:

> "The common law system governing the remedy of workmen against employers for injuries received in hazardous work is inconsistent with modern industrial conditions. In practice it proves to be economically unwise and unfair. Its administration has produced the result that little of the cost to the employer has reached the workman and that little only at large expense to the public. The remedy of the workman has been uncertain, slow and inadequate. Injuries in such work, formerly occasional, have become frequent and inevitable. The welfare of the state depends upon its industries, and even more upon the welfare of its wage-worker. The State of Washington, therefore, exercising herein its police and sovereign power, declares that all phases of the premises are withdrawn from private controversy, and sure and certain relief for workmen, injured in extrahazardous work, and their families and dependents is hereby provided regardless of question of fault****"

Because our Workmen's Compensation law rests on the "police and sovereign power" of the state it has been possible to administer and amend it in a flexible and dynamic manner.

In 1947, 4,000 total permanent disability pensioners or widows of fatal accidents and total permanent disability pensioners were living a sub-marginal existence on pensions dating back to 1912. These pensions ranged from $20 to $60 per month depending on the provisions of the Workmen's Compensation law at the date of injury. The law has been amended in 1947, 1957, and 1961 to provide supplementation out of the tax supported General Fund of the state to keep these pensioners at decent subsistence levels at or above the average O.A.S.I. payment. Currently, on June 8, 1961, five thousand pensioners will receive supplementation to $125 single and $155 married per month (plus children's allowance, if any, which are not supplemented) at a cost to the General Fund of $4,000,000 per year. Since 1947 to date Workmen's Compensation pensioners have received $32,800,000 in supplementation from the General Fund. This use of the flexible and dynamic features of our law

may well be unbelievable to many. A state that used its police and sovereign powers to deprive the injured workers of their common law rights, valueless as they often were, could do no less.

It is doubted if any type of Workmen's Compensation law that was not "exclusive" and based on the police power of the state could achieve such a miracle from the injured worker's viewpoint. Actually we had to amend our state Constitution to assure the legality of this procedure when the same problem arose in connection with supplementing retired teachers' pensions. However the equity and justice of supplementing Workmen's Compensation pensions was so apparent that no one challenged our Workmen's Compensation pension supplementation although it was in force for several years before the state constitution was amended.

The Workmen's Compensation Medical Aid Law, enacted in 1919, was so broad that it too, "supplied a foundation" when the progress of modern medicine required the creation of a comprehensive, integrated Rehabilitation Center and program in 1948. No amendment to the statute was required - it was done under administrative discretion and has never been legally questioned.

These two illustrations will, in the interests of brevity, have to suffice as adequate proof that our fund meets its obligations under the definition of "supplying a foundation" that cares for changing economic and social conditions.

Summary of Strong Features

In summary then, the Washington Exclusive Non-profit State Workmen's Compensation Fund meets its obligations by:

1. Providing a benefit or award schedule comparable or superior to the best in the nation and I.A.I.A.B.C. criteria with the probable exception of Permanent Partial Disability awards in which area the I.A.I.A.B.C. standards[10] are ambiguous.

---

10. I.A.I.A.B.C. Handbook - Bureau of Labor Standards Bulletin

2. The funding or financing system is sound from -
(a) the viewpoint of solvency of government operated social insurance programs and sound insurance principles in general,
(b) the merit rating viewpoints of private industry and safety advocates
(c) the viewpoint of injured workers who need a flexible and dynamic program which supplies a foundation that can care for changing economic and social conditions. In the final analysis this is the most important consideration because the W.C. program was created to meet the needs of the injured workers.

3. The coverage is comparatively adequate for all categories of workers. (Weaknesses of the coverage will be covered under that heading)

4. Medical Aid, including Rehabilitation, is unlimited and covers aggravation of conditions caused by the industrial injury for the life of the injured worker.

5. Reopening for aggravation to take care of the premature aging process due to the injury is, in practice, practically unlimited.

6. The comparatively adequate or superior benefits are supplied at the comparatively reasonable cost of 1% or less of payroll. Administrative costs are less than 10% of total costs. Comparisons as to cost and efficiency are always difficult to make on an equitable basis due to the many variables present, but it is self-evident that when there are no profits and no sales commissions to be made, exclusive non-profit State Funds, if honestly administered, have at least a 25% advantage in paying larger benefits out of the same amount of premium. Washington W.C. rates are 50% to 100% less in almost every class of employment when compared to our neighboring states of Oregon and California[11] who have comparable or less costly benefit structures.

7. Statistics are compiled and available.

---

11. See appendix D - A Comparison of Industrial Insurance Rates Per $100 of Payroll for Oregon, California and Washington - prepared by Oregon Industrial Commission Statistical Dept.

Lump Sum Awards vs. Permanent Partial Disability Pensions - the Greatest Weakness of all U.S. Workmen's Compensation Programs

The great difference in monetary value between a limited lump sum award and a life-time partial pension is the root of most evil in the United States W.C. system. It creates the need for the legalistic, forensic approach that plagues all our constructive efforts and pyramids our costs. (This is true whether the lump sum is paid in cash as in a few states or on the installment plan as in a majority of states.)

As long as most funding systems must require a cut-off point so actuaries can accurately state the premium rate necessary to assure a profit, this situation will continue to exist. This is true in our exclusive, non-profit State Fund states as it is in other states because our rates are always subject to comparison to other states with competing economies.

The Canadian Provinces have solved the problem to a great extent, but they are not subject to comparison within their own country, as all provinces in Canada have exclusive, non-profit W.C. funds. However, the Canadian cost experience of less than 1% of payroll does not appear to be any greater notwithstanding the much greater cost of P.P.D. pensions.[12]

The conclusion then is inescapable -- you can not siphon off 25% or more of premium income in the form of profits and commissions and still have enough money for adequate P.P.D. awards. The present practice is to force the seriously injured worker to assume the major burden of the cost of his injury in the form of reduced earnings and a lower standard of living -- often at the taxpayers' expense on direct relief.

---

12. pp. 314 - See footnotes #2 and #3

We in Washington State are considering a possible alternative in the form of Permanent Partial Disability Loss of Earning Power Pensions. Partial Pensions would range from $25 per month for 20% disability to $125 per month for 90% disability. If earning power was restored in whole or to an extent that part of the pension payment was not required to equal average earnings prior to the accident the unused portion of the pension reserve would automatically revert annually to reduce the class of employers' premium rate. All payments would cease at age 65 if the injured worker's earning power had been restored to an extent that entitles him to maximum O.A. and S.I. benefits. In any event the amount paid could not exceed the difference necessary to equal maximum O.A.S.I. The initial cost for pension reserves is estimated at three times the cost of "lump-summing" the same claims, but it is conjectured that in ten to fifteen years, due to reversions due to restored earning power, early deaths and interest accruals the fund would become practically self-sustaining to the extent that the costs would be no more than for "lump-summing" the same injuries.* (Insert fn.)

The proposal is unique inasmuch as it contemplates integrating two forms of social insurance. The use of industries' profit motive to assure the physical and economic restoration of seriously injured workers is somewhat analogous to the existing policy of merit or experience rating.

Our recent session of the Legislature called for a study of the proposal. My sense of humor requires me to add, with my tongue in my cheek, that the promised $60,000 appropriation was "inadvertantly" omitted. We hope to proceed with the study as planned with funds from another source. It is altogether fitting and proper that we should make this contribution to the solution of the W.C. problem as it will do much to convert our W.C. program to a genuine Workmen's Restoration program as that is the real and humane purpose of W.C. laws as we see it on a basis of fifty years' experience.

In conclusion I wish to express my thanks to the "Fund for Insurance Research" and the University of Wisconsin for the opportunity to participate in this symposium celebrating the fiftieth anniversary of the effective date of the Wisconsin W.C. law, the first W.C. law to go into effect in the United States. I am

---

*The present modest lump sum payments provided in the law would be retained as a sort of indemnity payment for the anatomical loss and would be paid in addition to the permanent partial disability pensions.

particularly happy to participate as this is also the fiftieth anniversary of the passage of the State of Washington's W.C. law on March 14, 1911. We were in a "dead heat" with Kansas for the honor of enacting the first constitutional W.C. law in the U.S. but our effective date for beginning operations is 1912. I am especially happy to participate in a symposium sponsored by the "Fund for Insurance Research" as to be accorded this privilege is in accord with the best traditions of democratic procedure and fair play. I trust my presentation has been objective and free of personal prejudice. On other occasions[13] I have belabored many members of this audience with the implications inherent in our W.C. programs.*

13. President's Address pp. 1-9 Proceedings, I.A.I.A.B.C. 1958, Bureau of Labor Standards Bulletin #201.

About the Author

Mr. Kennedy was born in Seattle, Washington, in December of 1904. He graduated Magna Cum Laude from the University of Washington in 1934. He also received his M.A. degree from there in 1935. Mr. Kennedy has had much experience in governmental service. From 1950-61 he served as Supervisor of Rehabilitation and Replacement - State Department of Labor and Industries (presently on leave of absence). At the present time he is Legislative Representative and Assistant to the President - Washington State Labor Council - AFL-CIO. He is interested in civic organizations -- Boy Scouts, Young Men's Christian Association, Association for Crippled Children, United Good Neighbors, Etc., and AFL-CIO, Committee on Political Education. He has written several papers and the reason he is on leave of absence from duties as Supervisor of the Department of Labor and Industries Rehabilitation Center for Injured Workers is to lobby to convert the Washington law from mere compensation to bona fide Workmen's Restoration by combining Anatomical and Wage Loss theories of rating disability(He is lobbying for the Washington State Labor Council--AFL-CIO).

---

*(speech concluded by the following remark)

I do not choose to do so again, except to say again "If you do this to the least of these, my brothers, you do it also unto me.

The Gospel according to St. Matthew.

Insurance Department
Standard Oil Company (Ind)
Chicago, Illinois

PRESENTED AT: Symposium on Workmen's Compensation in a Dynamic Society, University of Wisconsin - May 9-10, 1961

FUNDING WORKMEN'S COMPENSATION BENEFITS

Your other speakers have discussed accident frequency and severity as well as methods employed to reduce the frequency and severity of industrial accidents.

You have also heard, or you will hear, about the effect of statutory amendments on the cost of these injuries.

Despite the best efforts of the loss prevention engineers, in 1959 approximately 14,000 workers were killed in industrial accidents. Another 85,000 workers suffered permanently disabling injuries; 1,850,000 workers suffered temporary disabilities as the result of occupational accidents.

The direct cost of these accidents in 1959 was approximately $2,110,000,000 including loss of wages, medical expenses and the overhead cost of insurance. The National Safety Council estimates that indirect losses such as property damage, interference with production and time lost by workers other than the injured workmen result in an additional $2,100,000,000 of losses.

While the risk manager is vitally interested in the humanitarian aspect of loss prevention, he is also directly interested in protecting his corporation against the cost of those losses which do occur despite everyone's best efforts.

Workmen's Compensation losses fall in an area between direct damage to physical property and third-party liability claims. Losses arising out of direct damage to corporate property represent an immediate and exactly determinable loss. Third-party liability losses include a significant number of claims which are indeterminate both as to the amount of the loss and the point in time at which the loss will be paid.

The majority of Workmen's Compensation claims are immediate and exactly determinable as to amount. A small number of these claims may result in payments extending over a period of several years and a portion of these claims will involve questions of the exact liability of the employer.

Because some claims will result in liabilities extending several years into the future, and because the total annual cost of normal or nominal dollar amount claims will

fluctuate from year to year, the risk manager is concerned with two problems. First, he must protect his corporation against extreme fluctuation in the annual cost of Workmen's Compensation claims. Second, he should be able to furnish his Cost Accounting Department with sound and accurate cost figures.

ALTERNATIVES

Insurance

The business enterprise which has a limited number of employees and a relatively small payroll faces greater relative fluctuations than does the large corporation, even though the absolute fluctuation may be much smaller. The small enterprise, therefore, must look to commercial insurance as the only solution to the establishment of fixed costs for Workmen's Compensation claims.

Self-Insurance

As the enterprise grows in size, it approaches the point where self-insurance should receive serious consideration.

Two criteria must be considered. First, can the corporation satisfy the statutory requirements in order to qualify as a self-insurer? Second, is self-insurance the more economical approach?

The answer to the first criteria, i.e., statutory qualification, will depend upon the conditions established by the administration of the states in which the corporation operates.

The mere fact that the employer can meet the statutory requirements for self-insurance should not be taken as final proof that self-insurance should be considered. The state authorities are properly concerned primarily with the welfare of the injured worker. A financial position which satisfies the state authorities that the injured worker will be compensated does not guarantee that the best interest of the stockholders will be served by the use of self-insurance. In the event of a catastrophe, there may be sufficient assets to pay the claims of injured workers as well as other first line creditors, but the payment of these claims as well as other direct and indirect losses may damage the stockholder's

equity beyond the point of no return.

The risk manager must recognize his responsibility to the owners of the corporation, and not jeopardize the long-range existence of the corporation for the sake of short-range economics.

The second question, i.e., economy, represents a problem which must be solved by the risk manager on the basis of the facts peculiar to his organization.

The cost of insurance is exactly determinable. It may be determinable in advance as is the case under "prospective" rating methods, or it may be determinable within specified limits as is the case under "retrospective" rating methods. In either event, the risk manager can furnish his management with costs which are either known or which are variable within acceptable limits.

If the variance between minimum and maximum premiums under a proposed retrospective rating plan is too great, the risk manager can consider the purchase of "Retrospective Penalty Premium Indemnity" insurance. This will limit the maximum cost to the standard premium plus the premium for the penalty premium insurance.

When self-insurance is employed, the risk manager must either accept the almost impossible task of forecasting catastrophic losses or else he must "hedge" the self-insurance approach with a catastrophe (or large deductible) Workmen's Compensation insurance policy.

Unfortunately, some individuals responsible for insurance have made the mistake of comparing the cost of commercial insurance with the cost of benefits plus adjustment expenses without giving consideration to the cost of providing catastrophe protection.

The decision to self-insure should, therefore, be based upon a comparison of the cost of commercial insurance under the most advantageous rates and a rating program which can be negotiated as opposed to the total costs of being self-insured. These costs should include all benefits paid under the provisions of the state compensation acts, the cost of adjusting claims including any necessary appearances before the state industrial commissions, the cost of appeals from the decisions of the state industrial commissions, the cost

of replacing the safety and loss prevention activities of the insurance company, and the cost of protecting against catastrophic losses.

I suggest that self-insurers should give serious consideration to developing a market for the purchase of long-term disability benefit policies or annuities to provide for the payment of benefits to workmen who suffer permanent disabilities and to the widows of employees who are killed in industrial accidents. At the present time, self-insurers, for the most part, are faced with long-term liabilities due to these two classes of beneficiaries and federal income tax laws do not encourage the recognition of these liabilities until such time as the payments are actually made.

The liabilities to these two classes of beneficiaries are subject to revision in the event of the subsequent death of the workman or the death or remarriage of the widow. No individual employer has enough cases of this type to apply the conventional mortality or remarriage tables with any degree of actuarial soundness. An insurance company which would issue single premium policies for this purpose would have a sufficient spread of risks to establish accurate average premiums. The purchase of such a policy by the employer should qualify for treatment as a business expense for tax purposes.

This approach would also have the advantage of reflecting the total cost of the death or permanent injury in the company's operating statement for the year in which the injury or death occurred.

While some representatives of the insurance industry would resist the development of these special purpose policies on the grounds that they would give aid and comfort to the "enemy" (self-insurers), these policies would serve three useful purposes:

1. Beneficiaries would have the added security of the insurance company's guarantee to supplement the employer's primary liability.

2. The state industrial commissioners and insurance commissioners could be assured that long-term liabilities of self-insurers are guaranteed regardless of the future financial fortunes of the employer.

3. Self-insurers could discharge all of their long-term liabilities in the year in which the loss occurs.

Present Federal Income Tax laws do not permit self-insurers to "write off" reserves as deductible business expenses. For a short period of time in the middle 50's, reserves for future liabilities could be deducted as current business expenses, but this treatment was deemed a "loophole" and plugged after a very short period.

As a result the self-insurer must establish these reserves out of earnings after taxes. While some self-insurers do label a portion of earned surplus as a reserve for self-insurance, the majority of self-insurers treat workmen's compensation losses as a charge against current operating revenue.

Even when self-insurance reserve is established it suffers from two serious drawbacks.

First, and most serious, the reserve is simply a matter of attaching a label to part of earned surplus. There is seldom a balancing item in the asset side of the balance sheet. If a reserve is to act as a true self-insurance fund, it should be balanced by a specific appropriation of a portion of quick assets, and these assets should not be used when the current ratio of the corporation is computed. While this criterion may appear drastic, the self-insured corporation should recognize that the insured corporation has used a portion of its income to purchase an insurance policy which guarantees, without limit, the immediate payment of all liabilities under the Workmen's Compensation acts.

The second difficulty arising out of a self-insurance reserve which is a reserve in name only is that the title is subject to misunderstanding. Is it a reserve for third-party liability claims, a reserve for losses to company property, a reserve for Workmen's Compensation liability, a reserve for unfunded and uninsured past service credits or a combination of two or more of these? The amount of the so-called reserve may be very reassuring if the analyst has only one of these potential costs in mind.

We should not lose track of the fact that a true catastrophe could result in serious damage to company property, injury to employees and liability to others for bodily injury and property damage. If the damage to the plant results in a

long period of suspension of production, there will be a serious loss of future profits, and if a number of older employees elect early retirement as a result of the shutdown, there may be unexpected retirement plan expenses.

I mention this extreme situation only to emphasize the rude shock which awaits any management which has been lulled into a sense of false security by an improperly designed program of self-insurance.

This sense of security is unfortunately encouraged by the reassuring sound of the phrase "self-insurance." In too many cases the emphasis is placed upon the word "insurance" and the word "self" is gracefully elided. While the term self-insurance may be criticized as self-contradictory, it has gained popular acceptance both because of its reassuring sound and because it has an established legal recognition in the workmen's compensation statutes of many states.

A properly designed program of self-insurance is based upon two essential premises. First, all of the costs of self-insurance have been determined to be less than the cost of commercial insurance. Second, the total annual cost of losses assumed will not exceed a predetermined maximum. This maximum cost may be established by the purchase of catastrophe, or stop-loss, insurance. When catastrophe insurance is purchased, the risk manager must determine not only the deductible but the amount of coverage to be purchased in excess of the deductible.

When a risk manager considers the various methods of providing funds to meet the cost of workmen's compensation benefits, he cannot isolate workmen's compensation any more than he can isolate other exposures to loss. All sources of loss should be considered as interrelated.

I mentioned previously the possibility that a single occurrence could result in several types of loss. Even after the risk manager and top management have established a maximum acceptable limit for assumption of loss, the risk manager has not solved his problem; he has only established a point from which to start.

Management may agree, for example, that any loss up to $200,000 can be assumed without serious harm to income or assets. What if there is more than one serious loss during the fiscal period? A more logical approach is to consider the total maximum annual loss cost that management is willing to assume.

Insurance premiums for an existing program of full insurance protection (liability, Workmen's Compensation, fire and business interruption) may have been $500,000. Management may agree to a program which contemplates the assumption of "normal" losses and the purchase of protection against "excess" losses subject to a maximum annual cost of $700,000. Under this set of rules, the risk manager must use all of the actuarial, engineering and underwriting skills he can muster to be certain that the maximum annual cost will not exceed the top limit established by management. He must also ascertain that the average annual cost, over the long run, will be less than the cost of a program of full insurance protection. The risk manager must select, for self-insurance treatment, those exposures which represent the maximum potential saving.

Two factors combine to suggest that fire insurance will be the risk manager's first choice for self-insurance treatment. First, there is the important distinction between physical damage losses, which need not be adjusted unless insurance is purchased, and third party losses such as Workmen's Compensation and public liability which must be adjusted whether they are insured or uninsured. In this connection, the purchase of full coverage fire insurance creates the additional expense of adjusting insured losses with the insurance company.

The second factor which establishes fire insurance as the first choice for self-insurance is the availability of retrospective rating plans for Workmen's Compensation and public liability exposures. These plans permit the insured to develop costs which are related directly to the losses which occur during the policy period. At the same time, they provide insurance against individual losses in excess of a predetermined limit; and the annual maximum premium establishes retrospective rating as a type of aggregate annual deductible insurance.

Unfortunately, seven states which have monopolistic state funds do not permit the nationwide operation of the retrospective rating plan, although two of these states do permit self-insurance. Many business organizations, and the United States Chamber of Commerce, are of the opinion that these monopolistic funds constitute interference with freedom of private enterprise. Nevertheless, a risk manager must recognize the existence of such laws and plan his Workmen's Compensation program accordingly.

Having voiced this plea for freedom of private enterprise, I will make one final comment on the matter of freedom. The continued existence of a competitive insurance industry is of vital interest to the entire American economy. Insurance companies will continue to meet these needs only as long as they can remain free to charge appropriate rates. I do not want to antagonize either side in the "brouhaha" which is developing with respect to "prior approval" versus "no approval" rating laws. One of the arguments used in favor of strict rate controls is the fear that rating freedom would result in cut throat price competition and the ultimate insolvency of some insurance companies. This possibility, if true, is serious because of the volume of Workmen's Compensation benefits guaranteed by the insurance industry. Of course employers and employees in Wisconsin are protected against this possibility by the Stock, Mutual and Reciprocal guarantee funds established under the provisions of the Wisconsin statutes.

In the long run, though, which is economically more desirable, rating laws which protect the least efficient competitors or rating laws which encourage the most efficient?

Symposium on Workmen's Compensation in a Dynamic Society

University of Wisconsin

"Accident Prevention and Safety"

Paper Given by W. H. Lowe, Treasurer, Inland Steel Company, Chicago

May 9, 10, 1961

Accident Prevention and Safety

It is indeed an honor to be a participant in such an historic event, marking the 50th anniversary of the first American experiment in social legislation.

The history of the organized safety movement in America is closely tied in with the enactment of workmen's compensation legislation. Individual and public reaction against deaths and injuries sustained in hazardous industrial employment was expressed both in concern for financial protection of the injured worker and desire to eliminate the basic causes. Thus, in 1911, the same year in which the Wisconsin Workmen's Compensation statute was passed and upheld, the Association of Iron and Steel Electrical Engineers requested a general safety conference on a national scale, and this resulted in the First Cooperative Safety Congress, also held in Wisconsin - at Milwaukee - in 1912. Out of this meeting both the safety movement and the National Safety Council were born.

Many factors have, of course, contributed to the growth and success, over the years, of the safety movement, both in industry and in general. Enactment of workmen's compensation laws provided initially a financial stimulus to accident prevention. But more significant, I believe, was the moral reaction of industrial leaders as well as the entire citizenry to wasteful loss of life and limb; for this reaction really led industry to accept the financial responsibility imposed upon it by the compensation statutes. Such moral reaction led to the concept on the part of many that accidents should be preventable. This concept was further heightened by World War I, which emphasized a further tremendous waste of life and limb. Following the First World War, the safety movement made tremendous strides in industry and was given further impetus by World War II, which brought about the realization that more lives were lost and more injuries sustained annually by accident than had been incurred in the course of the war.

An important factor, of course, was the increasing emphasis on efficiency in American industry. Modern technology played a dual role. It enabled the incorporation of safety features into the design of more efficient equipment. The high costs of training workers to operate modern equipment greatly increased the indirect financial costs to employers of lost-time accidents. It soon became evident that expenditures on safety were recovered many times over by these indirect and direct financial savings.

The changing concepts of industrial relations have also been important, and the role of labor unions must be properly acknowledged. As industrial managements viewed with increasing concern the welfare of employees, emphasis on safety and health has increased.

Thus what started as a move to alleviate the financial hardship and suffering caused by accidents soon became a determined effort to eliminate the accidents themselves.

No one group can claim credit for the accomplishments to date in the field of safety. The cooperative and untiring efforts of all segments of industrial and public life have been required. The success experienced to date has undoubtedly been achieved more because of the widespread cooperation and contributions than other factors.

What results have been achieved over the last fifty years? In my opinion few reform movements in history have realized such impressive gains so quickly. Hundreds of thousands of lives have been preserved. Industry and employees have been saved billions of dollars.'

Let us look briefly at what has happened to the accident rate in America. For the years 1930-7, the average annual accidental death rate was 88.9 per 100,000 of population; in 1959 the rate was only 51.6, a drop of 42%. This means that some 63,000 fewer deaths occurred in 1959 than would have been lost if the earlier rate still prevailed. Furthermore, if we look at the working population (defined for this purpose as ages 25-64 years), the accidental death rate has been cut in half over this period. in 1959, only 15% of the total accidental deaths amounting to 91,000 were work deaths. The balance were classified as motor vehicle, public and home.

Similarly, only 20% of reported injuries in 1959 were work-incurred, the balance being spread in these other categories. It is regrettable that data on injuries, their frequency and severity, do not extend as far back as data on deaths. It is, of course, much harder to collect reliable national data to cover all industries. The National Safety Council has compiled representative data since 1926 from its members, and this shows that frequency rates (disabling injuries per 1 million manhours) have dropped from 31.87 in 1926 to 6.17 in 1958, or almost 80%, while severity rates (days lost per 1 million manhours) have declined almost as significantly during this period - from 2,500 to 744, or 70%. Though this data is based only on companies reporting to the Council, it is believed reliable because it is based, for the latter year, upon reports of almost 11,000 companies and units, principally manufacturing units. However, this data represents primarily the experience of large manufacturing plants.

The obvious conclusion to be drawn from such data is that accident prevention programs do work. Further evidence can be found in the results of specific industries. I vaguely remember a Lon Chaney film of some years ago that involved a steel mill and portrayed how workmen fell into huge vats of molten steel and slag, certainly a hideous occupational hazard, In these earlier years steel mills were regarded as - and were - relatively dangerous work places. Today the steel industry ranks as the 6th safest amongst all 41 industry classifications. The Pacific Coast Association of Pulp and Paper Manufacturers reports that its 45 members achieved an 84% reduction in frequency rate in the ten years from 1945-55, representing the prevention of more than 10,000 disabling injuries. The members of the Can Manufacturers' Institute accomplished a reduction in frequency rate from 14.9 to 5.97 between 1950 and 1955. Members of the Gypsum Association improved their safety record 83% in the last 13 years, and accomplished a 36% improvement in 1956 alone.

What does this mean for workmen's compensation? Reductions accomplished in the number of accidents obviously has meant significant dollar savings for employees as well as avoidance of financial loss and suffering. We can all take some comfort in the fact, that, without effective accident prevention, the total costs of workmen's compensation over the past 50 years would have been greater by billions of dollars. How have these significant results in industrial accident prevention been achieved? Industry quickly learned that engineering could prevent accidents, so safer equipment and methods have been, and are constantly being devised. Coupled with this development has been the growth in the number of people who devote their working hours to accident prevention, our wonder corps of safety specialists.

Industrial experience has also shown, however, that improvement of equipment and methods is not enough. Employees had to be educated; explanations of the reasons for adopting new methods and techniques, as well as constant reminders, had to be provided. All such education appeals, of course, to the individual self-interest.

But, being human, we are all both wonderful and yet strange creatures. We can read that 90,000 Americans are killed accidentally and over 9 million injuries suffered each year; but each of us quickly concludes that it's the other fellow who is involved in accidents, not us. Because of this, industry soon learned that something more was required to make accident prevention work. Rules and regulations covering safe work practices had to be set down, and penalties imposed for non-compliance.

Thus developed the "three E's"of safety - Engineering, Education, and Enforcement. These have been the basis of success in industrial accident prevention, and are currently seen to be the only effective basis in other safety areas, such as traffic safety.

One very important contributing factor to progress in industrial accident prevention has been, I believe, the interchange of information and ideas among those concerned with safety. Through conferences of safety-minded people, such as those sponsored by the National Safety Council and various state and local councils, as well as other groups; through industry associations; through innumerable publications; and through a variety of other ways; knowledge gained from experience and research as well as new ideas and techniques have been freely exchanged. As a result, trial and error approaches have been obviated in countless individual situations.

Success, of course, is relative. While industrial accident prevention has been successful to date according to the measurements commonly used and indicated earlier by me, I do not want to suggest that the job is fully accomplished. Much - very much - remains to be done.

While the accident frequency rate has been reduced dramatically, the total number of deaths and injuries has increased, because our population has risen so greatly. A total of 93,000 Americans were killed accidentally last year as against only 72,000 in the years 1903-7. While there are proportionately fewer industrial injuries today, the severity has increased, indicating that we are eliminating the minor accidents but are not as successful with the major - and costlier - accidents.

The accomplishments noted earlier in reduction of accident rates have been expressed necessarily in terms of averages. Unfortunately the rate reductions observed have not been made uniformly throughout all industry. Within the industrial community there are large variations in accomplishment from industry to industry and from company to company. A particular area of concern is the small-plant problem. While available data is not conclusive, it does suggest that the frequency and severity rates for small plants are two or three times greater than for large plants. How best to attack this problem? The small plant often cannot employ specialized safety personnel, and may not have sufficient financial resources to improve equipment and techniques. But lives must be saved and injuries prevented wherever possible, large plant or small. Perhaps exclusion of smaller operations from workmen's compensation should be reconsidered, in order to provide safety incentives to smaller employers. If this were done, however, appropriate pooling of risks would have to be worked out, since the accident experience of small units would be unreliable statistically for insurance purposes.

Efforts are being made to reach smaller employers through associations for safety purposes, but this is a difficult process. Some small employers have demonstrated, of course, that they can carry on effective safety programs.

One very important problem area of accident prevention falls outside the direct scope of workmen's compensation; but it should be of vital concern to employers -- namely, the off-the-job accident toll. Since most employers now bear part (if not all) of the costs of group sickness and medical insurances they are incurring the costs of nonoccupational accidents just as surely as they bear the compensation and other costs involved in occupational disabilities.

And I would point out that, in many instances, the benefits provided to employees for off-the-job accidents are greater, in relation to wages, than those paid under workmen's compensation. This development of recent years is certain to have a profound effect on the future level of workmen's compensation benefits.

Even if the level of benefits were the same for both occupational and nonoccupational injuries, the total cost of the latter would still be greater for most companies because the frequency of off-the-job accidents is greater. Based on the studies of a number of companies, the off-the-job accident rate runs anywhere from 5 to 20 times as great as the on-the-job rate.

I recognize that this is neither the time nor the place for an extensive discussion of nonoccupational safety. But I would remind you again that of some 94,000 accidental deaths in 1959, only 14% were caused by work accidents; 39% were caused by motor vehicle accident; 29% were the result of accidents in and around the home; and 18% resulted from "public" accidents, that is, in public transportation, recreation, etc. Of the home accidents half occurred to persons under 65. Of the public accidental deaths, almost half were caused by drowning. A National Health Survey for 1957-8 indicates that 65 million days were lost from work due to off-the-job accidents, as compared with only 41 million days lost due to on-the-job accidents. It is estimated that off-job accidents cost workers and their families some 3 billion dollars a year, and employers over half a billion.

Many industrial companies already have in effect off-the-job accident programs supplementing their in-plant programs. As more and more managements become aware of the costs and losses, both direct and indirect, their companies are incurring for nonoccupational accidents, safety efforts among employees and their families will undoubtedly increase.

Yes, much remains to be done. No one can sit back contentedly. All must continue to exert utmost efforts to this important cause.

To assure success in the future as outstanding as that achieved over the last 50 years, three things are required, it seems to me.

First, more must be done in the area of research on human behavior and motivation with respect to safety and accident prevention. We know that a large part of the accidents occur each year because individuals become careless. Why do they? Not enough is known to really answer this question effectively. For a number of years the National Safety Council has published estimates of projected deaths on the highways over certain national holidays. But Americans seem to ignore - or at least take very casually - these dire warnings; and the toll of death and injury continues to mount. A recent survey on automobile seat belts indicated both a lack of understanding and a conviction on the part of respondents that it was "the other guy" who needed belts, not they. Yes important and basic research is required in the human area.

Secondly, the concept of moral responsibility must be fully developed and inculcated in all of us. Certainly needless destruction of life and health is a moral failure. The commandment "Thou Shalt Not Kill" seems to apply to everything--except when we get behind the wheel of an automobile or a motor boat!!

I have been struck by the newspaper publicity given to certain events. A few months ago our Chicago papers were full of the story of an English exchange teacher who was brutally assaulted in a major Chicago park; fortunately she recovered. But for the 93 individuals killed in traffic accidents on Chicago streets so far this year, a few lines in the "obit" columns usually suffices. Why do we not feel the same sense of outrage in these latter cases? Have we become so calloused that we just don't care? Or are we simply reflecting the attitude that, because accidents are someone else's fault, they are no concern of ours?

Lastly, I firmly believe that continued progress in safety and accident prevention is possible; but if it is to come true, every individual must rededicate himself to this goal. Nothing less will suffice. As Americans we believe in life, liberty and the pursuit of happiness. Throughout the history of this nation Americans have fought to preserve liberty. Surely we will be willing to fight the same fight to preserve life and happiness--through safety and accident prevention.

E.7.1.

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Remarks Given by

William M. Douglas, President

International Association of Industrial

Accident Boards and Commissions

May 10, 1961, 1:30 P.M.

Wisconsin Center Building

FUTURE PROSPECTS - ROUND TABLE

As President of the International Association of Industrial Accident Boards and Commissions, commonly known as the IAIABC, I have been asked to address this symposium as a member of the panel on FUTURE PROSPECTS. May I point out that our active membership roster includes every Province of Canada, the Republic of the Philippines, New Zealand, Puerto Rico, and every state in the United States except Alabama, Louisiana, and Utah. We are very much interested in obtaining applications from these three states and I am hopeful that Utah will join the association this year; also I have information from Louisiana that a study is now going on in that state which may lead to their association with the IAIABC.

As Associate Members we have many of the leading Insurance Carriers, Industrial Organizations, Actuaries, Unions, Medical Associations, and law firms in the United States. We are grateful for the support of these organizations and I am happy to report that additional applications are being received from qualified companies every year.

While a number of my remarks may be applicable to all jurisdictions, you should understand at the outset that I am speaking about jurisdictions in the United States, since your symposium has been called to celebrate and recognize the fiftieth anniversary of workmen's compensation in the great state of Wisconsin.

During the twenty-one years that I have administered workmen's compensation in Hawaii, I deem it significant that in dealing with other leaders in this field I have yet to find the completely satisfied administrator, commissioner or director. They are striving to improve the laws in their jurisdictions, frequently under tremendous handicaps. Progress has been largely disappointing and, while a few jurisdictions have taken steps leading to more liberal benefits and modernization of operations, there remains a serious lack of standardization that our association in cooperation with the Council of State Governments and specialized consultants are trying to correct.

The Bureau of Labor Standards of the United States Department of Labor has appropriately taken the lead in calling attention to many of the more glaring deficiencies. For example, Bulletin 212 illustrates differences in the types of workmen's compensation laws, coverage, and benefits. Of particular interest to those of you who have an interest in the future of workmen's compensation is the last table printed in this bulletin. Only two states in the United States, Arizona and Hawaii, provided a weekly maximum equivalent to the average weekly wage reported.

Our benefit goal is clear; unless we get off our landing pads and provide realistic maximums for the victims of work injuries and their dependents, we will be faced with the possibility of federalization of our workmen's compensation system.

Nearly seven years ago my friend, Max D. Kossoris of the U. S. Bureau of Labor Statistics, in writing an appraisal of workmen's compensation in the United States, made the following statement concerning the outlook for workmen's compensation which almost is as true today as it was at that time:

> "The history of workmen's compensation development in the States does not encourage an optimistic view of future growth. In many States the basic statute is antiquated, holding fast (with some exceptions) to the more limited objectives of the experimental legislation of the early pioneers in this field. The laws, and the administration of them, generally have not grown with a more enlightened social point of view. Too many administrators continue to serve only as adjudicators of contested claims and--again with outstanding exceptions--are handicapped by the limited tenure of their appointments.
>
> "Few States have the necessary data to permit an adequate evaluation of what the law accomplishes, where it falls short, and what changes are necessary to keep it at socially desirable levels. Few States are in a position to gauge what, if any, additional costs would

be involved in liberalizing the benefit provisions of their acts--both in terms of benefits to offset wage loss and more liberal provisions for medical care and hospitalization. Few States are concerned with the rehabilitation of permanently impaired workers, and fewer still, with an active part in accident prevention.

"There is a need today for stronger public concern with the inadequacies of workmen's compensation legislation and its administration. In spite of the tremendous forward strides in other social and economic areas, our compensation legislation and administration, on the whole, lag far behind."

To those who would question my reference to the above criticism at this late date, may I point out:

1. There are still twenty-four states in the U. S. with elective workmen's compensation laws.

2. There are still twenty-nine states that make exemption for employers with less than a certain number of workers when every workmen's compensation administrator knows, or should know, that the employer who needs coverage the most is the small employer unable to finance compensation losses.

3. Only six jurisdictions (California, Connecticut, Hawaii, Ohio, Puerto Rico, and Vermont) provide coverage for farm workers in the same manner as other employees.

4. Nineteen states still cover only enumerated occupational diseases and two furnish no protection for such conditions.

5. Fourteen states still limit medical benefits necessitated by industrial injuries. The cost limitations range from $1,200 to $15,000, and the time limitations from 20 weeks to 5 years.

6. Approximately one-half of the states limit medical benefits in occupational disease cases. These limitations are on either duration or cost, or both.

7. Less than half of the States have a flexible provision relating to the time that a claim must be filed in order that the case may be given favorable consideration.

8. Five states have no subsequent injury funds.

9. Only seventeen states provide for special maintenance or other compensation to facilitate the rehabilitation of an injured worker.

10. Only ten states provide appropriate death benefits.

11. About half the states provide compensation for life in cases involving permanent and total disability.

12. Only two states provide 100% of the average weekly rate for maximum compensation payments.

13. Five states still have court administration of workmen's compensation.

It is with the above deficiencies in mind that I say to you that we must all renew our efforts to bring our workmen's compensation laws up to standard if we are to avoid criticism within and without the operational field of workmen's compensation. Along these lines, you should know that we are sponsoring action by the Bureau of Labor Standards to recognize those states whose laws meet or exceed the recognized standards. We hope that such recognition will be made for the calendar year 1961.

Please do not believe that the picture reflected so far is as remiss as it might seem. Many of the states are making maximum effort to comply with the recommended standards.

It is gratifying to note the support given by Unions, Insurance Carriers, Employers, and groups such as the Council of State Governments, International Association of Government Labor Officials, American Medical Association, and the IAIABC in behalf of the injured worker and his dependents. The outlook is favorable although by no means cause for complacency. The profits of gloom and doom have been with us for many years and will continue to look with disfavor on obvious progressive efforts to bring our laws up to standard. If we keep our eyes focused on the objectives outlined by the experts and refuse to be dissuaded from our goals, we will succeed where others have failed. I am confident the job is being done and will be completed within the next few years. To this end we must dedicate our efforts and refuse to reflect on the disappointments of prior years.

The future is bright to the extent of the efforts and energies we expend in the advancement of workmen's compensation objectives. I know you will all want to join in the development of this part of the history of the United States. To the accomplishment of these noble purposes we solicit your unswerving cooperation and support. Teamwork will get the job done quicker and better than isolated independent actions. Everyone must realize that accident prevention, occupational disability benefits and rehabilitation are the keys to success. We should not relax our attention from any one field of operations lest the other two become adversely affected.

You will note that I have purposely failed to discuss the Hawaii State Workmen's Compensation Law and the benefits provided, which are known to be as liberal as any provided in the United States today. Liberal benefits often nurture administrative headaches and I wish I had time to discuss some of these problems with you today. I will only say that such problems are the province of the administrator and should not be the concern of most people with interests in the field of workmen's compensation. I doubt that there is anything wrong with any workmen's compensation operation in the United States today that some liberal amendments and healthy appropriations would not cure. Let us continue to diagnose our own problems but seek the assistance of Labor Unions, Insurance Carriers, Medical Associations, Legislative Bodies, Legal Representatives, Employers and the Public

in obtaining the remedy.

May I take this opportunity to invite you all to attend the 47th Annual Convention of the International Association of Industrial Accident Boards and Commissions in Honolulu, November 12 to 16, 1961? We expect to have the most interesting and provocative convention ever held in the history of our association. There will be panel discussions and talks on accident prevention, medical problems, court decisions, changes in the workmen's compensation laws, rehabilitation, and other subjects to excite the interest of the conferees. We are also planning a number of educational and entertaining sessions which I am sure you will not want to miss. If you have not already received an advance notice, please write to our Secretary-Treasurer, Mr. Arthur Motley, Bureau of Labor Standards, Department of Labor, Washington, D. C., and he will see to it that you receive an invitation. The convention headquarters will be the beautiful Princess Kaiulani Hotel at Waikiki in Honolulu. If you have suggestions that will contribute to the success of our convention, please let me hear from you.

Thank you for your kind invitation to appear today, and as we say in Hawaii, "ALOHA NUI KAKOU."

INJURY AND RECOVERY IN THE COURSE OF EMPLOYMENT

Earl F. Cheit

Institute of Industrial Relations

University of California at Berkeley

Presented May 10, 1961 at
University of Wisconsin Symposium
on "Workmen's Compensation in a
Dynamic Society," Madison, Wis.

INJURY AND RECOVERY IN THE COURSE OF EMPLOYMENT*

Anniversaries are a time for reminiscing and for looking ahead. My assignment in this symposium is to look ahead, but even a very brief review of the past provides some helpful perspective. The first thing that stands out in a review of the past is the rising rate of injury and death that made grotesque the continued application of the old common law rules of liability for work injury. It is helpful to recall that early 20th century setting, for in it workmen's compensation was a bold idea -- one that challenged the imagination in somewhat the way that discussion of rocketry does today. I recently attended a high school debate on the question: who is ahead in the space race? In 1914, the Yale-Princeton debate asked this question: should injured workers receive compensation without regard to negligence?

To the charge that workmen might malinger under a workmen's compensation system, the 1914 affirmative responded: "Even if they did, could they ever malinger enough to offset the wrongs workmen have suffered without compensation? Who is to pay the long account of selfish and brutal employers? Must workmen be saints so that employers may with impunity be devils?"

The Workmen's Compensation Idea

In this early atmosphere of crusading reform -- once so strong here in Wisconsin -- workmen's compensation -- our oldest, most authoritative social insurance -- was born. It was won the hard way, as state after state finally overcame legal traditions and constitutional objections, without the leverage of federal law or strong union support. But once it gained acceptance, the workmen's compensation idea -- that injuries are an incident of industry and should receive medical care and compensation without regard to negligence -- has not until recently been seriously challenged.

Its durability established, this principle of "liability without fault" proved flexible enough to enable workmen's compensation to adapt to the full range of modern working conditions and hazards. The originally narrow interpretation of that famous phrase "accidental injury arising out of and in the course of employment" has broadened to include the victim of occupational disease and the worker whose pre-existing disability is aggravated by his job. It has even brought benefits to a Denver University football player injured in scrimmage; to a New York office boy hurt when the paper clip he was shooting with a rubber band backfired; and to the widow of the California executive whose suicide was traced to a work-caused manic-depressive state.

Criticisms: New and Old

Only in the publicity they attract, however, do the exceptional and liberal applications of workmen's compensation overshadow the more common result:

---

* This title and most of the material for this paper are taken from my forthcoming book, Injury and Recovery in the Course of Employment, New York: John Wiley and Sons, 1961.

inadequate benefit protection and obstructed rehabilitationof seriously injured workers. Nor have the results at these two extremes merged into same satisfactory average. Instead, they have produced two distinct criticisms, whose double-edge has made the status of workmen's compensation today more controversial and its future less secure than at any time since its earliest histroy.

Some of its critics contend that workmen's compensation threatens to extend to cover every disability, regardless of origin, whereas others emphasize that it is creating ever more serious benefit inequities and barriers to rehabilitation.

Interestingly, these criticisms of workmen's compensation arise at a time when three of its important traditional issues -- accident rates, compensation costs and the rate of benefit progress -- are less pressing than at any time in the past two decades.

The overall work injury record has been improving. In each year since 1940 (the unusually high tolls of the war years excepted) about two million Americans suffered a work injury involving at least one day of lost work time. But both the absolute and relative rate of injury is decreasing. An 8 per cent increase in injury rates in 1959 reversed this trend, but the overall record is still a favorable one. The injury severity rate has also declined, almost steadily, since the end of World War II.

The human toll is still large -- nearly 15,000 killed annually, some 80,000 persons disabled for life, and nearly two million disabled temporarily. Over one-fourth of these temporary disability cases extend beyond three weeks. Still, the record is improving, and while it is not as satisfying as it might be, the number of work injuries can hardly be a sudden cause for new concern with work injury compensation.

Owing partly to this decrease in accident rates, the relative costs of workmen's compensation are also declining. Although costs relative to covered payrolls have increased slightly in 1957 and 1958, they remain relatively low. Relative costs for 1958 are one-fifth lower than those of 1940, and despite substantial benefit increases in the past decade, they stand, at .96 exactly where they were ten years ago. Thus, although costs have risen in some jurisdictions, their overall burden hardly explains the renewed interest in compensation reform.

Nor can it be claimed that work injury compensation laws are making poorer progress toward their objectives than they have in the recent past. During World War II, workmen's compensation cash benefits tended to be badly outstripped by wage increases, but since that time the system has suffered no comparable relapses. Total benefit payments as a per cent of covered payrolls, .61 in 1958, are higher than any year since the end of World War II. Coverage, too, has improved. Although in 1956 at 78.1 per cent of the potentially eligible labor force, coverage was two percentage points below the peak of 1953, it was nevertheless 11 per cent above the 1940 level, and about equal to any year since the end of World War II.

The new criticisms of compensation, then, are not spurred by these long-standing issues in work injury compensation. True, much acute dissatisfaction with workmen's compensation still stems from its failure to

keep up with what has become economically and medically possible. Benefits have tended to lag behind wages and private disability programs; and while medical advances offer hitherto unhoped for promise of recovery and rehabilitation, the gap between promise and performance here is perhaps greatest of all. Moreover, the administration of workmen's compensation remains, in many jurisdictions, far too frail. The delays, costs and legal contests are still a drain on the system's goal of prompt, assured payment.

But added to these important issues which from its beginning have plagued workmen's compensation, are three new ones which push to the forefront the question of its very survival.

First, the traditional forms of work injury compensation are shrinking in importance. Workmen's compensation coverage has not extended to include those areas originally outside its jurisdiction. Instead both the compensation and the employers' liability jurisdictions are being increasingly covered by private disability plans, supplementary benefit programs, and even more important, by the extension of social security and railroad retirement laws into the area of disability.

Second, the cash-oriented administration and adverse incentives involved in workmen's compensation obstruct effective medical care and defeat successful rehabilitation. Even where a statute provides unlimited medical benefits, the care is often not adequate and frequently becomes involved in proceedings to determine cash benefits. Rehabilitation is not an official part of most laws, but even where it is, it is often defeated by the adverse incentives which the laws create. Rehabilitation has been made a hazard to cash benefit recovery.

Third, the legitimate subject matter of a work injury compensation program is becoming more and more difficult to define.

As the requirement of "accident" (trauma) is dropped and the compensation principle is extended to diseases (such as silicosis) attributable to work, and then further extended to diseases (or conditions) aggravated by work, establishing the causal relationship between the disability and the employment raises increasingly controversial questions. The more recent inclusion of heart, hearing, respiratory and circulatory diseases, and now the problem of radiation disability, have greatly added to the difficulty of ascribing occupational origin to disability.

In short, because work injury indemnity benefits have not increased fast enough, other public and private benefit programs are increasingly compensating disability. Medical care and rehabilitation, although they are still the most important objectives of compensation, are being hampered by the very laws which seek to attain them. And finally, because workmen's compensation has generally been liberal in assuming the occupational origin of disability (and because the etiology of disease is growing more complex), the laws are harder to administer.

So critics are asking: must not this system of diminishing importance -- which performs its major functions inadequately, whose administrative costs are increasing because of the many problems of gap and overlap it encounters with the growing number of programs encircling it -- soon give way to a new remedy if its admittedly sound objectives are to be realized?

A Unique Remedy?

The prediction that compensation will give way to some altogether new remedy for occupational disability may prove correct. It is tempting to consider how without the handicap of long accumulated problems some new system such as a unified social insurance program covering all disability could achieve both the original objectives of payment that is prompt, adequate, and inexpensive to obtain, as well as the more recently added goals of full medical and rehabilitation services.

But quite apart from the practicality and convenience of keeping the present system -- which does work, albeit imperfectly -- there is an impressive case for the proposition that workmen's compensation has a unique contribution to make. The merits of this position have been argued many times, particularly in European jurisdictions when integrated systems were being established.

The European experience provides strong precedent for singling out the occupationally disabled for special treatment -- even where a single social insurance system exists.

In his famous report on Social Insurance and Allied Services, Sir William Beveridge concluded that "On balance, the reasons for distinguishing between accident and industrial disease in any employment and other causes of injury, at least where death occurs or disability is prolonged, outweigh the reasons on the other side in favour of complete uniformity."

Four considerations support the case for separate and distinct occupational disability benefits:

(1) they are desirable assurances which help fully to compensate work in hazardous employments;

(2) they provide economic incentives for higher safety standards;

(3) they offer the only justification for limiting liability under the common law;

(4) they constitute payment for a special claim since work-caused injuries and fatalities occur while employees are acting under orders of their employers.

Evaluating Workmen's Compensation

But important as these arguments are, they may be brushed aside unless workmen's compensation performs more effectively. So we return to the criticisms mentioned earlier. Are they confirmed by the actual operation of the laws and the experiences of compensation claiments?

This evaluation is difficult because the facts and figures on workmen's compensation are very hard to come by. Only a handful of compensation jurisdictions seek to gather reliable, original claims data, and none conducts systematic follow-up studies of injured workers. It is not surprising, therefore, that a comprehensive national study of workmen's compensation covering the 54 greatly divergent laws has never been undertaken. Even the

most generous foundation support could not contemplate a thorough field study of all these jurisdictions. Nor has the U. S. Department of Labor been a likely candidate for sponsorship of such a study, since its Congressional rebuke for initiating "model bill" discussions some years ago.

But an alternative approach to comparative analysis can be developed using material from many published and unpublished studies, insurance data, and selected field surveys. The Institute of Industrial Relations, University of California, Berkeley, with the generous aid of the Ford Foundation, established such a research project in work injury compensation three years ago.

Personal interviews with over 1,500 disabled workers or their survivors in California assembled detailed information on their medical and indemnity benefits, their subsequent work histories, and their full financial situation. In order to make estimates of the effectiveness of workmen's compensation laws, a method was constructed for measuring the actual economic losses suffered by injured workers and their families.

The study included a comparative analysis of compensation and employers' liability jurisdictions, based on seamen's claims files from five major steamship companies, and from a large random sample of injury claims, from all Class I Railroads.

The study aimed at determining three issues: how successful is each of the systems in (1) restoring economic losses, (2) providing medical care, and (3) returning workers to their jobs?

The full analysis and findings appear in the forthcoming book, Injury and Recovery in the Course of Employment. The book makes several proposals, and these and others will be the subject matter of a second volume, a symposium on Occupational Disability and Public Policy, now in preparation, with some 15 contributors from the United States and Canada, some of whom are in the audience today.

Let me give you a few main conclusions of the study as they relate to my main assignment here today: New Horizons in Compensation Administration.

Employers' Liability vs. Workmen's Compensation

First, as you are well aware, there is some clamor for reversing the direction of the remedy, and adopting some of the discarded employers' liability approach.

The data from our study comparing employers' liability with workmen's compensation give neither aid nor comfort to this proposal.

These data show that injured railroad employees who successfully cross the coverage hurdle; who have obvious disabilities; who can withstand long delays; and whose claims, if contested, win, probably are better off under the Federal Employers' Liability Act than they would be under workmen's compensation. But there are workers at the other extreme -- barred from recovering for an injury where there was no negligence; deterred from filing claims; pressured into small settlements; without dramatic disabilities to sway a jury; unable to get good representation or to wait for a verdict; or

losers in a contested case -- for them the FELA can produce only bitterness and frustration.

Most temporarily disabled railroad workers fall between these extremes Protected by their unemployment compensation disability benefits and their medical care, they often get settlements which more than restore wage losses, and they may be better off under their present FELA protection than they would be under the workmen's compensation law of most industrial states.

Where there is permanent disability, however, FELA protection is more widely dispersed and less reliable. Perhaps the most telling comparison between workmen's compensation and the FELA is how each handles the most serious cases -- permanent total disability. Here a comparison shows that although about 18 per cent of the FELA cases received awards which exceeded $40,000 and none of the California cases did; that only 8 per cent of the California cases got less than $9,600 and 43 per cent of the FELA cases fell below that amount.

The experiences of seamen under the Jones Act, though differing in detail, present the same general picture. Temporarily disabled seamen with their trident of remedies are the best protected of America's industrial workers, but if permanently disabled, they must gamble on a system which tends to be costly to all parties no matter who wins, especially costly to those who lose, and sometimes unusually generous to those who win, whether they should have or not.

Even with all its inadequacies, workmen's compensation has proven itself a superior remedy to the ones it replaced. Why haven't railroad workers and merchant seamen demanded its protection? Because compensation progress has not been sufficiently widespread or uniform to offset the traditional benefits available to seamen and the attraction of large, if risky, awards under employers' liability procedures. While these factors together with inertia, have assured the continued life of these employers' liability systems, they do not reflect a weakness in the compensation principle itself.

Nor does the compensation for temporary disability cases pose a unique conceptual or legal problem. It can easily be handled by the present compensation system or by other systems, public or private, as indeed it frequently is. We know what needs to be done to make the system adequate; the Social Security Administration figures give us accurate estimates of loss and replacement; the standards worked out by IAIABC committees tell us what to do; the only problem is doing what we know needs to be done. That has proven to be difficult -- but discussing the legislative process is not my assignment today.

But there are three problems which seriously challenge workmen's compensation: survivorship benefits; occupational causation; and permanent disability compensation. I believe all three can be solved within the workmen's compensation framework, but not without careful legislative and administrative action.

The Low Estate of Death Benefits

Survivorship claims are more complicated than temporary disability claims as they involve both an issue of adequacy and equity.

The Institute study confirmed what many have suspected -- that death payments are the least generous in loss replacement of all workmen's compensation benefits -- and even seem to be losing ground. Just ten jurisdictions offer widows' benefits terminated only be death or remarriage, yet such annuities are the only adequate protection for survivors.

Why have death benefits reached such low estate? Certainly not because of their economic burden, since they are paid in but 1 per cent of the cases. And the customary explanation of resistence to benefit increases -- malingering -- is hardly relevant here. It may be that the fact of their small number has left these cases without strong legislative appeal and influence . But the main consideration surely is that the growing importance of survivors' benefits from other sources -- especially social security and private insurance -- has not been lost on the lawmakers. Reported instances of combined OASDI and workmen's compensation benefits which exceed lost wages are no longer rare.

The problem, therefore, is not whether survivorship benefit policies should take account of OASDI. They already do. The danger is that the need for coordinating the two systems of survivorship benefits will not be faced frankly; that for fear of being consumed by the federal program, state compensation lawmakers will officially ignore OASDI, while at the same time they refuse to provide compensation annuity benefits because of it.

It had already become obvious -- even before the data from the California survey confirmed it -- that permitting the two systems to continue side by side without coordination created serious inequities. While some widows receive overlapping benefits that restore more than wage losses, a great many are not covered by social security at all. When these widows face economic hardship, it is particularly unfair, because their limited compensation death benefits are in part due to the existence of OASDI benefits, which unfortunately they did not get.

These problems have begun to stir criticisms, and both the problems and the criticisms will grow. A parchwork or piecemeal approach to the problem will not suffice. What is needed is a coordinated program that fills in existing gaps to assure adequate protection while controlling overlapping benefits. It must start from the premise that OASDI survivorship benefits will constitute the nation's basic social insurance program for premature death and will seek to fill the primary economic needs of covered survivors. Its coverage gaps will be reduced, perhaps eventually eliminated. To this must be added the second premise that even if all coverage gaps in OASDI benefits are eliminated, there are important policy reasons for maintaining a distinct workmen's compensation death benefit, which can be offset by social security payments.

The study has proposed, in outline, what I believe to be an administratively feasible plan of integrating the two systems, consistent with these two premises, which would provide a solid measure of enonomic security to

widows at a reasonable cost.

Such a plan could follow an approach now used in Minnesota, which deducts from the lifetime compensation award of permanent totally disabled workers all social security benefits received by them after a certain compensation benefit has been paid.

For example, let us assume an annuity (terminated by death or remarriage) which paid two-thirds of the average wage earned by fatally injured workers in California and assume a widow, age 41, with children 10 and 6. Costs of such annuities can be estimated from published life and remarriage tables, discounted for present value, and in this case would be approximately $72,235. Her social security survivorship benefits, paid for 12 years during her children's dependency, and, after a nine-year lapse, her retirement benefits paid until her death, would be offset against the compensation annuity, and reduce its cost to $45,520. But cost of the annuity at age 41 is close to peak. For widows both older and younger the total cost of the compensation annuity would be substantially less. The social security offset would reduce this amount correspondingly.

On the other hand, the lower "offset" figure would not apply to those widows who receive no social security benefits -- primarily those with no minor dependent children. For example, the estimated cost of an annuity with the same restoration assumptions for a 22-year-old widow without children would be approximately $49,355.

The terms of the annuity might be designed to reflect the changing needs of the widow, restoring, for example, two-thirds of her losses during the period in which she has minor dependents, dropping to, say, 50 per cent restoration of losses thereafter. Or the amount might be set at two-thirds for the widows with children and 50 per cent for those without.

Although the estimated cost of the proposed annuities is considerably higher than the benefits now provided by nonannuity states, the total cost for the impressive measure of economic security they provide is relatively modest. Moreover, the actual amount which these annuities would add to total cost of compensation benefits would not be large. Death cases now account for approximately 10 to 15 per cent of all dollars spent in indemnity benefits, and all workmen's compensation costs represent a nationwide average of but 1 per cent of payroll costs. Thus, if the schedule of annuity benefits selected by any jurisdiction doubled its present average death payment, the effect of this cost increase would be small in its overall impact.

The advantages of this policy or a similar policy of benefit coordination are obvious: it assures an annuity to survivors and relates payments to need without overburdening the system. It meets the legislative problem squarely, and its passage would assure achievement of the proper objectives of a workmen's compensation policy for widows.

Relating the Disability to the Employment

What of the criticism often cited as the most challenging to workmen's compensation-- the increasing difficulty of relating the disability to employment?

The recent discussions of radiation disability have dramatized the difficulties physicians face in distinguishing between possibilities and probabilities in arriving at the cause of injury or disease. For exposure to this unusual hazard is not only difficult to measure, but its effects, if any, are often unknown, or they may not become manifest for years or even generations after exposure.

Of course, the problem exists, and has always existed in some degree, in all occupations. Every activity by which men earn their livelihood presents some hazard to physical or mental health, and all too often the symptoms of occupational illness or diseases cannot be readily distinguished from other disorders. This is true not only of jobs involving the hazards of advancing technology, but also, as Berton Roueché has pointed out of "...the fisherman's rheumatism, the waiter's fallen arches, the surgeon's hypertension, the miner's silicoses, the boilermaker's deafness, the bus driver's peptic ulcer, and the housemaid's bursitic knee."

Since the problem of identifying the occupational causes of disability is not new, why has it become acute at this point? Not because advancing technology has added newer hazards; actually more is known about these than the older ones, and greater safety efforts are being made in advance of their introduction than ever before, Rather, the problem has become intensified because of changes in the legal premises of the compensation system itself -- the gradual relaxation of the requirement for a causal connection between occupation and employment.

Reasons for Including Borderline Cases

The reasons why the law has taken this course are easier to understand than are the implications of the holdings. Partly it has been simply the process of liberalization and extension of social insurance protections which has been characteristic of the past quarter-century. Workmen's compensation has been generously helped in its move in this direction by the rise of an active plaintiffs' bar and the claims consciousness that is associated with it. The temptation to bring borderline cases under the protection of the long-established, secure compensation systems, whose costs (per dollar of insured payroll) are low, has been too strong to resist.

In retrospect, it seems clear that if social or private insurance protection against nonoccupational disability had existed, workmen's compensation would not have been under the pressures constantly to expand its scope.

Implications of Expanding Compensation Coverage

What are the implications of the libaralizing course workmen's compensation has followed?

Employers express concern that compensation laws may be led to cover more and more of the questionable cases, until they eventually become general disability laws which the employers will be required to finance. Others see this possibility of a general disability program as desirable, and perhaps the only rational possibility given the difficulties of administering a system that requires a demarcation of occupational and nonoccupational disability. In addition to those who foresee (either with alarm or favor)

a single system growing out of compensation, and those who predict that if it adopts firmer policies compensation will be able to continue within its present legal framework, there are those who advocate setting up separate systems to provide protection for just these types of difficult cases.

A special program for these difficult cases might solve some of compensation's problems, but it would create others. It would add new administrative difficulties to the already complex social and private economic security structure. It would present problems of integration with the existing systems. And it would raise serious equity questions. Why then should these cases receive special treatment simply because they present legal difficulties to compensation administrators?

A general disability program covering all nonoccupational cases would avoid these equity problems and would permit workmen's compensation to follow a more rigorous line, producing better claims and reemployment experience. But neither this type of social insurance protection, nor a more radical kind which covered all disability without regard to its cause, would completely solve the problem. For again, unless the experience of European countries is to be ignored, even under this latter program there would be strong reasons for identifying and providing more favorable benefit provisions for occupational cases.

In short, the problem of the borderline cases will probably be part of any system; and its severity will depend upon the degree of protection provided nonoccupational cases and therefore the degree of incentive beckoning workers with borderline cases to claim occupational disability.

Evidence examined in the study (which I do not have time to present) suggests that the problem posed by borderline cases is not a major drain on the system, as is often contended in popular discussions. Only a small percentage of compensation cases are actually involved and an even smaller percentage of compensation costs.

The major problem posed by these borderline cases is not a financial one; it is the adverse effect on rehabilitation and work incentives of the controversies they create. The nondeath cases are often in contest and workers involved are under uncertainty and threat. The long-term effects of this situation far outweigh the costs of including these cases under compensation. If the controversies could be substantially reduced and rehabilitation incentives provided, the most serious aspects of the problem could be eliminated.

But can a general foundation for rehabilitation and work incentives be built into the system? This is not a problem peculiar to heart or borderline cases, but is part of the basic compensation problem in permanent disability cases.

Compensating Permanent Disability

Permanently disabling injuries are unusually difficult to compensate under a mass social insurance program. Consider the handicaps affecting workmen's compensation from its inception.

The difficulties begin with the conceptual basis for permanent disability benefits -- the premise that following healing, there remains a disabling condition which will remain more or less static and unchangeable for the worker's lifetime. This concept may in some cases apply without difficulty to loss of a hand or foot. But many of the ways in which an accident affects the body or disease manifests itself, permit neither concise definition nor objective measurement.

Determination of the extent of permanent disability, or indeed, whether or not permanent disability exists at all, depends upon the degree to which a compensation law (or its interpretation) recognizes symptoms which can not be measured by objective standards.

The difference in definitions of permanent disability among the various jurisdictions is indeed startling. Permanent disability cases as a percentage of all compensable cases range from 5.6 per cent in Hawaii to 65.3 per cent in New Jersey. While certain other factors (chance variations in accident experience, industrial location, safety practices, etc.) influence these figures, there is no doubt that the interpretation of the term "permanent disability" which has evolved in each jurisdiction is the most important factor involved.

What Loss is Being Compensated?

What is permanent disability compensation really paying for? Is the claimant entitled to benefits because he has suffered an actual loss of wages, or because the injury threatens him with future economic loss? Or quite apart from loss of wages, should he be compensated because he has sustained a physical, anatomical or functional loss, with concommitant personal suffering?

When workmen's compensation replaced employers' liability, the vagaries of jury decisions had to be replaced with a rationalized benefit system, which answered these questions with principles that could be uniformly applied. If it was to relate benefits to losses in a rational and equitable manner, workmen's compensation had to define the loss being compensated, and distinguish between varying degrees of that loss in individual cases. But the answers to these questions are still anything but clear, a half-century later.

For example, when there are simultaneous multiple injuries, or, as is more often the case, when injuries and conditions resulting from them do not fit the commonly-used disability schedules, the schedules may raise more complex problems than they solve. Even when the injuries fit the schedule, their economic effects in individual cases often do not. Since the economic consequences of a given disability vary from person to person and among occupations, the schedules often produce serious inequities by paying identical benefits whether economic losses are negligible or overwhelming. Further inequities occur when the cases which cannot be made to fit the schedules are individually considered; these are frequently required to demonstrate present and possibly future wage loss in order to win any awards at all.

Controversy Over Claims

Since benefits in a permanent disability case involve substantial sums of money (lifetime payments may exceed $150,000) there is a strong

incentive for insurance carriers carefully to scrutinize claims, and to contest those considered questionable. This propensity to resist claims, which varies among carriers, is in part justified by them as necessary because the procedure which often puts a premium on the showing of dependency, leads to exaggerated claims.

As a result, a high proportion of permanent disability claims are contested, many of them going through appeals and even eventual court decisions. A series of questions must be answered: Does the symptom, or impairment, really exist? How serious is it? Will it continue? Was it caused, or aggravated, by the occupation? Finally, if the answer to these questions is found to by "yes," what should the benefits be?

Answers to the first three questions must come primarily from doctors. But the medical information needed may be as much in the realm of opinion as fact. And the opinions are sought in highly controversial fields, where knowledge is often limited. Subjective rather than objective symptoms, which do not lend themselves to measurement, characterize many very real disabilities. Two altogether disinterested physicians might reasonably supply very different answers to any of these questions. But unfortunately, medical testimony in these cases often comes from physicians who have been retained by either the claimant or the insurance company. Unless it were known in advance they would testify in favor of the retaining party, they would not be called as witnesses. Thus under compensation procedures these questions are often answered with information supplied by doctors practicing, in Dr. Kessler's famous phrase, "courthouse medicine."

Since few permanent disability claims involve symptoms that can be readily rated into precise numerical or schedule terms, in these cases a frequent prerequisite to winning an award is the demonstration of impaired earning capacity. A subjective complaint that will not show up on an x-ray, for example, is often examined by the next best evidence: that is, by the extent of the economic loss -- present and future -- of the injured worker. Since very substantial sums of money may be involved and medical testimony is often in conflict, the situation stirs controversy and tends to debilitate the worker's incentives for prompt rehabilitation. This is probably the most vexing of compensation's permanent disability problems.

The Problem of Equity

But even after the possible conflict over the degree of physical impairment is resolved, the basis on which permanent disability benefits are to be paid is open to serious question. For although in principle these payments are intended to compensate for lost earning capacity, in fact they cannot consistently do so because the economic effects of disability in individual cases bear no consistent relationship to the degree of physical impairment.

Actually it matters little that each individual's future economic recovery cannot be predicted. It would not be feasible under a mass uniform benefit program to tailor benefits to the needs of each case, even if it were theoretically possible. Some persons need much more than they receive and others receive benefits who do not need them at all.

These equity problems might be overlooked as an unwelcome but necessary price to pay for efficient claims handling, if benefits were high enough for those in need. Assuming adequate benefits, the possible injustice of paying like amounts to individuals with comparable physical impairments but without comparable economic losses might be a small evil in a program as complicated as workmen's compensation. (And the relative inequities are small compared to those committed under the employers' liability system, where recoveries range from very high to none at all.)

But, of course, the benefits are not high enough for those in need.

Thus arises the paradox of permanent disability compensation: on the one hand, historically it has not been possible to enact benefits sufficiently high to cover both the cases that suffer economic loss and those which do not. But on the other hand, it seems impossible accurately to predict those cases that will and will not suffer permanent wage losses so that in individual cases benefits can be more equitable realted to losses. Doubly ironic is the interaction between the parts of this dilemma (if the parts of a dilemma may be said to interact): the inability to identify economic loss provides legislative argument for holding benefit levels down, since some workers are already too "generously compensated."

The Problem Restated

Reduced to its basic terms, the permanent disability problem emerges because many injuries defy rational disability rating and because recovery -- physical and economic -- cannot be predicted. The problems set in motion by these two difficulties create barriers to rehabilitation. Since temporary benefits are low, there are pressures in minor cases for permanent disability ratings and also pressure by workers to keep their healing benefits until they can get a job. And where there is real permanent disability, but a dispute over the size of the claim, the injured worker may actually avoid a job in order not to lose his award -- an award which looks more real to him in this moment of anxiety and insecurity than the possibility of rehabilitation or a tenuous job. This is quite different from malingering. The need for lawyers helps to reinforce this behavior. For their part, carriers resist claims, or at least minimize their size, when the liability involved cannot be measured. They are convinced of the need for this by the fact that workers have an incentive to maximize these claims. Quite often employers are disturbed by these controversial cases and conclude that it is the best policy to sever the employee involved from the payroll.

Consequently, the handling of these permanent disability cases has succeeded in completely upsetting the desired incentives, and everyone in this situation finds it in his best interest to do the things that most discourage rehabilitation: the injured worker does not want to be rehabilitated; the insurance carrier does not want to recognize his claim; the employer does not want to retain the injured worker in his employ.

Is it possible to solve these problems of the permanently disabled within the framework of the workmen's compensation system? Is it possible for workmen's compensation to develop an equitable measure of permanent disability benefits flexible enough to accomodate varied human and economic

effects of disability, adequate, yet prompt and efficient enough for mass administration? If not, workmen's compensation may be forced to give way to an alternative system, for work injury compensation must be judged by its ability to achieve theeconomic restoration of permanently disabled workers. But before we abandon hope for workmen's compensation, can we not make a serious effort to make it work? I beleive it is possible, but not without changing the present administration of benefits and rearranging the incentives to assure workers reemployment after injury. While some of the changes here proposed may seem extensive in the light of present practices, in reality they merely go back to the assumptions underlying the adoption of the original system.

A POLICY PROPOSAL FOR WORKMEN'S COMPENSATION

For workmen's compensation effectively to restore its permanently disabled, the system must proceed from these three premises:

(1) Compensation administrators must undertake full responsiblity for supervision of the entire system to assure prompt, inexpensive and certain benefit payments. This means active responsibility for their major mission: the physical rehabilitation and economic restoration of injured workers, including direction of medical care and control of rehabilitation with careful follow-through case by case;

(2) disability rating procedures must be clarified and rationalized so that rehabilitation incentives are not undermined; and

(3) the rehiring of their disabled workers by employers must become the normal, expected and automatic end of the system.

Methods for accomplishing the first objective have been discussed earlier in this symposium. How can the other ends be achieved?

First, when workmen's compensation attempts to rate the residual degree of permanent disability, it must acknowledge that while rating physical incapacity is difficult, rating occupational incapacity is impossible. It follows that the attempt to reflect occupational incapacity in permanent disability rating (either in detailed percentage ratings or in schedules) should be dropped.

Instead, the system should adopt permanent disability rating procedures that seek to determine physical incapacity alone. Even this assignment is far from simple. Precise rating must be recognized as impossible, because all ratings at best are based on imprecise medical judgments, and because of the many subjective factors involved. What is proposed here, however, is that these difficulties be faced squarely; that ratings be made, not in fine degrees or in precise schedules, but within ranges. An injured worker would be rated within one of eight or ten groups, each spanning 12 or 10 per cent of rated physical incapacity. The law would simply provide for an injury falling in group A, or B, etc., instead of rating an injured worker 16 or 17 per cent disabled.

Second, once a permanently disabled worker is rated within one of these groups, he would become entitled to two types of benefit protection (aside from his unlimited, rehabilitation-oriented, supervised medical care):

(1) An indemnity benefit the size of which would increase with each disability category, to be paid in the conventional fashion.

(2) An incentive assurance to help guarantee his reemployment, the duration of which would increase with the seriousness of the injury.

The size of the indemnity payment could be the average now paid to injured workers in the range of disabilities covered in an up-to-date law, or better, could begin at the low end of that range for the "A" category cases, and increase as the disability became more severe.

THE REEMPLOYMENT ASSURANCE

More important, at this stage of the discussion, is the second aspect of the benefit -- the reemployment assurance. This would simply provide that any employer who does not rehire a permanently disabled worker after his condition is rated stationary becomes liable for a sum equal to the employee's cash benefit, and this liability cannot be passed on to a carrier. Where the employer is self-insured, the liability could simply be doubled and thus produce the same effect. The money could be used to offset the costs of a rehabilitation supervision program. Reemployment would be at least at former wages.

To keep this incentive provision from becoming an unjust penalty on employers who for reasons beyond their control cannot rehire their disabled workers, they would be permitted to show cause why they cannot discharge this responsibility. Thus in instances such as very small establishments where the jobs are so few and the nature of the injury such that reemployment, even with vocational rehabilitation, would be impossible, the employer could show cause and be thus relieved of the penalty payment for not rehiring his injured worker. The worker would, of course, receive his cash benefits, and would be promptly identified as in need of vocational rehabilitation.

Among other acceptable reasons for cause might be, for example, seasonal nature of employment, or declining employment. If, for personal or career reasons, an injured employee chose not to return to his former employer, the penalty peyment would not apply.

The point is that where the employer does show cause, and where the employee chooses not to return (and in those very few instances where the employer cannot show cause but chooses not to rehire the man anyway) these cases will have been identified at an early stage as in need of vocational rehabilitation.

An Alternative

To maintain simplicity the proposed reemployment requirement could be made uniformly applicable to all employers and the penalty payment made part

of the manual insurance rate, thus spreading the cost throughout the rating base. Since this approach would require no showing of cause or hearings, it would be simpler and less expensive to administer. For it to succeed, however, the insurance rate would have to be a strong incentive to reemployment, yet not be unbearably burdensome to smaller employers.

Advantages of the Proposal

The main advantage of such an approach to rating and compensating permanent disability is that the economic incentives are rationalized, restoring strong rehabilitation inducements to the program for the injured worker as well as the employer.

When employers are given the economic incentive to rehire injured workers, it seems safe to assume that the overwhelming majority of injured workers would be restored to their former jobs, or at least to some part of their former jobs. And this restoration would be under the conditions rehabilitation experts agree are most conducive to success -- the injured worker's accustomed surroundings.

The proposal does not seek an untried end. The California survey data have shown that an encouraging number of employers are already doing what is proposed here, and that the great majority of workers are capable of going back to their former work or similar work with the former employer.

One immediate by-product would be that the cases requiring vocational rehabilitation would be promptly identified, and the assumed back-log of these cases substantially reduced. Workers who cannot return to their former jobs (for whom employer shows cause or pays the penalty for not accepting) or who choose not to, will be
a far smaller number of cases for restoration than the backlog of cases who now may never reach rehabilitation counselors and facilities. By providing this limited number of cases with maintenance payments (already provided in about one-third of U.S. compensation laws) and effective vocational counseling, this system could offer an effective course of rehabilitation.

Its focus on a return to former employment makes the proposed system superior to the present rating system from the workers' point of view. Also of special value to him is the proposal to base benefits on physical incapacity alone. The worker would not have to make the choice between maximizing his injury to increase monetary compensation and minimizing his injury through rehabilitation at the risk of diminishing or terminating his compensation. Once his award was determined, it would not be reduced or cut off if he found employment, as can happen today.

Given the groupings of the disability categories, and the fact that the ratings would be frankly physical, disagreements over rating, though not completely eliminated, should be substantially reduced. No longer would every case raise borderline rating issues. Although borderline cases would still exist, there should be far fewer of them. Furthermore, relieved of the fear of economic disaster, workers would have less incentive to exaggerate disability and to magnigy claims. Knowing that reemployment was available, they would seek to go back to their full earning power as soon as possible. In other words, the filing of claims would not mean the beginning of the end of their jobs, thus spurring the desire to get the biggest possible awards.

With assurance, workers could look forward either to their reemployment or rehabilitation prospects.

Just as claimants would have reduced need to exaggerate claims, so insurance companies would have reduced need to resist them.

Precedent for the Proposal

While this proposal departs from present compensation administration, precedent for it exists not only in practice but also in the law itself.

The California insurance code prohibits insuring against the additional amounts payable under workmen's compensation law when there is a finding that an employer is guilty of "serious and willful" misconduct, or that an injury has occurred to an illegally employed minor. The Florida law has a similar provision for child labor.

A strong precedent is the Wisconsin provision that any employer who demands oppressive physical standards (or discriminatory physical examination) can be denied his experience rating credit.

Perhaps the clearest precedent of all is the practice of adjusting an employer's insurance costs according to his experience rating. If the law permits a penalty for poor accident frequency and severity records, why not a similar one for a poor reemployment record?

There is precedent for the program in a more fundamental sense as well. After all, the basic intent of compensation law is that costs of occupational disability be absorbed in the production processes. Thus firms could not argue that they were at a competitive disadvantage if each of their competitors were required to absorb the costs of their injured workers in this way. There is ample evidence to argue that by reemploying their injured workers firms would not incur greater long-run expense and in fact might well enjoy reduced compensation costs.

Since the proposed permanent disability rating and benefit policy would neither make definition of the disability less certain, nor disrupt established underwriting procedures, it would cause no special problems to carriers and self-insured risks. It would put an even greater premium on safety consciousness in the plant.

Unsolved Problems

The proposed system does not pretend to solve all of the problems associated with permanent disability rating and benefit administration. Even if all that is hoped for were acheived, for example, the system would not be able to improve the fate of those for whom a return to work was completely impossible. Although there are few such cases, they do exist. The rehabilitation of those cases in which the employer shows cause, or in which the worker chooses not to return would continue to present problems, but these could be more effectively handled once their numbers were reduced and the cases promptly identified. Of course, there will always be cases in which some exaggeration of disability is attempted, cases of "problem workers", and instances in which continuing jurisdiction is necessary to

assure appropriate benefit protection. And there will probably always be some employers who, for whatever reason, will try to avoid rehiring a worker injured in their employ.

A similar conclusion applies to the cases of "subjective" complaints. The premise of the proposal is that the number of these cases would be reduced when the work alternative is real, and the controversies lessened. Supervised medical care would undoubtedly assist. Even if this is true, however, these cases will continue to arise and to cause the old problems, and it seems doubtful that any system can ever hope fully to solve the issues they involve.

Effect on Initial Hiring

Would employers (faced with the prospect of providing continued employment to workers who become injured) discriminate against workers with a history of disablement when looking for new employees? This possibility is real enough to require that strengthened subsequent injury funds be made part of the proposal. But it should also be noted that if an employer was able to demonstrate that a worker was unable to perform a suitable job satisfactorily, this, of course, would be sufficient cause to release him. The issue of what is satisfactory performance has caused little problem to the employers who currently reemploy their injured workers.

Wage Losses of the Permanently Disabled

These proposals grow out of the actual experiences of injured workers as revealed by the California survey which found that fewer numbers of permanently disabled workers suffered permanent wage losses than had been generally assumed, but for those who did, the loss was greater than might have been assumed. For example, in a sample of workers with 1-19 per cent permanent disability ratings, 80 per cent suffered no permanent wage loss; in the 20-69 per cent group, 57 per cent suffered no permanent wage loss; even in the 70-100 per cent disabled group, 18 per cent suffered no permanent wage loss. In each of the samples studied, in about 15 per cent of the cases, it was impossible to place the disabled workers in either group, because extraneous factors entered the situation: subsequent accidents, retirement, death, or insufficient information. Thus, the permanent wage loss cases -- those presenting the greatest problem for workmen's compensation -- are limited to about 7 per cent of the minor permanent partial cases -- the largest category of permanent disability cases. The major partial permanently disabled group include about 27 per cent with permanent wage loss, and the group with permanent total disabilities, some 67 per cent -- but these most seriously injured groups involve much smaller numbers of workers.

On the other hand, the wage losses in dollars for those who suffered them were very great, ranging, in the median case, from $27,500 for the 1-19 per cent disabled, to $42,000 for the major permanent partials to $47,000 for the totally disabled.

Total workmen's compensation payments in California for the permanent partially disabled made virtually no impact on these losses, replacing less than 10 per cent in the median case; for permanent total cases, because

of the life pension, the replacement figure was greater (36 per cent) but still grossly inadequate.

And, interestingly enough, there was no significant difference between workmen's compensation payments to those with no permanent wage loss and those with staggering permanent wage losses.

But, as we have seen, the incredible inequity thus presented cannot be rectified simply by awarding larger money benefits to those with greater economic losses. The proposal presented here tries to cut the gordian knot of assuring equity to those who would ordinarily suffer the greatest wage loss, by offering a benefit that guarantees rather than undermines economic restoration.

SYMPOSIUM ON WORKMEN'S COMPENSATION IN A DYNAMIC SOCIETY

UNIVERSITY OF WISCONSIN

Summary of Remarks Made by

Arthur W. Motley, Director

Bureau of Labor Standards

U. S. Department of Labor

On May 10, 1961, at 1:30 P. M.

Wisconsin Center Building

FUTURE PROSPECTS - ROUND TABLE

The Future of Workmen's Compensation

The next ten years will bring changes to workmen's compensation--changes greater than the field has experienced in the past 40 years. I believe it is our role to anticipate the problems that will occur so that we will be able to experience a gradual shift and not an upheaval. There are several factors that are responsible for this transition and one is the change in the labor force which must be taken into consideration. An analysis of the labor force changes expected in the 1960's reveals that:

1. Total population is expected to rise from 180 to 208 million--a 15-percent increase over the past decade.

2. The number of young persons reaching 18 years of age will increase from 2.6 million per year in 1960 to 3.8 million per year in 1970.

3. The 18-21 age group will expand from less than 10 million in 1960 to nearly 15 million in 1970.

4. The labor force will see the largest increase of any decade in our history--from 73.6 million in 1960 to 87.1 in 1970. This is most significant. If we are unable to reduce our injury-frequency rates and they hold at their present levels, the volume of work injuries will continue to rise in proportion to the increase in employment. If this is the case, we could have a minimum of 340,000 more disabling injuries in 1970 than we had in 1959.

Is our present workmen's compensation system geared to absorb this additional workload? I think not!

The principal reason for my believing that the system as we have it today is not adequate is the change in philosophy on the part of the American public. The advent of social security, unemployment insurance, temporary disability insurance, private pension systems, and group medical policies have all had their part to play in changing the public and the worker's philosophy as to what is expected from workmen's

compensation. If a worker suffers an injury while at work, he expects that the benefits will be adequate to cover his family responsibilities and that he should not be expected to shoulder the load.

Our present system leaves many thousands of workers unprotected by a workmen's compensation law because of coverage limitations, numerical exemptions, and the fact that about half the laws are elective rather than compulsory. Estimates of the number of workers covered under the State and Federal systems vary. A recent estimate of the U. S. Department of Health, Education, and Welfare states that during an average week in 1959, 42.0--42.5 million workers were covered under the State and Federal programs.

What are the alternatives for the future?

We can visualize the workmen's compensation system as following one of three routes into the future. These routes are: (1) continue as a State system; (2) integrate with the social security system; or (3) federalize into one unified workmen's compensation system. Let us examine these possibilities in turn.

Continue as a State system--In order for workmen's compensation to continue as a State system and satisfy the needs of labor and management, it must modernize. None of our present laws may be looked to as a "model." Of the 52 workmen's compensation laws (including the District of Columbia and Puerto Rico):

1. Twenty-eight jurisdictions have compulsory-type laws for coverage of private employment.

2. Twenty-four jurisdictions make no numerical exemptions.

3. Eight jurisdictions cover agricultural workers in the same manner as other private workers.

4. Thirty-two jurisdictions cover all occupational diseases.

5. Six jurisdictions provide maximum compensation for temporary total disability for a worker,

wife, and two dependent children equal to at least two-thirds of the State's average weekly wage as reported under the unemployment insurance act.

6. Thirteen jurisdictions pay benefits during the entire period of temporary total disability.

7. Thirty jurisdictions pay benefits for life or for the period of disability in cases of permanent total disability.

8. Ten jurisdictions pay benefits to widows until death or re-marriage.

9. Thirty-seven jurisdictions provide unlimited medical benefits for accidental injuries.

10. Twenty-eight jurisdictions provide unlimited medical benefits for occupational diseases.

11. Seventeen jurisdictions have provisions for special maintenance or other compensation to facilitate rehabilitation.

12. Seventeen jurisdictions have a broad type second injury fund that will cover all types of permanent physical disability likely to be a hinderance or obstacle to employment.

If the State systems are to continue into the future without increasing pressures to shift into other patterns, all of the laws must: (a) apply to all workers; (b) provide for complete coverage of occupational diseases; (c) provide for complete medical care including rehabilitation, with authority for supervision of medical care by the workmen's compensation agency; (d) provide fair and reasonable indemnity compensation; (e) provide adequate death benefits for dependents; and (f) make waivers invalid.

These provisions must be in a well defined law with clear-cut rules and regulations which will permit the insurance carrier and the employer to fulfill their part of the contract in an expeditious manner. Payments are

delayed today because of uncertainty--an uncertainty as to interpretation of the law and of the rules and regulations. This must be corrected.

The administration of the State workmen's compensation system should also be removed from the political arena. The scramble for appropriations and the turnover in administrators are not conducive to an adequate system. These changes in personnel also delay the handling of benefit payments. It has been recommended many times that workmen's compensation and accident prevention activities be financed by assessments on insurance companies and on self-insurers. The States that have adopted this method of supporting their systems have made their programs less susceptible to the whims of political expediency. This system also permits long-range planning which is not possible in States where each year's plans are dependent on that year's appropriation.

The personnel should be under civil service because it is important to have trained and experienced people as administrators of these laws and to provide tenure for them. Members of workmen's compensation boards or commissions should be appointed for long terms and not be subject to arbitrary removal for political reasons.

It is possible that the State system to endure will require some type of a Federal minimum standard act in order to meet the demands of the future. With our modern rapid transportation, men are transferred from State to State in a matter of hours and the next decade promises even greater advances in this respect. State boundaries should not affect a man's rights should he be injured. Minimum standards that would be applied to all State laws are worthy of careful study. The adoption of Federal minimum standards have been resisted by many groups but it may be the only basis on which a State system will be accepted during the next decade.

The second possibility is to <u>integrate with social security</u>--There has been a certain amount of overlapping between State workmen's compensation programs and social security ever since the latter program became effective in 1935. In 1954 Congress extended this overlapping by

incorporating a disability freeze into the social security program. The "disability freeze" permitted workers who were disabled over long periods of time to disregard those months of disability in determining their average monthly wage for old-age and survivors benefits. This legislation added disability to the already overlapping death benefits.

In 1956, Congress enacted legislation permitting payments to totally disabled persons age 50 and over by the social security program. The law provided an offset against workmen's compensation benefits.

In 1958 the offset provision was deleted by Congress and in 1960 the age 50 limitation was removed. This legislation provided a further overlapping of benefits and the trend has not stopped.

In February 1961, H.R. 4571 was introduced in Congress, which would further broaden the scope of the social security program. This bill included a section which would change the present definition of disability from permanent total disability so that it would include disability of a temporary nature.

These developments are real--they are not just some vague idea in a research paper. We do not believe that this trend in duplication of benefits will continue without challenge and we believe that it depends on the States as to whether indemnity benefits under workmen's compensation are to be absorbed by the social security system.

The third possibility is <u>federalization of the complete system</u>--Congress has before it today two bills, either of which if enacted would federalize the administration and standards of all injuries caused by radiation. These bills are H.R. 1267 and H.R. 2731 introduced by Mr. Zelenko of New York and Mr. Price of Illinois. In discussing the bill he said:

> "Fifty years of experience in workmen's compensation within the United States makes brilliantly clear the fact that our State governments will be unable to protect workers from the hazards of radioactive material. Neither in the areas of adequate benefits, medical care, rehabilitation, nor in administration will the States provide

adequate protection to workers injured from exposure to radioactive material.

"Where the States have been unable to meet their responsibility, the Federal Government has assumed its obligation. Many years ago the Congress of the United States extended the protection of workmen's compensation to the longshoremen through the Longshoremen's and Harbor Worker's Compensation Act because the States were unable to do so. In the same manner workers who are exposed to radioactive materials should be extended protection under Federal law...."

It might be worth our while therefore to take a quick look at the coverage extended to some of our more common occupational diseases such as silicosis or berylliosis. There is a certain similarity between these diseases and the diseases caused by ionizing radiations such as: The symptoms take a long time to make themselves manifest; exposure may come from many employers in many States; and the diseases are progressive.

Treatment of Dust Diseases Under Present Systems Coverage

Today, while every State has a workmen's compensation law applicable to accidental injuries, the laws of two States, Mississippi and Wyoming, still do not cover any occupational diseases. Some or all dust diseases are covered under the other 52 workmen's compensation laws--those of 48 States, Puerto Rico, the District of Columbia, and the two Federal laws. Of these, 34 laws provide comprehensive coverage. Thirty States, the District of Columbia, Puerto Rico, the Federal Employees' Compensation Act, and the Longshoremen's and Harbor Workers' Compensation Act cover all occupational diseases. Two additional States, Alabama and Louisiana, specifically list pneumoconiosis, while New Hampshire lists silicosis and other pulmonary dust diseases. The remaining 15 laws specifically cover silicosis, or silicosis and one or two other specified dust diseases. Silicosis has the unique position of being the only occupational disease covered under all 52 laws that have coverage for occupational diseases.

Compensation Indemnity Benefits

The provisions regarding benefit payments in the case of occupational diseases are usually the same as for accidental injuries. However, some States do not pay benefits for partial disability resulting from occupational diseases, and a few pay lower benefits for other types of disability and for death.

Further restrictions are found in 20 States, in which benefits payable for silicosis or asbestosis are subject to limitations not placed on other occupational diseases.

Medical Benefits

Under all workmen's compensation acts, medical aid necessary to relieve his suffering and to restore the worker to health is required to be furnished to employees disabled because of an accidental injury or an occupational disease. In general, the laws provide the same medical benefits for occupational diseases as for accidental injuries. However, there is one notable exception in that several States still place arbitrary time or money limitations upon medical aid for certain dust diseases, particularly silicosis.

Twenty-five States, the District of Columbia, Puerto Rico, the Federal Employees' Compensation Act, and the Longshoremen's and Harbor Workers' Act give full medical aid for accidental injuries and for covered occupational diseases, including the dust diseases. In 15 additional States, the law sets medical benefits for both accidental injuries and covered occupational diseases, but provides period-of-time or monetary limitations, or both.

The remaining 8 of the 52 laws that cover occupational diseases set a limitation for all occupational diseases or for the dust diseases only.

Requirements for Exposure

Approximately half of the State laws contain exposure requirements which provide, in effect, that the worker is not eligible for compensation unless he has been exposed to

the dust hazard for a specified length of time. In most of these States, the laws specify that the disablement is not due to the nature of the occupation, and hence not compensable, unless during the last ten years preceding disablement the employee was exposed to dust for a specified period, part of which must have been in the State. The specified period for exposure is usually 5 years, although 2 years is not uncommon and the time of exposure within the State is most frequently set at 2 years.

Time Limits on Manifestation of the Disease or the Disability

A further requirement found in many State laws is that an occupational disease, in order to be compensable, must manifest itself within a certain period after the last exposure, or after the last day of work, or, in the case of death benefits, must follow continuous total disability for a specified number of years; in other words, a worker who becomes afflicted with an occupational disease after the specified time period from his last exposure is not eligible for compensation.

Time Limits on Claim Filing

Another requirement that the worker must meet is that of filing his claim for compensation within a specified period of time. The laws vary greatly, both as to the point from which the time limit runs and as to the length of time allowed in which to file after that point. Approximately one-half of the jurisdictions allow one year in which to file claims, and either six months or two years is allowed in most of the remaining jurisdictions. The point at which the time limit starts in over half the jurisdictions is the date of disablement or injury, with most of the remaining jurisdictions providing that the period shall run from date of exposure, last payment, or diagnosis.

In the case of silicosis and other dust diseases, it is not the time limit itself, but the point at which the time begins to run that may create unnecessary hardship. For example, in several jurisdictions the time

limit begins to run after the date of last exposure to the dust hazard. Even if the time allowed for filing after last exposure is generous, this time limit may expire before the worker has become disabled or has knowledge that the exposure was injurious.

There are other components that we could examine, such as waiver provisions and subsequent injury funds; but this is enough to show that the picture of the handling of dust diseases in the workmen's compensation system is not good.

Conclusion

I am not suggesting that we should adopt a Federal System of compensation. The Department has always taken the position that workmen's compensation should remain a State matter, and I share that view. We in the Department of Labor want to be of service to the States and to help in any way we can to ensure that State workmen's compensation systems meet the test that the early drafters of this legislation envisioned.

Workmen's Compensation

This course is sponsored by the Beloit Vocational and Adult School in cooperation with the School for Workers

October 5: Historical Development of Workmen's Compensation Legislation
--Emory Via, School for Workers

October 12: Workmen's Compensation in the United States Today: types of benefits, insurance, administration.
--Emory Via, School for Workers

October 19: The Provisions of the Wisconsin Law: benefits, claims, appeals.
--Emory Via, School for Workers

October 26: Rehabilitation: human, legal, and administrative problems.
--O. H. Richter, Senior Supervisor, Wisconsin State Board of Vocational and Adult Education, Rehabilitation Division.

November 2: Safety-what the law provides, worker attitudes, safety education programs.
--R. E. Puphal, Deputy of Industrial Commission, Industrial Safety and Buildings.

November 9: The Provisions of the Illinois Law: benefits, claims, appeals.
--Phillips Garman, Coordinator of Extension, Institute of Labor and Industrial Relations, University of Illinois.

November 16: A Lawyer Views the Practical Problems of Workmen's Compensation--the injured worke and his case, attorney relations, case examples.
--Bernie Kleiman, Attorney specializing in workmen's compensation cases, Chicago, Illinois.

November 30: New Challenges to Our Oldest Social Insurance Program.
--David B. Johnson, Associate Professor of Economics, University of Wisconsin

Unsafe conditions in Plants

Kind of inspection (if any)

What safety equip required by law
Codes —

& Who determines & how that there is a safety violation — deputy makes opinion but does not bar a hearing —

* Repeating of Safety is shaky — Union could help, by informing member on Ind Com. —

Farmers — employ 5 or more — under W.C.?

But not under Safety

W.C. must be reported if goes into 4th day — or if Permanent partial even if no loss

Employer responsible for providing

Is employee covered by W.C. if he tampers with a Safety device —

* General Orders on Safety — 50¢ each for their files
Safety & Construction

If employer violates Safety Code — get 15% more on W.C. claims — reduce W.C. 15% where an accident if Intoxicated

But onus of Safety devices must be the reasonable effort of employer to enforce —

20% of Pughal's time to investigate accident to determine if employee was at ~~of~~ fault in violation —

Just as the amount to the employee direct

Paid by Co — except when Co. insolvent (e.g. bankruptcy) then paid by Ins. Co.

Every injured employee, covered by act, & paid gets a card of placing rights

? → Does it include Safety provisions

Advisory Com. on Safety — work on Code revision
Labor — Mang. — Engineers

? — Who selects members —

Public hearings

Selected by Chmn. — serve without pay — difficult to get

Ind. Com. as resource

These Codes are the Admin Rule —

~~Pedestrian~~ ~~State~~ Hygiene & Air Pollution Control of State Bd. of Health

Labor Law —

University of Wisconsin

Points for a Local Union Workmen's Compensation Program

1. Every steward should investigate all injruies in his department. He should see that:
   a. Injury is reported to the company authorities, at once.
   b. Employee receives immediate medical attention.
   c. He (the Steward) makes a full record of the injury including name of the injured, address, date, time, description of the injury, and other details.

2. A committee of the local should be designated to carry the responsibility for workmen's compensation cases in the local -- either an existing committee or a new committee -- such as a Welfare Committee, Health & Safety Committee, Union Counseling Committee, Workmen's Compensation Committee, etc.

3. A copy of the Steward's Injury Report should go to the committee handling workmen's compensation cases.

4. The committee should investigate case at once to see that the injured member:
   a. Receives proper medical attention
   b. Receives all benefits immediately due him.
   c. Receives information about legal rights and instruction in procedure.

5. Member should be instructed to contact committee when company proposes a settlement or in six months.

6. Committee record of the case should be filed so that case will be checked again in six months and contact with member can again be made to see what progress is made on the case, so legal time limits do not expire.

7. At the time of final settlement member and the committee should get together so that offer can be reviewed in the light of legal rights of member and so that he has opportunity to obtain legal counsel, if necessary.

8. The Steward should also follow through on each case he has reported and see that either the committee is taking care of it or see that necessary assistance is available.

9. Committee should carry on an educational campaign in local as to member's rights and benefits under the Workmen's Compensation law using the membership meetings, publications, bulletins, and other means available. They should also thoroughly learn the law and its interpretation and follow proposed changes in the law and recommend improvements to their local and international unions (here specific example cases will be important).

SETTLED WORKMEN'S COMPENSATION CASES DURING YEAR 1962
Wisconsin Industrial Commission

Occupation: MACHINIST **Industry:** Fabricated metal products, Machinery (mfg.)

Nature of Injury, Part of Body	Compensated time loss Extent of Injury	Source of Injury, Type of Accident
Cut three fingers	Temporary - 2 days	Struck by moving part of grinder
Cut little finger	Temporary - 16 days	Caught in mechanical part of grinder
Sprained back	Temporary - 1 day	Overexertion holding or carying misc. object
Multiple injuries to body	Perm. partial - 495 days	Fell to walkway or surface of building
Bruised upper back	Temporary - 11 days	Fell against plate
Bursitis in knee	Temporary - 17 days	Stepped on bolt
Fractured third toe	Temporary - 18 days	Struck by tipping, sliding or rolling block
Fractured ribs	Temporary - 54 days	Fell to walkway or surface of building
Bruised ring finger at distal	Perm. partial - 1 day	Struck by moving part of vise
Imbedded splinter or chip in one eye	Temporary - 4 days	Struck by flying splinter or chip
Bruised shoulder	Temporary - 3 days	Fell from stationary equipment in building
Cut hand	Temporary - 2 days	Caught in mechanical part of equipment
Bruised multiple parts	Temporary - 5 days	Caught in mechanical part of equipment
Traumatic amputation of two fingers	Perm. partial - 49 days	Struck by electric drill handled by self
Cyst on wrist	Temporary - 1 day	Struck by wrench handled by self
Imbedded splinter or chip in eye	Temporary-2 days	Struck by flying dusts
Bruised middle finger	Temporary - 2 days	Struck by material from metal lathe

Occupation: MACHINIST **Industry:** Fabricated metal products, Machinery (mfg.)

Nature of Injury, Part of Body	Compensated time loss Extent of Injury	Source of Injury, Type of Accident
Burned arm	Temporary - 23 days	Contact with flame
Imbedded splinter or chip in abdomen	Temporary - 11 days	Bumped into chip or splinter
Dermatitis on both hands and arms	Temporary - 37 days	Absorbed chemicals
Puncture wound in upper arm	Temporary - 5 days	Struck by unspecified object on truck
Imbedded splinter or chip in ring finger	Temporary - 5 days	Struck against object handled by self
Fractured thumb	Temporary - 11 days	Struck by moving part of equipment
Traumatic amputation of middle finger	Perm. partial - 37 days	Caught in mechanical part of equipment
Sprained foot	Temporary - 2 days	Bodily reaction, involuntary movement as result of loss of equilibrium
Bruised lower back	Temporary - 40 days	Struck by tipping, sliding or rolling plank
Bruised more than on toe	Temporary - 22 days	Struck by tipping, sliding or rolling misc. item
Ache, pain in ankle	Temporary - 12 days	Struck by tipping, sliding or rolling pipes.
Bruised great toe	Temporary - 2 days	Struck by tipping, sliding or rolling metal item
Fractured ribs	Temporary - 35 days	Struck by tipping, sliding or rolling machine
Sprained lower back	Temporary - 2 days	Overexertion holding or carrying misc. item
Fractured index finger, 2nd joint	Perm. partial - 156 days	Struck by unspecified metal item
Traumatic amputation of ring finger	Perm. partial - 31 days	Caught in mechanical part of crane
Tore away part of little finger	Perm. partial - 9 days	Struck against moving part of grinder

The Crisis In Workmen's Compensation

Social insurance in America was pioneered by a workmen's compensation law enacted over 50 years ago. That first law back in 1908 protected a small number of federal workers from the effects of on-the-job injuries. This breakthrough inspired most states to enact similar laws within several years. But the law which held out so much hope for meeting human problems in an industrial age has been left obsolete by rapidly changing conditions.

Prior to the passage of workmen's compensation laws, the injured worker had the common law right to sue his employer for damages. The employer, however, could plead three defenses: assumption of risk; fellow-servant rule and contributory negligence.

As a result of growing dissatisfaction with the common law procedures, workmen's compensation was devised to assure that benefits would be paid to injured workers promptly, regardless of fault and with a minimum of litigation. In return for these gains, injured workers relinquished their right to sue.

Coverage

The U.S. Department of Health, Education, and Welfare estimates that about 20 percent of the civilian wage and salary workers in the United States are not covered by workmen's compensation. This proportion has changed slightly since 1953. It is probable the number of workers covered will actually decrease since those segments of the labor force least likely to be covered by statutory workmen's compensation programs—state and local government employes and domestic workers—have been increasing at a faster pace than the labor force in general.

Though all states have passed workmen's compensation laws, numerous devices are available to permit many employers to escape coverage. One of the most common is an elective act which permits an employer to accept or reject its provisions. Twenty-four states have elective laws. In many laws, employers with less than a certain number of employes are exempt from coverage. Only 21 states, the District of Columbia and Puerto Rico have no such exemption. Only nine states and Puerto Rico cover farmworkers in the same manner as other workers. Two states, Mississippi and Wyoming, make no statutory provision for the coverage of occupational diseases and an additional 19 states cover only those occupational diseases specifically enumerated in the law.

Adequacy of Benefits

When workmen's compensation laws were first passed the intent of most laws was to provide the average injured worker with periodic benefits equal to two-thirds of his pay. At the time most of these laws were passed, between 1910 and 1916, the average wage was about $13 and the average benefit about $10. Today the average state benefit is between $35 to $45 per week and the national average wage of a factory worker is about $97 per week.

The failure of state legislatures to raise the maximum benefit in their laws in conformity with rising wage levels has undermined the intent of workmen's compensation laws to provide weekly benefit amounts equal to two-thirds of the injured worker's wage. Most workmen's compensation laws will state the injured worker is entitled to a specified percentage of his weekly wage during disability, generally as high as 66⅔ percent. However, another section of the law

Labor's **ECONOMIC REVIEW**

Prepared by Lawrence Smedley,
Department of Social Security
Reprinted from June 1963
AFL-CIO AMERICAN FEDERATIONIST

will specify a maximum amount a worker can receive which is so low that it prevents a large majority of workers from receiving the specified percentage of the weekly wage.

Only three states, the District of Columbia and Puerto Rico have maximum benefit amounts for an injured worker, a wife and two dependent children equal to or greater than two-thirds of the state's average weekly wage.

More than half the states have maximum benefit levels less than 50 percent of the state's average weekly wage. By contrast, in 1940 only ten states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and only four of these less than 60 percent and none less than 50 percent.[1]

Temporary Total Disability

The largest portion of workmen's compensation claims involves temporary total disability which leaves no permanent physical impairment. Approximately nine out of every ten on-the-job injuries involve this kind of injury and roughly 75 percent of these cases recover within three weeks. In most states income benefits will not be paid during the first seven days of disability unless the disability lasts more than 28 days.

A typical case is a steelworker in Birmingham, Alabama, earning $128 per week, the average wage in the basic steel industry. He is injured and unable to work for three weeks. Under the Alabama law he is entitled to 55 percent of his weekly wage but only up to a maximum of $33 per week. There is no benefit for the first week. So he receives $66 in benefits but loses $384. He has been compensated for 17 percent of his wage loss.

Permanent Total Disability

Even though a worker may suffer a large wage loss as a result of temporary total disability, he does have the consolation that, in time, his full health will be restored. The worker who suffers a permanent total disability is disabled for life and the need for benefits is much greater.

Where the injury is permanent, there is no reason for payment to be temporary. Unfortunately, in many instances the record of benefit protection is less than that for temporary disability.

Half the states limit payments by specifying either the period of time for which benefits shall be paid or the monetary amount that shall be paid or both. The time limitation ranges from 341 weeks to 550 weeks and the monetary limits from $7,500 to $30,000. A worker earning $100 per week who is permanently and totally disabled in the state of Georgia is limited to a total of $12,500 in benefits. If the worker were in his twenties or early thirties, he could be expected to earn several hundred thousand dollars during the remainder of his working years. A law is of little value when it ensures that permanently and totally injured workers and their families will spend most of their lives without any workmen's compensation benefits.

[1] "State Workmen's Compensation Laws, A Comparison of Major Provisions with Recommended Standards," U.S. Department of Labor, December 1961.

ON-THE-JOB INJURIES—1962

Permanent Partial Disability

Permanent partial disabilities are permanent injuries which may restrict the earning power of a worker. Workmen's compensation laws compensate injured workers for most permanent partial awards in accordance with a schedule of benefit amounts. In other words, the state law places a value on the various parts of the human body.

States have shown great variation in the value they place on the various parts of a human being. The maximum compensation for a thumb lost by a federal employe is more than for an arm at the shoulder in 31 states and the loss of an entire hand in 39 states. The possible compensation for a foot ranges from $3,850 in Wyoming to $23,000 in Hawaii.[2] The proponents of state rights maintain these variations are necessary in order to adjust to the local conditions in each state. However, the facts show there is little correlation between state wage levels and benefit amounts. It is the injured workers and their families who make the adjustments.

Death Benefits

The value of a human life is cheap in the typical workmen's compensation law. The general practice in state laws is to severely restrict death benefit amounts either by time limits or by maximum monetary amounts. Only nine states and the District of Columbia have a provision that widows receive benefits for life or until remarriage.

For the tragic loss of a father and breadwinner, the state of Virginia will permit compensation for 350 weeks to a maximum of $11,100; Georgia, 400 weeks to a maximum of $10,200; North Carolina, 350 weeks and a maximum of $10,000; South Carolina, 350 weeks, maximum $10,000.

[2] "Analysis of Workmen's Compensation Laws," U.S. Chamber of Commerce, January 1962, p. 18.

Professor Earl Cheit of the University of California has attempted to estimate to what extent workmen's compensation benefits replaced economic loss in death cases in California. Professor Cheit has developed new and extensive formulae for measuring economic losses due to occupational death, taking into consideration such factors as working-life expectancy, future earnings and their present net values, taxes, loss of fringe benefits and changes in the pattern of family consumption expenditures.

Cash benefits payable under workmen's compensation were related to these economic losses to measure benefit adequacy. Cheit found that, for the median case, death benefits for widows replaced only 10.1 percent of the net economic loss for workers killed in 1952 and 12.2 percent for workers killed in 1956. If the widow had dependent children under 18, she also was eligible for Old Age and Survivors' Insurance benefits. The Cheit study showed that only 47 percent of the widows were entitled to OASDI benefits and that these benefits replaced twice as much wage loss as workmen's compensation benefits. Combined benefits, however, replaced only a third of the total wage loss.

The dire implications of the Cheit study are clear when one considers that the death benefit provisions of the California law are superior to those of many states.

Medical Care

Though the quality of medical care in workmen's compensation has improved over the years, many workers still have to bear part of the medical cost of their injury. About half the states restrict full medical care for injuries by setting limits on the monetary amounts or by time limitations on the number of weeks a worker can receive medical care.

Medical and hospitalization insurance generally excludes workmen's compensation cases from coverage and the worker cannot rely on this kind of supplementary insurance to help meet the medical costs of his injury.

Even when adequate medical care is available, litigation, apathy on part of the medical profession and the tendency of workmen's compensation commissions to emphasize their judicial rather than their administrative functions also has contributed to the denial of proper medical care.

Essential to satisfactory medical care is supervision and control of this care by the workmen's compensation agency and free choice of a qualified physician by the injured worker.

The agency must protect the injured worker by ensuring accuracy of diagnosis at the outset and continuing supervision of the medical care received until healing and recovery are as complete as possible. Yet in more than half the states, the workmen's compensation agency does not have the authority to supervise medical care and roughly 75 percent of all workers covered under workmen's compensation have their doctor chosen for them by their employer or by the insurance company in behalf of the employer.

Rehabilitation

Some of the greatest developments in medicine have taken place in the field of rehabilitation. It is in the area of workmen's compensation where the prospects for significant progress are the brightest.

Rehabilitation is of maximum benefit to the worker, employer and society. The successful rehabilitation of an injured worker means the worker is restored to maximum physical effectiveness and regains his self-respect as a wage earner and family breadwinner, the employer will save money on benefit payments and society will gain by the retention of a self-reliant and productive worker.

A description of a successful rehabilitation case by Dr. Howard Kessler, Director of the Kessler Institute for Rehabilitation, is an excellent example of what can be done for what seem to be hopeless cases:

"A young miner with a broken back and a spinal cord injury, causing a paraplegia, was referred to us for rehabilitation. He also had such extensive bed sores that the treating doctors thought it would be desirable and wise to amputate both legs. So both legs were amputated but he still had bed sores over the sacrum, the lower parts of the back and hips and stones in both ureters. Two unsuccessful attempts were made to drain the stones and he was left with a draining fistula from the abdomen through the bladder to the outside. In that condition, he was referred to us for rehabilitation. A hopeless case? So it would seem.

"Yet today that man has had the stones removed and the fistula has healed. The ulcers have healed. He walks with artificial limbs and crutches; and he is operating his own restaurant in Virginia." [3]

The case described by Dr. Kessler is not a recent one. Miraculous rehabilitation techniques have been available for many years, but the progress in rehabilitating injured workers has been slow. Most states still do not make rehabilitation an integral part of workmen's compensation.

Rehabilitation to achieve maximum results must begin as soon as possible after the injury. Delayed treatment can mean the difference between full restoration to health or remaining a cripple for life. One can imagine the plight of the young miner described above if he had been so unfortunate as to never have received adequate rehabilitation treatment. Yet thousands of injured workers are victims of similar neglect every year.

Even when a rehabilitation program for injured workers exists, the state law will severely limit the effectiveness of the program by failure to provide maintenance benefits during rehabilitation. The injured worker who has suffered a severe wage loss frequently finds it financially impossible to undergo vocational and physical rehabilitation when it requires an additional outlay of funds. Rehabilitation gener-

[1] The lower figure represents the benefit for a single worker; the higher the maximum for workers with dependents.

[2] Benefits may not exceed period of time or amounts indicated.

[3] Covers only specified dust or pulmonary diseases and/or diseases caused by the inhalation of poisonous gases or fumes.

[4] "W" means payment to widow until death or remarriage; "C" means payment to children until age specified.

[5] Plus $10 per dependent per month.

[6] Limited benefits for occupational disease in Arizona and Utah.

[7] Limited benefits for silicosis and asbestosis in Arkansas, Illinois, Maine, Nevada, Vermont, West Virginia, North Carolina, Texas and New Mexico.

[8] 55 per cent of state's average production wage.

[9] After maximum weeks of payment, reduced benefits may be paid until children reach the age of 18.

[10] An additional $500 may be allowed. In death cases all medical expenses without limitation.

[11] Dollar maximum does not apply to children under 18 nor to unmarried children over 18 for 104 weeks beyond their 18th birthday, if incapable of self-support, nor to unremarried widow physically or mentally incapable of self-support.

[12] Disability benefits already made are deducted from death benefits payable.

[13] In extreme cases the commissioner may require the employer to furnish care for a longer period. In silicosis cases, additional period is limited to 90 days.

[14] Provides $6 additional for each total dependent not to exceed the average weekly wage of the employe.

[15] In cases of occupational disease, no time limit is imposed. If employe with occupational disease is able to continue work while undergoing medical treatment, medical benefit is limited to $1,000. In cases of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.

[16] Benefits set in accordance with a "wage and compensation schedule period." Under this schedule, the 66⅔ per cent level is substantially adhered to for workers earning wages of $45 a week or less. For workers who earn more, the schedule fixes benefits which are less than 66⅔ per cent.

[17] In accidental injuries up to $15,000 may be authorized. In occupational diseases unlimited amounts may be authorized.

[18] Hospitalization for six months in addition to the $450 total medical and surgical allowance. Replacements for artificial limbs or eye together with continued medical care prescribed by attending doctor are without regard to the limitation in the law.

[19] Children studying until 25.

[20] Or 5 times annual earnings.

[21] An additional $1,200 may be ordered.

[22] Plus $2 for each dependent child under 21.

[23] Commission may extend for an additional period of 2 years.

[24] May be increased by $800.

[25] Additional death benefits payable from state fund for children.

[26] An additional $1,000 on application and showing of need.

[27] Longer period or greater sum may be allowed at the discretion of the commission.

[28] Reasonable medical, surgical, and hospital treatment and supplies, apparatus, artificial members for six months, which may be extended.

[29] Reasonable medical and hospital services or other remedial care for 90 days and additional 90 day periods upon written request to the commissioner. Commissioner may grant extension for aid not to exceed one year.

[30] Commission has discretion to add $1,000 if additional treatment will alleviate or cure.

[31] The one exception is radiation disease.

Source: For a more complete comparison of the laws, write to the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., for STATE WORKMEN'S COMPENSATION LAWS, Bulletin 161 with supplement. Price 30 cents.

ally requires expenses for travel, maintenance away from home, tuition and equipment. Thus it may be impossible for him to undergo rehabilitation when incurring these expenses at the same time he is supporting himself and his family on an inadequate workmen's compensation benefit.

Litigation

The dockets of both courts and workmen's compensation commissions are so loaded with contested cases that delays of a year or more are common. Prolific litigation may on occasion result in individual gain and advantage, but the total result makes effective operation of social insurance impossible. The vital clause underlying compensation laws—arising out of and in the course of employment—has resulted in much litigation since the inception of workmen's compensation laws. The rapidly changing character of American industrial techniques make it increasingly difficult to separate non-occupational and occupational causes of disease.

The increasing importance of the radiation problem illustrates this point. Every state now has industrial plants operating under licenses with the Atomic Energy Commission. There are hundreds of thousands of workers in such plants in private industry and the number is increasing rapidly. The means by which radiation induces injury are not clearly known.

Many diseases such as leukemia and various forms of cancer can be the result of radiation exposure or of natural incidence; also, the effects of exposure from all sources appear to be cumulative throughout life. It is impossible to draw with certainty the line between occupational exposure from medical X-rays, cosmic rays and contaminated agricultural products. Since medical science does not yet have the capability of allocating cause in radiation cases, how does one fit radiation injury in the workmen's compensation system whose foundation is based on the presumption that "cause" can be ascertained?

The more that is discovered about the complex origin of disease, the more difficult it becomes to determine causality and the more the workmen's compensation system must rely on arbitrary guesswork. Guesswork can only increase inequities and litigation. The problem would be relatively simple were there a comprehensive social insurance program covering all disability. With the exception of a few permanent totally disabled cases that can qualify for OASDI benefits, the worker is faced with all or nothing. If he loses, he receives nothing and frequently his only alternative is charity.

Financing Workmen's Compensation

In 1960, total benefit payments, including both medical and compensation, amounted to $1.3 billion. Though this aggregate amount is large, it should not mislead one into thinking that workmen's compensation is expensive. The cost of workmen's compensation is less than one cent on the payroll dollar in all but eight states.[4] One insurance journal recently made

WORKMEN'S COMPENSATION COVERAGE, BY STATES
(As Percent of Potential Coverage)

Source: Social Security Bulletin, U.S. Dept. of Health, Education and Welfare, June 1962.

the claim that workmen's compensation costs employers less than coffee breaks.

Employers insure their risk through private insurance (mutual or stock), with a state fund or self-insurance. Workmen's compensation is the only social insurance primarily financed through private insurance.

Workmen's compensation is a public law which requires what is basically a tax on the employer and the collection and disbursement of this tax should not be delegated to private groups. Labor is increasingly critical of the fact that benefit payments by insurance companies over the past ten years have averaged a little better than 60 percent of the amount which employers paid in premiums.

An important factor severely reducing the amount of the premium dollar reaching the injured worker is excessive expense loading by insurance companies. Expense loading is the portion of the rate set aside to meet anticipated underwriting expenses or overhead. State-approved expense loadings are established uniformly for all companies and usually reflect the expenses of the insurance carriers with the highest expenses. This reduces competition between insurance companies and raises costs unnecessarily.

The expense record of private insurance stands in stark contrast to the record of exclusive state funds. Exclusive state funds are public funds established by law from which all workmen's compensation insurance must be purchased by employers in the state. However, only six states, Puerto Rico and the federal government have established such funds so far.

For the years 1950-60, exclusive funds devoted an average of 6.5 percent of premiums to expenses. During this same period, this average for non-participating stock companies, participating stock companies and mutual companies was approximately 37 percent, 28 percent and 25 percent, respectively.

This difference in expense is vital. Higher expenses

[4] "Workmen's Compensation Payments and Costs," by Alfred M. Skolnik, 1960, U.S. Social Security Bulletin, June 1962, p. 13.

mean lower benefits for workers. In those states financing workmen's compensation by private insurance, benefits could be increased by about one-fourth if the overhead of all insurance companies could be reduced to 25 cents of every premium dollar.

Administration

Workmen's compensation commissions have, with few exceptions, short tenure, appointments subject to the spoils system, inadequate and underpaid personnel, insufficient appropriations and a lack of reliable statistics and records.

Five states have not even attempted to administer their laws and still rely on the courts to do so. Courts have not yet found a satisfactory means of coping with overloaded dockets and it is simply beyond the capacity of a court to handle the alien duties of supervising medical care, physical rehabilitation, vocational rehabilitation, the assurance of prompt benefits and the responsibility for safety and health activities. A court is apt to feel its sole responsibility is to process workmen's compensation claims with reasonable dispatch.

Financing of workmen's compensation coverage by private insurance also contributes to the prevalence of poor administration.

There are more than 150 insurance companies in the field of workmen's compensation. The level of performance varies a great deal. Some insurance carriers pay benefits promptly, others do not. Some will contest many claims and attempt to induce workers to settle for less than what they are entitled to, some will not. The task of adequately policing so many insurance carriers is beyond the capacity of most workmen's compensation systems.

When the workmen's compensation laws were first established, it was felt the laws could be self-executing, with the insurance companies making payments directly to the injured workers and that the workmen's compensation commission would act primarily as a judicial body, making decisions in controverted cases.

This philosophy prevails to a considerable degree today and, unfortunately, settlements are not carefully checked. The injured worker with unpaid bills piling up daily is not in a position for a long legal dispute and will frequently agree to a less favorable settlement with the insurance carrier than he might be entitled to. For example, during the period 1958-60, the state of New Jersey reviewed 23,513 uncontested workmen's compensation cases. Fewer than 50 percent of the settlements were considered adequate.[5] Since the administration of the New Jersey Workmen's Compensation Law is superior to most states, it takes little imagination to visualize the record throughout the rest of the nation.

The Crisis in Workmen's Compensation

Social insurance—and workmen's compensation in particular—is a product of industrial and technological change. Social insurance has been society's response to the resulting human problems. Unfortunately, we cannot hope to cope with our human problems if we continue to advance our technology at breakneck speed but ignore the changes needed in our social insurance programs.

Most of the deficiencies in workmen's compensation laws that existed at their inception still exist today. The first laws were written by men of high purpose who recognized the deficiencies but took further progress for granted. The results have been disappointing. What was a great social advance is now only an unfulfilled promise.

In view of the tragic record of the states, the enactment of a Federal Workmen's Compensation Act is essential. Short of this, the Congress should enact legislation fixing minimum standards of workmen's compensation.

A good state workmen's compensation law should cover all the occupationally injured. It should provide assured, prompt and adequate indemnity benefits with a minimum of litigation. The purpose of the law should be to restore the injured worker to maximum health and wage-earning capacity. This should be done with maximum administrative efficiency but with human welfare the paramount concern of the administrator. A good workmen's compensation law should include at least the following standards:

1. Compulsory coverage with no numerical exemptions.
2. Benefit levels sufficient to maintain a decent standard of living for injured workers and their dependents, with maximum weekly benefits of not less than two-thirds of the state's average weekly wage.
3. Reciprocity of benefit rights between jurisdictions.
4. Full statutory coverage of all occupational diseases.
5. Coverage of diseases caused by ionizing radiation.
6. Full medical benefits for job-incurred personal injuries and occupational diseases.
7. Full compensation protection under second injury funds.
8. Maintenance benefits during rehabilitation.
9. Administration under a state agency rather than the courts.
10. An exclusive state compensation fund.
11. Benefits for the totally disabled for the period of disability.

With the exception of the exclusive state fund, all these standards have been recommended by the U.S. Department of Labor. There is no state law that meets all the recommended standards. Only two jurisdictions, Puerto Rico and the District of Columbia, meet as many as nine. One state does not meet any of the standards.

The states have not met their responsibilities. Unless there is action on the federal level, the nation's first social insurance is likely to remain last in terms of performance.

Pract. Labor Legis — Workmen's Comp

AGRICULTURAL WORKERS and WORKMEN'S COMPENSATION

BULLETIN 206

(Revised)

January 1964

U.S. DEPARTMENT OF LABOR

W. Willard Wirtz, Secretary

BUREAU OF LABOR STANDARDS

Arthur W. Motley, Director

PREFACE

The purpose of this bulletin is to answer the many questions that come to the Bureau of Labor Standards regarding farm employers and farmworkers in case of farmwork accidents.

It gives information regarding the present status of the State workmen's compensation laws as they apply to agricultural employment and minimum premium rates for insurance in case of injury sustained in such employment.

It does not answer all the questions on this subject, but it does point out the importance of workmen's compensation protection for this large group of employees, most of whom are not now covered by State workmen's compensation laws.

This bulletin was prepared in the Workmen's Compensation Branch by staff consultants Donald L. Ream, Lloyd Larson, and William O'Donnell, under the general direction of Milton Brooke, Chief, Division of State Services, Bureau of Labor Standards, U.S. Department of Labor.

Workmen's Compensation Protects Farm Employers Farmworkers

- *A ranch hand suffered a broken arm, broken ribs, and a punctured lung when his clothing became entangled in the shaft of a corn chopper.*
- *Another ranchworker lost control of his tractor as he drove up a steep road. The tractor went over the side and overturned, crushing him underneath.*
- *Twenty-seven farmworkers were killed when the truck in which they were riding flipped into a canal after collision with a truck.*
- *A 10-year-old farmworker was killed when he was caught in a conveyor and dragged into a feed grinder.*
- *A 14-year-old farmworker was electrocuted when the electric current jumped from the wires to the shaker, a mechanical device used to hoist cotton, with which he was working.*
- *A truck-train collision caused the death of 32 Mexican farmworkers as well as serious injuries to several others.*

These are actual examples of some of the accidents that are happening on our farms. What protection is afforded farmworkers for the loss of their income and the cost of medical care? What is done to assist the widows and families of those killed in farm accidents? Is the farmer protected from damage suits?

Purpose of workmen's compensation

In nonfarm industries, the great majority of employers and workers are protected by workmen's compensation laws. Under this system, the worker who is injured while on the job receives medical care and cash benefits to offset a portion of his wage loss while he is disabled. (See table 4 on temporary total disability benefits, p. 14.) Workmen's compensation provides a speedy

and simple procedure for the payment of such benefits, as well as related services to the injured worker, such as rehabilitation. The question of who was at fault does not have to be determined; benefits are payable without the question of fault being raised. Workmen's compensation also eliminates the necessity for the employee to sue for damages—a costly and lengthy process, which often ends in failure. On the other hand, it protects the employer from lawsuits which might result in heavy damages being assessed. The principle under which workmen's compensation laws are based is that the cost of such protection is a part of the cost of production.

In contrast to the extensive coverage of nonfarm employers and workers under the workmen's compensation system, farm employers and their workers in the United States in general do not enjoy this protection. Yet some countries of Europe—Belgium, Denmark, Finland, France, West Germany, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Spain, Switzerland, and the United Kingdom—do cover work injuries in agriculture.[1]

Although farm occupations have been largely excluded from workmen's compensation in this country since the beginning, the framers of these early laws did not altogether agree that it was desirable to do so. However, farm employers opposed being brought under the law because they felt that such protection was unnecessary. They contended that farm occupations were largely nonmechanized and much less hazardous than factory work.

However, the situation on the farms has changed markedly since that time. For example, the proportion of hired workers to family workers on the farms is increasing. Of the 1962 farm labor force of 6,707,000, 4,873,000 were family workers and 1,834,000 were hired workers.[2] Furthermore, farming today is largely a mechanized industry and the farm operator is a businessman.

The likelihood that an occupational accident will result in death or serious disability is considerably greater in agriculture than elsewhere. In fact, farming has become one of the most hazardous occupations. The National Safety Council reports that 13,700 work deaths in all industries occurred in the United States in 1962, an increase of 200 from 1961. Statistics show that in 1962 there were 3,100 fatal accidents in agriculture, the highest of all industries.[3] Furthermore, the death rate per 100,000 workers in agriculture is exceeded only in mining and construction industries as shown in the following chart.[4]

Farming vs other industries

In agriculture there were 280,000 disabling injuries out of a total of 2 million in all industries. (See table 1.)

TABLE 1.—*Work Accidents*

Industry group	Deaths			Death rates			Disabling injuries, 1962
	1962	1952	Per-cent change	1962	1952	Per-cent change	
All industries	13, 700	15, 000	−9	21	26	−19	2, 000, 000
Trade	1, 200	1, 500	−20	9	13	−31	375, 000
Manufacturing	1, 800	2, 400	−25	11	15	−27	400, 000
Service, government	2, 800	2, 200	+27	13	15	−13	500, 000

Excerpts from *Accident Facts*, 1963 edition, published by National Safety Council, p. 23.

Fatal farm accidents are not declining in proportion to the decline in farm population in the United States.

In the face of such hazards in agriculture, the farmer is asking questions, such as:

- If my hired farmworker falls and breaks his leg, am I liable?
- Can the injured employee go to court and sue for damages?
- If my neighbor helps me harvest the hay and is injured while driving my tractor, what is my responsibility?

- How can I protect myself from heavy medical expenses if my hired workers are injured?
- If I insure, what will the insurance cost?

Let us consider some of these questions.

When is a farmer liable?

If he does not have workmen's compensation, a farmer may be held liable for injuries to his employees when it can be proved that he was negligent. The injured worker may sue and recover substantial damages. No information is available to show the extent to which farmers have protected themselves against liability claims. It is believed, however, that in most States relatively few farmers have utilized insurance to protect themselves against suits brought by employees. This is partly due to the fact that they have not recognized the chances they are taking in not insuring, and also because most States do not require a farmer to insure under the State workmen's compensation law.

Results of court cases show that farm employers are generally held responsible for the unsafe practices of their employees and for providing a safe place of employment. For example: In Minnesota, a 16-year-old farmworker was injured as a result of being thrown forward onto the sickle bar of a mower when the mower, being pulled by a tractor, struck a washout or depression. Although the mower was not built for anyone to ride on, the farmhand was requested to stand on the mower and unhook the clogging pea vines from the windrower. His legs were caught and injured in the accident. The farmowner was found to be negligent in failing to warn and instruct the farmhand of the dangers incident to his work. The court held that the jury could well find that the mowing machine constituted a dangerous instrumentality, especially for a person as immature and inexperienced as the farmhand.[5]

In the State of Washington, a farm employee herding cattle was instructed by the owner to ride a horse that the owner had stated was gentle. The employee was injured when he was thrown from the horse. The court held that where a worker is required to use a horse in the performance of his work, the employer must exercise care to furnish the employee a reasonably safe horse with which to perform his work. The farm employee did not assume a risk as a matter of law in failing to dismount when the horse balked before throwing him.[6]

A Florida case is another example. A dairy employee took action against his employer for injuries sustained when he stumbled and fell as the cow which he was attempting to drive up a ramp into the barn turned against him. The evidence was sufficient to sustain findings for the dairy employee on the questions of whether an uneven place in

[5] *Jenkins* v. *Jenkins*, 216 Minn., 19 N.W. 2d 389 (1945).
[6] *Williams* v. *Hofer*, 191 Washington, P. 2d 306 (1948).

the ramp was attributable to faulty construction and constituted a proximate cause of injury and whether the employer, having failed to correct such known defect, was negligent in failing to provide a reasonably safe place for the plaintiff to work.[7]

In Indiana, a farm laborer was injured when a tractor overturned on an incline. The Appellate Court held that the farmer, who had borrowed the tractor, was negilgent in not providing the laborer with a reasonably safe tractor because the rear tires of said tractor did not contain fluid to weigh down the tractor and prevent it from turning over. The laborer had discussed with the farmer the faulty manner in which the tractor was operating. The farmer replied that he would not be using the tractor very much. That statement, in the court's opinion, was, in effect, a promise to remove the hazard by returning the tractor to its owner. Furthermore, the court held that the defendant knew the borrowed tractor did not work properly and apparently made no inspection with reference to the fluid in the tires. The laborer was not prevented from recovering from the farmer on the ground that he had assumed the risk, since the case came within the exception to the rule of assumption of risk. Nor was the laborer contributorily negligent as a matter of law.[8]

In Illinois, action was brought to recover damages for personal injuries sustained by a farm employee as a result of negligence on the part of the owner in furnishing him an unsafe and defective cornpicker. The farmworker lost his balance and caught his hand in the husking-bin machinery. His hand was severely torn and mangled, resulting in the loss of several fingers. The court held that where a farmworker informed his employer that the elevator on the cornpicker was "hanging up" and the employer told the worker that he would have it repaired, the farmworker was not contributorily negligent as a matter of law.[9]

Still another case involved a ranch hand in South Dakota who was injured while operating a stack mover, a machine used in feeding cattle, on the owner's ranch. A tractor furnished both its power and locomotion. Action against the employer was for serious permanent injuries sustained when, in response to his employer's demand for help in stopping the tractor with a broken ignition switch, the ranch hand stepped on the drawbar and his foot slipped into the power takeoff. The court held that the power takeoff was protected only by a semicircular shield instead of a completely enclosing shaft and did not constitute a risk to the ranch hand until made so by the negligence of the employer in attempting to stop the motor instead of disengaging the clutch. In the court's opinion, a farm employee can, in the course of his employment, suddenly be confronted with a risk of which he had no previous knowledge, such as the employer's negligence. In this

case he had no opportunity to make an intelligent choice between quitting or continuing his job. Thus, there can be no voluntary acceptance of an assumption of risk on his part.[10]

A court case in Iowa, [11] involving a neighborly work trading agreement between farmer brothers in Iowa, is of special interest to farmers since it illustrates that under certain circumstances one farmer may be held to be the employer of another.

A farmer sued his brother for damages resulting from an accident on a wagon designed to mix hog feed and unload it into the feeder. The brothers had nearby farms and like most farmers helped each other. The hog feeders were found empty and a brother went over to fill them. The wagon containing feed corn was attached to the tractor takeoff and when he stepped up on the wagon tongue to pull the lever which let down the corn into the feeder, the cuff of his pants caught on some bolts extending from attached plates which were whirling at 350 revolutions per minute. He was tossed around and thrown to the ground. As a result of the accident, he was seriously injured, could not work for a year, and had not fully recovered after 3 years. The lower court awarded a judgment of $15,000.

The court held that his brother was his employer. The two brothers (and four other brothers) traded services back and forth. The work was compensated for at the end of the year if there was any difference in the time worked. The court held that even in the case of a simple exchange of work between farmers—where a farmer performs services for another—there is a relationship of employer and employee. The existence of an employer-employee relationship placed upon the employer a special duty to provide a safe place to work. The defendant brother argued that the injured brother knew that the bolts extended and should have avoided the accident. However, the court held that negligent repair was the real basis of liability. Undoubtedly, many farmers do not realize that neighborly work-trading arrangements can make one farmer the employer of another.

There are numerous other cases, but these will serve to show that there is a problem for both the employer and employee. In cases where the employer does not carry insurance, he may be liable for the entire amount.

In a report entitled "Work Injuries in California Agriculture, 1961," from the California Department of Industrial Relations, published in June 1962, several serious farm accidents were reported:

> A ranch foreman was directing an employee who was using a tractor to free a truck mired in the mud alongside the highway. The foreman stepped between the vehicles to shorten the hitch. The tractor driver released the brake, the tractor rolled back and the foreman was crushed against the truck body.

---

[10] *Bartlett* v. *Gregg*, 92 N.W. 2d 654 (1958).

[11] Reported in *Agricultural Banker*, October 1960.

A farmhand was driving a tractor at night along an irrigation ditch. The tractor rolled into the canal when he backed too close to the ditch in attempting to turn around. The worker was found the next morning pinned underneath the tractor in 4 feet of water.

A farm laborer was electrocuted while shaking walnuts from a tree with an aluminum pole. He lost his balance as he lifted the pole and the pole contacted an overhead high voltage powerline.

A labor truck carrying 16 passengers was struck from behind by another truck, resulting in the death of one worker and serious injuries to eight others.

A 16-year-old farm laborer died from overexposure to an organic phosphate compound used to dust strawberry plants. The boy worked all day long without proper protective clothing. He became ill during the late afternoon and was taken to the hospital and returned home after being given treatment. He died the next morning.

A farm shop mechanic was using an acetylene torch to cut an empty drum which had contained a cleaning solvent. The flame exploded the vapors within the drum and the end of the drum blew out, striking the mechanic in the head.

A farm laborer removed the radiator cap from an overheated tractor. When steam rushed out and scalded the worker, he fell back off the tractor, breaking his leg. The worker died as a result of the combined effects of burns over half his body and of shock.

These accidents illustrate what is happening to a greater or lesser degree in all States. They help to focus greater attention on whether agricultural workers should continue to be excluded from workmen's compensation benefits or whether they should have protection similar to that extended to production workers generally.

Workmen's compensation insurance experience in 36 States, principally for the years 1955–60, showed that a total of $64,980,027 was paid on 304,176 injury claims of hired farmworkers. Payments for 576 fatalities averaged $8,364. Permanent-total-disability claim payments averaged $45,430; permanent-partial injuries totaled 9,809 and the payments averaged $3,205.[12]

Why have the States not extended their workmen's compensation laws to the agricultural industry?

Originally, when farm employers were exempted from coverage of the workmen's compensation laws, it was claimed that farming was a way of life and not a hazardous employment. The specialization in crops and mechanization which has characterized agricultural operations in the 20th century places the farmworker in much the same situation as an industrial worker. For that reason it is difficult to justify the argument that an injured agricultural worker should not be entitled to the same benefits as an injured industrial worker.

[12] John D. Rush, "Current Statistics on Farm Accidents in the United States," U.S. Department of Agriculture, Economics Division. Data for 34 States were furnished by the National Council on Compensation Insurance, New York City, N.Y. New Jersey and California data were furnished by the respective State workmen's compensation agencies.

How does the worker actually fare under workmen's compensation laws? These laws are classified generally as applying to employers on a compulsory or elective basis. A compulsory-type law requires that employers within the jurisdiction of the law accept its provisions and provide the benefits prescribed by the act. An elective law permits the employer and employee to accept or reject the provisions of the act. Under most of the elective laws, acceptance of the act by the employer is presumed unless a specific notice is filed rejecting coverage. In those cases where the employer does reject the law, he loses the customary common law defenses of "assumption of risk," "fellow servant rule," and "contributory negligence."

Very few States cover farmworkers in the same manner as other employees

Seventeen States and Puerto Rico have some specific coverage of agricultural workers.

However, the laws of only seven jurisdictions—Alaska, California, Connecticut, Hawaii, Massachusetts, Ohio, and Puerto Rico—are compulsory and provide coverage for farmworkers in the same manner as other employees. Vermont also covers farmworkers in the same manner as other workers. But the Vermont law is elective, under which workers are covered unless the employer "elects" not to come under the act. The Wisconsin law provides compulsory coverage for farmers who employ 6 or more workers for 20 days during a calendar year in one or more locations; this provision becomes applicable 10 days after the 20th such day. New Jersey, which has an elective-type law, applies the act to all farmworkers, but this law expressly provides that farmers are not required to carry insurance.

In eight other States—Arizona, Florida, Kentucky, Louisiana, Minnesota, New York, South Dakota, and Wyoming—agricultural workers engaged in specific farm occupations, usually those operating certain types of machinery, are covered. (See table 2.) Of these States, the laws of Arizona, Minnesota, and New York are compulsory; those of Florida, Kentucky, Louisiana, South Dakota, and Wyoming are elective. In Kentucky and Wyoming, the employer must elect by filing a written notice. In Florida, Louisiana, and South Dakota, the law applies unless the employer specifically rejects it. The Louisiana law excludes from coverage agricultural employees while they are being transported to or from work regardless of the means of conveyance; also members of crews in airplanes engaged in dusting or spraying operations.

The Florida law was amended in 1957 to limit the farm labor exemption to "agricultural labor performed on a farm in the employ of a bona fide farmer or association of farmers." According to the Florida Industrial Commission, this amendment had the effect of extending coverage to farmworkers employed by commercial grove-

caretaking organizations; fruitpickers employed by packinghouse operators who purchase fruit on the trees; fruit or vegetable harvest workers employed by labor contractors who contract with farmers or growers to pick their crops for them; fruit or vegetable packers employed to work in packinghouses not located on a farm; and the like.

TABLE 2.—*States Covering Agricultural Workers in Specific Farm Occupations*

State	Type of law (applicable to agricultural workers)	Coverage	Exemptions
Arizona	Compulsory	Workers engaged in use of machinery.	If fewer than 3 employees.
Florida	Elective	Workers employed by commercial grove-caretaking organizations, fruitpickers employed by packinghouse operators who purchase fruit on the trees, fruit or vegetable harvest workers employed by labor contractors who contract with farmers or growers to pick their crops for them, fruit or vegetable packers employed to work in packinghouses not located on a farm, and the like.	3 employees.
Kentucky	Elective	Workers engaged in the operation of threshing machines used in threshing or hulling grain or seeds.	3 employees.
Louisiana	Elective	Workers engaged in the operation of harvesting machinery and threshing machinery.	No numerical exemptions.
Minnesota	Compulsory	Workers engaged in commercial threshing and commercial baling.	No numerical exemptions.
New York	Compulsory	Workers engaged in the operation of baling machines and threshing machines if on a farm other than that of employer's.	No numerical exemptions.

TABLE 2.—*States Covering Agricultural Workers in Specific Farm Occupations*—Con.

State	Type of law (applicable to agricultural workers)	Coverage	Exemptions
South Dakota	Elective	Workers engaged commercially in the operation of threshing machines, grains combines, corn shellers, silage cutters, and seed hullers for profit.	No numerical exemptions.
Wyoming	Elective	Workers engaged in power farming when one or more are employed for an average of 6 months each year. "Power farming" means work on farm, livestock ranch, or poultry farm, which uses in connection with its operation any power-driven equipment, such as a pickup truck, feed grinder, stacking machinery, tractor, mower, baler, or road grader.	No numerical exemptions.

In most States, the employments that are exempted from compulsory or elective coverage may be brought under the law through the voluntary acceptance of the employer. Such coverage is called voluntary. The employer does not lose his common law rights or or defenses if he does not decide to come under the law.

The laws of Alabama and the District of Columbia expressly prohibit voluntary coverage of farmworkers. Tennessee and Texas laws do not mention this subject.

In the States where voluntary coverage is permitted, it is accomplished either by action of the employer alone or by joint action of the employer and employee. In the following 27 States, such coverage may be chosen by the farmer by insuring under the workmen's compensation act, with no specific action being required on the part of the employee:

Arkansas	Kansas	Nevada	Rhode Island
Colorado	Maine	New Hampshire	South Carolina
Delaware	Michigan	New Mexico	Utah
Idaho	Mississippi	North Carolina	Virginia
Illinois	Missouri	North Dakota	Washington
Indiana	Montana	Oregon	West Virginia
Iowa	Nebraska	Pennsylvania	

In Georgia and Maryland, voluntary coverage of farmworkers is permitted by the joint action of both the employer and employee.

Most of the States listed in table 2 as having either elective or compulsory coverage for specified farm occupations also permit voluntary coverage for some or all other farm occupations. In other words, a farmer in these States may protect his workers under the workmen's compensation laws even though his farming operations are not specifically made subject to the law.

Numerical exemptions

Another factor in State workmen's compensation laws which affects coverage even though the law applies to agricultural employment is the exclusion of the employer if the number of his employees is less than a specified figure. Historically, the original framers of the State workmen's compensation laws justified this provision on the ground that it was administratively unsound to attempt coverage of small firms. Experience in the 22 States that have no numerical exemption in their laws shows the fallacy of this argument.

The cost of workmen's compensation protection

The problem of the cost of providing protection has always been prominent in any discussion of workmen's compensation for agricultural workers. What will it cost to insure farmworkers with workmen's compensation coverage? The answer will vary from State to State. Currently the basic premium per $100 of payroll ranges from $1.63 to $12.40. Usually a minimum premium is required regardless of the amount of payroll. At the present time this ranges from "none" to $158. Premium charges vary according to the type of farming activity, the location of the farm, and the size of the operation. Table 3 (p. 12) shows: (1) the basic premium charge per $100 of payroll; (2) the required minimum premium; and (3) the insurance system which prevails in the respective States.

The broader use of group insurance plans may be part of the answer to the problem of extending coverage to small farms. In fact, the workmen's compensation laws of California, Puerto Rico, and South Dakota provide for group policy arrangements.

For example, the California law allows employers of agricultural labor to carry a group compensation insurance policy if they are (1) members of any nonprofit agricultural association; or (2) members of, or stockholders in, any nonprofit cooperative agricultural marketing associations.

Likewise the Puerto Rico law authorizes the manager of State Insurance Fund to issue group-insurance policies to farm employers

TABLE 3.—*Insurance Systems and Basic Premium Rates for Farm Employment, by Jurisdiction*

State	Insurance system available			Premium cost	
	State fund	Private company	Self-insurance	Minimum premium	Basic rate per $100
Alabama	No	Yes	Yes	(2)	(2)
Alaska	No	Yes	Yes	$45.00	$2.35

TABLE 3.—*Insurance Systems and Basic Premium Rates for Farm Employment, by Jurisdiction*—Continued

State	Insurance system available			Premium cost [1]	
	State fund	Private company	Self-insurance	Minimum premium	Basic rate per $100
Utah	Yes	Yes	Yes	$45.00	$2.30
Vermont	No	Yes	Yes	66.00	3.48
Virginia	No	Yes	Yes	53.00	2.87
Washington	Yes	No	No	[12] 24.00	([12])
West Virginia	Yes	No	Yes	[13] 6.00	[13] 1.63
Wisconsin	No	Yes	Yes	87.00	7.19
Wyoming	Yes	No	No	([14])	([14])

[1] Code number 0006 (National Council on Compensation Insurance) for farms including all employees other than inservants but including drivers, chauffeurs, and helpers, as of September 1963, with the exception of Arizona, California, Hawaii, Nevada, New Jersey, New York, Oregon, Washington, West Virginia, and Wyoming.

[2] Farmworkers not covered.

[3] Code No. 0037.

[4] California rates range from $2.29 to $6.30 depending on type of farming. Minimum premium will vary with rate.

[5] Information not available.

[6] Code Nos. 0005 and 0008.

[7] Insurance or security is compulsory for nonresident employers who do not own immovable property in the State assessed at $25,000. Other employers are not required to secure the payment of compensation.

[8] Nevada rates range from $1.99 to $6.19 depending on type of farming. Minimum premium $1 per month.

[9] Code No. 0085.

[10] Code No. 00065.

[11] Class 1101—General Farming (collectible rate $8.13).

[12] Class 48-3. The rate is $0.07 for industrial insurance and $0.022 for medical aid, per workman hour. Minimum premium $2 per month.

[13] Code No. 0-4. Mimimum premium $1.50 per quarter.

[14] Premium rates are 5 percent of the gross payroll for the first 12 months that employees are reported. If after this period the account reflects a credit balance, the rate is reduced to 1 percent.

of cooperative associations and other nonprofit organizations of a similar type. The South Dakota law allows the organization of individuals, partnerships, or corporations, or combination of them, for the purpose of engaging in the exchange of reciprocal or interinsurance contracts.

What benefits are payable to injured workers?

Under workmen's compensation, farmworkers who are injured on the job are assured an income to maintain themselves and their dependents during the periods of disability and are assured of medical care. Benefits are provided, not only to the injured worker but also, in the case of death, for his family. These include medical services, indemnity benefit payments to the worker during the period of disablement, death benefits to the worker's family, and under most laws, burial expenses. (See table 4, "Minimum and Maximum Benefits for Temporary Total Disability.") Further-

TABLE 4.—*Minimum and Maximum Benefits for Temporary Total Disability Under Workmen's Compensation Laws*

(As of December 1963)

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Alabama	[1] 55–65	300 weeks	$15, or average wage if less.	$38	
Alaska	65	Duration of disability	$18, or average wage if less.	$100	$20, 000.
Arizona	65	433 weeks	$30 if worker is 21 years of age or over.	$150, plus $2.30 for each total dependent.	
Arkansas	65	450 weeks	$7	$35	$12, 500.
California	[2] 61¾	240 weeks	$25	$70	
Colorado	66⅔	Duration of disability	$10	$43.75	([3])
Connecticut	60	Duration of disability	$20	55 percent, of State's "average production wage."[4]	
Delaware	66⅔	Duration of disability	$25, or actual wage if less.	$50	
District of Columbia	66⅔	Duration of disability	$18, or average wage if less.	$70	$24, 000.
Florida	60	350 weeks	$8, or actual wage if less.	$42	
Georgia	60	400 weeks	$12, or actual wage if less.	$37	$12, 500.
Hawaii	66⅔	Duration of disability	$18, or average wage if less.	$75	$25, 000.

Idaho	[1] 55–60	400 weeks; [5] thereafter $15 per week ($18 if dependent wife) plus $4–$15 for children for duration of disability.	$15 ($18 if dependent wife) to $33.[1]	$32–$52[1] (see col. 3)	
Illinois	[1] 65–80	Duration of disability until equivalent of death benefit is paid, except in specific injury cases limited to 64 weeks.	$31.50–$49[1]	$51–$61[1]	$13, 500–$17, 500.[1]
Indiana	60	500 weeks	$18, or average wage if less.	$42	$16, 500.
Iowa	66⅔	300 weeks	$18, or actual wage if less.	$34–$50[1]	
Kansas	60	415 weeks	$7	$42	$17, 430.
Kentucky	65	425 weeks [6]	$16	$38	$16, 150.[6]
Louisiana	65	300 weeks	$10, or actual wage if less.	$35	
Maine	66⅔	500 weeks	$18	$42	$21,000.
Maryland	66⅔	208 weeks	$18, or actual wage if less.	$48	
Massachusetts	66⅔	Duration of disability	$20, or average wage if less, but not less than $10 if normal working hours are 15 or more.	$53, plus $6 for each total dependent. Aggregate shall not exceed the average weekly wage of the employee.	$16,000, plus dependents' allowances.[7]
Michigan	66⅔	500 weeks	$18–$28[1]	$33–$57[1]	([8]).
Minnesota	66⅔	350 weeks	$17.50	$45	
Mississippi	66⅔	450 weeks	$10	$35	$12,500.
Missouri	66⅔	400 weeks	$16, or actual wage if less.	$47.50	

See footnotes at end of table.

TABLE 4.—*Minimum and Maximum Benefits for Temporary Total Disability Under Workmen's Compensation Laws*—Continued

(As of December 1963)

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Montana	[1] 50–66⅔	300 weeks	$25.50	$29–$50 [1]	
Nebraska	66⅔	300 weeks; [5] thereafter 45 percent of wages, maximum $32.	$26, or actual wage if less, first 300 weeks; thereafter $22, or actual wage if less.	$40 (see col. 3)	
Nevada	[1] 65–90	433 weeks	No statutory minimum	$45–$62.31 [1]	
New Hampshire	66⅔	312 weeks; thereafter annual extensions in the discretion of the labor commissioner.	$15, or average wage if less.	$45	
New Jersey	([9])	300 weeks	$10	$45	
New Mexico	60	500 weeks	$24, or actual wage if less	$38	$20,000.
New York	66⅔	Duration of disability	$20, or actual wage if less	$55	$6,500.
North Carolina	60	400 weeks [10]	$10	$37.50	$12,000.[10]
North Dakota	80	Duration of disability	$15, plus $3 for each dependent child under 18, or those over 18 incapable of self-support.	$45–$60 [1]	
Ohio	66⅔	Duration of disability	$25, or actual wage if less	$56 for the first 12 weeks; thereafter $49.	$10,750.

Oklahoma	66⅔	300 weeks; may be extended to 500 weeks.	$15, or actual wage if less.	$37.50	
Oregon	[1] 50–75	Duration of disability	$30, or actual wage if less.	$32.31–$66.92 [1]	
Pennsylvania	66⅔	Duration of disability	$27.50, or 90 percent of actual wage if less, but in no event less than $20.	$47.50	
Puerto Rico	66⅔	312 weeks	$8	$35	
Rhode Island	60	Duration of disability [11]	$17 if worker is receiving benefits under the State temporary disability insurance act. $22 if worker is not receiving benefits under the State temporary disability insurance act.	$40 if worker is receiving benefits under the State temporary disability insurance act. $45–$57 [1] if worker is not receiving benefits under the State temporary disability insurance act.	([11])
South Carolina	60	500 weeks	$5	$35	$10,000.
South Dakota	55	312 weeks	$20, or average wage if less.	$38	$13,500.
Tennessee	65	300 weeks	$15, or average wage if less, but in no event less than $12.	$36	
Texas	60	401 weeks	$9	$35	
Utah	60	312 weeks	$25–$39.25,[1] or actual wage if less.	$40–$54.25 [1]	$11,204–$15,126.[1]
Vermont	66⅔	330 weeks [5]	$20, plus $2.50 for each dependent child under 21, or average wage if less.	$39, plus $2.50 for each dependent child under 21.	

See footnotes at end of table.

TABLE 4.—*Minimum and Maximum Benefits for Temporary Total Disability Under Workmen's Compensation Laws*—Continued

(As of December 1963)

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Virginia	60	500 weeks	$12	$37	$14,800.
Washington		Duration of disability	Same as maximum	$38.08–$71.54 [1]	
West Virginia	66⅔	208 weeks	$22	$38	
Wisconsin	70	Duration of disability	$8.75	$64	
Wyoming	66⅔	Duration of disability	$30–$46.15 [1]	$40.38–$60 [1]	
United States:					
Federal employees	[1] 66⅔–75	Duration of disability	$41.54, or actual wage if less.	$121.15	
Longshoremen	66⅔	Duration of disability	$18, or average wage if less.	$70	$24,000.

[1] According to number of dependents. In Idaho, Oregon, Washington, and Wyoming, according to marital status and number of dependents. In Illinois, according to number of dependent children under 16, or under 18 when not emancipated.

[2] The California law provides for 65 percent of 95 percent of actual earnings, or 61¾ percent.

[3] Colorado: If periodic disability benefits are payable to the worker under the Federal OASDI, the workmen's compensation weekly benefits shall be reduced (but not below zero) by an amount approximating one-half such Federal benefits for such week. If disability benefits are payable under an employer pension plan, the workmen's compensation benefits shall be reduced in an amount proportional to the employer's percentage of total contributions to the plan.

Colorado does not limit total maximum for disability from accidental injury, except that if payable in lump sum, maximum is $13,650; in case of occupational diseases, the maximum is $13,693.75.

[4] Connecticut: Beginning October 1963, this amounted to $57 a week.

[5] In case total disability begins after a period of partial disability, the period of partial disability shall be deducted from the specified period for temporary total.

[6] Kentucky: If period of total disability begins after a period of partial disability, the period of partial disability shall be deducted from the 425 weeks and the $16,150.

[7] Massachusetts: Maximum $18,000 for temporary total and permanent partial disability.

[8] Michigan: Total maximum may not exceed 500 times total weekly amount payable.

[9] New Jersey: Benefits are set in accordance with a "wage and compensation schedule." Under this schedule, the 66⅔-percent level is adhered to rather closely for workers earning wages of $45 a week or less. For workers who earn more, the schedule specifies benefits which are less than 66⅔ percent. For instance, a worker earning $60 a week is entitled to a compensation benefit of $36, or 60 percent.

[10] North Carolina: The 400 weeks and $12,000 do not apply in cases of permanent total disability resulting from an injury to the brain or spinal cord, or from loss of mental capacity caused by an injury to the brain.

[11] Rhode Island: After 1,000 weeks, or after $16,000 has been paid, payments to be made from second-injury fund for period of disability. The allowance of up to $12 a week for dependent children is also payable from this fund.

more, in many States, they also include special benefits, for instance, rehabilitation services for the injured workers, or extra benefits for minors injured while illegally employed.[13]

Recommendations of IAIABC and other organizations

For years different organizations have recommended the extension of coverage to agricultural workers.

At the 44th convention of the International Association of Governmental Labor Officials (IAGLO), August 28–31, 1961, in Portland, Oreg., the following resolution was adopted:

> "Resolved, that increased efforts be made to extend the coverage of State and Federal laws to agricultural workers."

The Council of State Governments has recommended in "Program of Suggested Legislation—1963," the coverage of agricultural employees whose employer has more than three employees in such employment.

In a report of the Special Committee to study the standards advocated by the International Association of Industrial Accident Boards and Commissions (IAIABC), adopted at the 48th Annual Convention of IAIABC, in Indianapolis, Ind., September 23–27, 1962, it was recommended that all farm employees be covered by all farm employers who have a payroll that exceeds $1,000 a year.

The experience of the States which cover farmworkers in the same manner as other employees shows that it is feasible and practicable to cover farmworkers under the workmen's compensation laws. Under this system, farm employers are protected against costly damage suits and will be able to gage more accurately their cost of production. Farmworkers who are injured on the job will be assured an income to maintain themselves and their dependents during periods of disability, and will be assured of medical care. Both the employer and the worker will be spared the long delays, the expense, and other difficulties where a suit for damages is involved.

For these reasons, the U.S. Department of Labor recommends that the protection of workmen's compensation which now accrues to more than 45 million workers in the United States should be extended to cover agricultural workers not included at the present time in many States.

---

WORKMEN'S COMPENSATION ACT
(WITH 1965 AMENDMENTS)

102.01 Definitions. (1) The provisions of this chapter may be known, cited and referred to as the "Workmen's Compensation Act" and allowances, recoveries and liabilities under or pursuant to this act constitute and may be known, designated and referred to as "Workmen's Compensation."

(2) "Act" as used in this chapter means "chapter"; "compensation" means workmen's compensation; "primary compensation and death benefit" * * * *means* compensation or indemnity for disability, or death benefit, other than increased, double or treble compensation or death benefit; "injury" is mental or physical harm to an employe caused by accident or disease, and also damage to or destruction of artificial members, dental appliances, teeth, *hearing aids,* and eye glasses, but, in the case of *hearing aids or* eyeglasses, only if such damage or destruction resulted from accidents which also caused personal injury entitling the employe to compensation therefor (either for disability or treatment); "municipality" includes county, city, town, village, school district, sewer district, drainage district, and

other public or quasi-public corporations; "examiner" includes the director of workmen's compensation; and "commission" means the industrial commmission of Wisconsin. "Time of injury," "occurrence of injury," or "date of injury" is the date of the accident which caused the injury, or in the case of disease the last day of work for the last employer whose employment caused disability, except that in case of occupational deafness the definition in s. 102.555 controls.[1, 2]

102.03 Conditions of liability. (1) Liability under this chapter shall exist against an employer only where the following conditions concur:

(a) Where the employe sustains an injury.

(b) Where, at the time of the injury, both the employer and employe are subject to the provisions of this chapter.

(c) 1. Where, at the time of the injury, the employe is performing service growing out of and incidental to his employment. Every employe going to and from his employment in the ordinary and usual way, while on the premises of his employer, or while in the immediate vicinity thereof if the injury results from an occurrence on the premises, shall be deemed to be performing service growing out of and incidental to his employment; and so shall any fireman responding to a call for assistance outside the limits of his city or village, unless such response is in violation of law. The premises of his employer shall be deemed to include also the premises of any other person on whose premises service is being performed.

2. To enhance the morale and efficiency of public employes in this state and attract qualified personnel to the public service, it is the policy of the state that the benefits of this chapter shall extend and be granted to employes in the service of the state or of any municipality therein on

---

[1] As to eyeglasses and hearing aids, damage or destruction must result from an *accident* which also causes personal injury entitling the employe to medical treatment or payment of compensation. The effect is that if an employe merely slips and his eyeglasses or hearing aid drop to the floor and break, but no personal injury results to the employe, there will be no payment for damage to eyeglasses or hearing aid.

[2] Compensation benefits may be recovered for disability which occurs after the severance of the employer-employe relationship, even though there was neither wage loss, nor time loss during the time that the employe was in service.

the same basis, in the same manner, under the same conditions, and with like right of recovery as in the case of employes of persons, firms or private corporations. Accordingly, the same considerations, standards, and rules of decision shall apply in all cases in determining whether any employe under this chapter, at the time of injury, was performing service growing out of an incidental to his employment. For the purposes of this subsection no differentiation shall be made among any of the classes of employers enumerated in s. 102.04 or of employes enumerated in s. 102.07; and no statutes, ordinances, or administrative regulations otherwise applicable to any employes enumerated in s. 102.07 shall be controlling.

(d) Where the injury is not intentionally self-inflicted.

(e) Where the accident or disease causing injury arises out of his employment.

(f) Every employe whose employment requires him to travel shall be deemed to be performing service growing out of and incidental to his employment at all times while on a trip, except when engaged in a deviation for a private or personal purpose. Acts reasonably necessary for living or incidental thereto shall not be regarded as such a deviation. Any accident or disease arising out of a hazard of such service shall be deemed to arise out of his employment.[3]

(g) For the purposes of this chapter, members of the state legislature shall be deemed covered while traveling to and from the capital in the performance of their function as legislators, and while traveling in the performance of their official duties as members of committees or other bodies created by the legislature or the governor, either during the session or during the interim.

(2) Where such conditions exist the right to the recovery of compensation pursuant to this chapter shall be the exclusive remedy against the employer, and the workmen's compensation insurance carrier.

---

[3] Accident or disease must arise out of a hazard of employment, and accidents and diseases not caused by reason of incidents of service are not to be compensated. Injuries, whether accidental or otherwise, must therefore, arise out of the business circumstances of the trip and not merely occur because of a personal condition or disability bearing no relation whatsoever to service.

(3) In the case of disease intermittent periods of temporary disability shall create separate claims, and permanent partial disability shall create a claim separate from a claim for any subsequent disability which latter disability is the result of an intervening cause.

(4) The right to compensation and the amount thereof shall in all cases be determined in accordance with the provisions of law in effect as of the date of the injury.

102.04 Definition of employer (1) The following shall constitute employers subject to the provisions of this chapter, within the meaning of section 102.03:

(a) The state, each county, city, town, village, school district, sewer district, drainage district and other public or quasi-public corporations therein.

(b) Every person who usually employs 3 or more employes, whether in one or more trades, business, professions or occupations, and whether in one or more locations. This paragraph shall not apply to farmers or to farm labor.[4]

(c) Every person engaged in farming who on any 20 consecutive or nonconsecutive days during a calendar year employs 6 or more employes, whether in one or more locations. The provisions of this chapter shall apply to such employer 10 days after the twentieth such day.[5]

(d) Every person to whom pars. (a), (b) and (c) are not applicable, who has any person in service under any contract of hire, express or implied, oral or written, and who, at or prior to the time of the injury to the employe for which compensation may be claimed, shall, as provided in s. 102.05, have elected to become subject to the provisions of this chapter, and who shall not, prior to such accident, have effected a withdrawal of such election.

(2) Members of partnerships shall not be counted as employes. Except as provided in s. 102.07 (5) (a), a person

---

[4] The employer becomes subject to the act whether the employes are in one or more trades, or one or more locations. An employer with two employes in Milwaukee and two in Madison would become subject even though employes in Milwaukee were engaged in the shoe business and employes in Madison in the restaurant business.

[5] Farmers are made subject to the act if there are 6 or more employes on any 20 days in a calendar year, and workmen's compensation insurance must be provided. Farmers were exempt until this provision became effective January 1, 1962.

under contract of hire for the performance of any service for any employer subject to this section (1961) shall not constitute an employer of any other person with respect to such service and such other person shall, with respect to such service, be deemed to be an employe only of such employer for whom the service is being performed.[6]

(3) As used in this chapter "farming" means the operation of farm premises owned or rented by the operator. "Farm premises" means areas used for operations herein set forth, but does not include other areas, greenhouses or other similar structures unless used principally for the production of food and farm plants. "Farmer" means any person engaged in farming as defined. Operation of farm premises shall be deemed to be the planting and cultivating of the soil thereof; the raising and harvesting of agricultural, horticultural or arboricultural crops thereon; the raising, breeding, tending, training and management of livestock, bees, poultry, fur bearing animals, wildlife or aquatic life, or their products, thereon; the processing, drying, packing, packaging, freezing, grading, storing, delivering to storage, to market or to a carrier for transportation to market, distributing directly to consumers or marketing any of the above-named commodities, substantially all of which have been planted or produced thereon; the clearing of such premises and the salvaging of timber and management and use of wood lots thereon, but not including logging, lumbering or wood cutting operations unless conducted as an accessory to other farming operations; the managing, conserving, improving and maintaining of such premises or the tools, equipment and improvements thereon and the exchange of labor, services or the exchange of use of equipment with other farmers in pursuing such activities. The operation for not to exceed 30 days during any calendar year, by any person deriving his principal income from farming, or farm machinery in performing farming services for other farmers for a consideration other than

[6] A possible dual status of employer and employe is objectionable because of confusion, delay and expense caused in determining who is actually to assume liability. This provision makes it clear that an employe cannot also be an employer with respect to service performed for an employer and that employes or helpers of the employe are to be deemed employes only of the employer for whom the service utilmately is being performed.

exchange of labor shall be deemed farming. Operation of such premises shall be deemed to include also any other activities commonly considered to be farming whether conducted on or off such premises by the farm operator.

102.05 Election by employer, withdrawal.[7] (1) Such election to become subject to the act on the part of the employer shall be made by filing with the commission, a written statement that he accepts the provisions of this chapter. The filing of such statement shall operate to subject such employer to its provisions, unless he shall file in the office of said commission a notice that he desires to withdraw his election, which withdrawal shall take effect thirty days after the date of such filing or at such later date as may be specified in the notice. Unless such withdrawal is filed the employer shall remain subject to the act, except that an employer who shall have had no employe at any time within a continuous period of 2 years shall be deemed to have effected withdrawal which shall be effective on the last day of such period. Such employer, however, shall again become subject to the act if at any time subsequent to such period of no employment he shall have 3 or more employes as provided in subsection (2), except as he may have elected not to accept the provisions of the act as provided in subsection (2).[8]

(2) If any employer shall at any time have three or more employes, whether in one or more trades, businesses, professions or occupations, and whether in one or more locations, he shall be deemed to have elected to accept the provisions of this chapter, unless prior to that time such employer shall have filed with the commission a notice in writing that he elects not to accept the provisions hereof. Such employer may withdraw in the manner provided in

[7] Application of the law is compulsory for employers who usually employ three or more employes in the course of a trade, business, profession or occupation, with the exception of farmers. The state and its civil subdivisions have always been compulsorily subject. Employers who *usually* employ fewer than three employes may nevertheless become subject to the workmen's compensation act as provided in 102.05 (2).

[8] An employer who has withdrawn by lapse of time during which he has no employes will again become subject to the act if at any time subsequently he shall have three or more employes as provided in subsection (2) except as he may have previously elected not to accept the provisions of the act as provided in subsection (2).

subsection (1). This subsection shall not apply to farmers or to farm labor. Members of partnerships shall not be counted as employes under this subsection.

(3) Any employer who shall enter into a contract for the insurance of compensation, or against liability therefor, shall be deemed thereby to have elected to accept the provisions of this chapter, and such election shall include farm laborers, domestic servants and employes not in the course of a trade, business, profession or occupation of the employer if such intent is shown by the terms of the policy. Such election shall remain in force until withdrawn in the manner provided in subsection (1)..[9]

(4) Any person engaged in farming who has become subject to this chapter may withdraw by filing with the commission a notice of withdrawal, providing he has not employed 6 or more employes as defined by s. 102.07 (5) on 20 or more days during the current or previous calendar year. Such withdrawal shall be effective 30 days after the date of receipt by the commission, or at such later date as is specified in the notice. Such person may again become subject to this chapter as provided by s. 102.04 (1) (c) and (d).

102.06 Joint liability of employer and contractor. An employer shall be liable for compensation to an employe of a contractor or subcontractor under him who is not subject to this chapter, or who has not complied with the conditions

---

[9] An employer who usually employs fewer than three employes may nevertheless become subject to the workmen's compensation act in any of three different ways: (1) by filing with the industrial commission a written statement of his election; (2) by *employing* three or more persons at any time, without previously having filed a notice of non-election with the industrial commission; (employment of three persons for a single *moment*, although some of these employes may have been only casual employes, is sufficient. *Stapleton Cheese Co. vs. Ind. Comm.*, 249 Wis. 133. (3) by securing a workmen's compensation insurance policy.

Commercial threshermen, clover hullers, silo fillers, corn shredders, and other employers who work for farmers are not considered to be engaged in farming operations and become subject to the act as do other non-farming employers. An employer who has once become subject to the compensation act remains subject thereafter so long as he employs even one person, or until he effects withdrawal by filing a written notice with the Industrial Commission or by lapse of two years with no employe in service. Employers who usually employ three or more in the course of a trade, business, profession or occupation (except farmers) cannot withdraw since they are compulsorily subject to the act.

of section 102.28 (2) in any case where such employer would have been liable for compensation if such employe had been working directly for him, including also work in the erection, alteration, repair or demolition of improvements or of fixtures upon premises of such employer which are used or to be used in the operations of such employer.[10] The contractor or subcontractor (if he is subject to the workmen's compensation act) shall also be liable for such compensation, but the employe shall not recover compensation for the same injury from more than one party. In the same manner, under the same conditions, and with like right of recovery, as in the case of an employe of a contractor or subcontractor, described above, an employer shall also be liable for compensation to an employe who has been loaned by him to another employer. The employer who becomes liable for and pays such compensation may recover the same from such contractor, subcontractor or other employer for whom the employe was working at the time of the injury if such contractor, subcontractor or other employer was an employer as defined in section 102.04.

102.07 Employe defined. "Employe" as used in this chapter means:

(1) Every person, including all officials, in the service of the state, or of any municipality therein whether elected or under any appointment, or contract of hire, express or implied, and whether a resident or employed or injured within or without the state. The state and any municipality may require a bond from a contractor to protect it against compensation to employes of such contractor or employes of a subcontractor under him.

(2) Any peace officer shall be considered an employe while engaged in the enforcement of peace or in the pursuit and capture of those charged with crime.

(3) Nothing herein contained shall prevent municipalities from paying teachers, policemen, firemen and other

[10] This provision is not intended to limit the other provisions of this section, but to make clear that if work is being performed under the circumstances stated, liability will exist against the principal employer as provided. The intent is to provide for broader coverage of contractor employes than obtains under decisions which the court has rendered, as in the case of *City of Hudson vs. Industrial Commission*, 241 Wis. 476.

employes full salaries during disability, nor interfere with any pension funds, nor prevent payment to teachers, policemen or firemen therefrom.

(4) Every person in the service of another under any contract of hire, express or implied, all helpers and assistants of employes, whether paid by the employer or employe, if employed with the knowledge, actual or constructive, of the employer, including minors (who shall have the same power of contracting as adult employes), but not including (a) domestic servants (b) any person whose employment is not in the course of a trade, business, profession or occupation of his employer, unless as to any of said classes, such employer has elected to include them. Item (b) shall not operate to exclude an employe whose employment is in the course of any trade, business, profession or occupation of his employer, however casual, unusual, desultory or isolated any such trade, business, profession or occupation may be.[11]

(5) For the purpose of determining the number of employes to be counted under s. 102.04 (1) (c), but for no other purpose, the following definitions shall apply:

(a) Farmers or their employes working on an exchange basis shall not be deemed employes of a farmer to whom their labor is furnished in exchange.

(b) The parents, spouse, child, brother, sister, son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law of a farmer shall not be deemed his employes.

(6) Every person selling or distributing newspapers or magazines on the street or from house to house. Such a person shall be deemed an employe of each independent news agency which is subject to this chapter, or (in the absence of such agencies) of each publisher's (or other intermediate) selling agency which is subject to this chapter, or (in the absence of all such agencies) of each publisher, whose newspapers or magazines he sells or distributes. Such a person shall not be counted in determining whether an intermediate agency or publisher is subject to this chapter.

---

[11] Persons who engage in any business undertaking, however limited as to time or magnitude, will become subject to the compensation act when three persons are employed.

(7) Every * * * member of any volunteer fire company or fire department organized under * * * ch. 213 *or any legally organized rescue squad* shall be deemed an employe of such company * * *, department *or squad. Every such member, while serving as an auxiliary policeman at an emergency, shall also be deemed an employe of said company, department or squad.* If such company * * *, department *or squad* has not insured its liability for compensation to its employes, the municipality or county within which such company * * * department *or squad* was organized shall be liable for such compensation.[12]

(8) Every independent contractor who does not maintain a separate business and who does not hold himself out to and render service to the public, provided he is not himself an employer subject to this chapter or has not complied with the conditions of subsection (2) of section 102.28, shall for the purpose of this chapter be an employe of any employer under this chapter for whom he is performing service in the course of the trade, business, profession or occupation of such employer at the time of the injury.[13]

(9) Members of the national and state guards, when in state service performing official duty under direction of appropriate authority, but only in case Federal laws, rules or regulations provide no benefits substantially equivalent to those provided in this chapter.

(10) Further to effectuate the policy of the state that the benefits of this chapter shall extend and be granted to employes in the service of the state, or of any municipality therein on the same basis, in the same manner, under the same conditions, and with like right of recovery as in the case of employes of persons, firms or private corporations, any question whether any person is an employe under this chapter shall be governed by and determined under the

---

[12] Volunteer firemen and members of rescue squads are to be considered employes and entitled to benefits in event of injury. However, if the volunteer fire company has not been organized under provisions of Chapter 213 the members are not employes unless their status may be determined to be such under general provisions. If the company or department has not insured liability of its members the municipality becomes liable for compensation.

[13] The effect is to cover independent contractors as defined in the same manner as though they were regular employes, and for the purposes of the act to constitute them as statutory employes.

See text Sec. 22.01, defining certain civil defense workers as employes subject to the act with limitations.

same standards, considerations, and rules of decision in all cases under subs. (1) to (9). Any statutes, ordinances, or administrative regulations which may be otherwise applicable to the classes of employes enumerated in sub. (1) shall not be controlling in deciding whether any person is an employe for the purposes of this chapter.

102.08 Nonelection by epileptics, blind persons, corporation officers. Epileptics and persons who are totally blind may elect not to be subject to the provisions of this chapter for injuries resulting because of such epilepsy or blindness and still remain subject to its provisions for all other injuries. Officers of corporations may also elect not to be subject to the provisions of this chapter. Such elections shall be made by giving notice to the employer in writing on a form to be furnished by the industrial commission, and filing a copy of such notice with the industrial commission. An election may be revoked by giving written notice to the employer of revocation, and such revocation shall be effective upon filing a copy of such notice with the industrial commission.

102.11 Earnings, method of computation.[14] (1) The average weekly earnings for temporary disability shall be taken at not less than $12.50 nor more than * * * *$97.15, resulting*

[14] The intent of this provision is that earnings on a normal full time basis shall be the basis for payment of compensation. Where board, lodging, or apprenticeship instruction is furnished the employe as a part of the consideration, the fair value of these benefits is to be added to the money wage in computing the compensation due. Any bonus, tip or premium is also part of the wage and must be reported as such by the employer in the first report of accident (Form WC-12).

Where the worker at the time of injury is working part time, his wage is to be extended to a normal full time basis by multiplying the hourly basis by the number of hours of the full time working day for the employment involved, and by multiplying the daily earnings by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury. Special treatment is provided for seasonal employment. Seasonal employment is defined as employment which can be conducted only during certain times of the year, and in no event is such employment to be considered seasonal if it extends over a period of more than 14 weeks within a calendar year.

In the case of persons performing service without fixed earnings, usual going earnings paid for similar services on a normal full time basis in the same or similar employment are to be utilized.

In no case is less than actual average weekly earnings to be taken, provided the injured has worked within each week of at least six calendar

in a weekly compensation rate of $68; for permanent total disability or death at not less than $20 nor more than * * * *$97.15, resulting in a maximum weekly compensation rate of $68 for permanent total disability and $48.57½ for death benefits;* and for permanent partial disability at not less than $20 nor more than * * * *$65.72, resulting in a maximum weekly compensation rate of $46.* Between said limits the average weekly earnings shall be determined as follows:[15]

(a) Daily earnings shall mean the daily earnings of the employe at the time of the injury in the employment in which he was then engaged. In determining daily earnings under this paragraph, overtime shall not be considered. If at the time of the injury the employe is working on part time for the day, his daily earnings shall be arrived at by dividing the amount received, or to be received by him for such part time service for the day, by the number of hours and fractional hours of such part time service, and multiplying the result by the number of hours of the normal full time working day for the employment involved. The words "part time for the day" shall apply to Saturday half days and all other days upon which the employe works less than normal full time working hours. The average weekly earnings shall be arrived at by multiplying the daily earnings

---

weeks during the year before his injury in the business in the kind of employment and for the employer for whom he worked when injured. Except for this provision, overtime is not taken into consideration.

The court has held that where a given number of hours per week are worked the total number of hours is to be taken and that "premium" wage is to be considered in determining weekly wage for compensation purposes. "Overtime" means only time beyond the number of hours usually worked by the employe, and not merely hours during which base normal wage is paid.

In no case shall average weekly earnings be less than 30 times normal hourly earnings at the time of injury.

Average annual earnings are not to be taken at less than actual annual earnings of the employe during the year immediately preceding the injury in the employment in which he worked at the time of injury.

[15] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965. Maximum for temporary disability, permanent total disability, and death is changed from a wage of $91.43 to $97.15, with compensation of $68 instead of $64. Compensation for permanent partial disability is increased to a maximum of $46 based upon a wage of $65.72 or more. There is no change in minimum wage, which remains at $12.50 for temporary disability, with compensation of $8.75 and $20 wage for permanent disability and death, with compensation at $14.

by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury.

(b) In case of seasonal employment, average weekly earnings shall be arrived at by the method prescribed in paragraph (a), except that the number of hours of the normal full time working day and the number of days of the normal full time working week shall be such hours and such days in similar service in the same or similar non-seasonal employment. Seasonal employment shall mean employment which can be conducted only during certain times of the year, and in no event shall employment be considered seasonal if it extends during a period of more than fourteen weeks within a calendar year.

(c) In the case of persons performing service without fixed earnings, or where normal full time days or weeks are not maintained by the employer in the employment in which the employe worked when injured, or where, for other reason, earnings cannot be determined under the methods prescribed by paragraph (a) or (b), the earnings of the injured person shall, for the purpose of calculating compensation payable under this chapter, be taken to be the usual going earnings paid for similar services on a normal full time basis in the same or similar employment in which earnings can be determined under the methods set out in paragraph (a) or (b).

(d) Except in situations where paragraph (b) applies, average weekly earnings shall in no case be less than actual average earnings of the employe for the calendar weeks during the year before his injury within which the employe has been employed in the business, in the kind of employment and for the employer for whom he worked when injured. Calendar weeks within which no work was performed shall not be considered under this provision. This paragraph shall be applicable only if the employe has worked within each week of at least six calendar weeks during the year before his injury in the business, in the kind of employment and for the employer for whom he worked when injured.

(e) Where any things of value are received in addition to monetary earnings as a part of the wage contract, they shall be deemed a part of earnings and computed at the value thereof to the employe.

(f) Average weekly earnings shall in no case be less than 30 times the normal hourly earnings, at the time of injury, provided that for injury occurring before September 1, 1947, they shall not be less than 40 times such earnings.

(g) If an employe is under twenty-seven years of age, his average weekly earnings on which to compute the benefits accruing for permanent disability or death shall be determined on the basis of the earnings that such employe, if not disabled, probably would earn after attaining the age of twenty-seven years. Unless otherwise established, said earnings shall be taken as equivalent to the amount upon which maximum weekly indemnity is payable.

(2) The average annual earnings when referred to in this chapter shall consist of 50 times the employe's average weekly earnings. Subject to the maximum limitation, average annual earnings shall in no case be taken at less than the actual earnings of the employe in the year immediately preceding his injury in the kind of employment in which he worked at the time of injury.

(3) The weekly wage loss referred to in this chapter, except under subsection (6) of section 102.60, shall be such percentage of the average weekly earnings of the injured employe computed according to the provisions of this section, as shall fairly represent the proportionate extent of the impairment of his earning capacity in the employment in which he was working at the time of the injury, and other suitable employments, the same to be fixed as of the time of the injury, but to be determined in view of the nature and extent of the injury.

102.12 Notice of injury, exception, laches. No claim for compensation shall be maintained unless, within 30 days after the occurrence of injury or within 30 days after the employe knew or ought to have known the nature of his disability and its relation to his employment, actual notice was received by the employer or by an officer, man-

ager or designated representative of an employer. If no representative has been designated by posters placed in one or more conspicous places, then notice received by any superior shall be sufficient. Absence of notice shall not bar recovery if it is found that the employer was not misled thereby. Regardless of whether notice was received, if no payment of compensation (other than medical treatment or burial expense) is made, and no application is filed with the commission within 2 years from the date of the injury or death, or from the date the employe or his dependent knew or ought to have known the nature of the disability and its relation to the employment, the right to compensation therefor shall be barred, except that the right to compensation shall not be barred if the employer knew or should have known, within the 2-year period, that the employe had sustained the injury on which claim is based. Issuance of notice of a hearing on the commission's own motion shall have the same effect for the purposes of this section as the filing of an application.

102.13 Examination by physician, competent witnesses, exclusion of evidence, autopsy. (1) Whenever compensation is claimed by any employe, he shall, upon the written request of his employer, submit to reasonable examination by a physician, provided and paid for by the employer, and shall likewise submit to examination from time to time by any physician selected by said commission, or a member or examiner thereof. The employe shall be entitled to have a physician, provided by himself, present at any such examination. So long as the employe, after such written request of the employer, shall refuse to submit to such examination, or shall in any way obstruct the same, his right to begin or maintain any proceeding for the collection of compensation shall be suspended; and if he shall refuse to submit to such examination after direction by the commission, or any member or examiner thereof, or shall in any way obstruct the same, his right to the weekly indemnity which shall accrue and become payable during the period of such refusal or obstruction, shall be barred. Any physician who shall be present at any such examination may be required to testify as to the results thereof. Any physician having at-

tended an employe may be required to testify before the commission when it shall so direct. Notwithstanding any other statutory provisions, any physician attending a workmen's compensation claimant may furnish to the employe, employer, workmen's compensation insurance carrier, or the commission information and reports relative to a compensation claim.[16] The testimony of any physician or surgeon who is licensed to practice where he resides or practices outside the state, may be received in evidence in compensation proceedings.

(2) The commission may refuse to receive testimony as to conditions determined from an autopsy if it appears (a) that the party offering the testimony had procured the autopsy and had failed to make reasonable effort to notify at least one party in adverse interest or the commission at least twelve hours before said autopsy of the time and place it would be performed, or (b) that the autopsy was performed by or at the direction of the coroner for purposes not authorized by chapter 966. The commission may in its discretion withhold findings until an autopsy is held in accordance with its directions.

102.14 Jurisdiction; advisory committee. (1) This chapter shall be administered by the commission.

(2) The commission shall appoint an advisory committee on workmen's compensation which shall consist of a member of the industrial commission or someone designated by the commission, who shall serve as chairman, with 5 representatives of employers and 5 representatives of employes. Such committee shall submit its recommendations with respect to amendments to this chapter to each regular session

---

[16] Physicians, under general statutory provisions, are not allowed to disclose information which they may acquire while attending a patient in their professional character. A physician who attends a workmen's compensation claimant is privileged to furnish to the employe, employer, workmen's compensation insurance carrier, or the commission information and reports relative to a compensation claim. It is a practical necessity that physicians attending injured workmen be permitted to furnish information to the commission upon which compensation can be based. Physicians will not be required, however, to disclose confidential communications communicated to them for the purpose of treatment unless such information is necessary to a proper disposition of the claim. The commission regards the physician who treats the injured workman at the request of the employer to all intents and purposes as the physician of the injured man. His testimony before the commission should be absolutely fair, factual and unbiased.

of the legislature and shall report its views upon any pending bill relating to this chapter to the proper legislative committee. The commission shall also appoint 3 nonvoting representatives of casualty insurance companies to sit with the committee in an advisory capacity.

102.15 Rules of procedure; transcripts. (1) Subject to the provisions of this chapter, the commission may adopt its own rules of procedure and may change the same from time to time.

(2) The commission may provide by rule the conditions under which transcripts of testimony and proceedings shall be furnished.

102.16 Submission of disputes, contributions by employes. (1) Any controversy concerning compensation, including any in which the state may be a party, shall be submitted to said commission in the manner and with the effect provided in this chapter. Every compromise of any claim for compensation may be reviewed and set aside, modified or confirmed by the commission within one year from the date such compromise is filed with the commission, or from the date an award has been entered, based thereon, or the commission may take such action upon application made within such year. Unless the word "compromise" appears in a stipulation of settlement, the settlement shall not be deemed a compromise, and further claim shall not be barred except as provided in s. 102.17 (4) irrespective of whether award is made. The employer or insurer shall have equal rights with the employe to have review of a compromise. Upon petition filed by the employer or insurer with the commission within one year from any award upon a stipulation of settlement the commission shall have power to set aside said award or otherwise determine the rights of the parties.[17]

---

[17] Unless a genuine compromise is made and approved by the commission, the applicant will not be foreclosed except by the six year limitation. Unless dispute arises, parties should not attempt to make "compromise" agreements but should stipulate facts without making use of the word "compromise." In case of a stipulation of settlement (not compromise) the employer's right to review is extended to one year from the date of award, leaving the employe's right for review the same as heretofore, that is, 6 years from the date of the last payent of compensation under the stipulation.

(2) The commission shall have jurisdiction to pass upon the reasonableness of medical and hospital bills in all cases of dispute where compensation is paid, in the same manner and to the same effect as it passes upon compensation.

(3) No employer subject to the provisions of this chapter shall solicit, receive or collect any money from his employes or make any deduction from their wages, either directly or indirectly, for the purpose of discharging any liability under the provisions thereof; nor shall any such employer sell to an employe, or solicit or require him to purchase medical or hospital tickets or contracts for medical, surgical, or hospital treatment required to be furnished by such employer.

(4) Any employer violating subsection (3) shall be subject to the penalties provided in subsection (3) of section 102.28, and, in addition thereto, shall be liable to an injured employe for the reasonable value of the necessary services rendered to such employe pursuant to any arrangement made in violation of subsection (3) of this section without regard to said employe's actual disbursements for the same.

102.17 Procedure; notice of hearing; witnesses, contempt; testimony, medical examination.[18] (1) (a) Upon the filing with the commission by any party in interest of any application in writing stating the general nature of any claim as to which any dispute or controversy may have arisen, it shall mail a copy of such application to all other parties in interest and the insurance carrier shall be deemed a party in interest. The commission may bring in additional parties by service of a copy of the application. The commission shall fix a time for the hearing on such application which shall not be more than 40 days after the filing of such application. The commission shall cause no-

[18] The practice before the commission follows substantially the practice in courts of equity. The purpose is to secure the facts in as direct and simple a manner as possible. Parties will aid the commission and make the administration of the act less expensive by stipulating all the facts not in dispute. In practice the commission mails copies of its awards to both parties. If a mistake is found, the commission may correct it upon having its attention called to the matter within twenty days after the date of the award. A complete statement of the rules of practice adopted by the commission in the administration of the compensation act is set forth at the back of this pamphlet.

tice of such hearing, to be given to each party interested, by service of such notice on him personally or by mailing a copy thereof to him at his last known post-office address at least 10 days before such hearing. In case a party in interest is located without the state, and has no post-office address within this state, the copy of the application and copies of all notices shall be filed in the office of the secretary of state and shall also be sent by registered mail to the last known post-office address of such party. Such filing and mailing shall constitute sufficient service, with the same force and effect as if served upon a party located within this state. Such hearing may be adjourned from time to time in the discretion of the commission, and hearings may be held at such places as the commission shall designate, within or without the state. The commission may also arrange to have hearing held by the commission, officer, or tribunal having authority to hear cases arising under the workmen's compensation law of any other state, of the District of Columbia, or of any territory of the United States, the testimony and proceedings at any such hearing to be reported to the commission and to be part of the record in the case. Any evidence so taken shall be subject to rebuttal upon final hearing before the commission.

(am) Either party shall have the right to be present at any hearing, in person or by attorney, or any other agent, and to present such testimony as may be pertinent to the controversy before the commission. No person, firm or corporation other than an attorney-at-law, duly licensed to practice law in the state, shall appear on behalf of any party in interest before the commission or any member or employe of the said commission assigned to conduct any hearing, investigation or inquiry relative to a claim for compensation or benefits under this chapter, unless he shall be a citizen of the United States, of full age, of good moral character and otherwise qualified, and shall have obtained from the commission a license authorizing him to appear in matters or proceedings before the commission. Such license shall be issued by the commission under rules to be adopted by it. In such rules the commission may prescribe such reasonable tests of character and fitness as it may deem

necessary. There shall be maintained in the office of the commission a registry or list of persons to whom licenses have been issued as provided herein, which list shall be corrected as often as licenses are issued or revoked. Any such license may be suspended or revoked by the commission for fraud or serious misconduct on the part of any such agent. Before suspending or revoking the license of any such agent, the commission shall give notice in writing to such agent of the charges of fraud or misconduct preferred against him, and shall give such agent full opportunity to be heard in relation to the same. Such license and certificate of authority shall, unless otherwise suspended or revoked, be in force from and after the date of issuance until the thirtieth day of June following such date of issuance and may be renewed by the commission from time to time, but each renewed license shall expire on the thirtieth day of June following the issuance thereof.[19]

(as) The contents of verified medical and surgical reports, by physicians and surgeons licensed in and practicing in Wisconsin, presented by claimants for compensation shall constitute prima facie evidence as to the matter contained therein, subject to such rules and such limitations as the commission prescribes.[20] So, also, shall such reports of physicians and surgeons, wherever licensed and practicing, to whom the claimant had been sent for examination or treatment by the employer or insurer, provided that such doctor consents to subject himself to cross-examination. Physicians and surgeons licensed in and practicing in Wisconsin may certify instead of verify such reports, and such certification shall be equivalent to verification; and any physician or surgeon who knowingly makes a false statement of fact or opinion in such certified report may be fined or imprisoned or both under s. 943.39. The record of a hos-

---

[19] Any person other than a Wisconsin attorney who wishes to represent parties in compensation hearings is required to obtain a license under rules formulated by the Industrial Commission. Rules will be found under the Rules of Practice in this pamphlet.

[20] The purpose of this provision is to equalize to a degree the opportunity for parties to present pertinent testimony. The cost of appearance of medical witnesses is, at times, prohibitive to employes. Under this provision, the burden of producing the physicians for cross-examination desired is imposed upon the employer or insurance company.

pital or sanatorium in Wisconsin operated by any department, agency, or municipality of the federal or state government, or of any other hospital or sanatorium in Wisconsin which is satisfactory to the commission, established by certificate, affidavit, or testimony of the supervising officer or other person having charge of such records, or of a physician or surgeon, to be such record of the patient in question, and made in the regular course of examination or treatment of such patient, shall constitute prima facie evidence in any workmen's compensation proceeding as to the matter contained therein, insofar as it is otherwise competent and relevant.[21]

(b) The commission may, with or without notice to either party, cause testimony to be taken, or an inspection of the premises where the injury occurred to be had, or the time books and payrolls of the employer to be examined by any member of the commission or any examiner appointed by it, and may from time to time direct any employe claiming compensation to be examined by a regular physician; the testimony so taken, and the results of any such inspection or examination, to be reported to the commission for its consideration upon final hearing. All ex parte testimony taken by the commission shall be reduced to writing and either party shall have opportunity to rebut the same on final hearing.

(bm) Section 326.12 shall not apply to proceedings under this act, except as to a witness:

1. Who is beyond the reach of a subpoena of a commissioner or examiner; or

2. Who is about to go out of the state, not intending to return in time for the hearing; or

3. Who is so sick, infirm or aged as to make it probable that he will not be able to attend the hearing; or

4. Who is a member of the legislature, if any committee

---

[21] It must be shown that the record was made in the regular course of examination or treatment of the patient. The record then constitutes prima facie evidence insofar as it may otherwise be competent and relevant.

of the same or the house of which he is a member is in session, provided he waives his privilege.[22]

(c) Whenever the testimony presented at any hearing indicates a dispute, or is such as to create doubt, as to the extent or cause of disability or death, the commission may direct that the injured employe be examined or autopsy be performed, or an opinion of a physician be obtained without examination or autopsy, by an impartial, competent physician designated by the commission who is not under contract with or regularly employed by a compensation insurance carrier or self-insured employer. The expense of such examination shall be paid by the employer. The report of such examination shall be transmitted in writing to the commission and a copy thereof shall be furnished by the commission to each party who shall have an opportunity to rebut the same on further hearing.

(2) If the commission shall have reason to believe that the payment of compensation has not been made, it may on its own motion give notice to the parties, in the manner provided for the service of an application, of a time and place when a hearing will be had for the purpose of determining the facts. Such notice shall contain a statement of the matter to be considered. Thereafter all other provisions governing proceedings on application shall attach insofar as the same may be applicable.

(3) Any person who shall wilfully and unlawfully fail or neglect to appear or to testify or to produce books, papers and records as required, shall be fined not less than twenty-five dollars nor more than one hundred dollars, or imprisoned in the county jail not longer than thirty days.

---

[22]This permits examination of a witness beyond reach of the subpoena of a commissioner or examiner, or when a witness shall be about to go out of the state not intending to return in time for hearing, or when he shall be so sick or infirm or aged as to make it probable that he will not be able to attend hearing, or in case of a member of the legislature, if a committee or house of which he is a member is in session, provided the member is willing to waive his privilege. In other cases adverse examination before hearing is not permissible. This insures a minimum of delay and expense, and that as far as possible all proceedings are to be had before the Industrial Commission, which has necessary machinery and personnel to insure prompt and proper procedure with little or no expense to the parties. See Sec. 326.07.

Each day such person shall so refuse or neglect shall constitute a separate offense.[23]

(4) The right of an employe, his legal representative or dependent to proceed under this section shall not extend beyond 6 years from the date of the injury or death or from the date that compensation (other than medical treatment or burial expenses) was last paid, or would have been last payable if no advancement were made, whichever date is latest, except that in case of injury or death caused by exposure to ionized radiation the right to proceed hereunder shall be subject to no time limitations.[24]

(5) This section does not limit the time within which the state may bring an action to recover the amounts specified in subsection (5) of section 102.49 and section 102.59.

(6) If an employe or dependent shall, at the time of injury, or at the time his right accrues, be under 21 years of age, the limitations of time within which he may file application or proceed under this chapter, if they would otherwise sooner expire, shall be extended to one year after he attains the age of 21 years. If, within any part of the last year of any such period of limitation, an employe, his personal representative, or surviving dependent be insane or on active duty in the armed forces of the United States such period of limitation shall be extended to two years after the date that the limitation would otherwise expire. The provision hereof with respect to persons on active duty in the armed forces of the United States shall apply only where no applicable federal statute is in effect.

102.18 Findings and award. (1) After final hearing the commission shall make and file its findings upon all the facts involved in the controversy, and its order, which shall state its determination as to the rights of the parties. Pending the final determination of any controversy before it, the commission may after any hearing make interlocutory findings, orders and awards which may be enforced in

---

[23] See also Sec. 325.12.

[24] This makes clear that even though an advancement or lump sum is granted the time for proceeding is not cut down but is limited only by a period of 6 years from the date that compensation would have been last payable if no advancement or lump payment had been made.

the same manner as final awards. The commission may include in its final award, as a penalty for noncompliance with any such interlocutory order or award, if it shall find that noncompliance was not in good faith, not exceeding twenty-five per cent of each amount which shall not have been paid as directed thereby. Where there is a finding that the employe is in fact suffering from an occupational disease caused by the employment of the employer against whom the application is filed, a final award dismissing such application upon the ground that the applicant has suffered no disability from said disease shall not bar any claim he may thereafter have for disability sustained after the date of said award.[25]

(2) The industrial commission may authorize a commissioner or examiner to make findings and orders, and to review, set aside, modify or confirm compromises of claims for compensation under rules to be adopted by the commissioner. Any party in interest who is dissatisfied with the findings or order of a commissioner or examiner may file a written petition with the industrial commission as a commission to review the findings or order.

(3) If no petition is filed within twenty days from the date that a copy of the findings or order of the commissioner or examiner was mailed to the last known address of the parties in interest, such findings or order shall be considered the findings or order of the industrial commission as a body, unless set aside, reversed or modified by such commissioner or examiner within such time. If the findings or order are set aside by the commissioner or examiner the status shall be the same as prior to the findings or order set aside. If the findings or order are reversed or modified by the commissioner or examiner the time for filing petition with the commission shall run from the date that notice of such reversal or modification is mailed to the last known address of the parties in interest. Within ten days after the filing of such petition with the commission the commission shall

---

[25] This provision prevents the final closing of a claim for occupational disease in those cases in which no showing of disability can be made to the time of the commission's order but in which disability may develop at a date following such order. Secs. 102.12 and 102.17 still apply however.

either affirm, reverse, set aside or modify such findings or order in whole or in part, or direct the taking of additional testimony. Such action shall be based on a review of the evidence submitted. If the commission is satisfied that a party in interest has been prejudiced because of exceptional delay in the receipt of a copy of any findings or order it may extend the time another twenty days for filing petition with the commission.[26]

(4) The commission shall have power to remove or transfer the proceedings pending before a commissioner or examiner. It may also on its own motion, set aside, modify or change any order, findings or award (whether made by an individual commissioner, an examiner or by the commission as a body) at any time within twenty days from the date thereof if it shall discover any mistake therein, or upon the grounds of newly discovered evidence. Unless the liability under sections 102.49, 102.57, 102.58, 102.59, 102.60 and 102.61 is specifically mentioned, the order, findings or award shall be deemed not to affect such liability.

(5) If it shall appear to the commission that a mistake may have been made as to cause of injury in the findings, order, or award upon an alleged injury based on accident, when in fact the employe was suffering from an occupational disease, the commission may upon its own motion, with or without hearing, within three years from the date of such findings, order, or award, set aside such findings, order, or award, or the commission may take such action upon application made within such three years. Thereafter, and after opportunity for hearing, the commission may, if in fact the employe is suffering from disease arising out of the employment, make new findings and award, or it may reinstate the previous findings, order or award.[27]

---

[26] In order that undue delay in decision may not result, simple and summary procedure under this provision becomes essential. This is especially true because the law provides, in case of decision by an individual examiner or commissioner, for three appeals, one to the full commission, one to the Circuit Court of Dane County, and one to the Supreme Court. See Ind 80.19.

[27] If the commission finds that a mistake has been made as to the cause of injury, mistakenly determined to be on the basis of accident when in fact an employe was suffering from an occupational disease, the commission may with or without hearing within three years from the date of the erroneous findings set aside the order. Likewise the commission may take such action upon application made within such three years.

(6) In case of disease arising out of the employment, the commission may from time to time review its findings, order, or award, and make new findings, order, or award, based on the facts regarding disability or otherwise as they may then appear. This subsection shall not affect the application of the limitation in 102.17 (4).[28]

102.19 Alien dependents; payments through consular officers. In case a deceased employe, for whose injury or death compensation is payable, leaves surviving him alien dependents residing outside of the United States, the duly accredited consular officer of the country of which such dependents are citizens or his designated representative residing within the state shall, except as otherwise determined by the commission, be the sole representative of such deceased employe and of such dependents in all matters pertaining to their claims for compensation. The receipt by such officer or agent of compensation funds and the distribution thereof shall be made only upon order of the commission, and payment to such officer or agent pursuant to any such order shall be a full discharge of the benefits or compensation. Such consular officer or his representative shall furnish, if required by the commission, a bond to be approved by it, conditioned upon the proper application of all moneys received by him. Before such bond is discharged, such consular officer or representative shall file with the commission a verified account of the items of his receipts and disbursements of such compensation. Such consular officer or representative shall make interim reports to the commission as it may require.

102.195 In case an employe is adjudged insane or incompetent, or convicted of a felony, and is confined in a public institution and has wholly dependent upon him for support a person, whose dependency is determined as if the employe were deceased, compensation payable during the period of his confinement may be paid to the employe and his de-

---

[28] Disability and required treatment from disease are often so unpredictable that an automatic reservation to review these cases seems desirable to prevent injustice. In all cases the six year statute of limitation forecloses further action. Within the six year period, however, the time is extended as provided.

pendents, in such manner, for such time and in such amount as the commission by order provides.

102.20 Judgment on award. Either party may present a certified copy of the award to the circuit court for any county, whereupon said court shall, without notice, render judgment in accordance therewith; such judgment shall have the same effect as though rendered in an action tried and determined by said court, and shall, with like effect, be entered and docketed.

102.21 Payment of awards by municipalities. Whenever an award is made by the commission under this chapter or s. 66.191 against any municipality, the person in whose favor it is made shall file a certified copy thereof with the municipal clerk. Within twenty days thereafter, unless an appeal is taken, such clerk shall draw an order on the municipal treasurer for the payment of the award. If upon appeal such award is affirmed in whole or in part the order for payment shall be drawn within ten days after a certified copy of such judgment is filed with the proper clerk. If more than one payment is provided for in the award or judgment, orders shall be drawn as the payments become due. No statute relating to the filing of claims against, and the auditing, allowing and payment of claims by municipalities shall apply to the payment of an award or judgment under this section.

102.22 Penalty for delayed payments. If the sum ordered by the commission to be paid shall not be paid when due, such sum shall bear interest at the rate of 6 per cent per annum. The state of Wisconsin shall be liable for such interest on awards issued against it under this chapter. The commission shall have jurisdiction to issue award for payment of such interest at any time within one year of the date of its order or upon appeal within one year after final court determination. Where the employer or his insurer is guilty of inexcusable delay in making payments, the payments as to which such delay is found shall be increased by 10 per cent. Where such delay is chargeable to the employer

and not to the insurer s. 102.62 shall be applicable and the relative liability of the parties shall be fixed and discharged as therein provided.[29]

102.23 Judicial review.[30] (1) The findings of fact made by the commission acting within its powers shall, in the absence of fraud, be conclusive; and the order or award, either interlocutory or final, whether judgment has been rendered thereon or not, shall be subject to review only in the manner and upon the grounds following: Within thirty days from the date of an order or award originally made by the commission as a body or following the filing of petition for review with the commission under section 102.18[31] any party aggrieved thereby may commence, in the Circuit Court for Dane County, an action against the commission for the review of such order or award, in which action the adverse party shall also be made defendant. In such action a complaint, which need not be verified, but which shall state the grounds upon which a review is sought, shall be served with the summons. Service upon the secre-

---

[29] Withholding amounts unquestionably due because the injured man refuses to execute a release of his right to claim further benefits or for other reason will be regarded as inexcusable delay in the making of compensation payments.

[30] Comment by Legislative Committee of 1911: The finding of the board, in the absence of fraud, is made absolutely conclusive by this section. The award is reviewable only on three grounds: (1) That the board acted without or in excess of its power; (2) that the award was procured by fraud; (3) that the findings of fact by the board do not support the award. This review does not allow any retrial of the case as presented to the board. The facts found by the board are conclusive, and the review that is allowed in those cases where the findings of fact do not support the award, would occur only where the board had not given proper consideration to the act itself. In other words, the court will review only questions of law included in grounds 1 and 3 upon which an award may be reviewed. The fraud alluded to in the second ground will be only such as was perpetrated in procuring the award, and will not include false testimony of any party, because all such questions will be decided conclusively by the board. *Buehler Bros. v. Ind. Comm.*, 220 Wis. 371. The object of having the action to review brought against the board is twofold: (1) If any error is made it will be an error made by the board. Consequently, the board should defend its own action, and this will be done at the expense of the state; (2) To relieve the party in whose favor the award was made of the expense of litigation in the circuit and supreme courts. The commission defends its own orders.

[31] A party must petition the commission as a body for review of findings and order of an examiner before appealing to the Circuit Court of Dane County. Appeal to the court is always from an order of the commission as a body.

tary of the commission, or any member of the commission, shall be deemed completed service on all parties, but there shall be left with the person so served as many copies of the summons and complaint as there are defendants, and the commission shall mail one such copy to each other defendant. If the circuit court is satisfied that a party in interest has been prejudiced because of exceptional delay in the receipt of a copy of any findings or order it may extend the time another thirty days in which such action may be commenced. The commission shall serve its answer within twenty days after the service of the complaint, and, within the like time, such adverse party shall, if he so desires, serve his answer to said complaint, which answer may, by way of counterclaim or cross complaint, ask for the review of the order or award referred to in the complaint, with the same effect as if such party had commenced a separate action for the review thereof. With its answer, the commission shall make return to said court of all documents and papers on file in the matter, and of all testimony which may have been taken therein, and of its order, findings and award. Such return of the commission when filed in the office of the clerk of the circuit court shall, with the papers mentioned in section 270.72, constitute a judgment roll in such action; and it shall not be necessary to settle a bill of exceptions in order to make such return part of the record of such court in such action. Said action may thereupon be brought on for hearing before said court upon such record by either party on ten days' notice to the other; subject, however, to the provisions of law for a change of the place of trial or the calling in of another judge. Upon such hearing, the court may confirm or set aside such order or award; and any judgment which may theretofore have been rendered thereon; but the same shall be set aside only upon the following grounds:

(a) That the commission acted without or in excess of its powers.

(b) That the order or award was procured by fraud.

(c) That the findings of fact by the commission do not support the order or award.

(2) Upon the trial of any such action the court shall disregard any irregularity or error of the commission unless it be made to affirmatively appear that the plaintiff was damaged thereby.

(3) The record in any case shall be transmitted to the commission within 5 days after expiration of the time for appeal from the order or judgment of the court, unless appeal shall be taken from such order or judgment.

(4) Whenever an award is made against the state the attorney general may bring an action for review thereof in the same manner and upon the same grounds as are provided by subsection (1) hereof.

(5) The commencement of action for review shall not relieve the employer from paying compensation as directed, when such action involves only the question of liability as between the employer and one or more insurance companies or as between several insurance companies.

102.24 Remanding record. (1) Upon the setting aside of any order or award the court may recommit the controversy and remand the record in the case to the commission, for further hearing or proceedings; or it may enter the proper judgment upon the findings, as the nature of the case shall demand. An abstract of the judgment entered by the trial court upon the review of any order or award shall be made by the clerk thereof upon the docket entry of any judgment which may theretofore have been rendered upon such order or award and transcripts of such abstract may thereupon be obtained for like entry upon the dockets of the courts of other counties.

(2) After the commencement of an action to review any award of the commission the parties may have the record remanded by the court for such time and under such condition as they may provide, for the purpose of having the commission act upon the question of approving or disapproving any settlement or compromise that the parties may desire to have so approved. If approved the action shall be at an end and judgment may be entered upon the approval as upon an award. If not approved the record shall forthwith be returned to the circuit court and the action shall proceed as if no remand had been made.

102.25 Appeal from judgment on award. (1) Said commission, or any party aggrieved by a judgment entered upon the review of any order or award, may appeal therefrom within thirty days from the date of service by either party upon the other of notice of entry of judgment. However it shall not be necessary for said commission or any party to said action to execute, serve or file the undertaking required by section 274.11 (3) in order to perfect such appeal; but all such appeals shall be placed on the calendar of the supreme court and brought to a hearing in the same manner as state causes on such calendar. The state shall be deemed a party aggrieved, within the meaning of this subsection, whenever a judgment is entered upon such a review confirming any order or award against it. At any time before the case is set down for hearing in the supreme court, the parties may have the record remanded by the court to the industrial commission in the same manner and for the same purposes as provided for remanding from the circuit court to the industrial commission under section 102.24 (2).

(2) It shall be the duty of the clerk of any court rendering a decision affecting an award of the commission to promptly furnish the commission with a copy of such decision without charge.

102.26 Fees and costs. (1) No fees shall be charged by the clerk of any court for the performance of any service required by this chapter, except for the docketing of judgments and for certified transcripts thereof. In proceedings to review an order or award, costs as between the parties shall be in the discretion of the court, but no costs shall be taxed against the commission.

(2) Unless previously authorized by the commission, no fee shall be charged or received for the enforcement or collection of any claim for compensation, nor shall any contract therefor be enforcible, where such fee, inclusive of all taxable attorney's fees paid or agreed to be paid for such enforcement or collection, exceed 20 per cent of the amount at which such claim shall be compromised or of the amount awarded, adjudged or collected, except that in cases

of admitted liability where there is no dispute as to amount of compensation due and in which no hearing or appeal is necessary, the fee charged shall not exceed 10 per cent but not to exceed $100, of the amount at which such claim shall be compromised or of the amount awarded, adjudged or collected. The limitation as to fees shall apply to the combined charges of attorneys, solicitors, representatives and adjusters who knowingly combine their efforts toward the enforcement or collection of any compensation claim.

(2m) In any action for the recovery of costs of hospitalization in a tuberculosis sanatorium, where such cost was incurred by a patient whose tuberculosis entitled him to workmen's compensation, no attorney fee for the recovery of such cost shall be allowed to the attorney for such patient in such workmen's compensation action, unless, by express agreement with the governing board of such institution he has been retained by such governing board to also act as its attorney.

(3) Compensation in favor of any claimant, which exceeds $100, shall be made payable to such claimant in person; however, in any award the commission shall upon application of any interested party and subject to the provisions of sub. (2) fix the fee of his attorney or representative and provide in the award for payment of such fee direct to the person entitled thereto. At the request of the claimant medical expense, witness fees and other charges associated with the claim may be ordered paid out of the amount awarded. Payment according to the directions of the award shall protect the employer and his insurer from any claim of attorney's lien.

(4) The charging or receiving of any fee in violation of this section shall be unlawful, and the attorney or other person guilty thereof shall forfeit double the amount retained by him, the same to be collected by the state in an action in debt, upon complaint of the commission. Out of the sum recovered the court shall direct payment to the injured party of the amount of the overcharge.

102.27 Claims unassignable and exempt. No claim for compensation shall be assignable, but this provision shall

not affect the survival thereof; nor shall any claim for compensation, or compensation awarded, or paid, be taken for the debts of the party entitled thereto.

102.28 Preference of claim; workmen's compensation insurance. (1) The whole claim for compensation for the injury or death of any employe or any award or judgment thereon, and any claim for unpaid compensation insurance premiums shall be entitled to the same preference in bankruptcy or insolvency proceedings as is given by any law of this state or by the federal bankruptcy act to claims for labor, but this section shall not impair the lien of any judgment entered upon any award.

(2) An employer liable under this act to pay compensation shall insure payment of such compensation in some company authorized to insure such liability in this state unless such employer shall be exempted from such insurance by the industrial commission. An employer desiring to be exempt from insuring his liability for compensation shall make application to the industrial commission showing his financial ability to pay such compensation, and agreeing as a condition for the granting of the exemption to faithfully report all injuries under compensation according to law and the requirements of the commission and to comply with this act, and the rules of the commission pertaining to the administration thereof, whereupon the commission by written order may make such exemption. The commission may from time to time require further statement of financial ability of such employer to pay compensation and may upon ten days' notice in writing, for financial reasons or for failure of the employer to faithfully discharge his obligations according to the agreements contained in his application for exemption, revoke its order granting such exemption, in which case such employer shall immediately insure his liability. As a condition for the granting of an exemption the commission shall have authority to require the employer to furnish such security as it may consider sufficient to insure payment of all claims under compensation. Where the security is in the form of a bond or other personal guaranty, the commission may at any time either before or after the entry of an award, upon

at least ten days' notice and opportunity to be heard require the sureties to pay the amount of the award, the same to be enforced in like manner as the award itself may be enforced. Where an employer procures an exemption as herein provided and thereafter enters into any form of agreement for insurance coverage with an insurance company or inter-insurer not licensed to operate in this state, his conduct shall automatically operate as a revocation of such exemption. An order exempting an employer from insuring his liability for compensation shall be null and void if the application contains a financial statement which is false in any material respect.[32]

(3) An employer who shall fail to comply with the provisions of subsection (2) of section 102.28 shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than ten dollars nor more than one hundred dollars or by imprisonment in the county jail for not less than thirty days nor more than six months, or by both such fine and imprisonment. Each day's failure shall be a separate offense. Upon complaint of the commission, the fines specified in this section may be collected by the state in an action in debt.

(4) If it appears by the complaint or by the affidavit of any person in behalf of the state that the employer's liability continues uninsured there shall forthwith be served on the employer an order to show cause why he should not be restrained from employing any person in his business pending the proceedings or until he shall have satisfied the court in which the matter is pending that he has complied with the provisions of subsection (2) of this section. Such order to show cause shall be returnable before the court or the judge thereof at a time to be fixed in the order not less than twenty-four hours nor more than three days after its issuance. Insofar as the same may be applicable and not herein otherwise provided, the provisions of chapter 268 relative to injunctions shall govern these proceedings. If

[32] An employer who has fraudulently obtained exemption from insuring his liability under the workmen's compensation act is in the same position as an employer who fails to carry workmen's compensation insurance without securing exemption. The effect is to take away all the exemptions of such an employer in case of an injury to an employe and to render him liable to the penalties provided for failure to insure.

the employer denies under oath that he is subject to this act, and furnishes bond with such sureties as the court may require to protect all his employes injured after the commencement of the action for such compensation claims as they may establish, then an injunction shall not issue. Every judgment or forfeiture against an employer, under subsection (3) of this section, shall perpetually enjoin him from employing any person in his business at any time when he is not complying with subsection (2) of this section.

(5) If compensation is awarded under this act, against any employer who at the time of the accident has not complied with the provisions of subsection (2) of this section, such employer shall not be entitled as to such award or any judgment entered thereon, to any of the exemptions of property from seizure and sale on execution allowed in sections 272.18 to 272.22. If such employer is a corporation, the officers and directors thereof shall be individually and jointly and severally liable for any portion of any such judgment as is returned unsatisfied after execution against the corporation.

(6) Every employer shall upon request of the industrial commission report to it the number of his employes and the nature of their work and also the name of the insurance company with whom he has insured his liability under the workmen's compensation act and the number and date of expiration of such policy. Failure to furnish such report within ten days from the making of a request by registered mail shall constitute presumptive evidence that the delinquent employer is violating the provisions of subsection (2) of this section.

102.29 Third party liability. (1) The making of a claim for compensation against an employer or compensation insurer for the injury or death of an employe shall not affect the right of the employe, his personal representative, or other person entitled to bring action, to make claim or maintain an action in tort against any other party for such injury or death, hereinafter referred to as a third party; nor shall the making of a claim by any such person against

a third party for damages by reason of an injury to which sections 102.03 to 102.64 are applicable, or the adjustment of any such claim, affect the right of the injured employe or his dependents to recover compensation.[33] The employer or compensation insurer who shall have paid or is obligated to pay a lawful claim under this chapter shall likewise have the right to make claim or maintain an action in tort against any other party for such injury or death. However, each shall give to the other reasonable notice and opportunity to join in the making of such claim or the instituting of an action and to be represented by counsel. If a party entitled to notice cannot be found, the industrial commission of Wisconsin shall become the agent of such party for the giving of a notice as required herein and the notice, when given to the industrial commission, shall include an affidavit setting forth the facts, including the steps taken to locate such party. Each shall have an equal voice in the prosecution of said claim, and any disputes arising shall be passed upon by the court before whom the case is pending, and if no action is pending, then by a court of record or the industrial commission. If notice is given as herein provided, the liability of the tort feasor shall be determined as to all parties having a right to make claim, and irrespective of whether or not all parties join in prosecuting said claim, the proceeds of such claim shall be divided as follows: after deducting the reasonable cost of collection, one-third of the remainder shall in any event be paid to the injured employe or his personal representative or other person entitled to bring action. Out of the balance remaining, the employer or insurance carrier shall be reimbursed for all payments made by it, or which it may be obligated to make in the future, under the workmen's compensation act, except that it shall not be reimbursed for any payments of increased compensation made or to be made under the provisions of sections 102.22, 102.57, or 102.60.[34] Any bal-

---

[33] Acceptance of compensation does not operate as an assignment of claim against a third party, nor does settlement with a third party operate as a waiver of claim for compensation.

[34] This provides that the employer or workmen's compensation insurance carrier shall not be reimbursed out of third party settlements for payments of increased compensation made or to be made under the provisions of 102.22, 102.57, 102.60. These respectively are penalty for delayed payments

ance remaining shall be paid to the employe or his personal representative or other person entitled to bring action. If both the employe or his personal representative or other person entitled to bring action, and the employer or compensation insurer, join in the pressing of said claim and are represented by counsel, the attorneys' fees allowed as a part of the costs of collection shall be, unless otherwise agreed upon, divided between such attorneys as directed by the court or by the industrial commission. A settlement of any third party claim shall be void unless said settlement and the distribution of the proceeds thereof is approved by the court before whom the action is pending and if no action is pending, then by a court of record or the industrial commission.

(2) In the case of liability of the employer or insurer to make payment into the state treasury under s. 102.49 or 102.59, if the injury or death was due to the actionable act, neglect or default of a third party, the employer or insurer shall have a right of action against such third party to recover the sum so paid into the state treasury, which right may be enforced by joining in the action mentioned in sub. (1), or by independent action. Contributory negligence of the employe because of whose injury or death such payment was made shall bar recovery if such negligence was as great as the negligence of the person against whom recovery is sought, and the recovery allowed the employer or insurer shall be diminished in proportion to the amount of negligence attributable to such injured or deceased employe. Any action brought under this subsection may, upon order of the court, be consolidated and tried together with any action brought under sub. (1).

(3) Nothing in this act shall prevent an employe from taking the compensation he may be entitled to under it and also maintaining a civil action against any physician or surgeon for malpractice. The employer or compensation in-

---

(either 6 per cent after an order of the commission or 10 per cent for inexcusable delay); 15 per cent increased compensation payable by the employer because of violation of a safety order and double or treble compensation paid because of employment of a minor without required permit or at prohibited employment.

surer shall have no interest in or right to share in the proceeds of any civil action against any physician or surgeon for malpractice.

(4) If the insurance carrier of the employer and of the third party shall be the same, or if there is common control of the insurer of each, the insurance carrier of the employer shall promptly notify the parties in interest and the industrial commission of that fact; likewise, if the employer has assumed the liability of the third party he shall give similar notice; and, in default of such notice, any settlement with an injured employe or beneficiary shall be void. Nothing contained in this subsection shall prevent the employer or compensation insurer from sharing in the proceeds of any third party claim or action, as set forth in subsection (1).

(5) If the insurance carrier of the employer and of the third party are the same or if there is common control of the insurer of each, and the insurer fails to commence a third party action within the 3 years allowed by s. 330.205, the 3-year statute of limitations in s. 330.205 shall not be pleaded as a bar in any action commenced by the injured employe herein against any such third party subsequent to 3 years from the date of injury, but prior to 6 years from such date of injury, provided that any recovery in such action shall be limited to the insured liability of the third party. In any such action commenced by the injured employe subsequent to the 3-year period, the insurance carrier of the employer shall forfeit all right to participate in such action as a complainant and to recover any payments made under the workmen's compensation act. This subsection shall not apply if the insurance carrier has complied with sub. (4).[35]

---

[35] The purpose of the provision is to give incentive to the common insurance carrier of the employer and third party to act in the interests of the employe in proceeding against the third party. There is not the same keen interest for the insurer to proceed where it is a common carrier as there is in the case where different carriers are involved. The penalty for failure to take prompt action is against the carrier which fails to initiate necessary steps to bring third party action. The carrier has already lost its right to proceed except as notice of injury has been served or action commenced within the 3 year period. It, therefore, loses nothing under the provision but also fails to gain that which is gained by the employe who, under this provision, will be permitted to commence his action after the 3 year period.

102.30 Other insurance not affected; liability of insured employer. (1) This act shall not affect the organization of any mutual or other insurance company, nor the right of the employer to insure in mutual or other companies, against such liability, or against the liability for the compensation provided for by this act, or to provide by mutual or other insurance, or by arrangement with his employes, or otherwise, for the payment to such employes, their families, dependents or representatives, of sick, accident or death benefits in addition to the compensation provided herein. But liability for compensation shall not be reduced or affected by any insurance, contribution or other benefit whatsoever, due to or received by the person entitled to such compensation, and the person so entitled shall, irrespective of any insurance or other contract,[36] have the right to recover the same directly from the employer; and in addition thereto, the right to enforce in his own name, in the manner provided in this act, the liability of any insurance company which may have insured the liability for such compensation, and the appearance, whether general or special, of any such insurance carrier by agent or attorney shall be a waiver of the service of copy of application and of notice of hearing required by section 102.17; provided, however, that payment of such compensation by either the employer or the insurance company, shall, to the extent thereof, be a bar to recovery against the other of the amount so paid, and provided, further, that as between the employer and the insurance company, payment by either directly to the employe, or to the person entitled to compensation, shall be subject to the conditions of the policy.

(2) The failure of the assured to do or refrain from doing any act required by the policy shall not be available to the insurance carrier as a defense against the claim of the injured employe or his dependents.

(3) The commission may order direct reimbursement out of the proceeds payable under this chapter for payments made under a nonindustrial insurance policy covering the same disability and medical expense when the claimant con-

---

[36] Liability for compensation is not reduced because the employe carries insurance, and no part of the wages of the employe may be taken to pay insurance premiums against liability under this act.

sents, or when it is established that such payments under the nonindustrial insurance policy were improper.

102.31 Workmen's compensation insurance; policy regulations. (1) (a) Every contract for the insurance of the compensation herein provided for, or against liability therefor, shall be deemed to be made subject to the provisions of this act, and provisions thereof inconsistent with the act shall be void. Such contract shall be construed to grant full coverage of all liability of the assured under and according to the provisions of the act, notwithstanding any agreement of the parties to the contrary unless the commission has theretofore by written order specifically consented to the issuance of a policy on a part of such liability, except that an intermediate agency or publisher referred to in section 102.07 (6) may, under its own policy, cover liability of employes as defined in said section 102.07 (6) for an intermediate or independent news agency, provided the policy of insurance of such publisher or intermediate agency is indorsed to cover such persons. If the publisher so covers it shall not be necessary for the intermediate or independent news agency to cover liability for such persons.[37] No policy shall be canceled by either party within the policy period nor terminated upon expiration date until a notice in writing shall be given to the other party, fixing the date on which it is proposed to cancel it, or declaring that the party does not intend to renew the policy upon expiration date. Such cancellation or termination shall not become effective until 30 days after written notice has been given to the commission unless prior thereto the employer obtains other insurance coverage or an order exempting him from carrying insurance as provided in section 102.28 (2).[38] Such

[37] The law establishes no direct liability against the publisher for the employes of the intermediate or independent agency except as the agency may be a contractor under the publisher, in which case liability would exist under Sec. 102.06. The publisher is permitted to assume, under his insurance policy, the liability which exists directly against the intermediate or independent news agency, and to relieve those agencies from covering liability of newsboys.

[38] This makes it impossible for the employer or insurance company to cancel a policy of insurance unless thirty days' notice is given to the other party and to the commission. A second provision makes it certain that issuance of a new policy will automatically revoke and terminate any former policy issued by the same company.

notice to the commission shall be served personally or by registered mail on the commission at its office in Madison. Issuance of a new policy shall automatically revoke and terminate any former policy or policies issued by the same company.

(b) If the insured is a partnership, such contract of insurance shall not be construed to grant coverage of the individual liability of the members of such partnership in the course of a trade, business, profession or occupation conducted by them as individuals, nor shall a contract of insurance procured to cover individual liability be construed to grant coverage of a partnership of which the individual is a member, nor to grant coverage of the liability of the individual arising as a member of any partnership.[39]

(2) Each employe shall constitute a separate risk. Five employers or more may join in the organization of a mutual company under subsection (16) of section 201.04 and no such company organized by employers shall be authorized to effect such insurance unless it shall have in force or put in force simultaneously insurance on at least one thousand five hundred separate risks.

(3) The commission may examine from time to time the books and records of any insurance company insuring liability or compensation for an employer in this state. Any such company that shall refuse or fail to allow the commission to examine its books and records shall have its license revoked.

(5) Two or more companies, licensed to carry on the business of workmen's compensation insurance in this state, may with the approval of the commissioner of insurance, form a corporation for the purpose of insuring special risks under the workmen's compensation act. The articles of incorporation shall contain a declaration that the various company members shall contribute such amounts as may be necessary to meet any deficit of such corporation, such declaration to be in lieu of all capital, surplus and other re-

[39] This language operates to treat a partnership for insurance purposes as an entity. If A, an individual, has insurance and joins a partnership, his individual insurance will not cover the partnership. Conversely, when A leaves the partnership, the partnership insurance will not cover A as an individual.

quirements for the organization of companies and the transaction of the business of workmen's compensation insurance in this state. Such corporation shall be owned, operated and controlled by its company members as may be provided in the articles of incorporation.

(6) If any corporation licensed to transact the business of workmen's compensation insurance shall fail promptly to pay claims for compensation for which it shall become liable or if it shall fail to make reports to the industrial commission as provided in section 102.38, the industrial commission may recommend to the commissioner of insurance that the license of such company be revoked, setting forth in detail the reasons for its recommendation. The commissioner shall thereupon furnish copy of such report to the corporation and shall set a date for a hearing, at which both the corporation and the industrial commission shall be afforded an opportunity to present evidence. If after such hearing the commissioner is satisfied that the corporation has failed to live up to all of its obligations under this chapter, he shall promptly revoke its license; otherwise he shall dismiss the complaint.

(7) If any corporation licensed to transact the business of workmen's compensation insurance shall encourage, persuade or attempt to influence any employer, arbitrarily or unreasonably to refuse employment to or to discharge employes, the commissioner of insurance may, upon complaint of the industrial commission, under procedure set out in subsection (6) of section 102.31, revoke the license of such corporation.[40]

(8) If any employer who has by the industrial commission been granted exemption from the carrying of compensation insurance shall arbitrarily or unreasonably refuse employment to or shall discharge employes because of a nondisabling physical condition, the industrial commission shall revoke the exemption of such employer.[41]

---

[40] The intent is to discourage insurance companies from attempting to influence employers, arbitrarily or unreasonably to refuse employment to, or discharge employes. The penalty for such activity may be revocation of the license of the insurance company by the commissioner of insurance upon complaint by the industrial commission.

[41] The intent is to dissuade action on the part of self-insurers as to hiring only workmen who are above the average in physical fitness, and in refusing to hire employes with slight physical defects.

102.32 Continuing liability; guarantee settlement, gross payment. In any case in which compensation payments have extended or will extend over six months or more from the date of the injury (or at any time in death benefit cases), any party in interest may, in the discretion of the commission, be discharged from, or compelled to guarantee, future compensation payments as follows:

(1) By depositing the present value of the total unpaid compensation upon a three per cent interest discount basis with such bank or trust company as may be designated by the commission; or

(2) By purchasing an annuity within the limitations provided by law, in such insurance company granting annuities and licensed in this state, as may be designated by the commission; or

(3) By payment in gross upon a three per cent interest discount basis to be approved by the commission; and

(4) In cases where the time for making payments or the amounts thereof cannot be definitely determined, by furnishing a bond, or other security, satisfactory to the commission for the payment of such compensation as may be due or become due. The acceptance of such bond, or other security, and the form and sufficiency thereof, shall be subject to the approval of the commission. If the employer or insurer is unable or fails to immediately procure such bond, then, in lieu thereof, deposit shall be made with such bank or trust company, as may be designated by the commission, of the maximum amount that may reasonably become payable in such cases, to be determined by the commission at amounts consistent with the extent of the injuries and the provisions of the law. Such bonds and deposits are to be reduced only to satisfy such claims and withdrawn only after the claims which they are to guarantee are fully satisfied or liquidated under the provisions of subsection (1), (2) or (3); and

(5) Any insured employer may, within the discretion of the commission, compel the insurer to discharge, or to guarantee payment of its liabilities in any such case under the provisions of this section and thereby release himself from

compensation liability therein, but if for any reason a bond furnished or deposit made under subsection (4) does not fully protect, the compensation insurer or uninsured employer, as the case may be, shall still be liable to the beneficiary thereof.

(6) Any time after six months from the date of the injury, the commission may order payment in gross or in such manner as it may determine to the best interest of the injured employe or his dependents. When payment in gross is ordered, the commission shall fix the gross amount to be paid based on the present worth of partial payments, considering interest at three per cent per annum.

(7) No lump sum settlement shall be allowed in any case of permanent total disability upon an estimated life expectancy, except upon consent of all parties, after hearing and finding by the commission that the interests of the injured employe will be conserved thereby.

102.33 Blanks and records. The commission shall print and furnish free to any employer or employe such blank forms as it shall deem requisite to facilitate efficient administration of this act; it shall keep such record books or records as it shall deem required for the proper and efficient administration of this act.

102.34 Nonelection, notice by employer. Knowledge of the fact that an employer is subject to this act shall conclusively be imputed to all employes. Every employer who would be subject to this act but for the fact that he has elected not to accept its provisions thereof, shall post and maintain printed notices of such nonelection on his premises, of such design, in such numbers, and at such places as the commission shall, by order, determine to be necessary to give information to his employes.

102.35 Penalties. (1) Every employer and every insurance company that fails to keep the records or to make the reports required by chapter 102 or that knowingly falsifies such records or makes false reports shall forfeit to the state not less than ten dollars nor more than one hundred dollars for each offense.

(2) Any employer, or duly authorized agent thereof, who, without reasonable cause, refuses to rehire an employe injured in the course of employment, or who, because of a claim or attempt to claim compensation benefits from such employer, shall discriminate or threaten to discriminate against an employe as to his employment, shall forfeit to the state not less than $50 nor more than $500 for each offense. No action under this subsection shall be commenced except upon request of the industrial commission.

102.37 Employers' records. Every employer of three or more persons and every employer who is subject to the workmen's compensation act shall keep a record of all accidents causing death or disability of any employe while performing services growing out of and incidental to the employment, which record shall give the name, address, age and wages of the deceased or injured employe, the time and causes of the accident, the nature and extent of the injury, and such other information as the industrial commission may require by general order. Reports based upon this record shall be furnished to the industrial commission at such times and in such manner as it may require by general order, upon forms to be procured from the commission.

102.38 Records of payments; reports thereon. Every insurance company which transacts the business of compensation insurance, and every employer who is subject to the workmen's compensation act, but who has not insured his liability, shall keep a record of all payments made under the provisions of chapter 102 of the statutes and of the time and manner of making such payments, and shall furnish such reports based upon these records to the industrial commission as it may require by general order, upon forms to be procured from the commission.

102.39 General orders; application of statutes. The provisions of chapter 101, relating to the adoption, publication, modification and court review of general orders of the commission shall apply to all general orders adopted pursuant to this chapter.

102.40 Reports not evidence in actions. Reports furnished to the commission pursuant to sections 102.37 and 102.38 shall not be admissible as evidence in any action or proceeding arising out of the death or accident reported.

102.42 Incidental compensation. (1) The employer shall supply such medical, surgical and hospital treatment, medicines, medical and surgical supplies, crutches, artificial members, appliances, and training in the use of artificial members and appliances, or, at the option of the employe, if the employer has not filed notice as hereinafter provided, Christian Science treatment in lieu of medical treatment, medicines and medical supplies, as may be reasonably required to cure and relieve from the effects of the injury, and to attain efficient use of artificial members and appliances,[42] and in case of his neglect or refusal seasonably to do so, or in emergency until it is practicable for the employe to give notice of injury, the employer shall be liable for the reasonable expense incurred by or on behalf of the employe in providing the same. The employer shall also be liable for reasonable expense incurred by the employe for necessary treatment to cure and relieve him from the effects of occupational disease prior to the time that the employe knew or should have known the nature of his disability and its relation to employment, and as to such treatment the provisions of section 102.42 (2) and (3) shall not apply.[43]

(2) The employe shall have the right to make choice of his attending physician from a panel of physicians to be

---

[42] Experience gained in cases of amputation following injury in the last war pointed out the necessity for training in the use of artificial limbs. Most meritorious and effective training and technique were evolved. The cost of training is a substantial item. The amendment provides for payment of such cost as part of compensation benefits with limitation only of reasonableness as to time and amount.

[43] Medical treatment when necessary is to be provided regardless of whether or not indemnity is payable or whether indemnity disability has ceased. There is provision for payment of expense for treatment procured by an employe who does not learn until later of the nature of his disability, or its relation to employment. Formerly, no liability would have existed unless and until notice of injury had been given. In such cases as tuberculosis following silicosis, this worked hardship on an employe who, although reasonably diligent, could not give notice of necessity for treatment because he had not yet learned the nature of his disability and its relation to employment.

named by the employer. Where the employer has knowledge of the injury and the necessity for treatment, his failure to tender the same shall constitute such neglect or refusal. Failure of the employer to maintain a reasonable number of competent and impartial physicians, ready to undertake the treatment of the employe, and to permit the employe to make choice of his attendant from among them, shall constitute neglect and refusal to furnish such attendance and treatment. Nothing contained in this section shall limit the right of the employe to make a second choice of physician from the panel of physicians named by the employer. The commission may upon summary hearing permit an injured employe to make selection of a physician not on the panel.[44]

(3) MEDICAL PANEL. In determining the reasonableness of the size of the medical panel, the commission shall take into account the number of competent physicians immediately available to the community in which the medical service is required, and where only one such physician is available, the tender of attention by such physician shall be construed as a compliance with this section unless specialized or extraordinary treatment is necessary. In such panel, partners and clinics shall be deemed as one physician. Every employer shall post the names and addresses of the physicians on his panel in such manner as to afford his employes reasonable notice thereof.[45]

(4) PREJUDICED PHYSICIAN. Whenever in the opinion of the commission a panel physician has not impartially estimated the degree of permanent disability or the extent of temporary disability of any injured employe, the commis-

---

[44] This insures that the employe who may be dissatisfied with the service of the first physician chosen may select another physician. It is generally considered that if an employe does not have confidence in his attending physician recovery may be delayed, and that no employe should have to be treated by a physician whom he distrusts or dislikes whether or not for good reason. The law provides for further change of physician upon request of the employe to the commission.

[45] The commission is to determine either by general rule or in individual cases what is a reasonable panel and to require the employer to maintain such panel.

There has been a commendable disposition on the part of both employers and carriers to enlarge medical panels in many cases to the extent of furnishing a free or practically free choice of physicians. The policy of the commission is to broaden rather than to restrict the number of physicians on panels.

sion may cause such employe to be examined by a physician selected by it, and to obtain from him a report containing his estimate of such disabilities. If the report of such physician shows that the estimate of the panel physician has not been impartial from the standpoint of such employe, the commission may in its discretion charge the cost of such examination to the employer, if he is a self-insurer, or to the insurance company which is carrying the risk.[46]

(5) CHRISTIAN SCIENCE TREATMENT. Any employer may elect not to be subject to the provisions for Christian Science treatment provided for in this section by filing written notice of such election with the commission.

(6) ARTIFICIAL MEMBERS. Artificial members furnished at the end of the healing period need not be duplicated.

(7) Unless the employe shall have elected Christian Science treatment in lieu of medical, surgical, hospital, or sanatorium treatment, no compensation shall be payable for the death or disability of an employe, if his death be caused, or insofar as his disability may be aggravated, caused or continued (a) by an unreasonable refusal or neglect to submit to or follow any competent and reasonable medical or surgical treatment, (b) or, in the case of tuberculosis, by his refusal or neglect to submit to or follow hospital or

---

[46] Subsections 2, 3 and 4 constitute the so-called "medical panel" provisions. Their purpose is to require employers and insurance carriers to maintain a panel of physicians, from which list employes shall be permitted to make their choice of physician to attend them. The size of this panel must necessarily vary according to the size of the community and the number of physicians available for service. In small communities the employer and insurer may satisfy their obligation by maintaining a smaller panel, and in those communities where only one physician is available, the tendering of service by that physician may be sufficient. The physicians named on the panel must be competent and impartial.

This legislation is intended to satisfy in a measure the demand of injured workmen that they be permitted to select their own physician. The plan will give them something approaching a choice and at the same time preserve for the employer and insurer the opportunity to see that only the most competent physicians and surgeons are called upon to attend employes. The agitation for the right of selection by the employe developed not always because of the incompetence of the physician designated by the employer, but more particularly because of conduct both in and out of hearing, which the injured men construed as evidence of partiality. The maintenance of strict impartiality by attending physicians will accomplish more than all other agencies to satisfy injured employes with the plan of medical selection by employers.

sanatorium treatment when found by the commission to be necessary. The right to compensation accruing during a period of refusal or neglect under (b) shall be barred, irrespective of whether disability was aggravated, caused or continued thereby.[47]

(8) Medical Expenses. In the event of a claim by a state employe under the conditions enumerated in s. 102.03, involving only payment of medical expense of not to exceed a gross of $50, the employing department may approve payment of such reasonable medical expense for necessary medical treatment to whomsoever owing, subject to subsequent review by the commission. If the employing department rejects the claim, the employe may make claim to the commission. Payment shall be charged to the appropriate fund, as provided by s. 20.550 (1).[48]

102.43 Weekly compensation schedule. If the injury causes disability, an indemnity shall be due as wages commencing with the fourth calendar day, exclusive of Sundays only, excepting where such employes work on Sunday, after the employe leaves work as the result of the injury, and shall be payable weekly thereafter, during such disability. If the disability shall exist after ten calendar days from the date the employe leaves work as a result of the injury and only if it so exists, indemnity shall also be due and payable for the first three calendar days, exclusive of Sundays only, excepting where such employes work on Sunday. Said weekly indemnity shall be as follows.[49]

---

[47] Former provisions as to the consequences of refusal or neglect to submit to treatment for tuberculosis were confusing and uncertain. This proposal is to clarify the situation and to bar compensation accruing during a period of refusal of hospital or sanatorium treatment when the commission has found it to be necessary. This is based on equity and further to protect persons from contact and possible contraction of tuberculosis from persons suffering from the disease.

There is also provision making it clear that medical and surgical treatment are in the same category so far as refusal to submit is concerned, that is, loss of compensation to the extent that refusal of treatment augments disability.

[48] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

[49] The payment to be made on the eleventh calendar day will pay for all disability to that date except where the waiting period is to be excluded because disability does not continue after ten calendar days from the date of initial disability.

(1) If the injury causes total disability, seventy per cent of the average weekly earnings during such total disability.

(2) If the injury causes partial disability, during the partial disability, such proportion of the weekly indemnity rate for total disability as the actual wage loss of the injured employe bears to his average weekly wage at the time of his injury.[50]

(3) If the disability caused by the injury is at times total and at times partial, the weekly indemnity during each total or partial disability shall be in accordance with subsections (1) and (2), respectively.

(4) If the disability period involves a fractional week, indemnity shall be paid for each day of such week, except Sundays only, at the rate of one-sixth of the weekly indemnity.[51]

(5) Temporary disability, during which compensation shall be payable for loss of earnings, shall include such period as may be reasonably required for training in the use of artificial members and appliances, and shall include such period as the employe may be receiving instruction pursuant to the provisions of section 102.61. Temporary disability on account of receiving instruction of the latter nature, and not otherwise resulting from the injury, shall not be in excess of 40 weeks.[52]

102.44 Maximum limitations. Section 102.43 shall be subject to the following limitations:

(2) In case of permanent total disability aggregate indemnity shall be weekly indemnity for the period that he

---

[50] In case of partial disability occasioning a wage loss, proportionate compensation is paid. For example: if an employe earns 50 per cent of his wage, he would also be entitled to 50 per cent of the compensation due for temporary total disability.

[51] Compensation is to be paid for each day of disability except Sunday, regardless of whether or not the day of disability is a working day. Payment for each day is to be made uniformly at the rate of one-sixth of the weekly indemnity regardless of the number of days per week which the employe works.

[52] In addition to compensation for temporary disability following injury compensation is to be paid for loss of earnings during such period as may be reasonably required, (1) for training in the use of artificial members and appliances, and (2) for such period as the employe may be receiving rehabilitation instruction. There is no stated limit for payment of compensation while training in the use of artificial members. There is a limitation of 40 weeks in case of rehabilitation training.

may live. Total impairment for industrial use of both eyes, or the loss of both arms at or near the shoulder, or of both legs at or near the hip, or of one arm at the shoulder and one leg at the hip, shall constitute permanent total disability. This enumeration shall not be exclusive but in other cases the commission shall find the facts.

(3) For permanent partial disability not covered by the provisions of sections 102.52 to 102.56 the aggregate number of weeks of indemnity shall bear such relation to the number of weeks set out in paragraphs (a) and (b) as the nature of the injury bears to one causing permanent total disability and shall be payable at the rate of 70 per cent of the average weekly earnings of the employe to be computed as provided in section 102.11.[53] Such weekly indemnity shall be in addition to compensation for healing period and shall be for the period that he may live, not to exceed, however, these named limitations, to-wit:

(a) One thousand weeks for all persons 50 years of age or less.

(b) For each successive yearly age group, beginning with 51 years, the maximum limitation shall be reduced by 2½ per cent per year, with no reduction in excess of 50 per cent.[54]

(4) Where the permanent disability is covered by the provisions of sections 102.52, 102.53 and 102.55,[55] such sections shall govern; provided, that in no case shall the percentage of permanent total disability be taken as more than 100 per cent.

---

[53] Compensation is to be paid at the full weekly rate but is to be proportioned to the total number of weeks provided for permanent partial disability. For example, 10% permanent partial disability because of a back injury entitles the injured employe under 51 years of age to 100 weeks of compensation. The basis of weekly payment for all compensation cases is uniform.

[54] A uniform basis is adopted for scheduled and non-scheduled disabilities, on the basis of 2½ per cent reduction per year, beginning with 51 years, the maximum reduction to be not more than 50 per cent. See Table 2, infra.

It will be noted that after age 70 there will be no further reduction for permanent disability.

(See Section 102.53 (2) providing like reduction in schedule injuries)

[55] This provides for application of the "multiple injury" feature of the law as between schedule and non-schedule injuries as well as merely between schedule injuries.

102.45 Benefits payable to minors; how paid. Compensation and death benefit payable to an employe or dependent who was a minor when his right began to accrue, may, in the discretion of the commission, be ordered paid to a bank, trust company, trustee, parent, or guardian, for the use of such employe or dependent as may be found best calculated to conserve his interests. Such employe or dependent shall be entitled to receive payments, in the aggregate, at a rate not less than that applicable to payments of primary compensation for total disability or death benefit as accruing from his twenty-first birthday.[56]

102.46 Death benefit. Where death proximately results from the injury and the deceased leaves a person wholly dependent upon him for support, the death benefit shall equal four times his average annual earnings, but when added to the disability indemnity paid and due at the time of death, shall not exceed seventy per cent of weekly wage for the number of weeks set out in paragraphs (a) and (b) of subsection (3) of section 102.44, based on the age of the deceased at the time of his injury.[57]

102.47 Death benefit continued. If death occurs to an injured employe other than as a proximate result of the injury, before disability indemnity ceases, death benefit and burial expense allowance shall be as follows:

(1) Where the injury proximately causes permanent total disability, they shall be the same as if the injury had caused death, except that the burial expense allowance shall be included in the items subject to the limitation stated in

---

[56] The purpose is to conserve the substantial installment payments which may be due to youthful employes. This in no way affects payments by the employer or insurance carrier but merely provides a method by which the industrial commission can direct retention and assume supervision of principal in the manner provided and thus conserve compensation payments best to suit the needs of the minor.

[57] This provision is to be read in conjunction with Sec. 102.44 (2), which provides for the compensating of permanent total disability during the life of the injured instead of for a given number of weeks. Sec. 102.46 preserves the old limitation, so that payment of death benefit, following a period of total disability, when added to the amount paid for disability before death, shall not exceed the same number of weeks as was formerly provided for permanent total disability.

section 102.46. The amount available shall be applied toward burial expense before any is applied toward death benefit.[58]

(2) Where the injury proximately causes permanent partial disability, the unaccrued compensation shall first be applied toward funeral expenses, not to exceed * * * *$500,*[59] any remaining sum to be paid to dependents, as provided in this section and ss. 102.46 and 102.48 and there shall be no liability for any other payments. All computations under this subsection shall take into consideration the present value of future payments.

102.48 Death benefit, continued. If the deceased employe leaves no one wholly dependent upon him for support, partial dependency and death benefits therefor shall be as follows:

(1) An unestranged surviving parent or parents, residing within any of the states or District of Columbia or any of the territorial possessions of the United States, shall receive a death benefit of $2,000.[60] If the parents are not living together, the commission shall divide this sum in such proportion as it determines to be just, considering their ages and other facts bearing on dependency.

(2) In all other cases the death benefit shall be such sum as the commission shall determine to represent fairly and justly the aid to support which the dependent might reasonably have anticipated from the deceased employe but for the injury. To establish anticipation of support and dependency, it shall not be essential that the deceased employe made any contribution to support. The

---

[58] It is provided that burial expense along with compensation payable in life and death benefit payable to dependents is subject to the limitation and not additional to it as in the case of death caused by the injury. Burial expense is first claim upon the balance in conformity with 102.47 (2). The limitation under 102.46 is up to four times average annual earnings but not more than the balance of the number of weeks provided as the basis for computing permanent partial disability to the head and torso.

[59] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

[60] All unestranged parents, unless totally dependent, will receive the sum of $2,000—this being predicated on an approximate average of benefits for partial dependency on the part of parents.

It is not necessary to make a showing of contribution to support under this provision. If, however, a showing of *total* dependency can be made, then Section 102.46 is applicable.

aggregate benefits in such case shall not exceed twice the average annual earnings of the deceased; or four times the contributions of the deceased to the support of such dependents during the year immediately preceding his death, whichever amount is the greater. In no event shall the aggregate benefits in such case exceed the amount which would accrue to a person solely and wholly dependent. Where there is more than one partial dependent the weekly benefit shall be apportioned according to their relative dependency. The term "support" as used in sections 102.42 to 102.63 shall include contributions to the capital fund of the dependents, for their necessary comfort.

(3) Death benefit, other than burial expenses, except otherwise provided, shall be paid in weekly installments corresponding in amount to fifty per cent of the weekly earnings of the employe, until otherwise ordered by the commission.

102.49 Additional death benefits for children, state fund. (1) Where the beneficiary under s. 102.46 or s. 102.47 (1) is the wife or husband of the deceased employe and is wholly dependent for support, an additional death benefit shall be paid from the funds provided by sub. (5) for each child by their marriage living at the time of the death of the employe, and who is likewise wholly dependent upon him for support. Such additional benefit shall be computed from the date of the death of the employe as follows: For the child one year of age or under (including a posthumous child), a sum equal to 1-1/15 times the average annual earnings of the deceased employe. For children in each successive yearly age group the amount allowed shall be reduced by one-sixteenth part of such sum, with no allowance for any child over 16 years of age at the death of the employe unless such child be physically or mentally incapacitated from earning, in which case the commission shall make such allowance as the equities and the necessities of the case merit, not more, however, than the amount payable on account of a child under one year of age.

(2) A child lawfully adopted by the deceased employe and the surviving spouse, prior to the time of the injury, and a child not his own by birth or adoption but living with

him as a member of his family at the time of the injury shall for the purpose of this section be taken as a child by their marriage.

(3) Where the employe leaves a wife or husband wholly dependent and also a child or children by a former marriage or adoption, likewise wholly dependent, aggregate benefits shall be the same in amount as if the children were the children of such surviving spouse, and the entire benefit shall be apportioned to the dependents in such amounts as the commission shall determine to be just, considering their ages and other facts bearing on dependency. The benefit awarded to the surviving spouse shall not exceed four times the average annual earnings of the deceased employe.

(4) Dependency of any child for the purposes of this section shall be determined according to the provisions of subsection (1) of section 102.51, in like manner as would be done if there was no surviving dependent parent.

(5) (a) In each case of injury resulting in death, leaving one or more persons wholly dependent for support, the employer or insurer shall pay into the state treasury the sum of $2,500.

(b) In each case of injury resulting in death leaving no person dependent for support, the employer or insurer shall pay into the state treasury the sum of $11,000.

(c) In each case of injury resulting in death, leaving one or more persons partially dependent for support, the employer or insurer shall pay into the state treasury an amount which, when added to the sums paid or to be paid on account of partial dependency, shall equal the death benefit payable to a person wholly dependent, plus the amount payable into the state treasury under this subsection where there is a person wholly dependent, such payment to the state treasury in no event to exceed $11,000.

(d) The payment into the state treasury shall be made in all such cases regardless of whether the dependents or personal representatives of the deceased employe commence action against a third party under s. 102.29. If such payment is not made within 20 days after the commission makes request therefor, any sum payable shall bear interest at the rate of 6 per cent per annum.

(e) If the balance in the fund provided by this subsection on any June 30 equals or exceeds 1½ times the amount paid out of the fund during the fiscal year ending on said June 30, then the amount of the payment into the state treasury, where one or more persons is wholly dependent for support, shall be $2,000 instead of $2,500 for injuries occurring on or after the following October 1. If the balance is 2 times the amount paid out, the amount of the payment shall be $1,500 instead of $2,500. If the balance is 2½ times the amount paid out, the payment shall be $1,000. If the balance is 3 times the amount paid out, the payment shall be $500. If the balance is 3½ times the amount paid out, no payment shall be required. Any provision for payment of less than $2,500 shall be valid for a period of one year commencing on said October 1. The commission shall by findings and order annually before October 1 determine the amount to be paid into the fund; such findings and order shall set forth the balance in the fund as of June 30, and the amount paid out during such fiscal year.[61]

(6) The moneys paid into the state treasury pursuant to subsection (5) with all accrued interest is hereby appropriated to the commission for the discharge of all liability for additional death benefits accruing under this section.

(7) The additional benefits for account of each child shall accrue at the rate of 13 per cent of the surviving parent's weekly indemnity. The commission may award such benefits to the surviving parent of such child, to his guardian or to such other person, bank or trust company for his use as may be found best calculated to conserve the interest of the child. In the case of death of a child while benefits are still payable there shall be paid the reasonable expense for burial not exceeding $300.

(8) For the proper administration of the funds available under subsection (5) and (6) the commission shall, by order, set aside in the state treasury suitable reserves to carry to maturity the liability for additional death benefit. Such moneys shall be invested by the state of Wisconsin investment board, in the securities authorized in section 206.34.

---

[61] As of April 1, 1959 the payment was $2,500; as of October 1, 1962, the payment was $2,000; as of October 1, 1963, the payment was $1,000. As of October 1, 1965, the payment is $500.

102.50 Burial expenses. In all cases where death of an employe proximately results from the injury the employer or insurer shall pay the reasonable expense for burial, not exceeding $500.

102.51 Dependents. (1) WHO ARE. The following shall be conclusively presumed to be solely and wholly dependent for support upon a deceased employe: a wife upon a husband with whom she is living at the time of his death; a husband upon a wife with whom he is living at the time of her death; a child under the age of eighteen years (or over said age, but physically or mentally incapacitated from earning), upon the parent with whom he is living at the time of the death of such parent, there being no surviving dependent parent. Where a dependent entitled to the presumption in this subsection survives the deceased employe, all other dependents shall be excluded.[62] The charging of any portion of the support and maintenance of a child upon one of the parents, or any voluntary contribution toward the support of a child by a parent, or an obligation to support a child by a parent shall constitute a living with any such parent within the meaning of this section.[63]

(2) WHO ARE NOT. (a) No person shall be considered a dependent unless a member of the family or a spouse, or a divorced spouse who has not remarried, or lineal descendent or ancestor, or brother or sister of the deceased employe.

(b) Where for eight years or more prior to the date of injury a deceased employe has been a resident of the United States, it shall be conclusively presumed that no person who has remained a nonresident alien during that period is either totally or partially dependent upon him for support.

---

[62] This provision excludes all other dependents from consideration when there are persons who are conclusively presumed to be solely and wholly dependent.

[63] Where there is no surviving dependent parent, children up to the age of 18 "living with" the deceased at the time of injury and death arbitrarily become entitled to death benefit based on total dependency. The law formerly provided that in case of divorce the charging of any portion of support and maintenance or voluntary contribution toward support or an obligation to support a child by a parent should constitute a "living with" the parent and thus entitled the child to the presumption of total dependency. There appears no reason why the child should not be equally protected where divorce is pending but no decree entered, or where the parents live apart without divorce pending, or where for any other reason a child may not be factually or physically living with its parents.

(c) No person who is a nonresident alien shall be found to be either totally or partially dependent on a deceased employe for support who cannot establish dependency by proving contributions from the deceased employe by written evidence or tokens of the transfer of money, such as drafts, letters of credit, cancelled checks, or receipts for the payment to any bank, express company, United States post office, or other agency commercially engaged in the transfer of funds from one country to another, for transmission of funds on behalf of said deceased employe to such nonresident alien claiming dependency. This provision shall not be applicable unless the employe has been continuously in and has been remuneratively employed therein for at least 6 months.[64]

(3) DIVISION AMONG DEPENDENTS. If there is more than one person wholly or partially dependent, the death benefit shall be divided between such dependents in such proportion as the commission shall determine to be just, considering their ages and other facts bearing on such dependency.

(4) DEPENDENCY AS OF DATE OF INJURY. Questions as to who constitute dependents and the extent of their dependency shall be determined as of the date of the injury to the employe, and their right to any death benefit shall become fixed as of such time, irrespective of any subsequent change in conditions; and the death benefit shall be directly recoverable by and payable to the dependents entitled thereto or their legal guardians or trustees; in case of the death of a dependent whose right to a death benefit has thus become fixed, so much of the same as is then unpaid shall be payable to his personal representatives in gross.

---

[64] A nonresident alien is barred from receiving benefits where the deceased employe, because of whose death claim is being made, has been a resident of the United States for 8 years or more prior to the date of injury.

This section formerly provided that no person who is a nonresident alien should be found either totally or partially dependent who could not establish contributions from the deceased employe by written evidence or tokens of the transfer of money such as drafts, letters of credit, cancelled checks, or certain other documentary evidence.

In some cases aliens who come to this country to work may be fatally injured before they have had opportunity to make contributions to their dependents. This provision allows proof of contributions other than by written evidence provided the deceased has not been in the United States for one year, or remuneratively employed for at least 6 months.

(5) WHEN NOT INTERESTED. No dependent of an injured employe shall be deemed a party in interest to any proceeding by him for the enforcement of his claim for compensation, nor as respects the compromise thereof by such employe. Subject to the provisions of section 102.16 (1), a compromise of all liability entered into by an employe shall be binding upon his dependents.

(6) DIVISION AMONG DEPENDENTS. Benefits accruing to a minor dependent child may be awarded to the mother in the discretion of the commission. Notwithstanding the provisions of subsection (1) the commission may reassign the death benefit, in accordance with their respective needs therefor as between a surviving spouse and children designated in section 102.49.[65]

(7) CERTAIN DEFENSE BARRED. In proceedings for the collection of primary death benefit or burial expense it shall not be a defense that the applicant, either individually or as a partner, was an employer of the deceased.[66]

102.52 Permanent partial disability schedule. In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified, at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11:

(1) The loss of an arm at the shoulder, 500 weeks;

(2) The loss of an arm at the elbow, 450 weeks;

(3) The loss of a hand, 400 weeks;

(4) The loss of a palm where the thumb remains, 275 weeks;

(5) The loss of a thumb and the metacarpal bone thereof, 125 weeks;

(6) The loss of a thumb at the proximal joint, 100 weeks;

---

[65] This provision limits redistribution as between classes named.

[66] This provision allows an employer who is a parent or other relative to receive death benefit from the insurance carrier, although such applicant, either individually or as a partner, would not otherwise be entitled to such benefits under the holding in the case of *Thomas v. Ind. Comm.*, 243 Wis. 231.

(7) The loss of a thumb at the distal joint, 40 weeks;

(8) The loss of all fingers on one hand at their proximal joints, 225 weeks;

(9) Losses of fingers on each hand as follows:

(a) An index finger and the metacarpal bone thereof, 60 weeks;

(b) An index finger at the proximal joint, 50 weeks;

(c) An index finger at the second joint, 30 weeks;

(d) An index finger at the distal joint, 12 weeks;

(e) A middle finger and the metacarpal bone thereof, 45 weeks;

(f) A middle finger at the proximal joint, 35 weeks;

(g) A middle finger at the second joint, 20 weeks;

(h) A middle finger at the distal joint, 8 weeks;

(i) A ring finger and the metacarpal bone thereof, 26 weeks;

(j) A ring finger at the proximal joint, 20 weeks;

(k) A ring finger at the second joint, 15 weeks;

(l) A ring finger at the distal joint, 6 weeks;

(m) A little finger and the metacarpal bone thereof, 28 weeks;

(n) A little finger at the proximal joint, 22 weeks;

(o) A little finger at the second joint, 16 weeks;

(p) A little finger at the distal joint, 6 weeks;

(10) The loss of a leg at the hip joint, 500 weeks;

(11) The loss of a leg at the knee, 425 weeks;

(12) The loss of a foot at the ankle, 250 weeks;

(13) The loss of the great toe with the metatarsal bone thereof, 83–1/3 weeks;

(14) Losses of toes on each foot as follows:

(a) A great toe at the proximal joint, 25 weeks;

(b) A great toe at the distal joint, 12 weeks;

(c) The second toe with the metatarsal bone thereof, 25 weeks;

(d) The second toe at the proximal joint, 8 weeks;

(e) The second toe at the second joint, 6 weeks;

(f) The second toe at the distal joint, 4 weeks;

(g) The third, fourth or little toe with the metatarsal bone thereof, 20 weeks;

(h) The third, fourth or little toe at the proximal joint, 6 weeks;

(i) The third, fourth or little toe at the second or distal joint, 4 weeks;

(15) The loss of an eye by enucleation or evisceration, 275 weeks;

(16) Total impairment of one eye for industrial use, 250 weeks;[67]

(17) Total deafness from accident or sudden trauma, * * * *330 weeks;*[68]

(18) Total deafness of one ear from accident or sudden trauma, * * * *55* weeks;[69]

---

[67] See Rule Ind 80.26 infra for determining loss of visual efficiency.

[68] See Rule Ind 80.25 infra for determining loss of hearing.

When the hearing in both ears has been reduced due to accidental injury, the smaller loss is multiplied by 5, added to the greater loss, and the total divided by 6. The resulting percentage is the loss of hearing in both ears and is applied to the schedule allowance for loss of hearing in both ears.

Example:

Age 30

Hearing in left ear—10 per cent loss
Hearing in right ear—90 per cent loss

$$\frac{(10\% \times 5) \text{ plus } 90\%}{6} = 23.33\% \text{ loss of hearing in both ears.}$$

[69] See 102.555 for occupational deafness schedule.

[68], [69] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

102.53 Multiple injury and age variations.[70] (1) In case an injury causes more than one permanent disability specified in sections 102.44 (3), 102.52 and 102.55, the period for which indemnity shall be payable for each additional equal or lesser disability shall be increased as follows:

(a) In the case of impairment of both eyes, by 200 per cent.

(b) In the case of disabilities on the same hand covered by section 102.52 (9), by 100 per cent for the first equal or lesser disability and by 150 per cent for the second and third equal or lesser disabilities.

(c) In the case of disabilities on the same foot covered by section 102.52 (14), by 20 per cent.

(d) In all other cases, by 20 per cent.

(e) The aggregate result as computed by applying paragraph (a), and the aggregate result for members on the same hand or foot as computed by applying paragraphs (b) and (c), shall each be taken as a unit for applying paragraph (d) as between such units, and as between such units and each other disability.

(2) In cases where the injured employe is above 50 years of age when injured the periods for which indemnity shall be payable, in addition to the healing period, shall be reduced from those specified in section 102.52 by 2½ per cent for each year that the age of such employe exceeds 50, with no reduction in excess of 50 per cent.[71]

102.55 Application of schedules. (1) Whenever amputation of a member is made between any 2 joints mentioned in the schedule in section 102.52 the determined loss and re-

---

[70] This provides for "stepping up" the value of disabilities to two or more fingers or portions of them so that in case of disabilities to fingers on one hand the increase is an additional 100% for the first equal or lesser disability and 150% for the second and third equal or lesser disabilities. In case of toes on one foot the corresponding increase is 20%, as it is in all other cases of multiple injury except for impairment of both eyes, where the increase is treble, as heretofore. When the aggregate result for members on the same hand or foot or for an eye has been computed, it is taken as a unit and there is increase as between that and other units by 20% for each equal or lesser injury unit (except as between both eyes or both ears).

[71] See Table 2, infra.

sultant indemnity therefor shall bear such relation to the loss and indemnity applicable in case of amputation at the joint next nearer the body as such injury bears to one of amputation at the joint nearer the body.

(2) For the purposes of this schedule permanent and complete paralysis of any member shall be deemed equivalent to the loss thereof.

(3) For all other injuries to the members of the body or its faculties which are specified in this schedule resulting in permanent disability, though the member be not actually severed or the faculty totally lost, compensation shall bear such relation to that named in this schedule as disabilities bear to the disabilities named in this schedule. Indemnity in such cases shall be determined by allowing weekly indemnity during the healing period resulting from the injury and the percentage of permanent disability resulting thereafter as found by the commission.[72]

102.555 Occupational deafness: definitions. (1) "Occupational deafness" means permanent partial or permanent total loss of hearing of one or both ears due to prolonged exposure to noise in employment. "Noise" means sound capable of producing occupational deafness. "Noisy employment" means employment in the performance of which an employe is subjected to noise.

---

[72] The commission has adopted the following rule for estimating the permanent disability involving finger tip amputations. Unless otherwise affirmatively established, in estimating permanent disability as a result of finger tip amputations, amputation of the distal one-third or less shall be considered the equavlent of 45 per cent loss of use of the distal phalanx, amputation of not more than the distal two-thirds but more than the distal one-third shall be considered the equivalent of 80 per cent loss of use of the distal phalanx, and amputation of more than the distal two-thirds shall be considered as 100 per cent loss of the distal phalanx, provided there is no added disability as a result of malformed nail or tissue. In no case shall the allowance be greater than it would have been for amputation of the entire distal phalanx.

After conferences with industrial physicians and surgeons in various parts of the state the commission has adopted a table (No. 5 for rating certain typical major disabilities involving ankylosis or restriction of movement). Physicians are free to make estimates different from those set forth in the table. However, because of the complete discussion and practically unanimous agreement upon which the table is based, the commission will require a very clear showing to be made that its application is inequitable.

(2) No benefits shall be payable for temporary total or temporary partial disability under this act for loss of hearing due to prolonged exposure to noise.

(3) An employe who because of occupational deafness is transferred by his employer to other noisy employment and thereby sustains actual wage loss, shall be compensated at the rate provided in s. 102.43 (2), not exceeding $3,500 in the aggregate from all employers. "Time of injury," "occurrence of injury," "date of injury" in such case shall be the date of wage loss.

(4) (intro. par.) Subject to the limitations herein contained and the provisions of s. 102.53 (2) there shall be payable for total occupational deafness of one ear, 36 weeks of compensation; for total occupational deafness of both ears, 216 weeks of compensation; and for partial occupational deafness, compensation shall bear such relation to that named herein as disabilities bear to the maximum disabilities herein provided. In cases covered by this subsection "time of injury," "occurrence of injury," or "date of injury" shall be exclusively the date of occurrence of any of the following events to an employe.[73]

(a) Transfer because of occupational deafness to nonnoisy employment by an employer whose employment has caused occupational deafness;

(b) Retirement;

(c) Termination of the employer–employe relationship;

(d) Layoff, provided the layoff is complete and continuous for one year;

(e) No claim under this subsection shall be filed, however, until 6 consecutive months of removal from noisy

---

[73] See Rule Ind 80.25 infra for determining loss of hearing. For occupational deafness the smaller loss is multiplied by 5, added to the greater loss, and the total divided by 6. The resulting percentage is the loss of hearing in both ears and is applied to the schedule allowance for loss of hearing in both ears.

Example:

Age 30

Hearing in left ear—40 per cent loss
Hearing in right ear—70 per cent loss

$$\frac{(40\% \times 5) \text{ plus } 70\%}{6} = 45\% \text{ loss of hearing in both ears}$$

Sec. 102.52 (17) and (18) for deafness due to trauma or accident.

employment after the time of injury except that under par. (d) such 6 consecutive months period may commence within the last 6 months of layoff.

(5) The limitation provisions in this act shall control claims arising under this section. Such provisions shall run from the first date upon which claim may be filed, or from the date of subsequent death, provided that no claim shall accrue to any dependent unless an award has been issued or liability admitted.

(6) No payment shall be made to an employe under this section unless he shall have worked in noisy employment for a total period of at least 90 days for the employer from whom he claims compensation.

(7) An employer shall become liable for the entire occupational deafness to which his employment has contributed; but if previous deafness is established by a hearing test or other competent evidence, whether or not the employe was exposed to noise within the 6 months preceding such test, he shall not be liable for previous loss so established nor shall he be liable for any loss for which compensation has previously been paid or awarded.

(8) Any amount paid to an employe under this section by any employer shall be credited against compensation payable by any employer to such employe for occupational deafness under subs. (3) and (4). No employe shall in the aggregate receive greater compensation from any or all employers for occupational deafness than that provided in this section for total occupational deafness.

102.56 Disfigurement. If an employe is so permanently disfigured about the face, head, neck, hand or arm as to occasion potential loss of wage, the commission may allow such sum for compensation on account thereof, as it deems just, not exceeding his average annual earnings as defined in s. 102.11.

102.565 Silicosis, nondisabling; medical examination; conditions of liability. (1) When an employe working subject to this chapter is, because he has a nondisabling silicosis, discharged from the employment in which he is engaged, or when an employe ceases such employment and

it is in fact inadvisable for him on account of a nondisabling silicosis to continue in it, and suffers wage loss by reason of such discharge, or such cessation, the commission may allow such compensation on account thereof as it deems just, not exceeding $7,000. In case of such discharge prior to a finding by the industrial commission that it is inadvisable for him to continue in such employment, the liability of the employer who so discharges his employe shall be primary, and the liability of the insurer shall be secondary, under the same procedure and to the same effect as provided by s. 102.62.

(2) Upon application of any employer or employe the commission may direct any employe of such employer or such employe who, in the course of his employment, has been exposed to the inhalation of silica, to submit to examination by a physician or physicians to be appointed by the industrial commission to determine whether such employe has silicosis, and the degree thereof. The cost of such medical examination shall be borne by the person making application. The results of such examination shall be submitted by the physician to the industrial commission, which shall submit copies of such reports to the employer and employe, who shall have opportunity to rebut the same provided request therefor is made to the commission within 10 days from the mailing of such report to the parties. The commission shall make its findings as to whether or not it is inadvisable for the employe to continue in his employment.

(3) If an employe shall refuse to submit to such examination after direction by the commission, or any member or examiner thereof, or shall in any way obstruct the same, his right to compensation under this section shall be barred.

(4) No payment shall be made to an employe under this section unless he shall have worked for the employer from whom he claims compensation in work exposing him to inhalation of silica for a total period of at least 90 days.

(5) Payment of a benefit under this section to an employe shall estop such employe from any further recovery whatsoever from any employer under this section.

102.57 Violations of safety provisions, penalty. Where injury is caused by the failure of the employer to comply with any statute or any lawful order of the commission, compensation and death benefits as provided in this chapter shall be increased 15 per cent. Failure of an employer reasonably to enforce compliance by employes with such statute or order of the commission shall constitute failure by the employer to comply with such statute or order.[74]

102.58 Decreased compensation. Where injury is caused by the * * *[75] failure of the employe to use safety devices where provided in accordance with any statute or lawful order of the commission and adequately maintained, and their use is reasonably enforced, by the employer, or where injury results from the employe's * * *[75] failure to obey any reasonable rule adopted by the employer for the safety of the employe and of which the employe has notice, or where injury results from the intoxication of the employe, the compensation, and death benefit provided herein shall be reduced 15 per cent.[76]

102.59 Pre-existing disability, indemnity, state fund, investment.[77] (1) If an employe has at the time of injury

---

[74] Where an employer fails to enforce compliance with safety orders the effect is often the same as though safety devices and safe places of work were not provided. This results in increase in the number of injuries. The provision will hold liable the employer who may provide safety devices and then by acquiescence in non-use fail to accomplish the desired result as to safety.

[75] Effective August 1, 1965, the law was amended to delete the word "wilful."

[76] Compensation cannot be reduced by 15% for failure of the employe to use safety devices where provided and adequately maintained *except* as their use is reasonably enforced. It was felt unfair to permit a reduction of compensation in cases where the employer acquiesced in failure of the employe to make use of a guard or where by failure to enforce use the employer had virtually consented that the employe should be allowed not to use the safety device.

It is necessary for the employer to show that he made a reasonable effort to enforce such rules.

The safety device must be one which is provided in accordance with a statute or lawful order of the commission and not merely one adopted but not required.

Reduction for failure to obey a reasonable rule adopted by the employer can be made only (1) where a denfiite order is shown and (2) where the employe had notice of the rule.

[77] This subsection has a two-fold purpose: First to eliminate any incentive for discrimination against the employe who has serious previous disability when he comes to seek re-employment because of the employer's fear, real

permanent disability which if it had resulted from such injury would have entitled him to indemnity for 250 weeks less 2½ per cent thereof for each year of age above 50 years with no reduction in excess of 50 per cent, and, as a result of such injury, incurs further permanent disability, which entitles him to indemnity for 250 weeks less 2½ per cent thereof for each year of age above 50 years with no reduction in excess of 50 per cent, he shall be paid from the funds provided in this section additional compensation equivalent to the amount which would be payable for said previous disability if it had resulted from such injury or the amount which is payable for said further disability, whichever is the lesser, provided, that if said disabilities result in permanent total disability the additional compensation shall be in such amount as will complete the payments which would have been due had said permanent total disability resulted from such injury.[78] Such additional compensation shall accrue from the end of the period for which compensation for permanent disability resulting from such injury is payable by the employer, and shall be subject to the provisions of section 102.32 (6) and (7).

(2) In the case of the loss or of the total impairment of a hand, arm, foot, leg or eye, the employer shall be required to pay $1,500 into the state treasury. The payment shall be made in all such cases regardless of whether the employe, his dependent or personal representatives, commence action against a third party as provided in s. 102.29.

(3) The moneys so paid into the state treasury, with all accrued interest, is hereby appropriated to the commission

---

or otherwise, that the loss of another member may subject him to very large indemnities on the ground that such loss would cause total or near total disability; *second,* to secure to the employe sustaining the loss or total impairment of a second member such amount of indemnity as the seriousness of the combined disabilities calls for.

Direct liability of the employer in case of the loss of the second member is made the same as for the loss of the first member, and the injured employe's rights are conserved by orders drawn on the fund for the balance of his indemnity. Primary liability of the employer for payment of $1,500 to the fund is insurable.

See Table 4, infra.

[78] To illustrate one who has previoulsy lost an arm at the shoulder at age 50 would have been entitled to 500 weeks' compensation. By second injury he loses his hand at the wrist and becomes entitled to 400 weeks' compensation. Over and above payment for second injury the employe may receive an additional 400 weeks of compensation from the fund.

for the discharge of all liability for special additional indemnity accruing under this section.

(4) For the proper administration of the funds available under this section the commission shall, by order, set aside in the state treasury suitable reserves to carry to maturity the liability for special additional indemnity in each case, and for any contingent death benefit. Such moneys shall be invested by the state of Wisconsin investment board, in the securities authorized in section 206.34.

102.60 Minor illegally employed, compensation. When the injury is sustained by a minor illegally employed, compensation and death benefits shall be as follows:

(1) Double the amount otherwise recoverable, if the injured employe is a minor of permit age, and at the time of the injury is employed, required, suffered or permitted to work without a written permit issued pursuant to chapter 103, except as provided in subsection (2).

(2) Treble the amount otherwise recoverable, if the injured employe is a minor of permit age, and at the time of the injury is employed, required, suffered, or permitted to work without a permit in any place of employment or at any employment in or for which the commission acting under authority of chapter 103, has adopted a written resolution providing that permits shall not be issued.

(3) Treble the amount otherwise recoverable if the injured employe is a minor of permit age, or over, and at the time of the injury is employed, required, suffered, or permitted to work at prohibited employment.

(4) Treble the amount otherwise recoverable, if the injured employe is a minor under permit age and illegally employed.

(5) A permit unlawfully issued by an officer specified in chapter 103, or unlawfully altered after issuance, without fraud on the part of the employer, shall be deemed a permit within the provisions of this section.

(6) If the amount recoverable under this section for temporary disability shall be less than the actual loss of

wage sustained by the minor employe, then liability shall exist for such loss of wage.

(7) The provisions of subsections (1) to (6) of section 102.60 shall not apply to employes as defined in subsection (6) of section 102.07 if the agency or publisher shall establish by affirmative proof that at the time of the injury the employe was not employed with the actual or constructive knowledge of such agency or publisher.

(8) This section shall not apply to liability arising under s. 102.06 unless the employer sought to be charged knew or should have known that the minor was illegally employed by the contractor or subcontractor.

(9) The increased compensation or increased death benefits recoverable under sub. (1) shall not exceed $5,000. The increased compensation or increased death benefits recoverable under subs. (2), (3) or (4) shall not exceed $7,500.

102.61 Indemnity under rehabilitation law. An employe who is entitled to receive and has received compensation pursuant to this chapter, and who is entitled to and is receiving instructions pursuant to the provisions of the Act of Congress known as the Vocational Rehabilitation Act, and amendments thereto, (Public Law 113 – 78th Congress) as administered by the state in which he holds residence or in which he resided at the time of becoming physically handicapped, shall, in addition to his other indemnity, be paid his actual and necessary expenses of travel and, if he received such instructions elsewhere than at the place of his residence, his actual and necessary costs of maintenance, during rehabilitation, subject to the following conditions and limitations:

(1) He must undertake the course of instruction within 60 days from the date when he has sufficiently recovered from his injury to permit of his so doing, or as soon thereafter as the officer or agency having charge of his instruction shall provide opportunity for his rehabilitation.

(2) He must continue in rehabilitation training with such reasonable regularity as his health and situation will permit.

(3) He may not have expenses of travel and costs of maintenance on account of training for a period in excess of 40 weeks in all.[79]

(4) The commission shall determine the rights and liabilities of the parties under this section in like manner and with like effect as it does other issues under compensation.

102.62 Primary and secondary liability; unchangeable. In case of liability for the increased compensation or increased death benefits provided for by section 102.57, or included in section 102.60, the liability of the employer shall be primary and the liability of the insurance carrier shall be secondary. In case proceedings are had before the commission for the recovery of such increased compensation or increased death benefits the commission shall set forth in its award the amount and order of liability as herein provided. Execution shall not be issued against the insurance carrier to satisfy any judgment covering such increased compensation or increased death benefits until execution has first been issued against the employer and has been returned unsatisfied as to any part thereof. Any provision in any insurance policy undertaking to guarantee primary liability or to avoid secondary liability for such increased compensation or increased death benefits shall be void. In case the employer shall have been adjudged bankrupt, or have made an assignment for the benefit of creditors, or if the employer, other than an individual, have gone out of business or have been dissolved, or if a corporation, its charter have been forfeited or revoked, the insurer shall be liable for the payment of increased compensation and death benefits without judgment or execution against the employer, but without altering the primary liability of the employer.

102.63 Refunds by state. Whenever the commission shall certify to the state treasurer that excess payment has

---

[79] These provisions extend maintenance benefits during rehabilitation training to employes injured subject to the Wisconsin law but who are residents of other states. The provision provides actual and necessary expenses of travel and cost of maintenance other than at the place of residence. Maintenance may be arranged by any officer or agency having charge of instruction. The limit as to expense of travel and cost of maintenance for training is 40 weeks. See Sec. 41.71 infra for text of Rehabilitation Law.

been made under section 102.59 or under subsection (5) of section 102.49 either because of mistake or otherwise, the state treasurer shall within five days after receipt of such certificate draw an order against the fund in the state treasury into which such excess was paid, reimbursing such payor of such excess payment together with interest actually earned thereon.

102.64 Attorney-general shall represent state and commission. (1) The attorney-general shall represent the state in all cases involving payment into or out of the state treasury under s. 20.550 (1) or ss. 102.49 or 102.59. He shall have power to compromise the amount of such payments but such compromises shall be subject to review by the commission. If the wife or husband of the deceased employe compromises her or his claim for primary death benefit, the claim of the children of such employe under s. 102.49 shall be compromised on the same pro rata basis subject to approval by the commission.[80]

(2) In all proceedings upon claims for compensation against the state, the attorney-general may appear on behalf of the state.

(3) In any action to review an order or award of the commission, and upon any appeal therein to the supreme court, the attorney-general shall appear on behalf of the commission, whether any other party defendant shall be represented or not, except that in actions brought by the state the governor shall appoint an attorney to appear on behalf of the commission.

102.65 Compensation security funds. (The text of this section is not printed in this pamphlet. This provision is for the establishing of workmen's compensation security funds for the payment of compensation in case of insolvency of insurance carriers.)

102.66 Waiver of payments. Any person entitled to death benefits, burial expenses, and medical and incidental com-

[80] This eliminates the question of whether liability for children's benefits may be denied where compromise of a parent's claim has been made. Issues involved are the same in both cases so adjustment also is on a comparable basis.

pensation payments under this chapter who may otherwise be entitled to payments under s. 66.191 (2) may file with the commission a written election to waive the death and burial expense payments due under this chapter and accept in lieu thereof such death benefit payments as may be due under s. 66.191 (2) plus such medical and incidental compensation payments as may be due under s. 102.42. No person shall receive death and burial expense payments under both s. 66.191 (2) and ch. 102.

OTHER STATUTES AFFECTING WORKMEN'S COMPENSATION

16.31 (1) Hazardous employment, injuries, salary continued. Whenever a conservation warden, *conservation patrol boat captain, conservation patrol boat engineer,* state forest ranger, field employe of the conservation department who is subject to call for fire control duty, member of the state patrol, state motor vehicle inspector, * * * *fire marshal, lifeguard, special agent for the attorney general, special tax agent, state drivers' license examiner,* member of the state fair police department, state university * * * policemen, state beverage tax investigator, *engineer, engineering aid,* fire watchman employed at the Grand Army home, or guard or institutional aid or a state probation and parole officer or any other employe whose duties include supervision and discipline of inmates *or wards of the state at the Wisconsin child center or* at a state penal institution, including central state hospital, the state school for boys, the state school for girls, or while on parole supervision outside of the confines of the institutions, or supervision of persons placed on probation by a court of record, or supervision and care of patients at a state mental institution, *and university hospitals,* suffers injury while in the performance of his duties, as defined in subs. (2) and (3), he shall continue to be paid his full monthly salary by his employing department upon the same basis as he was paid prior to the injury. Such full monthly salary shall be paid to the employe while he is unable to work as the result of the injury for not to exceed 3 months *upon recommendation of the appointing officer and approval of the director of*

personnel. When the employe is paid such salary under this section there shall be no deduction from his sick leave credits, compensatory time for overtime accumulations or vacation.

(2) "Injury" as used in this section is physical harm to an employe caused by accident or disease.

(3) As used in this section "Performance of duties" means duties performed in line of duty by:

(a) A forest ranger or field employe of the conservation department who is subject to call for forest fire control duty or fire watchman employed at the Grand Army home, *and lifeguard,* at all times while:

1. Driving or riding in a vehicle, aircraft or boat under circumstances which require hazardous maneuvering or speed in excess of the normal or posted limits in the performance of fire control duties;

2. Engaged in an effort to save lives, recover dead bodies, or protect public or private property;

3. Going to or returning from a fire and while engaged in the suppression of a fire; or

4. Engaged in public demonstration or training exercises provided such demonstration or training exercises are authorized by the appointing authority.

(b) A conservation warden, *conservation patrol boat captain, conservation patrol boat engineer,* a member of the state patrol, state motor vehicle inspector, university * * * policemen, * * * member of the state fair police department, * * * state beverage tax investigator, *special tax agent, special agent of the attorney general* and *fire marshal* at all times while:

1. In the process of making an arrest or investigating any violation or suspected violation of the law or the quelling of a riot or any other violence;

2. Engaged in an effort to save lives, recover dead bodies or protect public or private property;

3. Driving or riding in a vehicle, aircraft or boat under circumstances which require hazardous maneuvering or speed in excess of the normal or posted limits in the performance of law enforcement duties; or

4. Engaged in public demonstration or training exercises provided such demonstration or training exercises are authorized by the appointing authority.

(c) A guard, institution aid, or other employe * * * *at the Wisconsin child center, university hospitals or at* state penal and mental institutions, including central state hospital, the state school for boys, the state school for girls and state probation and parole officers, at all times while:

1. In the process of quelling a riot or disturbance or other act of violence;

2. In the process of restraining patients, inmates, probationers or parolees and apprehending runaways or escapees, including probationers and parolees;

3. When injury is inflicted as the result of an assault or act of violence by a patient, inmate, probationer or parolee; or

4. In the process of making an arrest or investigating any violation or suspected violation of law pursuant to police powers, authorized by s. 46.05 (2) and rules adopted pursuant thereto.

5. *Going to or returning from a fire, engaging in the suppression of a fire, evacuating patients or inmates of a fire or engaging in fire drills.*

6. *When disease is contracted as a result of exposure to such disease arising out of the care of inmates or patients.*

(d) A drivers' license examiner at all times while examining drivers, conducting road tests or checking motor vehicles.

(e) An engineering aid or engineer at all times while:

1. Driving or riding in vehicles which require hazardous maneuvering of excessively slow speed while marking or measuring physical characteristics of highways.

2. Surveying or inspecting within the right of way of highways on which traffic is maintained.

3. Surveying or inspecting on construction sites where heavy equipment is operating.

4. Investigating or inspecting highways, structures or terrain under hazardous conditions.

(4) In case an employe is denied benefits provided by this section by the employing department *or the director of per-*

sonnel, the employe shall have a right of appeal to the personnel board. The personnel board shall conduct hearings under the rules prescribed by the board and shall make an order granting or denying the application for benefits or making a determination as to the duration thereof. The personnel board shall, pursuant to s. 16.05, adopt rules for the administration of this section.

20.550 Miscellaneous general appropriations. There is appropriated from the general fund, or such other funds as may be indicated, annually, to be paid as herein provided:

(1) COMPENSATION, INJURED STATE EMPLOYES. Annually, such sums as may be necessary for payments as provided in ch. 102, and under ss. 56.21 and 66.191, except that payments of increased compensation payable under ss. 102.57 and 102.60, shall be paid from the appropriation covering the salary or maintenance of the person injured, provided such appropriation has not been exhausted; otherwise payments shall be made from the general fund and the first $200 of compensation thus paid from the general fund in the case of any person whose work was financed from a segregated fund or account shall be charged to that fund or account.

22.01 Civil defense. (11) (d) *Workmen's compensation coverage.* Employes of municipal and county civil defense units are employes of the municipality or county to which the unit is attached for purposes of workmen's compensation benefits. Employes of the area and state civil defense units are employes of the state for purposes of workmen's compensation benefits. Volunteer civil defense workers are employes of the civil defense unit with whom duly registered in writing for purposes of workmen's compensation benefits. A civil defense employe or volunteer who engages in civil defense activities upon order of any echelon in the civil defense organization other than that which carries his workmen's compensation coverage shall be eligible for the same benefits as though employed by the governmental unit employing him. Any employment which is part of a civil defense program including but not restricted because of enumeration, test runs and other activities which have a training

objective as well as civil defense activities during an emergency proclaimed by the governor and which grows out of, and is incidental to, such civil defense activity is covered employment. Members of a civil defense unit who are not acting as employes of a private employer during civil defense activities are employes of the civil defense unit for which acting. If no pay agreement exists or if the contract pay is less, pay for workmen's compensation purposes shall be computed at $2,080 per annum.

(e) *Indemnification of employe.* Civil defense employes as defined in par. (d) shall be indemnified by their sponsor against any tort liability to third persons incurred in the performance of civil defense activities while acting in good faith and in a reasonable manner. Civil defense activities constitute a governmental function.

(f) *State reimbursement.* If the total liability for workmen's compensation benefits under par. (d), indemnification under par. (e) and loss from destruction of equipment under sub. (12), incurred in any calendar year exceeds $1 per capita of the sponsor's population, the state shall reimburse the sponsor for the excess. Payment shall be made from the appropriation in s. 20.270 (1) on certificate of the state director.

(g) *Pay.* Civil defense employes as such shall receive no pay unless specific agreement for pay is made.

41.71 Rehabilitation law. (1) The state of Wisconsin hereby assents to and accepts the provisions and benefits of the act of congress entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment," approved June 2, 1920, and any amendatory or supplementary acts thereto as the congress of the United States may enact. The state board of vocational and adult education shall cooperate, pursuant to agreements, with the federal government and the United States Office of Vocational Rehabilitation in carrying out the purposes of any federal statutes pertaining to vocational rehabilitation and is authorized to adopt such methods of administration

WORKMEN'S COMPENSATION ACT
(WITH 1965 AMENDMENTS)

102.01 Definitions. (1) The provisions of this chapter may be known, cited and referred to as the "Workmen's Compensation Act" and allowances, recoveries and liabilities under or pursuant to this act constitute and may be known, designated and referred to as "Workmen's Compensation."

(2) "Act" as used in this chapter means "chapter"; "compensation" means workmen's compensation; "primary compensation and death benefit" * * * *means* compensation or indemnity for disability, or death benefit, other than increased, double or treble compensation or death benefit; "injury" is mental or physical harm to an employe caused by accident or disease, and also damage to or destruction of artificial members, dental appliances, teeth, *hearing aids,* and eye glasses, but, in the case of *hearing aids or* eyeglasses, only if such damage or destruction resulted from accidents which also caused personal injury entitling the employe to compensation therefor (either for disability or treatment); "municipality" includes county, city, town, village, school district, sewer district, drainage district, and

other public or quasi-public corporations; "examiner" includes the director of workmen's compensation; and "commission" means the industrial commmission of Wisconsin. "Time of injury," "occurrence of injury," or "date of injury" is the date of the accident which caused the injury, or in the case of disease the last day of work for the last employer whose employment caused disability, except that in case of occupational deafness the definition in s. 102.555 controls.[1, 2]

102.03 Conditions of liability. (1) Liability under this chapter shall exist against an employer only where the following conditions concur:

(a) Where the employe sustains an injury.

(b) Where, at the time of the injury, both the employer and employe are subject to the provisions of this chapter.

(c) 1. Where, at the time of the injury, the employe is performing service growing out of and incidental to his employment. Every employe going to and from his employment in the ordinary and usual way, while on the premises of his employer, or while in the immediate vicinity thereof if the injury results from an occurrence on the premises, shall be deemed to be performing service growing out of and incidental to his employment; and so shall any fireman responding to a call for assistance outside the limits of his city or village, unless such response is in violation of law. The premises of his employer shall be deemed to include also the premises of any other person on whose premises service is being performed.

2. To enhance the morale and efficiency of public employes in this state and attract qualified personnel to the public service, it is the policy of the state that the benefits of this chapter shall extend and be granted to employes in the service of the state or of any municipality therein on

---

[1] As to eyeglasses and hearing aids, damage or destruction must result from an *accident* which also causes personal injury entitling the employe to medical treatment or payment of compensation. The effect is that if an employe merely slips and his eyeglasses or hearing aid drop to the floor and break, but no personal injury results to the employe, there will be no payment for damage to eyeglasses or hearing aid.

[2] Compensation benefits may be recovered for disability which occurs after the severance of the employer-employe relationship, even though there was neither wage loss, nor time loss during the time that the employe was in service.

the same basis, in the same manner, under the same conditions, and with like right of recovery as in the case of employes of persons, firms or private corporations. Accordingly, the same considerations, standards, and rules of decision shall apply in all cases in determining whether any employe under this chapter, at the time of injury, was performing service growing out of an incidental to his employment. For the purposes of this subsection no differentiation shall be made among any of the classes of employers enumerated in s. 102.04 or of employes enumerated in s. 102.07; and no statutes, ordinances, or administrative regulations otherwise applicable to any employes enumerated in s. 102.07 shall be controlling.

(d) Where the injury is not intentionally self-inflicted.

(e) Where the accident or disease causing injury arises out of his employment.

(f) Every employe whose employment requires him to travel shall be deemed to be performing service growing out of and incidental to his employment at all times while on a trip, except when engaged in a deviation for a private or personal purpose. Acts reasonably necessary for living or incidental thereto shall not be regarded as such a deviation. Any accident or disease arising out of a hazard of such service shall be deemed to arise out of his employment.[3]

(g) For the purposes of this chapter, members of the state legislature shall be deemed covered while traveling to and from the capital in the performance of their function as legislators, and while traveling in the performance of their official duties as members of committees or other bodies created by the legislature or the governor, either during the session or during the interim.

(2) Where such conditions exist the right to the recovery of compensation pursuant to this chapter shall be the exclusive remedy against the employer, and the workmen's compensation insurance carrier.

---

[3] Accident or disease must arise out of a hazard of employment, and accidents and diseases not caused by reason of incidents of service are not to be compensated. Injuries, whether accidental or otherwise, must therefore, arise out of the business circumstances of the trip and not merely occur because of a personal condition or disability bearing no relation whatsoever to service.

(3) In the case of disease intermittent periods of temporary disability shall create separate claims, and permanent partial disability shall create a claim separate from a claim for any subsequent disability which latter disability is the result of an intervening cause.

(4) The right to compensation and the amount thereof shall in all cases be determined in accordance with the provisions of law in effect as of the date of the injury.

102.04 Definition of employer (1) The following shall constitute employers subject to the provisions of this chapter, within the meaning of section 102.03:

(a) The state, each county, city, town, village, school district, sewer district, drainage district and other public or quasi-public corporations therein.

(b) Every person who usually employs 3 or more employes, whether in one or more trades, business, professions or occupations, and whether in one or more locations. This paragraph shall not apply to farmers or to farm labor.[4]

(c) Every person engaged in farming who on any 20 consecutive or nonconsecutive days during a calendar year employs 6 or more employes, whether in one or more locations. The provisions of this chapter shall apply to such employer 10 days after the twentieth such day.[5]

(d) Every person to whom pars. (a), (b) and (c) are not applicable, who has any person in service under any contract of hire, express or implied, oral or written, and who, at or prior to the time of the injury to the employe for which compensation may be claimed, shall, as provided in s. 102.05, have elected to become subject to the provisions of this chapter, and who shall not, prior to such accident, have effected a withdrawal of such election.

(2) Members of partnerships shall not be counted as employes. Except as provided in s. 102.07 (5) (a), a person

---

[4] The employer becomes subject to the act whether the employes are in one or more trades, or one or more locations. An employer with two employes in Milwaukee and two in Madison would become subject even though employes in Milwaukee were engaged in the shoe business and employes in Madison in the restaurant business.

[5] Farmers are made subject to the act if there are 6 or more employes on any 20 days in a calendar year, and workmen's compensation insurance must be provided. Farmers were exempt until this provision became effective January 1, 1962.

under contract of hire for the performance of any service for any employer subject to this section (1961) shall not constitute an employer of any other person with respect to such service and such other person shall, with respect to such service, be deemed to be an employe only of such employer for whom the service is being performed.[6]

(3) As used in this chapter "farming" means the operation of farm premises owned or rented by the operator. "Farm premises" means areas used for operations herein set forth, but does not include other areas, greenhouses or other similar structures unless used principally for the production of food and farm plants. "Farmer" means any person engaged in farming as defined. Operation of farm premises shall be deemed to be the planting and cultivating of the soil thereof; the raising and harvesting of agricultural, horticultural or arboricultural crops thereon; the raising, breeding, tending, training and management of livestock, bees, poultry, fur bearing animals, wildlife or aquatic life, or their products, thereon; the processing, drying, packing, packaging, freezing, grading, storing, delivering to storage, to market or to a carrier for transportation to market, distributing directly to consumers or marketing any of the above-named commodities, substantially all of which have been planted or produced thereon; the clearing of such premises and the salvaging of timber and management and use of wood lots thereon, but not including logging, lumbering or wood cutting operations unless conducted as an accessory to other farming operations; the managing, conserving, improving and maintaining of such premises or the tools, equipment and improvements thereon and the exchange of labor, services or the exchange of use of equipment with other farmers in pursuing such activities. The operation for not to exceed 30 days during any calendar year, by any person deriving his principal income from farming, or farm machinery in performing farming services for other farmers for a consideration other than

[6] A possible dual status of employer and employe is objectionable because of confusion, delay and expense caused in determining who is actually to assume liability. This provision makes it clear that an employe cannot also be an employer with respect to service performed for an employer and that employes or helpers of the employe are to be deemed employes only of the employer for whom the service utilmately is being performed.

exchange of labor shall be deemed farming. Operation of such premises shall be deemed to include also any other activities commonly considered to be farming whether conducted on or off such premises by the farm operator.

102.05 Election by employer, withdrawal.[7] (1) Such election to become subject to the act on the part of the employer shall be made by filing with the commission, a written statement that he accepts the provisions of this chapter. The filing of such statement shall operate to subject such employer to its provisions, unless he shall file in the office of said commission a notice that he desires to withdraw his election, which withdrawal shall take effect thirty days after the date of such filing or at such later date as may be specified in the notice. Unless such withdrawal is filed the employer shall remain subject to the act, except that an employer who shall have had no employe at any time within a continuous period of 2 years shall be deemed to have effected withdrawal which shall be effective on the last day of such period. Such employer, however, shall again become subject to the act if at any time subsequent to such period of no employment he shall have 3 or more employes as provided in subsection (2), except as he may have elected not to accept the provisions of the act as provided in subsection (2).[8]

(2) If any employer shall at any time have three or more employes, whether in one or more trades, businesses, professions or occupations, and whether in one or more locations, he shall be deemed to have elected to accept the provisions of this chapter, unless prior to that time such employer shall have filed with the commission a notice in writing that he elects not to accept the provisions hereof. Such employer may withdraw in the manner provided in

[7] Application of the law is compulsory for employers who usually employ three or more employes in the course of a trade, business, profession or occupation, with the exception of farmers. The state and its civil subdivisions have always been compulsorily subject. Employers who *usually* employ fewer than three employes may nevertheless become subject to the workmen's compensation act as provided in 102.05 (2).

[8] An employer who has withdrawn by lapse of time during which he has no employes will again become subject to the act if at any time subsequently he shall have three or more employes as provided in subsection (2) except as he may have previously elected not to accept the provisions of the act as provided in subsection (2).

subsection (1). This subsection shall not apply to farmers or to farm labor. Members of partnerships shall not be counted as employes under this subsection.

(3) Any employer who shall enter into a contract for the insurance of compensation, or against liability therefor, shall be deemed thereby to have elected to accept the provisions of this chapter, and such election shall include farm laborers, domestic servants and employes not in the course of a trade, business, profession or occupation of the employer if such intent is shown by the terms of the policy. Such election shall remain in force until withdrawn in the manner provided in subsection (1)..[9]

(4) Any person engaged in farming who has become subject to this chapter may withdraw by filing with the commission a notice of withdrawal, providing he has not employed 6 or more employes as defined by s. 102.07 (5) on 20 or more days during the current or previous calendar year. Such withdrawal shall be effective 30 days after the date of receipt by the commission, or at such later date as is specified in the notice. Such person may again become subject to this chapter as provided by s. 102.04 (1) (c) and (d).

102.06 Joint liability of employer and contractor. An employer shall be liable for compensation to an employe of a contractor or subcontractor under him who is not subject to this chapter, or who has not complied with the conditions

---

[9] An employer who usually employs fewer than three employes may nevertheless become subject to the workmen's compensation act in any of three different ways: (1) by filing with the industrial commission a written statement of his election; (2) by *employing* three or more persons at any time, without previously having filed a notice of non-election with the industrial commission; (employment of three persons for a single *moment*, although some of these employes may have been only casual employes, is sufficient. *Stapleton Cheese Co. vs. Ind. Comm.*, 249 Wis. 133. (3) by securing a workmen's compensation insurance policy.

Commercial threshermen, clover hullers, silo fillers, corn shredders, and other employers who work for farmers are not considered to be engaged in farming operations and become subject to the act as do other non-farming employers. An employer who has once become subject to the compensation act remains subject thereafter so long as he employs even one person, or until he effects withdrawal by filing a written notice with the Industrial Commission or by lapse of two years with no employe in service. Employers who usually employ three or more in the course of a trade, business, profession or occupation (except farmers) cannot withdraw since they are compulsorily subject to the act.

of section 102.28 (2) in any case where such employer would have been liable for compensation if such employe had been working directly for him, including also work in the erection, alteration, repair or demolition of improvements or of fixtures upon premises of such employer which are used or to be used in the operations of such employer.[10] The contractor or subcontractor (if he is subject to the workmen's compensation act) shall also be liable for such compensation, but the employe shall not recover compensation for the same injury from more than one party. In the same manner, under the same conditions, and with like right of recovery, as in the case of an employe of a contractor or subcontractor, described above, an employer shall also be liable for compensation to an employe who has been loaned by him to another employer. The employer who becomes liable for and pays such compensation may recover the same from such contractor, subcontractor or other employer for whom the employe was working at the time of the injury if such contractor, subcontractor or other employer was an employer as defined in section 102.04.

102.07 Employe defined. "Employe" as used in this chapter means:

(1) Every person, including all officials, in the service of the state, or of any municipality therein whether elected or under any appointment, or contract of hire, express or implied, and whether a resident or employed or injured within or without the state. The state and any municipality may require a bond from a contractor to protect it against compensation to employes of such contractor or employes of a subcontractor under him.

(2) Any peace officer shall be considered an employe while engaged in the enforcement of peace or in the pursuit and capture of those charged with crime.

(3) Nothing herein contained shall prevent municipalities from paying teachers, policemen, firemen and other

[10] This provision is not intended to limit the other provisions of this section, but to make clear that if work is being performed under the circumstances stated, liability will exist against the principal employer as provided. The intent is to provide for broader coverage of contractor employes than obtains under decisions which the court has rendered, as in the case of *City of Hudson vs. Industrial Commission*, 241 Wis. 476.

employes full salaries during disability, nor interfere with any pension funds, nor prevent payment to teachers, policemen or firemen therefrom.

(4) Every person in the service of another under any contract of hire, express or implied, all helpers and assistants of employes, whether paid by the employer or employe, if employed with the knowledge, actual or constructive, of the employer, including minors (who shall have the same power of contracting as adult employes), but not including (a) domestic servants (b) any person whose employment is not in the course of a trade, business, profession or occupation of his employer, unless as to any of said classes, such employer has elected to include them. Item (b) shall not operate to exclude an employe whose employment is in the course of any trade, business, profession or occupation of his employer, however casual, unusual, desultory or isolated any such trade, business, profession or occupation may be.[11]

(5) For the purpose of determining the number of employes to be counted under s. 102.04 (1) (c), but for no other purpose, the following definitions shall apply:

(a) Farmers or their employes working on an exchange basis shall not be deemed employes of a farmer to whom their labor is furnished in exchange.

(b) The parents, spouse, child, brother, sister, son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law of a farmer shall not be deemed his employes.

(6) Every person selling or distributing newspapers or magazines on the street or from house to house. Such a person shall be deemed an employe of each independent news agency which is subject to this chapter, or (in the absence of such agencies) of each publisher's (or other intermediate) selling agency which is subject to this chapter, or (in the absence of all such agencies) of each publisher, whose newspapers or magazines he sells or distributes. Such a person shall not be counted in determining whether an intermediate agency or publisher is subject to this chapter.

---

[11] Persons who engage in any business undertaking, however limited as to time or magnitude, will become subject to the compensation act when three persons are employed.

(7) Every * * * member of any volunteer fire company or fire department organized under * * * ch. 213 *or any legally organized rescue squad* shall be deemed an employe of such company * * *, department *or squad. Every such member, while serving as an auxiliary policeman at an emergency, shall also be deemed an employe of said company, department or squad.* If such company * * *, department *or squad* has not insured its liability for compensation to its employes, the municipality or county within which such company * * * department *or squad* was organized shall be liable for such compensation.[12]

(8) Every independent contractor who does not maintain a separate business and who does not hold himself out to and render service to the public, provided he is not himself an employer subject to this chapter or has not complied with the conditions of subsection (2) of section 102.28, shall for the purpose of this chapter be an employe of any employer under this chapter for whom he is performing service in the course of the trade, business, profession or occupation of such employer at the time of the injury.[13]

(9) Members of the national and state guards, when in state service performing official duty under direction of appropriate authority, but only in case Federal laws, rules or regulations provide no benefits substantially equivalent to those provided in this chapter.

(10) Further to effectuate the policy of the state that the benefits of this chapter shall extend and be granted to employes in the service of the state, or of any municipality therein on the same basis, in the same manner, under the same conditions, and with like right of recovery as in the case of employes of persons, firms or private corporations, any question whether any person is an employe under this chapter shall be governed by and determined under the

---

[12] Volunteer firemen and members of rescue squads are to be considered employes and entitled to benefits in event of injury. However, if the volunteer fire company has not been organized under provisions of Chapter 213 the members are not employes unless their status may be determined to be such under general provisions. If the company or department has not insured liability of its members the municipality becomes liable for compensation.

[13] The effect is to cover independent contractors as defined in the same manner as though they were regular employes, and for the purposes of the act to constitute them as statutory employes.

See text Sec. 22.01, defining certain civil defense workers as employes subject to the act with limitations.

same standards, considerations, and rules of decision in all cases under subs. (1) to (9). Any statutes, ordinances, or administrative regulations which may be otherwise applicable to the classes of employes enumerated in sub. (1) shall not be controlling in deciding whether any person is an employe for the purposes of this chapter.

102.08 Nonelection by epileptics, blind persons, corporation officers. Epileptics and persons who are totally blind may elect not to be subject to the provisions of this chapter for injuries resulting because of such epilepsy or blindness and still remain subject to its provisions for all other injuries. Officers of corporations may also elect not to be subject to the provisions of this chapter. Such elections shall be made by giving notice to the employer in writing on a form to be furnished by the industrial commission, and filing a copy of such notice with the industrial commission. An election may be revoked by giving written notice to the employer of revocation, and such revocation shall be effective upon filing a copy of such notice with the industrial commission.

102.11 Earnings, method of computation.[14] (1) The average weekly earnings for temporary disability shall be taken at not less than $12.50 nor more than * * * *$97.15, resulting*

[14] The intent of this provision is that earnings on a normal full time basis shall be the basis for payment of compensation. Where board, lodging, or apprenticeship instruction is furnished the employe as a part of the consideration, the fair value of these benefits is to be added to the money wage in computing the compensation due. Any bonus, tip or premium is also part of the wage and must be reported as such by the employer in the first report of accident (Form WC-12).

Where the worker at the time of injury is working part time, his wage is to be extended to a normal full time basis by multiplying the hourly basis by the number of hours of the full time working day for the employment involved, and by multiplying the daily earnings by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury. Special treatment is provided for seasonal employment. Seasonal employment is defined as employment which can be conducted only during certain times of the year, and in no event is such employment to be considered seasonal if it extends over a period of more than 14 weeks within a calendar year.

In the case of persons performing service without fixed earnings, usual going earnings paid for similar services on a normal full time basis in the same or similar employment are to be utilized.

In no case is less than actual average weekly earnings to be taken, provided the injured has worked within each week of at least six calendar

in a weekly compensation rate of $68; for permanent total disability or death at not less than $20 nor more than * * * *$97.15, resulting in a maximum weekly compensation rate of $68 for permanent total disability and $48.57½ for death benefits;* and for permanent partial disability at not less than $20 nor more than * * * *$65.72, resulting in a maximum weekly compensation rate of $46.* Between said limits the average weekly earnings shall be determined as follows:[15]

(a) Daily earnings shall mean the daily earnings of the employe at the time of the injury in the employment in which he was then engaged. In determining daily earnings under this paragraph, overtime shall not be considered. If at the time of the injury the employe is working on part time for the day, his daily earnings shall be arrived at by dividing the amount received, or to be received by him for such part time service for the day, by the number of hours and fractional hours of such part time service, and multiplying the result by the number of hours of the normal full time working day for the employment involved. The words "part time for the day" shall apply to Saturday half days and all other days upon which the employe works less than normal full time working hours. The average weekly earnings shall be arrived at by multiplying the daily earnings

---

weeks during the year before his injury in the business in the kind of employment and for the employer for whom he worked when injured. Except for this provision, overtime is not taken into consideration.

The court has held that where a given number of hours per week are worked the total number of hours is to be taken and that "premium" wage is to be considered in determining weekly wage for compensation purposes. "Overtime" means only time beyond the number of hours usually worked by the employe, and not merely hours during which base normal wage is paid.

In no case shall average weekly earnings be less than 30 times normal hourly earnings at the time of injury.

Average annual earnings are not to be taken at less than actual annual earnings of the employe during the year immediately preceding the injury in the employment in which he worked at the time of injury.

[15] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965. Maximum for temporary disability, permanent total disability, and death is changed from a wage of $91.43 to $97.15, with compensation of $68 instead of $64. Compensation for permanent partial disability is increased to a maximum of $46 based upon a wage of $65.72 or more. There is no change in minimum wage, which remains at $12.50 for temporary disability, with compensation of $8.75 and $20 wage for permanent disability and death, with compensation at $14.

by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury.

(b) In case of seasonal employment, average weekly earnings shall be arrived at by the method prescribed in paragraph (a), except that the number of hours of the normal full time working day and the number of days of the normal full time working week shall be such hours and such days in similar service in the same or similar non-seasonal employment. Seasonal employment shall mean employment which can be conducted only during certain times of the year, and in no event shall employment be considered seasonal if it extends during a period of more than fourteen weeks within a calendar year.

(c) In the case of persons performing service without fixed earnings, or where normal full time days or weeks are not maintained by the employer in the employment in which the employe worked when injured, or where, for other reason, earnings cannot be determined under the methods prescribed by paragraph (a) or (b), the earnings of the injured person shall, for the purpose of calculating compensation payable under this chapter, be taken to be the usual going earnings paid for similar services on a normal full time basis in the same or similar employment in which earnings can be determined under the methods set out in paragraph (a) or (b).

(d) Except in situations where paragraph (b) applies, average weekly earnings shall in no case be less than actual average earnings of the employe for the calendar weeks during the year before his injury within which the employe has been employed in the business, in the kind of employment and for the employer for whom he worked when injured. Calendar weeks within which no work was performed shall not be considered under this provision. This paragraph shall be applicable only if the employe has worked within each week of at least six calendar weeks during the year before his injury in the business, in the kind of employment and for the employer for whom he worked when injured.

(e) Where any things of value are received in addition to monetary earnings as a part of the wage contract, they shall be deemed a part of earnings and computed at the value thereof to the employe.

(f) Average weekly earnings shall in no case be less than 30 times the normal hourly earnings, at the time of injury, provided that for injury occurring before September 1, 1947, they shall not be less than 40 times such earnings.

(g) If an employe is under twenty-seven years of age, his average weekly earnings on which to compute the benefits accruing for permanent disability or death shall be determined on the basis of the earnings that such employe, if not disabled, probably would earn after attaining the age of twenty-seven years. Unless otherwise established, said earnings shall be taken as equivalent to the amount upon which maximum weekly indemnity is payable.

(2) The average annual earnings when referred to in this chapter shall consist of 50 times the employe's average weekly earnings. Subject to the maximum limitation, average annual earnings shall in no case be taken at less than the actual earnings of the employe in the year immediately preceding his injury in the kind of employment in which he worked at the time of injury.

(3) The weekly wage loss referred to in this chapter, except under subsection (6) of section 102.60, shall be such percentage of the average weekly earnings of the injured employe computed according to the provisions of this section, as shall fairly represent the proportionate extent of the impairment of his earning capacity in the employment in which he was working at the time of the injury, and other suitable employments, the same to be fixed as of the time of the injury, but to be determined in view of the nature and extent of the injury.

102.12 Notice of injury, exception, laches. No claim for compensation shall be maintained unless, within 30 days after the occurrence of injury or within 30 days after the employe knew or ought to have known the nature of his disability and its relation to his employment, actual notice was received by the employer or by an officer, man-

ager or designated representative of an employer. If no representative has been designated by posters placed in one or more conspicous places, then notice received by any superior shall be sufficient. Absence of notice shall not bar recovery if it is found that the employer was not misled thereby. Regardless of whether notice was received, if no payment of compensation (other than medical treatment or burial expense) is made, and no application is filed with the commission within 2 years from the date of the injury or death, or from the date the employe or his dependent knew or ought to have known the nature of the disability and its relation to the employment, the right to compensation therefor shall be barred, except that the right to compensation shall not be barred if the employer knew or should have known, within the 2-year period, that the employe had sustained the injury on which claim is based. Issuance of notice of a hearing on the commission's own motion shall have the same effect for the purposes of this section as the filing of an application.

102.13 Examination by physician, competent witnesses, exclusion of evidence, autopsy. (1) Whenever compensation is claimed by any employe, he shall, upon the written request of his employer, submit to reasonable examination by a physician, provided and paid for by the employer, and shall likewise submit to examination from time to time by any physician selected by said commission, or a member or examiner thereof. The employe shall be entitled to have a physician, provided by himself, present at any such examination. So long as the employe, after such written request of the employer, shall refuse to submit to such examination, or shall in any way obstruct the same, his right to begin or maintain any proceeding for the collection of compensation shall be suspended; and if he shall refuse to submit to such examination after direction by the commission, or any member or examiner thereof, or shall in any way obstruct the same, his right to the weekly indemnity which shall accrue and become payable during the period of such refusal or obstruction, shall be barred. Any physician who shall be present at any such examination may be required to testify as to the results thereof. Any physician having at-

tended an employe may be required to testify before the commission when it shall so direct. Notwithstanding any other statutory provisions, any physician attending a workmen's compensation claimant may furnish to the employe, employer, workmen's compensation insurance carrier, or the commission information and reports relative to a compensation claim.[16] The testimony of any physician or surgeon who is licensed to practice where he resides or practices outside the state, may be received in evidence in compensation proceedings.

(2) The commission may refuse to receive testimony as to conditions determined from an autopsy if it appears (a) that the party offering the testimony had procured the autopsy and had failed to make reasonable effort to notify at least one party in adverse interest or the commission at least twelve hours before said autopsy of the time and place it would be performed, or (b) that the autopsy was performed by or at the direction of the coroner for purposes not authorized by chapter 966. The commission may in its discretion withhold findings until an autopsy is held in accordance with its directions.

102.14 Jurisdiction; advisory committee. (1) This chapter shall be administered by the commission.

(2) The commission shall appoint an advisory committee on workmen's compensation which shall consist of a member of the industrial commission or someone designated by the commission, who shall serve as chairman, with 5 representatives of employers and 5 representatives of employes. Such committee shall submit its recommendations with respect to amendments to this chapter to each regular session

---

[16] Physicians, under general statutory provisions, are not allowed to disclose information which they may acquire while attending a patient in their professional character. A physician who attends a workmen's compensation claimant is privileged to furnish to the employe, employer, workmen's compensation insurance carrier, or the commission information and reports relative to a compensation claim. It is a practical necessity that physicians attending injured workmen be permitted to furnish information to the commission upon which compensation can be based. Physicians will not be required, however, to disclose confidential communications communicated to them for the purpose of treatment unless such information is necessary to a proper disposition of the claim. The commission regards the physician who treats the injured workman at the request of the employer to all intents and purposes as the physician of the injured man. His testimony before the commission should be absolutely fair, factual and unbiased.

of the legislature and shall report its views upon any pending bill relating to this chapter to the proper legislative committee. The commission shall also appoint 3 nonvoting representatives of casualty insurance companies to sit with the committee in an advisory capacity.

102.15 Rules of procedure; transcripts. (1) Subject to the provisions of this chapter, the commission may adopt its own rules of procedure and may change the same from time to time.

(2) The commission may provide by rule the conditions under which transcripts of testimony and proceedings shall be furnished.

102.16 Submission of disputes, contributions by employes. (1) Any controversy concerning compensation, including any in which the state may be a party, shall be submitted to said commission in the manner and with the effect provided in this chapter. Every compromise of any claim for compensation may be reviewed and set aside, modified or confirmed by the commission within one year from the date such compromise is filed with the commission, or from the date an award has been entered, based thereon, or the commission may take such action upon application made within such year. Unless the word "compromise" appears in a stipulation of settlement, the settlement shall not be deemed a compromise, and further claim shall not be barred except as provided in s. 102.17 (4) irrespective of whether award is made. The employer or insurer shall have equal rights with the employe to have review of a compromise. Upon petition filed by the employer or insurer with the commission within one year from any award upon a stipulation of settlement the commission shall have power to set aside said award or otherwise determine the rights of the parties.[17]

[17] Unless a genuine compromise is made and approved by the commission, the applicant will not be foreclosed except by the six year limitation. Unless dispute arises, parties should not attempt to make "compromise" agreements but should stipulate facts without making use of the word "compromise." In case of a stipulation of settlement (not compromise) the employer's right to review is extended to one year from the date of award, leaving the employe's right for review the same as heretofore, that is, 6 years from the date of the last payent of compensation under the stipulation.

(2) The commission shall have jurisdiction to pass upon the reasonableness of medical and hospital bills in all cases of dispute where compensation is paid, in the same manner and to the same effect as it passes upon compensation.

(3) No employer subject to the provisions of this chapter shall solicit, receive or collect any money from his employes or make any deduction from their wages, either directly or indirectly, for the purpose of discharging any liability under the provisions thereof; nor shall any such employer sell to an employe, or solicit or require him to purchase medical or hospital tickets or contracts for medical, surgical, or hospital treatment required to be furnished by such employer.

(4) Any employer violating subsection (3) shall be subject to the penalties provided in subsection (3) of section 102.28, and, in addition thereto, shall be liable to an injured employe for the reasonable value of the necessary services rendered to such employe pursuant to any arrangement made in violation of subsection (3) of this section without regard to said employe's actual disbursements for the same.

102.17 Procedure; notice of hearing; witnesses, contempt; testimony, medical examination.[18] (1) (a) Upon the filing with the commission by any party in interest of any application in writing stating the general nature of any claim as to which any dispute or controversy may have arisen, it shall mail a copy of such application to all other parties in interest and the insurance carrier shall be deemed a party in interest. The commission may bring in additional parties by service of a copy of the application. The commission shall fix a time for the hearing on such application which shall not be more than 40 days after the filing of such application. The commission shall cause no-

[18] The practice before the commission follows substantially the practice in courts of equity. The purpose is to secure the facts in as direct and simple a manner as possible. Parties will aid the commission and make the administration of the act less expensive by stipulating all the facts not in dispute. In practice the commission mails copies of its awards to both parties. If a mistake is found, the commission may correct it upon having its attention called to the matter within twenty days after the date of the award. A complete statement of the rules of practice adopted by the commission in the administration of the compensation act is set forth at the back of this pamphlet.

tice of such hearing, to be given to each party interested, by service of such notice on him personally or by mailing a copy thereof to him at his last known post-office address at least 10 days before such hearing. In case a party in interest is located without the state, and has no post-office address within this state, the copy of the application and copies of all notices shall be filed in the office of the secretary of state and shall also be sent by registered mail to the last known post-office address of such party. Such filing and mailing shall constitute sufficient service, with the same force and effect as if served upon a party located within this state. Such hearing may be adjourned from time to time in the discretion of the commission, and hearings may be held at such places as the commission shall designate, within or without the state. The commission may also arrange to have hearing held by the commission, officer, or tribunal having authority to hear cases arising under the workmen's compensation law of any other state, of the District of Columbia, or of any territory of the United States, the testimony and proceedings at any such hearing to be reported to the commission and to be part of the record in the case. Any evidence so taken shall be subject to rebuttal upon final hearing before the commission.

(am) Either party shall have the right to be present at any hearing, in person or by attorney, or any other agent, and to present such testimony as may be pertinent to the controversy before the commission. No person, firm or corporation other than an attorney-at-law, duly licensed to practice law in the state, shall appear on behalf of any party in interest before the commission or any member or employe of the said commission assigned to conduct any hearing, investigation or inquiry relative to a claim for compensation or benefits under this chapter, unless he shall be a citizen of the United States, of full age, of good moral character and otherwise qualified, and shall have obtained from the commission a license authorizing him to appear in matters or proceedings before the commission. Such license shall be issued by the commission under rules to be adopted by it. In such rules the commission may prescribe such reasonable tests of character and fitness as it may deem

necessary. There shall be maintained in the office of the commission a registry or list of persons to whom licenses have been issued as provided herein, which list shall be corrected as often as licenses are issued or revoked. Any such license may be suspended or revoked by the commission for fraud or serious misconduct on the part of any such agent. Before suspending or revoking the license of any such agent, the commission shall give notice in writing to such agent of the charges of fraud or misconduct preferred against him, and shall give such agent full opportunity to be heard in relation to the same. Such license and certificate of authority shall, unless otherwise suspended or revoked, be in force from and after the date of issuance until the thirtieth day of June following such date of issuance and may be renewed by the commission from time to time, but each renewed license shall expire on the thirtieth day of June following the issuance thereof.[19]

(as) The contents of verified medical and surgical reports, by physicians and surgeons licensed in and practicing in Wisconsin, presented by claimants for compensation shall constitute prima facie evidence as to the matter contained therein, subject to such rules and such limitations as the commission prescribes.[20] So, also, shall such reports of physicians and surgeons, wherever licensed and practicing, to whom the claimant had been sent for examination or treatment by the employer or insurer, provided that such doctor consents to subject himself to cross-examination. Physicians and surgeons licensed in and practicing in Wisconsin may certify instead of verify such reports, and such certification shall be equivalent to verification; and any physician or surgeon who knowingly makes a false statement of fact or opinion in such certified report may be fined or imprisoned or both under s. 943.39. The record of a hos-

---

[19] Any person other than a Wisconsin attorney who wishes to represent parties in compensation hearings is required to obtain a license under rules formulated by the Industrial Commission. Rules will be found under the Rules of Practice in this pamphlet.

[20] The purpose of this provision is to equalize to a degree the opportunity for parties to present pertinent testimony. The cost of appearance of medical witnesses is, at times, prohibitive to employes. Under this provision, the burden of producing the physicians for cross-examination desired is imposed upon the employer or insurance company.

pital or sanatorium in Wisconsin operated by any department, agency, or municipality of the federal or state government, or of any other hospital or sanatorium in Wisconsin which is satisfactory to the commission, established by certificate, affidavit, or testimony of the supervising officer or other person having charge of such records, or of a physician or surgeon, to be such record of the patient in question, and made in the regular course of examination or treatment of such patient, shall constitute prima facie evidence in any workmen's compensation proceeding as to the matter contained therein, insofar as it is otherwise competent and relevant.[21]

(b) The commission may, with or without notice to either party, cause testimony to be taken, or an inspection of the premises where the injury occurred to be had, or the time books and payrolls of the employer to be examined by any member of the commission or any examiner appointed by it, and may from time to time direct any employe claiming compensation to be examined by a regular physician; the testimony so taken, and the results of any such inspection or examination, to be reported to the commission for its consideration upon final hearing. All ex parte testimony taken by the commission shall be reduced to writing and either party shall have opportunity to rebut the same on final hearing.

(bm) Section 326.12 shall not apply to proceedings under this act, except as to a witness:

1. Who is beyond the reach of a subpoena of a commissioner or examiner; or

2. Who is about to go out of the state, not intending to return in time for the hearing; or

3. Who is so sick, infirm or aged as to make it probable that he will not be able to attend the hearing; or

4. Who is a member of the legislature, if any committee

---

[21] It must be shown that the record was made in the regular course of examination or treatment of the patient. The record then constitutes prima facie evidence insofar as it may otherwise be competent and relevant.

of the same or the house of which he is a member is in session, provided he waives his privilege.[22]

(c) Whenever the testimony presented at any hearing indicates a dispute, or is such as to create doubt, as to the extent or cause of disability or death, the commission may direct that the injured employe be examined or autopsy be performed, or an opinion of a physician be obtained without examination or autopsy, by an impartial, competent physician designated by the commission who is not under contract with or regularly employed by a compensation insurance carrier or self-insured employer. The expense of such examination shall be paid by the employer. The report of such examination shall be transmitted in writing to the commission and a copy thereof shall be furnished by the commission to each party who shall have an opportunity to rebut the same on further hearing.

(2) If the commission shall have reason to believe that the payment of compensation has not been made, it may on its own motion give notice to the parties, in the manner provided for the service of an application, of a time and place when a hearing will be had for the purpose of determining the facts. Such notice shall contain a statement of the matter to be considered. Thereafter all other provisions governing proceedings on application shall attach insofar as the same may be applicable.

(3) Any person who shall wilfully and unlawfully fail or neglect to appear or to testify or to produce books, papers and records as required, shall be fined not less than twenty-five dollars nor more than one hundred dollars, or imprisoned in the county jail not longer than thirty days.

---

[22] This permits examination of a witness beyond reach of the subpoena of a commissioner or examiner, or when a witness shall be about to go out of the state not intending to return in time for hearing, or when he shall be so sick or infirm or aged as to make it probable that he will not be able to attend hearing, or in case of a member of the legislature, if a committee or house of which he is a member is in session, provided the member is willing to waive his privilege. In other cases adverse examination before hearing is not permissible. This insures a minimum of delay and expense, and that as far as possible all proceedings are to be had before the Industrial Commission, which has necessary machinery and personnel to insure prompt and proper procedure with little or no expense to the parties. See Sec. 326.07.

Each day such person shall so refuse or neglect shall constitute a separate offense.[23]

(4) The right of an employe, his legal representative or dependent to proceed under this section shall not extend beyond 6 years from the date of the injury or death or from the date that compensation (other than medical treatment or burial expenses) was last paid, or would have been last payable if no advancement were made, whichever date is latest, except that in case of injury or death caused by exposure to ionized radiation the right to proceed hereunder shall be subject to no time limitations.[24]

(5) This section does not limit the time within which the state may bring an action to recover the amounts specified in subsection (5) of section 102.49 and section 102.59.

(6) If an employe or dependent shall, at the time of injury, or at the time his right accrues, be under 21 years of age, the limitations of time within which he may file application or proceed under this chapter, if they would otherwise sooner expire, shall be extended to one year after he attains the age of 21 years. If, within any part of the last year of any such period of limitation, an employe, his personal representative, or surviving dependent be insane or on active duty in the armed forces of the United States such period of limitation shall be extended to two years after the date that the limitation would otherwise expire. The provision hereof with respect to persons on active duty in the armed forces of the United States shall apply only where no applicable federal statute is in effect.

102.18 Findings and award. (1) After final hearing the commission shall make and file its findings upon all the facts involved in the controversy, and its order, which shall state its determination as to the rights of the parties. Pending the final determination of any controversy before it, the commission may after any hearing make interlocutory findings, orders and awards which may be enforced in

---

[23] See also Sec. 325.12.

[24] This makes clear that even though an advancement or lump sum is granted the time for proceeding is not cut down but is limited only by a period of 6 years from the date that compensation would have been last payable if no advancement or lump payment had been made.

the same manner as final awards. The commission may include in its final award, as a penalty for noncompliance with any such interlocutory order or award, if it shall find that noncompliance was not in good faith, not exceeding twenty-five per cent of each amount which shall not have been paid as directed thereby. Where there is a finding that the employe is in fact suffering from an occupational disease caused by the employment of the employer against whom the application is filed, a final award dismissing such application upon the ground that the applicant has suffered no disability from said disease shall not bar any claim he may thereafter have for disability sustained after the date of said award.[25]

(2) The industrial commission may authorize a commissioner or examiner to make findings and orders, and to review, set aside, modify or confirm compromises of claims for compensation under rules to be adopted by the commissioner. Any party in interest who is dissatisfied with the findings or order of a commissioner or examiner may file a written petition with the industrial commission as a commission to review the findings or order.

(3) If no petition is filed within twenty days from the date that a copy of the findings or order of the commissioner or examiner was mailed to the last known address of the parties in interest, such findings or order shall be considered the findings or order of the industrial commission as a body, unless set aside, reversed or modified by such commissioner or examiner within such time. If the findings or order are set aside by the commissioner or examiner the status shall be the same as prior to the findings or order set aside. If the findings or order are reversed or modified by the commissioner or examiner the time for filing petition with the commission shall run from the date that notice of such reversal or modification is mailed to the last known address of the parties in interest. Within ten days after the filing of such petition with the commission the commission shall

---

[25] This provision prevents the final closing of a claim for occupational disease in those cases in which no showing of disability can be made to the time of the commission's order but in which disability may develop at a date following such order. Secs. 102.12 and 102.17 still apply however.

either affirm, reverse, set aside or modify such findings or order in whole or in part, or direct the taking of additional testimony. Such action shall be based on a review of the evidence submitted. If the commission is satisfied that a party in interest has been prejudiced because of exceptional delay in the receipt of a copy of any findings or order it may extend the time another twenty days for filing petition with the commission.[26]

(4) The commission shall have power to remove or transfer the proceedings pending before a commissioner or examiner. It may also on its own motion, set aside, modify or change any order, findings or award (whether made by an individual commissioner, an examiner or by the commission as a body) at any time within twenty days from the date thereof if it shall discover any mistake therein, or upon the grounds of newly discovered evidence. Unless the liability under sections 102.49, 102.57, 102.58, 102.59, 102.60 and 102.61 is specifically mentioned, the order, findings or award shall be deemed not to affect such liability.

(5) If it shall appear to the commission that a mistake may have been made as to cause of injury in the findings, order, or award upon an alleged injury based on accident, when in fact the employe was suffering from an occupational disease, the commission may upon its own motion, with or without hearing, within three years from the date of such findings, order, or award, set aside such findings, order, or award, or the commission may take such action upon application made within such three years. Thereafter, and after opportunity for hearing, the commission may, if in fact the employe is suffering from disease arising out of the employment, make new findings and award, or it may reinstate the previous findings, order or award.[27]

---

[26] In order that undue delay in decision may not result, simple and summary procedure under this provision becomes essential. This is especially true because the law provides, in case of decision by an individual examiner or commissioner, for three appeals, one to the full commission, one to the Circuit Court of Dane County, and one to the Supreme Court. See Ind 80.19.

[27] If the commission finds that a mistake has been made as to the cause of injury, mistakenly determined to be on the basis of accident when in fact an employe was suffering from an occupational disease, the commission may with or without hearing within three years from the date of the erroneous findings set aside the order. Likewise the commission may take such action upon application made within such three years.

(6) In case of disease arising out of the employment, the commission may from time to time review its findings, order, or award, and make new findings, order, or award, based on the facts regarding disability or otherwise as they may then appear. This subsection shall not affect the application of the limitation in 102.17 (4).[28]

102.19 Alien dependents; payments through consular officers. In case a deceased employe, for whose injury or death compensation is payable, leaves surviving him alien dependents residing outside of the United States, the duly accredited consular officer of the country of which such dependents are citizens or his designated representative residing within the state shall, except as otherwise determined by the commission, be the sole representative of such deceased employe and of such dependents in all matters pertaining to their claims for compensation. The receipt by such officer or agent of compensation funds and the distribution thereof shall be made only upon order of the commission, and payment to such officer or agent pursuant to any such order shall be a full discharge of the benefits or compensation. Such consular officer or his representative shall furnish, if required by the commission, a bond to be approved by it, conditioned upon the proper application of all moneys received by him. Before such bond is discharged, such consular officer or representative shall file with the commission a verified account of the items of his receipts and disbursements of such compensation. Such consular officer or representative shall make interim reports to the commission as it may require.

102.195 In case an employe is adjudged insane or incompetent, or convicted of a felony, and is confined in a public institution and has wholly dependent upon him for support a person, whose dependency is determined as if the employe were deceased, compensation payable during the period of his confinement may be paid to the employe and his de-

---

[28] Disability and required treatment from disease are often so unpredictable that an automatic reservation to review these cases seems desirable to prevent injustice. In all cases the six year statute of limitation forecloses further action. Within the six year period, however, the time is extended as provided.

pendents, in such manner, for such time and in such amount as the commission by order provides.

102.20 Judgment on award. Either party may present a certified copy of the award to the circuit court for any county, whereupon said court shall, without notice, render judgment in accordance therewith; such judgment shall have the same effect as though rendered in an action tried and determined by said court, and shall, with like effect, be entered and docketed.

102.21 Payment of awards by municipalities. Whenever an award is made by the commission under this chapter or s. 66.191 against any municipality, the person in whose favor it is made shall file a certified copy thereof with the municipal clerk. Within twenty days thereafter, unless an appeal is taken, such clerk shall draw an order on the municipal treasurer for the payment of the award. If upon appeal such award is affirmed in whole or in part the order for payment shall be drawn within ten days after a certified copy of such judgment is filed with the proper clerk. If more than one payment is provided for in the award or judgment, orders shall be drawn as the payments become due. No statute relating to the filing of claims against, and the auditing, allowing and payment of claims by municipalities shall apply to the payment of an award or judgment under this section.

102.22 Penalty for delayed payments. If the sum ordered by the commission to be paid shall not be paid when due, such sum shall bear interest at the rate of 6 per cent per annum. The state of Wisconsin shall be liable for such interest on awards issued against it under this chapter. The commission shall have jurisdiction to issue award for payment of such interest at any time within one year of the date of its order or upon appeal within one year after final court determination. Where the employer or his insurer is guilty of inexcusable delay in making payments, the payments as to which such delay is found shall be increased by 10 per cent. Where such delay is chargeable to the employer

and not to the insurer s. 102.62 shall be applicable and the relative liability of the parties shall be fixed and discharged as therein provided.[29]

102.23 Judicial review.[30] (1) The findings of fact made by the commission acting within its powers shall, in the absence of fraud, be conclusive; and the order or award, either interlocutory or final, whether judgment has been rendered thereon or not, shall be subject to review only in the manner and upon the grounds following: Within thirty days from the date of an order or award originally made by the commission as a body or following the filing of petition for review with the commission under section 102.18[31] any party aggrieved thereby may commence, in the Circuit Court for Dane County, an action against the commission for the review of such order or award, in which action the adverse party shall also be made defendant. In such action a complaint, which need not be verified, but which shall state the grounds upon which a review is sought, shall be served with the summons. Service upon the secre-

---

[29] Withholding amounts unquestionably due because the injured man refuses to execute a release of his right to claim further benefits or for other reason will be regarded as inexcusable delay in the making of compensation payments.

[30] Comment by Legislative Committee of 1911: The finding of the board, in the absence of fraud, is made absolutely conclusive by this section. The award is reviewable only on three grounds: (1) That the board acted without or in excess of its power; (2) that the award was procured by fraud; (3) that the findings of fact by the board do not support the award. This review does not allow any retrial of the case as presented to the board. The facts found by the board are conclusive, and the review that is allowed in those cases where the findings of fact do not support the award, would occur only where the board had not given proper consideration to the act itself. In other words, the court will review only questions of law included in grounds 1 and 3 upon which an award may be reviewed. The fraud alluded to in the second ground will be only such as was perpetrated in procuring the award, and will not include false testimony of any party, because all such questions will be decided conclusively by the board. *Buehler Bros. v. Ind. Comm.*, 220 Wis. 371. The object of having the action to review brought against the board is twofold: (1) If any error is made it will be an error made by the board. Consequently, the board should defend its own action, and this will be done at the expense of the state; (2) To relieve the party in whose favor the award was made of the expense of litigation in the circuit and supreme courts. The commission defends its own orders.

[31] A party must petition the commission as a body for review of findings and order of an examiner before appealing to the Circuit Court of Dane County. Appeal to the court is always from an order of the commission as a body.

tary of the commission, or any member of the commission, shall be deemed completed service on all parties, but there shall be left with the person so served as many copies of the summons and complaint as there are defendants, and the commission shall mail one such copy to each other defendant. If the circuit court is satisfied that a party in interest has been prejudiced because of exceptional delay in the receipt of a copy of any findings or order it may extend the time another thirty days in which such action may be commenced. The commission shall serve its answer within twenty days after the service of the complaint, and, within the like time, such adverse party shall, if he so desires, serve his answer to said complaint, which answer may, by way of counterclaim or cross complaint, ask for the review of the order or award referred to in the complaint, with the same effect as if such party had commenced a separate action for the review thereof. With its answer, the commission shall make return to said court of all documents and papers on file in the matter, and of all testimony which may have been taken therein, and of its order, findings and award. Such return of the commission when filed in the office of the clerk of the circuit court shall, with the papers mentioned in section 270.72, constitute a judgment roll in such action; and it shall not be necessary to settle a bill of exceptions in order to make such return part of the record of such court in such action. Said action may thereupon be brought on for hearing before said court upon such record by either party on ten days' notice to the other; subject, however, to the provisions of law for a change of the place of trial or the calling in of another judge. Upon such hearing, the court may confirm or set aside such order or award; and any judgment which may theretofore have been rendered thereon; but the same shall be set aside only upon the following grounds:

(a) That the commission acted without or in excess of its powers.

(b) That the order or award was procured by fraud.

(c) That the findings of fact by the commission do not support the order or award.

(2) Upon the trial of any such action the court shall disregard any irregularity or error of the commission unless it be made to affirmatively appear that the plaintiff was damaged thereby.

(3) The record in any case shall be transmitted to the commission within 5 days after expiration of the time for appeal from the order or judgment of the court, unless appeal shall be taken from such order or judgment.

(4) Whenever an award is made against the state the attorney general may bring an action for review thereof in the same manner and upon the same grounds as are provided by subsection (1) hereof.

(5) The commencement of action for review shall not relieve the employer from paying compensation as directed, when such action involves only the question of liability as between the employer and one or more insurance companies or as between several insurance companies.

102.24 Remanding record. (1) Upon the setting aside of any order or award the court may recommit the controversy and remand the record in the case to the commission, for further hearing or proceedings; or it may enter the proper judgment upon the findings, as the nature of the case shall demand. An abstract of the judgment entered by the trial court upon the review of any order or award shall be made by the clerk thereof upon the docket entry of any judgment which may theretofore have been rendered upon such order or award and transcripts of such abstract may thereupon be obtained for like entry upon the dockets of the courts of other counties.

(2) After the commencement of an action to review any award of the commission the parties may have the record remanded by the court for such time and under such condition as they may provide, for the purpose of having the commission act upon the question of approving or disapproving any settlement or compromise that the parties may desire to have so approved. If approved the action shall be at an end and judgment may be entered upon the approval as upon an award. If not approved the record shall forthwith be returned to the circuit court and the action shall proceed as if no remand had been made.

102.25 Appeal from judgment on award. (1) Said commission, or any party aggrieved by a judgment entered upon the review of any order or award, may appeal therefrom within thirty days from the date of service by either party upon the other of notice of entry of judgment. However it shall not be necessary for said commission or any party to said action to execute, serve or file the undertaking required by section 274.11 (3) in order to perfect such appeal; but all such appeals shall be placed on the calendar of the supreme court and brought to a hearing in the same manner as state causes on such calendar. The state shall be deemed a party aggrieved, within the meaning of this subsection, whenever a judgment is entered upon such a review confirming any order or award against it. At any time before the case is set down for hearing in the supreme court, the parties may have the record remanded by the court to the industrial commission in the same manner and for the same purposes as provided for remanding from the circuit court to the industrial commission under section 102.24 (2).

(2) It shall be the duty of the clerk of any court rendering a decision affecting an award of the commission to promptly furnish the commission with a copy of such decision without charge.

102.26 Fees and costs. (1) No fees shall be charged by the clerk of any court for the performance of any service required by this chapter, except for the docketing of judgments and for certified transcripts thereof. In proceedings to review an order or award, costs as between the parties shall be in the discretion of the court, but no costs shall be taxed against the commission.

(2) Unless previously authorized by the commission, no fee shall be charged or received for the enforcement or collection of any claim for compensation, nor shall any contract therefor be enforcible, where such fee, inclusive of all taxable attorney's fees paid or agreed to be paid for such enforcement or collection, exceed 20 per cent of the amount at which such claim shall be compromised or of the amount awarded, adjudged or collected, except that in cases

of admitted liability where there is no dispute as to amount of compensation due and in which no hearing or appeal is necessary, the fee charged shall not exceed 10 per cent but not to exceed $100, of the amount at which such claim shall be compromised or of the amount awarded, adjudged or collected. The limitation as to fees shall apply to the combined charges of attorneys, solicitors, representatives and adjusters who knowingly combine their efforts toward the enforcement or collection of any compensation claim.

(2m) In any action for the recovery of costs of hospitalization in a tuberculosis sanatorium, where such cost was incurred by a patient whose tuberculosis entitled him to workmen's compensation, no attorney fee for the recovery of such cost shall be allowed to the attorney for such patient in such workmen's compensation action, unless, by express agreement with the governing board of such institution he has been retained by such governing board to also act as its attorney.

(3) Compensation in favor of any claimant, which exceeds $100, shall be made payable to such claimant in person; however, in any award the commission shall upon application of any interested party and subject to the provisions of sub. (2) fix the fee of his attorney or representative and provide in the award for payment of such fee direct to the person entitled thereto. At the request of the claimant medical expense, witness fees and other charges associated with the claim may be ordered paid out of the amount awarded. Payment according to the directions of the award shall protect the employer and his insurer from any claim of attorney's lien.

(4) The charging or receiving of any fee in violation of this section shall be unlawful, and the attorney or other person guilty thereof shall forfeit double the amount retained by him, the same to be collected by the state in an action in debt, upon complaint of the commission. Out of the sum recovered the court shall direct payment to the injured party of the amount of the overcharge.

102.27 Claims unassignable and exempt. No claim for compensation shall be assignable, but this provision shall

not affect the survival thereof; nor shall any claim for compensation, or compensation awarded, or paid, be taken for the debts of the party entitled thereto.

102.28 Preference of claim; workmen's compensation insurance. (1) The whole claim for compensation for the injury or death of any employe or any award or judgment thereon, and any claim for unpaid compensation insurance premiums shall be entitled to the same preference in bankruptcy or insolvency proceedings as is given by any law of this state or by the federal bankruptcy act to claims for labor, but this section shall not impair the lien of any judgment entered upon any award.

(2) An employer liable under this act to pay compensation shall insure payment of such compensation in some company authorized to insure such liability in this state unless such employer shall be exempted from such insurance by the industrial commission. An employer desiring to be exempt from insuring his liability for compensation shall make application to the industrial commission showing his financial ability to pay such compensation, and agreeing as a condition for the granting of the exemption to faithfully report all injuries under compensation according to law and the requirements of the commission and to comply with this act, and the rules of the commission pertaining to the administration thereof, whereupon the commission by written order may make such exemption. The commission may from time to time require further statement of financial ability of such employer to pay compensation and may upon ten days' notice in writing, for financial reasons or for failure of the employer to faithfully discharge his obligations according to the agreements contained in his application for exemption, revoke its order granting such exemption, in which case such employer shall immediately insure his liability. As a condition for the granting of an exemption the commission shall have authority to require the employer to furnish such security as it may consider sufficient to insure payment of all claims under compensation. Where the security is in the form of a bond or other personal guaranty, the commission may at any time either before or after the entry of an award, upon

at least ten days' notice and opportunity to be heard require the sureties to pay the amount of the award, the same to be enforced in like manner as the award itself may be enforced. Where an employer procures an exemption as herein provided and thereafter enters into any form of agreement for insurance coverage with an insurance company or inter-insurer not licensed to operate in this state, his conduct shall automatically operate as a revocation of such exemption. An order exempting an employer from insuring his liability for compensation shall be null and void if the application contains a financial statement which is false in any material respect.[32]

(3) An employer who shall fail to comply with the provisions of subsection (2) of section 102.28 shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than ten dollars nor more than one hundred dollars or by imprisonment in the county jail for not less than thirty days nor more than six months, or by both such fine and imprisonment. Each day's failure shall be a separate offense. Upon complaint of the commission, the fines specified in this section may be collected by the state in an action in debt.

(4) If it appears by the complaint or by the affidavit of any person in behalf of the state that the employer's liability continues uninsured there shall forthwith be served on the employer an order to show cause why he should not be restrained from employing any person in his business pending the proceedings or until he shall have satisfied the court in which the matter is pending that he has complied with the provisions of subsection (2) of this section. Such order to show cause shall be returnable before the court or the judge thereof at a time to be fixed in the order not less than twenty-four hours nor more than three days after its issuance. Insofar as the same may be applicable and not herein otherwise provided, the provisions of chapter 268 relative to injunctions shall govern these proceedings. If

[32] An employer who has fraudulently obtained exemption from insuring his liability under the workmen's compensation act is in the same position as an employer who fails to carry workmen's compensation insurance without securing exemption. The effect is to take away all the exemptions of such an employer in case of an injury to an employe and to render him liable to the penalties provided for failure to insure.

the employer denies under oath that he is subject to this act, and furnishes bond with such sureties as the court may require to protect all his employes injured after the commencement of the action for such compensation claims as they may establish, then an injunction shall not issue. Every judgment or forfeiture against an employer, under subsection (3) of this section, shall perpetually enjoin him from employing any person in his business at any time when he is not complying with subsection (2) of this section.

(5) If compensation is awarded under this act, against any employer who at the time of the accident has not complied with the provisions of subsection (2) of this section, such employer shall not be entitled as to such award or any judgment entered thereon, to any of the exemptions of property from seizure and sale on execution allowed in sections 272.18 to 272.22. If such employer is a corporation, the officers and directors thereof shall be individually and jointly and severally liable for any portion of any such judgment as is returned unsatisfied after execution against the corporation.

(6) Every employer shall upon request of the industrial commission report to it the number of his employes and the nature of their work and also the name of the insurance company with whom he has insured his liability under the workmen's compensation act and the number and date of expiration of such policy. Failure to furnish such report within ten days from the making of a request by registered mail shall constitute presumptive evidence that the delinquent employer is violating the provisions of subsection (2) of this section.

102.29 Third party liability. (1) The making of a claim for compensation against an employer or compensation insurer for the injury or death of an employe shall not affect the right of the employe, his personal representative, or other person entitled to bring action, to make claim or maintain an action in tort against any other party for such injury or death, hereinafter referred to as a third party; nor shall the making of a claim by any such person against

a third party for damages by reason of an injury to which sections 102.03 to 102.64 are applicable, or the adjustment of any such claim, affect the right of the injured employe or his dependents to recover compensation.[33] The employer or compensation insurer who shall have paid or is obligated to pay a lawful claim under this chapter shall likewise have the right to make claim or maintain an action in tort against any other party for such injury or death. However, each shall give to the other reasonable notice and opportunity to join in the making of such claim or the instituting of an action and to be represented by counsel. If a party entitled to notice cannot be found, the industrial commission of Wisconsin shall become the agent of such party for the giving of a notice as required herein and the notice, when given to the industrial commission, shall include an affidavit setting forth the facts, including the steps taken to locate such party. Each shall have an equal voice in the prosecution of said claim, and any disputes arising shall be passed upon by the court before whom the case is pending, and if no action is pending, then by a court of record or the industrial commission. If notice is given as herein provided, the liability of the tort feasor shall be determined as to all parties having a right to make claim, and irrespective of whether or not all parties join in prosecuting said claim, the proceeds of such claim shall be divided as follows: after deducting the reasonable cost of collection, one-third of the remainder shall in any event be paid to the injured employe or his personal representative or other person entitled to bring action. Out of the balance remaining, the employer or insurance carrier shall be reimbursed for all payments made by it, or which it may be obligated to make in the future, under the workmen's compensation act, except that it shall not be reimbursed for any payments of increased compensation made or to be made under the provisions of sections 102.22, 102.57, or 102.60.[34] Any bal-

---

[33] Acceptance of compensation does not operate as an assignment of claim against a third party, nor does settlement with a third party operate as a waiver of claim for compensation.

[34] This provides that the employer or workmen's compensation insurance carrier shall not be reimbursed out of third party settlements for payments of increased compensation made or to be made under the provisions of 102.22, 102.57, 102.60. These respectively are penalty for delayed payments

ance remaining shall be paid to the employe or his personal representative or other person entitled to bring action. If both the employe or his personal representative or other person entitled to bring action, and the employer or compensation insurer, join in the pressing of said claim and are represented by counsel, the attorneys' fees allowed as a part of the costs of collection shall be, unless otherwise agreed upon, divided between such attorneys as directed by the court or by the industrial commission. A settlement of any third party claim shall be void unless said settlement and the distribution of the proceeds thereof is approved by the court before whom the action is pending and if no action is pending, then by a court of record or the industrial commission.

(2) In the case of liability of the employer or insurer to make payment into the state treasury under s. 102.49 or 102.59, if the injury or death was due to the actionable act, neglect or default of a third party, the employer or insurer shall have a right of action against such third party to recover the sum so paid into the state treasury, which right may be enforced by joining in the action mentioned in sub. (1), or by independent action. Contributory negligence of the employe because of whose injury or death such payment was made shall bar recovery if such negligence was as great as the negligence of the person against whom recovery is sought, and the recovery allowed the employer or insurer shall be diminished in proportion to the amount of negligence attributable to such injured or deceased employe. Any action brought under this subsection may, upon order of the court, be consolidated and tried together with any action brought under sub. (1).

(3) Nothing in this act shall prevent an employe from taking the compensation he may be entitled to under it and also maintaining a civil action against any physician or surgeon for malpractice. The employer or compensation in-

---

(either 6 per cent after an order of the commission or 10 per cent for inexcusable delay); 15 per cent increased compensation payable by the employer because of violation of a safety order and double or treble compensation paid because of employment of a minor without required permit or at prohibited employment.

surer shall have no interest in or right to share in the proceeds of any civil action against any physician or surgeon for malpractice.

(4) If the insurance carrier of the employer and of the third party shall be the same, or if there is common control of the insurer of each, the insurance carrier of the employer shall promptly notify the parties in interest and the industrial commission of that fact; likewise, if the employer has assumed the liability of the third party he shall give similar notice; and, in default of such notice, any settlement with an injured employe or beneficiary shall be void. Nothing contained in this subsection shall prevent the employer or compensation insurer from sharing in the proceeds of any third party claim or action, as set forth in subsection (1).

(5) If the insurance carrier of the employer and of the third party are the same or if there is common control of the insurer of each, and the insurer fails to commence a third party action within the 3 years allowed by s. 330.205, the 3-year statute of limitations in s. 330.205 shall not be pleaded as a bar in any action commenced by the injured employe herein against any such third party subsequent to 3 years from the date of injury, but prior to 6 years from such date of injury, provided that any recovery in such action shall be limited to the insured liability of the third party. In any such action commenced by the injured employe subsequent to the 3-year period, the insurance carrier of the employer shall forfeit all right to participate in such action as a complainant and to recover any payments made under the workmen's compensation act. This subsection shall not apply if the insurance carrier has complied with sub. (4).[35]

---

[35] The purpose of the provision is to give incentive to the common insurance carrier of the employer and third party to act in the interests of the employe in proceeding against the third party. There is not the same keen interest for the insurer to proceed where it is a common carrier as there is in the case where different carriers are involved. The penalty for failure to take prompt action is against the carrier which fails to initiate necessary steps to bring third party action. The carrier has already lost its right to proceed except as notice of injury has been served or action commenced within the 3 year period. It, therefore, loses nothing under the provision but also fails to gain that which is gained by the employe who, under this provision, will be permitted to commence his action after the 3 year period.

102.30 Other insurance not affected; liability of insured employer. (1) This act shall not affect the organization of any mutual or other insurance company, nor the right of the employer to insure in mutual or other companies, against such liability, or against the liability for the compensation provided for by this act, or to provide by mutual or other insurance, or by arrangement with his employes, or otherwise, for the payment to such employes, their families, dependents or representatives, of sick, accident or death benefits in addition to the compensation provided herein. But liability for compensation shall not be reduced or affected by any insurance, contribution or other benefit whatsoever, due to or received by the person entitled to such compensation, and the person so entitled shall, irrespective of any insurance or other contract,[36] have the right to recover the same directly from the employer; and in addition thereto, the right to enforce in his own name, in the manner provided in this act, the liability of any insurance company which may have insured the liability for such compensation, and the appearance, whether general or special, of any such insurance carrier by agent or attorney shall be a waiver of the service of copy of application and of notice of hearing required by section 102.17; provided, however, that payment of such compensation by either the employer or the insurance company, shall, to the extent thereof, be a bar to recovery against the other of the amount so paid, and provided, further, that as between the employer and the insurance company, payment by either directly to the employe, or to the person entitled to compensation, shall be subject to the conditions of the policy.

(2) The failure of the assured to do or refrain from doing any act required by the policy shall not be available to the insurance carrier as a defense against the claim of the injured employe or his dependents.

(3) The commission may order direct reimbursement out of the proceeds payable under this chapter for payments made under a nonindustrial insurance policy covering the same disability and medical expense when the claimant con-

---

[36] Liability for compensation is not reduced because the employe carries insurance, and no part of the wages of the employe may be taken to pay insurance premiums against liability under this act.

sents, or when it is established that such payments under the nonindustrial insurance policy were improper.

102.31 Workmen's compensation insurance; policy regulations. (1) (a) Every contract for the insurance of the compensation herein provided for, or against liability therefor, shall be deemed to be made subject to the provisions of this act, and provisions thereof inconsistent with the act shall be void. Such contract shall be construed to grant full coverage of all liability of the assured under and according to the provisions of the act, notwithstanding any agreement of the parties to the contrary unless the commission has theretofore by written order specifically consented to the issuance of a policy on a part of such liability, except that an intermediate agency or publisher referred to in section 102.07 (6) may, under its own policy, cover liability of employes as defined in said section 102.07 (6) for an intermediate or independent news agency, provided the policy of insurance of such publisher or intermediate agency is indorsed to cover such persons. If the publisher so covers it shall not be necessary for the intermediate or independent news agency to cover liability for such persons.[37] No policy shall be canceled by either party within the policy period nor terminated upon expiration date until a notice in writing shall be given to the other party, fixing the date on which it is proposed to cancel it, or declaring that the party does not intend to renew the policy upon expiration date. Such cancellation or termination shall not become effective until 30 days after written notice has been given to the commission unless prior thereto the employer obtains other insurance coverage or an order exempting him from carrying insurance as provided in section 102.28 (2).[38] Such

[37] The law establishes no direct liability against the publisher for the employes of the intermediate or independent agency except as the agency may be a contractor under the publisher, in which case liability would exist under Sec. 102.06. The publisher is permitted to assume, under his insurance policy, the liability which exists directly against the intermediate or independent news agency, and to relieve those agencies from covering liability of newsboys.

[38] This makes it impossible for the employer or insurance company to cancel a policy of insurance unless thirty days' notice is given to the other party and to the commission. A second provision makes it certain that issuance of a new policy will automatically revoke and terminate any former policy issued by the same company.

notice to the commission shall be served personally or by registered mail on the commission at its office in Madison. Issuance of a new policy shall automatically revoke and terminate any former policy or policies issued by the same company.

(b) If the insured is a partnership, such contract of insurance shall not be construed to grant coverage of the individual liability of the members of such partnership in the course of a trade, business, profession or occupation conducted by them as individuals, nor shall a contract of insurance procured to cover individual liability be construed to grant coverage of a partnership of which the individual is a member, nor to grant coverage of the liability of the individual arising as a member of any partnership.[39]

(2) Each employe shall constitute a separate risk. Five employers or more may join in the organization of a mutual company under subsection (16) of section 201.04 and no such company organized by employers shall be authorized to effect such insurance unless it shall have in force or put in force simultaneously insurance on at least one thousand five hundred separate risks.

(3) The commission may examine from time to time the books and records of any insurance company insuring liability or compensation for an employer in this state. Any such company that shall refuse or fail to allow the commission to examine its books and records shall have its license revoked.

(5) Two or more companies, licensed to carry on the business of workmen's compensation insurance in this state, may with the approval of the commissioner of insurance, form a corporation for the purpose of insuring special risks under the workmen's compensation act. The articles of incorporation shall contain a declaration that the various company members shall contribute such amounts as may be necessary to meet any deficit of such corporation, such declaration to be in lieu of all capital, surplus and other re-

[39] This language operates to treat a partnership for insurance purposes as an entity. If A, an individual, has insurance and joins a partnership, his individual insurance will not cover the partnership. Conversely, when A leaves the partnership, the partnership insurance will not cover A as an individual.

quirements for the organization of companies and the transaction of the business of workmen's compensation insurance in this state. Such corporation shall be owned, operated and controlled by its company members as may be provided in the articles of incorporation.

(6) If any corporation licensed to transact the business of workmen's compensation insurance shall fail promptly to pay claims for compensation for which it shall become liable or if it shall fail to make reports to the industrial commission as provided in section 102.38, the industrial commission may recommend to the commissioner of insurance that the license of such company be revoked, setting forth in detail the reasons for its recommendation. The commissioner shall thereupon furnish copy of such report to the corporation and shall set a date for a hearing, at which both the corporation and the industrial commission shall be afforded an opportunity to present evidence. If after such hearing the commissioner is satisfied that the corporation has failed to live up to all of its obligations under this chapter, he shall promptly revoke its license; otherwise he shall dismiss the complaint.

(7) If any corporation licensed to transact the business of workmen's compensation insurance shall encourage, persuade or attempt to influence any employer, arbitrarily or unreasonably to refuse employment to or to discharge employes, the commissioner of insurance may, upon complaint of the industrial commission, under procedure set out in subsection (6) of section 102.31, revoke the license of such corporation.[40]

(8) If any employer who has by the industrial commission been granted exemption from the carrying of compensation insurance shall arbitrarily or unreasonably refuse employment to or shall discharge employes because of a nondisabling physical condition, the industrial commission shall revoke the exemption of such employer.[41]

---

[40] The intent is to discourage insurance companies from attempting to influence employers, arbitrarily or unreasonably to refuse employment to, or discharge employes. The penalty for such activity may be revocation of the license of the insurance company by the commissioner of insurance upon complaint by the industrial commission.

[41] The intent is to dissuade action on the part of self-insurers as to hiring only workmen who are above the average in physical fitness, and in refusing to hire employes with slight physical defects.

102.32 Continuing liability; guarantee settlement, gross payment. In any case in which compensation payments have extended or will extend over six months or more from the date of the injury (or at any time in death benefit cases), any party in interest may, in the discretion of the commission, be discharged from, or compelled to guarantee, future compensation payments as follows:

(1) By depositing the present value of the total unpaid compensation upon a three per cent interest discount basis with such bank or trust company as may be designated by the commission; or

(2) By purchasing an annuity within the limitations provided by law, in such insurance company granting annuities and licensed in this state, as may be designated by the commission; or

(3) By payment in gross upon a three per cent interest discount basis to be approved by the commission; and

(4) In cases where the time for making payments or the amounts thereof cannot be definitely determined, by furnishing a bond, or other security, satisfactory to the commission for the payment of such compensation as may be due or become due. The acceptance of such bond, or other security, and the form and sufficiency thereof, shall be subject to the approval of the commission. If the employer or insurer is unable or fails to immediately procure such bond, then, in lieu thereof, deposit shall be made with such bank or trust company, as may be designated by the commission, of the maximum amount that may reasonably become payable in such cases, to be determined by the commission at amounts consistent with the extent of the injuries and the provisions of the law. Such bonds and deposits are to be reduced only to satisfy such claims and withdrawn only after the claims which they are to guarantee are fully satisfied or liquidated under the provisions of subsection (1), (2) or (3); and

(5) Any insured employer may, within the discretion of the commission, compel the insurer to discharge, or to guarantee payment of its liabilities in any such case under the provisions of this section and thereby release himself from

compensation liability therein, but if for any reason a bond furnished or deposit made under subsection (4) does not fully protect, the compensation insurer or uninsured employer, as the case may be, shall still be liable to the beneficiary thereof.

(6) Any time after six months from the date of the injury, the commission may order payment in gross or in such manner as it may determine to the best interest of the injured employe or his dependents. When payment in gross is ordered, the commission shall fix the gross amount to be paid based on the present worth of partial payments, considering interest at three per cent per annum.

(7) No lump sum settlement shall be allowed in any case of permanent total disability upon an estimated life expectancy, except upon consent of all parties, after hearing and finding by the commission that the interests of the injured employe will be conserved thereby.

102.33 Blanks and records. The commission shall print and furnish free to any employer or employe such blank forms as it shall deem requisite to facilitate efficient administration of this act; it shall keep such record books or records as it shall deem required for the proper and efficient administration of this act.

102.34 Nonelection, notice by employer. Knowledge of the fact that an employer is subject to this act shall conclusively be imputed to all employes. Every employer who would be subject to this act but for the fact that he has elected not to accept its provisions thereof, shall post and maintain printed notices of such nonelection on his premises, of such design, in such numbers, and at such places as the commission shall, by order, determine to be necessary to give information to his employes.

102.35 Penalties. (1) Every employer and every insurance company that fails to keep the records or to make the reports required by chapter 102 or that knowingly falsifies such records or makes false reports shall forfeit to the state not less than ten dollars nor more than one hundred dollars for each offense.

(2) Any employer, or duly authorized agent thereof, who, without reasonable cause, refuses to rehire an employe injured in the course of employment, or who, because of a claim or attempt to claim compensation benefits from such employer, shall discriminate or threaten to discriminate against an employe as to his employment, shall forfeit to the state not less than $50 nor more than $500 for each offense. No action under this subsection shall be commenced except upon request of the industrial commission.

102.37 Employers' records. Every employer of three or more persons and every employer who is subject to the workmen's compensation act shall keep a record of all accidents causing death or disability of any employe while performing services growing out of and incidental to the employment, which record shall give the name, address, age and wages of the deceased or injured employe, the time and causes of the accident, the nature and extent of the injury, and such other information as the industrial commission may require by general order. Reports based upon this record shall be furnished to the industrial commission at such times and in such manner as it may require by general order, upon forms to be procured from the commission.

102.38 Records of payments; reports thereon. Every insurance company which transacts the business of compensation insurance, and every employer who is subject to the workmen's compensation act, but who has not insured his liability, shall keep a record of all payments made under the provisions of chapter 102 of the statutes and of the time and manner of making such payments, and shall furnish such reports based upon these records to the industrial commission as it may require by general order, upon forms to be procured from the commission.

102.39 General orders; application of statutes. The provisions of chapter 101, relating to the adoption, publication, modification and court review of general orders of the commission shall apply to all general orders adopted pursuant to this chapter.

102.40 Reports not evidence in actions. Reports furnished to the commission pursuant to sections 102.37 and 102.38 shall not be admissible as evidence in any action or proceeding arising out of the death or accident reported.

102.42 Incidental compensation. (1) The employer shall supply such medical, surgical and hospital treatment, medicines, medical and surgical supplies, crutches, artificial members, appliances, and training in the use of artificial members and appliances, or, at the option of the employe, if the employer has not filed notice as hereinafter provided, Christian Science treatment in lieu of medical treatment, medicines and medical supplies, as may be reasonably required to cure and relieve from the effects of the injury, and to attain efficient use of artificial members and appliances,[42] and in case of his neglect or refusal seasonably to do so, or in emergency until it is practicable for the employe to give notice of injury, the employer shall be liable for the reasonable expense incurred by or on behalf of the employe in providing the same. The employer shall also be liable for reasonable expense incurred by the employe for necessary treatment to cure and relieve him from the effects of occupational disease prior to the time that the employe knew or should have known the nature of his disability and its relation to employment, and as to such treatment the provisions of section 102.42 (2) and (3) shall not apply.[43]

(2) The employe shall have the right to make choice of his attending physician from a panel of physicians to be

---

[42] Experience gained in cases of amputation following injury in the last war pointed out the necessity for training in the use of artificial limbs. Most meritorious and effective training and technique were evolved. The cost of training is a substantial item. The amendment provides for payment of such cost as part of compensation benefits with limitation only of reasonableness as to time and amount.

[43] Medical treatment when necessary is to be provided regardless of whether or not indemnity is payable or whether indemnity disability has ceased. There is provision for payment of expense for treatment procured by an employe who does not learn until later of the nature of his disability, or its relation to employment. Formerly, no liability would have existed unless and until notice of injury had been given. In such cases as tuberculosis following silicosis, this worked hardship on an employe who, although reasonably diligent, could not give notice of necessity for treatment because he had not yet learned the nature of his disability and its relation to employment.

named by the employer. Where the employer has knowledge of the injury and the necessity for treatment, his failure to tender the same shall constitute such neglect or refusal. Failure of the employer to maintain a reasonable number of competent and impartial physicians, ready to undertake the treatment of the employe, and to permit the employe to make choice of his attendant from among them, shall constitute neglect and refusal to furnish such attendance and treatment. Nothing contained in this section shall limit the right of the employe to make a second choice of physician from the panel of physicians named by the employer. The commission may upon summary hearing permit an injured employe to make selection of a physician not on the panel.[44]

(3) MEDICAL PANEL. In determining the reasonableness of the size of the medical panel, the commission shall take into account the number of competent physicians immediately available to the community in which the medical service is required, and where only one such physician is available, the tender of attention by such physician shall be construed as a compliance with this section unless specialized or extraordinary treatment is necessary. In such panel, partners and clinics shall be deemed as one physician. Every employer shall post the names and addresses of the physicians on his panel in such manner as to afford his employes reasonable notice thereof.[45]

(4) PREJUDICED PHYSICIAN. Whenever in the opinion of the commission a panel physician has not impartially estimated the degree of permanent disability or the extent of temporary disability of any injured employe, the commis-

---

[44] This insures that the employe who may be dissatisfied with the service of the first physician chosen may select another physician. It is generally considered that if an employe does not have confidence in his attending physician recovery may be delayed, and that no employe should have to be treated by a physician whom he distrusts or dislikes whether or not for good reason. The law provides for further change of physician upon request of the employe to the commission.

[45] The commission is to determine either by general rule or in individual cases what is a reasonable panel and to require the employer to maintain such panel.

There has been a commendable disposition on the part of both employers and carriers to enlarge medical panels in many cases to the extent of furnishing a free or practically free choice of physicians. The policy of the commission is to broaden rather than to restrict the number of physicians on panels.

sion may cause such employe to be examined by a physician selected by it, and to obtain from him a report containing his estimate of such disabilities. If the report of such physician shows that the estimate of the panel physician has not been impartial from the standpoint of such employe, the commission may in its discretion charge the cost of such examination to the employer, if he is a self-insurer, or to the insurance company which is carrying the risk.[46]

(5) CHRISTIAN SCIENCE TREATMENT. Any employer may elect not to be subject to the provisions for Christian Science treatment provided for in this section by filing written notice of such election with the commission.

(6) ARTIFICIAL MEMBERS. Artificial members furnished at the end of the healing period need not be duplicated.

(7) Unless the employe shall have elected Christian Science treatment in lieu of medical, surgical, hospital, or sanatorium treatment, no compensation shall be payable for the death or disability of an employe, if his death be caused, or insofar as his disability may be aggravated, caused or continued (a) by an unreasonable refusal or neglect to submit to or follow any competent and reasonable medical or surgical treatment, (b) or, in the case of tuberculosis, by his refusal or neglect to submit to or follow hospital or

---

[46] Subsections 2, 3 and 4 constitute the so-called "medical panel" provisions. Their purpose is to require employers and insurance carriers to maintain a panel of physicians, from which list employes shall be permitted to make their choice of physician to attend them. The size of this panel must necessarily vary according to the size of the community and the number of physicians available for service. In small communities the employer and insurer may satisfy their obligation by maintaining a smaller panel, and in those communities where only one physician is available, the tendering of service by that physician may be sufficient. The physicians named on the panel must be competent and impartial.

This legislation is intended to satisfy in a measure the demand of injured workmen that they be permitted to select their own physician. The plan will give them something approaching a choice and at the same time preserve for the employer and insurer the opportunity to see that only the most competent physicians and surgeons are called upon to attend employes. The agitation for the right of selection by the employe developed not always because of the incompetence of the physician designated by the employer, but more particularly because of conduct both in and out of hearing, which the injured men construed as evidence of partiality. The maintenance of strict impartiality by attending physicians will accomplish more than all other agencies to satisfy injured employes with the plan of medical selection by employers.

sanatorium treatment when found by the commission to be necessary. The right to compensation accruing during a period of refusal or neglect under (b) shall be barred, irrespective of whether disability was aggravated, caused or continued thereby.[47]

(8) Medical Expenses. In the event of a claim by a state employe under the conditions enumerated in s. 102.03, involving only payment of medical expense of not to exceed a gross of $50, the employing department may approve payment of such reasonable medical expense for necessary medical treatment to whomsoever owing, subject to subsequent review by the commission. If the employing department rejects the claim, the employe may make claim to the commission. Payment shall be charged to the appropriate fund, as provided by s. 20.550 (1).[48]

102.43 Weekly compensation schedule. If the injury causes disability, an indemnity shall be due as wages commencing with the fourth calendar day, exclusive of Sundays only, excepting where such employes work on Sunday, after the employe leaves work as the result of the injury, and shall be payable weekly thereafter, during such disability. If the disability shall exist after ten calendar days from the date the employe leaves work as a result of the injury and only if it so exists, indemnity shall also be due and payable for the first three calendar days, exclusive of Sundays only, excepting where such employes work on Sunday. Said weekly indemnity shall be as follows.[49]

---

[47] Former provisions as to the consequences of refusal or neglect to submit to treatment for tuberculosis were confusing and uncertain. This proposal is to clarify the situation and to bar compensation accruing during a period of refusal of hospital or sanatorium treatment when the commission has found it to be necessary. This is based on equity and further to protect persons from contact and possible contraction of tuberculosis from persons suffering from the disease.

There is also provision making it clear that medical and surgical treatment are in the same category so far as refusal to submit is concerned, that is, loss of compensation to the extent that refusal of treatment augments disability.

[48] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

[49] The payment to be made on the eleventh calendar day will pay for all disability to that date except where the waiting period is to be excluded because disability does not continue after ten calendar days from the date of initial disability.

(1) If the injury causes total disability, seventy per cent of the average weekly earnings during such total disability.

(2) If the injury causes partial disability, during the partial disability, such proportion of the weekly indemnity rate for total disability as the actual wage loss of the injured employe bears to his average weekly wage at the time of his injury.[50]

(3) If the disability caused by the injury is at times total and at times partial, the weekly indemnity during each total or partial disability shall be in accordance with subsections (1) and (2), respectively.

(4) If the disability period involves a fractional week, indemnity shall be paid for each day of such week, except Sundays only, at the rate of one-sixth of the weekly indemnity.[51]

(5) Temporary disability, during which compensation shall be payable for loss of earnings, shall include such period as may be reasonably required for training in the use of artificial members and appliances, and shall include such period as the employe may be receiving instruction pursuant to the provisions of section 102.61. Temporary disability on account of receiving instruction of the latter nature, and not otherwise resulting from the injury, shall not be in excess of 40 weeks.[52]

102.44 Maximum limitations. Section 102.43 shall be subject to the following limitations:

(2) In case of permanent total disability aggregate indemnity shall be weekly indemnity for the period that he

---

[50] In case of partial disability occasioning a wage loss, proportionate compensation is paid. For example: if an employe earns 50 per cent of his wage, he would also be entitled to 50 per cent of the compensation due for temporary total disability.

[51] Compensation is to be paid for each day of disability except Sunday, regardless of whether or not the day of disability is a working day. Payment for each day is to be made uniformly at the rate of one-sixth of the weekly indemnity regardless of the number of days per week which the employe works.

[52] In addition to compensation for temporary disability following injury compensation is to be paid for loss of earnings during such period as may be reasonably required, (1) for training in the use of artificial members and appliances, and (2) for such period as the employe may be receiving rehabilitation instruction. There is no stated limit for payment of compensation while training in the use of artificial members. There is a limitation of 40 weeks in case of rehabilitation training.

may live. Total impairment for industrial use of both eyes, or the loss of both arms at or near the shoulder, or of both legs at or near the hip, or of one arm at the shoulder and one leg at the hip, shall constitute permanent total disability. This enumeration shall not be exclusive but in other cases the commission shall find the facts.

(3) For permanent partial disability not covered by the provisions of sections 102.52 to 102.56 the aggregate number of weeks of indemnity shall bear such relation to the number of weeks set out in paragraphs (a) and (b) as the nature of the injury bears to one causing permanent total disability and shall be payable at the rate of 70 per cent of the average weekly earnings of the employe to be computed as provided in section 102.11.[53] Such weekly indemnity shall be in addition to compensation for healing period and shall be for the period that he may live, not to exceed, however, these named limitations, to-wit:

(a) One thousand weeks for all persons 50 years of age or less.

(b) For each successive yearly age group, beginning with 51 years, the maximum limitation shall be reduced by 2½ per cent per year, with no reduction in excess of 50 per cent.[54]

(4) Where the permanent disability is covered by the provisions of sections 102.52, 102.53 and 102.55,[55] such sections shall govern; provided, that in no case shall the percentage of permanent total disability be taken as more than 100 per cent.

---

[53] Compensation is to be paid at the full weekly rate but is to be proportioned to the total number of weeks provided for permanent partial disability. For example, 10% permanent partial disability because of a back injury entitles the injured employe under 51 years of age to 100 weeks of compensation. The basis of weekly payment for all compensation cases is uniform.

[54] A uniform basis is adopted for scheduled and non-scheduled disabilities, on the basis of 2½ per cent reduction per year, beginning with 51 years, the maximum reduction to be not more than 50 per cent. See Table 2, infra.

It will be noted that after age 70 there will be no further reduction for permanent disability.

(See Section 102.53 (2) providing like reduction in schedule injuries)

[55] This provides for application of the "multiple injury" feature of the law as between schedule and non-schedule injuries as well as merely between schedule injuries.

102.45 Benefits payable to minors; how paid. Compensation and death benefit payable to an employe or dependent who was a minor when his right began to accrue, may, in the discretion of the commission, be ordered paid to a bank, trust company, trustee, parent, or guardian, for the use of such employe or dependent as may be found best calculated to conserve his interests. Such employe or dependent shall be entitled to receive payments, in the aggregate, at a rate not less than that applicable to payments of primary compensation for total disability or death benefit as accruing from his twenty-first birthday.[56]

102.46 Death benefit. Where death proximately results from the injury and the deceased leaves a person wholly dependent upon him for support, the death benefit shall equal four times his average annual earnings, but when added to the disability indemnity paid and due at the time of death, shall not exceed seventy per cent of weekly wage for the number of weeks set out in paragraphs (a) and (b) of subsection (3) of section 102.44, based on the age of the deceased at the time of his injury.[57]

102.47 Death benefit continued. If death occurs to an injured employe other than as a proximate result of the injury, before disability indemnity ceases, death benefit and burial expense allowance shall be as follows:

(1) Where the injury proximately causes permanent total disability, they shall be the same as if the injury had caused death, except that the burial expense allowance shall be included in the items subject to the limitation stated in

---

[56] The purpose is to conserve the substantial installment payments which may be due to youthful employes. This in no way affects payments by the employer or insurance carrier but merely provides a method by which the industrial commission can direct retention and assume supervision of principal in the manner provided and thus conserve compensation payments best to suit the needs of the minor.

[57] This provision is to be read in conjunction with Sec. 102.44 (2), which provides for the compensating of permanent total disability during the life of the injured instead of for a given number of weeks. Sec. 102.46 preserves the old limitation, so that payment of death benefit, following a period of total disability, when added to the amount paid for disability before death, shall not exceed the same number of weeks as was formerly provided for permanent total disability.

section 102.46. The amount available shall be applied toward burial expense before any is applied toward death benefit.[58]

(2) Where the injury proximately causes permanent partial disability, the unaccrued compensation shall first be applied toward funeral expenses, not to exceed * * * *$500*,[59] any remaining sum to be paid to dependents, as provided in this section and ss. 102.46 and 102.48 and there shall be no liability for any other payments. All computations under this subsection shall take into consideration the present value of future payments.

102.48 Death benefit, continued. If the deceased employe leaves no one wholly dependent upon him for support, partial dependency and death benefits therefor shall be as follows:

(1) An unestranged surviving parent or parents, residing within any of the states or District of Columbia or any of the territorial possessions of the United States, shall receive a death benefit of $2,000.[60] If the parents are not living together, the commission shall divide this sum in such proportion as it determines to be just, considering their ages and other facts bearing on dependency.

(2) In all other cases the death benefit shall be such sum as the commission shall determine to represent fairly and justly the aid to support which the dependent might reasonably have anticipated from the deceased employe but for the injury. To establish anticipation of support and dependency, it shall not be essential that the deceased employe made any contribution to support. The

---

[58] It is provided that burial expense along with compensation payable in life and death benefit payable to dependents is subject to the limitation and not additional to it as in the case of death caused by the injury. Burial expense is first claim upon the balance in conformity with 102.47 (2). The limitation under 102.46 is up to four times average annual earnings but not more than the balance of the number of weeks provided as the basis for computing permanent partial disability to the head and torso.

[59] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

[60] All unestranged parents, unless totally dependent, will receive the sum of $2,000—this being predicated on an approximate average of benefits for partial dependency on the part of parents.

It is not necessary to make a showing of contribution to support under this provision. If, however, a showing of *total* dependency can be made, then Section 102.46 is applicable.

aggregate benefits in such case shall not exceed twice the average annual earnings of the deceased; or four times the contributions of the deceased to the support of such dependents during the year immediately preceding his death, whichever amount is the greater. In no event shall the aggregate benefits in such case exceed the amount which would accrue to a person solely and wholly dependent. Where there is more than one partial dependent the weekly benefit shall be apportioned according to their relative dependency. The term "support" as used in sections 102.42 to 102.63 shall include contributions to the capital fund of the dependents, for their necessary comfort.

(3) Death benefit, other than burial expenses, except otherwise provided, shall be paid in weekly installments corresponding in amount to fifty per cent of the weekly earnings of the employe, until otherwise ordered by the commission.

102.49 Additional death benefits for children, state fund. (1) Where the beneficiary under s. 102.46 or s. 102.47 (1) is the wife or husband of the deceased employe and is wholly dependent for support, an additional death benefit shall be paid from the funds provided by sub. (5) for each child by their marriage living at the time of the death of the employe, and who is likewise wholly dependent upon him for support. Such additional benefit shall be computed from the date of the death of the employe as follows: For the child one year of age or under (including a posthumous child), a sum equal to 1-1/15 times the average annual earnings of the deceased employe. For children in each successive yearly age group the amount allowed shall be reduced by one-sixteenth part of such sum, with no allowance for any child over 16 years of age at the death of the employe unless such child be physically or mentally incapacitated from earning, in which case the commission shall make such allowance as the equities and the necessities of the case merit, not more, however, than the amount payable on account of a child under one year of age.

(2) A child lawfully adopted by the deceased employe and the surviving spouse, prior to the time of the injury, and a child not his own by birth or adoption but living with

him as a member of his family at the time of the injury shall for the purpose of this section be taken as a child by their marriage.

(3) Where the employe leaves a wife or husband wholly dependent and also a child or children by a former marriage or adoption, likewise wholly dependent, aggregate benefits shall be the same in amount as if the children were the children of such surviving spouse, and the entire benefit shall be apportioned to the dependents in such amounts as the commission shall determine to be just, considering their ages and other facts bearing on dependency. The benefit awarded to the surviving spouse shall not exceed four times the average annual earnings of the deceased employe.

(4) Dependency of any child for the purposes of this section shall be determined according to the provisions of subsection (1) of section 102.51, in like manner as would be done if there was no surviving dependent parent.

(5) (a) In each case of injury resulting in death, leaving one or more persons wholly dependent for support, the employer or insurer shall pay into the state treasury the sum of $2,500.

(b) In each case of injury resulting in death leaving no person dependent for support, the employer or insurer shall pay into the state treasury the sum of $11,000.

(c) In each case of injury resulting in death, leaving one or more persons partially dependent for support, the employer or insurer shall pay into the state treasury an amount which, when added to the sums paid or to be paid on account of partial dependency, shall equal the death benefit payable to a person wholly dependent, plus the amount payable into the state treasury under this subsection where there is a person wholly dependent, such payment to the state treasury in no event to exceed $11,000.

(d) The payment into the state treasury shall be made in all such cases regardless of whether the dependents or personal representatives of the deceased employe commence action against a third party under s. 102.29. If such payment is not made within 20 days after the commission makes request therefor, any sum payable shall bear interest at the rate of 6 per cent per annum.

(e) If the balance in the fund provided by this subsection on any June 30 equals or exceeds 1½ times the amount paid out of the fund during the fiscal year ending on said June 30, then the amount of the payment into the state treasury, where one or more persons is wholly dependent for support, shall be $2,000 instead of $2,500 for injuries occurring on or after the following October 1. If the balance is 2 times the amount paid out, the amount of the payment shall be $1,500 instead of $2,500. If the balance is 2½ times the amount paid out, the payment shall be $1,000. If the balance is 3 times the amount paid out, the payment shall be $500. If the balance is 3½ times the amount paid out, no payment shall be required. Any provision for payment of less than $2,500 shall be valid for a period of one year commencing on said October 1. The commission shall by findings and order annually before October 1 determine the amount to be paid into the fund; such findings and order shall set forth the balance in the fund as of June 30, and the amount paid out during such fiscal year.[61]

(6) The moneys paid into the state treasury pursuant to subsection (5) with all accrued interest is hereby appropriated to the commission for the discharge of all liability for additional death benefits accruing under this section.

(7) The additional benefits for account of each child shall accrue at the rate of 13 per cent of the surviving parent's weekly indemnity. The commission may award such benefits to the surviving parent of such child, to his guardian or to such other person, bank or trust company for his use as may be found best calculated to conserve the interest of the child. In the case of death of a child while benefits are still payable there shall be paid the reasonable expense for burial not exceeding $300.

(8) For the proper administration of the funds available under subsection (5) and (6) the commission shall, by order, set aside in the state treasury suitable reserves to carry to maturity the liability for additional death benefit. Such moneys shall be invested by the state of Wisconsin investment board, in the securities authorized in section 206.34.

---

[61] As of April 1, 1959 the payment was $2,500; as of October 1, 1962, the payment was $2,000; as of October 1, 1963, the payment was $1,000. As of October 1, 1965, the payment is $500.

102.50 Burial expenses. In all cases where death of an employe proximately results from the injury the employer or insurer shall pay the reasonable expense for burial, not exceeding $500.

102.51 Dependents. (1) WHO ARE. The following shall be conclusively presumed to be solely and wholly dependent for support upon a deceased employe: a wife upon a husband with whom she is living at the time of his death; a husband upon a wife with whom he is living at the time of her death; a child under the age of eighteen years (or over said age, but physically or mentally incapacitated from earning), upon the parent with whom he is living at the time of the death of such parent, there being no surviving dependent parent. Where a dependent entitled to the presumption in this subsection survives the deceased employe, all other dependents shall be excluded.[62] The charging of any portion of the support and maintenance of a child upon one of the parents, or any voluntary contribution toward the support of a child by a parent, or an obligation to support a child by a parent shall constitute a living with any such parent within the meaning of this section.[63]

(2) WHO ARE NOT. (a) No person shall be considered a dependent unless a member of the family or a spouse, or a divorced spouse who has not remarried, or lineal descendent or ancestor, or brother or sister of the deceased employe.

(b) Where for eight years or more prior to the date of injury a deceased employe has been a resident of the United States, it shall be conclusively presumed that no person who has remained a nonresident alien during that period is either totally or partially dependent upon him for support.

---

[62] This provision excludes all other dependents from consideration when there are persons who are conclusively presumed to be solely and wholly dependent.

[63] Where there is no surviving dependent parent, children up to the age of 18 "living with" the deceased at the time of injury and death arbitrarily become entitled to death benefit based on total dependency. The law formerly provided that in case of divorce the charging of any portion of support and maintenance or voluntary contribution toward support or an obligation to support a child by a parent should constitute a "living with" the parent and thus entitled the child to the presumption of total dependency. There appears no reason why the child should not be equally protected where divorce is pending but no decree entered, or where the parents live apart without divorce pending, or where for any other reason a child may not be factually or physically living with its parents.

(c) No person who is a nonresident alien shall be found to be either totally or partially dependent on a deceased employe for support who cannot establish dependency by proving contributions from the deceased employe by written evidence or tokens of the transfer of money, such as drafts, letters of credit, cancelled checks, or receipts for the payment to any bank, express company, United States post office, or other agency commercially engaged in the transfer of funds from one country to another, for transmission of funds on behalf of said deceased employe to such nonresident alien claiming dependency. This provision shall not be applicable unless the employe has been continuously in and has been remuneratively employed therein for at least 6 months.[64]

(3) DIVISION AMONG DEPENDENTS. If there is more than one person wholly or partially dependent, the death benefit shall be divided between such dependents in such proportion as the commission shall determine to be just, considering their ages and other facts bearing on such dependency.

(4) DEPENDENCY AS OF DATE OF INJURY. Questions as to who constitute dependents and the extent of their dependency shall be determined as of the date of the injury to the employe, and their right to any death benefit shall become fixed as of such time, irrespective of any subsequent change in conditions; and the death benefit shall be directly recoverable by and payable to the dependents entitled thereto or their legal guardians or trustees; in case of the death of a dependent whose right to a death benefit has thus become fixed, so much of the same as is then unpaid shall be payable to his personal representatives in gross.

---

[64] A nonresident alien is barred from receiving benefits where the deceased employe, because of whose death claim is being made, has been a resident of the United States for 8 years or more prior to the date of injury.

This section formerly provided that no person who is a nonresident alien should be found either totally or partially dependent who could not establish contributions from the deceased employe by written evidence or tokens of the transfer of money such as drafts, letters of credit, cancelled checks, or certain other documentary evidence.

In some cases aliens who come to this country to work may be fatally injured before they have had opportunity to make contributions to their dependents. This provision allows proof of contributions other than by written evidence provided the deceased has not been in the United States for one year, or remuneratively employed for at least 6 months.

(5) WHEN NOT INTERESTED. No dependent of an injured employe shall be deemed a party in interest to any proceeding by him for the enforcement of his claim for compensation, nor as respects the compromise thereof by such employe. Subject to the provisions of section 102.16 (1), a compromise of all liability entered into by an employe shall be binding upon his dependents.

(6) DIVISION AMONG DEPENDENTS. Benefits accruing to a minor dependent child may be awarded to the mother in the discretion of the commission. Notwithstanding the provisions of subsection (1) the commission may reassign the death benefit, in accordance with their respective needs therefor as between a surviving spouse and children designated in section 102.49.[65]

(7) CERTAIN DEFENSE BARRED. In proceedings for the collection of primary death benefit or burial expense it shall not be a defense that the applicant, either individually or as a partner, was an employer of the deceased.[66]

102.52 Permanent partial disability schedule. In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified, at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11:

(1) The loss of an arm at the shoulder, 500 weeks;

(2) The loss of an arm at the elbow, 450 weeks;

(3) The loss of a hand, 400 weeks;

(4) The loss of a palm where the thumb remains, 275 weeks;

(5) The loss of a thumb and the metacarpal bone thereof, 125 weeks;

(6) The loss of a thumb at the proximal joint, 100 weeks;

---

[65] This provision limits redistribution as between classes named.

[66] This provision allows an employer who is a parent or other relative to receive death benefit from the insurance carrier, although such applicant, either individually or as a partner, would not otherwise be entitled to such benefits under the holding in the case of *Thomas v. Ind. Comm.*, 243 Wis. 231.

(7) The loss of a thumb at the distal joint, 40 weeks;

(8) The loss of all fingers on one hand at their proximal joints, 225 weeks;

(9) Losses of fingers on each hand as follows:

(a) An index finger and the metacarpal bone thereof, 60 weeks;

(b) An index finger at the proximal joint, 50 weeks;

(c) An index finger at the second joint, 30 weeks;

(d) An index finger at the distal joint, 12 weeks;

(e) A middle finger and the metacarpal bone thereof, 45 weeks;

(f) A middle finger at the proximal joint, 35 weeks;

(g) A middle finger at the second joint, 20 weeks;

(h) A middle finger at the distal joint, 8 weeks;

(i) A ring finger and the metacarpal bone thereof, 26 weeks;

(j) A ring finger at the proximal joint, 20 weeks;

(k) A ring finger at the second joint, 15 weeks;

(l) A ring finger at the distal joint, 6 weeks;

(m) A little finger and the metacarpal bone thereof, 28 weeks;

(n) A little finger at the proximal joint, 22 weeks;

(o) A little finger at the second joint, 16 weeks;

(p) A little finger at the distal joint, 6 weeks;

(10) The loss of a leg at the hip joint, 500 weeks;

(11) The loss of a leg at the knee, 425 weeks;

(12) The loss of a foot at the ankle, 250 weeks;

(13) The loss of the great toe with the metatarsal bone thereof, 83–1/3 weeks;

(14) Losses of toes on each foot as follows:

(a) A great toe at the proximal joint, 25 weeks;

(b) A great toe at the distal joint, 12 weeks;

(c) The second toe with the metatarsal bone thereof, 25 weeks;

(d) The second toe at the proximal joint, 8 weeks;

(e) The second toe at the second joint, 6 weeks;

(f) The second toe at the distal joint, 4 weeks;

(g) The third, fourth or little toe with the metatarsal bone thereof, 20 weeks;

(h) The third, fourth or little toe at the proximal joint, 6 weeks;

(i) The third, fourth or little toe at the second or distal joint, 4 weeks;

(15) The loss of an eye by enucleation or evisceration, 275 weeks;

(16) Total impairment of one eye for industrial use, 250 weeks;[67]

(17) Total deafness from accident or sudden trauma, * * * *330 weeks;*[68]

(18) Total deafness of one ear from accident or sudden trauma, * * * *55* weeks;[69]

---

[67] See Rule Ind 80.26 infra for determining loss of visual efficiency.

[68] See Rule Ind 80.25 infra for determining loss of hearing.

When the hearing in both ears has been reduced due to accidental injury, the smaller loss is multiplied by 5, added to the greater loss, and the total divided by 6. The resulting percentage is the loss of hearing in both ears and is applied to the schedule allowance for loss of hearing in both ears.

Example:

Age 30

Hearing in left ear—10 per cent loss
Hearing in right ear—90 per cent loss

$$\frac{(10\% \times 5) \text{ plus } 90\%}{6} = 23.33\% \text{ loss of hearing in both ears.}$$

[69] See 102.555 for occupational deafness schedule.

[68], [69] This amendment was effected by Chapter 166, Laws of 1965, effective August 1, 1965.

102.53 Multiple injury and age variations.[70] (1) In case an injury causes more than one permanent disability specified in sections 102.44 (3), 102.52 and 102.55, the period for which indemnity shall be payable for each additional equal or lesser disability shall be increased as follows:

(a) In the case of impairment of both eyes, by 200 per cent.

(b) In the case of disabilities on the same hand covered by section 102.52 (9), by 100 per cent for the first equal or lesser disability and by 150 per cent for the second and third equal or lesser disabilities.

(c) In the case of disabilities on the same foot covered by section 102.52 (14), by 20 per cent.

(d) In all other cases, by 20 per cent.

(e) The aggregate result as computed by applying paragraph (a), and the aggregate result for members on the same hand or foot as computed by applying paragraphs (b) and (c), shall each be taken as a unit for applying paragraph (d) as between such units, and as between such units and each other disability.

(2) In cases where the injured employe is above 50 years of age when injured the periods for which indemnity shall be payable, in addition to the healing period, shall be reduced from those specified in section 102.52 by 2½ per cent for each year that the age of such employe exceeds 50, with no reduction in excess of 50 per cent.[71]

102.55 Application of schedules. (1) Whenever amputation of a member is made between any 2 joints mentioned in the schedule in section 102.52 the determined loss and re-

[70] This provides for "stepping up" the value of disabilities to two or more fingers or portions of them so that in case of disabilities to fingers on one hand the increase is an additional 100% for the first equal or lesser disability and 150% for the second and third equal or lesser disabilities. In case of toes on one foot the corresponding increase is 20%, as it is in all other cases of multiple injury except for impairment of both eyes, where the increase is treble, as heretofore. When the aggregate result for members on the same hand or foot or for an eye has been computed, it is taken as a unit and there is increase as between that and other units by 20% for each equal or lesser injury unit (except as between both eyes or both ears).

[71] See Table 2, infra.

sultant indemnity therefor shall bear such relation to the loss and indemnity applicable in case of amputation at the joint next nearer the body as such injury bears to one of amputation at the joint nearer the body.

(2) For the purposes of this schedule permanent and complete paralysis of any member shall be deemed equivalent to the loss thereof.

(3) For all other injuries to the members of the body or its faculties which are specified in this schedule resulting in permanent disability, though the member be not actually severed or the faculty totally lost, compensation shall bear such relation to that named in this schedule as disabilities bear to the disabilities named in this schedule. Indemnity in such cases shall be determined by allowing weekly indemnity during the healing period resulting from the injury and the percentage of permanent disability resulting thereafter as found by the commission.[72]

102.555 Occupational deafness: definitions. (1) "Occupational deafness" means permanent partial or permanent total loss of hearing of one or both ears due to prolonged exposure to noise in employment. "Noise" means sound capable of producing occupational deafness. "Noisy employment" means employment in the performance of which an employe is subjected to noise.

---

[72] The commission has adopted the following rule for estimating the permanent disability involving finger tip amputations. Unless otherwise affirmatively established, in estimating permanent disability as a result of finger tip amputations, amputation of the distal one-third or less shall be considered the equavlent of 45 per cent loss of use of the distal phalanx, amputation of not more than the distal two-thirds but more than the distal one-third shall be considered the equivalent of 80 per cent loss of use of the distal phalanx, and amputation of more than the distal two-thirds shall be considered as 100 per cent loss of the distal phalanx, provided there is no added disability as a result of malformed nail or tissue. In no case shall the allowance be greater than it would have been for amputation of the entire distal phalanx.

After conferences with industrial physicians and surgeons in various parts of the state the commission has adopted a table (No. 5 for rating certain typical major disabilities involving ankylosis or restriction of movement). Physicians are free to make estimates different from those set forth in the table. However, because of the complete discussion and practically unanimous agreement upon which the table is based, the commission will require a very clear showing to be made that its application is inequitable.

(2) No benefits shall be payable for temporary total or temporary partial disability under this act for loss of hearing due to prolonged exposure to noise.

(3) An employe who because of occupational deafness is transferred by his employer to other noisy employment and thereby sustains actual wage loss, shall be compensated at the rate provided in s. 102.43 (2), not exceeding $3,500 in the aggregate from all employers. "Time of injury," "occurrence of injury," "date of injury" in such case shall be the date of wage loss.

(4) (intro. par.) Subject to the limitations herein contained and the provisions of s. 102.53 (2) there shall be payable for total occupational deafness of one ear, 36 weeks of compensation; for total occupational deafness of both ears, 216 weeks of compensation; and for partial occupational deafness, compensation shall bear such relation to that named herein as disabilities bear to the maximum disabilities herein provided. In cases covered by this subsection "time of injury," "occurrence of injury," or "date of injury" shall be exclusively the date of occurrence of any of the following events to an employe.[73]

(a) Transfer because of occupational deafness to nonnoisy employment by an employer whose employment has caused occupational deafness;

(b) Retirement;

(c) Termination of the employer–employe relationship;

(d) Layoff, provided the layoff is complete and continuous for one year;

(e) No claim under this subsection shall be filed, however, until 6 consecutive months of removal from noisy

---

[73] See Rule Ind 80.25 infra for determining loss of hearing. For occupational deafness the smaller loss is multiplied by 5, added to the greater loss, and the total divided by 6. The resulting percentage is the loss of hearing in both ears and is applied to the schedule allowance for loss of hearing in both ears.

Example:

Age 30

Hearing in left ear—40 per cent loss
Hearing in right ear—70 per cent loss

$$\frac{(40\% \times 5) \text{ plus } 70\%}{6} = 45\% \text{ loss of hearing in both ears}$$

Sec. 102.52 (17) and (18) for deafness due to trauma or accident.

employment after the time of injury except that under par. (d) such 6 consecutive months period may commence within the last 6 months of layoff.

(5) The limitation provisions in this act shall control claims arising under this section. Such provisions shall run from the first date upon which claim may be filed, or from the date of subsequent death, provided that no claim shall accrue to any dependent unless an award has been issued or liability admitted.

(6) No payment shall be made to an employe under this section unless he shall have worked in noisy employment for a total period of at least 90 days for the employer from whom he claims compensation.

(7) An employer shall become liable for the entire occupational deafness to which his employment has contributed; but if previous deafness is established by a hearing test or other competent evidence, whether or not the employe was exposed to noise within the 6 months preceding such test, he shall not be liable for previous loss so established nor shall he be liable for any loss for which compensation has previously been paid or awarded.

(8) Any amount paid to an employe under this section by any employer shall be credited against compensation payable by any employer to such employe for occupational deafness under subs. (3) and (4). No employe shall in the aggregate receive greater compensation from any or all employers for occupational deafness than that provided in this section for total occupational deafness.

102.56 Disfigurement. If an employe is so permanently disfigured about the face, head, neck, hand or arm as to occasion potential loss of wage, the commission may allow such sum for compensation on account thereof, as it deems just, not exceeding his average annual earnings as defined in s. 102.11.

102.565 Silicosis, nondisabling; medical examination; conditions of liability. (1) When an employe working subject to this chapter is, because he has a nondisabling silicosis, discharged from the employment in which he is engaged, or when an employe ceases such employment and

it is in fact inadvisable for him on account of a nondisabling silicosis to continue in it, and suffers wage loss by reason of such discharge, or such cessation, the commission may allow such compensation on account thereof as it deems just, not exceeding $7,000. In case of such discharge prior to a finding by the industrial commission that it is inadvisable for him to continue in such employment, the liability of the employer who so discharges his employe shall be primary, and the liability of the insurer shall be secondary, under the same procedure and to the same effect as provided by s. 102.62.

(2) Upon application of any employer or employe the commission may direct any employe of such employer or such employe who, in the course of his employment, has been exposed to the inhalation of silica, to submit to examination by a physician or physicians to be appointed by the industrial commission to determine whether such employe has silicosis, and the degree thereof. The cost of such medical examination shall be borne by the person making application. The results of such examination shall be submitted by the physician to the industrial commission, which shall submit copies of such reports to the employer and employe, who shall have opportunity to rebut the same provided request therefor is made to the commission within 10 days from the mailing of such report to the parties. The commission shall make its findings as to whether or not it is inadvisable for the employe to continue in his employment.

(3) If an employe shall refuse to submit to such examination after direction by the commission, or any member or examiner thereof, or shall in any way obstruct the same, his right to compensation under this section shall be barred.

(4) No payment shall be made to an employe under this section unless he shall have worked for the employer from whom he claims compensation in work exposing him to inhalation of silica for a total period of at least 90 days.

(5) Payment of a benefit under this section to an employe shall estop such employe from any further recovery whatsoever from any employer under this section.

102.57 Violations of safety provisions, penalty. Where injury is caused by the failure of the employer to comply with any statute or any lawful order of the commission, compensation and death benefits as provided in this chapter shall be increased 15 per cent. Failure of an employer reasonably to enforce compliance by employes with such statute or order of the commission shall constitute failure by the employer to comply with such statute or order.[74]

102.58 Decreased compensation. Where injury is caused by the * * *[75] failure of the employe to use safety devices where provided in accordance with any statute or lawful order of the commission and adequately maintained, and their use is reasonably enforced, by the employer, or where injury results from the employe's * * *[75] failure to obey any reasonable rule adopted by the employer for the safety of the employe and of which the employe has notice, or where injury results from the intoxication of the employe, the compensation, and death benefit provided herein shall be reduced 15 per cent.[76]

102.59 Pre-existing disability, indemnity, state fund, investment.[77] (1) If an employe has at the time of injury

---

[74] Where an employer fails to enforce compliance with safety orders the effect is often the same as though safety devices and safe places of work were not provided. This results in increase in the number of injuries. The provision will hold liable the employer who may provide safety devices and then by acquiescence in non-use fail to accomplish the desired result as to safety.

[75] Effective August 1, 1965, the law was amended to delete the word "wilful."

[76] Compensation cannot be reduced by 15% for failure of the employe to use safety devices where provided and adequately maintained *except* as their use is reasonably enforced. It was felt unfair to permit a reduction of compensation in cases where the employer acquiesced in failure of the employe to make use of a guard or where by failure to enforce use the employer had virtually consented that the employe should be allowed not to use the safety device.

It is necessary for the employer to show that he made a reasonable effort to enforce such rules.

The safety device must be one which is provided in accordance with a statute or lawful order of the commission and not merely one adopted but not required.

Reduction for failure to obey a reasonable rule adopted by the employer can be made only (1) where a denfiite order is shown and (2) where the employe had notice of the rule.

[77] This subsection has a two-fold purpose: First to eliminate any incentive for discrimination against the employe who has serious previous disability when he comes to seek re-employment because of the employer's fear, real

permanent disability which if it had resulted from such injury would have entitled him to indemnity for 250 weeks less 2½ per cent thereof for each year of age above 50 years with no reduction in excess of 50 per cent, and, as a result of such injury, incurs further permanent disability, which entitles him to indemnity for 250 weeks less 2½ per cent thereof for each year of age above 50 years with no reduction in excess of 50 per cent, he shall be paid from the funds provided in this section additional compensation equivalent to the amount which would be payable for said previous disability if it had resulted from such injury or the amount which is payable for said further disability, whichever is the lesser, provided, that if said disabilities result in permanent total disability the additional compensation shall be in such amount as will complete the payments which would have been due had said permanent total disability resulted from such injury.[78] Such additional compensation shall accrue from the end of the period for which compensation for permanent disability resulting from such injury is payable by the employer, and shall be subject to the provisions of section 102.32 (6) and (7).

(2) In the case of the loss or of the total impairment of a hand, arm, foot, leg or eye, the employer shall be required to pay $1,500 into the state treasury. The payment shall be made in all such cases regardless of whether the employe, his dependent or personal representatives, commence action against a third party as provided in s. 102.29.

(3) The moneys so paid into the state treasury, with all accrued interest, is hereby appropriated to the commission

---

or otherwise, that the loss of another member may subject him to very large indemnities on the ground that such loss would cause total or near total disability; *second,* to secure to the employe sustaining the loss or total impairment of a second member such amount of indemnity as the seriousness of the combined disabilities calls for.

Direct liability of the employer in case of the loss of the second member is made the same as for the loss of the first member, and the injured employe's rights are conserved by orders drawn on the fund for the balance of his indemnity. Primary liability of the employer for payment of $1,500 to the fund is insurable.

See Table 4, infra.

[78] To illustrate one who has previoulsy lost an arm at the shoulder at age 50 would have been entitled to 500 weeks' compensation. By second injury he loses his hand at the wrist and becomes entitled to 400 weeks' compensation. Over and above payment for second injury the employe may receive an additional 400 weeks of compensation from the fund.

for the discharge of all liability for special additional indemnity accruing under this section.

(4) For the proper administration of the funds available under this section the commission shall, by order, set aside in the state treasury suitable reserves to carry to maturity the liability for special additional indemnity in each case, and for any contingent death benefit. Such moneys shall be invested by the state of Wisconsin investment board, in the securities authorized in section 206.34.

102.60 Minor illegally employed, compensation. When the injury is sustained by a minor illegally employed, compensation and death benefits shall be as follows:

(1) Double the amount otherwise recoverable, if the injured employe is a minor of permit age, and at the time of the injury is employed, required, suffered or permitted to work without a written permit issued pursuant to chapter 103, except as provided in subsection (2).

(2) Treble the amount otherwise recoverable, if the injured employe is a minor of permit age, and at the time of the injury is employed, required, suffered, or permitted to work without a permit in any place of employment or at any employment in or for which the commission acting under authority of chapter 103, has adopted a written resolution providing that permits shall not be issued.

(3) Treble the amount otherwise recoverable if the injured employe is a minor of permit age, or over, and at the time of the injury is employed, required, suffered, or permitted to work at prohibited employment.

(4) Treble the amount otherwise recoverable, if the injured employe is a minor under permit age and illegally employed.

(5) A permit unlawfully issued by an officer specified in chapter 103, or unlawfully altered after issuance, without fraud on the part of the employer, shall be deemed a permit within the provisions of this section.

(6) If the amount recoverable under this section for temporary disability shall be less than the actual loss of

wage sustained by the minor employe, then liability shall exist for such loss of wage.

(7) The provisions of subsections (1) to (6) of section 102.60 shall not apply to employes as defined in subsection (6) of section 102.07 if the agency or publisher shall establish by affirmative proof that at the time of the injury the employe was not employed with the actual or constructive knowledge of such agency or publisher.

(8) This section shall not apply to liability arising under s. 102.06 unless the employer sought to be charged knew or should have known that the minor was illegally employed by the contractor or subcontractor.

(9) The increased compensation or increased death benefits recoverable under sub. (1) shall not exceed $5,000. The increased compensation or increased death benefits recoverable under subs. (2), (3) or (4) shall not exceed $7,500.

102.61 Indemnity under rehabilitation law. An employe who is entitled to receive and has received compensation pursuant to this chapter, and who is entitled to and is receiving instructions pursuant to the provisions of the Act of Congress known as the Vocational Rehabilitation Act, and amendments thereto, (Public Law 113 – 78th Congress) as administered by the state in which he holds residence or in which he resided at the time of becoming physically handicapped, shall, in addition to his other indemnity, be paid his actual and necessary expenses of travel and, if he received such instructions elsewhere than at the place of his residence, his actual and necessary costs of maintenance, during rehabilitation, subject to the following conditions and limitations:

(1) He must undertake the course of instruction within 60 days from the date when he has sufficiently recovered from his injury to permit of his so doing, or as soon thereafter as the officer or agency having charge of his instruction shall provide opportunity for his rehabilitation.

(2) He must continue in rehabilitation training with such reasonable regularity as his health and situation will permit.

(3) He may not have expenses of travel and costs of maintenance on account of training for a period in excess of 40 weeks in all.[79]

(4) The commission shall determine the rights and liabilities of the parties under this section in like manner and with like effect as it does other issues under compensation.

102.62 Primary and secondary liability; unchangeable. In case of liability for the increased compensation or increased death benefits provided for by section 102.57, or included in section 102.60, the liability of the employer shall be primary and the liability of the insurance carrier shall be secondary. In case proceedings are had before the commission for the recovery of such increased compensation or increased death benefits the commission shall set forth in its award the amount and order of liability as herein provided. Execution shall not be issued against the insurance carrier to satisfy any judgment covering such increased compensation or increased death benefits until execution has first been issued against the employer and has been returned unsatisfied as to any part thereof. Any provision in any insurance policy undertaking to guarantee primary liability or to avoid secondary liability for such increased compensation or increased death benefits shall be void. In case the employer shall have been adjudged bankrupt, or have made an assignment for the benefit of creditors, or if the employer, other than an individual, have gone out of business or have been dissolved, or if a corporation, its charter have been forfeited or revoked, the insurer shall be liable for the payment of increased compensation and death benefits without judgment or execution against the employer, but without altering the primary liability of the employer.

102.63 Refunds by state. Whenever the commission shall certify to the state treasurer that excess payment has

---

[79] These provisions extend maintenance benefits during rehabilitation training to employes injured subject to the Wisconsin law but who are residents of other states. The provision provides actual and necessary expenses of travel and cost of maintenance other than at the place of residence. Maintenance may be arranged by any officer or agency having charge of instruction. The limit as to expense of travel and cost of maintenance for training is 40 weeks. See Sec. 41.71 infra for text of Rehabilitation Law.

been made under section 102.59 or under subsection (5) of section 102.49 either because of mistake or otherwise, the state treasurer shall within five days after receipt of such certificate draw an order against the fund in the state treasury into which such excess was paid, reimbursing such payor of such excess payment together with interest actually earned thereon.

102.64 Attorney-general shall represent state and commission. (1) The attorney-general shall represent the state in all cases involving payment into or out of the state treasury under s. 20.550 (1) or ss. 102.49 or 102.59. He shall have power to compromise the amount of such payments but such compromises shall be subject to review by the commission. If the wife or husband of the deceased employe compromises her or his claim for primary death benefit, the claim of the children of such employe under s. 102.49 shall be compromised on the same pro rata basis subject to approval by the commission.[80]

(2) In all proceedings upon claims for compensation against the state, the attorney-general may appear on behalf of the state.

(3) In any action to review an order or award of the commission, and upon any appeal therein to the supreme court, the attorney-general shall appear on behalf of the commission, whether any other party defendant shall be represented or not, except that in actions brought by the state the governor shall appoint an attorney to appear on behalf of the commission.

102.65 Compensation security funds. (The text of this section is not printed in this pamphlet. This provision is for the establishing of workmen's compensation security funds for the payment of compensation in case of insolvency of insurance carriers.)

102.66 Waiver of payments. Any person entitled to death benefits, burial expenses, and medical and incidental com-

[80] This eliminates the question of whether liability for children's benefits may be denied where compromise of a parent's claim has been made. Issues involved are the same in both cases so adjustment also is on a comparable basis.

pensation payments under this chapter who may otherwise be entitled to payments under s. 66.191 (2) may file with the commission a written election to waive the death and burial expense payments due under this chapter and accept in lieu thereof such death benefit payments as may be due under s. 66.191 (2) plus such medical and incidental compensation payments as may be due under s. 102.42. No person shall receive death and burial expense payments under both s. 66.191 (2) and ch. 102.

OTHER STATUTES AFFECTING WORKMEN'S COMPENSATION

16.31 (1) Hazardous employment, injuries, salary continued. Whenever a conservation warden, *conservation patrol boat captain, conservation patrol boat engineer,* state forest ranger, field employe of the conservation department who is subject to call for fire control duty, member of the state patrol, state motor vehicle inspector, * * * *fire marshal, lifeguard, special agent for the attorney general, special tax agent, state drivers' license examiner,* member of the state fair police department, state university * * * policemen, state beverage tax investigator, *engineer, engineering aid,* fire watchman employed at the Grand Army home, or guard or institutional aid or a state probation and parole officer or any other employe whose duties include supervision and discipline of inmates *or wards of the state at the Wisconsin child center or* at a state penal institution, including central state hospital, the state school for boys, the state school for girls, or while on parole supervision outside of the confines of the institutions, or supervision of persons placed on probation by a court of record, or supervision and care of patients at a state mental institution, *and university hospitals,* suffers injury while in the performance of his duties, as defined in subs. (2) and (3), he shall continue to be paid his full monthly salary by his employing department upon the same basis as he was paid prior to the injury. Such full monthly salary shall be paid to the employe while he is unable to work as the result of the injury for not to exceed 3 months *upon recommendation of the appointing officer and approval of the director of*

personnel. When the employe is paid such salary under this section there shall be no deduction from his sick leave credits, compensatory time for overtime accumulations or vacation.

(2) "Injury" as used in this section is physical harm to an employe caused by accident or disease.

(3) As used in this section "Performance of duties" means duties performed in line of duty by:

(a) A forest ranger or field employe of the conservation department who is subject to call for forest fire control duty or fire watchman employed at the Grand Army home, *and lifeguard,* at all times while:

1. Driving or riding in a vehicle, aircraft or boat under circumstances which require hazardous maneuvering or speed in excess of the normal or posted limits in the performance of fire control duties;

2. Engaged in an effort to save lives, recover dead bodies, or protect public or private property;

3. Going to or returning from a fire and while engaged in the suppression of a fire; or

4. Engaged in public demonstration or training exercises provided such demonstration or training exercises are authorized by the appointing authority.

(b) A conservation warden, *conservation patrol boat captain, conservation patrol boat engineer,* a member of the state patrol, state motor vehicle inspector, university * * * policemen, * * * member of the state fair police department, * * * state beverage tax investigator, *special tax agent, special agent of the attorney general* and *fire marshal* at all times while:

1. In the process of making an arrest or investigating any violation or suspected violation of the law or the quelling of a riot or any other violence;

2. Engaged in an effort to save lives, recover dead bodies or protect public or private property;

3. Driving or riding in a vehicle, aircraft or boat under circumstances which require hazardous maneuvering or speed in excess of the normal or posted limits in the performance of law enforcement duties; or

4. Engaged in public demonstration or training exercises provided such demonstration or training exercises are authorized by the appointing authority.

(c) A guard, institution aid, or other employe * * * *at the Wisconsin child center, university hospitals or at* state penal and mental institutions, including central state hospital, the state school for boys, the state school for girls and state probation and parole officers, at all times while:

1. In the process of quelling a riot or disturbance or other act of violence;

2. In the process of restraining patients, inmates, probationers or parolees and apprehending runaways or escapees, including probationers and parolees;

3. When injury is inflicted as the result of an assault or act of violence by a patient, inmate, probationer or parolee; or

4. In the process of making an arrest or investigating any violation or suspected violation of law pursuant to police powers, authorized by s. 46.05 (2) and rules adopted pursuant thereto.

5. *Going to or returning from a fire, engaging in the suppression of a fire, evacuating patients or inmates of a fire or engaging in fire drills.*

6. *When disease is contracted as a result of exposure to such disease arising out of the care of inmates or patients.*

(d) A drivers' license examiner at all times while examining drivers, conducting road tests or checking motor vehicles.

(e) An engineering aid or engineer at all times while:

1. Driving or riding in vehicles which require hazardous maneuvering of excessively slow speed while marking or measuring physical characteristics of highways.

2. Surveying or inspecting within the right of way of highways on which traffic is maintained.

3. Surveying or inspecting on construction sites where heavy equipment is operating.

4. Investigating or inspecting highways, structures or terrain under hazardous conditions.

(4) In case an employe is denied benefits provided by this section by the employing department *or the director of per-*

sonnel, the employe shall have a right of appeal to the personnel board. The personnel board shall conduct hearings under the rules prescribed by the board and shall make an order granting or denying the application for benefits or making a determination as to the duration thereof. The personnel board shall, pursuant to s. 16.05, adopt rules for the administration of this section.

20.550 Miscellaneous general appropriations. There is appropriated from the general fund, or such other funds as may be indicated, annually, to be paid as herein provided:

(1) COMPENSATION, INJURED STATE EMPLOYES. Annually, such sums as may be necessary for payments as provided in ch. 102, and under ss. 56.21 and 66.191, except that payments of increased compensation payable under ss. 102.57 and 102.60, shall be paid from the appropriation covering the salary or maintenance of the person injured, provided such appropriation has not been exhausted; otherwise payments shall be made from the general fund and the first $200 of compensation thus paid from the general fund in the case of any person whose work was financed from a segregated fund or account shall be charged to that fund or account.

22.01 Civil defense. (11) (d) *Workmen's compensation coverage.* Employes of municipal and county civil defense units are employes of the municipality or county to which the unit is attached for purposes of workmen's compensation benefits. Employes of the area and state civil defense units are employes of the state for purposes of workmen's compensation benefits. Volunteer civil defense workers are employes of the civil defense unit with whom duly registered in writing for purposes of workmen's compensation benefits. A civil defense employe or volunteer who engages in civil defense activities upon order of any echelon in the civil defense organization other than that which carries his workmen's compensation coverage shall be eligible for the same benefits as though employed by the governmental unit employing him. Any employment which is part of a civil defense program including but not restricted because of enumeration, test runs and other activities which have a training

objective as well as civil defense activities during an emergency proclaimed by the governor and which grows out of, and is incidental to, such civil defense activity is covered employment. Members of a civil defense unit who are not acting as employes of a private employer during civil defense activities are employes of the civil defense unit for which acting. If no pay agreement exists or if the contract pay is less, pay for workmen's compensation purposes shall be computed at $2,080 per annum.

(e) *Indemnification of employe.* Civil defense employes as defined in par. (d) shall be indemnified by their sponsor against any tort liability to third persons incurred in the performance of civil defense activities while acting in good faith and in a reasonable manner. Civil defense activities constitute a governmental function.

(f) *State reimbursement.* If the total liability for workmen's compensation benefits under par. (d), indemnification under par. (e) and loss from destruction of equipment under sub. (12), incurred in any calendar year exceeds $1 per capita of the sponsor's population, the state shall reimburse the sponsor for the excess. Payment shall be made from the appropriation in s. 20.270 (1) on certificate of the state director.

(g) *Pay.* Civil defense employes as such shall receive no pay unless specific agreement for pay is made.

41.71 Rehabilitation law. (1) The state of Wisconsin hereby assents to and accepts the provisions and benefits of the act of congress entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment," approved June 2, 1920, and any amendatory or supplementary acts thereto as the congress of the United States may enact. The state board of vocational and adult education shall cooperate, pursuant to agreements, with the federal government and the United States Office of Vocational Rehabilitation in carrying out the purposes of any federal statutes pertaining to vocational rehabilitation and is authorized to adopt such methods of administration

as are found by the federal government to be necessary for the proper and efficient operation of such agreements or plans for vocational rehabilitation and to comply with such conditions as may be necessary to secure the full benefits of such federal statutes. The state treasurer is designated and appointed custodian of all moneys received by the state from the federal government for the purpose of carrying out any federal statutes pertaining to vocational rehabilitation, and to make disbursements therefrom and from all state funds available for vocational rehabilitation purposes upon the order of the state board of vocational and adult education.

(2) This section may be cited as the "Rehabilitation Law."

(3) As used in this section the terms:

(a) "Handicapped person" means any person who, by reason of a physical or mental defect or infirmity, whether congenital or acquired by accident, injury or disease, is or may be expected to be totally or partially incapacitated for remunerative occupation, and who may reasonably be expected to be fit to engage in a remunerative occupation after receiving vocational rehabilitation service.

(b) "Rehabilitation" means the rendering of a handicapped person fit to engage in a remunerative occupation.

(c) "Board" means the state board of vocational and adult education.

(d) "Federal act" means the act of congress entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment," approved June 2, 1920, and any amendatory or supplementary acts thereto.

(e) "Homebound person" means one who, because of the severity of his physical or mental disabilities, is not expected to be able to compete with the able-bodied persons in normal employment.

(4) The provisions of this section shall not apply to any person who, in the judgment of the board, may not be susceptible of rehabilitation.

(5) Any handicapped person who has been domiciled within the state for one year or more, or who resides in the state and shall so reside at the time of becoming handicapped, may apply to the board for advice and assistance relative to his rehabilitation.

(6) The board shall:

(a) Provide that all persons reporting or making application to it as handicapped shall be promptly visited by its agent or representative with a view of determining whether or not vocational rehabilitation is feasible; acquaint all such persons for whom vocational rehabilitation is feasible with the rehabilitation facilities afforded by the state and counsel them regarding the selection of a suitable vocation; register all such persons electing to take advantage of the benefits of rehabilitation offered and prescribe and provide such training as may be necessary to insure their vocational rehabilitation; maintain a record of all such persons, together with the measures taken for their rehabilitation; utilize in the rehabilitation of such persons such existing educational facilities of the state as may be advisable and practicable including public and private educational institutions, public and private establishments, plants or factories and the services of persons specially qualified for the instruction of handicapped persons.

(b) Promote and aid in the establishment of schools and classes for the rehabilitation of handicapped persons; supervise the training of such persons and confer with their relatives and other persons interested concerning any matter affecting their vocational rehabilitation.

(c) Aid handicapped persons in securing such employment as will facilitate their training or will be suitable to their condition and provide for the placement in suitable gainful occupation of persons completing courses of training provided by the board, including supervision for a reasonable time after placement.

(d) Utilize the facilities of such agencies, both public and private, as may be practicable in securing employment for such persons and all public agencies are authorized and directed to cooperate with the board for the purposes stated.

(e) Procure and furnish at cost to handicapped persons artificial limbs and other orthopedic and prosthetic appliances, to be paid for in installments, when such appliances cannot be otherwise provided. The installment payments shall be paid to the state treasurer and shall be held by him in a special fund for the purpose of this paragraph. Payments from this fund shall be made at the direction of the board.

(f) Arrange for the physical or psychiatric examination of any person applying for or reported as needing rehabilitation; and arrange for such therapeutic treatment as may be necessary for rehabilitation of any handicapped person who registered with the board, except persons who are entitled to such treatment under the workmen's compensation law.

(g) Cooperate with any department in the state government, the federal government or with any county or other municipal authority within the state, or with any private agency, in carrying out this section.

(h) Make such rules and regulations as may be necessary to carry out the provisions of this section.

(i) Report to the governor and to the U. S. Office of Vocational Rehabilitation annually on or before September first for the year ending the preceding June thirtieth.

(7) Pursuant to rules, regulations, and standards prescribed by the state board of vocational and adult education, the board may provide maintenance cost during actual training to handicapped persons registered for rehabilitation services, except that no maintenance cost shall be provided to persons receiving maintenance cost under section 102.61 of the workmen's compensation act.

(8) The industrial commission shall communicate to the board all reports made to the said commission of cases of injury to employes which in the opinion of the commission may render the persons injured handicapped; and shall cooperate with the board in carrying out the provisions of this section.

(9) The state board of health shall:

(a) Cooperate with the board in arranging with all public and private hospitals, clinics, and dispensaries and with

practicing physicians, to send to the board prompt and complete reports of any persons under treatment in such hospitals, clinics or dispensaries, or by such physicians, for any injury or disease that may render them handicapped.

(b) Arrange with health officers to send to the board prompt and complete reports of any persons who in the course of their official duties they find to be suffering from any injury or disease that may render them handicapped, if such persons have not already been reported.

(c) Cooperate generally with the board in carrying out the provisions of this section.

(10) The board and the industrial commission shall cooperate in carrying out the provisions of this section according to a plan which shall be formulated by them and which shall be effective when approved by the governor.

50.04 Maintenance charges. (3) Any patient who has a legal settlement in this state or any patient who, or whose parent, if the patient is a minor, has resided in this state for 5 years or more in the aggregate prior to his application for admission, and 90 days of which residence is within 5 years next preceding his application, shall be cared for at any county tuberculosis sanatorium without charge to him, regardless of his ability to pay, and the cost of his care shall be charged against the state subject to a charge over against the county of his legal settlement as provided in s. 50.09 (2). If any such patient is the beneficiary of a policy of hospitalization, health or accident insurance or other contract covering care in a tuberculosis sanatorium, he shall be liable to pay the cost of his care to the extent of the liability on such policy, insurance or contract as determined by the admitting court, except that such liability shall not include amounts payable as disability benefits under any such policy. If any patient treated in a tuberculosis sanatorium operated by this state or any of its political subdivisions is entitled to workmen's compensation by reason of his tuberculosis, the cost of his care shall be recoverable by such institution, in the same proceeding that such patient takes for the recovery of his workmen's compensation. Such institution shall be deemed a party in interest in such proceeding and shall be

entitled to notice of any such proceeding and may appear in such proceeding for the purpose of prosecuting its right to recovery. No settlement of workmen's compensation of the claim of such patient shall be approved by the industrial commission that does not provide for the payment of the cost of the care of such patient. Nothing contained in this subsection shall prohibit any patient from paying all or a part of the cost of his care if he so desires.

56.21 Compensation to injured prisoners. If an inmate of a state institution in the performance of his assigned work is injured so as to permanently incapacitate him or materially reduce his earning power, he may, upon being released from such institution, either upon parole or upon final discharge, be allowed and paid such compensation as the industrial commission finds him entitled to. He shall be compensated on the same basis as he would be had the injury been covered by the workmen's compensation act, except that the total paid to any such inmate shall not exceed $5,000 and may be paid in installments. If the injury results from employment in a prison industry, the payment shall be made from the revolving appropriation for its operation. If there is no revolving appropriation, payment shall be made from the general fund.[81]

66.191 Special death and disability benefits for certain public employes subject to Wisconsin retirement act. (1) Whenever a policeman, fireman, conservation warden, deputy state fire marshal, state forest ranger, field employe of the conservation commission who is subject to call for forest fire control or warden duty, member of the state traffic patrol, state university full-time policeman, guard or any other employe whose principal duties are supervision and discipline of inmates at a state penal institution, including central state hospital, or state beverage tax investigator who is a participating employe under ss. 66.90 to 66.918

[81] This provision applies in favor of all inmates of state institutions regardless of whether or not they are penal institutions. In line with dictionary definitions, an inmate must be considered as one who is confined against his will. The provision, therefore, does not apply in favor of students in the school for deaf and blind, or other similar institutions, but does apply in case of inmates of state insane asylums, home for feeble minded, reformatories, state prisons, etc.

shall, while engaged in the performance of duty, be injured or contract a disease due to his occupation, and be found upon examination to be so completely and presumably permanently disabled, either physically or mentally, as to render necessary his retirement from any of the aforesaid services, the industrial commission shall order payment to him monthly, under s. 20.550 (1) or 102.21, of a sum equal to one-half his monthly salary in such service at the time that he became so disabled.

(2) If such injury or disease shall cause the death of such person, and he shall die leaving surviving a widow or an unmarried child under the age of 18 years, the commission shall order monthly payments as follows:

(a) To the widow, unless she shall have married the deceased after he sustained such injury or contracted such disease, one-third of the monthly salary being paid to the deceased in such service at the time of his disability or death, until she marries again.

(b) To the guardian of each such child, $15 until he becomes 18 years of age; provided that the total monthly payments ordered under this subsection shall not exceed 65 per cent of the monthly salary being paid to the deceased in such service at the time of his disability or death, and there shall be a pro rata reduction in the benefits paid hereunder, if necessary, in order to comply with such limitation. On or before January 15 in each year any widow entitled to a benefit under this subsection shall file with the municipality which makes payments hereunder an affidavit stating that she has not married again. The monthly payment ordered to any widow under this subsection shall begin in each calendar year only after such affidavit shall have been filed with the clerk of such municipality, and no payment shall be made for any month in such year prior to the one in which such affidavit was filed.

(c) Any person entitled to death benefit payments under this subsection may file with the commission a written election to waive such payments and accept in lieu thereof such death benefits, burial expenses, and medical and incidental compensation payments as may otherwise be due under ch. 102, but no person shall receive death and burial expense payments under both ch. 102 and this subsection.

(3) Any policeman, fireman or conservation warden who has fulfilled all other requirements for inclusion as a participating employe under the Wisconsin retirement fund shall be eligible to the benefits payable under this section during the qualifying period established pursuant to s. 66.901 (4) (d).

(4) This section shall be administered by the industrial commission, which may adopt necessary rules relating to hearings, investigations and other matters in connection with applications for benefits under this section.

(5) Any person entitled to disability benefit payments under this section may file with the commission and the board of trustees of the Wisconsin retirement fund a written election to waive such payments and accept in lieu thereof such payments as may otherwise be due under s. 66.907; but no person shall receive disability benefit payments under both s. 66.907 and this section.[82]

66.315 Peace officers; compensation when acting outside own municipality. (1) Any chief of police, county traffic officer or other peace officer of any city, village or town, who shall be required by command of the governor, sheriff or other superior authority to maintain the peace or who shall respond to the request of the authorities of another municipality, to perform police or peace duties outside territorial limits of the city, village or town where employed as such officer, shall be entitled to the same wage, salary, pension, workmen's compensation, and all other service rights for such service as for service rendered within the limits of the city, village or town where regularly employed.

(2) All wage and disability payments, pension and workmen's compensation claims, damage to equipment and clothing, and medical expense, shall be paid by the city, village or town regularly employing such peace officer. Upon making such payment such city, village or town shall be reimbursed by the state, county or other political subdivision whose officer or agent commanded the services out of which the payments arose.

---

[82] This amendment was effected by Chapter 268, Laws of 1963.

66.907 (4) Election of benefits; waiver. Any person entitled to payments under this section who may otherwise be entitled to payments under s. 66.191 may file with the board and the industrial commission a written election to waive payments due under this section and accept in lieu thereof such payments as may be payable under s. 66.191, but no person shall receive payments under both s. 66.191 and this section. However, any person otherwise entitled to payments under this section may receive such payments, without waiver of any rights under s. 66.191, during such period as may be required for a determination of such person's rights under s. 66.191. Upon the final adjudication of such person's rights under s. 66.191, if waiver is filed under this section, such person shall immediately cease to be entitled to payments under this section and the fund shall be reimbursed for all payments made under this section, from the award made under s. 66.191, in accordance with such rules as are prescribed by the board and the industrial commission.

83.17 County may assume compensation liability; agreements with localities. Whenever a county contributes funds to a highway project undertaken by a town, village or city in the county or a city, town or village has its highways maintained by the county with local funds, the county through its county highway committee may assume the liability under the workmen's compensation act of the town, village or city to any employe on such project, and may by agreement with the governing body of the town, village or city provide for the amount the town, village or city shall pay to the county for the assumption of such liability. Such action of the county highway committee shall remain in effect until the county board by resolution disapproves of such action.

101.01 Definitions of terms used. The phrase "place of employment" includes every place, whether indoors or out or underground and the premises appurtenant thereto where either temporarily or permanently any industry, trade or business is carried on, or where any process or operation, directly or indirectly related to any industry,

trade or business, is carried on, and where any person is, directly or indirectly, employed by another for direct or indirect gain or profit, but does not include any place where persons are employed in (a) private domestic service which does not involve the use of mechanical power or (b) farming. The term "farming" includes those activities specified in s. 102.04 (3), and also includes the transportation of farm products, supplies or equipment directly to the farm by the operator of said farm or his employes for use thereon, if such activities are directly or indirectly for the purpose of producing commodities for market, or as an accessory to such production.

101.06 Employer's duty to furnish safe employment and safe place. Every employer shall furnish employment which shall be safe for the employes therein and shall furnish a place of employment which shall be safe for employes therein and for frequenters thereof and shall furnish and use safety devices and safeguards, and shall adopt and use methods and processes reasonably adequate to render such employment and places of employment safe, and shall do every other thing reasonably necessary to protect the life, health, safety, and welfare of such employes and frequenters. Every employer and every owner of a place of employment or a public building now or hereafter constructed shall so construct, repair or maintain such place of employment or public building as to render the same safe.

101.20 Witness fees. Each witness who shall appear before the commission by its order shall receive for his attendance the fees and mileage now provided for witnesses in civil cases in courts of record, which shall be audited and paid by the state in the same manner as other expenses are audited and paid, upon the presentation of properly verified vouchers approved by the chairman of the commission, and charged to the proper appropriation for the industrial commission. But no witness subpoenaed at the instance of parties other than the commission shall be entitled to compensation from the state for attendance or travel unless the commission shall certify that his testimony was material to the matter investigated.

103.37 Certain requirements to obtaining employment prohibited. (1) It shall be unlawful for any employer, as defined in subsection (2) to require any employe or applicant for employment to pay the cost of a medical examination required by the employer as a condition of employment.

(2) The term "employer" as used in this section shall mean and include an individual, a partnership, an association, a corporation, a legal representative, trustee, receiver, trustee in bankruptcy, and any common carrier by rail, motor, water, air or express company doing business in or operating within the state.

(3) The term "employe" shall mean and include every person who may be permitted, required or directed by any employer, as defined in subsection (2) in consideration of direct or indirect gain or profit, to engage in any employment.

(4) Any employer who violates the provisions of this section shall be liable to a fine of not more than $100 for each and every violation. It shall be the duty of the public service commission and the industrial commission to enforce this section.

205.05 Rate making. (3) Rates or rating plans shall not take into account the physical impairment of employes. Any employer who applies or promotes any oppressive plan of physical examination and rejection of employes or applicants for employment shall forfeit the right to the advantages of experience rating. If the industrial commission finds that grounds exist for such forfeiture it shall file with the commissioner a certified copy of its findings, which filing shall automatically suspend any experience rating credit which may accrue to such employer. The determination shall be made as prescribed in ss. 101.13 to 101.26, so far as such sections are applicable subject to review under ch. 227. Restoration of an employer to the advantages of experience rating shall be by like procedure.

205.15 Insurance of rejected workmen's compensation risks. (1) The members of the workmen's compensation bureau, established pursuant to s. 205.03, shall accept any workmen's compensation risk tendered to and rejected by any member of said bureau in the manner herein provided.

(2) When any such rejected risk is called to the attention of the bureau and it appears that the risk is in good faith entitled to coverage, the bureau shall fix the initial premium therefor, and, upon payment thereto, it shall designate a member who shall issue a policy containing the usual and customary provisions found in such policies therefor, but for which undertaking all members of the bureau shall be reinsurers as among themselves in the amount which the compensation insurance written in this state during the preceding calendar year by such member bears to the total compensation insurance written in this state during the preceding year by all members of the bureau.

(3) The bureau shall make and adopt such rules as may be necessary to carry this section into effect, subject to an appeal to the commissioner as in all other cases. Any decision of such bureau under this section shall be subject to review on appeal to the commissioner.

(4) As a prerequisite to the transaction of workmen's compensation insurance in this state, every insurer shall file with the commissioner written authority permitting the bureau to act in its behalf.

325.05 Witness' and interpreter's fees. (1) The fees of witnesses and interpreters shall be as follows:

(a) For attending before a justice of the peace, or any arbitrators or any board or committee thereof of any town, city or village, for witnesses $4 for each day, for interpreters $4 per day.

(b) For attending before any other court, officer, board or committee, for witnesses $5 for each day, for interpreters $10 per half day.

(c) For traveling, at the rate of five cents per mile going and returning from his residence (if within the state); or, if without, from the point where he crosses the state boundary in coming to attend to the place of attendance, and returning by the usually traveled route between such points.

(2) A witness or interpreter shall be entitled to fees only for the time he shall be in actual and necessary attendance as such; and shall not be entitled to receive pay in more than one action or proceeding for the same attendance or

travel on behalf of the same party. No person shall be entitled to fees as a witness or interpreter while attending court as an officer or juror; nor shall any attorney or counsel in any case be allowed any fee as a witness or interpreter therein.

325.12 Coercing witnesses before officers and boards. If any person shall, without reasonable excuse, fail to attend as a witness, or to testify as lawfully required before any arbitrator, coroner, board, commission, commissioner, examiner, committee, or other officer or person authorized to take testimony, or to produce a book or paper which he was lawfully directed to bring, or to subscribe his deposition when correctly reduced to writing, any judge of a court of record or court commissioner in the county where the person was obliged to attend may, upon sworn proof of the facts, issue an attachment for him, and unless he shall purge the contempt and go and testify or do such other act as required by law, may commit him to close confinement in the county jail until he shall so testify or do such act, or be discharged according to law. The sheriff of the county shall execute the commitment.

328.45 Presumption of employment connected disease. In any proceedings involving the application by a municipal fireman or his beneficiary for disability or death benefits under s. 66.191 or any pension or retirement system applicable to firemen, where at the time of death or filing of application for disability benefits the deceased or disabled fireman had served a total of 5 years as a fireman and a qualifying medical examination given prior to the time of his joining the department showed no evidence of heart or respiratory defect or disease, and where the disability or death is found to be caused by heart or respiratory defect or disease, such finding shall be presumptive evidence that such defect or disease was caused by such employment.

Ind 80.28 Diagnosis for brucellosis
Ind 80.29 Value of room or meals
Ind 80.30 Average weekly earnings for members of volunteer fire companies or fire departments

Ind 80.01 General. The rules of practice at hearings before the industrial commission will conform generally to the rules of practice before courts of equity. The aim is to secure the facts in as direct and simple a manner as possible.

Ind 80.02 Reports. (1) *Employers* under the provisions of the workmen's compensation act within one day after the fatal termination of an accident or industrial disease, shall make a brief report of this occurrence to the industrial commission by telegraph, telephone or by letter. They shall also make a report on form WC–12 (formerly A–12) on the fourth day after the accident or beginning of disability from occupational disease upon every accident or disease causing death or a disability which exists beyond the third day after the employee leaves work as a result of the accident.

(2) *Self-insured employers and insurance companies* on all accidents which require a first report must:

(a) Make a supplementary report on form WC–13 (formerly A–13) on the eleventh day following that on which the accident occurred.

(b) Make another supplementary report immediately when payments are stopped for any reason. This report must be accompanied by an explanatory memorandum, with copy being furnished the injured claimant, if there is a dispute with the injured man.

(c) Make a final report on form WC–13 when final payment of compensation has been made, which must be accompanied by (a) a copy of the final receipt signed by the injured employe, and (b) a report from a physician, if the disability exceeds 3 weeks or if there is any permanent disability, unless there has been a hearing before the commission.

(d) Supply to the employe copy of final report on form WC–13 in all cases at the time of final payment, and final physician's report in cases where disability has extended beyond 3 weeks following the date of injury, or where permanent disability has resulted.

(e) Make immediate report of any amputation which requires an artificial member or appliance.

Ind 80.03 Compromise. In any case where an accident and injury to an employe occurs of which the commission has jurisdiction under the compensation act, and a compromise of liability thereunder is made directly by such employer and employe, the same shall be made in writing in the presence of one or more disinterested witnesses who shall sign such compromise, and copies of all such compromises shall be mailed immediately to the industrial commission by the employer. All compromises may be reviewed, set aside, modified or confirmed by the commission upon application of either party within one year from the date of the compromise. (Section 102.16, Wis. Stats.)

Ind 80.04 Place of hearing. The commission at its discretion may from time to time hold public sessions other than in the state capitol.

Ind 80.05 Procedure on claim. (1) In case of disputes in matters coming under the jurisdiction of the commission, either party to the dispute may apply to the commission for relief and the commission shall make such order or award as shall be lawful and just in the premises.

(2) In all such cases the party complaining shall file his application with the commission, with copies to be served on the adverse party. The commission shall thereupon serve such adverse party with a copy of such application and such adverse party shall file his answer thereto with the commission within 10 days after such service and likewise serve a copy of such answer on the party making the application. The commission will thereupon notify the parties of the time and place of hearing, at least 10 days prior to such hearing. (Section 102.17, Wis. Stats.)

Ind 80.06 Parties. The parties to the controversy shall be known as the applicant and the respondent. The party filing the application for relief shall be known as the applicant and the adverse party as the respondent. Either party may appear in person or by an attorney or agent.

Ind 80.07 Service. All service of papers, unless otherwise directed by the commission or by law, may be made by mail and proof of such mailing shall be prima facie proof of such service. Time within which service shall be made shall be the same as in courts of record unless otherwise specified by rule or order of the commission.

Ind 80.08 Amendments. Amendment may be made to any pleading upon application to the commission and cause shown. The commission may on its own motion, modify or change its order, finding or award at any time within 20 days from the date thereof if it shall discover any mistake therein.

Ind 80.09 Extension of time and postponement. The commission may grant extensions of time in which to comply with any rule when it shall deem such extensions of time reasonable and it may likewise grant adjournments of hearings.

Ind 80.10 Stipulations. Parties to a controversy may stipulate the facts in writing, and the commission may thereupon make its order or award. Stipulations must set forth in detail the manner of computing the compensation due and must be accompanied by a report from a physician stating the extent of the disability.

Ind 80.11 Depositions. At the discretion of the commission depositions may be taken and used upon any hearing where the convenience of the witnesses or parties may so require. Such depositions shall be taken in the same manner as in courts of record. Depositions for the purpose of discovery before hearing are specifically prohibited by law, with certain exceptions as provided by section 102.17 (1) (bm), Wis. Stats.

Ind 80.14 Transcripts. (1) In cases pending before the commission, transcripts of testimony taken or proceedings had before the commission will be furnished to the applicant or respondent or their attorneys in accordance with the following provisions:

(a) Prior to the commencement of an action to review its order or award, the commission may furnish to any party a copy of such testimony or proceedings upon payment of the sum of 20 cents per folio and 5 cents per folio for each additional copy thereof.

(b) After the commencement of such action or proceedings, a copy of such testimony will be furnished to the plaintiff or to his attorney, upon payment of the sum of 20 cents per folio and 5 cents per folio for each additional copy thereof, and all other parties will be furnished copies upon payment of 5 cents per folio.

(c) Upon proper showing of financial inability to pay for copies of such testimony or proceedings, the commission in its discretion will furnish copies of the same on such terms as may be agreed.

Ind 80.15 Exception from insurance; conditions. (1) As a condition for an exemption, deposits of securities, a surety bond or both shall be required in the following cases:

Persons and Partnerships:

(a) Where the net resources, exclusive of exemptions, are less than $25,000.

(b) Where the net resources, exclusive of exemptions, do not equal $1,500 for each employe up to 20 in number, and $400 for each additional employe up to 50 and $100 for each additional employe.

(c) Where the liabilities, exclusive of capital, exceed 75% of the resources, excluding exemptions.

(2) The industrial commission reserves the right to require a surety bond, or a deposit of security, in individual cases, regardless of the amount of net assets.

Ind 80.16 Exemptions from insurance; automatic. The state and all of its political subdivisions and all state and national banks are exempt from insurance of their liability under the compensation act, without further order of this commission. Any county training school board, county school board, school district board, board of education, board of industrial education, board of park commissioners, board of public works, board of drainage district commissioners, metropolitan sewerage commission and any board of public utilities created under subsection (1) of section 66.068, Wis. Stats., may carry a workmen's compensation insurance policy separate and distinct from any carried by the county, town, village or city in which it is located. However, partial insurance or divided insurance of the risk of any political division, board or commission, may not be carried, except upon written order of this commission. Any municipality which has

entered into an agreement with one or more other municipalities for the joint operation of a fire department composed wholly or partly of volunteers may separately insure its liability under the compensation act for injury to any fireman.

Ind 80.17 Excess insurance. An employer who has been granted exemption from insuring his risk under the workmen's compensation act may carry excess insurance in accordance with regulations of the insurance commissioner without further order of this commission, and such excess insurance shall not be deemed full coverage.

Ind 80.18 Procedure in state cases. (1) The following reports and statements are required in claims for compensation or medical aid by an employe of the state.

(a) In all cases where disability extends beyond the three-day waiting period or permanent disability results, the first report of injury on form WC–12 is to be submitted to the Industrial Commission by the employing department.

(b) In all cases in which any disability results or medical expense is involved, a statement by the employe on form to be supplied by the industrial commission that he was injured in the course of his employment, reciting time and place of injury, the reasons for its occurrence, the nature of injury and stating all expenditures incurred for medical, surgical, hospital treatment, and medicines, to the time of the claim; whether claim is made for disability; if so, what period of temporary disability and what permanent disability is claimed, and what salary has been paid by the state during the period of disability. If bills have been paid by the injured, receipts are to be attached.

(c) A report from the attending physician showing the nature of injury and the extent of disability. This may be made on form supplied by the commission.

(d) Bill from the physician and/or hospital itemizing services rendered and charges made. This need not be verified.

(e) A statement from the employing department stating whether injury occurred in the course of employment, and whether treatment is believed necessary as claimed. This will be made in conjunction with employe's statement and on the same form. If the department is unable to make statement the reason is to be stated.

(f) A state employe who sustains an accidental injury may select his own physician; and if the case is compensable, the industrial commission will order reimbursement for reasonable medical, surgical, and hospital care, including charges for necessary medical examinations and reports. The employing department has no authority to incur any liability for medical or surgical treatment or hospital care. The employing department is not a party to a claim for compensation; the state of Wisconsin is considered the employer, and the attorney general represents the state in such cases.

(2) If the statements supplied and inquiry or investigation by the commission and/or attorney general leave doubt as to legitimacy of the claim, hearing will be scheduled.

(3) The attorney general will appear for the state if hearing is set.

(4) Applicable forms will be supplied to employes and to employing department by the industrial commission upon request.

(5) Where payment of medical expense is authorized by the employing department under the provisions of subsection 102.42 (8) Wis. Stats., up to a gross of $50 for each injury, form WC–7c is to be sent to the commission enumerating thereon the amounts of the expenses being authorized for payment and a voucher is to be sent to the Bureau of Finance with itemized statements of expenses incurred attached thereto.

Ind 80.19 Procedure on review by commission. (1) The following rules shall govern proceedings on appeal from the order of an individual examiner or commissioner to the industrial commission.

(a) The party appealing shall file his petition with the industrial commission, setting forth separately the particular finding or findings as to which it is claimed error has been made.

(b) The commission shall forthwith proceed to review the record. If it shall appear that there may be error, the commission shall set aside the order, or direct the taking of additional testimony; otherwise it shall affirm such findings and order.

1. If the commission affirms the original decision, or directs the taking of further testimony, notice to that effect will be served on all parties in interest.

2. If the commission sets aside the original decision, the commission shall forthwith notify the opposing party, who shall have 10 days from date of notice in which to make answer.

(c) The answer shall meet separately each contention of the petitioner by a concise statement by the opposing party in support of his contention.

(d) Brief may be filed by either party with its petition or answer, but not thereafter unless permitted by the commission. Oral argument shall not be permitted except upon request of the commission. Transcript of testimony shall not be furnished except upon order of the commission.

(e) Time for answering may be extended upon order of the commission.

Ind 80.20 License to appear. (1) The following rules shall govern the issuance, suspension, or revocation of licenses to appear before the industrial commission in compensation matters under the provisions of section 102.17 (1) (am), Wis. Stats.

(a) Permission to appear at a single hearing may be issued by the industrial commission through any examiner or individual commissioner upon application evidencing qualifications provided by statute and the commission's rules. Such permission may be given to appear in 3 cases before the issuing of license. When appearance has been made in 3 cases, license shall be required, which shall be issued only upon execution and filing with the commission of application upon form prescribed by the commission.

(b) Before license shall be issued applicant shall have appeared in representation of a party before the commission on at least 3 formal hearings.

(c) The following conditions shall operate as grounds for refusal, suspension, or revocation of license.

1. Charging of excessive or unconscionable fees, misrepresentation of clients, dishonesty, fraud, sharp practice, neglect of duty, or other

improper conduct in the representation of a party before the industrial commission, unless satisfactorily explained or excused by the commission on the grounds of subsequent good conduct.

2. Disbarment from the practice of law, or resignation by request of properly constituted authorities, unless there has been subsequent reinstatement and continuance in good standing.

3. Contumacious conduct in hearing, gross discourtesy toward commission representatives, or failure to conform to rulings or instructions of the commission or its representatives.

4. Intentional or repeated failure to observe provisions of the compensation act or rules of procedure adopted by the industrial commission.

5. Any other gross evidence of lack of good moral character, fitness or act of fraud, or serious misconduct.

Ind 80.21 Physicians' reports. Upon the request of the industrial commission, any party in interest to a claim under the workmen's compensation act shall furnish the industrial commission with copies of all physicians' reports in their possession or procurable by them. When deemed advisable by the industrial commission, copies of such reports may be furnished to the other parties in interest.

Ind 80.22 Use of physicians' reports as evidence. See subsection 102.17 (1) (as), Wis. Stats.

(1) Matters stated in such report which would not be competent or material evidence if given as oral testimony shall not be competent or material as prima facie evidence if objection is made, except as corroborated by competent and material oral testimony.

(2) Use of reports shall be permitted in any case in which claim for compensation is made, provided the reporting doctor is available for cross examination.

(3) An applicant shall be informed of the provisions of section 102.17 (1) (as), Wis. Stats., and the commission's rules and also that form for reporting will be supplied to him upon request.

(4) Report shall be submitted to the commission upon a form prescribed by the commission and shall be verified or certified. The commission may require additional or supplementary reports. Upon failure of the applicant to submit such reports within the time specified prior to hearing, all reports previously filed may, in the discretion of the commission, be excluded as evidence.

(5) Reports shall be filed with the application for adjustment of claim, or as soon thereafter as possible. Reports not filed with the commission 15 days prior to the date of hearing shall not be acceptable as evidence except upon good cause for failure so to file, established to the satisfaction of the commission.

(6) Upon receipt of report the commission shall promptly serve copy upon the employer or carrier.

(7) The filing of reports under this provision shall be permissible whether or not injury occurred on or before June 10, 1943.

Ind 80.23 Common insurance of employer and third party. In all cases where compensation becomes payable and the insurance carrier of an employer and of a third party shall be the same, or if there is

common control of the insurer of each, the insurance carrier of the employer shall promptly notify the parties in interest and the industrial commission of that fact.

Ind 80.24 Statement of employe. When an employe gives a statement signed by him, which in any way concerns his claim, a copy of such statement must be given to the employe. When such statement is taken by a recording device and is not immediately reduced to writing, a copy of the entire statement must be given the employe or to his attorney within a reasonable time after application for hearing is filed, and the actual recording must be available as an exhibit if formal hearing is held. Failure on the part of the employer or insurance carrier to comply with the above will preclude the use of such statement in any manner in connection with that claim.

Ind 80.25 Loss of hearing; determination. The commission as a matter of policy adopts the report of the medical subcommittee of the advisory committee on workmen's compensation legislation of the industrial commission, dated April 5, 1954, for determination of loss of hearing in workmen's compensation cases, with amendments adopted upon the recommendations of the subcommittee on noise of the committee on conservation of hearing of the American Academy of Ophthalmology and Otolaryngology.

Such report as amended is as follows:

I. Under what circumstances does noise constitute a hazard to hearing?

a. *Question:* What frequency and intensity?
Answer: The committee members stressed the importance of both intensity and frequencies in evaluating the noise problem. It was pointed out and pretty well agreed that no definite level could be set for hazardous noise intensity at this time. Furthermore, it was noted that most answers to this question in the literature were in the form of qualified statements. In addition to the pressure levels, the type (frequency) and the length of exposure as well as individual susceptibility must be considered. In general it was agreed that sound below an intensity of 90 decibels as measured on the C scale of an approved sound level meter, would not be harmful to workers' hearing regardless of the length of exposure. It is the energy per octave band that determines the hazardous noise level.

b. *Question:* How can noise best be measured?
Answer: The measurement of noise is primarily the function of acoustical engineers and properly trained personnel. Noise should be scientifically measured by properly trained individuals using approved calibrated instruments, which at the present time include sound level meters, octave band analyzers (see I. a.) and oscilloscopes, the latter particularly for impact type noises.

II. How can hearing loss be measured?

a. *Question:* What type of test is best?
Answer: Discussion followed as to what was meant by "hearing loss." It was pointed out that losses of hearing ability for high frequency tones (4000 and above) could be observed in many audiograms. However, it was unanimously agreed by the members of the committee that such high frequency losses do not constitute any disability for hearing ordinary conversational voice, and it was felt that hearing loss as used in this discussion should be confined to losses occurring in the frequencies ordinarily used for speech conversation. It was recognized by members of the committee that testing the individual by means of speech audiometry (for consonants and vowels) would most directly reveal the hearing ability of the individual for ordinary speech. At the present time, however, numerous problems present themselves in the routine performance of these tests. For example: speech audiometers, while available, as yet are neither standardized nor routinely found in otologists' offices. Language problems make these tests difficult in many instances. National authoritative bodies such as the Council on Physical Medicine of the American Medical Association and the American Academy of Ophthalmology and Otolaryngology have not as yet published a list of approved speech audiometers or accepted methods for their use in

determining hearing disability. Until such time as their recommendations are officially published, it is agreed that pure-tone air conduction audiometric tests be used for evaluating hearing acuity. It was recommended that the readings of the three frequencies of 500, 1,000 and 2,000 cycles per second be used in computing loss of hearing, but that in the performance of the pure-tone air conduction audiogram, all frequencies between 250 and 8,000 cycles per second on the audiometer be used for diagnostic purposes.

b. *Question:* What formula is most suitable?

Answer: It was pointed out that the findings of pure-tone air conduction audiometry are used for computing percentage loss of hearing by the American Medical Association Method of 1947, (Reference: Journal of the American Medical Association, February 9, 1947), the 0.8 Method of Fletcher or its modification or the Fowler Method. All of these methods have met with objections. The committee agreed that no consideration should be given for losses in frequencies below 500 cycles per second or above 2,000 cycles per second. Furthermore, it was felt that losses averaging 15 decibels or less in the frequencies between 500 and 2,000 cycles per second do not constitute any practical hearing disability. A table for evaluating hearing disability based upon average readings of the frequencies 500, 1,000, 2,000 of pure-tone air conduction tests has been formulated and is hereby attached.

III. How long must one be removed from a noisy environment before a final estimate of hearing loss can be made?

What is the greatest percentage of improvement which can be expected after removal?

Answer: It was agreed that there is a certain amount of recovery of hearing ability which may be expected after removing an individual from a prolonged exposure to a noisy environment. Just how much recovery will take place will depend on the number of years of exposure, the degree of hearing loss and individual susceptibility.

The members of the committee subscribe in principle to the statement of policy of the subcommittee of the Academy of Ophthalmology and Otolaryngology which is as follows:

> "Hearing loss produced by prolonged exposure to loud noise may be considered permanent if it still persists after the individual has been removed from the noise environment for a period of six months."

Therefore, those individuals who have removed themesives for six months or longer from their noisy working areas can have a final determination made of their hearing. When rule Ind 80.25 was adopted, it was intended that the examiners and commissioners have discretion in determining the extent of hearing impairment whenever audiometric readings* were taken by two or more persons. When several audiometric examinations are made under similar conditions, at closely spaced intervals by the same person, the best average reading obtained by that person at any one time shall be used. In other words, the best average decibel reading from any single audiometric examination shall be used as the reading of that operator. It is considered that the commission and its examiners should not be bound by either the lowest or the highest audiometric reading, but shall have discretion in evaluating the actual loss at or between the highest and the lowest readings by different persons. Independent medical examination is to be available where there is doubt in a loss of hearing claim. (For those claims filed under the statutory provisions in effect previous to the creation of section 102.555 which became effective July 1, 1955 and where the claimant continued to work in noisy environment, the audiometric and hearing evaluations should be made after a 48 hour removal from the noisy areas. In addition, five decibels should be deducted from the average decibel ratings of 500, 1,000 and 2,000 frequencies to allow for the recovery factor).

IV. What cases of occupational loss of hearing can be improved by hearing aids and to what extent?

Answer: The improvement resulting from the use of a hearing aid in these cases is too variable to warrant its consideration as a corrective factor. Many of these individuals cannot wear a hearing aid with any degree of satisfaction. Any benefit which might be obtained in any individual case from the use of a hearing aid should not be considered in arriving at a percentage of hearing loss or disability.

---

* This is the reading of the so-called hearing loss or hearing level dial of an audiometer which is calibrated according to the American Standard Z-24, 5–1951 or an equivalent recognized and accepted standard. Readings from an audiometer calibrated to different standard shall be adjusted to the equivalent of the American Standard Z-24, 5–1951.

V. Which test is most suitable for pre-employment examinations? What formula is recommended (as to frequencies and intensities)?

Answer: The use of the pure-tone air conduction audiometer is recommended for recording the hearing acuity of workers in pre-employment examinations. The audiometer should be one accepted and approved by the Council on Physical Medicine of the American Medical Association. The audiometer should be routinely and periodically calibrated. The pre-employment record should include a satisfactory history and physical examination as it may pertain to the hearing status and must include the pure-tone air conduction audiometric record. Otological examinations and evaluations should be made where indicated. All frequencies between 250 and 8,000 cycles per second found on the audiometer should be recorded.

VI. Is treatment of any value in reduction of the hearing loss due to noise?

Answer: The hearing loss resulting from industrial noise exposure cannot be improved by any known medical or surgical treatment.

VII. In general, what examinations can and should be made to determine the nature of loss, i.e., whether due to noise or to other cause?

Answer: By history, physical examination, otological and audiometric examinations.

HEARING DISABILITY TABLE

Average Decibel Loss	Per Cent of Compensable Hearing Loss	Average Decibel Loss	Per Cent of Compensable Hearing Loss
16	1.5	50	52.5
17	3.	51	54.
18	4.5	52	55.5
19	6.	53	57.
20	7.5	54	58.5
21	9.	55	60.
22	10.5	56	61.5
23	12.	57	63.
24	13.5	58	64.5
25	15.	59	66.

46	46.5	80	97.5
47	48.	81	99.
48	49.5	82–100	100.
49	51.		

Members of the medical advisory committee wish to emphasize that the above recommendation and test procedures cannot be regarded as final. The present answers and conclusions are based upon the "best" scientific information available at this time. Revisions will be required from time to time as additional knowledge accumulates and better technical methods and instruments are developed.

Members of Medical Subcommittee:
MARK J. BACH, M.D., Chairman
MEYER S. FOX, M.D.
FRANK G. TRESKOW, M.D.
PAUL J. WHITAKER, M.D.
CHARLES R. TABORSKY, M.D.

April 5, 1954

Ind 80.26 Loss of vision; determination. The following rules for determining loss of visual efficiency shall be applicable to all cases settled after December 1, 1941, irrespective of the date of injury, except that, in the examples for computations of compensation payable and of the percentage of permanent total disability, the computation of the percentage of visual impairment must be applied to the provisions of the workmen's compensation act as they existed at the date of the injury.

(1) MAXIMUM AND MINIMUM LIMITS OF THE PRIMARY COORDINATE FACTORS OF VISION. In order to determine the various degrees of visual efficiency, (a) normal or maximum, and (b) minimum, limits for each coordinate function must be established; i.e., the 100% point and the 0% point.

(a) Maximum limits. The maximum efficiency for each of these is established by existing and accepted standards.

1. Central Visual Acuity. The ability to recognize letters or characters which subtend an angle of 5 minutes, each unit part of which subtends a 1 minute angle at the distance viewed is accepted as standard. Therefore a 20/20 Snellen or A.M.A. and a 14/14 A.M.A. are employed as the maximum acuity of central vision, or 100% acuity for distance vision and near vision respectively.

2. Field Vision. A visual field having an area which extends from the point of fixation outward 65 degrees, down and out 65 degrees, down 55 degrees, down and in 45 degrees, inward 45 degrees, in and up 45 degrees, upward 45 degrees, and up and out 55 degrees is accepted as 100% industrial visual field efficiency.

3. Binocular Vision. Maximum binocular vision is present if there is absence of diplopia in all parts of the field of binocular fixation, and if the 2 eyes give useful binocular vision.

(b) Minimum limits. The minimum limit, or the 0% of the coordinate functions of vision, is established at that degree of deficiency which reduces vision to a state of industrial uselessness.

1. Central Visual Acuity. The minimum limit of this function is established as the loss of light perception, light perception being qualitative vision. The practical minimum limit of quantitative visual acuity is established as the ability to distinguish form. Experience, experiment and authoritative opinion show that for distance vision 20/200 Snellen or A.M.A. Chart is 80% loss of visual efficiency, 20/380 is 96% loss, and 20/800 is 99.9% loss, and that for near vision 14/141 A.M.A. Reading Card is 80% loss of visual efficiency, 14/266 is 96% loss, and 14/560 is 99.9% loss. Table 1 shows the percentage loss of visual efficiency corresponding to the Snellen and other notations for distant and for near vision, for the measurable range of quantitative visual acuity.

2. Field Vision. The minimum limit for this function is established as a concentric central contraction of the visual field to 5 degrees. This degree of contraction of the visual field of an eye reduces the visual efficiency to zero.

3. Binocular Vision. The minimum limit is established by the presence of diplopia in all parts of the motor field, or by lack of useful binocular vision. This condition constitutes 50% motor field efficiency.

TABLE 1

Percentage of Central Visual Efficiency Corresponding to Specified Readings for Distant and for Near Vision for Measurable Range of Quantitative Visual Acuity

A.M.A. Test Chart or Snellen Reading for Distance	A.M.A. Card Reading for Near	Percentage of Visual Efficiency	Percentage Loss of Vision	A.M.A. Test Chart or Snellen Reading for Distance	A.M.A. Card Reading for Near	Percentage of Visual Efficiency	Percentage Loss of Vision
20/20	14/14	100.0	0.0	20/122.5	--------	40.0	60.0
20/25	14/17.5	95.7	4.3	20/137.3	--------	35.0	65.0
20/25.7	--------	95.0	5.0	20/140	14/98	34.2	65.8
20/30	14/21	91.5	8.5	20/155	--------	30.0	70.0
20/32.1	--------	90.0	10.0	20/160	14/112	28.6	71.4
20/35	14/24.5	87.5	12.5	20/175	--------	25.0	75.0
20/38.4	--------	85.0	15.0	20/180	14/126	23.9	76.1
20/40	14/28	83.6	16.4	20/200	14/141	20.0	80.0
20/44.9	14/31.5	80.0	20.0	20/220	14/154	16.7	83.3
20/50	14/35	76.5	23.5	20/240	14/168	14.0	86.0
20/52.1	--------	75.0	25.0	---------	14/178	12.3	87.7
20/60	14/42	69.9	30.1	20/260	14/182	11.7	88.3
20/60.2	--------	70.0	30.0	20/280	14/196	9.7	90.3
20/68.2	--------	65.0	35.0	20/300	14/210	8.2	91.8
20/70	14/49	64.0	36.0	20/320	14/224	6.8	93.2
20/77.5	--------	60.0	40.0	20/340	14/238	5.7	94.3
20/80	14/56	58.5	41.5	20/360	14/252	4.8	95.2
20/86.8	--------	55.0	45.0	20/380	14/266	4.0	96.0
20/90	14/63	53.4	46.6	20/400	14/280	3.3	96.7
20/97.5	--------	50.0	50.0	20/450	14/315	2.1	97.9
20/100	14/70	48.9	51.1	20/500	14/350	1.4	98.6
20/109.4	--------	45.0	55.0	20/600	14/420	0.6	99.4
20/120	14/84	40.9	59.1	20/700	14/490	0.3	99.7
---------	14/89	38.4	61.6	20/800	14/560	0.1	99.9

(c) Where distance vision is less than 20/200 and the A.M.A. Chart is used, readings will be at 10 feet. The percentage of efficiency and loss may be obtained from this table by comparison with corresponding readings on the basis of 20 feet, interpolating between readings if necessary. In view of the lack of uniform standards among the various near vision charts, readings for near vision, within the range of vision covered thereby, are to be according to the American Medical Association Rating Reading Card of 1932.

(2) MEASUREMENT OF COORDINATE FACTORS OF VISION AND THE COMPUTATION OF THEIR PARTIAL LOSS.

(a) Central visual acuity. 1. Central visual acuity shall be measured both for distance and for near, each eye being measured separately, both with and without correction. Where the purpose of the

computation is to determine loss of vision resulting from injury, if correction is needed for a presbyopia due to age or for some other condition clearly not due to the injury (see section on miscellaneous regulations), the central visual acuity "without correction", as the term is used herein, shall be measured with a correction applied for such presbyopia or other preexisting condition but without correction for any condition which may have resulted from the injury. The central visual acuity "with correction" shall be measured with correction applied for all conditions present.

2. The percentage of central visual acuity efficiency of the eye for distance vision shall be based on the best percentage of central visual acuity efficiency obtainable with correction, less one half of the difference between the percentage of central visual acuity with and without correction. However, in no case shall such subtraction for glasses be taken at more than 25%, or less than 5%, of total central visual acuity efficiency. If a subtraction of 5%, however, reduces the percentage of central visual acuity efficiency below that obtainable without correction, the percentage obtainable without correction shall be adopted unless correction is nevertheless necessary to prevent eye strain or for other reasons.

3. The percentage of central visual acuity efficiency of the eye for near vision shall be based on a similar computation from the near vision readings, with and without correction.

4. The percentage of central visual acuity efficiency of the eye in question shall be the result of the weighted values assigned to these 2 percentages for distance and for near. A onefold value is assigned to distance vision and a twofold value to near vision. Thus, if the central visual efficiency for distance is 70% and that for near is 40%, the percentage of central visual efficiency for the eye in question would be:

Distance (taken once)	**70%**
Near (taken twice)	**40**
	40
	150 ÷ 3 = 50% central visual acuity efficiency

5. The Snellen test letters or characters as published by the Committee on Compensation for Eye Injuries of the American Medical Association and designated "Industrial Vision Test Charts" subtend a 5 minute angle, and their component parts a 1 minute angle. These test letters or the equivalent are to be used at an examining distance of 20 feet for distant vision (except as otherwise noted on the Chart where vision is very poor), and of 14 inches for near vision, from the patient. The illumination is to be not less than three foot candles, nor more than ten foot candles on the surface of the chart.

6. Table 1 shows the percentage of central visual acuity efficiency and the percentage loss of such efficiency, both for distance and for near, for partial loss between 100% and zero vision for either eye.

(b) Field vision. 1. The extent of the field of vision shall be determined by the use of the usual perimetric test methods, a white target being employed which subtends a 1 degree angle under illumi-

nation of not less than three foot candles, and the result plotted on the industrial visual field chart. The readings should be taken, if possible, without restriction to the field covered by the correction worn.

2. The amount of radial contraction in the 8 principal meridians shall be determined. The sum of the degrees of field vision remaining on these meridians, divided by 420 (the sum of the 8 principal radii of the industrial visual field) will give the visual field efficiency of one eye in per cent, subject to the proviso stated in the section on "Minimum Limits" that a concentric central contraction of the field to a diameter of 5 degrees reduces the visual efficiency to zero.

3. Where the impairment of field is irregular and not fairly disclosed by the 8 radii, the impaired area should be sketched upon the diagram on the report blank, and the computation be based on a greater number of radii, or otherwise, as may be necessary to a fair determination.

(c) Binocular vision. 1. Binocular vision shall be measured in all parts of the motor field, recognized methods being used for testing. It shall be measured with any useful correction applied.

2. Diplopia may involve the field of binocular fixation entirely or partially. When diplopia is present, this shall be plotted on the industrial motor field chart. This chart is divided into twenty rectangles, 4 by 5 degrees in size. The partial loss due to diplopia is that proportional area which shows diplopia as indicated on the plotted chart compared with the entire motor field area.

3. When diplopia involves the entire motor field, causing an irremediable diplopia, or when there is absence of useful binocular vision due to lack of accommodation or other reason, the loss of coordinate visual efficiency is equal to 50% loss of the vision existing in one eye (ordinarily the injured, or the more seriously injured, eye); and when the diplopia is partial, the loss in visual efficiency shall be proportional and based on the efficiency factor value of one eye as stated in table 2. When useful correction is applied to relieve diplopia, 5% of total motor field efficiency of one eye shall be deducted from the percent of such efficiency obtainable with the correction. A correction which does not improve motor field efficiency by at least 5% of total will not ordinarily be considered useful.

TABLE 2

Loss in Binocular Vision

No loss	equals	100.0%	Motor	Field	Efficiency

19/20	"	61.0	"	"	"
20/20	"	50.0	"	"	"

(3) INDUSTRIAL VISUAL EFFICIENCY OF ONE EYE. The industrial visual efficiency of one eye is determined by obtaining the product of the computed coordinate efficiency values of central visual acuity, of field of vision, and of binocular vision. Thus, if central visual acuity efficiency is 50 per cent, visual field efficiency is 80 per cent, and the binocular vision efficiency is 100 per cent, the resultant visual efficiency of the eye will be 50 x 80 x 100 = 40 per cent. Should useful binocular vision be absent in all of the motor field so that binocular efficiency is reduced to 50 per cent, the visual efficiency would be 50 x 80 x 50 = 20%.

(4) COMPUTATION OF COMPENSATION FOR IMPAIRMENT OF VISION. When the percentage of industrial visual efficiency of each eye has been thus determined, it is subtracted from 100%. The difference represents the percentage impairment of each eye for industrial use. These percentages are applied directly to the specific schedules of the Workmen's Compensation Act.

(5) TYPES OF OCULAR INJURY NOT INCLUDED IN THE DISTURBANCE OF COORDINATE FACTORS. Certain types of ocular disturbance are not included in the foregoing computations and these may result in disabilities, the value of which cannot be computed by any scale as yet scientifically possible of deduction. Such are disturbances of accommodation not previously provided for in these rules, of color vision, of adaptation to light and dark, metamorphopsia, entropion, ectropion, lagophthalmos, epiphora, and muscle disturbances not included under diplopia. For such disabilities additional compensation shall be awarded, but in no case shall such additional award make the total compensation for loss in industrial visual efficiency greater than that provided by law for total permanent disability.

(6) MISCELLANEOUS REGULATIONS. (a) Compensation shall not be computed until all adequate and reasonable operations and treatment known to medical science have been attempted to correct the defect. Further, before there shall be made the final examination on which compensation is to be computed, at least three months shall have elapsed after the last trace of visible inflammation has disappeared, except in cases of disturbance of extrinsic ocular muscles, optic nerve atrophy, injury of the retina, sympathetic ophthalmia, and traumatic cataract; in such cases, at least twelve months and preferably not more than sixteen months shall intervene before the examination shall be made on which final compensation is to be computed. In case the injury is one which may cause cataract, optic atrophy, disturbance of the retina, or other conditions, which may further impair vision after the time of the final examination, note thereof should be made by the examining physician on his report.

(b) In cases of additional loss in visual efficiency, when it is known that there was present a preexisting subnormal vision, compensation shall be based on the loss incurred as a result of eye injury or occupational condition specifically responsible for the additional loss. In case there exists no record or no adequate and positive evidence of preexisting subnormal vision, it shall be assumed that the visual efficiency prior to any injury was 100%. In order to effect the above purpose, the examining physician should carefully distinguish, in regard to each of the coordinate factors, between impairments resulting from the injury and impairments not so resulting as established by the type of proof here stated. Such other impairments should, however, be also reported, separately. Computation must occasionally also be made of impairment of vision not resulting from the injury, as, for instance, for the purpose of computing additional indemnity due under the provisions of the Workmen's Compensation Act on account of preexisting disability of one or both eyes.

Note I—Example of computation covering partial disability to a single eye

A. Central Visual Acuity:

Distance—Reading of 20/32.1 with glasses equals visual efficiency of	90.0%
Reading of 20/200 without glasses equals visual efficiency of	20.0%
Difference	**70.0%**

Rated efficiency is 90.0% minus 25% (because one-half of 70.0% exceeds 25) or 65.0%

Near—Reading of 14/21 with glasses equals visual efficiency of	91.5%
Reading of 14/35 without glasses (except that correction is applied for presbyopia due to age) equals visual efficiency of	76.5%
Difference	**15.0%**

Rated efficiency is 91.5% minus 7.5% (which is one-half of 15.0%) or 84.0%

Final Central Visual Acuity Efficiency is:

65.0 + 84.0 + 84.0 = 233.0 ÷ 3 = 77.7%

B. Field Vision:

Sum of eight principal meridians of the field remaining divided by 420 is:

40
50
50
50
40
40
40
40

420) 350 (83.3%)

C. Binocular Vision:

Diplopia in 3 rectangles (3/20) is 96.3% motor field efficiency.

D. Industrial Visual Efficiency of the one eye is:

77.7% x 83.3% x 96.3% or 62.3%

E. Impairment of the one eye for industrial use is:

100.0% — 62.3% = 37.7%

F. Compensation payable is (under major schedule since amendments of 1931):

Total impairment of one eye (age 50 or less) 250 weeks. 250 weeks x 37.7% = 94.25 weeks (Reduce the number of weeks by 2% for each year that the age at time of injury exceeds 50.)

Note II—Example of computation covering partial disability to both eyes

1. **Left Eye is 62.3% efficient, see Example I.**
2. **Right Eye:**

A. Central Visual Acuity:

Distance—Reading of 20/30 with correction equals visual efficiency of	91.5%
Reading of 20/35 without glasses equals visual efficiency of	87.5%
Difference	**4.0%**

Rated efficiency is the vision without correction (because correction gives improvement of less than the 5% minimum allowance for glasses, and is not necessary to prevent eye strain, etc.) 87.5%

Near—Reading of 14/14 with glasses equal visual efficiency of	100.0%
Reading of 14/21 without glasses equals visual efficiency of	91.5%
Difference	**8.5%**

Rated efficiency is 100.0% minus 5% (because 5% is the minimum allowance for glasses) or 95.0%

Final Central Visual Acuity Efficiency is:

87.5% + 95% + 95% = 277.5 ÷ 3 = 92.5%

B. Field vision is 100%

C. Binocular vision is 100%

D. Industrial visual efficiency of the right eye is:

92.5% x 100% x 100% or 92.5%

E. Impairment of right eye for industrial use is:

100.0% — 92.5% = 7.5%

3. **Compensation payable is** (under major schedule since amendments of 1931, and at age 50 or less):

Left eye (Example I):	94.25 weeks
Right eye: 250 weeks × 7.5% = 18.75 weeks × 3 (multiple injury clause) =	56.25 weeks
Total	150.5 weeks

(Reduce the number of weeks by 2½% for each year that the age at time of injury exceeded 50.)

Note III—Example of compensation covering enucleation of one eye and partial disability of the other eye

1. **Left eye** is 35.28% impaired (77.7% × 83.3% = 64.72%; 100%—64.72% = 35.28%, as allowance for binocular vision is inapplicable when the other eye is enucleated or blind), which results at age 50 or less, in indemnity payable for 88.2 weeks
2. **Right eye** is enucleated, which at said ages, results in indemnity payable for ----------275 weeks
3. **Total payable:** 88.2 weeks × 3 (multiple injury) = 264.6 + 275 = ----------539.6 weeks
(Subject to deduction of 2½% for each year over age of 50)
The number of weeks indemnity indicated as payable for impairment of vision or for enucleation is in addition to indemnity for temporary disability. All results are subject to the limitation that the total amount of indemnity payable, including that for temporary disability, shall not exceed the indemnity which would be payable for permanent total disability. The statutory and legal rules applicable to the determination of additional compensation payable out of the special state fund on account of preexisting disabilities are not here stated.

Ind 80.27 Forms. (1) The following are listed in accordance with **Sec. 227.013.** Each form is issued by the workmen's compensation

division and may be obtained from the Industrial Commission, Hill Farm State Office Building, Madison.

(a) WC–7 Application for Adjustment of Claim.

(b) WC–7a Application for Adjustment of Claim (Occupational Disease).

(c) WC–7b Application for Review of Compromise.

(d) WC–7c State Employe's Application for Adjustment of Claim.

(e) WC–12 Employer's First Report of Injury or Disease.

(f) WC–13 Supplementary Report on Accident and Industrial Disease.

(g) WC–16 Physician's Report on Accident or Industrial Disease.

(h) WC–16a Physician's Report on Eye Injuries.

(i) WC–16b Physician's Report on Accidental or Industrial Disease (pursuant to 102.17 (1) (as).

(j) WC–28 Petition for Review of Findings and Order of Commissioner or Examiner.

Ind 80.28 Diagnosis for Brucellosis. When any employe is ill with fever and other signs and symptoms suggestive of brucellosis, it should be considered that the employe has the disease when the clinical impression is confirmed by one (1) or more of the following diagnostic tests:

Diagnosis

I. Positive blood or tissue cultures for any of this group of organisms, Br. Abortus, Br. Suis, Br. Militensis

II. Serologic tests.

A. Positive agglutination tests in titre of 1 to 160 or above some time during the course of the disease

B. The tests should be repeated with a separate blood specimen for confirmation of the final titre

III. The specimens for the tests required herein must be taken by a licensed practicing physician, and immediately delivered to the State Hygienic Laboratory, Attention Dr. A. S. Evans, 437 Henry Mall, Madison, Wisconsin. Such specimens shall be in a container upon which is plainly printed the name and address of the patient, employer, and a certificate by the attending physician that he took the specimen from the named patient on the date stated over his signature and address. The State Hygienic Laboratory shall make necessary tests as soon as possible and upon completion thereof it shall send a report of the results of said tests to the physician in attendance on the case, and a copy of said report to the Industrial Commission, Hill Farm State Office Building, Madison.

Ind 80.29 Value of room or meals. In determining an employe's wages from any employer under chapter 102, Wis. Stats., any lodging or meals furnished as part of the employ's pay shall, unless a different specific showing is made, depend on his workplace and be valued as follows:

(a) As to any city or village with a population of 1,000 or more:

1. The value of a room shall be $7.00 per week or $1.00 per day; and the value of meals shall be $14.50 per week or 70 cents per meal.

2. Effective September 1, 1964, the value of a room shall be $8.75 per week or $1.25 per day; and the value of meals shall be $16.75 per week or 80 cents per meal.

(b) Elsewhere:

1. The value of a room shall be $6.25 per week or 90 cents per day; and the value of meals shall be $13.50 per week or 65 cents per meal.

2. Effective September 1, 1964, the value of a room shall be $8.00 per week or $1.25 per day; and the value of meals shall be $15.75 per week or 75 cents per meal.

(c) To value room and meals hereunder, there shall be included within a city or village any community or isolated establishment which is outside the territorial limits but within the industrial or commercial area of the city or village, and its population shall be determined from the latest available federal census figures.

Ind 80.30 Average weekly earnings for members of volunteer fire companies or fire departments. The maximum average weekly earnings under the provisions of section 102.11, Wis. Stats., which are in effect on the date of injury shall be used in computing the amount of compensation payable to an employee as defined by subsection 102.07 (7), except as specific showing may be made in an individual case that such wage is not proper.

Ind 80.31 The commission shall observe the same rules and procedures and may use the same forms in processing and determining claims made under Chapter 66 as are used under Chapter 102.

Ind 80.32

TABLE 5—PERMANENT DISABILITIES: PERCENTAGES OF LOSS OF USE FOR LOSSES OF MOTION AS COMPARED WITH AMPUTATIONS AT THE INVOLVED JOINTS

SHOULDER	
Total ankylosis at the shoulder with arm at side, scapula fixed	75%
Total ankylosis at the shoulder with arm at side, scapula free	55%
Limitation of active elevation to 45° but otherwise normal	35%
Limitation of active elevation in all directions to 90°, but otherwise normal	20%
Limitation of active elevation to 135° but otherwise normal	5%
ELBOW	
Ankylosis of elbow joint at 45° less than full extension (radio-ulnar motion destroyed, hand 45° less than fully pronated)	60%
Total ankylosis of arm at elbow at right angles	
With radio-ulnar motion intact	50%
With radio-ulnar motion destroyed (hand 45° less than fully pronated)	70%
Ankylosis of arm at elbow at 45° less than full extension with radio-ulnar motion intact	45%
Limitation of motion of elbow joint (radio-ulnar motion unaffected)	
Remaining range, 90°–135°	20%
Remaining range, 135°–180°	35%
Ankylosis of radius and ulna, estimated at elbow joint (hand 45° less than fully pronated)	20%

WRIST

Ankylosis, straight position	25%

FINGERS

Complete ankylosis

Thumb	Mid-position	Complete Extension
Distal joint only	25%	35%
Proximal joint only	15%	20%
Distal and proximal joints	35%	65%
Distal, proximal and carpometacarpal joints	85%	100%
Fingers		
Distal joint only	25%	35%
Middle joint only	75%	85%
Proximal joint only	40%	50%
Distal and middle joints	85%	100%
Distal, middle and proximal joints	100%	100%

Loss of Motion

Fingers	Loss of flexion	Loss of use	Loss of Extension	Loss of use
Distal joint only	10% =	1%	10% =	2%
	20% =	2%	20% =	4%
	30% =	3%	30% =	6%
	40% =	5%	40% =	8%
	50% =	10%	50% =	15%
	60% =	15%	60% =	20%
	70% =	20%	70% =	30%
	80% =	25%	80% =	40%
			100% =	60%

Ind 80.33 Permanent disabilities: Fingertip Amputations. Unless otherwise affirmatively established, in estimating permanent disability as a result of fingertip amputations, amputation of the distal one-third or less shall be considered the equivalent of 45 per cent loss of use of the distal phalanx, amputation of not more than the distal two-thirds but more than the distal one-third shall be considered the equivalent of 80 per cent loss of use of the distal phalanx, and amputation of more than the distal two-thirds shall be considered as 100 per cent loss of the distal phalanx, provided there is no added disability as a result of malformed nail or tissue. In no case shall the allowance be greater than it would have been for amputation of the entire distal phalanx.

WC-70

FORMS

EMPLOYER'S NON-ELECTION OR WITHDRAWAL FROM THE WORKMEN'S COMPENSATION ACT

Industrial Commission,
Madison, Wisconsin.

Take notice that the undersigned employer of labor in Wisconsin hereby files notice of non-election or withdrawal from operation under provisions of the workmen's compensation act. The following questions and answers are made a part of this notice:

1. State whether corporation / partnership / individual ----------
2. Kind of business ----------
3. Largest number of persons ever employed at any one time ----------
4. Number of persons now employed ----------
5. State number of employes you expect *usually* to employ ----------
   (Include corporate officers who work as employes)
6. Has compensation insurance ever been carried? ----------
7. State when withdrawal desired (if later than thirty days following filing of notice) ----------

Dated at ---------- (Place) this ---------- day of ---------- 19----

Signed ----------

Employer's Name as Shown by Compensation Policy

(Official Position)

(Address)

Please Read Carefully:

1. Non-election may be effected immediately provided the employer has never employed three persons or carried compensation insurance. Withdrawal (by an employer who has been subject to the act) cannot become effective until thirty days after the date of filing notice.

2. Employers filing notice of withdrawal and thereafter employing one or more persons, even part time, must keep compensation insurance in force without lapse for at least thirty days following the date notice reaches the office of the Industrial Commission or until the later date specified as the date of withdrawal.

3. Employers who have withdrawn from the workmen's compensation act have liability at common law, with common law defenses abrogated. Farmers who have withdrawn have liability at common law but retain their common law defenses. (Sec. 331.37 Wis. Stats.)

4. Employers (except farmers) who *usually* have three or more employes in a business, trade or profession are not permitted to withdraw from the act. (Sec. 102.04(2)).

WC-61

SUGGESTED FORM OF EMPLOYE'S PARTIAL NON-ELECTION OF WORKMEN'S COMPENSATION ACT

(Epilepsy or Total Blindness)

To----------

(Exact Name of Employer)

(Address of Employer)

You will take notice that I, one of your employes, am (1) totally blind, or (2) afflicted with epilepsy, and pursuant to Section 102.08 of the Workmen's Compensation Act, elect not to be subject to such Act for injuries resulting because of total blindness or epilepsy, and still remain subject to the provisions of the Workmen's Compensation Act for all other injuries.

Dated at _____ this _____ day of _____ 19____

INDUSTRIAL COMMISSION OF WISCONSIN

APPLICATION FOR REVIEW OF COMPROMISE
WORKMEN'S COMPENSATION ACT

_____Employe

vs.

_____Employer

_____Insurance Carrier

The applicant respectfully shows:

1. Address of Employe _____

2. Address of Employer _____

3. Accident occurred at_____on the____day of_____
(City or Town)
19____, and was caused as follows: _____
_____
_____
_____

4. That on the_____ day of_____applicant entered into a compromise agreement for settlement of his claim; that he now contends that the settlement made was unjust to him for the following reasons:
_____
_____
_____
_____
_____
_____
_____
_____

5. Hearing should be scheduled at: _____

6. I will be ready for full hearing at any time after: _____
(If not fully prepared for hearing, please so state)
_____
_____

Wherefore the applicant prays for review of the compromise agreement made and that the respondent be required to answer the charges herein, and that an order or award be made by the Industrial Commission granting such relief as the applicant may be entitled to in the premises.

Dated at_____ this_____day of_____ 19____

Signed_____
(Applicant must sign here)

Note: The original application and two copies for the respondent must be mailed to the Industrial Commission, Madison, Wisconsin.

If it is alleged that greater disability has resulted than was anticipated at the time of settlement, application should be accompanied by physician's report, stating the extent of disability claimed.

5. First wage loss or time loss suffered by applicant because of his disease was on_____, 19____ while employed by_____
(Name of employer)

6. Last wage loss or time loss suffered was on_____19____ while employed by _____

7. Other dates between which wage loss or time loss occurred were as follows:
From_____ To_____ while employed by_____
From_____ To_____ while employed by_____
From_____ To_____ while employed by_____
From_____ To_____ while employed by_____

8. **Last** date worked for **last** responsible employer was_____ 19____ and nature of work was_____

9. Injured was earning, on last day of work $_____ per day; $_____ per week; $_____ per annum.

10. Has applicant had physical examination at employer's request?_____
    a. If so, what employer requested?_____
    b. What date was such examination made?_____
    c. Has applicant been refused work following examination?_____
    d. If so, by what employer and what date?_____
    _____
    (Employer and date)

11. The injured was born on_____
    (Give year, month and day)
    Married or single_____Number of children_____

12. Disability for which compensation is claimed:
    _____
    _____
    _____
    _____
    (State how long disabled and whether there is any permanent disabiltiy. If the injury resulted in death give the date of death)

13. If not disabled is it inadvisable because of silicosis to continue in the employment?_____

14. When did applicant first learn that he suffered from occupational disease caused by his employment?_____

15. Notice of injury was given to employer(s) as follows:

(Name of employer)	(Date notice given)

16. Names of doctors who treated injured for occupational disease and dates treated:

(Name)	(Address)	(Date)

17. Expense incurred for doctor: $_____
    For hospital and medicines: $_____

18. If injured has been confined in a hospital or sanatorium at any time, give name and period:
    _____
    (Name of sanatorium) (Period)
    _____

19. Compensation paid injured $_____

20. If application is for death benefit what relation was deceased to applicant? _____

21. Was applicant dependent upon deceased at time of injury?_____

22. Did applicant live with deceased at time of injury and death?_____
    (Yes or no)

23. Have you ever made claim on account of occupational disease?_____
    (Yes or no)

24. If so, when_____ *Against what employer*_____

25. Other material facts:

Wherefore the applicant prays that the respondents be required to answer the charges herein and that an order or award be made by the Industrial Commission granting such relief as the applicant may be entitled to in the premises.

Dated at_____this_____day of_____, 19____

Signed_____
(Applicant must sign here)

Note: Either party to the dispute may apply to the commission for an adjustment of any matter in dispute.

The original application and two copies for the respondent must be mailed to the Industrial Commission, Madison, Wisconsin.

ADMISSION TO SERVICE AND ANSWER TO APPLICATION

STATE OF WISCONSIN
INDUSTRIAL COMMISSION
WORKMEN'S COMPENSATION DIVISION
W. C. 19 Madison, Wisconsin

Claim Number

Applicant

Applicant's attorney

Versus

Insurance carrier

We are enclosing herein copy of an application for adjustment of claim which has been filed in this office. Under the rules of practice of the commission you will be given ten days within which to admit service and make your answer to the application. One copy should be mailed to us; one copy to the applicant or his attorney if he has one; and one should be retained for your record. Unless you deny liability you should proceed to pay compensation immediately, in accordance with the provisions of the law, and not require the applicant, as well as yourself, to incur the expense, incidental to a hearing before the commission. In the meantime all compensation which is concededly due and which has accrued should be paid and the commission notified. Payments clearly due should not be withheld because application has been filed.

The respondent above named, for answer to the application herein, respectfully states:

It is: (Check one)	
Admitted	Denied

1. That applicant sustained an injury on or about the date set forth in the application.
2. That the relationship of employer and employe existed at the time of the alleged injury.
3. That the parties were subject to the Workmen's Compensation Act at the time of the alleged injury.
4. That at the time of the alleged injury the employe was performing service growing out of and incidental to his employment.
5. That the accident or disease causing injury arose out of the alleged employment.
6. That notice of injury was given employer as specified in application.
7. That applicant was temporarily disabled for the period stated in application. If denied, state temporary disability admitted.
8. That applicant is permanently disabled to the extent stated in the application. If denied, state permanent disability admitted.
9. That the rate of wages as set forth in application is correct. If denied, state weekly wage admitted.
10. That the alleged employer was insured under the Workmen's Compensation Act at the time of alleged injury.
11. State exactly what matters are in dispute and your reason for denying liability. (Use other side if necessary.) (If any statements are found to be incorrect, you may file an amended answer.)

Amount of compensation paid to date	Dated	Signature of respondent

SUGGESTED FORM OF RECEIPT FOR COMPENSATION

Received from the _____ the sum of _____ Dollars ($_____) in payment of compensation on account of an injury received by me on _____ 19____ while employed by _____

Amount Previously Received $_____

Amount of this Payment $_____

Total $_____

Signed this _____ day of_____ 19____

Witness_____ _____

Signature of Employee

Note: Employer will set out method of arriving at basis of settlement, giving total period of disability. Read over carefully to employe and be sure that he understands nature of receipt. When the final payment of compensation is made a receipt should be taken in this form and filed by the employer with a supplementary report on form A-13.

Insurance companies and self-insured employers must print the final receipts they use, but these must conform substantially with this form.

SUGGESTED FORM OF COMPLAINT FOR A REVIEW OF AN ORDER OR AWARD OF THE INDUSTRIAL COMMISSION

STATE OF WISCONSIN : IN CIRCUIT COURT : FOR DANE COUNTY

A_____ B_____
Plaintiff,

vs.

C_____ Company,
A Wisconsin Corporation, D_____
Insurance Company, A Wisconsin
Corporation, and Industrial
Commission of Wisconsin,
Defendants.

COMPLAINT

The above named plainiff, by _____, his attorney for his cause of action against the above named defendants respectfully shows to the court that:

1. The plaintiff is a (state vocation) residing at _____ Street, in the City of _____, Wisconsin.

2. The C_____ Company is a corporation organized and existing under and by virtue of the laws of the state of Wisconsin with its principal office in the city of _____, Wisconsin.

3. The D_____ Insurance Company is a corporation organized and existing under and by virtue of the laws of the state of Wisconsin, with its principal office in the city of _____, Wisconsin.

4. On the _____ day of _____, 19____, in a proceeding under ch. 102, Stats., known as Wisconsin Compensation Act, the above named defendant, Industrial Commission of Wisconsin, made certain findings and based upon such findings made and entered its order or award dismissing the plaintiff's application for compensation (or, that the defendants, C_____ Company and D_____ Insurance Company, pay to the plaintiff certain sums as compensation).

5. This plaintiff is aggrieved by reason of said findings and order or award, and brings this action for a review of said findings, order or award upon the following grounds:

(a) That said defendant, Industrial Commission of Wisconsin, acted without or in excess of its powers in making the following findings (here quote those findings of which you desire to complain, and only those) in that such findings are not supported by the evidence.

(b) That the findings of fact by the commission do not support its order or award in that (state with particularity the respect or respects in which the findings are claimed to be deficient as a support for the order or award).

(c) That the order or award was procured by a fraud in that (here state the specific facts relied on as fraud, but bear in mind that the fraud alluded to in the statutes does not include false testimony).

Wherefore this plaintiff demands judgment that the findings and order or award complained of be set aside, and for such other or further judgment, order or relief as the circumstances may warrant.

E_____ F_____
Plaintiff's Attorney

Note: Insurance Company, if any, must be joined as a defendant when claim is against an insured employer. The Industrial Commission must always be named as a defendant. See Sec. 102.23 supra.

STATE OF WISCONSIN

INDUSTRIAL COMMISSION OF WISCONSIN

PETITION FOR REVIEW OF FINDINGS AND ORDER OF COMMISSIONER OR EXAMINER

WORKMEN'S COMPENSATION ACT

In the Matter of

----------,
Applicant,

vs.

----------,

----------,
Respondent,

----------,
Insurance Carrier.

TO THE INDUSTRIAL COMMISSION OF WISCONSIN, MADISON, WISCONSIN.

The undersigned hereby makes application for a review of the findings of the examiner in the above case issued on the ---------- day of commissioner

---

The specific finding(s) appealed from, and which petitioner claims are unwarranted by the evidence are as follows:

(Petitioner)

Address----------

Dated ---------- 19------

NOTE CAREFULLY: Petition must be filed with the Industrial Commission at Madison, Wisconsin, within twenty days from the date that a copy of the findings or order of the commissioner or examiner was mailed to the last known address of the parties in interest. If not filed within twenty days, such findings or order shall be considered the findings or order of the Industrial Commission as a body. See Sec. 102.18 supra.

STATE OF WISCONSIN

INDUSTRIAL COMMISSION OF WISCONSIN

ANSWER TO PETITION FOR REVIEW OF FINDINGS AND ORDER OF COMMISSIONER OR EXAMINER

WORKMEN'S COMPENSATION ACT

In the Matter of

----------,
Applicant,

vs.

----------,

----------,
Respondent

TO THE INDUSTRIAL COMMISSION OF WISCONSIN, MADISON, WISCONSIN:

The answer of ---------- who is the ---------- in the above matter, contests the petition for review prayed for by the petition herein, upon the grounds that the findings and order made are proper and correct for the following reasons:

(Respondent)

Address----------

Dated ---------- 19------

NOTE: Separate answer should be made to each finding alleged by the petitioner to have been in error.

(Copy of this answer should be sent to opposing party or his counsel.)

TABLE I—PRESENT VALUE AT 3 PER CENT COMPOUNDED ANNUALLY OF $1.00 PER WEEK, PAYABLE AT THE END OF EACH WEEK FOR ANY TERM FROM ONE WEEK TO ONE THOUSAND WEEKS.

To find the present value of any sum payable weekly, multiply that sum by the present value of $1 payable for the number of weeks for which such sum is payable.

Example: To find the present value of $14.42 payable at the end of each week for 208 weeks, multiply $14.42 by the present value of $1 payable weekly for 208 weeks (shown in the table to be $196.1184). $14.42 x 196.1184 equals $2,828.02.

TABLE 2—REDUCTION IN NUMBER OF WEEKS OF COMPENSATION PAYABLE FOR PERMANENT PARTIAL DISABILITY CASES, DUE TO AGE OF EMPLOYEE

(Section 102.44 (3) and 102.53 (2))

Starting at age 51, the number of weeks for which compensation is payable is reduced by 2½% per year (with no reduction in excess of 50 per cent).

Such reductions for age apply to both:

1. Scheduled Permanent Partial Disability Cases, listed in Section 102.52.
2. Relative Permanent Partial Disability Cases under Section 102.44 (3) (a) and (b).

Last Attained Age of Injured Employee, on Date of His Injury	1 Use for Scheduled P.P.D. Cases, as Required by Section 102.53 (2) Cumulative percentage reduction in the number of weeks of compensation payable	2 Use for Relative P.P.D. Cases, under Section 102.44 (3) (The aggregate number of weeks of indemnity payable shall bear such relation to the number of weeks shown in Column C below, as the nature of the injury bears to one causing "Permanent Total Disability" (1))	
		Number of weeks of indemnity allowed for the stated "Permanent Total Disability" (2)	Illustration: For an Injury which Resulted in a Disability Equivalent to 50% of the Stated Permanent Total Disability Number of weeks of indemnity payable (Take 50% of Col. C)
A	B	C	D
50 or under	0	1000	500
51	2.5%	975 wks.	487.5 wks.
52	5.0	950	475.0
53	7.5	925	462.5
54	10.0	900	450.0
55	12.5	875	437.5
56	15.0	850	425.0
57	17.5	825	412.5
58	20.0	800	400.0
59	22.5	775	387.5
60	25.0	750	375.0
61	27.5	725	362.5
62	30.0	700	350.0
63	32.5	675	337.5
64	35.0	650	325.0
65	37.5	625	312.5
66	40.0	600	300.0
67	42.5	575	287.5
68	45.0	550	275.0
69	47.5	525	262.5
70 or over	50.0	500	250.0

(1) This "Permanent Total Disability" (Section 102.44 (3)) is merely a legal standard for determining the number of weeks of compensation to be paid. Payment of compensation for a case of Permanent Total Disability is for life, instead of for a limited number of weeks. See Section 102.44 (2).

(2) Reduced for age, by 2½% per year. The average number of years in labor force remaining declines as one advances in age.

TABLE 3—CHILDREN'S ADDITIONAL DEATH BENEFITS

Percentage of the "Average Annual Earnings" of the Deceased Parent Payable to Children of Specified Ages, Under Section 102.49 (a)

Line No.	Age of Child on Date of Death of Parent	Percentage of one "Average Annual Earnings" Payable
1.	One year or under (or a posthumous child)	106.66667%
2.	Two years or under, but more than one year	100.00000
3.	Three years or under, but more than two years	93.33333
4.	Four years or under, but more than three years	86.66667
5.	Five years or under, but more than four years	80.00000
6.	Six years or under, but more than five years	73.33333
7.	Seven years or under, but more than six years	66.66667
8.	Eight years or under, but more than seven years	60.00000
9.	Nine years or under, but more than eight years	53.33333
10.	Ten years or under, but more than nine years	46.66667
11.	Eleven years or under, but more than ten years	40.00000
12.	Twelve years or under, but more than eleven years	33.33333
13.	Thirteen years or under, but more than twelve years	26.66667
14.	Fourteen years or under, but more than thirteen years	20.00000
15.	Fifteen years or under, but more than fourteen years	13.33333
16.	Sixteen years or under, but more than fifteen years	6.66667
17.	Older children who are physically or mentally incapacitated from earning	(b)

(a) Effective since July 1, 1953.
(b) To be determined by the Industrial Commission.

TABLE 4—ELIGIBILITY FOR BENEFITS FROM SECOND INJURY INDEMNITY FUND
Under Section 102.59

Attained Age of Employee, on Date of Injury	Disabilities shown must each be rated at least equal to one entitled to the minimum number of weeks of compensation listed below	
	For Pre-existing disability(1)	For the Second injury(1)
	(weeks)	(weeks)
Under 51	250.00	250.00
51	243.75	243.75
52	237.50	237.50
53	231.25	231.25

68	137.50	137.50
69	131.25	131.25
70	125.00	125.00
Over 70	125.00	125.00

TABLE 5—PERMANENT DISABILITIES: PERCENTAGE OF LOSS OF USE AS COMPARED WITH AMPUTATIONS AT INVOLVED JOINTS

SHOULDER

Total ankylosis at the shoulder with arm at side, scapula fixed	75%
Total ankylosis at the shoulder with arm at side, scapula free	55%
Limitation of active elevation to 45° but otherwise normal	35%
Limitation of active elevation in all directions to 90°, but otherwise normal	20%
Limitation of active elevation to 135% but otherwise normal	5%

ELBOW

Ankylosis of elbow joint at 45° less than full extension (radio-ulnar motion destroyed, hand 45° less than fully pronated)	60%
Total ankylosis of arm at elbow at right angles	
With radio-ulnar motion intact	50%
With radio-ulnar motion destroyed (hand 45° less than fully pronated)	70%
Ankylosis of arm at elbow at 45° less than full extension with radio-ulnar motion intact	45%
Limitation of motion of elbow joint (radio-ulnar motion unaffected)	
Remaining range, 90°–135°	20%
Remaining range, 135°–180°	35%
Ankylosis of radius and ulna, estimated at elbow joint (hand 45° less than fully pronated)	20%

WRIST

Ankylosis, straight position	25%

FINGERS

Complete ankylosis

Thumb	Mid-position	Complete Extension
Distal joint only	25%	35%
Proximal joint only	15%	20%
Distal and proximal joints	35%	65%
Distal, proximal and carpometacarpal joints	85%	100%

Fingers		
Distal joint only	25%	35%
Middle joint only	75%	85%
Proximal joint only	40%	50%
Distal and middle joints	85%	100%
Distal, middle and proximal joints	100%	100%

Loss of Motion

Fingers	Loss of flexion	Loss of use	Loss of Extension	Loss of use

	50% =	25%	50% =	25%
	60% =	30%	60% =	40%
	70% =	35%	70% =	75%
	80% =	40%	80% =	85%
			90% =	100%

HIP

Ankylosis in alignment for normal standing position ---------- 50%

Shortening of leg (no posterior or lateral angulation, age 50 or less)

1 inch ---------- 7%

1½ inches ---------- 14%

2 inches ---------- 22%

KNEE

Ankylosis at 170° ---------- 40%

Limitation of motion, remaining range 135°–180° ---------- 20%

ANKLE

Ankylosis—favorable position 10 to 15 degrees equinus without loss

Loss of inversion and eversion with full dorsi and plantar flexion

Ankylosis—favorable position with loss of inversion and eversion -- 40%

Loss of inversion and eversion with full dorsi and plantar flexion remaining ---------- 15%

ANKLE

Ankylosis—Favorable position 10 to 15 degrees equinus without loss of inversion and eversion ---------- 30%

Ankylosis—Favorable position with loss of inversion and eversion -- 40%

Loss of inversion and eversion with full dors; and plantar flexion remaining ---------- 15%

INDUSTRIAL
COMMISSION
OF WISCONSIN

FACTS ABOUT The WISCONSIN WORKMEN'S COMPENSATION LAW

With Amendments
to August 1, 1965

70000—03; R70000—03

Industrial Commission of Wisconsin

JOSEPH C. FAGAN
Chairman

CARL E. LAURI
Commissioner

GENE A. ROWLAND
Commissioner

STEPHEN J. REILLY
Secretary

RALPH E. GINTZ
Director of Workmen's Compensation

FACTS ABOUT THE WISCONSIN WORKMEN'S COMPENSATION LAW

1. Q: What does the Wisconsin Workmen's Compensation Act do?

   A: It provides for medical and money benefits to employes injured by reason of their work, and for death benefits to their dependents. It is administered by the Industrial Commission, Madison, Wisconsin.

INJURIES COVERED

2. Q: What injuries are covered?

   A: Mental and physical harm of all kinds, whether due to accident or disease, and also accidental damage to artificial members, dental appliances, and teeth, also eye glasses and hearing aids provided they are damaged in an accident which causes some personal injury, although slight.

3. Q: Are all occupational diseases covered?

   A: Yes, all diseases due to employment, such as silicosis, lead poison-

ing, hernia, dermatitis, and loss of hearing, caused by exposure over a period of time to conditions which result in injury.

CONDITIONS OF LIABILITY

4. Q: What must an employe show to collect benefits?

   A: That he and his employer were subject to the compensation act; that he was injured while performing service for his employer; that the injury was not intentionally self-inflicted; and that his injury was caused by his work.

5. Q: Is an employe who is injured while going to or from work entitled to benefits?

   A: Yes, but only if he is on the premises of his employer at the time, or on premises where his work is to be done. If he is actually doing work for his employer, or is being transported by the employer when injured, he will be entitled to benefits whether or not he is on the employer's premises when hurt. An employe whose job requires him to travel is performing service at all times while on a trip, except for purely personal acts. He is covered while traveling in trains, cabs, or while in eating places or hotels, provided he has not deviated for a private or personal purpose. Actions reasonably necessary for living, such as eating, bathing, etc., are not regarded as deviations.

6. Q: What employers are subject to the act?

   A: (1) All employers, except farmers, who have at any time, even momentarily, employed three or more

persons in their business and have not elected not to be subject to the act; (2) all employers, except farmers, who usually employ three or more persons in their business are compulsorily subject and may not withdraw; (3) the state, counties, cities, villages and school districts regardless of the number of employes. Employers of domestic servants and other persons not employed in the business of the employer are not subject but the employer may voluntarily become subject by taking a policy of workmen's compensation insurance. (4) A farmer who employs 6 or more employes on 20 or more days in a calendar year becomes subject to the act. Other farmers may voluntarily elect to come under the law by taking out workmen's compensation insurance. Certain specified close relatives are not counted as employes in determining whether the farmer is subject.

7. Q: Suppose the employer has two employes in one business and one in another, or two employes in one city and one in another?

A: The employer becomes subject to the act when he has three employes, whether in one or more businesses or locations.

8. Q: If an employer is subject to the act, may an employe sue in court for injury if he prefers?

A: No; it is the only remedy between them for personal injury arising out of employment.

9. Q: If an employe works for a contractor who is not subject to the act, or who has no insurance, may the employe hold liable the princi-

pal employer for whom the contractor performs service?

A: Yes, provided the principal employer is subject to the act. He could not, for example, hold a farmer as principal employer unless the farmer had become subject to the act, nor could he hold a principal employer who had never employed more than two persons and had not become subject to the act.

EMPLOYES COVERED

10. Q: May minors receive compensation?

A: Yes. Minors under the act are competent to contract and receive compensation benefits, as are adults.

11. Q: May employes agree that in case of injury no benefits will be claimed?

A. No, except epileptics and those totally blind, and those only if they have given notice to the commission and the employer in advance, and then only for such injuries as are caused by epilepsy or blindness. Any other agreement is illegal and absolutely void.

WAGE BASIS

12. Q: What is the basis for compensation?

A: Seventy per cent of the normal full time wage at the time of injury in the employment in which the employe works at that time. Overtime is counted only if he has worked six calendar weeks or more for the employer and then only if the average weekly wage earned is higher than the normal

full time wage. For example, if the normal full time weekly wage is $60, but over a six week period the employe has put in overtime and earned $450, his actual average weekly wage is $75, and compensation is based on such wage. If, however, during the six week period the employe has lost a good deal of time and has earned only $360 or less, his wage will be $60 per week, based on normal full time.

13. Q: How is the wage of a part time worker fixed?

A: On the wage of a normal full time worker. For example, if a part time worker works for one hour per day, and normal full time workers in the same job work eight hours a day, the part time worker's wage is taken on the basis of an eight hour day.

14. Q: What is the smallest weekly compensation?

A: Minimum weekly wage is $12.50 and minimum weekly compensation 70 per cent of that wage, or $8.75. This is due no matter how small a wage the employe earns. Minimum weekly wage is always at least 30 times the hourly rate if such wage amounts to more than $12.50 per week. Minimum weekly wage for permanent disability is $20, with weekly compensation 70 per cent of that wage, or $14.

15. Q: What is the maximum compensation?

A: Maximum compensation is $68 for temporary, permanent total, and death. For permanent partial disability, the maximum compensa-

tión is $46. No matter how high the wage, no employe can receive more than these amounts except for penalties because of violation of a safety order, or because of illegal hiring of a minor.

16. Q: Are tips counted in determining wage?

A: All things of value, as board and room, tips, bonuses, etc., are counted.

17. Q: Must notice of injury be given to the employer?

A: Notice must be given within 30 days from the date of injury, or the right to compensation may be barred. Injury should be reported immediately, or as soon as possible to the foreman or other designated person to avoid doubt about the claim, and also so that medical treatment may be promptly given.

18. Q: Suppose notice is not given within 30 days?

A: Claim may still be established, but if the employer can show he was misled, benefits will not be payable.

FILING OF CLAIMS

19. Q: How soon must claim be made where no compensation has been paid?

A: Application for adjustment of claim must be filed with the Industrial Commission within two years from the date of injury. The time for filing application may be extended to six years if it can be shown that the employer knew or ought to have known within the two year period that the employe had sustained the injury.

20. Q: Suppose the employe' does not learn within two years than an occupational disease was caused by his work?

A: The time is then extended for two years from the time he knew or should have known of the connection between his disease and his work, but is not extended beyond six years from the last day of work before his disability commences.

21. Q: When a claim is made, has the employer a right to have physical examination of an employe made by a doctor?

A: Yes, in order to learn about the employe's disability, so he may know whether to pay compensation. If the employe fails to report for reasonable examination as requested from time to time, his compensation may be stopped. The employe may have his doctor present at the time of examination if he wishes. If the examination is considered unreasonable, the matter may be submitted to the commission for decision. The employe is entitled to compensation for time lost and to his traveling expense, if any, in submitting to examination.

22. Q: Suppose a dispute arises and the parties wish to settle the claim?

A: They may do so, but always subject to the commission's approval. If the commission does not approve settlement, it has no effect, and further claim may be made. All compromise agreements are subject to review by the Industrial Commission within one year.

WHO BEARS COST?

23. Q: May an employer charge the employe for the cost of compensation insurance or benefits?

A: No; the law makes that illegal and provides penalties.

24. Q: Should an employe sign receipt for compensation?

A: Yes, but the signing of receipt does not prevent him from claiming and recovering additional compensation even though the receipt may state that the amount paid is in final settlement.

HEARING PROCEDURE

25. Q: In case of dispute, what may the employe do to obtain compensation?

A: He may file his application for adjustment of claim with the Industrial Commission, Madison, Wisconsin. Forms are supplied by the commission upon request. After application is filed, hearing is set as soon as possible at a selected center.

26. Q: Must the employe be represented at hearing by attorney?

A: No; he may appear in person, by agent or by attorney.

27. Q: If an employe is not represented by attorney, who assists him in bringing out the facts?

A: The commission's examiner who conducts the hearing will ask questions of all witnesses present at the hearing. (See 31. Q. and A.)

28. Q: Is there any limitation as to attorney's fee?

A: The law allows an attorney to charge up to 20 per cent of the amount recovered, unless there is no dispute and no need for hearing, when the fee charged cannot exceed ten per cent and not more than $100 in any case.

29. Q: Who must pay the attorney's fee?

A: The person making claim must pay the fee. It is well to have a clear understanding with the attorney on the fee.

30. Q: May a union representative represent an employe at hearing?

A: Yes; any person, upon proper showing, may obtain permission from the examiner to represent a claimant.

31. Q: Must the employe have witnesses at hearings?

A: Witnesses are not needed as to points not in dispute. As to points in dispute, appearance of witnesses should be arranged. Each party must pay the cost of his own witnesses. If there is question as to what witnesses are needed, and no lawyer is hired, the commission may be asked at the time of filing application, or as soon as possible before hearing.

32. Q: Are doctors' reports admissible as evidence for the employe?

A: Yes, of doctors licensed and practicing in Wisconsin and of doctors outside Wisconsin to whom the claimant has been sent for examination or treatment by the employer or insurance company. These must be notarized or certified, on forms provided by the commission, and filed with the

commission at least 15 days before the time of hearing. They should be presented at the time application is filed or as soon thereafter as possible. Forms are supplied by the commission on request.

33. Q: Who conducts hearings and decides cases?

A: Attorney examiners of the Industrial Commission.

APPEALS

34. Q: May there be appeal from the examiner's findings?

A: Yes, to the Industrial Commission as a body. This must be done within 20 days from the date of the order made by the examiner. If petition for review is not filed within 20 days from that date, the commission and the court lose jurisdiction.

35. Q: What further appeals are possible, after appeal to the commission?

A: One to the Circuit Court of Dane County within 30 days from the order of the commission as a body, and to the Supreme Court within 30 days from notice of entry of judgment of the Circuit Court.

EXEMPTION FROM DEBT

36. Q: May compensation be assigned?

A: No; neither can it be taken for debt, except for Federal Income Tax. It is not necessary to report compensation payments for income tax purposes, as income tax is not charged on workmen's compensation benefits.

LIABILITY FOR COMPENSATION

37. Q: Who pays compensation?

A: Most employers carry insurance so that the insurance company pays benefits. Some employers are "self-insurers" and pay compensation directly. In either case, the employer is primarily responsible for payment.

38. Q: Are employers required to insure their compensation liability?

A: All employers subject to the act are required to insure unless excused by the Industrial Commission on a showing of financial ability to pay claims. Only a small number of employers are "self-insurers." Failure of employers to insure unless excused calls for heavy penalties.

39. Q: If a person is hurt by negligence of a "third party" may he take compensation and also sue the third party?

A: Yes. He will then receive his full compensation benefits and also one-third of the net amount recovered from the third party. All costs of collection, including attorney's fees, are taken out before division of proceeds is made. The insurance company or employer is then repaid the amount paid or to be paid as compensation, and if any balance remains, that also is paid to the employe. Action against a third party is usually by joint action of the employer or his insurance carrier and the injured employe.

MEDICAL BENEFITS

40. Q: What are the benefits under the act?

A: (1) Medical treatment; (2) compensation for lost time, wage and disability; (3) death benefit; (4)

maintenance during rehabilitation training.

41. Q: What medical benefits are provided?

A: Every sort of medical or hospital treatment reasonably necessary. Treatment by a doctor of osteopathy or a chiropodist (foot doctor) is included. Treatment by a masseur or physical therapist is included when prescribed by a regularly qualified physician. Artificial limbs and appliances of all kinds when needed are also to be provided but are not required to be replaced. Employes are entitled to compensation for lost time and for necessary traveling expense when submitting to treatment.

42a. Q: Is treatment by a chiropractor provided?

A: There is no liability for chiropractic treatment unless such is prescribed by a regularly qualified physician.

42b. Q: Is Christian Science treatment provided?

A: Christian Science treatment may be provided in lieu of medical treatment, unless the employer has filed notice with the commission not to provide such treatment.

43. Q: Is there any limit as to medical and hospital benefits?

A: Absolutely none, except treatment must be reasonably necessary and the expense must be reasonable.

44. Q: Who supplies the physician?

A: The employer must give the employe his choice from a reasonable

number of doctors to be listed on a panel. The employe is also entitled to a second choice of physician if he is dissatisfied with the first physician chosen. The commission may, in addition, permit choice of some other doctor upon proper showing.

45. Q: What is a "reasonable number" of physicians?

A: That is to be determined by the commission in each case. Most employers list a very wide choice. If the employe believes the employer does not list an adequate number, or that proper treatment is not being given, he should take the matter up with the commission.

46. Q: Must the employe give notice to the employer that he needs treatment?

A: Yes; otherwise he must bear the expense himself, except that in case of emergency, the employer becomes liable for the reasonable value of necessary treatment before the time that it is possible to give notice. In case of occupational disease he may recover the reasonable expense of treatment incurred before he knew that his work caused his condition, even though notice is not given.

47. Q: Need artificial members, when worn out, be replaced?

A: No; only one suitable member is required to be supplied. If the member supplied is not suitable, a suitable one must be supplied.

48. Q: Suppose the employe refuses medical treatment?

A: He will lose his rights to compensation so far as his refusal results

in greater disability.

PAYMENT AND BASIS OF COMPENSATION

49. Q: When does compensation commence?

A: There is no compensation for the first three days following the day of first disability except as hereafter noted. For example, an employe who is injured and leaves work on the first day of the month is entitled to compensation only for such disability as results on and after the fifth day of the month. The first payment is due on the eleventh day for such disability as has then resulted, and weekly thereafter during disability. If there is disability following the tenth day after the day of first disability, compensation is also payable for the first three days. If compensation is not received within two weeks after injury, the employe should inform the commission.

50. Q: Are Sundays counted in the first three days?

A: No, unless the employe works on Sundays. Sundays are, however, counted in the running of the ten day period.

51. Q: Suppose there is disability which causes only partial wage loss?

A: Proportionate compensation is then paid; for half wage loss half of compensation payable for total disability is to be paid. If total disability calls for $68 compensation, half wage loss calls for $34.

52. Q: Is compensation payable for all days lost?

A: For each day except Sunday, one-sixth of weekly compensation is payable. That is true whether the employe works on Sundays or more or less than six days per week.

53. Q: Suppose disability prevents a man from ever earning again?

A: He receives compensation for the rest of his life.

54. Q: Suppose disability will always remain to the head or body, but some work can be done?

A: Compensation is then paid for a limited number of weeks, dependent on age, but never for more than 1,000 weeks in addition to the "healing period." To illustrate, if 50 per cent disability results to one 50 years of age or under, compensation is payable for 500 weeks, if twenty-five per cent disability, to 250 weeks, etc. In cases of persons over 50 years of age, the basic number of weeks for permanent partial disability to the head or body decreases by 2½ per cent each year until age 70, at which age there is no further reduction.

REHIRING OF EMPLOYE

55. Q: Is an employer required to rehire an employe injured in the course of employment?

A: No, but if an employer refuses to rehire such an employe without good cause, or if the employer discriminates against such an employe, the employer is subject to a forfeiture of $50 to $500 in an action by the State of Wisconsin.

56. Q: Who is entitled to receive death benefits?

A: Only persons named in the compensation act, including husband, wife, children 18 or under, grandchildren, parents, brothers and sisters, and members of family.

57. Q: How much death benefit can be paid?

A: The largest payment (in case of total dependency) is $19,430 and the smallest, $4,000.

58. Q: Suppose a person is receiving compensation for permanent disability and then dies from some cause other than injury?

A: Of the balance remaining unpaid, up to $500 is applied on burial expense. The remainder becomes payable to dependents not, however, in a sum greater than such dependents would have received if death had resulted from injury.

59. Q: What may parents receive as death benefit?

A: If they were on friendly terms with the son or daughter, $2,000 is paid as death benefit. However, if parents were totally dependent, they may receive as much as $4,000 to $19,430, varying with the wage of the employe.

60. Q: What may other dependents receive?

A: They may receive the amount which they might have expected to receive from the employe as contribution to support, but not more than $19,430 in any case.

61. Q: In addition to death benefit, is burial expense payable?

A: Yes, but not more than $500.

62. Q: What is the provision for additional payments to children of a widow who herself is to receive benefits?

A: Children 16 or under living with the employe at the time of injury may receive benefits from a state fund created for that purpose. The amount varies with age up to a total of $5,181.33 for one child (one year or younger) and is payable at the rate of 13 per cent of the weekly amount paid to the widow or widower.

METHOD OF PAYMENT

63. Q: Are benefits payable in installments or in one sum?

A: The purpose of compensation payments is to replace wage loss as and when it occurs. All compensation, including death benefit, is to be paid in installments as are wages unless a showing is made to the commission that interests of the employe or dependent will be conserved by more rapid or lump sum payments.

64. Q: Do employes or dependents lose compensation if they receive a lump sum payment?

A: As payments are normally due only in installments, three per cent compound interest is charged when payments are made more rapidly or in one sum.

SCHEDULES OF BENEFITS

65. Q: In case of loss of a member such as a hand, arm, leg, foot, eye, etc., how is compensation paid?

A: Schedules in the act provide payment for a certain number of weeks for loss by amputation, as of toes, arms, feet, etc., and for loss of vision or hearing. Loss of an arm at the shoulder, for example, calls for payment to a person aged fifty or under of 500 weeks compensation in addition to compensation for healing period. Loss of vision of one eye calls for 250 weeks compensation; loss of hand at the wrist, 400 weeks; loss of foot at the ankle, 250 weeks; loss of thumb at the proximal joint, 100 weeks, etc.

66. Q: Does it make a difference whether the right or left member is lost?

A: No the amount is the same.

67. Q: Does age make a difference?

A: There are reductions of 2½ per cent for each year after age 50 in the number of weeks allowed. For example, one aged 60 when injured will have compensation reduced by 25 per cent in the number of weeks allowed with no further reduction after age 70.

68. Q: Suppose there is not loss by amputation, but stiffness or other disability?

A: A proportionate number of weeks is then payable. If, for example, the loss of use is one-half of the arm, 250 weeks would be paid instead of 500.

69. Q: Where more than one member, such as finger, arm, hand, leg, etc., is affected, is there special provision.

A: Yes, additional amounts are allowed for multiple injuries.

DISFIGUREMENT BENEFITS

70. Q: Suppose disfigurement results?

A: Additional compensation up to $4,857.50 may be paid for disfigurement of the face, head, neck, hand or arm. It must be shown that the disability is such as probably will cause wage loss — this because the employe is unable to obtain work or must accept a lower wage because of disfigurement.

INCREASED AND DECREASED COMPENSATION

71. Q: Suppose it can be shown that the employer or employe was negligent?

A: Negligence makes no difference as to payment of compensation except as there may be violation of a safety order.

72. Q: May compensation be increased for any reason?

A: Yes. If injury is caused by reason of a violation by the employer of the "safe place" statute, or of a safety order, or because of failure of an employer reasonably to enforce compliance by employes with a statute or order, 15 per cent increased compensation becomes payable to the employe or his dependents.

73. Q: May compensation be decreased for any reason?

A: Yes, if the employe fails to follow rules for his safety or to use safety devices which the law requires, adequately maintained and the use of which is enforced compensation may be decreased 15 per cent. If injury occurs because of

intoxication, compensation is also decreased 15 per cent.

74. Q: What about illegal employment of minors?

A: If an employer is required to have a permit to hire a minor and no permit is obtained, the employe will receive double compensation for his injury. If he is employed at prohibited employment (whether or not he has a permit), he will receive trebel compensation. Under provision of the Child Labor law, certain employments have been prohibited to minors of certain ages.

75. Q: Who pays increased compensation?

A: It is paid by the employer and not by the insurance company, except if the employer is insolvent.

PRE-EXISTING DISAB TY

76. Q: Suppose an employe already has disability and injury causes additional disability?

A: If disabilities are sufficiently serious, that is, if such as to call for payment of at least 250 weeks of compensation for each disability, he may receive additional payments from a state fund. The employer thus pays only for the disability caused by his work, and the fund pays additional compensation.

REHABILITATION BENEFITS

77. Q: What about rehabilitation benefits?

A: If the employe has a type of injury which makes it difficult or impossible for him to do work

previously performed, he may, during a period not exceeding 40 weeks, receive expenses of travel and costs of maintenance, provided rehabilitation instructions are received elsewhere than at the place of his residence. During the period of rehabilitation compensation is continued on the basis of wage loss.

78. Q: Is there provision for training in the use of artificial limbs?

A: Yes; during such period applicant will continue to receive compensation and is entitled to all training and expenses necessary to attain efficient use of artificial members and appliances.

REPORT OF INJURY BY EMPLOYE

79. Q: What should an employe do when he suffers injury?

A: He should report at once to his employer directly, or through a foreman or designated person; he should submit promptly to all necessary first aid and medical treatment; he should submit to medical examination by the employer's doctor from time to time as requested; if compensation is not promptly paid, he should notify the Industrial Commission. Many slight injuries produce serious results because first aid or medical treatment is not immediately procured. Many claims are hard to prove because immediate notice of injury was not given to the employer.

HOW TO OBTAIN INFORMATION

80. Q: If an employe has doubt as to his rights or duties, what should he do?

A: He should promptly submit his question to the Workmen's Compensation Division, Industrial Commission, Madison, Wisconsin, or if at Milwaukee, he may consult the commission's examiner at 819 North Sixth Street, First Floor.

WC-94

INDUSTRIAL COMMISSION OF WISCONSIN
4802 Sheboygan Avenue
MADISON, WISCONSIN 53702

In view of your recent injury, the Industrial Commission wishes to give the following information regarding benefits provided by the Workmen's Compensation Law.

MEDICAL TREATMENT

1. After you report your injury and the need for treatment, your employer is required to provide a list of a reasonable number of physicians from which you may select your doctor. You may have a second choice if you are dissatisfied with the first. You may also apply to the Commission for another physician if you are dissatisfied with the doctor supplied.
2. If you fail to select a doctor from a proper list **YOU** must pay your doctor and hospital bills.
3. **If you are refused a choice from a proper list of doctors, you may choose your own doctor.** Your employer or his insurance company will then be liable for necessary medical and hospital bills.
4. Upon request, you should submit promptly to reasonable medical examination by any doctor named by the employer or insurance carrier. Failure to do so will suspend compensation.

COMPENSATION

5. Compensation payments are due on the 11th day after the beginning of disability and weekly thereafter during disability. If you have not received payment by the 15th day after disability commences, or if payments are not made regularly during disability, take the matter up with your employer and write to us.
6. No compensation is payable for the first three days following the day of first disability unless you still have disability after the 10th day following the day of first disability. The day on which injury is sustained is not counted as a day of disability for payment of compensation.
7. For total disability, compensation is 70 per cent of your average weekly wage, but compensation cannot be more than $68.00 in case of temporary total disability, or for permanent total disability. For permanent partial disability, compensation cannot be more than $46.00, and for all types of disability cannot be less than $8.75 per week. For temporary partial disability, compensation is proportioned to wage loss.
8. If your wage was $97.15 per week or more, you should receive the highest compensation payable to any employe ($68.00 per week or $46.00 per week as above noted.) If correct compensation is not paid, write to us.
9. A fixed number of weeks of compensation is set by law for the loss or loss of use of a member, as a foot, hand, finger, toe, eye, etc. If you have any question, write the Industrial Commission.
10. Returning to work does not end compensation should your injury force you to quit and again be disabled.
11. Any employer who refuses without reasonable cause to rehire an employe injured in the course of employment is subject to a penalty or forfeiture.
12. Do not be afraid to sign receipts for compensation payments received. When any compensation has been paid, the law keeps your claim open for six years, unless hearing is had before the commission or compromise agreement is signed.
13. If any question is in dispute and you make a compromise settlement (accepting less than you claim due), this settlement becomes final, although it is subject to review on request made within one year. All compromises must be approved by the commission, and if not approved, claim will still be open.
14. Please fill out the enclosed postal card showing the date on which you actually received the first compensation payment. If the payment has not yet been received, please keep the card and fill it out when you receive the first payment. (See also instructions on card.) **It is very important that this postal card be accurately filled out and returned to the commission.**
15. Do not hesitate to write to the Industrial Commission if you have any questions regarding the Workmen's Compensation Law, or settlement of your claim. Be sure to give name of your employer at the time of your injury.

Workmen's Compensation Division
INDUSTRIAL COMMISSION OF WISCONSIN

P.S. For injuries occuring before August 1, 1965, the highest compensation rate for temporary disability or permanent total disability was $64.00 and the highest rate for permanent partial disability was $44.50.

EMPLOYER'S FIRST REPORT OF INJURY OR DISEASE

Form W.C. 12 (Was A-12)

THE STATE OF WISCONSIN
Department of Industry,
Labor and Human Relations
WORKMEN'S COMPENSATION DIVISION
P.O. Box 2209, Madison 53701

STATISTICAL CODING BLOCK		

Employer must make this report directly to the Department of Industry, Labor and Human Relations on the fourth day after employe leaves work if disability still continues. In death cases, report must be made within twenty-four hours. In case of permanent disability, or where more than three days of temporary disability is certain to result, make report at once.

1. Date of report | Made out by | Position of person making out report

2. Employer's name | Employer is ☐ Individual ☐ Partnership ☐ Corporation

3. Employer's address Street No. City or Town | Employer's Telephone No.

4. Nature of business Manufacture, trade, transportation, etc. Specific product.

5. Name of your insurance company (If "self-insurer" by commission's order, so state) | Policy No.

6. Place where injury or disease occurred Place name County State
☐ City ☐ Village ☐ Township

INJURED EMPLOYE

7. Name (First) (Middle) (Last) | Social Security No.

Employe's current address (No. and St. or R.F.D.) City State Zip | Sex ☐ Male ☐ Female | Married ☐ Yes ☐ No

8. Age | Date of birth | Length of time worked for you | If employe under 18 was permit on file?

9. Occupation | Under which classification of your policy were his wages earned?

10. Is injured an officer, partner, proprietor or manager? ☐ Yes ☐ No If yes, state his position

CHECK IF MAXIMUM WAGE CONCEDED. ☐ IF NOT, COMPLETE WAGE INFORMATION BELOW:

11. Wage rate at time of injury $ per Hr. Week Month Other

	Hrs. Per. Day	Hrs. Per Week	Days Per Week
12. Injured employe's scheduled work week at time of injury			
13. Normal full-time employment for injured's kind of work			

14. For the 52 weeks prior to the date of the injury, report the number of weeks worked in the same kind of work, and the total wage, salary, commission, and bonus or premium earned for such weeks, as follows:

No. of weeks worked	Gross amount (excluding bonus or premium) $	Bonus or premium $	If piece worker, no. of hours worked

15. In addition to cash wage, did employe receive board ..... room..... tips..... laundry .....

16. Are his wages carried on your regular pay roll upon which your policy premium is based? | If he is employed by a jobber or contractor, give name

INJURY

17. Date of injury month day year time last day worked

18. Did injury occur in the course of his regular employment? ☐ Yes ☐ No | Previous physical defects

19. Describe fully how accident or disease occurred. (Note machine or part, tool, object, substance or thing most directly contributing to the accident or disease, giving special attention to unsafe acts and to the kind of accident as "Struck By", "Caught In," "Burning," "Fall," etc.)

20. Did injury occur because of (a) Intoxication ..... (b) Failure to use safety devices ..... (c) To obey rules .....

21. Nature and extent of injury. (State exactly the part of the body affected and the character of the injury or disease)

22. If employe has returned to work, give date ..... If not, how long will he be away from work? .....
Did death result? If yes, give the name, relationship, age, and address of dependents.
☐ Yes ☐ No

ADMISSION OF SERVICE AND ANSWER TO APPLICATION

W. C. 19

STATE OF WISCONSIN
INDUSTRIAL COMMISSION
WORKMEN'S COMPENSATION DIVISION
MADISON, WISCONSIN

CLAIM NUMBER

APPLICANT	APPLICANT'S ATTORNEY

VERSUS

INSURANCE CARRIER

We are enclosing herein copy of an application for adjustment of claim which has been filed in this office. Under the rules of practice of the commission you will be given ten days within which to admit service and make your answer to the application. One copy should be mailed to us; one copy to the applicant or his attorney if he has one; and one should be retained for your record. Unless you deny liability you should proceed to pay compensation immediately, in accordance with the provisions of the law, and not require the applicant, as well as yourself, to incure the expense, incidental to a hearing before the commission. In the meantime all compensation which is concededly due and which has accrued should be paid and the commission notified. Payments clearly due should not be withheld because application has been filed.

THE RESPONDENT ABOVE NAMED, FOR ANSWER TO THE APPLICATION HEREIN, RESPECTFULLY STATES:

IT IS: (CHECK ONE)		
ADMITTED	DENIED	
		1. THAT APPLICANT SUSTAINED AN INJURY ON OR ABOUT THE DATE SET FORTH IN THE APPLICATION.
		2. THAT THE RELATIONSHIP OF EMPLOYER AND EMPLOYE EXISTED AT THE TIME OF THE ALLEGED INJURY.
		3. THAT THE PARTIES WERE SUBJECT TO THE WORKMEN'S COMPENSATION ACT AT THE TIME OF THE ALLEGED INJURY.
		4. THAT AT THE TIME OF THE ALLEGED INJURY THE EMPLOYE WAS PERFORMING SERVICE GROWING OUT OF AND INCIDENTAL TO HIS EMPLOYMENT.
		5. THAT THE ACCIDENT OR DISEASE CAUSING INJURY AROSE OUT OF THE ALLEGED EMPLOYMENT.
		6. THAT NOTICE OF INJURY WAS GIVEN EMPLOYER AS SPECIFIED IN APPLICATION.
		7. THAT APPLICANT WAS TEMPORARILY DISABLED FOR THE PERIOD STATED IN APPLICATION. IF DENIED, STATE TEMPORARY DISABILITY ADMITTED.
		8. THAT APPLICANT IS PERMANENTLY DISABLED TO THE EXTENT STATED IN THE APPLICATION. IF DENIED, STATE PERMANENT DISABILITY ADMITTED.
		9. THAT THE RATE OF WAGES AS SET FORTH IN APPLICATION IS CORRECT. IF DENIED, STATE WEEKLY WAGE ADMITTED.
		10. THAT THE ALLEGED EMPLOYER WAS INSURED UNDER THE WORKMEN'S COMPENSATION ACT AT THE TIME OF ALLEGED INJURY.

11. STATE EXACTLY WHAT MATTERS ARE IN DISPUTE AND YOUR REASON FOR DENYING LIABILITY. (USE OTHER SIDE, IF NECESSARY.) (IF ANY STATEMENTS ARE FOUND TO BE INCORRECT, YOU MAY FILE AN AMENDED ANSWER.)

History as described by patient

DIAGNOSIS (Please be as detailed as possible)

DISABILITY (Describe elements such as limitation of motion, pain, weakness, etc. and describe effect on working ability)

What amputation present | Stump hardy or tender

Record motion losses on reverse side

PRIOR DISABILITY

What previous disability

PROGNOSIS

Prognosis

Date able to return to employment | Date actually returned to work | Patient discharged?

What period of temporary partial disability?

What permanent disability has resulted?

If healing has not ended, what is minimum permanent disability expected?

What further treatment should be given?

Additional comments, if any:

Date | City | Signature of physician (in own writing)

Instructions for finger injuries

Please use statutory terms in referring to fingers, such as thumbs, index, middle, ring, and little fingers, and distal, middle, and proximal joints, where there is limitation of motion list separately the normal range of flexion in degrees, the *"degrees" loss of flexon*, and the *"degrees" loss of extension* for each joint of each finger. The Industrial Commission will evaluate the loss of use due to loss of motion of the fingers.

Where there are other elements of disability of the fingers, such as deformity, weakness, pain, or lack of endurance, give your opinion on the percentage loss of use as compared to amputation for such elements of disability and specify the joint at which such loss is estimated.

Physician's guide to estimating percentage of loss of use as compared with amputations at involved joints for ankylosis & motion loss only. Pain, loss of endurance, vascular changes, etc. would constitute additional disability.

SHOULDER

Total ankylosis at the shoulder with arm at side, scapula fixed	75%
Total ankylosis at the shoulder with arm at side, scapula free	55%
Limitation of active elevation to 45° but otherwise normal	35%
Limitation of active elevation in all directions to 90°, but otherwise normal	20%
Limitation of active elevation to 135% but otherwise normal	5%

ELBOW

Ankylosis of elbow joint at 45° less than full extension (radio-ulnar motion destroyed, hand 45° less than fully pronated)	60%
Total ankylosis of arm at elbow at right angles	
With radio-ulnar motion intact	50%
With radio-ulnar motion destroyed (hand 45° less than fully pronated)	70%
Ankylosis of arm at elbow at 45° less than full extension with radio-ulnar motion intact	45%
Limitation of motion of elbow joint (radio-ulnar motion unaffected)	
Remaining range, 90°–135°	20%
Remaining range, 135°–180°	35%
Ankylosis of radius and ulna, estimated at elbow joint (hand 45° less than fully pronated)	20%

WRIST

Ankylosis, straight position	25%

HIP

Ankylosis in alignment for normal standing position	50%
Shortening of leg (no posterior or lateral angulation, age 50 or less)	
1 inch	7%
1½ inches	14%
2 inches	22%

KNEE

Ankylosis at 170°	40%
Limitation of motion, remaining range 135°–180°	20%

ANKLE

Ankylosis—Favorable position 10 to 15 degrees equinus without loss of inversion and eversion	30%
Ankylosis—Favorable position with loss of inversion and eversion	40%
Loss of inversion and eversion with full dorsi and plantar flexion remaining	15%

STATE OF WISCONSIN
INDUSTRIAL COMMISSION

WORKMEN'S COMPENSATION DIVISION
HILL FARM STATE OFFICE BUILDING
POST OFFICE BOX 2209
MADISON, WISCONSIN 53701

Your application for hearing has been served. You will soon receive an answer from the insurance company or self-insured employer showing what matters are in dispute.

At the hearing, be ready to offer testimony or evidence on the points in dispute. Arrange to have any witnesses present you feel will help to prove your claim. If any necessary witness refuses to appear, we will send you subpoenas which will compel his attendance. The cost of serving the subpoenas and any other cost or charge by any of your witnesses must be paid by you.

You must have medical proof if there is a dispute as to how much temporary or permanent disability you claim, or whether the disability arose out of the injury. If this is not in issue, no medical proof is required.

To save the expense of having the doctor present at the hearing, you may use his written report on our form WC-16B which, if certified or notarized, becomes his testimony. Please write for forms immediately if you intend to use them, as we must have the completed forms 15 days before hearing. If you prefer, you may have the doctor testify in person, in which case the form is not required.

An employee may have an attorney or agent help him prepare and present his case. If there is no attorney, the commission's hearing examiner will ask questions necessary to bring out the testimony of witnesses.

If you wish an attorney, he should be seen promptly so that he may properly prepare the case. He may not charge more than 20 per cent of the amount he helps to recover.

If you have any questions, write to this office. If you are in the Milwaukee area, you may see our Examiner, Mr. Kische, at 819 North Sixth Street, or telephone 224-4211.

Sincerely,

WISCONSIN INDUSTRIAL COMMISSION

PHYSICIAN'S REPORT ON ACCIDENT OR INDUSTRIAL DISEASE IN LIEU OF TESTIMONY

(Prepare in duplicate and send both copies to Workmen's Compensation Division)

1. Name of Employe

2. Name of Employer

3. Date of accident or first illness

4. State in patient's own words the accident or work exposure to which he attributes the condition for which he saw you.

5. Give complete account of the nature and extent of disability, including subjective complaints, objective findings and your diagnosis.

6. Did you treat patient? If so, between what dates?

☐ YES ☐ NO

7. Date of last examination

Date disability from work began

8. Date injured was or will be able to return to full time work subject only to his permanent limitations.

9. Date injured was or will be able to return to a limited type of work

What limitations?

10. In your opinion, did the accident or work exposure described in Item 4 directly cause the disability?

☐ YES ☐ NO

11. If not directly, did the accident or work exposure in Item 4 cause the disability by aggravation or acceleration of a pre-existing condition?

☐ YES ☐ NO

(over)

12. Has accident or industrial disease resulted in any permanent disability?

☐ YES ☐ NO ☐ By aggravation of the following preexisting condition

13. What elements constitute disability (such as limitation of motion, deformity, weakness, pain, lack of endurance, etc.)? If limitation of motion, describe nature and percentage of limitation of each part of each member affected. (Make estimates on voluntary, not passive motion) If amputation, state exact point bone was amputated and whether stump is tender or hardy.

14. What percentage of disability to the member, eye, or ear involved, or to the entire body if injury is to torso or head, was caused by the accident or work exposure described in Item 4?

15. Do you expect that the above permanent disability will increase or that the condition will in any way improve? Please explain.

16. Do you expect that any further treatment will be necessary to cure or relieve from the effects of this injury?

☐ YES ☐ NO if YES, explain

17. Previous to this injury, did employe have any permanent disability?

☐ YES ☐ NO If YES, explain

18. I am a physician licensed in and practicing in Wisconsin

Year of graduation

Medical College

Physician's typed or printed name

Physician's address

CERTIFICATION

I hereby certify, subject to the penalty of fine and/or imprisonment, as provided in Sec. 943.39 of the Wisconsin Statutes, that the above report truly and correctly sets forth the history, my findings, diagnosis and opinion.

.....M. D.
(Signature of Physician)

Date

Section 102 17 (1) (as) provides that the contents of verified or certified medical and surgical reports presented by claimants for compensation shall constitute prima facie evidence as to the matter contained therein. Reports must be filed with the commission in duplicate fifteen days prior to the date of hearing to be acceptable as evidence. If not so filed, it will be necessary to produce the doctor to give oral testimony at the time of hearing.

U.S. DEPARTMENT OF LABOR
W. Willard Wirtz, Secretary

Workmen's Compensation Enactments in 1965

OVER 200 AMENDMENTS to workmen's compensation laws, in 43 States and Puerto Rico, were made in 1965. Of special significance were amendments providing full medical benefits in West Virginia; substantial increases in coverage, in Maine, Michigan, and Oregon; important administrative changes, in California and Oregon; special encouragement of rehabilitation services, in Michigan; and elimination of the limitation on the amount or period of benefits for permanent total disability or death, in Maine. In the latter State, the dollar limitations on maximum weekly benefits for disability or death were also removed; the maximum weekly benefits will be two-thirds of the average weekly wage in the State, as computed by the Employment Security Commission.

Administration

California and Oregon provided for extensive reorganization of the administration of their workmen's compensation laws. California divided the present functions of the Industrial Accident Commission between the Administrative Director of the Division of Industrial Accidents and a Workmen's Compensation Appeals Board of seven members, appointed by the Governor for 4-year terms. All judicial powers are vested in the Board, five members of which must be experienced attorneys. A medical advisory committee was also established.

The Oregon law creates a State Compensation Department to replace the Industrial Accident Commission. The Department will operate as a separate insurance company under a manager appointed by the Governor for a 4-year term. For the first time, private insurance carriers will be permitted to underwrite workmen's compensation. A Workmen's Compensation Board will regulate all workmen's compensation insurance in the State—the State Industrial Accident Fund, private carriers, and self-insurers. It will certify "direct responsibility" (self-insured) employers under a bond of not less than $100,000, assess employers and provide penalties for violations, supervise accident prevention and rehabilitation activities, and determine permanent disability ratings. Appeals will go from hearings officers to the Board, and from there to a circuit court judge; the jury trial has been eliminated.

Alaska's Workmen's Compensation Board was expanded from 3 to 5 members and divided into two panels, each panel to include the Commissioner of Labor or his designated representative, a representative of industry, and a representative of labor. The latter two members are to be appointed by the Governor.

Michigan increased its Workmen's Compensation Appeal Board from 5 to 7 members. Nebraska increased the number of judges on its Workmen's Compensation Court from 3 to 4; their terms were increased to 8 (from 6) years.

Hawaii strengthened its act by providing that the employer shall make a final report within 30 days after final payment. The report is to show the total payments made, the date of termination of temporary total disability, and such other information as the Director may require.

The California Labor Code relating to public works was amended to provide that every contractor to whom a public works contract is awarded shall sign and file a certificate stating that he is aware of the requirement for workmen's compensation insurance or self-insurance, and that he will comply with such provisions before commencing work.

Indiana law now provides that when the Industrial Board determines that an employer has acted in bad faith in adjusting and settling an award or has not pursued the settlement with diligence, then, if compensation is awarded, the Board shall fix the amount of the claimant's attorney fees and such fees shall be paid to the attorney by the employer and shall not be charged against the award to the claimant.

Maximum Benefits

Twenty-five States have increased maximum benefits for temporary total disability, as shown in the accompanying table. Fifteen States, the District of Columbia, and two Federal programs now pay maximum benefits of $60 or more; another seven States pay maximums of $55 or more. In several States, maximum benefits were also raised for permanent total disability, for partial disability, and for death. In addition,

(Reprinted by the Bureau of Labor Standards from The Monthly Labor Review, November 1965)

Wyoming raised benefits for permanent total disability and for death, and Idaho and South Dakota raised death benefits.

Burial allowances were increased to $750 (from $550) in Minnesota and (from $500) in Illinois, Michigan, and New Mexico; to $650 (from $500) in Nevada; to $600 (from $500) in Washington and (from $400) in Oregon; and to $500 (from $400) in Nebraska.

Medical Benefits

Several States liberalized medical benefits, so that all but 10 now provide unlimited benefits. In West Virginia, benefits are initially limited to $3,000, but the administrative agency may authorize additional benefits without limit. South Dakota removed its 20-week limitation; while retaining its initial limitation of $1,700, it now allows the Industrial Commissioner to authorize additional medical care to a maximum of $20,000 (instead of $2,900). Michigan deleted its provision that benefits beyond 6 months could be extended only for additional 6-month periods. New Mexico increased the initial amount of benefits to $5,000; the district court can extend benefits to $25,000. In Montana, the Industrial Accident Board may now order the replacement or repair of any prosthetic appliance damaged in an industrial accident. The New York law had already specified "full medical care;" the term has been extended to include optometric services and the provision of eyeglasses, false teeth, and artificial eyes. Nebraska now requires employers to furnish the first prosthetic devices needed by the injured worker, as part of the medical benefits to be provided; previously only devices necessary for treatment had been required.

Rehabilitation

Michigan provided that an injured worker shall be entitled to prompt medical rehabilitation services and, when necessary, vocational rehabilitation services. The vocational rehabilitation shall not extend beyond 52 weeks, unless the Workmen's Compensation Department orders its extension for up to 52 additional weeks. The Department may also order that the worker receive additional payments for transportation or for any other extra expense during the period of rehabilitation.

California provided that the Administrative Director may set up a rehabilitation unit to foster, review, and approve rehabilitation plans, to be initiated by the employer or insurance carrier. In addition to temporary disability benefits, the injured worker shall receive $52.50 weekly for up to 26 weeks as an advance on his permanent disability award.

Coverage

Oregon amended its law to provide for compulsory rather than elective coverage; it is estimated that an additional 200,000 workers will be covered. The New Hampshire law, which formerly covered employers of three or more persons, now covers employers of two or more.

In Maine, employers are now covered if they employ four or more workers (formerly six), and agricultural employment other than seasonal is now subject to the act. ("Seasonal" is defined as employment beginning with the planting season

MAXIMUM WEEKLY TEMPORARY TOTAL DISABILITY BENEFITS INCREASED IN 1965

State	Former maximum	New maximum	State	Former maximum	New maximum
Arkansas	$35.00	$38.50	New Hampshire	$45.00	$50.00
Colorado	43.75	49.00	New Mexico	38.00	40.00

Illinois	51.00–61.00	[1] 62.00–76.00	North Dakota	45.00–60.00	50.00–65.00
Indiana	42.00	45.00	Oklahoma	37.50	40.00
Iowa	34.00–50.00	40.00–56.00	Oregon	32.31–66.92	39.23–73.85
Maine	42.00	([3])	Tennessee	36.00	38.00
Maryland	48.00	55.00	Utah	40.00–54.25	42.00–60.00
Michigan	33.00–57.00	[2] 58.00–91.00	Vermont	[4] 29.00	[4] 41.00
Missouri	47.50	52.00	Washington	38.08–71.54	42.69–81.23
Montana	29.00–50.00	35.00–56.00	West Virginia	38.00	42.00
Nebraska	40.00	42.00	Wisconsin	64.00	68.00
Nevada	45.00–62.31	48.75–67.50			

[1] For the first 64 weeks; thereafter reduced to $56–$68.

[2] Two-thirds of State's average weekly wage as computed by the Employment Security Commission.

[3] Effective Sept. 1, 1965. The maximum benefit rates will increase to $61–$92 on Sept. 1, 1966, and $64–$93 on Sept. 1, 1967. Thereafter, the maximum rates will be adjusted on the basis of $1 increase or decrease for each $1.50 change in the State's average weekly wage.

[4] Plus $2.50 for each dependent child under 21.

and terminating at the completion of the harvest season.)

The Michigan law was amended to cover employers of one or more persons working for 35 hours or more a week for 13 weeks or more during the preceding 52 weeks. In addition, employers of agricultural workers will be covered if they have employed three workers or more on a regular basis for 35 hours or more a week for 13 weeks or more during the preceding 52 weeks. As of May 1, 1966, agricultural employers with one or more employees working 35 hours or more a week for 5 consecutive weeks or more are to provide medical and hospital benefits to employees injured at work; this does not eliminate any remedy otherwise available to the employee against the employer.

A few States have added coverage, usually for specified public officials. Missouri covered employees of the Division of Welfare. Oklahoma included garbage and sanitation departments and fire departments within the provisions for hazardous employment. North Dakota added appointed officials of the State, and elective and appointed officials of political subdivisions, including municipal corporations. Nevada added regular and volunteer firemen, under certain conditions, to its occupational disease act. Vermont extended coverage to every elected or appointed executive officer of a corporation. Wyoming provided coverage for certain domestic aircraft pilots and flight personnel. On the other hand, Idaho exempted working members of a partnership from compulsory coverage, and California has expanded its definition of nonemployees to include athletes (other than regular employees participating in sports or athletics) who receive no compensation for such participation other than the use of athletic equipment, uniforms, transportation, meals, or lodging.

Subsequent Injury Fund

Minnesota amended its subsequent injury fund provision to permit the employer, in cases of subsequent injury, to be reimbursed from the Special Fund, under specified conditions, for all compensation paid in excess of 26 weeks of cash benefits and $1,000 in medical expenses. If it is determined that the subsequent injury, or the disability or death resulting from it, would not have occurred except for the preexisting physical impairment, the employer shall be reimbursed for the entire amount of compensation paid. Previously, the employer was reimbursed only for benefits paid in excess of 104 weeks of compensation. The requirement for registration with the Industrial Commission of employees with preexisting impairments is retained, but it is newly provided that an employee will be deemed to be registered if his preexisting impairment was caused by an injury for which compensation had been paid under the Minnesota workmen's compensation act.

Occupational Diseases

Added to the list of occupational diseases was asbestosis, in Montana; tuberculosis resulting from the care of patients in hospitals, in South Dakota; and tenosynovitis of the hand or arm, in Vermont.

Michigan created a Silicosis and Dust Disease Fund to reimburse employers or insurance carriers who have paid more than $12,500 in compensation benefits due to these diseases. The provision precluding payment for partial disability for such diseases, and limiting compensation for total disability to $10,500, was repealed effective May 1, 1966.

Florida provided for payment to firemen of benefits for tuberculosis, heart disease, or hypertension resulting in total or partial disability or death. The condition is presumed to be accidental, provided the fireman "shall have successfully passed a physical examination" upon entering the service as a fireman. Michigan provided that for county sheriffs and their deputies and members of the State police, "personal injury" shall be construed to include respiratory and heart diseases, or illnesses resulting therefrom, which develop or manifest themselves during a period while the officer is in the active service of his department and which result from the performance of duties. Nevada added a presumption that diseases of the lungs are compensable for certain firemen. New Jersey provided that any condition or impairment of health to a member of a voluntary fire department caused by a disease of the respiratory system shall be presumed to be an occupational disease unless rebutted by satisfactory proof.

—Lloyd W. Larson
Bureau of Labor Standards

HIGHLIGHTS OF PRESENT WORKMEN'S COMPENSATION LAW

November 1, 1965

Report of injuries arising out of and in the course of employment must be made immediately to your supervisor. A failure to report within 30 days will bar compensation excepting cases where the employer, through his supervisors had actual notice of what happened to the employee.

All injuries should be reported no matter how slight, as mere scratches have produced death by tetanus or lock jaw.

Claims for compensation must be filed within one year with the State Board of Workmen's Compensation. The mere reporting of an injury is not the filing of a claim. To file a claim you must, within twelve months of the date of the injury, either wirte the State Board of Workmen's Compensation a letter and state that you are filing a claim, or secure from the Board our Form 14, "CLAIM FOR COMPENSATION AND/OR APPLICATION FOR HEARING," complete and return this Form to the Board, or be forever barred. There are only two exceptions, a minor child under 18 years of age with no legal guardian appointed, or a person who is non compos mentis.

If you are paid compensation under an agreement approved by this Board, not just medical expenses, you have two years to come back on the grounds of a change in condition. This change in condition must be for the worse, a mere not getting well or any better is not sufficient.

Under the Compensation Law, the employer and/or insurance carrier is allowed to pick the doctor who is to treat you. Only when he fails or refuses can you select the doctor. If the doctor who is treating you fails or refuses to give you proper treatment, you may petition the Workmen's Compensation Board, under Code Section 114-501, to permit a change in doctors, setting out your reasons for making the request, in which case a different doctor may be appointed by this Board.

No compensation is payable for the first seven calendar days of incapacity resulting from an injury unless 28 consecutive days are lost. The compensation rate for total incapacity is based on the average weekly wage of the injured employee on the date of his injury with a maximum benefit of $37 per week, if his average weekly wage was $61.66 or more. The minimum benefit shall be $12 per week unless the average weekly wage was less than $12 in which case the actual wage shall be the weekly benefit. Otherwise the weekly benefit will be 60% of $40 or $24.

In no case shall the number of weeks paid exceed 400, nor shall the total amount of compensation paid exceed $12,500 for total incapacity.

For partial incapacity, if the injured employee is unable to earn as much money as he was making at the time of his injury, he is entitled to 60% of the difference in his wages with a maximum of $30 per week. For instance, if prior to his injury his average weekly wage was $100 and since the injury he is only able to earn $75 per week, he would be entitled to $15 per week as compensation which is 60% of $25. While on the other hand, if this same employee is now only able to earn $40 per week, his compensation rate would be $30 per week, the maximum allowed under this Code Section.

In no case shall the period covered by such compensation for partial incapacity be greater than 350 weeks from the date of injury. In case the partial incapacity begins after a period of total incapacity, the number of weeks paid for total incapacity shall be deducted from the maximum period herein allowed for partial incapacity. Further, the total compensation payable for partial incapacity in no case exceeds $9,000.

An employee sustaining a permanent partial industrial handicap to a specific member, shall be paid compensation for such permanent partial industrial handicap for the period specified by the Legislature. In addition, compensation for total incapacity for work as provided in Code Section 114-404 shall be paid for a period not to exceed 10 weeks, known as the healing period.

The specific member and number of weeks applicable as set out by the Legislature is as follows:

(a) Loss of thumb, 60% of average weekly wages for 60 weeks.

(b) Loss of first finger (Index finger) 60% of

average weekly wages for 40 weeks.

(c) Loss of second finger, 60% of average weekly wages for 35 weeks.

(d) Loss of third finger, 60% of average weekly wages for 30 weeks.

(e) Loss of fourth (little) finger, 60% of average weekly wages for 25 weeks.

(f) Loss of first phalange of the thumb or any finger shall be considered to be equal to the loss of one-half of such thumb or finger, and the compensation shall be for one-half of the period of time above specified.

(g) Loss of more than one phalange shall be considered the loss of the entire finger or thumb: Provided, that in no case shall the amount received for more than one finger exceed the amount provided in this schedule for the loss of a hand.

(h) Loss of a great toe, 60% of average weekly wages for 30 weeks.

(i) Loss of one of the toes other than a great toe, 60% of the average weekly wages for 20 weeks.

(j) Loss of the first phalange of any toe shall be considered to be equal to the loss of one-half of such toe, and the compensation shall be for one-half of the periods of time above specified.

(k) Loss of more than one phalange shall be considered as the loss of the entire toe.

(l) Loss of a hand, 60% of the average weekly wages for 160 weeks.

(m) Loss of an arm, 60% of the average weekly wages for 200 weeks.

(n) Loss of a foot, 60% of the average weekly wages for 135 weeks.

(o) Loss of a leg, 60% of the average weekly wages for 225 weeks.

(p) Loss of an eye, 60% of the average weekly wages for 125 weeks.

(q) Complete loss of hearing in both ears, 60% of the average weekly wages for 150 weeks.

(r) Complete loss of hearing in one ear, 60% of average weekly wages for 60 weeks.

(s) Total loss of use of a member or loss of vision of an eye shall be considered as equivalent to the loss of such member or eye. The compensation for partial loss of, or for partial loss of use of, shall be such proportion of the payments above provided for total loss as such partial loss bears to total loss. Loss of both arms, hands, legs, or feet, or any two of these members, or the permanent total loss of vision in both eyes, shall be deemed permanent total incapacity and shall be compensated under Section 114-404.

The weekly compensation payments referred to above shall be subject to the same limitations as to maximum and minimum as heretofore set out, ($37 maximum and $12 minimum per week).

The maximum medical benefit is $2,500 which was set up by Legislative Act for the purpose of attempting to treat an injured employee and to reduce his permanent disability to the lowest minimum, or in other words to attempt to restore the man as nearly as possible to his former condition. This money should be used by an injured employee in the same manner as he would use his own money—in a conservative manner.

The compensation law further provides that where an employee sustains an injury by accident arising out of and in the course of his empolyment and which produces his death, that the dependents of the deceased employee, wholly dependent on his earnings for support at the time of the injury, shall receive weekly compensation equal to 85% of the compensation which is provided for in Section 114-404 for total disability, for a period of 400 weeks. Partial dependents receive weekly compensation based on the average amount contributed weekly by the deceased to his average weekly wages at the time of his injury. Partial dependents *do not* receive compensation where the deceased employee leaves total dependents.

The compensation law further provides that in addition to any other compensation, the reasonable expenses of the employee's last sickness shall be paid without regard to the $2,500 medical limit, and burial expenses not to exceed $500.

In order to better protect all parties, the Board has revised the various Forms used in workmen's compensation cases. *ALL FORMS* should first be correctly filled in, then signed by all parties and filed with this Board.

When an employee is able to return to work, he certainly should not expect his employer to permit him to return to work without signing the Form 19 or Form 19A, whichever is applicable to his particular case, because any employer who does permit an employee to return to work without first signing one of these Forms, is running a terrible risk.

★ ★ ★

The Georgia State AFL-CIO is committed to improving this existing law, and will support, encourage and work for increased benefits and changes which will help Georgia workers when they are injured and incapacitated; and which will provide better security and benefits to widows and dependents of workers killed in industrial accidents.

W. H. Montague, Sr.
President, Georgia State AFL-CIO

MAJOR STANDARDS RECOMMENDED BY THE
INTERNATIONAL ASSOCIATION OF GOVERNMENTAL LABOR OFFICIALS
FOR STATE CHILD LABOR LEGISLATION AND THE EXTENT TO WHICH
EXISTING STATE CHILD LABOR LAWS MEET THESE STANDARDS

	RECOMMENDED STANDARDS	EXTENT TO WHICH STATE CHILD LABOR LAWS MEET RECOMMENDED STANDARDS
Minimum age	16 years in any employment in a factory; 16 in any employment during school hours; 14 in nonfactory employment outside school hours.	24 States and P.R. approximate this standard in whole or in part (Ala., Alaska, Colo., Conn., Ga., Ill., Ky., La., Maine, Md., Mass., Mont., N.J., N.Y., N.C., Ohio, Pa., R.I., S.C., Tenn., Va., W. Va., Wis., Wyo.)
Hazardous occupations	Minimum age 18 for employment in a considerable number of hazardous occupations. State administrative agency authorized to determine occupations hazardous for minors under 18.	Few, if any, States extend full protection in this respect to minors up to 18 years of age, though many State laws prohibit employment under 18 in a varying number of specified hazardous occupations. 25 States, D.C., and P.R. have a State administrative agency with such authority (Alaska, Ariz., Colo., Conn., Fla., Hawaii, Kans., La., Maine, Md., Mass., Mich., N.H., N.J., N.Y., N.C., N. Dak., Ohio, Oreg., Pa., Utah, Va., Wash., W. Va., Wis.)
Maximum daily hours	8-hour day for minors under 18 in any gainful occupation.	17 States, D.C., and P.R. have an 8-hour day for minors of both sexes under 18 in most occupations (Alaska, Calif., Colo., Ky., La., Mont., N.J., N.Y., N. Dak., Ohio, Oreg., Pa., Tenn., Utah, Va., Wash., Wis.) 5 other States have this standard for girls up to 18 (Ariz., Ill., Ind., Nev., N. Mex.).
Maximum weekly hours	40-hour week for minors under 18 in any gainful occupation.	5 States (Alaska, Ky., N.J., Tenn., Va.) and P.R. have a 40-hour week for minors under 18 in most occupations. In addition, Wisconsin has a 40-hour week for 16-year-olds in a school week. 11 other States (Ala., Fla., Ga., Hawaii, Md., Mo., N.Y., N.C., R.I., W. Va., Wis.) have a 40-hour week for minors under 16 in most occupations. In addition, Washington has a 40-hour week for minors under 16 when school is not in session.
Work during specified night hours prohibited*	13 hours of nightwork prohibited for minors of both sexes under 16 in any gainful occupation. 8 hours of nightwork prohibited for minors of both sexes between 16 and 18 in any gainful occupation.	7 States and P.R. meet this standard at least for most occupations (Hawaii, Iowa, Kans., N.J., N.Y., N.C., Okla.). In addition, Kentucky and Utah meet this standard for minors under 15; Ohio for girls under 16, and for boys under 16 on nights preceding schooldays; Oregon for minors under 16, except on special permits; and Virginia for minors under 16 on nights preceding schooldays. 11 States and D.C. prohibit 12 or 12½ hours of nightwork for minors under 16 (Ariz., Ill., Md., Mass., Minn., Mo., N.Mex., N. Dak., Pa., R.I., Tenn.). Missouri prohibits 12 hours of nightwork on nights preceding schooldays; Tennessee prohibits 12 hours of nightwork for minors under 16 attending school. 10 States, D.C., and P.R. meet or exceed this standard, at least for most occupations, (Ark., Conn., Kans., Ky., La., Mass., Mich., N.J., Ohio, Tenn.); Maryland meets the standard for those attending school.
Employment certificates	Required for minors under 18 in any gainful occupation.	23 States, D.C., and P.R. require employment or age certificates for minors under 18 in most occupations (Calif., Conn., Del., Fla., Ga., Hawaii, Ind., Ky., La., Md., Mass., Mich., Mont., N.J., N.Y., N.C., Ohio, Oreg., Pa., Utah, Va., Wash., Wis.). New Hampshire requires such certificates for minors between 16 and 18 in occupations subject to the provisions of the Federal Fair Labor Standards Act. Two other States (Ala. and Nev.) require such certificates for minors under 17.

*14 States and P.R. prohibit work of children under 16 after 6 p.m., 18 and D.C. after 7 p.m., and 15 after 8 p.m. or later. Of those prohibiting work after 6, 7, or 8 p.m., 11 permit work until 9 or 10 p.m. under certain circumstances, usually during vacations or on nights preceding nonschooldays.

The Failure Of Workmen's Compensation Laws

oldest, least adequate — Only social insurance (required) using private insurance!

Workmen's compensation is based on the theory that, because accidents are inherent in production, their costs should be borne by the society which benefits from the production. It is also assumed that a system providing prompt cash and medical benefits would cost society less by reducing to a minimum the loss of the injured worker's productive services and the burden of supporting him and his family.

The Extent of Coverage

Although some individual state systems compile comprehensive statistics, there are no reliable statistics on the workmen's compensation system as a whole. The best estimates place total coverage of civilian wage and salary workers at about 80 percent, a percentage that has changed only slightly over the last 10 or 15 years.

Workmen's compensation laws may be classified as compulsory or elective. A compulsory law requires that a covered employer and employe must comply with the law. An elective law permits the employer the option of whether to accept coverage of the law. If the employer rejects coverage, he loses the common law defenses—assumption of risk, negligence of fellow workers and contributory negligence—when the worker files a suit. About one-half the state workmen's compensation laws are compulsory, while the remainder are elective.

Twenty-seven state laws exempt employers having less than a specified number of employes, ranging from 3 to 15. Many compensation laws not only limit coverage to certain persons and employment, but also as to injuries covered. Twenty states cover only those occupational diseases specifically listed in the law. Wyoming makes no statutory provision for coverage of occupational diseases; the Mississippi law covers only radiation disease; and the Alabama law lists only pneumonoconiosis.

Employes of charitable or religious institutions are frequently excluded, as are many state and local government employes. Most workmen's compensation laws exclude casual workers, domestics and agricultural workers. The exclusion of the latter persists in the face of its classification as one of the nation's most dangerous occupations.

Disability Benefits

A typical workmen's compensation law provides compensation for three kinds of disability—temporary total disability, permanent total disability and permanent partial disability. The first involves disability which is temporary and leaves no permanent physical impairment; the second is an injury which may restrict the earning power of a worker; and the third is a disability which permanently terminates an employe's useful working life.

The large majority of industrial accidents, approximately 90 percent, involve temporary total disability. About 90 percent of these cases recover within a month and 75 percent in three weeks. The typical workmen's compensation law requires a one-week waiting period and allows no retroactive benefits for that week until the disability lasts beyond 28 days.

In addition, the benefit formula, though often stating a worker is entitled to two-thirds of his wages at time of injury, will also specify a maximum amount which ensures that a large majority of injured workers will receive much less. For example, take the case of

ON-THE-JOB INJURIES – 1965

Source: U. S. Bureau of Labor Statistics.

an auto worker in Atlanta earning the average wage in the auto industry in that state of roughly $141 per week. If injured and unable to work for three weeks, he is entitled to 60 percent of his wages but only up to a maximum of $37 per week. In addition, he does not receive benefits for the first week. He would receive $74 in workmen's compensation benefits and lose $423 in wages—only a 17.5 percent replacement of wage loss.

Permanent partial disabilities are of two kinds: those that involve the loss or loss of use of a member of the body and those which cannot be so classified. Injuries to the back, head and nervous system are the most frequent examples of the latter kind. Most occupational injuries are of the first kind and are usually compensated for by means of a schedule.

In other words, a workmen's compensation law places a value on various parts of the human body. The total amount payable is calculated by multiplying the maximum number of weeks allowed for the particular injury by the worker's weekly benefit. For example, a worker in Georgia who loses an arm will be eligible for a maximum of $7,400 (200 weeks times $37). The maximum compensation for loss of a hand in Hawaii is worth more than loss of an arm at the shoulder in every state but one. An eye is worth a maximum of $16,800 in Arizona but only $3,000 in Mississippi. This variation between states is typical of the compensation for scheduled injuries.

Permanent total disability is the most costly kind of disability because the employe's useful working life is permanently and totally terminated. Most of these injuries involve paraplegia, blindness in both eyes, loss of both arms or both legs or some combination of this kind of anatomical loss. Unfortunately, though the injury is permanent, in about half the states the benefits are temporary. In these states, there are limitations in maximum monetary amounts or in duration ranging from 330 to 550 weeks and in monetary amounts from $10,000 to $30,000. A highly skilled worker who is injured and becomes a paraplegic is entitled to a maximum of $15,200 in Alabama, $12,500 in Georgia and $10,000 in South Carolina.

Death Benefits

The weekly benefit amounts in death cases are generally lower than in disability cases, especially where the widow is the only survivor. The lower benefits for widows were originally based on the theory that the death of the wage earner removed one mouth to feed.

In addition, only ten state workmen's compensation laws pay benefits to widows for life or until remarriage. For the death of a young father which deprives his widow and children of his lifetime of earnings, the State of Virginia will allow compensation for 300 weeks to a maximum of $11,700; Georgia, 400 weeks to a maximum of $12,500; North Carolina, 350 weeks and a maximum of $12,000; South Carolina, 350 weeks and a maximum of $10,000. It is particularly tragic that death benefits should be so low. The number of cases is so small, less than 1 percent, that substantial improvements could be made at a very small cost.

The Inadequacy of Benefits

The inadequacy of workmen's compensation benefits is particularly unfair since prior to workmen's compensation laws injured workers had the right to file suit against the employer. The worker relinquished this right in return for making workmen's compensation his exclusive remedy for occupational injury.

There long has been dispute in workmen's compensation as to the fairest method of measuring in-

A WORKER'S LIFETIME EARNINGS

demnification for injured workers. An injured worker often endures pain, suffering and intense psychological shock. A severe injury such as the loss of arms or legs can affect his family and social life to such an extent that this can be a much greater burden than the loss of occupational earnings. There is more than the bearing of pain. How does one measure the cost of a handicap that prevents a father from romping with his young son or deprives an enthusiastic hunter the thrill of tramping the fields or the bowler his night out.

Many persons representing insurance companies or employers may say these factors are too precious to be measured in monetary terms and no effort should be made to do so. But there is ample legal precedent.

When workmen's compensation laws were first passed during the 1910-16 period, most laws provided benefits which enabled a large majority of workers to receive two-thirds of their wages during disablement. At the present time, only 3 states provide a maximum workmen's compensation benefit for temporary total disability equal to two-thirds of the state's average weekly wage. More than half the states have maximum benefits less than 50 percent of the state's average weekly wage. In contrast, in 1940 only 10 states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and none less than 50 percent.

The inadequacy of benefits for more serious injuries is even worse. For the worker permanently and totally disabled, or in the event of his death, he or his family can suffer for a lifetime.

The severe economic impact of limited benefits can be illustrated in representative states. In Indiana, for example, the average factory wage is above the national average and the workmen's compensation benefit is typical. An Indiana worker permanently and totally disabled on the job is eligible for $45 a week in benefits, a total of $2,340 a year. Yet he had been earning above the national average factory wage of $5,600 a year; at this level, and assuming an annual 3 percent wage rise, the Indiana worker could have expected to earn $65,000 over the next 10 years, $152,000 over 20 years and $269,000 over 30 years. Yet he is held to a fixed level, which steadily declines in proportion to rising wages. In Alabama, again a fairly typical state, a permanently and totally disabled worker is limited to 550 weeks of benefits or a maximum of $15,200. Thus the Alabama worker would receive in all a sum only three times what he had earned in just a single year.

Medical Care

In many states, the injured worker may still have to pay a portion of the medical cost of his injuries. Many states still limit full medical care by setting limits on time or monetary amounts. This is difficult to justify when the cost of providing full medical care is so inexpensive. Professor Earl Cheit of the University of California estimated in a 1962 study that providing unlimited medical benefits would increase costs ranging from 11.6 percent in Alabama to 2.7 percent for Virginia. It would mean 5.5 percent for Montana, Louisiana and Tennessee and 7.5 percent in Colorado and Georgia. The actual cost of these percentages is small. Workmen's compensation as a total program costs about $1.04 for each $100 of payroll and roughly

[1] The lower figure represents the benefit for a single worker; the higher figure is the maximum for workers with dependents.

[2] Benefits may not exceed period of time or amounts indicated.

[3] Covers only specified dust or pulmonary diseases and/or diseases caused by the inhalation of poisonous gases or fumes.

[4] "W" means payment to widow until death or remarriage; "C" means payment to children until age specified.

[5] Plus an additional $10.00 per month if there are dependents.

[6] 55 percent of 85 percent of the average wage as computed by the Employment Security Commission in Kentucky and two-thirds of the State's average weekly wage in Maine.

[7] May be extended by commission without limit.

[8] 55 percent of state's average production worker wage.

[9] If worker is receiving benefits under the State temporary disability insurance act, benefits under the workmen's compensation act are limited to $40.00.

[10] An additional $500 may be allowed.

[11] Dollar maximum does not apply to children under 18 nor to unmarried children over 18 for 104 weeks beyond their 18th birthday, if incapable of self-support, nor to unremarried widow physically or mentally incapable of self-support.

[12] Disability benefits already made are deducted from death benefits payable.

[13] During the first 12 weeks of disability the amount is $56.00, but thereafter the maximum amount drops to $49.00.

[14] Provides $6.00 additional for each total dependent, not to exceed the average weekly wage of the employe.

[15] In cases of occupational disease, no time limit is imposed. If employe with occupational disease is able to continue work while undergoing medical treatment, medical benefit is limited to $1,000. In cases of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.

[16] Benefits set in accordance with a "wage and compensation schedule period." Under this schedule, the 66⅔ percent level is substantially adhered to for workers earning wages of $45 a week or less. For workers who earn more, the schedule fixes benefits which are less than 66⅔ percent.

[17] Up to $15,000 may be authorized.

[18] Additional medical care if a showing can be made that such care will substantially restore earning power.

[19] Children studying until 25.

[20] Order of Commissioner required if aggregate exceeds $7,500.

[21] The Commissioner upon application and reasonable proof being furnished may order additional services not to exceed an aggregate cost of $18,300.

[22] Plus $2.50 for each dependent child under 21.

[23] Commission may extend for an additional period of 2 years.

[24] May be increased without limit, but no medical benefits are payable in silicosis cases.

[25] Additional death benefits payable from state fund for children.

[26] The commission may extend additional medical care in cases showing justifiable need.

[27] Reasonable medical and hospital services or other remedial care for 6 months and additional 6 month periods upon written request to the Commissioner. Commissioner may grant extension for aid not to exceed one year.

[28] Reasonable medical, surgical, and hospital treatment and supplies, apparatus, artificial members for six months, which may be extended.

[29] No specific coverage but some workers have won benefits through court decisions.

[30] Additional payments out of Medical Disaster Insurance Fund in excess of payments under Workmen's Compensation Act and Occupational Disease Act, maximum $35,000.

[31] The one exception is radiation disease.

one-third or less than 35 cents goes for hospitalization and medical costs. Though states vary, on the average a 5 to 10 percent rise would mean an increase of from 1.7 cents to 3.5 cents per $100 of payroll.

The quality of medical care is as important as full medical care. The right of the workmen's compensation agency to supervise medical care and the right of the worker to a choice of a qualified physician are an essential part of quality medical care. The agency has an obligation to ensure that an injured worker receives an accurate diagnosis at the outset and that there be continuing supervision of medical care until healing and recovery are as complete as possible. Unfortunately, only 22 state laws have specific provisions authorizing the workmen's compensation agency to supervise medical care.

Roughly three-fourths of all workers covered under workmen's compensation have their doctor chosen for them by their employer or by the insurance company on behalf of the employer. Though few doctors will deliberately falsify a medical diagnosis, medical rationalizations are possible when a significant portion of a doctor's income is derived from a few insurance carriers or employers. A physician does not retain clients when he continually decides against their interests. A doctor subject to such pressures may use the term "mild" on a medical report when he should have used the word "marked" and easily rationalize the accuracy of his diagnosis. The result for an injured worker may be a denial of benefits and economic hardship for his family.

Rehabilitation

Rehabilitation has been defined as "the restoration of the handicapped to the fullest physical, mental, social, vocational and economic usefulness of which they are capable." Though the rehabilitation movement is greatly indebted to the war disabled whose plight gave birth to the first national program after World War I, it was workmen's compensation which originated the concept of civilian rehabilitation. Of 12 states which passed rehabilitation laws before the federal government, nine restricted the benefits to industrial victims.

Advances in medical science and in rehabilitation techniques ensure that all but the most helpless cases, with adequate funds and proper administration, can be restored to productive and useful lives. Professor Herman Somers, in his book, "Workmen's Compensation," tells the story of a girl who had been a commercial artist:

"She came to the Institute with a broken neck, paralyzed in both arms and legs. Not being able to push, she could not use crutches. She could not flex her fingers enough to hold a paint brush. However, at the end of 7 months of rehabilitation she could raise her hands to her face. To enable her to paint again, the Institute designed for her a special soft-leather glove, made holes in it, and put the brush in the holes. She could paint almost as well as before she was hurt . . . homework was secured for the girl with an interior decorator and a textile manufacturer. The girl with the broken neck, and her father, became the support of an impoverished family of five."

The above is not an exceptional case. It is known that a man can get by not only without legs, but with only one lung, one kidney, without a stomach and without a large part of his intestines. A Swedish study utilizing a hypothetical, severely-disabled worker considered for a job in a shoe factory "showed that, even if he were blind in one eye, color-blind in the other, had curvature of the spine, arrested TB and rheumatic heart disease, had only one leg, a gluteal hernia and could not raise his arms above his shoulders, he could still perform 50 percent of the jobs in that factory."

The "miracles" of rehabilitation have been available for many years. In view of its long relationship with rehabilitation, the workmen's compensation system should have long ago made rehabilitation an integral part of the workmen's compensation program. Unfortunately, rehabilitation programs are provided by law in only about one-half the workmen's compensation laws and most of these are not fully satisfactory. Both the International Association of Industrial Accident Boards and Commissions and the U. S. Department of Labor have recommended a rehabilitation division within the workmen's compensation agency, for a separate division is most likely to achieve a successful rehabilitation program. Only 17 states have such a division.

Even in those states where full compensation is paid, workers who undergo rehabilitation generally must incur additional expenses such as travel, living expenses away from home, tuition and equipment. The injured worker can least afford these additional expenses right after a period of incapacity, living on inadequate workmen's compensation benefits. Frequently, financial considerations make it impossible for him to undergo physical and vocational rehabilitation. Though adequate maintenance benefits are an essential part of any rehabilitation program, only 19 states make provision for such benefits in their state laws.

The Financing of Workmen's Compensation

In workmen's compensation, employers insure their risk either with a private stock or mutual insurance carrier, with a state fund (competitive or exclusive) or they self-insure. Workmen's compensation is the only social insurance to rely primarily on the private insurance mechanism for financing.

In 1964, the total cost of workmen's compensation was $2.7 billion. Workmen's compensation benefit payments amounted to $1.7 billion or only 62 percent of the total. The primary reason for such a small proportion going to injured workers in benefits is the expense loading by insurance carriers. Expense loading is the portion of the rate set aside to meet anticipated underwriting expenses or overhead. The expense record of private insurance contrasts sharply with that of exclusive state funds. Such funds devote

Towards a Model Law

A good workmen's compensation law should meet the following minimum standards. Except for the exclusive state fund, all have been urged as standards by the U. S. Department of Labor and the International Association of Industrial Accident Boards and Commissions. No state law meets all these standards; only 18 states meet more than half of them.

1. Compulsory coverage, with no exemptions for small firms.
2. Full coverage of agricultural workers.
3. Benefit levels sufficient to maintain a decent standard of living for injured workers and their dependents, with maximum weekly benefits of not less than two-thirds of the state's average weekly wage.
4. Reciprocity of benefit rights between jurisdictions.
5. Time limits within which an employe must file a claim for occupational disease should be at least one year after the date the employe has knowledge of the nature of his disability and its relation to his job and until after disablement.
6. Full statutory coverage of all occupational diseases.
7. Coverage of diseases caused by ionizing radiation.
8. Full medical benefits for job-incurred personal injuries and occupational diseases.
9. Full compensation protection under second injury funds.
10. Choice of qualified physician by injured workers.
11. The workmen's compensation agency

on an average only 6 to 8 percent of premiums to expenses. The average for non-participating stock companies, participating stock companies and mutual companies average approximately 37 percent, 28 percent and 25 percent, respectively.

The insurance carriers claim that an exclusive state fund is a monopoly and deprives a state workmen's compensation program of a competitive system of compensation underwriting. This raises the free enterprise argument, which has much emotional appeal. It is an erroneous assertion. The legislature sets benefits and places administration in a governmental agency. Each insurer must write exactly the same policy.

The obvious conclusion is that if an exclusive state fund can return such a large portion of the premium dollar to the injured worker, while a private insurance company must burden the workmen's compensation system with a 30 to 40 percent overhead, there exists a just opportunity to vastly improve workmen's compensation laws without increasing costs to the employer. There is no real competition among insurance carriers in workmen's compensation and there is no reason why a public law requiring what is basically a tax should utilize private groups in its financing and administration.

Administration and Litigation

If injured workers and their families are to receive justice, there must be dissemination of information, investigation and enforcement of coverage, close supervision of claims settlements, adjudication of contested claims, supervision of rehabilitation and medical care, safety promotion and statistical analysis of the work of the agency.

Few workmen's compensation agencies carry out such programs to any substantial degree. Most emphasize their judicial functions at the expense of their administrative ones. Unfortunately, when workmen's compensation laws were passed, it was felt the system could be largely self-administered, that the parties would come to agreement on their own and that the workmen's compensation commissions would act primarily as a judicial body in contested cases. This philosophy prevails to a great extent even today and often the worker receives less than his full rights because a worker with unpaid bills piling up daily is not in a position to fight a long legal battle and frequently agrees to a quick but less satisfactory award.

Many of these awards are lump-sum settlements. The lawyer can usually get a larger fee with less work and with greater certainty if a lump-sum is paid. Employers and insurance carriers also favor lump-sum settlements since they are usually for much less than the worker would receive in weekly benefits and because they terminate liability and thus eliminate the danger of claims for additional compensation for aggravation of injury. The injured worker is soon forgotten.

The fact that there are some 200 to 250 insurance carriers writing workmen's compensation coverage compounds the problem. The caliber of performance varies widely. Some carriers pay benefits promptly, some do not. Some settle claims fairly, some will induce workers to settle for less than they are entitled to. The typical, understaffed workmen's compensation agency lacks the personnel or expertise to adequately police the settlements of so many carriers.

Litigation generally only involves those cases involving permanent total, major permanent partial and death cases. Minor injuries representing 80 to 90 percent of total injuries are not litigated. Most of these are temporary total disability cases, the bulk of which

should have the authority to supervise and control medical care.

12. The workmen's compensation agency should include a rehabilitation division which should promote full utilization and development of rehabilitation facilities for the benefit of injured workers.

13. Maintenance benefits during rehabilitation.

14. Administration under a state agency rather than by the courts.

15. An exclusive state compensation fund.

16. Benefits for the totally disabled for the period of disability.

17. In case of death, benefits should be paid to the widow until her death or remarriage and to children during their minority and to other dependents during the period of their inability to support themselves.

18. Minors under 18 who are injured on the job if employed in violation of any state law should be paid double benefits.

19. Prohibition of special contracts with employers whereby a worker with a specific physical defect waives his right to compensation in the event of subsequent injury.

20. Prohibition of lump-sum settlements and compromise of rights to full medical care under compromise and release settlements unless the workmen's compensation agency approves such a settlement on the advice of the appropriate state rehabilitation unit or agency.

21. Judicial review should be limited to consideration of the record of the workmen's compensation agency on questions of law only, without trial de novo. In addition, there should be an appeals board which has no administrative responsibilities and from which appeal on matters of law can be made to the state's highest court.

recover within three weeks. Because of the smaller sums involved, there is less inducement for employers to contest and for lawyers to take a case.

Workmen's compensation gets publicity with the unusual case, such as that of the business executive who wrenched his back while doing the twist on an out-of-town sales meeting, or the benefits to a Denver University football player injured in scrimmage, or the case of a New York office boy hurt when the paper clip he was shooting with a rubber band backfired into his eye. These kinds of cases give an erroneous impression of liberality when the general situation is one of inadequate benefits. One need only scan the court dockets to find verdicts as high as $100,000 for high wage earners who lose a leg in a liability case. This compares with a maximum of $34,000 in a state workmen's compensation law. Thirty-seven states provide less than a maximum of $10,000 for loss of a leg at the hip.

The modern industrial environment has contributed to litigation by making it increasingly difficult to delineate between occupational and non-occupational causes of disease. The more medical science discovers about the nature of disease, the more it ascribes cause to multiple factors. This conflicts with the basic presumption of a workmen's compensation law that causal relationship between the disease and the occupation can be determined.

Interpretation of the vague phrase "arising out of and in the course of employment" has resulted in much litigation since the inception of workmen's compensation laws. This difficulty was enhanced when the later coverage of occupational disease was further liberalized by legal interpretations which made a disease compensable if the employment could be shown to have aggravated a condition which may have been caused by non-work factors. Degenerative diseases have been included in the workmen's compensation system on the theory that the employer takes the employe as he finds him and is responsible for aggravation of underlying pathological conditions.

Employers and insurance carriers attempt to resolve the problem by restricting coverage of workmen's compensation laws, thus in effect limiting their intended purpose. The solution is to improve the program, for its inadequacies have created a vacuum and further restrictions in occupational disease coverage will only increase the retreat in favor of other programs.

The Failure of Workmen's Compensation

The necessity of caring for an occupationally-injured worker and his family long has been given priority in the social conscience, but has been largely ignored in legislation. The first state workmen's compensation law was passed 55 years ago. During this period of time, the economic and social progress of our nation has been unparalleled in human history. Changing technology and industrial growth created vast and unprecedented social problems, which in turn generated new programs to resolve these human problems. Unfortunately, modernizing changes in state workmen's compensation laws have not kept pace.

If state workmen's compensation laws are to achieve their purpose of assured, prompt and adequate benefits, certain reforms are imperative. The only sure way to accomplish this change is federal legislation. Detailed and long arguments in behalf of federal legislation should not be necessary. The tragic record of over 50 years is argument enough. The AFL-CIO convention has urged enactment of a federal Workmen's Compensation Act. Short of this, Congress should enact legislation fixing minimum standards of workmen's compensation.

BRIEF SUMMARY OF STATE WORKMEN'S COMPENSATION LAWS

The main purpose of workmen's compensation laws is to eliminate the former uncertainties of getting damages for injuries at common law or under employers' liability laws. Before workmen's compensation laws were adopted, an injured employee had to file suit against his employer and prove that the injury was due to the employer's negligence. The employer, even though he had been negligent, could avail himself of the three common law defenses: "assumption of risk," "fellow servant rule," and "contributory negligence." That is, the employer could defeat recovery if it was proved that the employee's injury was due to the ordinary risks of his work, if it was caused by the negligence of a fellow worker, or if the employee by his own negligence in any way contributed to the injury.

The difficulties of obtaining redress under this system led to the enactment of employer's liability acts in many jurisdictions. These acts lessened the effectiveness of the defenses which the employer could use. But the employee still had to bring suit against the employer and prove that the accident was the fault of the employer. There were still the long delays in securing court action, the uncertainty of the result, and the high cost of negligence suits. Often the worker was still denied any compensation or damages.

Workmen's compensation laws are intended to assure prompt payment of benefits to employees injured in the course of their employment or to the dependents of those killed, regardless of fault, and with a minimum of legal formality.

HISTORY

Workmen's compensation laws had their beginning in this country almost 60 years ago. The first to be passed was the Federal Employees' Compensation Act, covering a small number of civil employees, in 1908. In 1911 ten States adopted such laws. The laws of Washington and Kansas were the first to be passed, both on March 14; the Wisconsin law was the first to go into effect--May 3. Others followed in the next few years. In 1916 the Federal Employees' Compensation Act was reenacted. By 1920 all but six States had workmen's compensation laws. Between 1920 and 1948, these six States adopted such legislation and another Federal law was passed--the Longshoremen's and Harbor Workers' Compensation Act--which was made applicable also, by separate act, to private employments in the District of Columbia. Thus there are now compensation acts in all 50 States, in the District of Columbia and Puerto Rico, and the two Federal acts, making a total of 54 acts.

TYPE OF LAW

There are great variations in the provisions of the different laws. For instance, they vary as to type of law, coverage, amount of benefits paid, insurance requirements, and administrative procedures.

Workmen's compensation laws may be classified as compulsory or elective. Under a compulsory act, every employer subject to it is required to comply with its provisions for the compensation of work injuries. An elective act is one in which the employer has the option of either accepting or rejecting the act, but in case he rejects it he loses the customary common law defenses--assumed risk of the employment, negligence of fellow servants, and contributory negligence. Although most employers elect to come under the act, some do not. Thirty-one of the workmen's compensation acts are compulsory for most of the employments covered:

Alaska	Maryland	Puerto Rico
Arizona	Massachusetts	Rhode Island
Arkansas	Michigan	Utah
California	Minnesota	Virginia
Connecticut	Mississippi	Washington
Delaware	Nevada	Wisconsin
District of Columbia	New Hampshire	Wyoming
Hawaii	New York	Longshoremen's and Harbor Workers'
Idaho	North Dakota	Federal Employees' Compensation
Illinois	Ohio	
	Oklahoma	
	Oregon	

The other twenty-three are elective:

Alabama	Louisiana	Pennsylvania
Colorado	Maine	South Carolina
Florida	Missouri	South Dakota
Georgia	Montana	Tennessee
Indiana	Nebraska	Texas
Iowa	New Jersey	Vermont
Kansas	New Mexico	West Virginia
Kentucky	North Carolina	

COVERAGE

Most of the laws apply to both private and public employments, but no compensation law covers all employments. There are still many gaps in coverage. Some laws restrict coverage to so-called "hazardous" employments. About half of the laws exempt employers having fewer than a specified number of employees. Usually the laws exclude farmwork, domestic service, and casual employments. Hired farmworkers constitute the largest population group deprived of workmen's compensation protection. Many laws also contain other exemptions, such as employees of charitable or religious institutions.

The laws are limited not only as to persons and employments included, but also as to injuries covered. Under the early laws, usually only "accidental" injuries were covered, which did not include occupational diseases. Gradually it has been accepted, however, that the worker suffering disability through occupational disease should be entitled to the same protection as a worker disabled through accidental injury. When such provisions were first included in State laws, they usually applied only to specific diseases. There is a growing trend, however, toward full coverage. Now the following 34 acts cover all occupational diseases:

Alaska	Maryland	Pennsylvania
Arkansas	Massachusetts	Puerto Rico
California	Michigan	Rhode Island
Connecticut	Minnesota	South Carolina
Delaware	Missouri	Utah
District of Columbia	Nebraska	Virginia 1/
Florida	Nevada	Washington
Hawaii	New Jersey	West Virginia
Illinois	New York	Wisconsin
Indiana	North Dakota	Longshoremen's and Harbor Workers'
Kentucky	Ohio	Federal Employees' Compensation
	Oregon	

The remaining States cover only listed diseases, except for Wyoming which has no provision for occupational diseases, although some workers have won benefits through court decisions.

In line with current trends, new legislation has been passed in many States to add coverage of radiation diseases where the State does not already have full coverage of occupational diseases. Now all but two States have some coverage of disability due to radiation. However, in several States this is very limited; in fact, coverage is adequate in only about a half dozen States.

The fact that occupational diseases are covered, however, does not mean that benefits are the same as for accidents in all cases. In about a third of the States, medical benefits are less than for accidental injuries--at least for some diseases. In a few States lower indemnity benefits are paid or even no benefits for partial disability.

Number of Workers Covered

Because of the various coverage limitations and the fact that almost half the laws are elective rather than compulsory, many thousands of workers are still unprotected by these laws. Estimates of the number of workers covered under the State and Federal programs indicate that about 80 percent of the workers in this country are covered. This leaves about 20 percent of the total workers without protection under workmen's compensation for injuries suffered on the job. Many of these unprotected workers are included in the two million persons each year who suffer occupational injuries or death.

1/ Virginia: Employer may elect schedule coverage.

BENEFITS

Under the workmen's compensation laws, various types of benefits are provided the injured worker, or, in case of his death, his family. These include medical services, benefit payments to the worker during period of disablement and for permanent disabilities, death benefits to the worker's family, and under nearly all laws, burial expenses. In many States they also include special benefits--for instance, a lump sum in case of disfigurement, rehabilitation services for the injured workers, or extra benefits for minors injured while illegally employed.

Medical Benefits

When a worker is injured he first of all needs medical aid, and perhaps hospitalization. All the compensation laws require medical benefits to be paid, but the amount and duration of such payment varies under the different laws. About four-fifths of the acts provide for full payment for all the medical aid and hospitalization required. The remaining laws set limitations, either upon the length of time the worker may receive such benefits, or upon the amount of money benefits he may receive, or both. (See Table 1, p.8, for a summary of the medical benefit provisions.)

Disability Benefits

There are various types of disabilities for which benefits are paid. The great majority of compensation cases involve temporary total disability--that is, the employee is unable to work at all while he is recovering from the injury, but he is expected to recover fully.

The monetary benefits in all but one of the laws are based on a percentage of the worker's average wages, usually 60, 65, or 66-2/3 percent. Injured workers, however, do not necessarily receive the amount of their wage loss that would be indicated by the percentage. Other provisions in the laws, such as the waiting period and maximum dollar limitations on weekly and total aggregate payments, operate to reduce the amount.

While benefits have been constantly increasing by liberalization of the weekly and total maximums, they have not kept pace with rising wages. When compensation laws were originally passed, the maximums set in the laws were sufficiently high so that the injured workers usually received the proportion of wage loss specified. Today, the dollar limitations on maximum payments in most cases operate to nullify the statutory percentage, which is usually 66-2/3 percent. It has been estimated that the maximum weekly benefits for temporary total disability now amount to less than 50 percent of the average weekly wage. In nine of the jurisdictions, the maximum weekly benefits for temporary total disability are still below $40, including benefits for dependents. Twenty-two of the laws now provide a weekly

maximum of $55 or more for an injured worker with a wife and two dependent children: the two Federal laws and those of Alaska, Arizona, California, Connecticut, the District of Columbia, Hawaii, Illinois, Maine, Maryland, Massachusetts, Michigan, Nevada, New York, North Dakota, Ohio, Oregon, Rhode Island, Washington, Wisconsin, and Wyoming. (See Table 2, p. 11, for a summary of the benefit provisions for temporary total disability.)

In cases of permanent total disability, the worker has become permanently injured in such a manner that he is unable to work at all, or unable to work regularly in any well-known branch of the labor market. In most States, in case of certain injuries, such as the loss of sight of both eyes, loss of both feet or both hands, or the loss of one hand and one foot, the resulting disability is conclusively presumed to be permanent total. The two Federal acts and those of 31 jurisdictions pay benefits for life or the entire period of disability. The balance of the laws limit either the period during which such benefits may be paid or the maximum amount that may be paid, or both. Where they are so limited, the time periods range from 330 to 500 weeks, and the money limitations range from a low of $10,000 to a high of $30,000. In the laws that limit permanent disability benefits, although the worker is still completely disabled, no provision is made for compensating the employee after the time or money limitations have been reached. (Table 3, p. 14, summarizes the benefit provisions for permanent total disability.)

Another type of disability is designated permanent partial disability. This means a worker has a permanent injury, but he is usually able to work. If he cannot go back to his old job, he can often do, or be trained to do, other types of work. There are two classes of permanent partial disabilities: schedule injuries, meaning the loss of an arm, leg, eye, ear, or other member of the body; and nonschedule injuries, which are those of a more general nature, such as a disability caused by injury to the head or back.

Benefits for schedule injuries, under most laws, are payable for a fixed number of weeks, depending upon the member of the body that has been lost. For instance, in one State, benefits are paid for 269 weeks for loss of an arm, 215 weeks for loss of a hand or leg, 65 weeks for a thumb, and 162 weeks for loss of sight of an eye. There is great variation from State to State in the number of weeks set and consequently in the benefits received. This is illustrated by the fact that for loss of an arm at the shoulder the number of weeks ranges from 175 to 500 in the various States. The permanent loss to an individual of some member of his body, which may affect his present working capacity or his future job opportunities, requires not only physical but emotional adjustments. The idea of a fixed period for schedule injuries is to give the injured worker time to make such adjustments. It is also a recognition of the likelihood that the injury, in the average case, will result in a certain amount of loss of earnings or loss of earning capacity over the lifetime of the injured worker. Under about half the laws there are express provisions for rehabilitation in the form of retraining, education,

job guidance, and sometimes placement, to help the injured person make the adjustments and find suitable work before the period of compensation runs out.

For nonschedule permanent partial injuries, a percentage of the disability to permanent total, or to schedule injuries, is sometimes made and payments made accordingly. In other laws the benefits are based on the difference between the wages before injury and the wages the worker is able to earn after the injury. Under most of the laws, such benefits have time or monetary limits, as for other types of disability. About three-fourths of the laws provide that the benefits for permanent partial disability are in addition to those received for temporary total disability. A few States deduct the compensation received for temporary disability from the allowance for permanent partial disability. (Table 4, p. 19, shows minimum and maximum benefits for both schedule and nonschedule injuries, and maximum periods for nonschedule injuries. Table 5, p. 23, shows the number of weeks for which compensation is payable for certain schedule injuries.)

Death Benefits

The purpose of death benefits is to provide income for families or other dependents of the deceased workman. The amount of compensation and the length of time it is paid varies considerably under the different laws. In Arizona, Connecticut, the District of Columbia, Maine, Nevada, New York, North Dakota, Oregon, Puerto Rico, Washington, West Virginia, and the Federal employees' and longshoremen's acts, the laws provide for the payment of benefits to a widow for life or until remarriage, and in case of children until they are 18 (sometimes beyond 18 if the children are incapable of self support). The other States limit the period or the total amount of payments, or both; benefits for the widow vary in maximum weeks payable from 300 weeks to 500 weeks, and the maximum monetary death benefits range from $10,000 to $35,100 for a widow and children.

In all but one of the compensation acts, provision is made for the payment of burial allowances, the maximum amount ranging from $200 to $1,000; over half pay $500 or more. (Table 6, p. 29, contains a summary of the death benefit provisions.)

Illegally Employed Minors

All the acts cover legally employed minors. Eighteen of them (those of Alabama, California, Florida, Illinois, Indiana, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New Hampshire, New Jersey, New York, Pennsylvania, Puerto Rico, Rhode Island, Utah, and Wisconsin) provide additional compensation, usually double, in the case of injury to minors who are illegally employed. Three States--Oklahoma, Vermont, and West Virginia--do not cover minors illegally employed. In the remaining States, the District of Columbia, and under the Longshoremen's and Harbor Workers' Act, compensation is paid to minors illegally employed on the same basis as if they were legally employed.

REHABILITATION

Rehabilitation of a handicapped person has come to mean the greatest possible restoration of the person in every phase of his life--physical, mental, social, vocational, and economic usefulness. But the number of workers who receive rehabilitation is far below what it should be.

Workmen's compensation agencies have a special responsibility with respect to the rehabilitation of the worker injured in the course of his employment. Such agencies are the first State agencies to hear about a work injury and are thus in a position to promote the rehabilitation of the worker shortly after his injury. Authorities agree that early referral to a rehabilitation program is essential to accomplish maximum results. Unless rehabilitation begins as soon as possible following the injury, maximum physical restoration may be prevented.

Although rehabilitation is now considered an essential feature of a complete workmen's compensation program, progress in making provisions for it under workmen's compensation laws unfortunately has been slow. Special provisions relating to rehabilitation are included in the laws of only 29 jurisdictions and the two Federal acts. (Table 7, p. 33, shows the maintenance and other benefits payable under these laws.) The benefits are in addition to the provisions of the Federal Vocational Rehabilitation Act. Under that act, a Federal-State rehabilitation program is operated in all the States, the District of Columbia, and Puerto Rico, by the State divisions of vocational rehabilitation. Services include medical care, counselling and guidance in selecting the right job, and training for and placement on the right job.

Table 1.--Medical Benefits

State	Full benefits: Law specifies full benefits	Full benefits: Law authorizes administrator to extend without limit
Alaska	No	Yes.
Arizona[1]	(2)	(2).
Arkansas[1]	No	Yes.
California	Yes

Limited Benefits

State	Initial limitation		Limitation on time or monetary benefits after extension by administrative agency
	Time	Money	
Alabama	2 years	$2,400	No additional benefits permitted.
Colorado	6 months 7/	3,500	No additional benefits permitted.
Georgia	10 weeks	2,000	Unlimited time and $2,500.
Kansas		1/6,000	No additional benefits permitted.
Louisiana		2,500	No additional benefits permitted.
Montana	36 months 8/	9/2,500	(8/).
New Mexico	5 years	5,000	$25,000.
Pennsylvania	1 year		(3/).
South Dakota		1,700	$21,700.
Tennessee	1 year	1,800	$2,500.
Virginia	90 days		3 years.

1/ However, benefits are limited for occupational diseases in Arizona (to $1,000) and in Utah (to $1,925.01); and for silicosis or asbestosis in the following States: Arkansas, 180 days; Illinois, 6 months; Kansas, 120 days--may be extended up to 210 days in special cases; Maine, $1,000; Nevada, $50 per month; North Carolina, $1,000 a year, 3 years; Texas, 91 days; Vermont, $1,000.

2/ Arizona: Full medical aid, in the judgment of the Arizona Industrial Commission, is authorized through a combination of the medical care and rehabilitation provisions of the law.

3/ Additional medical care may be ordered in New Hampshire if supported by findings of three physicians; in North Carolina if the care would lessen the period of disability; and in Pennsylvania if it would substantially restore the worker's earning power.

4/ The Ohio and Oregon laws set no initial amount or period; all medical benefits authorized by the administrative agency. In Ohio in silicosis cases, no medical benefits payable except in case of total disability or a change of occupation.

5/ Washington: Under certain conditions, medical benefits terminate.

6/ West Virginia: No medical benefits are payable in silicosis cases.

7/ Colorado: The 6-month limitation applies to accidental injuries; there is no time limitation for occupational diseases. Benefits for silicosis, asbestosis, and anthracosis are payable only if the commissioner determines that medical treatment will materially improve the worker's condition.

8/ Montana: In cases of occupational diseases: (a) the 36 months does not apply; (b) the $2,500 and its extension applies if the disability is total; and (c) if an employee continues work while undergoing medical care, the monetary benefits are limited to $1,000.

9/ Montana: In cases of total disability where $2,500 is not sufficient, an additional monetary amount may be allowed for hospitalization.

Table 2.--Minimum and Maximum Benefits for Temporary Total Disability

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Alabama	1/55-65	300 weeks	$15.00, or average wage if less	$38.00	
Alaska	65	Duration of disability	$25.00, or average wage if less	$100.00	$17,000
Arizona	65	433 weeks	$30.00, if worker is 21 years of age or over, plus $2.30 for total dependents.	$150.00, plus $2.30 for total dependents.	
Arkansas	65	450 weeks	$10.00	$38.50	$14,500
California	2/61-3/4	240 weeks	$25.00	$70.00	
Colorado	66-2/3	Duration of disability	$11.50	$49.00 3/	(3/)
Connecticut	60	Duration of disability	$20.00	55% of State's "average production wage wage." 4/	
Delaware	66-2/3	Duration of disability	$25.00, or actual wage if less	$50.00	
District of Columbia	66-2/3	Duration of disability	$18.00, or average wage if less	$70.00	$24,000
Florida	60	350 weeks	$8.00, or actual wage if less	$42.00	
Georgia	60	400 weeks	$12.00, or actual wage if less	$37.00	$12,500
Hawaii	66-2/3	Duration of disability	$18.00, or average wage if less	$112.50	$25,000
Idaho	1/55-60	400 weeks;5/ thereafter $15 per week ($18.00 if dependent wife) plus $4 to $15 for children, for duration of disability.	$15.00 ($18.00 if dependent wife) to $33.00.1/	$32.00 to $52.00 1/ (see column 3).	
Illinois	1/65-80 + (42.5% of 65-80)	Duration of disability until equivalent of death benefits is paid, except in specific injury cases limited to 64 weeks.	$31.50 to $49.00 1/	$62.00 to $76.00.1/ After first 64 weeks reduced to $56 to $68.	$15,000-$21,000
Indiana	60	500 weeks	$18.00	$45.00	$20,000
Iowa	66-2/3	300 weeks	$18.00, or actual wage if less		
Kansas	60	415 weeks	$7.00	$42.00	$17,430
Kentucky	66-2/3	425 weeks 5/	25% of 85% of the State's average weekly wage.	55% of 85% of the State's average weekly wage. ($44)	$18,700
Louisiana	65	300 weeks	$10.00, or actual wage if less	$35.00	
Maine	66-2/3	Duration of disability	$18.00	2/3 of State's average weekly wage.6/	
Maryland	66-2/3	208 weeks	$18.00, or actual wage if less	$55.00	
Massachusetts	66-2/3	Duration of disability	$20.00, or average wage if less, but not less than $10 if normal working hours are 15 or more.	$58.00, plus $6 for each total dependent. Aggregate shall not exceed the average weekly wage of the employee.	$16,000, plus dependents' allowances.7/
Michigan	66-2/3	Duration of disability	$27.00 to $42.00	$58.00 to $91.00 1/	
Minnesota	66-2/3	350 weeks	$17.50	$45.00	
Mississippi	66-2/3	450 weeks	$10.00	$35.00	$12,500

See footnotes at end of table.

Table 2.--Minimum and Maximum Benefits for Temporary Total Disability--Cont.

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Missouri	66-2/3	400 weeks	$16.00, or actual wage if less	$52.00	
Montana	1/50-66-2/3	300 weeks	$31.50	$35.00 to $56.00 1/	
Nebraska	66-2/3	300 weeks; 5/ thereafter 45% of wages, maximum $34.00.	$28.00 or actual wage if less, first 300 weeks; thereafter $24.00, or actual wage if less.	$42.00 (see column 3)	
Nevada	1/65-90	433 weeks	No statutory minimum	$52.50 to $72.69 1/	
New Hampshire	66-2/3	312 weeks; thereafter annual extensions at the discretion of the labor commissioner.	$15.00, or average wage if less	$50.00	
New Jersey	66-2/3	300 weeks	$15.00	2/3 of State's average weekly wage	
New Mexico	60	500 weeks	$24.00, or actual wage if less	$40.00	$20,000
New York	66-2/3	Duration of disability	$20.00, or actual wage if less	$60.00	
North Carolina	60	400 weeks 8/	$10.00	$37.50	$12,000 8/
North Dakota	80	Duration of disability	$15.00, plus $3 for each dependent child under 18, or those over 18 incapable of self-support.	$50.00 to 65.00 1/	
Ohio	66-2/3	Duration of disability	$25.00, or actual wage if less	$56.00 for the first 12 weeks; thereafter $49.00.	$10,750
Oklahoma	66-2/3	300 weeks; may be extended to 500 weeks.	$15.00, or actual wage if less	$40.00	
Oregon	1/50-75	Duration of disability	$30.00, or 90% of actual wage if less.	$39.23 to $73.85 1/	
Pennsylvania	66-2/3	Duration of disability	$31.50, or 90% of actual wage if less, but in no event less than $21.	$52.50	
Puerto Rico	66-2/3	312 weeks	$8.00	$35.00	
Rhode Island	66-2/3	Duration of disability 9/	$20.00 if worker is receiving benefits under the State Temporary Disability Insurance Act, otherwise $25.00.	$45.00 if worker is receiving benefits under the State Temporary Disability Insurance Act; otherwise $50 to $62. 1/	(9/)
South Carolina	60	500 weeks	$5.00	$50.00	$12,500
South Dakota	55	312 weeks	$22.00, or average wage if less.	$42.00	$14,000
Tennessee	65	Duration of disability	$15.00, or average wage if less, but in no event less than $12.	$38.00	$14,000
Texas	60	401 weeks	$9.00	$35.00	
Utah	60	312 weeks	$25.00 to $39.25, 1/ or actual wage if less.	$42.00 to $60.00 1/	$13,104--$18,720 1/
Vermont	66-2/3	330 weeks 5/	$21.00, plus $2.50 for each dependent child under 21, or average wage if less.	$41.00, plus $2.50 for each dependent child under 21.	

See footnotes at end of table.

Table 2.--Minimum and Maximum Benefits for Temporary Total Disability--Cont.

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Virginia	60	500 weeks	$14.00	$45.00	$18,000
Washington	------	Duration of disability	Same as maximum	$42.69 to $81.23 1/	
West Virginia	66-2/3	208 weeks	$22.00	$42.00	
Wisconsin	70	Duration of disability	$8.75	$68.00	
Wyoming	66-2/3	Duration of disability	$30.00 to $46.15 1/	$40.38 to $60.00 1/	
United States:					
Federal employees	1/66-2/3-75	Duration of disability	$41.54, or actual wage if less.	$121.15	
Longshoremen	66-2/3	Duration of disability	$18.00, or average wage if less.	$70.00	$24,000

1/ According to number of dependents. In Idaho, Oregon, Washington, and Wyoming, according to marital status and number of dependents. In Illinois, according to number of dependent children under 16, or under 18 when not emancipated but not to exceed average weekly earnings except to the extent of the minimum compensation rates.

2/ The California law provides for 65 percent of 95 percent of actual earnings, or 61-3/4 percent.

3/ Colorado: If periodic disability benefits are payable to the worker under the Federal OASDI, the workmen's compensation weekly benefits shall be reduced (but not below zero) by an amount approximating one-half such Federal benefits for such week. If disability benefits are payable under an employer pension plan, the workmen's compensation benefits shall be reduced in an amount proportional to the employer's percentage of total contributions to the plan. Colorado does not limit total maximum for disability from accidental injury, except that if payable in lump sum, maximum is $15,377; in case of occupational diseases, the maximum is $15,377.

4/ Connecticut: Beginning October 1965, the maximum amounted to $61 a week.

5/ In case total disability begins after a period of partial disability, the period of partial disability shall be deducted from the specified period for temporary total disability.

6/ Maine: Beginning November 30, 1965, the maximum amounted to $57.78.

7/ Massachusetts: Maximum $18,000 for temporary total and permanent partial disability.

8/ North Carolina: The 400 weeks and $12,000 do not apply in cases of permanent total disability resulting from an injury to the brain or spinal cord or from loss of mental capacity caused by an injury to the brain.

9/ Rhode Island: After 1,000 weeks, or after $16,000 has been paid, payments to be made from second-injury fund for period of disability. The allowance of up to $12,000 a week for dependent children is also payable from this fund.

Table 3. -- Minimum and Maximum Benefits for Permanent Total Disability

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Alabama	1/ 55-65	400 weeks. (For specific types of disability, 550 weeks.)	$15.00, or actual wage if less	$38.00	$15,200
Alaska	65	Duration of disability	$25.00 or actual wage if less	$65.00	
Arizona	65	Life	$30.00 if worker is 21 years of age or older.	$150.00	
Arkansas	65	450 weeks	$10.00	$38.50	$14,500
California	2/ 61-3/4	400 weeks; thereafter 60 percent of average weekly earnings at time of injury, maximum $48.46 for life.	$20.00 per week for 400 weeks, and thereafter life pension of $18.46 per week.	$52.50 per week for 400 weeks, and thereafter life pension of $48.46 per week.	
Colorado	66-2/3	Life 3/	$11.50 3/	$49.00 3/	(3/)
Connecticut	60	Duration of disability	$20.00	55 percent of State's average production wage. ($61 as of Oct. 1965)	
Delaware	66-2/3	Duration of disability	$25.00, or actual wage if less	$50.00	
District of Columbia	66-2/3	Duration of disability	$18.00, or average wage if less	$70.00	
Florida	60	Duration of disability	$ 8.00, or actual wage if less	$42.00	
Georgia	60	400 weeks	$12.00, or actual wage if less	$37.00	$12,500
Hawaii	66-2/3	Duration of disability	$18.00	$112.50	(4/)
Idaho	1/ 51-60	400 weeks; 5/thereafter $15 per week ($18 if dependent wife) plus $4-$15 for children, for duration of disability.	$15.00 ($18.00 if dependent wife) to $33.00. 1/	$32.00 to $52.00 1/(see col. 3)	
Illinois	1/ 65-80+ ($42.5% of 65-80)	Life	$31.50 to $49.00 1/	$56.00 to $68.00 1/	(6/)
Indiana	60	500 weeks; thereafter payments may be made for an indefinite period. 7/	$18.00	$45.00	7/$20,000
Iowa	66-2/3	500 weeks	$18.00	$47.50	$23,750
Kansas	60	415 weeks	$ 7.00	$42.00	$17,430
Kentucky	66-2/3	425 weeks 8/	25% of 85% of the State's average weekly wage. ($20)	55% of 85% of the State's average weekly wage. ($44.00)	$18,700

See footnotes at end of table.

Table 3. -- Minimum and Maximum Benefits for Permanent Total Disability - Continued

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Louisiana	65	400 weeks	$10.00, or actual wage if less	$35.00	
Maine	66-2/3	Duration of disability	$18.00	2/3 of State's average weekly wage ($57.78 as of 11/30/65)	
Maryland	66-2/3	Duration of disability 9/	$18.00, or average wage if less	$55.00	$30,000
Massachusetts	66-2/3	Duration of disability 9/	$20.00	$58.00, plus $6 for each total dependent. Aggregate shall not exceed the average weekly wage of the employee	
Michigan	66-2/3	Duration of disability 10/	$27.00 to $42.00 1/	$58.00 to $91.00 1/	
Minnesota	66-2/3	Duration of disability	$17.50, or actual wage if less	$45.00	(11/)
Mississippi	66-2/3	450 weeks	$10.00	$35.00	$12,500
Missouri	66-2/3	300 weeks, thereafter 40 percent of wages, maximum $30 for duration of disability.	$16.00	$47.00	
Montana	1/50-66-2/3	500 weeks	$31.50	$35.00 to $56.00 1/	
Nebraska	66-2/3	300 weeks; thereafter 45 percent of wages, maximum $34.00 for duration of disability.	$28.00, or actual wage if less, first 300 weeks; thereafter $24.00, or actual wage if less.	$42.00 (see col. 3)	
Nevada	----	Life	$43.50 to $60.23 1/	$43.50 to $60.23 1/	
New Hampshire	66-2/3	312 weeks; thereafter annual extensions at the discretion of the labor commissioner.	$15.00, or actual wage if less	$50.00	
New Jersey	66-2/3	450 weeks; under certain conditions benefits paid for life.12/	$15.00; after 450 weeks may be $5.00 12/	2/3 of State's average weekly wage.12/	
New Mexico	60	500 weeks	$24.00, or actual wage if less	$40.00	$20,000
New York	66-2/3	Duration of disability	$20.00, or actual wage if less	$60.00	
North Carolina	60	400 weeks; 500 weeks for 2 injuries in same employment. (Payable for life in certain circumstances. 13/)	$10.00	$37.50	13/$12,000

See footnotes at end of table.

Table 3. -- Minimum and Maximum Benefits for Permanent Total Disability - Continued

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
North Dakota---	80	Duration of disability----------	$15.00, plus $3 for each dependent child under 18, or those 18 and over incapable of self-support (up to a total of $15).	$50.00 to $65.00 1/-------	
Ohio------	66-2/3	Life----------	$40.25, 14/ or average wage if less.	$49.00----------	
Oklahoma--	66-2/3	500 weeks----------	$15.00, or actual wage if less--	$40.00----------	
Oregon----	---	Duration of disability----------	$35.77 to $70.38 1/----------	$35.77 to $70.38 1/-------	
Pennsylvania----	66-2/3	Duration of disability----------	$31.50, or 90 percent of actual wage if less, but in no event less than $21.	$52.50----------	
Puerto Rico--	66-2/3	Duration of disability----------	$9.23----------	$20.76----------	
Rhode Island ----	66-2/3	Duration of disability 15/-------	$20.00 if worker is receiving benefits under the Temporary Disability Insurance Act. $25 if worker is not receiving benefits under the TDI Act.	$45.00 if worker is receiving benefits under the Temporary Disability Insurance Act. $50.00 to $62.00 1/ if worker is not receiving benefits under the TDI Act.	(15/)
South Carolina--	60	500 weeks----------	$5.00----------	$50.00----------	$12,500
South Dakota----	55	300 weeks; thereafter 30 percent of earnings, maximum $15 for life.	$22.00, first 300 weeks; $12 thereafter.	$42.00 (see col. 3)-------	$14,000
Tennessee--	65	550 weeks----------	$15.00, or average wage if less, but in no event less than $12.	$38.00----------	$14,000
Texas------	60	401 weeks----------	$9.00----------	$35.00----------	
Utah--------	60	260 weeks; thereafter 45 percent of weekly wages during disability, maximum $42.00. 16/	$25.00 to $39.25 1/----------	$42.00 to $60.00 1/-------	(16/)
Vermont----	66-2/3	330 weeks 5/----------	$21, plus $2.50 for each dependent child under 21, or average wage if less.	$41.00, plus $2.50 for each dependent child under 21.	$13,530
Virginia---	60	500 weeks----------	$14.00----------	$45.00----------	$18,000
Washington---	-----	Duration of disability----------	$42.69 to $81.23 1/----------	$42.69 to 81.23 1/--------	
West Virginia	66-2/3	Life----------	$22.00----------	$42.00----------	

See footnotes at end of table.

Table 3. -- Minimum and Maximum Benefits for Permanent Total Disability - Continued

State	Maximum percentage of wages	Maximum period	Payments per week		Total maximum stated in law
			Minimum	Maximum	
Wisconsin---	70	Life----------	$14.00----------	$68.00----------	
Wyoming-----	------	----------	$28.85 to $34.62, 1/plus $6.92 for each dependent child under 18, or each child under 21 incapable of self-support because of mental or physical incapacity 17/	$28.85 to $34.62, 1/plus $6.92 for each dependent child under 18, or each child under 21 incapable of self-support because of mental or physical incapacity.17/	17/$17,500-- $27,500
United States: Federal employees--	1/66-2/3-75	Life----------	$41.54, or actual wage if less—	$121.15----------	
Longshoremen-------	66-2/3	Duration of disability----------	$18.00, or average wage if less-	$70.00----------	

1/ According to number of dependents. In Idaho, Oregon, Washington, and Wyoming, according to marital status and number of dependents. Under the Federal Employees' Compensation Act, the 75 percent of wages is contingent upon the existence of a statutory dependent.

2/ The California law provides for 65 percent of 95 percent of actual earnings, or 61-3/4 percent.

3/ Colorado: If periodic disability benefits are payable to the worker under the Federal OASDI, the workmen's compensation weekly benefits shall be reduced (but not below zero) by an amount approximating one-half such Federal benefits of such week. If disability benefits are payable under an employer pension plan, the workmen's compensation benefits shall be reduced in an amount proportional to the employer's percentage of total contributions to the plan.

Colorado does not limit total maximum for disability from accidental injury, but sets a maximum of $15,377 in case of occupational diseases.

4/ Hawaii: After $25,000 has been paid, compensation at the same rate is paid from a special fund for life.

5/ In case total disability begins after a period of partial disability, the period of partial disability shall be deducted from the weeks specified.

6/ Illinois: After $15,000 to $21,000, depending upon number of dependents, has been paid, a pension for life is provided.

7/ Indiana: After $20,000 and 500 weeks, further payments of compensation may be paid for an indefinite period from a special fund.

8/ Kentucky: If period of total disability begins after a period of partial disability, the period of partial disability shall be deducted from the 425 weeks.

9/ Law expressly provides that such payments are in addition to payments for temporary total disability.

10/ Michigan: Law states that the conclusive presumption of total and permanent disability in certain cases shall not extend beyond 800 weeks, but after that time the question of permanent total disability is determined in each case in accordance with the facts.

11/ Minnesota: After $18,000 paid, OASDI benefits credited against workmen's compensation benefits.

Table 3. -- footnotes (continued)

12/ New Jersey: After 450 weeks, if worker has accepted such rehabilitation as may have been ordered by the Rehabilitation Commission, further benefits may be paid during disability, amounting to his previous weekly compensation payment diminished proportionately as the wages he is then able to earn bear to the wages received at the time of the accident. If his wages equal or exceed such former wages, his benefit rate shall be reduced to $5 a week.

13/ North Carolina: In cases in which total and permanent disability results from paralysis resulting from an injury to the brain or spinal cord or from loss of mental capacity resulting from an injury to the brain, compensation shall be paid during the life of the injured employee, without regard to the 400 weeks or to the $12,000 maximum.

14/ Ohio: For persons previously awarded permanent total disability benefits, supplemental payments may be made from the Disabled Workmen's Relief Fund to bring payment up to $40.25.

15/ Rhode Island: After 1,000 weeks, or after payment of $16,000 for total disability, payments to be made for duration of total incapacity or for life from second-injury fund.

16/ Utah: After payment of $18,720 by the employer or carrier, a worker who has cooperated with the Division of Vocational Rehabilitation but who cannot be rehabilitated receives from the combined injury fund 45 percent of wages, for period of disability, weekly maximum $42.

17/ Wyoming: As to the allowance for the children, the law states: ". . . there shall be credited to the account of each of such children . . . a lump sum equivalent to $30 per month /$6.92 per week/ until the time when each of said children would become 18 years of age; provided that the lump sum credited to the account of all said children shall in no case exceed $10,000." The total maximum of $27,500 shown on the table includes the $10,000.

Table 4.--Minimum and Maximum Benefits for Permanent Partial Disability*

State	Maximum percentage of wages or wage loss[1]	Maximum period for nonschedule injuries	Payments per week[2]		Total maximum stated in law[2]
			Minimum	Maximum	
Alabama	[3] 55-65	300 weeks	$15.00, or actual wage if less (schedule). No statutory minimum for nonschedule.	$38.00	
Alaska	65	During disability	$25.00	$100.00	$20,000 (schedule) $17,000 (nonschedule)
Arizona	55	During disability[4]	$25.38 if worker is 21 years of age or older.	$126.92	
Arkansas	65	450 weeks	$10.00	$38.50	$14,500
California	[5] 61-3/4	399 weeks[6][7]	$20.00	$52.50	
Colorado	66-2/3	During disability [6][8]	$11.50[8]	$49.00[8]	[8] $12,740 (nonschedule)
Connecticut	60	780 weeks[6]	$20.00 (schedule). No statutory minimum for nonschedule.	55 percent of State's average production wage ($61 as of October 1965).	
Delaware	66-2/3	300 weeks[6]	$25.00, or actual wage if less.	$50.00	
District of Columbia	66-2/3	During disability[6]	$18.00, or average wage if less (schedule). No statutory minimum for nonschedule.	$70.00	$24,000
Florida	60	350 weeks[6]	$8.00, or actual wage if less	$42.00	
Georgia	60	350 weeks[4]	$12.00, or actual wage if less (schedule). No statutory minimum for nonschedule.	$30.00	$9,000 (nonschedule)
Hawaii	66-2/3	During disability[6]	$35.00	$112.50	$35,100 (schedule) $25,000 (nonschedule)
Idaho	60	In proportion to schedule injuries[6]	$15.00, or average wage if less.	$30.00	
Illinois	[3] 65-80	417.43 weeks (8 years)[6]	$31.50 to $49.00[3] (schedule). No statutory minimum for nonschedule.	$56.00 to $68.00[3]	[3] $15,000-$21,000
Indiana	60	500 weeks[6]	$18.00	$45.00	$20,000
Iowa	66-2/3	In proportion to permanent total disability, for which the maximum is 500 weeks.[6]	$18.00, or actual wage if less.	$47.50	$23,750
Kansas	60	415 weeks	No statutory mininum	$42.00	$17,430
Kentucky	66-2/3	400 weeks[9]	25 percent of 85 percent of the State's average weekly wage. ($20.00)	50 percent of 85 percent of the State's average weekly wage. ($40.00)	$16,000
Louisiana	65	300 weeks	$10.00, or actual wage if less.	$35.00	

See footnotes at end of table.

Oklahoma-------	66-2/3	500 weeks----------	$15.00, or actual wage if less.	$37.50----------	

See footnotes at end of table.

Table 4.--Minimum and Maximum Benefits for Permanent Partial Disability*- Continued

State	Maximum percentage of wages or wage loss1/	Maximum period for nonschedule injuries	Payments per week2/		Total maximum stated in laws2/
			Minimum	Maximum	
Oregon---------	3/50-75	In proportion to schedule injuries.6/	$30.00, or 90 percent of actual wages if less.	$39.23 to $73.85 3/14/	$10,560 (nonschedule)
Pennsylvania---	66-2/3	350 weeks6/----------	$31.50, or 90 percent of wages if less, but not less than $21.00 (schedule). No statutory minimum for nonschedule.	$52.50 (schedule)---- $42.00 (nonschedule)-	
Puerto Rico----	66-2/3	450 weeks6/----------	$8.00----------	$35.00----------	$6,000
Rhode Island---	50 (schedule) 60 (nonschedule)	800 weeks----------	$16.00 (schedule). No statutory minimum for nonschedule.	$30.00 (schedule)---- $22.00 (nonschedule)15/----------	
South Carolina-	60	300 weeks6/----------	$5.00 (schedule). No statutory minimum for nonschedule.	$50.00----------	$12,500
South Dakota---	55 (schedule) 50 (nonschedule)	312 weeks6/----------	$22.00, or average wage if less (schedule). No statutory minimum for nonschedule.	$42.00----------	$14,000
Tennessee------	65	400 weeks6/----------	$15.00, or average wage if less, but in no event less than $12.	$38.00----------	$14,000
Texas----------	60	300 weeks6/----------	No statutory minimum----------	$35.00----------	
Utah----------	60	312 weeks4/----------	No statutory minimum----------	$42.00 to $60.00 3/---	16/ $12,000
Vermont--------	66-2/3 (schedule) 50 (nonschedule)	330 weeks17/----------	$21.00, or average wage if less (schedule). No statutory minimum for nonschedule.	$41.00 (schedule)---- $21.00 (nonschedule)-	$13,530 (schedule)
Virginia-------	60	300 weeks4/----------	$14.00 (schedule). No statutory minimum for nonschedule.	$45.00----------	
Washington-----	----------	(18/)	No statutory minimum----------	(18/)	$15,000 (schedule) $12,750 (nonschedule)
West Virginia--	66-2/3	336 weeks4/19/----------	$22.00----------	$42.00----------	
Wisconsin------	70	1,000 weeks6/----------	$14.00----------	$46.00----------	
Wyoming--------	----------	In proportion to schedule injuries.6/	$30.00 to $46.15 according to number of dependents.	$30.00 to $46.15 according to number of dependents.	
United States: Federal employees.	3/66-2/3-75	During disability6/-----	$41.54, or actual wage if less (schedule). No statutory minimum for nonschedule.	$121.15----------	
Longshoremen	66-2/3	During disability6/-----	$18.00, or average wage if less (schedule). No statutory minimum for nonschedule.	$70.00----------	$24,000

*In some States the benefits listed do not apply if the disability is due either to silicosis or to any occupational disease.

1/ Generally for schedule injuries percentage is figured on average weekly wages, and for nonschedule injuries on the basis of the difference between wages before injury and wages after injury.

Footnotes - Continued

2/ Figure given is the amount paid for both schedule and nonschedule injuries unless otherwise noted.

3/ According to number of dependents. In Illinois, according to number of dependent children under 16, or under 18 when not emancipated. Under the Federal Employees' Compensation Act, the 75 percent of wages is contingent upon the existence of a statutory dependent.

4/ In case the partial disability begins after a period of total disability, the period of total disability shall be deducted from the maximum period set in the law for partial disability.

5/ The California law provides for 65 percent of 95 percent of actual earnings, or 61-3/4 percent.

6/ In addition to compensation for temporary total disability, which is limited in some States to a specific number of weeks.

7/ California: Four weeks of compensation for each 1 percent of permanent disability, and thereafter if disability is 70 percent or more, life pension of 1.5 percent of average weekly earnings for each percent of disability in excess of 60 percent.

8/ Colorado: If periodic disability benefits are payable to the worker under the Federal OASDI, the workmen's compensation weekly benefits shall be reduced (but not below zero) by an amount approximating one-half such Federal benefits for such week. If disability benefits are payable under an employer pension plan, the workmen's compensation benefits shall be reduced in an amount proportional to the employer's percentage of total contributions to the plan.

9/ Kentucky: Where compensation is paid for other types of disability, the period of such payments is deducted from the 400 weeks.

10/ Maryland: For serious cases as defined, the maximum is $40 a week and the $12,500 limit does not apply.

11/ Massachusetts: $18,000 is the maximum for temporary total and permanent partial disability.

12/ New Jersey: Benefits set in accordance with a "wage and compensation schedule." Under this schedule, the 66-2/3 percent level is adhered to rather closely for workers earning wages of $45 a week or less. For workers who earn more, the schedule specifies benefits which are less than 66-2/3 percent. For instance, a worker earning $60 a week is entitled to a compensation benefit of $36, or 60 percent.

13/ Ohio: Employee may elect benefits under one of two plans: "A" under which benefits are 66-2/3 percent of earning capacity impairment; or "B" under which benefits are based on permanent physical impairment. Under "B" benefits are paid for a maximum of 200 weeks if disability is 90 percent or more, and are set at 66-2/3 percent of employee's average weekly wage.

14/ Oregon: Schedule permanent partial injuries are compensated at the rate of $55.00 for each degree of disability, as specified in the law, but maximum weekly payments are limited to those shown in this table.

15/ Rhode Island: If employee cannot obtain suitable work and employer cannot give him such work or show it is available elsewhere, weekly benefits for partial incapacity are paid at the same rate as for total incapacity ($45 maximum).

16/ Utah: The maximum $12,000 applies in cases of accidental injury. In cases of permanent partial disability due to an occupational disease, the maximum benefits are $5,105.

17/ Vermont: In case the partial disability begins after a period of total disability, no deduction for the period of total disability is made unless the combination of both periods exceeds the statutory maximum of 330 weeks. In no case can the combined total of all types of compensation exceed the 330 weeks. (Orvis v. Hutchins, 123 Vt. 18.)

18/ Washington: Payments based on permanent physical impairment; in event award exceeds $1,000, employee has option to receive full lump sum award of $1,000 immediate payment with balance in monthly payments per temporary disability schedule plus 5 percent interest per annum on unpaid balance.

19/ West Virginia: For a disability of 85 to 100 percent, benefits are payable during life.

United States:														
Federal employees 3/	8/ 312	244	75	46	30	25	15	9/ 288	205	38	16	160	52	200
Longshoremen 3/	8/ 312	244	75	46	30	25	15	9/ 288	205	38	16	160	52	200

*Some States include additional injuries in their schedules, such as loss of testicles or skull fracture or bone fractures.

1/ Payments under this schedule are in lieu of all other payments.

2/ Alaska: Law provides for payment of fixed sums for schedule injuries. For instance, for the loss of an arm, $14,500; loss of a leg, $12,900; loss of an eye, $7,200; loss of hearing in one ear, $2,700.

3/ Payments are in addition to payments for temporary total disability during all or part of the healing period.

4/ For major member.

Table 5.--Number of Weeks for which Compensation is Payable for Certain Schedule Injuries*--Footnotes (cont.)
/Monetary weekly benefits shown on Table 4./

5/ For minor member.

6/ By enucleation.

7/ Without enucleation.

8/ Loss at shoulder or elbow. In Minnesota and South Dakota, amputation of arm below elbow considered loss of arm if artificial member cannot be used. In Delaware, the District of Columbia, Illinois, Maine, Mississippi, Tennessee, and under the Federal employees' and longshoremen's acts, loss of arm above the wrist shall be considered as loss of arm.

9/ Loss of leg at hip or knee. In Delaware, the District of Columbia, Maine, Mississippi, and Tennessee, and under the Federal employees' and longshoremen's acts, loss of leg above ankle considered as loss of leg.

10/ California: Ratings are determined as percentage of permanent total disability, and vary due to modification for age and occupation of employee. Figures given are standard ratings, prior to modification for occupation and age. The figures shown for arm, leg, and foot are for cases where reasonably satisfactory use of prosthesis is not possible. Where prostheses can be used, the following figures apply: major arm--280 weeks, minor arm--260 weeks; major hand--240 weeks, minor hand--220 weeks; leg at or above knee, 260 weeks. If number of weeks shown is 280 weeks or more, a life pension is also provided. (See footnote 7, Table 4)

11/ Loss of leg at or above knee if use of artificial limb possible.

12/ Loss of metacarpal bone in case of a thumb or finger, or metatarsal bone in case of a toe.

13/ Loss at proximal joint.

14/ Loss at hip joint, so close as to preclude use of artificial limb.

15/ Illinois: 235 weeks for loss of arm. If amputation is above elbow, 15 additional weeks is allowed. If arm is amputated so close to the shoulder joint that an artificial arm cannot be used, or if arm is disarticulated at the shoulder joint, an additional 65 weeks (a total of 300) is allowed. 200 weeks for loss of leg. If amputation is above knee, 25 additional weeks. If leg is amputated so close to hip joint that an artificial limb cannot be used, or if leg is disarticulated at the hip joint, an additional 75 weeks (a total of 275) is allowed.

16/ Indiana: For loss of second toe, 30 weeks; third toe, 20 weeks; fourth toe, 15 weeks; and fifth toe, 10 weeks.

17/ Iowa: In addition to maximum weeks, the law sets monetary maximums for schedule injuries: loss of arm, $10,925; hand, $8,312.50; thumb, $2,850; first finger, $1,662.50; second finger, $1,425; third finger, $1,187.50; little finger, $950; leg, $9,500; foot, $7,125; great toe, $1,900; other toe, $712.50; sight of an eye, $5,937.50; loss of an eye if other eye already lost, $9,500; hearing, one ear, $2,375; hearing, both ears, $8,312.50.

18/ Kansas: Payments are in lieu of all other benefits, except that in certain cases additional compensation may be allowed during the healing period for not to exceed 10 percent of the schedule period, maximum 15 weeks.

19/ Maine: In addition to payments for temporary total disability, the law provides for a lump sum payment which shall be determined by multiplying the average weekly wage by the period of presumed total incapacity set forth in the schedule.

20/ Maine: Or for diplopia.

21/ Massachusetts: A flat sum of $20 weekly is payable for the specific periods listed. This is in addition to all other benefits. Loss or loss of use of fingers and toes is in proportion to loss of hand or foot, according to a schedule established by the Division of Industrial Accidents.

22/ Minnesota: Weeks of compensation increased by 15 percent if more than one member is permanently disabled.

23/ Missouri: If schedule loss (with the exception of an eye) is 100 percent, either by severance or loss of use, weeks of compensation are increased by 10 percent.

Table 5.--Number of Weeks for Which Compensation is Payable for Certain Schedule Injuries*--Footnotes (cont.)
/Monetary weekly benefits shown on Table 4./

24/ New York: If healing period exceeds the specified time, the protracted period beyond such time is awarded in addition to the schedule loss incurred.

25/ North Dakota: Loss of leg at hip, 234 weeks; at knee, 195 weeks.

26/ Oregon: In addition to payments for temporary total disability, law provides for payment of $55 for each degree of injury. For instance, for loss by separation of one arm at or above elbow joint, 192 degrees or $10,560; loss by separation of one leg above knee, 150 degrees or $8,250. Complete loss of hearing, one ear, $3,300; both ears, $10,560. Complete loss of sight, one eye, $5,500. Partial loss of hearing, or partial loss of sight, one eye, apportioned to above maximums, partial loss of sight, both eyes, to 300 degrees of disability ($16,500).

27/ Puerto Rico: Permanent visual disabilities are to be determined by the manager of the State insurance fund.

28/ Texas: The Industrial Accident Board allows 75 weeks for loss of hearing in one ear.

29/ Vermont: In lieu of all other benefits except medical and hospital benefits.

30/ Washington: Law provides for payment of fixed sums for specified and nonspecified injuries, which are in addition to payments for temporary total disability. For instance, for amputation of one leg at the hip, $15,000; amputation of arm so near the shoulder that an artificial arm cannot be worn, $15,000; major arm at or above elbow, $14,250; loss of one eye by enucleation, $6,000; complete loss of hearing in both ears, $12,000. In cases involving non-amputation of members, award is in proportion to 85 percent of amputation value; in other nonspecified injury cases, awards are in proportion to maximum of $12,750.

31/ West Virginia: Loss of thigh at hip joint, 240 weeks; loss of thigh, 200 weeks.

32/ Wisconsin: In addition to payments for temporary total disability. Periods during which payments are made for schedule injuries are based upon employee who is 50 years of age or less. Where employee is above 50, periods specified reduced by 2-1/2 percent for each year the age of such employee exceeds 50.

33/ Wisconsin: Loss at hip joint, 500 weeks; at knee, 425 weeks. For loss of second toe, 25 weeks, or 8 weeks for loss at proximal joint; other toes, 20 weeks, or 6 weeks for loss at proximal joint. For deafness due to accident or sudden trauma: one ear, 55 weeks; two ears, 330 weeks; for total occupational deafness caused by exposure to noise in employment: one ear, 36 weeks; two ears, 216 weeks.

34/ Wyoming: In addition to payments for temporary total disability, law provides for payment of fixed sums for schedule injuries. For instance, for loss of arm above elbow, $6,800; for the loss of a leg above knee, $5,800; for loss of an eye or at least 90 percent of the sight thereof, $5,000. (No provision for loss of hearing)

Table 6.--Minimum and Maximum Benefits for Widows and Children in Death Cases

State	Maximum percentage of wages		Maximum period	Payments per week		Total maximum stated in law
	Widow only	Widow plus children		Minimum	Maximum	
Alabama	35	65	300 weeks	$15.00, or actual wage if less.	$38.00	
Alaska	35	65	Widowhood;[1] children until 18 or marriage.[2]	$45.00 to $75.00[3]	$100.00[3]	$20,000
Arizona	35	66-2/3	Widowhood; children until 18 or marriage.[2]	$16.15 to $30.77	$80.77 to $153.85[3]	
Arkansas	35	65	450 weeks	$10.00	$38.50	$14,500
California	------	------	250 weeks in cases of total dependency; 292.86 weeks in case of surviving widow and one or more dependent minor children.	$25.00[4]	$70.00[4]	[3]/$17,500-$20,500
Colorado	66-2/3	66-2/3	312 weeks	$11.50	$49.00 to $59.50[3]	$15,337-$18,623.50
Connecticut	60	60	Widowhood; children until 18[2]	$20.00	55% of State's average production wage ($61 as of October 1965).	
Delaware	50	80	400 weeks; thereafter to children until 18.	$15.00	$37.50 to $60.00[3]	
District of Columbia	35	66-2/3	Widowhood; children until 18[2]	$9.45--widow or dependent widower.	$36.75 to $70.00[3]	
Florida	35	60	350 weeks	$8.00, or actual wage if less.	$42.00	
Georgia	51	51	400 weeks	$10.20, or 85 percent of actual wage if less.	$31.45	
Hawaii	50	66-2/3	Widowhood; children until 18[2]	$15.00 or average wage if less--widow or widower.	$84.38 to $112.50[3]	[2]/$35,100
Idaho	45	55	400 weeks; thereafter to children until 18.[2]	$15.00 to $20.00[5]	$25.00 to $40.00[5]	$16,000
Illinois	65+ (42.5% of 65)	80+ (42.5% of 80)	Widowhood; [6]/children until 18[2]	$32.50 to $49.00[3]	$58.00 to $68.00[3][6]	[3]/$15,000-$21,000
Indiana	60	60	450 weeks	$18.00, or average wage if less.	$45.00	$20,000
Iowa	66-2/3	66-2/3	300 weeks	$18.00, or actual wage if less.	$47.50	$14,250
Kansas	------	------	Widowhood; children until 18[2]	No statutory minimum in the case of partial dependents; no weekly minimum for total dependents but a minimum total of $2,500.	$42.00	$15,000
Kentucky	66-2/3	66-2/3	400 weeks[7]	25% of 85% of the State's average weekly wage. ($20)	50% of 85% of the State's average weekly wage. ($40)	$16,000

See footnotes at end of table.

Table 6.--Minimum and Maximum Benefits for Widows and Children in Death Cases--Cont.

State	Maximum percentage of wages		Maximum period	Payments per week		Total maximum stated in law
	Widow only	Widow plus children		Minimum	Maximum	
Louisiana	32-1/2	65	400 weeks	$10.00, or actual wage if less.	$35.00	
Maine	66-2/3	66-2/3	Widowhood; children until 18[2]	$18.00	2/3 of State's average weekly wage ($57.78 as of 11/30/65).	
Maryland	66-2/3	66-2/3	500 weeks	$18.00, or average wage if less.	$48.00	$15,000
Massachusetts	------	------	400 weeks; thereafter to children until 18.[8]	Same as maximum	$40.00, plus $6 for each child.	[7]/$16,000
Michigan	66-2/3	66-2/3	500 weeks; thereafter to children until 21.	$27.00 to $39.00[3]	$58.00 to $84.00[3]	
Minnesota	40	66-2/3	Widowhood; children until 18[2]	$17.50, or actual wage if less.	$45.00	$17,500
Mississippi	35	66-2/3	450 weeks	$10.00[9]	$35.00[9]	$12,500
Missouri	66-2/3	66-2/3	Widowhood; children until 18[2]	$16.00	$52.00	$16,500
Montana	50	66-2/3	500 weeks	$31.50	$35.00 to $56.00[3]	
Nebraska	66-2/3	66-2/3	325 weeks	$28.00, or actual wage if less.	$42.00	
Nevada	50	80	Widowhood; children until 18[2]	No statutory minimum	$27.69, plus $8.31 for each child.	
New Hampshire	66-2/3	66-2/3	341 weeks	$20.00, or average wage if less.	$50.00	$17,050
New Jersey	35	60	Widowhood;[10] children until 18.	$15.00	2/3 of State's average weekly wage.	
New Mexico	40	60	500 weeks	No statutory minimum	$40.00	$20,000
New York	40	66-2/3	Widowhood; children until 18[2]	$12.00 to $20.00[3]	$36.00 to $60.00[3]	
North Carolina	60	60	350 weeks	$10.00	$37.50	$12,000
North Dakota	------	------	Widowhood; children until 18[2]	$25.00, plus $7.00 for each child.[9]	$25.00, plus $7.00 for each child.[9]	
Ohio	66-2/3	66-2/3	----------	$40.25	$49.00	[3]/$15,000-$18,000
Oklahoma	------	------	----------	----------	----------	$13,500
Oregon	------	------	Widowhood; children until 18[2]	$25.38 to $53.08[3]	$25.38 to $53.08[3]	
Pennsylvania	51	66-2/3	500 weeks; thereafter payments to children until 18.	$25.50 to $33.33	$34.00 to $52.50[3]	
Puerto Rico	50	85	Widowhood; dependent children	$9.23[9]	$23.08[9]	
Rhode Island	60	60	500 weeks	$26.00	$30.00, plus $4 for each child.	
South Carolina	60	60	350 weeks	$5.00	$35.00	

See footnotes at end of table.

Table 6.--Minimum and Maximum Benefits for Widows and Children in Death Cases--Cont.

State	Maximum percentage of wages		Maximum period	Payments per week		Total maximum stated in law
	Widow only	Widow plus children		Minimum	Maximum	
South Dakota	------	------	Special sum to widow, plus $15.00 for each child until 18.11/	----------	(See column 3)---------	$12,000-$15,000
Tennessee-------	50	65	Widowhood; children until 18.2/	$15.00, or actual wage if less, but in no event less than $12.	$38.00----------	$14,000
Texas----------	60	60	360 weeks----------	$9.00----------	$35.00----------	
Utah----------	66	60	312 weeks----------	No statutory minimum-----	$42.00 to $60.00 3/	3/$13,104-$18,720
Vermont---------	40	50	330 weeks----------	$21.00----------	$41.00----------	$13,530
Virginia--------	60	60	300 weeks----------	$14.00----------	$45.00----------	$13,500
Washington------	------	------	Widowhood; children until 18	$32.31 to $63.92 3/9/-----	$32.31 to $63.92 3/9/--	
West Virginia---	------	------	Widowhood; children until 18.2/	$17.31, plus $4.62 for each child ($5.75 for invalid child).	$17.31, plus $4.62 for each child ($5.75 for invalid child).	
Wisconsin-------	50	(12/)	400 weeks----------	$10.00----------	$48.58 12/----------	12/$19,430
Wyoming---------	------	------	Widowhood; children until 18.2/	$30.00----------	$30.00 to $46.15, 3/ plus $6.92 for each child.	3/$13,000-$23,000
United States:						
Federal employees------	45	75	Widowhood; children until 18.2/	$24.92----------	$121.15----------	
Longshoremen---	35	66-2/3	Widowhood; children until 18.2/	$9.45----------	$36.75 to $70.00 3/-----	

1/ The term "widownood" is used to mean the period until the death or remarriage of the widow. (In some cases, the same benefits are paid to a dependent or invalid widower.)

2/ May be continued beyond age 18 if physically or mentally incapacitated or incapable of self-support. In New York, payments may be continued beyond 18 if dependent child is totally blind or physically disabled and whose disablement is total and permanent. In Hawaii, the dollar maximum does not apply to children under 18; nor to unmarried children over 18 if they are incapable of self-support; nor to an unremarried widow who is physically or mentally incapable of self-support.

3/ According to number of dependents.

4/ In actual practice under its discretionary power, the Workmen's Compensation Appeals Board orders death benefits paid at the maximum weekly rate ($70.00).

5/ Idaho: $20 and $30 if dependent widow only; $20 and $40 if dependent widow with children; $15 and $25 if no dependent widow.

6/ Illinois: Under certain circumstances, upon remarriage of childless widow remaining compensation payments shall be reduced by 50 percent. Benefits not to exceed the average weekly earnings except to the extent of the minimum compensation rates.

7/ Kentucky: Disability payments already made to be deducted from death benefits payable.

8/ Massachusetts: Benefits continue to children until 18 or over 18 if incapacitated, and to widows during periods they are not fully self-supporting.

Table 6.--Minimum and Maximum Benefits for Widows and Children in Death Cases--Footnotes (cont.)

9/ In addition, lump sum payment at death of worker: In Mississippi, $100 to widows; in North Dakota, $300 to widow and $100 for each dependent child up to a maximum of $600; in Washington, $600; in Puerto Rico, $500 to widow and $50 for each dependent child up to a maximum of $1,100.

10/ New Jersey: Any earnings from employment by the widow after 450 weeks of compensation have been paid shall be deducted from the compensation thereafter payable to her.

11/ South Dakota: Death benefits to the widow are set at a sum equal to five times the annual earnings of the employee, but not less than $5,000 or more than $12,000, plus $15 a month for each child until he is 18 years of age, up to aggregate total for widow and children of $15,000. However, one-half of any compensation payments (other than medical) are to be deducted from death benefits.

12/ Wisconsin: Additional benefits payable from Children's Fund to the widow for children under 16 years of age (13 percent of the widow's benefits is the weekly or monthly allowance made for each dependent child), or for children over 16 if mentally or physically incapacitated.

Table 7.--Statutory Provisions In Workmen's Compensation Laws Relating To Rehabilitation Benefits For Injured Workers

Jurisdiction	Maintenance and other benefits
Alaska	Maximum $100 a month for maintenance for permanently disabled persons. Total maximum $5,000 for additional compensation, treatment, instruction, and transportation. (Additional benefits in certain cases.)
Arizona	The Industrial Commission is authorized to provide such additional awards as may be necessary for the promotion of vocational rehabilitation.
Arkansas	Maximum $400 for training and incidental travel expenses for persons disabled from silicosis or asbestosis.
California	In addition to temporary disability benefits, the injured worker undergoing rehabilitation may receive $52.50 weekly for up to 26 weeks as an advance on his permanent disability award.
Connecticut	Maximum $15 a week (in addition to compensation) during rehabilitation.
District of Columbia	Maximum $25 a week for maintenance of permanently disabled persons during vocational rehabilitation as directed by the U. S. Secretary of Labor (in addition to compensation). Secretary of Labor may furnish prosthetic appliances or other apparatus.
Florida	The Industrial Commission is directed to assist permanently disabled workers to obtain appropriate training, education, and employment, and is authorized to cooperate with the proper Federal, State, and other public or private agencies in the vocational rehabilitation of injured workers, and may pay for such services out of administrative funds.
Hawaii	Maximum expenditure of $5,000 for any permanently disabled person for retraining and rehabilitation, including evaluation, instruction, necessary transportation, and maintenance.

No Ga.

Table 7.--Statutory Provisions In Workmen's Compensation Laws
Relating To Rehabilitation Benefits For Injured Workers (continued)

Jurisdiction	Maintenance and other benefits
Maine	Maximum $20 a week in addition to compensation, for sustenance and travel, as determined by the Industrial Accident Commission. Total maximum of $2,000 for sustenance, travel, and rehabilitation for the first 52 weeks, and up to $500 additional if rehabilitation is extended for a second 52 weeks.
Maryland	No benefits specifically mentioned, but a rehabilitation counsellor within the Workmen's Compensation Commission refers proper cases to the Division of Vocational Rehabilitation.
Massachusetts	Needed rehabilitation services including travel, and room and board when necessary, training, guidance and placement services (in addition to compensation).
Michigan	Prompt rehabilitation services, including vocational rehabilitation up to 52 weeks if necessary. (Workmen's Compensation Department may extend this up to an additional 52 weeks.) Department may order additional payments to workers for transportation or any other expense during rehabilitation.
Minnesota	66-2/3 percent of wages, maximum $45 a week, for not more than 52 weeks (in addition to compensation).
Mississippi	Maximum $10 a week, for not more than 52 weeks, for maintenance (in addition to compensation).
Missouri	Maximum $10 a week to injured employees while receiving rehabilitation. Period limited to 20 weeks except that the Board of Rehabilitation may, in unusual cases, extend the period for not more than an additional 20 weeks. Board may order employer to pay for transportation to rehabilitation facility.
Montana	Maximum $30 a week for maintenance while receiving training. Also travel expenses and expenses for books and equipment while in training.

Table 7.--Statutory Provisions In Workmen's Compensation Laws
Relating To Rehabilitation Benefits For Injured Workers (continued)

Jurisdiction	Maintenance and other benefits
New Jersey	No rehabilitation benefits specifically mentioned, but the law specifies that after 450 weeks of receiving permanent total benefits such compensation shall cease unless the employee shall have submitted to such rehabilitation as may have been ordered by the Rehabilitation Commission.
New York	Maximum $30 a week for maintenance for totally or partially disabled workers. Also additional compensation necessary for rehabilitation.
North Dakota	Maximum $25 a week for 72 weeks payable to dependents during period of rehabilitation.
Ohio	Maximum $40.25 a week for 52 weeks for maintenance. Industrial Commission may also pay cost of artificial appliances. State Rehabilitation Center (Ohio State University) authorized to restore, train, and reeducate, and place in productive employment physically handicapped workers.
Oregon	Rehabilitation center to make available to injured workers modern techniques for rehabilitation. Industrial Accident Commission authorized to expend such funds as may be necessary to accomplish rehabilitation.
Pennsylvania	The State Board of Vocational Rehabilitation may make money payments necessary to meet living requirements for individuals and their families during the period of rehabilitation and training, and for an additional 60 day trial period of employment if the disabled individual is cooperative and demonstrates satisfactory progress.
Puerto Rico	Rehabilitation center established to make available to injured workers the best in physical medicine and rehabilitation services.
Rhode Island	Curative center established to make available to injured workers "all possible modern curative treatment and methods."
Texas	Medical services to include treatments necessary for physical rehabilitation, including training in prosthetic devices.

No Tenn.

Table 7.--Statutory Provisions In Workmen's Compensation Laws
Relating To Rehabilitation Benefits For Injured Workers (continued)

Jurisdiction	Maintenance and other benefits
Utah	Maximum $830 for use in rehabilitation and training for certain permanent disabilities. Employees permanently and totally disabled (either from an accident or an occupational disease) who cooperate but cannot be rehabilitated, are eligible for benefits up to $42 a week for life after the maximum benefits otherwise payable are completed.
Washington	Rehabilitation center established to make available to injured workers the best in physical medicine and rehabilitation services.
West Virginia	Maximum $1,200 for each permanently disabled worker, plus temporary total payments for vocational training, including the use of crutches, artificial limbs, or other appliances or medical treatment as necessary. Each case to be authorized by the Commissioner.
Wisconsin	Actual and necessary maintenance and travel costs during maximum of 40 weeks of rehabilitation, if training provided elsewhere than at place of residence; employer shall supply training in use of artificial members or appliances (in addition to full compensation during training period, including rehabilitation period).
United States: Federal employees	Maximum $100 a month for maintenance. Also cost of rehabilitation services (in addition to compensation).
United States: Longshoremen and Harbor Workers	Maximum $25 a week for maintenance (in addition to compensation). Secretary of Labor may furnish prosthetic appliances or other apparatus.

WORKMEN'S COMPENSATION

Thirty-Third Report
July 1, 1964, to June 30, 1966

good cases in back

FOREWORD

Progress

During this biennium the workmen's compensation department continued studying methods to improve the efficiency of its work and adopted procedures which already have proven to be effective.

A program of pretrial conferences is started. Regular calendars are arranged in Milwaukee and Madison to handle those cases where settlement seemed likely, where compensation or medical treatment may be resumed, or where the examiner views disability or disfigurement. The acceptance of the program by the parties and their attorneys is encouraging. Many of these cases never reach the formal hearing calendar. The reduction of the backlog of pending applications for hearings from 1360 to 1076 during the biennium is in a large measure due to this program.

The nature of service rendered to the public is improved due to a new filing system related to a data processing system. Correspondence now receives more prompt attention. A training program for the professional staff is resulting in improved performance.

After many years of effort the system of processing the claims of state employes is now improved to provide for direct vouchering for payment in about 80% of the claims. These involve medical payments only of less than $50.

During the past two years over 66,000 injuries were reported and over 38 million dollars was paid out for disability and medical

treatment. The maximum rate for temporary disability was increased from $64 to $66 in 1965 while the maximum rate for permanent disability increased from $44.50 to $46.

General

Wisconsin was the FIRST STATE in the United States to put a workmen's compensation act into effect. The law was approved and became effective on May 3, 1911.

The constitutionality of the act was upheld in a decision of the Wisconsin Supreme Court on November 1, 1911. Chief Justice C. J. Winslow wrote the opinion, in which he said, "To speak of the common law personal injury action as a remedy to the problem is to jest with a serious subject, to give a stone to the one who asks for bread."

Industry now had the responsibility of providing treatment and partially compensating employes for lost wages, regardless of a fault on the part of the employer or negligence on the part of an employe. This is recognized as a part of the cost of production. Contributory negligence of the employe, assumption of risk and negligence of a fellow servant were no longer defenses.

The law covered only accidental injuries until 1919, when occupational diseases were included. Coverage continued to be voluntary or elective until 1931, when it became compulsory for employers who usually employed three or more employes (except farmers). In that same year the waiting period was reduced from seven to three days. Effective January 1, 1962, farmers having six or more employes on any twenty different days of a calendar year become subject and must obtain workmen's compensation insurance.

Compensation Insurance

It is the commission's duty to ascertain that employers subject to the compensation act insure their risks, unless they are permitted to self-insure.

This duty is one which involves considerable difficulty and detail. The work is facilitated by the filing of reports upon all policies issued by the insurance carriers. This makes it possible to see that employers who have taken out a policy either renew it at expiration, insure with some other company, or satisfy the commission that for good reason insurance is no longer required. This function involves a great deal of detail since there are about 65,000 em-

ployers in Wisconsin who carry insurance. There are many employers subject to the act who are violating the law by failing to insure. Without special personnel for this task no substantial progress can be made in reducing the number of violations. The commission believes that to provide good service, both to employers and employes, several persons should be assigned for this purpose. Many employers are innocently unaware of the fact that they are subject to the compensation act. Others, through inadvertence, or by willful intention, have failed to provide insurance. Many employers are unable to assume the cost of compensation benefits, which in a single case may amount to many thousands of dollars.

Processing Injury Cases

Most injury cases are not disputed and are processed by the filing of reports and by correspondence. This does require detailed examination by personnel expertly trained to analyze the law and compute benefits due in different types of cases.

Where valid dispute exists the parties may compromise their differences and submit proposed settlement to the commission. They are required to submit supporting statement and further investigation may be made by the commission to make certain that a valid dispute exists which does warrant a compromise. If the commission concludes that full liability should be assumed the compromise is rejected and formal hearing will be scheduled if the employer or insurance carrier does not accept full liability.

The law provides that where dispute cannot otherwise be adjusted, formal hearing may be held upon application by either party. Hearings are conducted at county seats and at other points throughout the state. This avoids expense of parties in appearing and producing witnesses at Madison. Hearings are conducted by law-trained examiners who hear and decide cases in the same manner as does a judge. These examiners have broad powers of independent investigation and are not bound solely by testimony presented at hearing. Their duty is to obtain all essential facts, make all necessary investigation, and to apply pertinent law in reaching their decision. A stenographic record is made of all testimony taken. While proceedings are more informal than in courts of law, orderly procedure is maintained, and records are

made upon which there may be appeal to the commission and to the courts.

Examiners make the primary decision, which becomes final unless there is petition for review to the commission as a body within 20 days from the date of the examiner's order. This results in speed of hearing and decision. Uniformity is achieved by the provision for review by the commission as a body. These reviews are based upon the record made and upon such further investigation, hearing, oral argument or briefs as may be found desirable in individual cases. Usually the review is upon the record made at the time of hearing. It is intended that no further hearing shall be had except as diligence can be shown or as undue hardship might result. The commission has full power to take any and all steps necessary to safeguard the interests of parties.

Tables

Table 1 set forth in the pages following shows the action taken by the commission on 10,497 petitions for review between October 1, 1933, and June 30, 1966. Table 3 shows the cases settled and does not include compromise adjustments. Cases in which disability does not extend beyond 3 days are not reported to the commission, so that medical benefits for such cases are not included.

TABLE I

COMMISSION ACTION ON PETITIONS FOR REVIEW DURING THE PERIOD OCTOBER 1, 1933, THROUGH JUNE 30, 1966

Action	*Number*	*Percentage*
Total	10,497	100.

[1]Figures given in this table are subject to various qualifying provisions of the law.

[2]To be taken at $35.00 per week for the first 78 weeks of disability, and at $30.00 per week thereafter.

[3]In conformity with footnote [2] above, this figure is $24.50 per week for the first 78 weeks of disability, and $21.00 per week thereafter.

[4]Represents maximum amount of weekly death benefit payable to spouse.

P.T.D. equals Permanent Total Disability — P.P.D. equals Permanent Partial Disability — Temp. D. equals Temporary Disability.

(1) The figures in this column cover medical costs in both fee cases and contract cases. The estimated medical cost of contract cases was computed by multiplying the number of contract cases by the average medical cost per case in fee cases.

Benefits shown in Table 3 above do not include payments for funeral expenses, payments to or from the Second Injuries Fund, payments to or from the Children's Additional Death Benefit Fund, payments for maintenance during rehabilitation training periods, the cost of artificial members furnished, nor the amount of medical aid payments where the injury did not cause disability beyond the waiting period of 3 days. Also excluded are the payments in compromised cases, and any additional payments in reopened cases.

TABLE 4

Summary of Total Compensable Workmen's Compensation Cases Settled in Years 1930 — 1965

Year Case Was Settled	Number of Cases Settled					Indemnity Paid	Medical Aid Paid in Cases On A Fee Basis		Cases With No Fee Reported—Contract Medical And Other
	Total	Kind of Disability					Number Of Cases	Amount	
		Death	Permanent Total	Permanent Partial	Temporary

(1) Reflects combined experience of both public and private exempt employers.

Note: Prior to 1938 our record of promptness of first payment was tabulated from reports by the insurance carriers. This proved unworkable because some carriers reported the date on which the check was made out; others the date on which the check was mailed to the employer with instructions to transmit it to the employe; and still others the date on which the check was actually mailed to the employe.

Under our present method, postcards are sent to the employe, who is asked to report the date on which the check was received. Cases included in our tabulations are those for which our office receives a postcard report from the injured employe.

Comparable figures for 1938 are not available.

(A) No cases were treated as open accounts prior to the year ended September 30, 1925 — pending a test of the constitutionality of the provisions creating the fund and governing its operations.

(B) Includes an account (for incapacitated child) with first terminal payment on 8/1/58. A further order was issued, with payments starting 9/1/62, in accordance with the provisions of sec. 102.49 (1).

A Includes 5 cases in which both the employer and insurance company were held liable — with increased indemnity of $11.70.

B Includes 1 case in which both the employer and insurance company were held liable — with increased indemnity of $4.90.

C Includes 1 case in which the employer was bankrupt; his insurance company paid increased indemnity of $4.00.

NOTE: Inexcusably delayed payments are increased by 10%. The 10% extra indemnity is payable by the party who is responsible for inexcusable delay in making payments.

[1]**Confirmed** indicates that the Industrial Commission order was upheld by the Court's Decision.

Dismissed indicates (generally) that for various reasons the court did not decide the case on its merits (legal or factual points).

Set Aside indicates that the Indusrial Commission order was overturned.

Remanded indicates (generally) that the case was sent back to the Industrial Commission either for approval of a compromise or for further proceedings.

The categories **confirmed** and **dismissed** may be considered as favorable to the Industrial Commission since they leave the Industrial Commission order intact. **Set aside** and **remanded** may be considered as unfavorable to the Industrial Commission since by these decisions the Industrial Commission orders are either discarded in whole or in part, or must be compromised.

NO personal comfort

ELEANOR NELSON, SISTER (Virginia Nelson, Deceased)

vs.

HARRY S. MANCHESTER

June 11, 1964

The deceased and her sister were employed by the respondent at its retail store on State Street in Madison. They worked until 9:00 p.m. on Monday and generally left promptly because of their interest in a particular television program. At approximately 8:50 p.m. on May 20, 1963, the deceased informed her sister that she was going across the street to obtain cigarettes. They shared cigarettes and had one left between them. The purpose in obtaining cigarettes at that time was to enable them to go to their home promptly at 9 p.m. The deceased was struck by a motor vehicle while crossing State Street and sustained fatal injury.

It was held that the accident causing injury did not arise out of the employment. The purchase of the cigarettes was not reasonably necessary for the personal comfort of the deceased or her sister during their work since the day's shift was practically completed.

customer became ee

GRACE BARTLE

vs.

MARSHALL METCALF AND LEROY JARVIS

July 9, 1964

Ralph Metcalf was employed by the respondent to operate one of its caterpillar tractors. Applicant had arranged with respondent to have certain caterpillar work performed on her farm premises. On July 2, 1963, Ralph Metcalf finished such work and asked the applicant to assist him in putting the blade back on the tractor because he was in a hurry to get to another job of the respondent. It was the usual practice of the respondent's employes to seek similar assistance and the respondent paid for such help by crediting the customers on their accounts.

It was held that the applicant was an employe of the respondent. The services performed by her were at the request of and for the benefit of the respondent rather than herself. This case is to be distinguished from Nemeth vs. Farmers' Co-op., 252 Wis. 290 in that respect.

cardiac case

ARNOLD H. BORGWARDT

vs.

TREMPEALEAU ELECTRIC CO-OP

August 13, 1964

The applicant was employed by the respondent from 1949 until 1961. During the last few years his hours were extended from 40 hours to 48 to 50 hours a week, that applicant did occasionally work evenings attending meetings and doing public speaking. The applicant sustained cardiac failure with coronary thrombosis. The examiner found that since the work did not involve strenuous physical labor or intense emotional strain that applicant's disability was not related to his employment.

14 too few for mdw. panel.

SALVATORE A. SORRENTI

vs.

AMERICAN MOTORS CORPORATION

August 21, 1964

The respondent maintained a panel of doctors engaged in various medical specialties and four doctors employed by the respondent. The list did contain the names of 14 general practitioners. The examiner found that a list of only 14 general practitioners in a community the size of Milwaukee was unreasonably restricted. The respondent was held liable for the reasonable charges of necessary treatment rendered by a doctor not on the panel.

KENNETH KINCAID

vs.

JEROME GRIGNON

September 30, 1964 loss of blindeye

The applicant required an enucleation of a previously blind eye as a result of this injury. The issue was whether there was liability for payment into the State Fund established by 102.59 (2). The examiner found liability based on the fact that the statute stated two conditions of liability: 1) in case of loss of the eye, or 2) total impairment of vision of an eye. The first condition existed. The commission reversed the examiner, stating that as to eyes there is also a schedule for total loss of vision, but as to the hand, arm, foot or leg there is no schedule for amputation which had preexisting total impairment. It was concluded there was no legislative intent to require payment of the State Treasury for the loss of enucleation or amputation of a previously totally impaired eye or member.

GINEE A. DARDANELL

vs.

GENERAL MERCHANDISE COMPANY

November 12, 1964

Injury on December 8, 1961 was admitted. The principal issue was whether applicant sustained injury in the course of and arising out of employment. She was working on the 4:00 p.m. to 12:30 a.m. shift December 7 and 8th, 1961. She put a package containing a doll belonging to a fellow employe in the trunk of her automobile for safe keeping. At the end of the shift, applicant and the fellow employe walked to the applicant's automobile which was parked on the employer's parking lot. Applicant went around past the driver's side of the car to the trunk, which she opened. She then lifted the package out of the trunk and over her head, when a strong gust of wind caught the package, causing her to fall, injurying her right knee.

It was held that applicant was not going from her employment *in the ordinary and usual way,* that she did not sustain injury while performing services growing out of and incidental to her employment and that the accident causing injury did not arise out of the employment. Application was dismissed.

This case is pending in the Circuit Court of Dane County.

MARVIN M. ALDERDEN

vs.

ARNOLD L. JOHNSON d/b/a JOHNSON'S SHELL SERVICE

December 9, 1964

The principal issue involved was whether applicant sustained injury March 25, 1963, while performing services in the course of and arising out of employment by the respondent. He had a regular full time job and worked part time at the respondent's filling station, for which he was paid $1.00 per hour, plus commission and a discount on purchases.

The respondent permitted the claimant and other employes to use the facilities of the service station to repair their own automobiles at no charge to them and when they were not on duty for the respondent.

The Commission concluded that this was a part of the remuneration for their services and that the applicant's injury to his eye while working on his own personal automobile was compensable.

MARGUERITE H. RETZER, WIDOW (Edward Retzer, Deceased)

vs.

CITY OF SUPERIOR

December 21, 1964

Deceased was employed by respondent city as a police officer for approximately 18 years. While patrolling in a squad car on May 16, 1963, he received a radio call at 5:15 p.m. to apprehend a suspect on a theft charge. He arranged via squad car radio with another squad car to intercept the suspect at a designated point. The suspect had a record of 31 arrests (13 as a juvenile and 18 as an adult). Deceased followed the suspect's car approximately 14 blocks, then turned on his red light, and by loud speaker directed the suspect to pull over behind the other squad car parked at the curb. The suspect obeyed and made no attempt to escape. The other two officers were outside and next to their squad car and walked over to the suspect's car when he stopped.

The suspect, 2 other men and 2 other women in the car did not attempt to leave their car. It was daylight on a heavily traveled city street.

Deceased parked behind the suspect's car, got out of his squad car and started to walk to the suspect's car when he gasped and fell to the street. He was pronounced dead within 8 minutes. No autopsy was performed.

It was held that deceased did not sustain injury arising out of his employment by respondent and claim for death benefits was dismissed.

This case is pending in the Circuit Court of Dane County.

NORA E. WILLARD, WIDOW (Dewey Willard, Deceased)

vs.

MORNINGSIDE SANATORIUM

March 12, 1965

The principal issue is whether deceased sustained fatal coronary February 21, 1963, while performing services growing out of and

incidental to his employment and arising out of his employment by the respondent.

Deceased worked for the employer as a handy man and his work day was to begin at 5:30 a.m. His first duty was to pick up the employer's cook, who lived a few miles from the employer, so that she was at work at 5:45 a.m. The employer provided an automobile which was kept in a heated garage, with which deceased could pick up the cook and perform other errands. Deceased generally drove to work in his own automobile. For his own convenience, he made a practice of picking up the cook in his own automobile on the way to work, instead of driving to the employer and picking up the employer's car to get the cook.

February 21, 1963, was a cold day and deceased could not get his own automobile started. His wife testified that he was upset and flushed and told her he would have to walk to work. He suffered a fatal coronary attack enroute.

It was held that he was not in the course of his employment, since he was not yet on the premises of the employer and was merely going to work.

ROBERT BREIDUNG

vs.

UNIVERSITY OF WISCONSIN

April 22, 1965

Hernia - knifelike pain

Claimant worked for the respondent since 1954 at maintenance work. He had surgery in February, 1964, for a gall bladder and ulcer, there was no evidence of a hernia at that time or in June, 1963 when he had a complete physical examination. He had returned to work on a half time basis April 30, 1964, and worked half time through May.

On May 11, 1964, he was directed to repair a soap dispenser under a pot and pan washing machine. He had to crawl headfirst into a space approximately three feet deep, 26 inches wide and two and one-half to three feet high. The bottom surface was wet so he laid on a two by three foot tray which was about ten inches above the floor. While in this position with his back on the tray he attempted to loosen the soap pipe overhead using two wrenches. Applicant felt a sharp knifelike pain in his groin while pulling on the wrench. He called out, cursed and then crawled out of the enclosure asking a fellow worker to loosen the pipe. Applicant felt pain while the fellow worker loosened the pipe. Applicant then cleaned the pipe and replaced it performing light work until the end of his shift an hour or two later. He reported his injury to his supervisor immediately and felt a burning sensation in the groin the next morning when he observed a protrusion.

It was held that applicant's hernia was compensable.

LESLIE IMMEL

vs.

HARRY C. BREEST, INC.

April 29, 1965

Hazard 15-0%

The employe sustained injury when he fell through a window opening under construction on an exterior wall. He was standing on a scaffolding erected on the third floor, which scaffold was five feet above the floor. The ground, however, was 28 feet below the point

where he was standing. There was no guardrail across the opening at the window.

The commission affirmed the examiner in finding 15 per cent increased compensation because of violation of Ind 35.21 (1) and 101.06, Wisconsin Statutes. The commission pointed out that since a hazard existed at each opening in an outer wall, such openings must be guarded. The required height for guardrails refers to either the height above the floor or ground, whichever is greater.

This case is pending in the Circuit Court of Dane County.

DONNA J. SCHEPPA, WIDOW (Gerald Scheppa, Deceased)

vs.

NEKOOSA-EDWARDS PAPER COMPANY

May 14, 1965

Deceased who was 28 years old died while drilling holes on a couch roll with a 120 volt drill. He leaned against the roll with his thighs. He suddenly stiffened and made a sound. A fellow worker pulled the cord of the drill and he slumped over the roll. After autopsy, it was discovered that he had an enlarged heart and a coronary arthrosclerosis with approximately 85 per cent occlusion of the anterior descending coronary artery. The ground plug of the drill was missing, but it was not established that this caused electric shock. Examination of the drill failed to show any evidence of a short. There was no mark indicating electric burn on the body of the deceased.

coronary vs. Electric Shock.

The examiner dismissed and found it was more probable that death resulted from a coronary attack than from electric shock. The Commission affirmed the order.

This case is pending in the Circuit Court of Dane County.

MARIE L. JOHNSON, WIDOW (Donald Johnson, Deceased)

vs.

w/ co. car after work SCREEN-O-GRAPH, INC.

July 19, 1965

Drinking

The issue was whether deceased sustained fatal injury in the course of and arising out of employment. He was killed in a one car crash between 1:00 a.m. and 7:00 a.m., October 24, 1964. His occupation was sales work and printing work for the respondent and at the time of his death, he was driving an automobile owned by the employer which he had been permitted to use. On October 23, 1964, he had worked at the Milwaukee plant of the employer and had returned to the Germantown plant after 6:00 p.m. During the course of the evening, he and a fellow employe did work at the Germantown plant, visited a filling station twice and four taverns. They returned to the shop for 15 minutes, then went to the filling station for 10 or 15 minutes and visited two more taverns, after which the deceased drove the fellow employe home, leaving him at 1:00 a.m. on October 24, 1964. No one saw him alive after that time and he apparently headed for home himself. His own automobile had been parked at a wayside in the country for approximately two weeks because of a flat tire. There was no showing that there was an agreement or undertaking by the employer to transport the deceased. It was concluded that the employer, which was operated by the brother of the deceased, merely permitted him to use the automobile as a matter of convenience and that his fatal injury did not occur in the course of or arise out of employment.

This case was confirmed by the Circuit Court January 26, 1966.

ANN L. FREIBURGER

vs.

CITY OF TWO RIVERS
MANITOWOC COUNTY
DR. ALFRED ZLATNIK

August 24, 1965

The applicant was a medical laboratory and X-ray technician by the hospital from 1944 to September 13, 1959. Her duties required her to secure blood, sputum and gastric samples. After leaving the hospital, she had very limited exposure while working for the doctor as a technician. The examiner found that because of the extent of her hospital exposure and recognizing the much higher incidence of tuberculosis among hospital personnel than the general public, it was probable she was infected with tuberculosis by her work experience at the hospital. An interlocutory award was issued awarding compensation and medical expense. The commission affirmed.

AGNES G. BRUENIG

vs.

LINA NURSING HOME

August 27, 1965

Aggressor

The applicant was employed in the kitchen of respondent's nursing home. The son of the owner addressed vile language to the applicant, whereupon she slapped him in the face. He then assaulted her resulting in alleged injury to applicant. The examiner found that the use of vile language did not make the employer's son the aggressor and that the applicant was in fact the aggressor, having struck the first blow. The injury did not arise out of the employment. The commission affirmed.

CATHERINE MOLONEY, WIDOW (Raymond T. Moloney, Deceased)

vs.

MARLIN ELECTRIC COMPANY

October 1, 1965

The deceased was the president of the Marlin Electric Company and Marlin Toy Company, located at Horicon, Wisconsin. He resided at Lake Forest, Illinois, and was fatally injured while flying from Lake Forest to Horicon in a plane owned by the Marlin Electric Company, the operating expenses of which were paid by the Marlin Toy Company. The plane was purchased to expedite the weekly supervision of the businesses by the deceased, who was the only operator of the plane.

The Marlin Electric Company was considering the manufacture of a bowling computer. On January 15, 1964, the deceased flew to Horicon to obtain the computer. The insurance carrier had collected premium from the respondent, Marlin Electric Company, based to a substantial degree on the salary of the deceased. The insurance carrier knew the deceased was the sole operator of the plane, which was separately coded in the audit and premium collected accordingly.

The commission reversed the examiner, holding that the insurance company is now estopped from denying an employer-employe relationship and awarded death benefits to the widow.

This case was confirmed by the Circuit Court June 17, 1966.

ERVIN HENRY SCHREINER

vs.

CAPITOL LIQUOR AND NORTHWESTERN CARTAGE COMPANY

October 27, 1965

The principal issue was who the employer of the claimant was at the time of injury on July 31, 1964. The commission held that he was employed by, performed services for, and was paid for such services by Northwestern Cartage Company, which had assigned him to work as a truck driver delivering merchandise for several establishments. Claimant contacted Northwestern Cartage Company each day for instructions as to where he was to report for work the following day. He was assigned to deliver merchandise for Capitol Liquor and was doing this when he sustained injury on July 31, 1964.

It was found that although Capitol Liquor gave him instructions as to the delivery of its merchandise, claimant was subject to the right of control by Northwestrn Cartage Company and he could not have been discharged by Capitol Liquor. He sustained his injury at the end of the shift, reporting this to Northwestern Cartage Company the next morning. He did not report his injury to Capitol Liquor. When the doctor released him for work, he reported back to Northwestern Cartage Company and was returned to work.

This case is pending in the Circuit Court of Dane County.

CASIMIR CHMIEL

vs.

MILWAUKEE GAS AND LIGHT COMPANY

December 7, 1965

The only issue is whether the employer was liable for 6 per cent interest for delay in payment, pending an appeal under the provisions of section 102.22.

On August 2, 1963, the examiner awarded compensation. This order was petitioned for review and affirmed by the commission on October 2, 1963. Appeal was taken to the Dane County Circuit Court which affirmed the commission on October 9, 1964. The commission has held for many years that 6 percent interest is due under these circumstances from ten days after the commission's order until payment is made, and in this case interest was awarded to the claimant in the sum of $433 and to his attorneys and several doctors in lesser amounts.

The case was confirmed by the Circuit Court May 13, 1966.

EDWARD OLSON

vs.

PAUL J. GRUNAU COMPANY

December 27, 1965

The applicant sustained burns to his wrist and both sides of his face. He was taken to a hospital, but released to his home the same day. His wife was a graduate nurse and under the directions of the

doctor, was able to provide necessary nursing care. The applicant entered into an agreement with his wife to pay her for the time spent in furnishing nursing services.

Although services performed by near relatives are presumed to be a gratuity, the commission affirmed the examiner's award, since there was an agreement to pay for services and she was in fact a nurse. If she didn't perform the services, applicant would either have remained in the hospital or would have required other nursing services at home.

DENNIS LEE BROWN

vs.

JOURNAL COMPANY

January 6, 1966

Applicant was employed by the employer as a newsboy and was 15 years of age at the time of his injury on Sunday, March 14, 1965. He had been instructed to report to the employer's newspaper station at 3:30 a.m. to sub the Sunday newspapers and was injured at about 4:00 a.m. outside the station. The newspapers had not yet arrived and the captain, as well as the assistant captain who were inside the station, kept the door locked so that the claimant and other newsboys could not enter. The boys outside had engaged in horseplay, but claimant withdrew from such activity previous to his injury, although he did sustain injury as a result of horseplay by the other newsboys. This involved pushing boards in and out of the station through cracks in the door. It was concluded that the employer did not establish or enforce reasonable rules of conduct for the safety of its newsboys who might normally be expected to engage in horseplay activity while they were idle, considering their youth and energy. Claimant was at the news station pursuant to the instructions of the employer, waiting to perform his work. It was held that the injury was compensable.

EARL SCHNECKENBURGER

vs.

ELDON MILLER, INC.

February 17, 1966

Applicant was employed by the employer for eleven years and for the last four years as terminal manager. His hours were from 7:00 a.m. to 5:00 p.m. and one-half day on Saturday. About once a week he inspected trucks at night. He attended rate hearings about once a week on an advisory capacity or as a witness. On June 18, 1964, while at work he felt uncomfortable. That evening he consulted a physician who diagnosed a myocardial infarction. He returned to work September 14, 1964, and after two months resumed his usual duties. On June 3, 1965, he attended hearings before the Interstate Commerce Commission in Chicago. He retired at 10:00 p.m. and awoke at 3:00 a.m. perspiring and feeling weak. A second myocardial infarct was diagnosed but in another area of the heart. Applicant had long standing sclerotic changes of the aorta.

The examiner found that the occupation of the applicant did not have a contributory effect in producing the myocardial infarcts of June 18, 1964, and June 4, 1965. The Commission affirmed.

This case is pending in the Circuit Court of Dane County.

STANLEY LOTUS

vs.

CITY OF WEST ALLIS

February 28, 1966

The applicant was a crossing guard at an assigned corner. He was required to be at the corner at 7:55 a.m. to place a school stop sign after having checked in with the police department. On the morning of March 8, 1965, he had time to spare so he stopped in at the school on his way to his corner. On leaving the school he slipped and fell while on the school grounds. He then reported for duty to the police department and reported to his corner.

The examiner allowed the claim but the Commission reversed the order finding that he had not as yet reported for work and that he was not performing services growing out of and incidental to his employment at the time of injury.

Change

WALDEMAR A. ROSENTHAL

vs.

AMERICAN BIOSYNTHETICS CORPORATION

Sex

March 15, 1966

The applicant's duties from 1950 to 1953 involved working with a synthetic estrogen or female hormone in various forms including powder. Beginning in 1951 his hair grew thinner, his beard decreased and he developed breasts which were removed surgically. The examiner found that applicant had sustained a compensable occupational disease. The Commission affirmed.

BARBARA ELIZABETH FISCHER, WIDOW (Wesley Royden Fischer, Deceased)

vs.

WILSON AND SHIPLER, INC.

March 22, 1966

The deceased was fatally injured May 20, 1963, while covered by the Workmen's Compensation Act. The issue was determination of dependency.

The deceased had married Barbara Elizabeth Mickey on May 4, 1963 in Missouri. They then returned to live with her father and daughter. The deceased did not provide for the support of the daughter. The deceased had married June Ellen Biggers in Rockton, Illinois, on May 25, 1947. In 1951 the deceased commenced an action for divorce which was dismissed for want of prosecution. June Ellen Biggers was alive when deceased attempted marriage with Barbara Mickey. Two examiners divided the death benefit equally between Barbara and her daughter.

The Commission reversed and held that the marriage between deceased and Barbara Mickey was invalid as the deceased was still married to June Ellen Biggers and was incompetent to again marry. Diane Mickey, the daughter of Barbara was not living with the deceased but with her grandfather and was not a dependent. June Ellen Biggers, his wife, was estranged from him and not entitled to death benefits. Death benefits were then awarded to the father of deceased.

This case is pending in the Circuit Court of Dane County.

Tavern case covered

FLORENCE ALLEN, WIDOW (Harold Allen, Deceased)

vs.

ASA FOSTER a/k/a ASA FOSTER CONSTRUCTION COMPANY

March 29, 1966

The deceased was employed by respondent, a construction company, to operate equipment. He was only paid for the hours the crew normally worked, however, he was also required to grease and oil the equipment before work. This required that he go to the respondent's office to obtain gas and oil. Deceased was also to turn in his time cards on Friday of each week. On Friday, November 6, 1964, deceased left the site of work and proceeded in the direction of his employer's shop. He stopped for a short time in a tavern and then resumed his trip, sustaining fatal injury. The examiner found that at the time and place of injury, the deceased was entitled to the presumption that he was in the course of his employment and that respondent had failed to overcome the presumption. Death benefits were awarded the widow. The Commission affirmed.

This case is pending in the Circuit Court of Dane County.

FLORENCE L. FISCHER, WIDOW (Roland G. Fischer, Deceased)

vs.

NORTHERN STATES POWER COMPANY

May 13, 1966

The deceased was regularly employed by the respondent as a clerk on the day shift. In the spring of 1965, flood conditions prevailed on the rivers in the La Crosse area. The road to respondent's French Island plant went under water April 12, 1965, and respondent's superintendent provided his pontoon boat to ferry the workers from the Northside City dock. The deceased was hired to meet and ferry the 11:00 p.m. shift at 10:30 p.m. The waters continued to rise and the point of embarkation was changed. The two normal routes he would use to drive were closed so that he had to drive from La Crescent, Minnesota, to eastern La Crosse, then north to Onalaska and south to La Crosse. The deceased attempted to cross the west channel of the Mississippi while going to work and was drowned.

The examiner dismissed but the Commission reversed on the theory that deceased was engaged in a special errand for the benefit of the respondent at the time of injury and the deceased was compensated by the respondent for the trip. An injury on a journey is compensable if the making of that journey is part of the service for which the employe is compensated.

INDUSTRIAL COMMISSION

Biennial Review

July 1, 1964 to June [illegible], 1966

WISCONSIN [illegible] FORWARD IN
JOB SECURITY, OPPORTUNITY, AND SAFETY

THE governor, with the advice and consent of the Senate, is hereby authorized and directed to appoint, as soon after the passage of this act as may be, and thereafter biennially, on the first Monday in the month of February, a suitable person to act as commissioner, who shall constitute a bureau of labor statistics, with headquarters at the capitol.

Section 1, Chapter 319, Laws of 1883

THE INDUSTRIAL COMMISSION OF WISCONSIN

Hill Farms State Office Building • 4802 Sheboygan Avenue • Madison, Wisconsin 53702

December 31, 1966

To the Governor,
the Legislature,
and the people of
Wisconsin:

This report of activities for the biennial period ended June 30, 1966 is respectfully submitted.

Joseph C. Fagan, Chairman

Gene A. Rowland, Commissioner

E. E. Estkowski, Commissioner

WISCONSIN MOVES FORWARD IN JOB SECURITY, OPPORTUNITY, AND SAFETY,

A trained labor force—stable and secure—is vital to the well-being of Wisconsin's industrial establishment. To lead the way toward these objectives is the mandate of the Industrial Commission of Wisconsin, and it is to that end the Commission and its staff are fully committed . . .

. . . by bringing employer and employe together through a comprehensive employment service;

. . . by stabilizing the labor force through benefits aimed to ease the burden of unavoidable periods of unemployment;

. . . by assistance in maintaining and enhancing the high degree of skill in our labor force through providing and encouraging training opportunities;

. . . by fostering employment opportunities for all persons, based only on one criterion, the ability to do the job;

. . . by establishing and maintaining fair and reasonable conditions of employment for women and children;

. . . by maintaining acceptable standards of building construction to assure the safety and welfare of the labor force and the general public;

. . . by helping employers and employes reach fair and equitable settlements for work-associated injuries and illnesses;

. . . and by searching out and publishing useful and needed information about the labor force and the industrial establishment.

MILESTONES

1883—Bureau of Labor Statistics established

1885—Name changed to Bureau of Census, Labor, and Industrial Statistics

1897—Another name change to: Bureau of Labor and Industrial Statistics

1901—First Wisconsin State Employment offices established

1911—This was Wisconsin's banner year of progressive labor legislation. During this year, the Legislature enacted:

- Safety Legislation
- Women's Hours Law
- The Workmen's Compensation Act
- Apprenticeship Training Legislation
- Strengthened powers to establish and conduct State Employment Agencies
- Strengthened the Child Labor Laws and created the Industrial Commission to administer these laws; superseding the Bureau of Labor and Industrial Statistics.

1913—Minimum Wage Legislation

1931—Wage Collection Legislation

1932—Unemployment Compensation Act

1945—Fair Employment Practices Act

1965—Equal Opportunity in Housing Act

WISCONSIN STATE EMPLOYMENT SERVICE

THE State Employment Service is a major division of the Industrial Commission, but operates under such Federal legislation as the Wagner Peyser Act of 1933, the Serviceman's Readjustment Act of 1944 and the Employment Act of 1946.

While the funds are supplied through the Federal Government, the cost of operation in effect is borne by the business community of Wisconsin through a payroll tax on Wisconsin employers of four or more workers.

Through federal affiliation and the consequent lines of communication with other public employment service offices in our 49 sister states, the Service is kept constantly aware of nation-wide developments with immediate or potential impact in Wisconsin.

Responsibilities in a Changing Technological Society

The emphasis of the Service in recent years has shifted from a simple "labor exchange" concept, to the more complex role of a research and training organization.

Each WSES district office continues to face the problem of identifying and serving the peculiar needs of their locales. Aside from the day-to-day work of interviewing, counseling and testing applicants and filling job orders, the Service has been charged with the following responsibilities:

1. Provisions for manpower development and training.
2. Facilitating the outmigration of surplus labor.
3. Attracting qualified people to fill local job vacancies.
4. Industrial-development and community planning activities.
5. Supplementing school guidance programs.
6. Technical assistance to employers in analyzing personnel problems such as turnover and absenteeism.
7. Preparation of special labor market data.

PLACEMENTS

With the demands of our new technology and the high rates of unemployment in our unskilled population, the accomplishments in manpower research and development are a more valid measure of the Service's work than is the simple numerical count of all those people placed in jobs during the biennium. Still, placements remain a vital part of the Service's efforts and totaled 198,102 during the biennium with over 75 percent of them in non-agricultural industries. Non-agricultural placements were made in the following occupational classifications:

TOTAL NON-AGRICULTURAL PLACEMENTS

	158,570	100%
Professional	7,218	4.6%
Clerical and Sales	28,156	17.8%
Service	30,657	19.3%
Skilled	8,308	5.2%
Semi-skilled	19,668	12.4%
Unskilled and Other	64,563	40.7%

A breakdown of placements by industry group is shown in the following chart:

PLACEMENTS BY INDUSTRY GROUP
1964-66 Biennium

The changes witnessed in recent years relieving man of monotonous toil, though sometimes deskilling and always increasing productive capacities, are highly desirable. However, when the state of technology so depersonalizes as to affect the individual's opportunity to work and eliminates personal pride or accomplishment in work, then it needs controlling.

TECHNICAL RESOURCES

Meeting the challenge in the way technology has changed the manner in which work is done has demanded a major re-direction of Employment Service Activities. During the past two bienniums the Service has been designated to play a vital part in the administration of federal legislative acts and programs such as the Manpower Development and Training Act, the Economic Opportunity Act, the Smaller Community Program, and the Area Redevelopment Act. To function effectively in this new environment, the WSES has continued to make use of several new tools and technical resources during the biennium.

Counseling

Employment counseling continues to be a very significant tool for aiding young persons entering the labor markets, for servicemen returning to civilian life and for realistically approaching the barriers to reemployment of older and handicapped workers. Technological change has posed new challenges to other workers forced to change occupations. In the last biennium, the Employment Service gave more than 75,000 counseling interviews.

Special Employer Services

Over 57,000 employer contacts were made to assist in the solution of employment problems such as recruiting, turnover and absenteeism, and to explain the services available to the employer.

Training in principles and use of job analysis was given to 96 employment and plant managers, safety and personnel directors, and labor and industrial relations people representing 28 firms.

Nine new aptitude test batteries for specific occupations were developed and seven others are presently under development.

Nearly 1,000 employers were served by the WSES through the use of tests.

Over 136,000 persons were administered interest proficiency and aptitude tests by WSES district offices.

Occuaptional Research

Wisconsin is fortunate to have one of eight USES occupational research centers where continual study is made on the actual change in and content of jobs. Wisconsin employers have been extremely cooperative and generous with their time and facilities in cooperating with these job studies.

FRANCIS J. WALSH

Director

State Employment Service

During the past biennium, this center completed a brochure entitled *Occupations in Numerically Controlled Metal-Cutting Machining.*
sents occupational information about a relatively new but increasing significant area of work. The brochure will shortly become an official publication of the U. S. Department of Labor, and will be distributed nationally to all employment service offices. A previous study by the Wisconsin Field Center in the area of data processing was also published by the Department of Labor during the biennium under the title *Occupations in Electronic Computing Systems.*

Skill Training

The WSES, in cooperation with the State Board of Vocational and Adult Education and vocational schools throughout the state, has utilized the Manpower Development and Training Act and the training provisions of the Area Redevelopment Act to good advantage. Since the passage of both acts four years ago, 4,500 trainees have completed courses in these programs. and 78% of them have been placed in jobs related to their training. An additional 1,000 persons were enrolled in 24 different occupational training courses in June, 1966.

Community Participation

Extraordinary steps have been taken to extend services to the rural and less populated and industrialized areas where access to employment office services has been limited. The Smaller Community Program, a cooperative venture of the WSES with the University of Wisconsin Agricultural Extension Service's program of Rural Areas Development has achieved the concept of "human resource development." This program encourages and assists local and regional planning groups to evaluate, develop and promote their own resources. Through this program WSES has provided the full range of its services to applicants, employers, public and private planning and industrial development groups, and community action agencies.

In some cases this service has been used to motivate local leadership to take a good look at themselves; in other areas, such as Iron County, efforts had to be individualized. A number of miners were placed on

jobs while others were enrolled in ARA and MDTA training programs when the last iron mine closed.

Labor Market Information

Meeting the growing demands for labor market information has become a flourishing activity serving the needs of employers, researchers, news media, and industrial development promotion and policy planners at the state and national levels. Data, studies, forecasting on employment, unemployment, labor supply and shortages, wages, turnover, training needs and on the employment problems encountered by special applicant groups is developed in a wide variety of periodic and special reports.

These include county occupational potential reports, studies in data processing, cosmetology, careers for non-college bound youth, an automation information series, a recent statewide job vacancy survey and many others.

Recent expansions and improvements in the Employment Service and the introduction of new programs have brought into focus the need for new, more current and more valid information. Much of this material is gathered at the local office level, then analyzed, summarized, and distributed by the administrative office.

The research and Statistics Section works closely with other sections to determine training needs and the effectiveness of training that has been conducted. Within this Section both **automation** and **operations** research and planning is continually studied to find new and better ways to serve the public interest.

FIELD SERVICES DIVISION

Teacher Placement Service

The WSES has maintained a centralized placement service since 1934. The objectives are to assist school administrators to obtain qualified teachers and to aid prospective and qualified teachers to enter and advance in their profession.

The Service maintains the largest repository of teachers' credentials in the state. During the past biennium, 4,156 teaching positions were filled by this specialized service. This figure represents an increase of nearly 12 percent over the previous biennium.

Professional Placement Service

The nature of this statewide program demands most extensive development and implementation at a centralized location. The primary function of a statewide program in bringing together employers and professionally qualified applicants is an activity coordinated through all WSES offices.

Employment in the professional occupational groups has been and continues to be the fastest growing of all occupational groups. This service affords a professional applicant's qualifications the widest possible exposure depending on the applicant's geographic mobility. Nearly 5 percent of the total non-agricultural placements during the past biennium were of professional, technical, and kindred workers.

Inter-Area Recruitment Service

As in years past, the orderly movement of workers within and outside the state is coordinated at the administrative level. This service is utilized by district offices when local sources of manpower cannot meet the needs of employers and where they are willing to accept workers from other localities.

Farm Labor Service

This service is responsible for recruiting enough workers to meet the needs of agricultural and food-processing employers. An annual average of 10,000 migratory workers are recruited in southern labor supply states to meet the seasonal labor needs of Wisconsin employers. This service is accomplished through the network of United States Employment Service offices in states where there is a seasonal supply of workers. The hectic activities of four seasonal offices at Oconto, Wautoma, Sister Bay, Sturgeon Bay and all district offices require close coordination from this centralized service. Regulatory functions relating to wages, housing, transportation and working conditions are also enforced for the protection of migratory labor.

The rapid advance of mechanization has severely affected labor requirements in the production and processing of food and farm commodities. However, the termination of Public Law 78, which permitted importation of foreign workers, has sharply increased recruitment pressure for domestic migratory labor.

Total agricultural placements in the past biennium were 39,532.

SERVING SPECIAL APPLICANT GROUPS

Veteran Services

In 1946 Congress expressed recognition of a moral and just obligation to provide services for veterans. This promise is still needed and fulfilled each day in every public employment service office by maintaining close relationships with veterans organizations.

During the past biennium the Service placed 18,411 veterans in non-agricultural jobs. 12.6 percent of those men were disabled veterans. In addition, nearly 5,000 veterans were provided employment counseling services.

Handicapped Workers

To help handicapped workers compete for jobs each WSES district office provides specialized placement, counseling and job development techniques.

Close cooperation with the State Vocational Rehabilitation Division has resulted in 1,521 persons being referred there for rehabilitation service. In turn, Vocational Rehabilitation has referred 522 people for job placement and WSES has placed 60 percent of them.

WSES district offices also placed 7,775 handicapped workers who did not require rehabilitative service. Over 6,500 disabled job seekers were provided counseling services.

Older Workers

It is over a decade since the needs of older workers in a highly competitive labor market was first recognized. There is adequate evidence that employment practices have failed to accommodate themselves to profound changes in the population age-mix.

The older worker is often defined as 45 years of age and over and he is often faced with a difficult time finding employment when he becomes unemployed. Programs of employer education are conducted to correct many misconceptions of the older worker's capabilities. During the past biennium 25,500 placements were of older workers. In addition, 3,000 received special employment counseling service.

Youth

The majority of youth enter the labor market shortly after graduation from high school; consequently, the Service has increased its counseling, testing and placement services in the state's high schools to assist non-college-bound seniors in the transition from school to work. These services supplement and are closely coordinated with the school's guidance program.

Over 41,000 youth took advantage of the counseling service during the past beinnium. More than 62,000 placements were made of youngsters under 22 years of age.

Recognizing that almost half the population in the nation is 25 years old or younger, the Employment Service has established two Youth Opportunity Centers, one in Milwaukee and one in Madison, to more effectively help young people with their vocational problems.

Intensive outreach to disadvantaged youth and personalized counseling and job placement services are prime objectives of these Centers which serve large areas of central and southeastern Wisconsin.

The Economic Opportunity Act has focused ES services on helping disadvantaged youth through the Neighborhood Youth Corps, Job Corps, and beautification and conservation projects authorized by the Nelson Amendment. All these involve extensive coordination with other agencies.

In the last 17 months of the biennium, the Employment Service recruited and screened 760 young men for Job Corps assignments. Working with 10 sponsors, the ES also enrolled 4,600 young people in Neighborhood Youth Corps projects and 200 adults in Nelson Amendment projects. All those enrolled in various programs received guidance counseling.

Civil Defense Coordination

This agency has well-formulated emergency plans which are closely coordinated with all other Civil Defense and Department of Labor mobilization plans. Activity in the past biennium included the development and trial of recovery plans.

EMPLOYMENT SECURITY OFFICES

The strength of the public employment service lies in the quality of community participation each of our offices can provide to meet the needs of the areas they serve. Through community participation our offices discover the attitudes, desires, needs and ambitions of employers and applicants alike.

Construction of three modern offices was begun in the past biennium in Manitowoc, Sheboygan, and Wausau, and will be completed in 1967. The buildings will be owned by the agency, and are designed to facilitate the best possible employment service to the people of the districts.

As of June 30, 1966 District offices were located in the following cities: Appleton, Ashland, Beaver Dam, Beloit, Eau Claire, Fond du Lac, Green Bay, Janesville, Kenosha, La Crosse, Lancaster, Madison, Manitowoc, Marinette, Milwaukee (2), Oshkosh, Racine, Rhinelander, Sheboygan, Superior, Watertown, Waukesha, Wausau, and Wisconsin Rapids. Branch offices provide service in Neenah-Menasha, Stevens Point, and Marshfield. Madison and Milwaukee each have a Youth Opportunity Center.

LOOKING AHEAD

The Wisconsin State Employment Service is rapidly evolving from a simple labor exchange to an aggressive Manpower Service Agency which actively reaches out to extend its many manpower development services to Wisconsin citizens.

Emphasis will be placed upon four basic manpower functions in the next biennium: outreach, improvement of employability, job development and placement, and job market information. The Employment Service is entering a new era in which it assumes the broad responsibility for the conservation and development of human resources in the work force.

UNEMPLOYMENT COMPENSATION DIVISION

REFLECTING the expansion in business activity, covered employment in Wisconsin reached an all-time high during the 1964-1966 biennium, as did total wages paid to covered workers.

U. C. benefit payments continued to decline, dropping from $48.9 million in 1962-1963 and $48.2 million in 1963-1964 to $39.5 million in 1964-1965 and $33.8 million in 1965-1966.

Wisconsin's U. C. benefit fund received $93.8 million in contributions from covered employers, and $14.5 million in interest earnings during the 1964-1966 biennium. Those receipts exceeded the fund's reduced benefit disbursements by $35.5 million during the two years.

The resulting increase in the fund partly reflected two major benefit financing amendments recommended by the law's Advisory Committee, and enacted by the 1965 Legislature. Those amendments (a) newly provided for "solvency contributions" to be credited to the law's balancing account, starting in 1965; and (b) raised the law's taxable "payroll" base from the first $3,000 per worker, per year, to $3,600, starting in 1966.

COVERAGE — OF EMPLOYERS AND WORKERS

By June 1966, Wisconsin's U. C. law covered about 37,300 employers — mostly those with four or more workers. (21 states cover employers of 1 person.)

Wisconsin's 37,300 covered employers average just under 25 workers each, and have employes in some 40,000 different establishments or places of work.

In March 1965, about 25,700 of those establishments employed fewer than 10 workers; 7,300 had from 10-19 workers; 4,375 had from 20-49; 1,350 had from 50-99; 800 had from 100-249; 250 had from 250-499; 125 had from 500-999; and 86 employed 1,000 or more. Those 86 largest establishments employed over 22 per cent of all workers covered by the law.

The Commission's records show, month by month, the total number of workers employed by private employers. The trend of covered employment has been upward since 1950, increasing from an average of 735,100 in that year to an average of 960,300 in 1965. A detailed breakdown of covered workers in recent years is shown below:

MONTHLY COVERED EMPLOYMENT
1963, 1964, 1965 (rounded data)

	1963	1964	1965
January	853,500	872,300	915,200
February	847,300	867,600	909,500
March	849,500	872,000	914,800
April	868,000	888,600	932,100
May	882,800	906,000	948,100
June	901,100	918,500	973,500
July	916,300	928,200	985,600
August	916,600	941,500	993,100
September	915,500	947,000	992,800
October	904,500	936,500	985,900
November	901,600	934,000	986,500
December	900,500	942,400	987,400
Average	888,100	912,800	960,300

COVERED EMPLOYMENT AND GROSS WAGES
1964 and 1965
(by industry group) — (rounded data)

	Average Monthly Employment (in 1000's)		Gross Wages (in millions)	
Industry	1964	1965	1964	1965
Manufacturing	466	489	$2,950	$3,173
Trade	227	240	945	1,036
Service	69	75	251	282
Utilities	56	58	347	369
Construction	48	51	340	379
Finance, etc.	42	43	227	242
Mining, etc.	3	3	16	17
Miscellaneous	2	2	11	12
	913	960	$5,087	$5,510

Public employes are omitted from the above figures; but Wisconsin's U. C. law now applies to 56,000 public workers — employed by the State, by the City of Milwaukee, or by those cities or counties which have

elected coverage. Instead of requiring U. C. reserves in such cases, the law applies a simple benefit reimbursement basis to each government unit.

In addition, under agreements with the U. S. Department of Labor, about 25,000 federal civilian employes and a varying number of ex-servicemen are covered by the unemployment compensation provisions of Wisconsin's law. Benefits paid to unemployed federal workers or ex-servicemen are financed entirely at federal expense.

Wisconsin's civilian labor force, counting both the employed and the unemployed, totals about 1.8 million. Of that number, about 200 thousand are farm workers, and about 160 thousand are self-employed, or unpaid family workers, or domestic workers. The remaining 1.4 million are non-agricultural wage and salary workers. About 1.14 million of those 1.4 million wage and salary workers have unemployment benefit protection: — 1.05 million in covered private employment; 81 thousand in covered government employment; and about 14 thousand in railroad employment covered under federal law.

The remaining 295 thousand non-farm workers, not covered by unemployment compensation, consist mainly of state and local government workers, employes of non-profit organizations, and about 80,000 employes of employers with less than 4 workers.

WISCONSIN'S UNEMPLOYMENT FUND AND CONTRIBUTIONS

Wisconsin's unemployment reserve fund is held by the U. S. Treasury Department in Washington, D.C., and credited to Wisconsin's account in the Unemployment Trust Fund. Withdrawals are made from this Fund as needed to pay benefits to eligible covered workers.

Wisconsin's benefit fund has been built up since July 1934 by contributions from covered employers only. Each employer's required payments are figured as a percentage of his covered payroll and are credited to his experience-rating account in the state fund.

Wisconsin's fund reached a peak of $262.2 million in October 1957. It declined steadily thereafter to a low of $182.5 million in March 1963. This decline of almost $80 million was due mainly to the heavy benefit costs of the 1957-1958 and 1960-1961 recessions.

But it was also due to the shrinking adequacy of the law's $3,000 "taxable" payroll base, as compared to rising wage and benefit levels.

By 1964 it had become clear that the law's benefit financing provisions should be strengthened, especially as to the fund's balancing or "solvency" account (which finances the benefits charged to overdrawn employer accounts).

The law's Advisory Committee therefore recommended — and the 1965 Legislature enacted — two

PAUL A. RAUSHENBUSH
Director

Unemployment Compensation Division

major financing amendments, designed to strengthen the fund and its solvency account.

The first amendment newly provided for a "solvency" contribution, to be paid by each employer into the fund's balancing account, starting in 1965. All employers pay the same solvency rate; but those employers whose normal rate is under 3.7% do not have to pay their solvency contribution as an "extra" — unless they so elect. In overdrawn or deficit cases, however, the solvency rate must be added to the normal rate. The rate is set annually, depending on the "adequacy level" of the balancing account. The solvency rate, as a percent of taxable payroll, was initially set at 0.25% for 1965, and dropped to 0.1% for 1966.

The second 1965 financing amendment changed the law's taxable "payroll" base from the first $3,000 per worker, per year, to $3,600 from 1966 on. That should raise the taxable wage base, on which contributions are paid, from $2.85 billion to about $3.3 billion per year, thereby increasing the adequacy of the fund and its solvency account.

Partly as a result of those 1965 changes, Wisconsin's U. C. contribution collections rose, — from $38.9 million in 1962-1963 and $41.9 million in 1963-1964, — to $45.1 million in 1964-1965 and to $48.7 million in 1965-1966.

And Wisconsin's benefit reserve fund rose, from $189.4 million on June 30, 1964, to $224.9 million on June 30, 1966.

EXPERIENCE RATES

Wisconsin's law has from the start included a definite system of individual employer "experience rating" — with each employer's contribution rate based on his own experience under the law. This system of setting rates is designed to charge each employer with the benefit costs of his own unemployment, and to encourage steadier jobs, so far as practicable.

Each employer's contribution rate is determined once a year, based on his own record, reflected by his account, as to payrolls, contributions and benefit payments. Contribution rates vary accordingly, both among employers and from year to year — based on varying experience.

The law's normal contribution schedule now uses 11 possible "experience rates," each stated as a percentage of the employer's covered payroll: — ranging from a high of 4.4 percent down to zero percent. The highest rates apply only after an employer's benefit drains have exceeded his contributions. The zero rate applies to an employer only when he has built up substantial reserves.

The average rate of contributions, stated as a percentage of the given year's defined (taxable) payrolls, was 1.47 percent for 1961; 1.40 percent for 1962; 1.55 percent for 1963; 1.54 percent for 1964 and 1.67 percent for 1965. The average rate of contributions was even lower, for each of those years, if stated as a percentage of the year's gross total wages for covered work, as follows: 0.85 percent for 1961; 0.78 percent for 1962; 0.84 percent for 1963; 0.82 percent for 1964 and 0.86 percent for 1965.

Wisconsin's experience rating system measures the reserve adequacy of each employer's account by his most recent (single) year's payrolls, and limits rate jumps from year to year, to assure a gradual adjustment of individual rate variations.

U. C. BENEFITS — UNDER WISCONSIN'S LAW

During the first 30 years, through August 17, 1966, Wisconsin's covered workers received over 21.8 million benefit checks for weeks of partial or total unemployment. Those checks totaled over $655 million. More than 43 percent of that amount — over 288 million — was paid in the last six calendar years.

Following are the benefit dollars paid out under Wisconsin's U. C. law, by calendar years:

WISCONSIN U. C. BENEFITS
By Calendar Years
1963-1965

Year	Amount	Year	Amount
1936	$ 131,073	1951	$ 7,358,376
1937	2,131,576	1952	14,128,778
1938	9,511,312	1953	17,937,114
1939	3,663,572	1954	40,029,910
1940	4,548,529	1955	22,187,840
1941	2,928,432	1956	24,055,554
1942	4,119,561	1957	29,306,071
1943	880,512	1958	66,515,694*
1944	1,249,692	1959	37,030,937*
1945	4,264,654	1960	45,519,450
1946	7,771,882	1961	68,058,222
1947	3,393,102	1962	44,591,161
1948	4,895,635	1963	47,542,834
1949	19,626,899	1964	46,443,622
1950	13,061,616	1965	36,020,992

*Includes $11.8 million in state financed temporary emergency benefits: $8.1 million in 1958 and $3.7 million in 1959.

For the last four fiscal years, Wisconsin's benefit payments totaled $48,946,138 during 1962-1963; $48,205,047 in 1963-1964; $39,577,390 during 1964-1965 and $33,807,224 in 1965-1966.

BENEFITS

Weekly Benefit Rates. Each worker's benefit rights under the law are based on his employment by a covered employer. What weekly benefit payment applies to an eligible claimant depends on his own average weekly wage from the given employer, figured by dividing his gross earnings by his work weeks.

The law's schedule of weekly benefit rates, though based on each worker's own average weekly wage, is weighted in favor of the lower earnings brackets. In the higher wage brackets Wisconsin's benefit schedule pays each jobless worker about 50 percent of his average wage — up to the law's top benefit rate or ceiling.

Wisconsin's U. C. law provides that the top weekly benefit rate will be set, each January 1 and July 1, at 52½ percent of the gross state-wide average weekly wage — of Wisconsin's covered employes — for the 12-month period ended six months earlier. This determination is non-discretionary, being based on comprehensive wage and employment data regularly gathered and available under the law.

This semi-annual adjustment keeps the law's benefit ceiling up to date. It helps to assure that a majority of Wisconsin's jobless workers will be paid weekly benefits equal to 50 percent of their own average weekly wages.

Wisconsin's top weekly benefit rate became $54 on July 1, 1964; $55 on January 1, 1965; $56 on July 1, 1965 and $57 on January 1, 1966. During the year ended June 30, 1966, Wisconsin's benefits for total unemployment ranged from $11 per week up to $57 per week, and averaged $44.61 per weekly check. The top rate became $58 on July 5, 1966.

Benefit Duration. How many weeks of benefit duration may apply to an eligible Wisconsin worker depends on how many work-weeks he has had in covered emloyment during the past year. He needs 18 such work-weeks, to qualify at all. Beyond that, the more weeks he has worked, the more rights he has built up and the more benefit weeks he may draw — if he remains unemployed and eligible.

If a worker has had 43 or more weeks of covered employment within the past year, he may draw up to 34 weeks of benefits. If he has had fewer work-weeks, his benefit weeks equal 80 percent of his actual work-weeks.

Benefit Year. Wisconsin's law was amended in 1963, to provide for a "benefit year" — as most other state U. C. laws have long done. So a claimant's benefit

rights are now determined, and set, for a whole "benefit" year, based on his wages and covered during the preceding "base period" year.

Waiting Period. Wisconsin's U. C. law requires a "waiting period" — to start each benefit year — of one calendar week of unemployment for which no benefits can be paid. (The worker must claim and be eligible for that week, or it can't be counted toward his unpaid waiting period.)

The law's one week waiting period means that an eligible jobless worker cannot receive his first benefit check (which pays for his second week of unemployment) until about three weeks after his layoff.

Benefit Claims. To secure benefits under Wisconsin's U. C. law, each jobless claimant must register for work, and must report weekly, through one of Wisconsin's public employment offices. These offices are located in 26 cities, throughout the state. Many smaller communities are served by traveling U. C. representatives, once a week.

To remain eligible, a jobless claimant must apply for any job to which a public employment office refers him and must accept any work offered him, or show good cause for his failure to do so. Whenever a claimant turns down a job without good cause, the law's "work-test" stops his benefits — until after he has worked again, in at least four weeks.

Various other qualifying, eligibility and disqualifying conditions apply. For instance, no benefits are paid to workers while they are out on strike. Benefits are suspended while a claimant is unavailable for work. An employe who is discharged for misconduct on the job, or who quits his job without adequate cause, cannot draw any benefits based on that job.

In short, the law's provisions limit its protection rather strictly — so that benefit checks will go only to laid-off workers who are genuinely unemployed.

Settlement of Disputed Claims. Whenever a question arises as to the possible disqualification of a claimant for benefits, an investigation is made. Based on the facts thus gathered, a Commission deputy makes an initial determination. In any case involving a dispute between employer and employe, both parties receive a written copy of the determination and either may appeal.

In 1965, 94,340 determinations on questions involving possible disqualifications were made at the initial stage. In 26,489 or 28.1 percent of those cases the claimant was denied benefits for varying periods up to complete cancellation of his benefit rights, depending upon the issue involved.

Of the 94,340 determinations, 19,832 involved employer contests primarily on "quit" and "misconduct" issues. The remaining 74,508 determinations involved questions arising through the screening of claims by the Commission's staff, — such as the claimant's availability for work, his failure to register for work with a public employment office, or his failure to apply for or accept a suitable job.

Of the 94,340 initial determinations thus made, 3,456 or 3.7 percent were appealed. In about two-thirds of those cases, the Commission examiner hearing the appeal affirmed the initial determination.

During 1965 the Industrial Commission, sitting as a review body, considered 697 further appeals. The Commission affirmed the examiner's decision in 86 percent of those cases.

Finally, in 1965, the Circuit Court affirmed the Commission in 20 cases; reversed the Commission in 2 cases; and remanded one case for further proceedings. Ten other cases were dismissed, and 19 other appeals were not perfected by the plaintiffs. Further, the Wisconsin Supreme Court decided 4 cases in 1965, on appeal from the Circuit Court and the Commission. In 3 cases the Supreme Court affirmed the Circuit Court and the Commission. In the other case, it reversed the Circuit Court and affirmed the Commission.

Controlling Benefits. The Industrial Commission's continuing efforts to control benefit claims and to prevent improper payments have always been widely supported by labor, by management and by citizens generally. Wisconsin's covered employers are kept fully informed as to benefits and have been especially helpful in keeping improper payments down to a minimum.

When an employee starts his claim, his last employer is notified and asked to report any disqualification which may apply to the claim. Further, the employer not only receives a notice of each benefit determination, but also a notice of each resulting benefit check. Wisconsin was the first state to supply such current benefit information to its employers.

Most U. C. claimants are honest. But there is always some fraud in any benefit program. A few cheaters conceal current wages while claiming U. C. benefits. The Commission uses a variety of methods to spot such fraud. It also checks every communication which gives definite facts about a possible fraud case. U. C. cheaters do get caught, and the law's various fraud penalties are applied.

In 1965 fraud was found in 732 cases which called for disqualification from future benefits. In 589 of those cases, benefit overpayments of $59,300 were ordered repaid. In 73 flagrant cases, court convictions were obtained.

OTHER U. C. BENEFIT AND RETRAINING PROGRAMS

Along with the state jobless benefit program, the Industrial Commission currently operates two federal

U. C. programs, whose benefit provisions and procedures are closely tied in with Wisconsin's U. C. law. (No claimant can receive both Wisconsin benefits and federal U. C. benefits for the same week.)

One federally financed program, called U. C. F. E., provides benefit protection to about 25,000 federal civilian employes located in Wisconsin. During the biennium ended June 30, 1966, the Commission issued 28,400 U. C. F. E. checks totaling $1,190,700.

Another federal program, called U. C. X., applies to ex-servicemen. During the biennium ended June 30, 1966, the Commission issued 56,900 U. C. X. checks, totaling $2,143,400.

The Industrial Commission cooperates with other state employment security agencies in administering those federal U. C. programs, as well as the respective state unemployment compensation laws.

Two other federal programs were administered in Wisconsin by the Industrial Commission's Employment Service and Unemployment Compensation departments, under agreements with the federal government during the 1964-1966 biennium.

In May 1961 the federal Area Redevelopment Act (ARA) became law. It became operative one year later. This new pilot program provided for federally financed weekly allowances, for unemployed persons in redevelopment (high unemployment) areas, while taking approved training or retraining, for periods limited to 16 weeks. Later, by federal amendment, the ARA program was incorporated into the broader Manpower Development and Training Act (MDTA), effective as to new projects starting July 1, 1965.

During the life of the ARA program weekly training allowances totaling $616,000 were paid in Wisconsin, of which $282,900 were paid in the two years ended June 30, 1966.

In March 1962, the federal Manpower Development and Training Act (MDTA) became law. This act also provided for a system of allowances to be paid to unemployed persons during their approved training or retraining. The MDTA program is not limited to redevelopment areas, and its weekly allowances can now be paid for periods up to 104 weeks. It also provides for travel and subsistence allowances in certain cases. The first MDTA courses started operating in October 1962. Allowances paid under the MDTA program totaled $3,366,500 during the biennium ended June 30, 1966.

U. C. ADMINISTRATIVE COSTS

Wisconsin's administrative costs have always been relatively low, when measured by the cost of operating similar U. C. programs in fairly comparable states.

The Commission's costs of administering Wisconsin's U. C. program are almost wholly financed by federal grants made by the federal Bureau of Employment Security, from Congressional appropriations.

These federal grants require the submission of budget estimates based on detailed work-load and unit cost estimates. They also involve federal controls and auditing of all expenditures made by the Commission's U. C. Department — even though all such items (salaries, purchases, rentals, etc.) constitute state expenditures, made through the regular channels which apply to all state departments.

Because of widely fluctuating loads — which characterize every unemployment compensation program — the Commission's U. C. staff and costs have varied widely from year to year. U. C. operating costs, including those involved in paying federal U. C. benefits, were $2,655,508 for 1962-1963; $2,778,885 for 1963-1964; $2,943,772 for 1964-1965 and $3,016,146 for 1965-1966.

FEDERAL LEGISLATION

In 1965 and 1966 a major effort was made in Congress to impose federal benefit standards on all state U. C. laws. If the amendments passed by the U. S. Senate had been accepted by the House, they would have left little room for state discretion or initiative. The proposed changes finally died in a "conference" committee, in the closing days of the 89th Congress.

So far, the steady improvement of the state laws has been a major factor in defeating such proposals. As the Commission has noted in previous reports: — "the best argument against federalization is progress by the states themselves — in improving their own laws and administrative performance. The better the state laws, and the better their administration, the stronger the case against federalization — and the weaker the public demand for further centralization of government functions . . . . Suitable action by the states, to provide more adequate benefit protection for their own citizens, is the best way to head off — or defeat — renewed 'federalization' efforts."

WISCONSIN U. C. AMENDMENTS

Under Wisconsin's unemployment compensation law, the primary responsibility for recommending desirable amendments rests on the law's Advisory Committee, — which now consists of four employer and four labor members.

This representative group has functioned ever since the law's enactment. It has counselled with the Commission on administrative policy and procedure; and has jointly recommended nearly all the major amendments enacted by Wisconsin's Legislature since 1932.

In accord with its statutory mandate, the Advisory Committee will again hold public hearings, in October and November 1966, and will seek to reach joint agreement on desirable U. C. amendments for consideration by the 1967 Legislature. Two legislators have been named by the Legislative Council to observe the Advisory Committee's 1966-1967 meetings.

APPRENTICESHIP DIVISION

THE past two years have continued to be a period of change in both procedures and policies in the Apprenticeship Division. The plan of streamlining the division and its operation has continued ahead as scheduled. Further economies have been put into effect. Clear guides have been developed to shorten communication lines between the division and labor, management, and education groups. And in the past two years additional steps have been taken to promote and initiate many programs under the Manpower Development and Training Act of 1962.

The following is a brief outline of the accomplishments made since July 1, 1964. With the help of labor, management, and education, the second Biennial State Apprenticeship Conference was held in Green Bay, with 375 persons in attendance.

New field offices were established in the Neenah office of the Wisconsin State Employment Service and in the Wausau Technical Institute. Both of these offices provide new and expanded services to labor, management, schools and apprentices in their respective areas.

In cooperation with labor and management, new procedures were developed for the selection of apprentices with Joint Apprenticeship Committees and provided technical assistance to over 300 employers to develop selection procedures that would meet the requirements of the new State Equal Opportunity Plan for Apprenticeship.

Distributed over 2,000 copies of the Guidance Counselor's Guide to apprenticeable occupations, to high school guidance counselors and libraries throughout the state of Wisconsin.

Downward Trend Reversed

The apprenticeship program reached a modern day low in 1962, with only 4,000 indentures. Since that time, continuous promotional efforts by the Division people, a concentrated effort toward the high school guidance counselor, an upswing in the economy, and a severe shortage of skilled craftsmen, has enabled the Division to reach the current figure of approximately 6,500 indentures.

PROMOTIONAL ACTIVITIES

Because the Apprenticeship Law is based on voluntary participation, the efforts of the Division have to be organized largely into several persuasive phases. Examples of some of these efforts follow:

Promotional Meetings — In 1964, a statewide labor-management-education apprenticeship conference was held in Green Bay. This meeting, which attracted well over 350 participants, was dedicated to the promotion of apprenticeship within the non-participating industries; the review of current programs; and to the updating of the apprenticeship system in Wisconsin.

Following the statewide meeting, several regional conferences were held throughout the state.

Public Information — A planned system of press releases developed to circulate publicity to news media, trade publications, and any and all sources of publicity. This work, coupled with many public appearances of Division personnel, has greatly assisted in promoting the concept of apprenticeship and on-the-job training.

Cooperative Programs — Cooperative agreements have been worked out for promotional efforts with the state and federal agencies connected with and interested in the training of skilled manpower. The principals of these agencies are the Wisconsin State Employment Service; state and local boards of vocational, technical and adult education; Bureau of Apprenticeship and Training, United States Department of Labor; the State Department of Public Instruction, and with state agencies that have apprenticeship provisions in their law — the Board of Examiners in Watchmaking; and the Barbering, Cosmetology, and Plumbing Divisions of the State Board of Health.

Both the field and supervisory staff attend and address meetings and conferences for the purposes of acquainting people with the apprenticeship program and promoting it in all Wisconsin industries. The field staff devotes 50% of its time to promotional activities as compared to practically none in 1960. In their promotional work, they work closely with representatives of the agencies previously mentioned. In the last two years, field and supervisory staffs have accomplished 4,803 promotional visits.

BASIC WORKLOAD

Although the Apprenticeship Division's workload correlates closely with the typical workload of any sales office, some measures regarding quantity of work are both necessary and available. The basic workload

CHARLES T. NYE
Director
Apprenticeship Division

of the Division is the processing of apprenticeship indentures. During the 1964-1966 Biennium the following transactions have occurred:

Indentures Approved	5,001
Indentures Completed	1,824
Indentures Cancelled	964
Indentures Suspended	319
Indentures Reinstated	162
Total Transactions	8,270

The field staff representatives made 10,000 field visits during this same two-year period. Over 5,000 of these visits were of a service nature. During the past two years, 1,824 certificates of completion were awarded to graduate apprentices.

The most valid measure of any apprenticeship agency's work is the quantity and quality of the journeymen made available to industries through that agency. So the most meaningful figure quoted above is that of 1,824 apprentices who completed their indentures during the past two years. This many skilled journeymen are an invaluable additional asset to Wisconsin businesses and industries as well as to the graduate apprentice himself who has embarked on a lifetime career. The high quality of Wisconsin graduate apprentices is recognized throughout the nation.

STATISTICAL SUMMARY	FISCAL YEAR 1964-65	1965-66
Indentures		
Approved	1,900	3,100
Completed	934	890
Cancelled	435	525
Suspended	91	228
Reinstated	94	68
Field Visits	4,590	5,410
Diplomas Issued	934	890
On-the-job Trainees	594	1,504

EQUAL OPPORTUNITIES DIVISION

WITH the end of this biennium, the Equal Opportunities Division has completed 21 years of operation. Established in 1945, the Division was assigned administration of the state's then new fair employment practices law and was given the name Fair Employment Practices Division.

Non-Discrimination In Employment

The 1945 statute applied only to discrimination in employment because of race, creed, color, national origin, or ancestry. In 1959 it was amended to bar discriminatory practices based on age, with age defined as "between the ages of 40 and 65." In 1961 the statute was further amended to bar discriminatory practices based on sex and finally, in 1965 it was again amended to prohibit discrimination because of handicap.

Non-discrimination in Housing

In 1965, the state adopted its Equal Opportunity in Housing Law (Chapter 439) which prohibits discrimination where the sale, lease, or rental of housing constitutes a "business" as defined in the statute. The administration of this law was assigned to the Fair Employment Practices Division and, with this addition, a new broad area of responsibilities in human rights, the statute specified that the Division's name be changed from Fair Employment Practices to Equal Opportunities Division.

Non-Discriminatory Contracts Law

In addition to the Fair Employment Practices Law, and the Equal Opportunity in Housing Law, the Division administers the state's Non-Discriminatory Contracts Law. This law requires all contracting agencies of the state to include in every contract executed by them a provision which binds the contractor to employ on a non-discriminatory basis.

DIVISION FUNCTIONS

In administering the laws assigned to it, the Division divides its work into two broad categories: the regulatory function and the educational function.

The regulatory function involves the investigation and adjudication of complaints.

The educational function is broad in scope and covers a wide ranging area of activity. Included are:

. . . investigation of the existence, character, causes, and extent of discrimination in the state;

. . . study of the best and most practical ways of eliminating discrimination;

. . . conferring and cooperating with business, industry, labor unions, professional organizations, and public and private agencies in joint efforts to eliminate discrimination;

. . . and making specific and detailed recommendations to such individuals and organizations.

Educational Activities During the Biennium

To accelerate study of possible discriminatory patterns, the Division held fact finding hearings in the service industry in the Milwaukee area in September 1965 and in the construction industry in the Milwaukee area, the Racine/Kenosha area, and the Janesville/Beloit area in February and March of 1966. These hearings looked into the personnel procedures and practices of these industries as they might affect the employment of minority groups.

A second area of investigation, conducted under a grant made available by the Equal Employment Opportunity Commission in Washington, was a detailed study made to determine the availability of clerical jobs for Negroes in the Milwaukee area.

Equal Opportunity Councils Formed

The Division has been active in encouraging and assisting the creation of private equal opportunity councils. Among the more prominent examples of this kind of activity was the formation in the Summer of 1966 — of the statewide Wisconsin Equal Opportunity Association.

This Association has as its stated purpose:

> "To bind together in one association, the resources of business, industry, labor, located in all geographic areas of Wisconsin, to the end that the principle of equal employment opportunity, based solely on merit, is, in a practical, professional-like way, advanced and more fully realized throughout the State of Wisconsin."

Among its objectives will be to create a positive climate in the state for optimum opportunity; establish educational, cultural and social means for equal opportunity, organize existing facilities in the state to promote optimum opportunity, and work to eliminate all forms of discrimination in employment.

In February 1966 the first annual statewide Governor's Conference on Equal Opportunity in Employment was arranged and scheduled in Milwaukee by the Division. In addition to keynote addresses by the Governor and Commissioner Richard Graham of the Federal Equal Employment Opportunity Commission, the Conference included four specific interest workshops. Approximately 800 people were enrolled in the Conference.

The Committee on Equal Employment Opportunity in Construction was established for the Milwaukee area in cooperation with the construction industry and the construction trades unions. Its purpose is to open wide the channels of communication between civil rights spokesmen, labor leaders and employers; and to accelerate the entry of Negroes into the trades, especially into apprenticeship training.

VIRGINIA HUEBNER
Director
Equal Opportunities Division

Numerous action oriented programs have been held in the effort to eliminate racial and sex discrimination in employment. For example, during the biennium several full day workshops regarding techniques for increasing the hire and upgrading of Negroes and eliminating discrimination against women were conducted for labor leaders and for supervisory and industrial relations personnel within industrial plants.

Division personnel have worked closely with labor/management teams to provide advice and counsel on the legality of collective bargaining provisions, wage and classification plans, benefits programs and job assignments as applied to women workers.

COMPLAINTS

During the biennium, 120 complaints alleging discrimination in employment were filed with the Division. Forty-nine reports of discriminatory job orders were filed with the Division by the State Employment Service. Nine complaints were filed under the new housing law.

Complaints are investigated to determine whether there is or is not probable cause to believe discrimination was practiced.

In those cases where probable cause is found, the Division attempts to eliminate the practice through conference, conciliation and persuasion. When these efforts fail to eliminate the practice, a formal Commission hearing is required by the statute.

While complaints based on race have leveled off during the biennium, there has been a surge of complaints of discrimination because of sex.

Cases involving the sex provisions are complex and require the expenditure of as many as 80 man hours in investigation and adjudication. The following synopsis of a case that is neither the most nor the least complex is illustrative of the work required in arriving at a just determination:

The complaint alleged discrimination on the basis of sex. The Company's job evaluation plan as well as the seniority system established inequities detrimental to female workers. In order to properly evaluate the charge, the investigator was required to interview the complainant, conduct a series of three meetings with management and labor representatives, hold a series of phone conversations with labor and management representatives, study, digest and evaluate a 93-page labor-management agreement, study, digest, and evaluate a 33-page job evaluation plan, maintan a file of reports, communications, etc., on the case. Upon coming to the conclusion that there was probable cause to believe discrimination was practiced, the investigator held a conciliation meeting that resulted in elimination of the discriminatory practices. If correction had not been effected and the case had gone to hearing, the investigator may have been requested to offer testimony.

It is estimated that approximately 50 man hours were expended in this case.

STATISTICAL SUMMARY

The following table indicates the number and nature of complaints processed by the Division:

EMPLOYMENT COMPLAINTS
1964-1966 BIENNIUM

	Number	Per Cent
Race, Negro	56	46.7%
Race, White	3	2.5
Age	10	8.3
Sex	40	33.3
National Origin	4	3.3
Religion	2	1.7
Handicap	5	4.2

HOUSING COMPLAINTS
Dec. 1965 to July 1966

Total Cases	9
Complaint Based on Rental	9
Disposition	
No Probable Cause Found	2
Probable Cause Found	3
Pending	4
Type of Residence	
Apartment	5
Duplex	1
Single Family	2
Town House	1

OTHER ACTIVITIES

Committee on Conflicts in Laws Applying to Women

Recognizing the apparent conflict between the administering of the sex provisions in Wisconsin's Fair Employment Law, and the administration of the "protective" legislation affecting women, a special study committee was established to recommend ways and means of harmonizing the two programs.

Housing Law Advisory Committee

Chapter 439 which prohibits discrimination in housing became effective December 19, 1965. To assist in developing of procedural rules and to advise the Industrial Commission on the development of a sound administrative program, an advisory committee was appointed.

Public Information

Since the success of the Division's program depends in large measure upon the understanding and support of the general public, the staff and Commissioners have addressed and worked with business, industrial, labor, civic, professional and civil rights groups and made numerous radio and television appearances throughout the state.

ADMINISTRATIVE DIVISION

STEPHEN J. REILLY
Executive Secretary
of the Commission

THE Administrative Division provides technical and administrative services to the operating divisions and to the commissioners.

Following is a brief description of the staff sections within the division and a review of their 1964-1966 accomplishments:

Personnel: This Section coordinates the personnel activities of all the divisions. In this biennium, payroll and personnel records of the commission were centralized and assigned to Personnel. Before centralization, payroll and personnel records were maintained separately for the federally financed and for the state financed divisions. In addition, personnel has made significant progress in staff training programs.

Data Processing and Systems Analysis: This Section provides data processing and systems analysis service for all divisions. In this biennium, data processing service was centralized in the administrative division. Before centralization, the Unemployment Compensation Division provided data processing services to the other divisions of the commission. In addition to centralizing data processing, Systems Analysis was combined with Data Processing into one Section. During this biennium the computer feasibility study was completed and specifications submitted to seven vendors. The commission has ordered an IBM System 360 Model 30 scheduled for delivery on May 1, 1967.

The Data Processing Systems Analysis Section has been designing new systems for the computer; acquiring and training a staff of programmers; and programming and testing to be ready to make the transition from the present unit record system to the computer. After the computer is installed and operational, considerable economies will be realized in commission operations.

Public Information: This section has the responsibility of coordinating the public information programs of all divisions of the commission. It is particularly concerned with providing information to those parts of the population which are most directly affected by the legislation and regulations administered by the commission.

Program results in public information can only be measured by how well the commission gets its story across to the public. Much progress has been made in this biennium in this regard. Wider coverage in the news media has been evident. More direct public contact has been achieved through personal appearances. The commission has made progress in digesting laws and codes so that they can be easily understood and easily disseminated. This section has developed an internal publication, the "Intercom," designed to keep the 1,200 commission employes up to date on commission programs, policies, and developments.

Fiscal: The Fiscal Section has the responsibility for budgeting and accounting for the seven general fund divisions of the commission. The main emphasis in this biennium has been in providing better budgetary controls to the division directors.

Purchases and Services: Purchases and Services has the responsibility for purchasing, stores, reproduction and other services for the seven general fund divisions of the commission. Notable among the achievements this biennium of the section has been the establishment of an inventory of all capital equipment with a depreciation schedule set up for each.

Secretarial Services: This unit serves the typing and stenographic needs of the seven general fund divisions of the commission. Emphasis has been on training the unit personnel on the work of all divisions to provide flexibility. A significant degree of mechanization has been achieved through the acquisition of automatic typewriters.

Other Administrative Services: This division also provides administrative assistance to the three commissioners in carrying out their responsibilities. During these past two years, the commission has made significant progress in improving the quality and quantity of all operations. The addition of the computer will greatly increase the potential for further improvement and efficiency in operations and so enable the commision to be of even better service to the people of Wisconsin.

STATISTICAL DIVISION

THE Statistical Division has been in existence since the organization of the Industrial Commission in 1911, with the function of carrying out the various Statistical programs assigned to it by the Commission. In these years, the Statistical Division has prepared information on a large range of subjects.

Following is a brief description of the current programs of the Division:

WORKMEN'S COMPENSATION STATISTICS

One of the major programs of the Division is the preparation of workmen's compensation statistics — including the review of qualifications of self-insurers and applications for partial or divided insurance coverage privileges. (See section on the Workmen's Compensation Division.)

Employers subject to the provisions of the Workmen's Compensation Act must report compensable injury cases to the Industrial Commission on Form W.C.-12. The Statistical Division codes certain pertinent information from Form W.C.-12 and its corresponding claim docket prepared by the Workmen's Compensation Division.

Basic coding principles follow the provisions of the American Standard Method of Recording Basic Facts Relating to the Nature and Occurrence of Work Injuries, Z16.2-1962. Analytical categories coded are: 1) nature of injury, 2) part of body affected, 3) source of injury, and 4) accident type.

All of the material in the monthly releases on reported cases is derived directly from Form W.C.-12. Much of the data for the annual releases on compensable settled cases also come from this form. Reports of 37,070 work injuries were received by the Commission during the second year of the biennium as compared to 34,689 during the first year of the biennium. Of these totals, 4,311 and 4,316 were cases in which the liability of the employer was self-insured.

Employers and self-insurers are rated by the time taken to send in a first report; insurance companies and self-insurers are rated by the time taken to make the first payment of compensation. First reports of injury cases are considered prompt reports if received within seven days after the date of commencement of disability. First payments of compensation are classified as prompt payments when the injured employe has received, within 15 days after the commencement of his disability, the full amount due and payable for all compensable time lost during the first ten days after the commencement of his disability.

PERCENTAGE OF CASES WITH PROMPT FIRST REPORTS
Fiscal Year Ending June 30,

1965	
All cases	53.7
Insured employers	56.5
Exempt employers	34.1
Private	46.9
Public	16.0
1966	
All cases	52.9
Insured employers	55.8
Exempt employers	30.8
Private	45.7
Public	9.5

PERCENTAGE OF CASES WITH PROMPT FIRST PAYMENTS
Fiscal Year Ending June 30,

1965	
All cases	85.1
Insurance companies	85.8
Exempt employers	77.8
Private	79.8
Public	60.6
1966	
All cases	84.8
Insurance companies	85.4
Exempt employers	78.7
Private	80.9
Public	60.6

The releases on cases reported to the Commission on Form W.C.-12 are issued monthly. The reported cases are classified by: insurance status; sex; percentage of first reports received within seven days; daily average number of injury cases reported; selected age groups; occupational classification; traffic accidents; nature of injury, source of injury and accident type; nature of injury and part of body affected; industry and source of injury; city of occurrence and nature

of injury; county of occurrence and accident type; and available information on the fatal injuries reported during the month. Other tables and information are included as the need arises.

Fiscal Year Ending June 30, 1965	
Fatal cases	130
Nonfatal cases	34,559
Occupational disease cases	1,181
Accidental injury cases	33,508
Women	4,898
Men	29,791
Total no. of cases reported	34,689
1966	
Fatal cases	136
Nonfatal cases	36,934
Occupational disease cases	1,255
Accidental injury cases	35,815
Women	5,175
Men	31,895
Total no. of cases reported	37,070
% CHANGE	
Fatal cases	+4.6
Nonfatal cases	+6.9
Occupational disease cases	+6.3
Accidental injury cases	+6.9
Women	+5.7
Men	+7.1
Total no. of cases reported	+6.9

Work injury cases are classified by insurance carrier and self-insurer in the following releases: Promptness of First Payment of Compensation (semi-annual); Compensable Settled Cases Classified by Formal Hearings and Summary Data (annual).

Employer violations of Industrial Commission rules are published in an annual release on double and treble liability cases of illegally employed minors, and violations of safety orders.

The annual releases on compensable settled cases are on a calendar year basis and show amount of indemnity and medical aid paid. Various reports are issued, classifying the work injury cases by: place of occurrence; industry; county of occurrence and industry; occupation; source of injury and accident type; disability; occupational diseases; and a summary. Such releases do not include reopened, compromise or non-

HENRY J. GMEINDER
Director
Statistical Division

compensable cases. Special studies are also released on work injuries occurring in certain industries.

Injury cases are classified as being settled (or closed) as soon as the Commission's files contain evidence of full payment of all benefits due, or when the Commission has entered a final award in final settlement of the claim.

COMPENSABLE WORK INJURY CASES SETTLED, 1964 & 1965

1964	
Total number of cases	24,123
Kind of disability	
Fatal	120
Permanent total	12
Permanent partial	2,925
Temporary	21,071
Indemnity	$12,795,828
Medical aid paid in cases on a fee basis	
Number of cases	22,503
Amount	$4,972,460
Cases with no fee reported — contract medical and other	1,625
1965	
Total number of cases	27,761
Kind of disability	
Fatal	116
Permanent total	17
Permanent partial	3,309
Temporary	24,319
Indemnity	$14,420,543
Medical aid paid in cases on a fee basis	
Number of cases	25,546
Amount	$5,753,144
Cases with no fee reported — contract medical and other	2,215

Some reports are not given general distribution. These include requests for special studies from other departments of the state, the Wisconsin Council of Safety, Inc., and employer groups engaged in accident prevention activities.

Monthly payrolls are prepared for the Children's Additional Death Benefit Fund, Second Injuries Indemnity Fund, and Workmen's Compensation Claims Against the State of Wisconsin, and all changes and adjustments are furnished to the Bureau of Finance. Special reports are prepared on the financial condition of these funds and those receiving benefits therefrom.

Reports are collected from employers carrying their own risk under the Workmen's Compensation Act and evaluated for Commission review. Applications for partial and divided insurance coverage are also presented to the Commission for necessary approval.

The Statistical Division also undertakes special studies for the Commissioners, the Director of Workmen's Compensation, and the Advisory Committee on Workmen's Compensation Legislation.

INJURY FREQUENCY AND SEVERITY RATE PROGRAM

This program is carried out in cooperation with the Bureau of Labor Statistics of the U. S. Department of Labor. Work Injuries Cooperative Survey Form BLS 1418 furnishes both the Industrial Commission and the U. S. Department of Labor with the information needed to compile their respective summaries.

The employers surveyed are asked to furnish the following data: average number of employees for the year, including all classes of employees; total hours worked by all employees during the year, excluding off-duty time paid for, such as vacation; nature of business; and every disabling work injury which occurred during the year, by classification.

All injury rate data are compiled according to the provisions of the American Standard Method of Recording and Measuring Work Injury Experience, Z16.1. The injury frequency rate is the average number of disabling injuries for each 1,000,000 employee-hours worked. The injury severity rate is the average number of days charged or lost, as a result of disabling work injuries, for each 1,000,000 employee-hours worked. The average days charged or lost per disabling injury is the total number of days charged or lost divided by the total number of disabling injuries.

Each year, requests for work injury rate data are mailed to approximately 5,500 manufacturing firms and 5,000 construction contractors operating in Wisconsin. The injury rate experience in the table below reflects the exposure of almost 450,000 Wisconsin manufacturing and construction employees, representing around 90 percent of all manufacturing employment and around 60 percent of all contract construction employment.

ALL MANUFACTURING	
1964	
Injury frequency rate	16.5[A]
Injury severity rate	673[A]
Average days charged (or lost) per disabling injury	57[A]
No. of reporting units	4,425
No. of employees reported (rounded)	415,600
Percent of estimated total employment	87.9
1963	
Injury frequency rate	15.2[A]
Injury severity rate	696[A]
Average days charged (or lost) per disabling injury	46[A]
No. of reporting units	4,461
No. of employees reported (rounded)	417,200
Percent of estimated total employment	90.1

ALL CONTRACT CONSTRUCTION	
1964	
Injury frequency rate	38.3[A]
Injury severity rate	2,526[A]
Average days charged (or lost) per disabling injury	66[A]
No. of reporting units	2,925
No. of employees reported (rounded)	32,900
Percent of estimated total employment	57.2
1963	
Injury frequency rate	35.6[A]
Injury severity rate	2,432[A]
Average days charged (or lost) per disabling injury	68[A]
No. of reporting units	2,794
No. of employees reported (rounded)	31,700
Percent of estimated total employment	60.8

[A] Weighted average. The weights are based on the relation between the employment reported and the estimated total employment.

Two annual releases are published: a regular work injury statistical release and a special release on the work injury experience of members of the Wisconsin

Council of Safety, Inc. Work injury experience is classified by detailed industry, location of reporting establishment, and size of reporting establishment.

There are four basic differences between our workmen's compensation statistics and injury frequency rate data.

Under the injury frequency rate program, all injuries or occupational diseases resulting in disabilities that caused lost time of one day or more, as provided in Z16.1, are included. Workmen's compensation statistics generally include only those cases covered under the Wisconsin Workmen's Compensation Act, where the injury or occupational disease caused a disability that lasted four or more days. (Both include permanent partial disability cases where no time was lost.)

The compensable time in workmen's compensation statistics, as of January 1, 1961, represents the actual time paid for, counting six days to the week, under the provisions of Wisconsin's Workmen's Compensation Act. In injury frequency rate data, the days lost are calendar days for temporary disability cases; for fatal, permanent total and permanent partial disability cases, scheduled time charges (in days) are assigned according to the provisions of Z16.1.

Reporting on Form BLS 1418, the form used to determine the injury frequency rates, is voluntary. Under the Workmen's Compensation Act of Wisconsin, reporting is compulsory of all work injury cases, except temporary disability cases which cause disability for three days or less.

The county and area groups, for injury frequency rate data, are determined by the location of the reporting establishment. For workmen's compensation data, the county and area groups are determined by the location where the injury was incurred. This is a minor difference, however, since the majority of work injuries occur at the location of the reporting establishment.

PREVAILING WAGE RATES AND HOURS OF LABOR

Under the direction of the Statistical Division, the program functions to fulfill the legislative intent of Sections 103.49, 103.50 and 66.293.

Wisconsin's three prevailing wage rates and hours of labor laws have for their primary purpose the stimulation and protection of the economic position of individual workers on specified public contract construction projects, ensuring rates at least equal to those prevailing in the area. This legislation prevents substandard wages, aids competitive bidding, improves accuracy of estimates, improves quality of workmanship and provides more labor-management harmony on projects subject to these statutes.

Wage rate data are gathered from a variety of sources and carefully analyzed. Reports are received from labor organizations, contractors, United States Department of Labor, and other sources. Collective bargaining and employee welfare fund agreements are studied.

Under these laws, the Statistical Division:

1. Certifies prevailing wage rates, fringe benefits, and hours of labor for each subject state and municipal contract building construction and public works project, except highways and bridges.
   a. Section 103.49. State contract building and other public works projects where the estimated total cost of completing the project is $25,000 or more, or between $2,500 and $25,000 and only one trade or occupation is required to complete it.
   b. Section 66.293. Municipal public works projects, except highway, street or bridge construction, contracted by the solicitation of bids with minimum $2,500 and $25,000 threshold coverage levels as under Section 103.49.
2. Certifies annually prevailing wage rates, vested vacation payments, truck rental rates, and hours of labor for state contract highway construction under Section 103.50.
3. For Section 103.49, refers complaints to enforcing unit and serves as a consulting unit; for Section 103.50, refers complaints to enforcing unit; for Section 66.293, answers inquiries on alleged underpayments by individual employees, and serves as a consulting unit — for challenges of prevailing wage rates by municipalities or labor organizations, arranges for and holds hearings to be attended by interested parties.

In addition, the Statistical Division provides contractors, labor organizations, architects, governmental units, and others with construction wage rate informa-

tion. Early in 1964, a collectively bargained building construction wage rate booklet was issued for two purposes: first, to serve as an additional check on the validity and reliability of prevailing wage rates and fringe benefits, and secondly, to make this information available to other users in a more economical form. Since then, this booklet has been issued annually, with quarterly revisions.

Wisconsin's three prevailing wage rate laws were first enacted in 1931. However, the Industrial Commission did not have any responsibility for determining prevailing wage rates for municipal projects until January 1, 1966, after Chapter 484, Laws of 1965, became effective.

The following tabulation summarizes, for the biennium, activities of the Statistical Division related to the administration of the laws:

Fiscal year ending June 30, 1965	
Number of certifications	
103.49[A]	241
103.50[B]	1
Number of public hearings held	
103.50	1
1966	
Number of certifications	
103.49[A]	203
103.50[B]	1
66.293[A]	185
Number of public hearings held	
103.50	1
Number of exemptions granted	
66.293	11
Number of wage determinations challenged	
66.293	15
Number of special hearings or meetings held	
66.293[C]	14
Number of meetings of Prevailing Wage Rate Advisory Committee	12

[A] Each certification involves up to 250 different occupations.
[B] This certification is made annually; a total of 6,100 wage rates are determined for the 72 counties in Wisconsin.
[C] Excluding those meetings attended by Commission Staff only.

OTHER PROGRAMS

Statistical releases on child labor and street trades permits are published annually from information supplied by the Division of Labor Standards. The permits are classified by place of issue; industry; sex; and age.

The Statistical Division prepares monthly, quarterly and annual reports on plans approved by the Building Section of the Division of Industrial Safety and Buildings.

INDUSTRIAL SAFETY AND BUILDING PLAN APPROVALS AND FEES COLLECTED

Fiscal Year Ending June 30, 1965	
All plans approved	6,771
Private project approvals	5,801
State and Municipal project approvals	970
Fees collected on private project approvals	$106,393
1966	
All plans approved	7,481
Private project approvals	6,316
State and Municipal project approvals	1,165
Fees collected on private project approvals	$127,341

The Committee to Evaluate the Statistics Division of the Wisconsin Industrial Commission was formed on December 7, 1965, as part of the Governor's 19-Point Program for improved service in the Industrial Commission. It was composed of representatives of management and labor unions who evaluated the established program of the Statistical Division toward a goal of collection and analysis of those statistics which can significantly add to the effectiveness of state service.

The committee confined its recommendations to the establishment of general criteria, including: "Because of limitations of staff and budget within the Division, the Director must restrict and channel expenditures of time, personnel and equipment to the collection and analysis of only those statistics which improve the service and advance the programs of the Industrial Commission."

RELEASES AND REPORTS

Workmen's Compensation Statistical Releases.
Work Injury Rate Statistical Releases.
Prevailing Wage Rate Law for State Contract Building Construction and Public Works — Section 103.49.
Prevailing Wage Rate Law for State Contract Highway Construction Work — Section 103.50.
Prevailing Wage Rate Law for Municipal Public Works — Section 66.293.
Collectively Bargained Wage Rates in Wisconsin Building Construction.
Reports on Plans Approved by the Building Section, Division of Industrial Safety and Buildings.
Annual Certification of Prevailing Highway Construction Wage Rates and Truck Rental Rates.
Annual Child Labor and Street Trades Permits Statistical Reports.

DIVISION OF LABOR STANDARDS

THE Division of Labor Standards of the Commission is charged with the administration and enforcement of the following nine laws:

1. Child Labor
2. Street Trades
3. Women's Hours
4. Home Work
5. Minimum Wage
6. One Day of Rest in Seven
7. Wage Payment and Collection
8. Private Employment Agencies
9. Prevailing Wage (Enforcement)

WAGE PAYMENT AND COLLECTION

Under Section 103.39 and 101.01, the Commission may investigate and attempt to adjust controversies on the wage claims not in excess of $200. In its efforts to reach a settlement, it may take an assignment of wage in trust from an employe whose claim is deemed to be valid.

Claims against employers in Milwaukee County are handled by the Commission's branch office in Milwaukee. Claims against employers located elsewhere in the state are acted upon by the Madison office.

When a claim is filed with the Commission, the employer is notified and requested to answer the claim. If he denies the validity, the matter is set for investigation or hearing at which time both the employer and the employe are given full opportunity to present their positions on the wage claim. If the Commission finds the claim to be valid and the employer refuses to pay it, the employe assigns his claim to the Commission as the basis for a civil action against the employer for its collection.

The law allows the Commission to call upon the district attorneys of this state to commence actions where necessary. Actions on claims for agreed wages against employers in this state, exclusive of Milwaukee County, are commenced by the district attorney of the county in which the employer is located.

A Commission attorney located in the Milwaukee office represents the claimant in actions against employers in Milwaukee County.

During the period July 1, 1964 through June 30, 1966, 202 claims were referred to district attorneys for action. Court action was commenced on 91 claims by the Commission attorney in Milwaukee.

During the biennium, 894 claims were collected with collections amounting to $48,947.74.

CHILD LABOR

The purpose of the Child Labor Law is to protect the life, health, safety and welfare of our minor employees. A work permit system serves as an effective tool in the administration of the Child Labor Law and serves as a protection for both the minor and the employer. The child is protected from working at a job that may be dangerous or for which he may be physically unfit. The employer is protected from unwittingly violating the law.

The Child Labor Law requires that work permits be obtained for each minor employe under the age of 18, except those engaged in agricultural pursuits and domestic work during vacation and outside of school hours. A minimum age of 14 years is set for most gainful employments. The law regulates the hours of work, and lists the employment and places of employment deemed to be dangerous or prejudicial to the life, health, safety, or welfare of minors under the ages specified.

Section 103.75 of the Child Labor Law permits the Commission to issue age certificates for minors under rules and regulations which are deemed necessary. This section makes age certificates conclusive proof of the age of the minor under the Workmen's Compensation Act. Age certificates are issued to minors who prove their ages to be between 18 and 21 years.

When minors under 20 years of age are injured in their employment, the accident reports are referred to this division by the Workmen's Compensation Division to be checked for violations of the Child Labor regulations. Of the 3,223 such cases checked during this biennium, 154 minors were injured while employed in

violation of the Child Labor regulations. Consequently their employers were assessed increased compensation. During this biennium, employers paid a total of $17,-810.91 increased compensation to injured minor employes.

STREET TRADES

The Street Trades Law regulates the employment of minors under 18 years of age in the sale and distribution of magazines, periodicals, newspapers, and in street trades work on any street or other public place, or from house to house. The statute as originally inacted, fixed a minimum age of 18 for the employment of girls and 13 for the employment of boys. In 1951 the law was amended to allow the employment of boys 12 years of age on condition that their work was limited to house to house street trades in residential areas.

PERMITS AND AGE CERTIFICATES ISSUED

In the administration of the Child Labor and Street Trades laws, the Commission relies on the voluntary services of 870 permit officers authorized by the Commission to assist in the issuance of permits. These permit officers are located in all communities offering employment opportunities to minors.

The number of Child Labor and Street Trades permits and Certificates of Age issued in the state are shown according to calendar year as indicated.

	Calendar Year 1964	1965
Child Labor Permits Issued	62,157	72,706
Street Trades Permits Issued	14,875	16,070
Age Certificates Issued	3,992	6,396
Total Permits and Age Certificates Issued	81,024	95,172

ONE DAY OF REST IN SEVEN

The One Day of Rest in Seven Law, Section 103.85, provides that employes of factories and mercantile establishments, with certain exceptions named in the law, shall receive at least 24 consecutive hours of rest during each calendar week. To relieve some employes of the hardship created by strict compliance with Section 103.85, especially in cases of emergency, the Commission grants exceptions to Section 103.85. From July 1, 1964 through June 30, 1966, the Commission granted 404 exceptions to this law.

HOMEWORK

The Wisconsin law provides that no owner or lessee of any factory shall send out work to be done in a home unless he has secured a permit to do so from the Industrial Commission. During the period of July 1, 1964 through June 30, 1966, 38 permits for homework manufacture were issued.

MINIMUM WAGE LAW

The Minimum Wage Law makes it the responsibility of the Industrial Commission to determine, fix, and enforce wage rates payable to women and minors, which are not less than the living wage. The minimum wage order, which became effective September 1, 1964 set the following rates:

MINIMUM WAGE RATES

	Effective Sept. 1, 1964
(a) Adult women and minors 16 years of age or over:	
1. In cities of 1,000 or more	$1.10
2. Elsewhere in the state	1.00
(b) Minors under 16 years of age:	
1. In cities of 1,000 or more	.85
2. Elsewhere in the state	.75

On April 25, 1966 an advisory board was named to aid the Commission in reviewing the changes in wages and cost of living since the last minimum wage increase in order to determine if the present rates were adequate.

EMPLOYMENT AGENTS

Private employment agents are licensed under Chapter 105, Wisconsin Statutes, for annual periods of July 1 of one year to June 30 of the next.

During the period from July 1, 1964 through June 30, 1966, 18 new applications for licenses were received. After hearings were held, ten were granted licenses and four were denied. One applicant withdrew her application before the hearing.

Twenty licensed employment agents as of June 30, 1965 reported gross receipts of $419,169. Twenty-four licensed agencies as of June 30, 1966, reported gross receipts of $569,757.

PLACEMENTS MADE BY ALL LICENSED EMPLOYMENT AGENCIES

July 1, 1964 - June 30, 1965	8,721
July 1, 1965 - June 30, 1966	10,058

COMPLAINTS

The Division of Labor Standards receives from 13,000 to 15,000 complaints each year by letter, telephone and in person. During a "relatively quiet" two-week test and recording period in September, the Division received 517 complaints as follows:

Agriculture Claims	2	Street Trades	4
Bad Checks	12	Canning Factory	6
Commissions Earned	25	Women's Hours	31

(table continued)

Deductions	24	One Day Rest in Seven	5
Discharge & Severance Pay	34	Homework	0
Holiday Pay	10	Private Employment Agents	4
Sick Pay	8	Prevailing Wage	1
Time & ½ after 40 Hours	40	Minimum Wage	28
Tips	2	Meals & Lodging	20
Vacation Pay	26	Coffee Break	16
Sex Discrimination	3	Wage Claims	144
Weight Lifting	10	Miscellaneous	12
Child Labor	38	Domestic Service Claims	12

Some of the complaints dealt with subjects over which the Division has no jurisdiction and many were not valid. Each complainant, however, must be courteously processed and all are time consuming.

DOUGLAS N. AJER

Director

Division of Labor Standards

ACTIVITIES AND ACCOMPLISHMENTS
JULY 1, 1964 TO JUNE 30, 1966

1. Public Contacts (all offices)
   - (a) Visitors to offices 102,488
   - (b) Phone calls received 121,880
   - (c) Letters sent 65,907
   - (d) Packages sent 4,768

2. Enforcement and field activities
   - (a) Number of general inspections 3,023
   - (b) Wage Claims investigated 402
   - (c) Complaints and referrals investigated 1,504
   - (d) Permit officer contacts 1,612
   - (e) Other contacts by deputies 1,285

3. Violations found
   - (a) Child Labor and Street Trades
     - Minors employed without the required child labor or street trades permit .. 1,618
     - Minors employed at prohibited employments 96
     - Minors employed in excess of the legal number of hours permitted per day and per week 1,039
     - Minors under 18 years of age employed more than 6 days per week 140
     - Minors under 18 years of age employed outside of time of day permitted by law and special orders 179
     - Minors employed in violation of meal period order 48
   - (b) Women's Hours
     - Women employed in excess of the legal daily or weekly limit of hours .. 2,619
     - Women employed in violation of meal period order 67
     - Special orders issued granting exception to regulations 711
     - Number of women affected by special orders 28,726
   - (c) Wage Adjustments
     - Number of women and minors receiving minimum wage 2,611
     - Amount of minimum wages received $131,492.05
     - Number of women and minors receiving overtime 2,619
     - Amount of overtime wage received ..... $ 44,492.47
     - Total amounts collected $175,984.52
     - Amount due on pending reports on July 1, 1966 ..... $ 28,896.44
     - $204,881.46
   - (d) Miscellaneous
     - Number of inspections where no violations were found 1,441
     - Number of employers not keeping proper records 1,080
     - Payment of wage not made as required by Section 103.39 105
     - Deductions from wages not listed 27
     - Number of employes in mercantile and manufacturing establishments without one day of rest in seven
       - Number of men 44
       - Number of women 7

Regulations on Employment Agents (LS-80)

DIVISION OF INDUSTRIAL SAFETY AND BUILDINGS

THE primary responsibility of the Division of Industrial Safety and Buildings is to promote, within the limits of its jurisdiction throughout the state, a reasonable degree of safety for workmen, the public, and the visitors to all public buildings. This responsibility divides into three general functions:

The engineering functions include the examination of drawings, design calculations and specifications for projects of all kinds, but mostly for places of employment, and other public buildings.

The inspection functions include visits to places of employment to determine whether or not there is compliance with administrative code provisions.

Investigatory functions include field surveys to determine the cause of failures or malfunctions occurring in the specific fields of interest. When such accidents also involve personal injuries, either to employees or frequenters, the investigation includes interviews with all witnesses and the preparation of evidence for the legal proceedings that may follow.

The rules, regulations, and standards on which these functions are based are the Wisconsin Administrative Codes. These codes and functions can be grouped in eight general categories:

Boiler and Unfired Pressure Vessels
Building Design and Construction
Electrical
Elevators, Escalators and Dumbwaiters
Factory and Machinery Safeguarding
Mines, Quarries, Trenches and Tunnels
Petroleum Products and Fire Prevention
Ski-Tows and Amusement Rides*

REVENUE

Some sections of this Division are partly self-sustaining through fees collected for providing certain services. All revenue produced is deposited in the State General Fund and is not re-appropriated to the Commission. Hence, all operating funds for the Division depend on legislative appropriations.

*In a recent opinion the Attorney General advised that the commission's responsibility extended into the recreational equipment used in ski tows, aerial tramways, thrill rides, and automobile race tracks.

Authority for collecting fees is found in Section 101.10 (12) and (13) of the Statutes. The current fee schedule is found in Wisconsin Administrative Code, Chapter Ind 69.

REVENUE FROM FEES DURING THE BIENNIUM

ACTIVITY	FISCAL 1964-65	FISCAL 1965-66
Inspection of boilers, unfired pressure vessels and refrigeration plants	16,910.71	19,012.19
Examination and approval of drawings for buildings, heating and ventilating systems, building additions and alterations and fire escapes	166,616.62	192,488.15
Examination and approval of drawings for elevators, escalators, and dumbwaiters	5,092.78	4,135.96
Inspection of elevators, escalators, and dumbwaiters	12,768.00	12,255.00
Certificates of Competency (Boiler Inspectors)	1,180.00	1,300.00
Certificates of Competency (Elevator Inspectors)	660.00	850.00

BOILERS AND UNFIRED PRESSURE VESSELS

Boilers and pressure vessels operating at pressures in excess of 15 pounds per square inch must be designed, fabricated, repaired and inspected to meet established standards. Pressure vessels include boilers, air receivers, gas holders, and vessels containing refrigerants, anhydrous ammonia, and other liquids and gases in closed containers.

Wisconsin Administrative Codes applying in this category are: Chapters Ind 41 and 42 — Boilers and Unfired Pressure Vessels; Chapter Ind 43 — Anhydrous Ammonia; and Chapter Ind 45 — Mechanical Refrigeration.

A summary of work performed in this category for the biennium follows:

ACTIVITY	FISCAL 1964-65	1965-66
Boilers Inspected		
Internally	215	337
Externally	1,184	871
Pressure Vessels Inspected	230	153
Refrigeration Plants Inspected	985	992
Corrections Ordered	2,056	1,773
Boilers Condemned	3	8
Accidents Investigated	1	0
Shop Inspections (Fabrications)	72	83
* * * * * *		
Insurance Company Boiler Inspection Reports	4,723	4,215
* * * * * *		
Certificates of Competency issued to Boiler Inspectors employed by insurance companies.		
Certificates of Competency, renewed	183	188
Number of Applicants	13	15
Applicants Examined and Certified	16	18

BUILDINGS

Building construction plans reviewed and approved during the biennium represent over one billion 500 million cubic feet of building volume. The tabulations below show this volume by year and show the number of other projects for which drawings were submitted for examination and approval:

TYPES OF PLANS APPROVED — ALL PROJECTS

	FISCAL YEAR 1964-65	1965-66
TOTAL	8,595	8,785
General Building Drawings	3,999	4,010
Volume in 1000 cu. ft.	755,455	753,234
Heating & Ventilating Drawings	3,429	3,506
Volume in 1000 cu. ft.	563,810	622,009
Miscellaneous Drawings:		
Structures, submitted separately from general building drawings	378	328
Alterations and repairs for buildings and structures	476	510
Fire escapes — drawings submitted by fabricator	38	30

ROGER OSTREM
Director
Industrial Safety and Buildings Division

Industrial exhaust systems for dusts, fumes, vapors, gases and spray coating	221	220
Stadia, grand stands, bleachers	54	65

Building Safety Specialists employed in this section inspect building construction projects and existing buildings to determine that construction or structural changes are proceeding in compliance with commission-approved drawings. A tabulation of their collective activities follows:

NUMBER OF BUILDING INSPECTIONS AND FIELD INTERVIEWS

Fiscal Year	Building Inspections	Field Interviews
1962-63	7,990	1,340
1963-64	8,392	1,719
1964-65	5,644	1,607
1965-66	7,697	1,331

Wisconsin Administrative Codes enforced in this section are: Chapter Ind 20 — Dusts, Fumes, Vapors and Gases; Chapter Ind 21 — Spray Coating; Chapter Ind 22 — Sanitation; Chapter Ind 35 — Safety in Construction; Chapter Ind 50 and 59 — State Building Code and Heating, Ventilating and Air Conditioning; Chapter Ind 60 and 64 — Existing Buildings.

ELECTRICAL

During the biennium, a revision of Volumes 1 and 2 of the Wisconsin State Electrical Code was initiated. The Advisory Committee for this code held nine meetings. The revision will become effective in 1967.

The staff conducted 20 instructional meetings with electric utility personnel, electricians and contractors. An additional 210 meetings were held with individual local inspectors to assist them with code problems and inspections. A total of 172 field inspections were made with these local inspectors.

The staff reviewed 300 Underwriters' Laboratories Electrical Council reports for the purpose of providing code consultation to U. L.

Additional activities appear in the following table:

ACTIVITY	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Accidents investigated	60	70
Fatalities	14	15
Field Inspections made	65	53
Orders cited	225	186
Interviews	760	915
Electrical plans reviewed	104	2,336

Jurisdictional Wisconsin Administrative Codes are: Wisconsin State Electrical Code — Volumes 1 and 2; Chapter Ind 16 — Electric Fence Code; Chapter Ind 19 — Illumination Code.

Electrical Code Volume 1 contains the regulations of the Industrial Commission and the Public Service Commission relating to electrical and communication lines and supply stations.

Electrical Code Volume 2 contains the regulations on electrical and communications equipment and wiring and lighting protection.

Chapter Ind 19 — Illumination Code contains the regulations on minimum lighting requirements in all public buildings and places of employment.

ELEVATORS — ESCALATORS — DUMBWAITERS MOVING SIDEWALKS — MOVING RAMPS

The Wisconsin Elevator Code, Chapter Ind 4, was reviewed and was amended in several parts during this biennium. In addition, the advisory committee developed and the Commission adopted a new code, Chapter Ind 44, entitled Personnel Hoists. A personnel hoist is defined as a temporary structure designed and installed primarily for the purpose of transporting personnel vertically on building construction projects.

ACTIVITY	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Installations Inspected	2,024	1,860
Violations Discovered	3,568	4,201
Drawings Examined and Approved	278	239
Accidents and Injuries Investigated	17	43
Inspections Received from Insurance Companies	9,281	8,987
Violations Discovered	7,820	7,658

CERTIFICATES OF COMPETENCY AS ELEVATOR INSPECTORS ISSUED TO INSURANCE COMPANY PERSONNEL	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Renewals	106	106
Applicants for Examination	11	14
Applicants Examined and Certified	4	8

FACTORY INSPECTION

Principally engaged in promoting safe working conditions in all places of employment, the staff of this section seeks out unsafe working conditions, confers with employers regarding them, and strives to effect compliance with the applicable administrative safety codes.

Some significant accomplishments for the biennium are as follows:

ACTIVITY	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Inspections	5,003	4,561
Rule violations found	9,159	9,150
Injury cases investigated	2,190	2,481
Hearings and conferences	2,196	1,922
Injury reports analyzed	33,321	36,104

Wisconsin Administrative Codes enforced by this section are: Chapter Ind 1 — General Safety; Chapter Ind 20 — Dusts, Fumes, Vapors and Gases; Chapter Ind 21 — Spray Coating; Chapter Ind 22 — Sanitation; Chapter Ind 25 — Sanitary Facilities in Railroad Terminals and Cabooses; Chapter Ind 26 — Railroad Employees Welfare Facilities; Chapter Ind 35 — Safety in Construction.

MINES, QUARRIES, TRENCHES AND TUNNELS

The last deep iron mine in the Hurley area closed in 1964. During the biennium, however, two new zinc mine and ore treatment plants were opened in the Southwestern area of the state.

Inspection activities were set up for these mines and for the quarries and gravel pits that were opened up to keep pace with road building programs.

Other major sub-surface activities requiring constant watch include the deep sewer tunnels in metropolitan Milwaukee, sewer and water main projects, and the advancing natural gas pipelines.

ACTIVITIES	1964-65	1965-66
Mine Inspection	57	46
Trench-Tunnel Inspection	748	801
Quarry-Pit Inspection	1,060	923
Field Conferences	2,190	2,264
Injury Investigations	124	176

During the biennium Chapter Ind 5, the Wisconsin Code for Explosives and Blasting Agent was amended.

Other codes enforced in this section are Chapter Ind 2 — Quarries and Pits; Chapter Ind 3 — Mines; and Chapter Ind 6 — Trench, Excavation and Tunnel Construction.

PETROLEUM PRODUCTS

The chief function of this section and its staff is to minimize fire hazards particularly in the handling and storage of petroleum products including the liquefied petroleum gases. A secondary function is to determine what communities are eligible to share in the two percent fire insurance premium rebates. Eligibility requires a community to maintain a specific fire inspection program in conjunction with maintaining a bona fide fire department.

Activities during the biennium are as follows:

INSPECTIONS	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Cleaning and Dyeing Plants:		
Number of Inspections	242	170
Hazards Discovered	23	49
Flammable Liquids:		
Number of Inspections	2,462	2,454
Hazards Discovered	1,398	1,796
Liquefied Petroleum Gases:		
Number of Inspections	562	506
Hazards Discovered	154	129
Fire Prevention:		
Number of Inspections	21	0
Hazards Discovered	32	0
Plan Approvals:		
Flammable Liquids	191	188
LP Gas	38	34
Cleaning and Dyeing	1	0

FIRE DEPARTMENTS IN CITIES, VILLAGES, AND TOWNS CERTIFIED AS ELIGIBLE FOR 2 PERCENT FIRE INSURANCE REBATE	FISCAL YEAR 1964-65	FISCAL YEAR 1965-66
Certified	663	692
Not Certified	24	18
The number of new fire departments established were	58	49

Wisconsin Administrative Codes enforced in this section are: Chapter Ind 7 — Cleaning and Dyeing; Chapter Ind 8 — Flammable Liquids; Chapter Ind 9 — Liquefied Petroleum Gas; Chapter Ind 65 — Fire Prevention.

"OPERATION SAFE PLACE"

During the past few years, the job injury frequency rate in Wisconsin has been rising at a faster rate than the growth of the labor force. To reverse this upward curve the Division initiated "Operation Safe Place" early in 1966, a plan of reorganization that will result in an intensified program for job safety. Funding for 28 additional inspector positions to carry out "Operation Safe Place" was passed by the Legislature in June and was awaiting the Governor's signature at the close of the biennium.

DAILY AVERAGE NONAGRICULTURAL EMPLOYMENT AND NUMBER OF INJURIES REPORTED, WISCONSIN, 1939-1965

WORKMEN'S COMPENSATION DIVISION

WISCONSIN has been a leader in the field of workmen's compensation since its law was enacted in 1911. During the past two years over 69,000 injuries were reported and over 38 million dollars was paid out for disability benefits and medical expense. Injuries in which disability does not exceed three days, need not be reported to the Industrial Commission and consequently there is no record of the medical expense in such cases. Payments made in such cases are in addition to the 38 million dollars.

The maximum weekly compensation rate for temporary disability and for permanent total disability was increased from $64.00 to $68.00 in 1965, while the maximum weekly rate for permanent partial disability was increased from $44.50 to $46.00. Over 1 million employes and approximately 65,000 employers are now subject to the Workmen's Compensation Act. Employers who have three or more employes are compulsorily subject while other employers may voluntarily elect to become subject. Farmers are subject if they employ six employes for 20 days in a calendar year. Domestic servants are not covered unless the employers voluntarily choose to do so.

Liability under the Workmen's Compensation Act is the exclusive remedy of the employe against the employer and does not depend upon negligence. Employers who are not subject to workmen's compensation may be sued at common law upon a showing of negligence resulting in injury to an employe. The Wisconsin law provides for direct payment of compensation without formality or written agreement. This assures speed in payment so that approximately 86 percent of all first compensation checks are paid within 15 days of the date of injury. When permanent disability results, payment continues on a weekly basis for conceded disability.

Payment Records Checked

For many years the Commission has conducted an energetic campaign to make certain that payments of compensation are made promptly. This information is recorded and published for the interested parties with the result that promptness in payments is the constant goal of insurance carriers.

Employers are required to report compensable injuries to the commission. Self-insured employers and insurance carriers are required to make subsequent reports as to payment. Employers make first reports on the fourth day after commencement of disability of an accident or occupational disease entitling an employe to compensation. On the eleventh day a report is required showing that payment has commenced, or else gives the reason for non-payment. When payments are discontinued for any reason, another report must be submitted and, if dispute exists, a statement must be attached advising of the nature of dispute. When final payment is made it is reported to the Commission and accompanied by a receipt signed by the employe. Physicians' reports are required where temporary disability exceeds three weeks or where any permanent disability results. Reports are used as a check against each other and a follow-up system is employed to see that they are supplied promptly to the Commission.

When the Commission's Safety Division believes that injury may have been caused by a violation of a general order on safety, it is investigated by a deputy of the Commission. If this investigation discloses that injury was due to the employer's failure to comply with a safety order or law, the employer is so advised. In such cases the employer is required to pay 15 percent increased compensation for which insurance cannot be provided. If liability is disputed, the matter is scheduled for formal hearing. Cases involving employment of minors in violation of the child labor law or at prohibited employment, entitles them to double or treble compensation and are handled similarly.

Uncontested Cases

Of the 69,000 cases reported in the last two years over 51,000 cases were found to be compensable. In over 94 percent of these cases adjustment was reached without hearing. Many questions are adjusted through correspondence or through informal conference between the parties and the Commission. The Commission attempts to keep all parties fully informed as to their rights and duties, thus avoiding issues which otherwise might be raised. All cases in which adjustment is reached without formal action are termed "uncontested."

The Commission adheres to its policy of not approving final settlements in "uncontested" cases. Careful

inquiry is made to make certain that settlement is effected in accordance with the requirements of law. This requires careful examination by employes with good knowledge of the compensation act, court decisions, and administrative procedure. Where no formal action has been taken by the Commission a case may be reopened within six years from the date of the last payment of compensation. The law provides for compromise settlements, which must have the approval of the Commission. Unless approved they have no effect. If approved they may be reviewed within one year and confirmed or set aside. Compromise settlements are not approved except where a valid dispute is shown to exist and where payment of less than the full claim appears to be justified.

Contested Cases

Formal hearings are necessary in less than 6% of the cases. Hearings in such cases are conducted by trained law examiners, who make findings and enter orders. Their findings and orders are reviewable by the Commission, upon request of either party, as to both law and fact. The Commission's decision is reviewable by the Dane County Circuit Court and the Supreme Court on questions of law only.

From July 1, 1964 to July 1, 1966, the total number of petitions for review from examiners' decisions to the Commission as a body was 763.

Contested cases are brought to hearing by application for adjustment of claim by either party or upon the Commission's own motion. Hearings are conducted at county seats and industrial cities throughout the state, avoiding expense to parties in bringing witnesses to Madison. A complete stenographic record is made of testimony taken, although proceedings are otherwise of an informal nature.

When no petition for review is filed within 20 days from the making of the order by the examiner, the order automatically becomes that of the Commission as a body. Appeal may be taken to the Circuit Court of Dane County within 30 days following the Commission's order upon review. From the decision of the Circuit Court, appeal lies to the Supreme Court.

Compensation Insurance

The Industrial Commission has two duties with respect to compensation insurance: (1) it must see that employers subject to the compensation act insure their risk unless permitted to self-insure, and (2) it must pass upon applications of employers for exemption from the obligation to insure.

It is roughly estimated that perhaps 5,000 employers

RALPH GINTZ

Director

Workmen's Compensation Division

in Wisconsin subject to the compensation act have not provided insurance, some innocently and some intentionally violating the law. The Commission has, in the past to a limited extent, undertaken the task of canvassing employers to make certain that insurance is carried by them when subject to the act. This is an important service, both to employers and employes. Employers who innocently violate the law have the right to know their status and to protect themselves from large awards which may be made in case of injury to employes.

The Commission's work in this field is facilitated by the statutory provision that insurance companies must file reports upon all compensation policies issued. This makes it possible for the Commission to see that employers who have taken out policies keep insurance in force. It also makes it possible to check lists of employers to determine which of them have failed to insure. This work involves a great amount of detail in checking records of approximately 65,000 employers in Wisconsin who carry compensation insurance.

The duty of determining when employers may carry their own risk under the compensation act involves less work but is equally responsible. There are approximately 150 employers operating under order of the Commission permitting them exemption from carrying insurance, but these employers had slightly less than one-fifth of the payroll of the state. No employer is permitted to carry his own risk until he has filed with the Commission a sworn statement of assets and liabilities indicating that he is financially so situated that he can meet any claim which might reasonably arise. New statements are called for periodically. And, there is a periodical review of qualifications. In numerous instances the procuring of insurance or the deposit of securities to guarantee payment of compensation benefits is required. Employers are not permitted the privilege of self-insurance except as they measure up to the legal requirements as to reporting, investigating, and paying compensation claims, as well as showing a strong financial condition.

SUMMARY OF SUGGESTED CHANGES IN THE 1966 WORKMEN'S COMPENSATION ACT

This Summary analyzes only those Sections of the Act which are changed.

114-101 Redefines Employer and Employee by striking the words counties with over 300,000 and places all school district employees, whether incorporated or under county control, and all hospital authorities where any part of money is obtained from County, City, State or tax funds under the Act.

114-103 Amended. Where the case is held not to be under the Workmen's Compensation Act, the common law rights shall prevail. Statute will not outlaw claim once it is filed, and pending any appeal.

114-106 Amended, and put back as before amendment of 1963 (encourages settlements).

114-107 Amend and have Workmen's Compensation cover all Employers with three (3) instead of ten (10) employees.

114-112 Amend. Clarifies **"same extent as the immediate employer"** to cover principal, intermediate and subcontractors with three (3) employees engaged on any part of work of job.

114-102 Amended. If deceased has worked less than a full week, the hourly wage, where applicable, shall be multiplied by the regular hourly work week of employees in the like industry in the territory involved to arrive at hourly wage.

114-403 Amended. No subrogation where injured employee or dependents (in case of death) have action against any third parties.

114-404 Amended. **Total incapacity.** Raise weekly benefit from 60% to 66-2/3% of weekly wage. Raise $37 weekly benefit maximum to $50. Add $3 for each dependent child, not to exceed four or $12, under 18 years of age or handicapped. Substitute $18 for $14 as lowest weekly compensation rate. Keep 400 week period but strike limit of $12,500, thereby making a limit or death claim of $20,000.

114-405 Amended. **Partial incapacity.** Raise weekly benefits from 60% to 66-2/3% of weekly wage. Raise weekly maximum benefit from $30 to $36. Raise 350 weeks benefit payments not to exceed 400 weeks.

114-406 Amend. Claimant shall be paid under 114-404 until he is able to obtain gainful employment or his percentage of permanent handicap can reasonably be determined (instead of maximum of 10 weeks) at which time he shall be paid same weeks as now except pay 225 weeks for arm, and wherever any part of arm above wrist is removed, the loss shall be considered as the whole arm, and wherever any part of the leg above the ankle is removed, it shall be considered the loss of the entire leg.

114-410 Conform to 114-406 and raise number of weeks from 350 to 400, and maximum total of $20,000.

114-412 Amend hernia provisions so, if hernia appears within seven (7) days, it is compensable. (Strike **suddenly** and **immediately** after accident) from Act. Keep **accident, pain** and no prior existence.

114-413 Amend by keeping widow's 85% of compensation (same as now), and add $3 for each dependent child not to exceed four children or $12 a week additional.

114-416 Amend so where compensation paid monthly, or semi-monthly, to be paid in middle of period.

114-417 Amended. Lump sum payments only where agreed or in hardship cases where used to pay off mortgage, or pay secured debts accumulated prior to injury, and in cases where widow and/or minor children's veteran benefits are affected by workmen's compensation.

114-419 Amended. If two or more insurance carriers have coverage for same employer, to make both liable if both had coverage. If one enters into Agreement to Pay and the other remains silent, the one agreeing to pay shall have subrogation rights against the other for proportionate amount of the money paid out.

Cases settled — 99% [speed?] 160T claims 1965
contested — 911 hearings

Lowry tries to get to raise benefits — the rest can wait

114-501 Amended. **Medical.** Unlimited medical costs with claimant having right to pick own doctor with approval of Workmen's Compensation Board. Employer having right to petition Board for change of doctors. Workmen's Compensation Board having complete control of medical arrangements and costs.

114-503 Amend to add "restricted to reasonableness as to travel for examination purposes, and to be approved prior by Workmen's Compensation Board."

114-603 Eliminates the word **"wilful"** and penalizes employer for failure to file required forms, etc. by assessing 10% penalty attorneys fees, and costs.

114-616 Provides penalty of 10% and attorneys fees and costs for failure to file agreements relative to Workmen's Compensation or death benefits within ten (10) days of execution, and subject to revocation of permit by Board after hearing.

114-706 Amend. If the employer or his insurance carrier fail to reach an agreement to pay compensation within 30 days after receiving notice of such injury, arising out of and in the course of the employment, it shall be held to be automatically controverted and if it is unsuccessfully defended, all cost including witness fees and a reasonable attorney's fee shall be added in addition to the compensation benefits due with the Compensation Board having the right to excuse the same in extreme cases (stops wrongful practices and forcing unfair settlements).

114-709 Amended. Changed to read as before 1963 amendment, and provides reopening of claim within two (2) years where a change in condition occurs.

114-710 Appeals to Superior Court to correct unconstitutional change in 1963 (Code Sec. 2-3708, 108 Ga. Appeals 68).

114-711 Amend to restrict to an order or award unappealed from and if more than one year has elapsed since judgment or award became final, then only after a new hearing by Board and a showing that there has been no change of condition (prevents stale judgments on old awards).

114-715 Amend to read (Board) "shall hear all questions arising under this Title and shall have exclusive jurisdiction of all of the same with the right of appeal as set out in 114-710."

114-716 Failure to make report in time specified subject to penalty of 10%, costs and attorney's fees.

114-717 Adds on section: All moneys assessed against insurance companies or self-insurers be deposited in the State Treasure to the credit of the Workmen's Compensation Board. Administration Fund balances, at the end of any appropriation period shall not revert to the general fund or any other fund but shall remain the property of the State Board of Workmen's Compensation and shall be used only for their expenditures.

114-719 **New Section.** Anyone failing in thirty (30) days after injury or death to agree or offer to agree on compensation, and file within ten (10) days such offer, Board upon finding liability for injury or death shall assess 10% penalty, costs and attorney's fees.

114-720 **New Section.** If no agreement reached, or if after agreement payments are discontinued, either party may ask for hearing. Where employee has agreed to accept award or less than award, on a supplemental hearing Board may assess 10% penalty, costs and attorney's fees.

114-9905 **New Section.** Misdemeanor to fail to cover employees by insurance or self-insurer, as required under the Act.

114-9906 **New Section.** Misdemeanor to fail to file reports, agreements under the Act, as required.

Workmen's compensation, on-the-job insurance

Your safety at work is one of your union's major concerns. Safe working conditions have been key bargaining issues in contract negotiations for many years.

Most IAM contracts include clauses that give a worker the right to refuse unsafe jobs. Many require employers to furnish safety equipment and protective clothing. Other agreements establish joint safety committees to set and maintain the highest possible safety standards in the shops.

Despite these and other safety efforts of labor and industry, accidents happen. Last year, more than 2,000,000 workers were injured and more than 15,000 were killed on their jobs.

Today, because of the efforts by trade unions, the cost as well as the number of accidents have been reduced. All 50 states now have workmen's compensation laws that provide weekly benefits for workers temporarily or permanently disabled by work-related accidents. But only 27 states, the District of Columbia and Puerto Rico require all employers, regardless of size, to provide compensation benefits. In the 23 other states, most of which are so-called "right-to-work" states, employer participation is optional. Workers in these states must resort to the nineteenth century method of suing their employer for damages.

Laws requiring compensation for injured workers began in Europe around 1880. The first workmen's compensation law in this country was enacted by the Federal Government in 1908 for some of its employees working hazardous jobs. In 1911, Wisconsin enacted the first state law.

Before workmen's compensation laws, an injured worker could get benefits during his disability only by suing his employer. The worker had to prove that his accident was caused by his employer's negligence. The purpose of workmen's compensation laws was to eliminate court battles and provide benefits regardless of fault.

Workmen's compensation laws vary widely in coverage, cash benefits, medical care and administration. Some states have special compensation funds while in others, employers insure their workers through commercial insurance companies. As shown in the adjacent table, the compensation laws and benefits are best in states where trade unions are strong. Where unions are weak, and employer interests dominate state legislatures, workers are shortchanged.

Do's and don't's if you are hurt on the job

Do report the accident and injuries to your foreman and your union steward.

Do notify your employer that you intend to file a claim for workmen's compensation.

Do get a written statement from all persons who saw the accident with their names and addresses. If your injury prevents you from doing this, your union steward will do it for you.

Do check your IAM contract. In addition to workmen's compensation, you may also be entitled to additional benefits under terms of the union contract.

DO

Don't sign any blank papers or forms.

Don't give any written statements concerning the accident or injury beyond necessary reports required by the Workmen's Compensation Agency.

Don't accept the employer's decision on your eligibility for compensation benefits. If questions arise, check with your IAM representatives.

Don't rush out and hire a lawyer. Most workmen's compensation cases can be settled without a lawyer. If legal complications arise, your IAM lodge will refer you to a competent lawyer.

DON'T

Benefits are paid weekly, based in most states a

Temporary total disability =

State	Weekly Maximum	Time Limit
Alabama	$38	300 weeks: 400 weeks for PT disability
Alaska	$100: $65 for PT	Duration of disability
Arizona	$150 for TT and PT $126.92 for PP $2.30 additional for dependents under TT	433 weeks for TT; duration of disability for PP; Life for PT
Arkansas	$38.50	450 weeks
California	$70 for TT $52.50 for PT for 400 weeks, thereafter $48.46 for life; $52.50 for PP	240 weeks for TT; 399 weeks for PP; 400 weeks for PT, thereafter a lifetime benefit of 60% of average earnings when injured, $48.46 maximum
Colorado	$49	Duration of disability for TT and PP; Life for PT
Connecticut	55% of State's average production wage ($65 as of October 1, 1966)	During disability for TT and PT; 780 weeks for PP
Delaware	$50	During disability for TT and PT; 300 weeks for PP
District of Columbia	$70	During disability
Florida	$42	350 weeks for TT and PP; During disability for PT
Georgia	$30 for PP $37 for TT and PT	350 weeks for PP; 400 weeks for TT and PT
Hawaii	$112.50	During disability
Idaho	$32 to $52 with dependents for TT and PT; $30 for PP	400 weeks, thereafter $15 a week, $18 with wife, and $4 to $15 for dependent children for duration of disability; In proportion to schedule injuries for PP
Illinois	$62 to $76 for TT, according to number of dependents; $56 to $68 for PT and PP	64 weeks for full amount for TT, $56 to $68 for thereafter; 8 years (417.43 weeks) for PP; life for PT
Indiana	$45	500 weeks, thereafter payments may continue for indefinite period for PT disabilities
Iowa	$40 to $56 for TT $47.50 for PP and PT	300 weeks for TT 500 weeks for PT For PP disability, in proportion with PT disability (500 weeks)
Kansas	$42	415 weeks
Kentucky	55% of 85% of State's average weekly wage, ($44); 50% of 85% for PP, ($40)	400 weeks for PP 425 weeks for TT and PT
Louisiana	$35	300 weeks for PP and TT; 400 weeks for PT
Maine	Two-thirds State's average weekly wage ($59.81 as of June 1, 1966)	300 weeks for PP During disability for TT and PT
Maryland	$25 for PP; $55 for PT and TT	208 weeks for TT; during disability for PP and PT
Massachusetts	$58, plus $6 for each total dependent; $20 additional for schedule PP injuries	During disability
Michigan	$61 to $92 for TT and PP; $61 to $86 for PT; (New TT benefits after September, 1967—$64 to $93)	During disability
Minnesota	$45	350 weeks; duration of disability for PT
Mississippi	$35	450 weeks
Missouri	$47 for PP and PT $52 for TT	400 weeks for TT and PP; 300 weeks for PT, thereafter 40% of wages for duration of disability. ($30 maximum)
Montana	$35 to $56, according to number of dependents	300 weeks for TT 500 weeks for PP and PT
Nebraska	$42	300 weeks for PT and TT, thereafter 45% of wages for duration of disability, ($34 maximum) 300 weeks for PP
Nevada	$27.69 for PP; $43.50 to $60.23 for PT, according to dependents; $52.50 to $72.69 for TT	429 weeks for PP 433 weeks for TT Life for PT
New Hampshire	$48.50 for schedule PP, $50 for non schedule PP; $50 for PT and TT	312 weeks for TT and PT, with annual extensions possible; 341 weeks for PP

§ Transportation provided for employees assigned away from place of burial.

Our goals in workmen's compensation

Many experts believe that in all but a few states workmen's compensation laws have failed to deliver what workers were originally promised: swift, certain and adequate benefits for job-connected injuries.

Undoubtedly the most desirable solution would be a federal workmen's compensation law setting uniform standards and benefits in all states. However, this is politically unattainable. Enormous profits have given private insurance companies a powerful vested interest in state administration of workmen's compensation. To improve existing workmen's compensation laws we seek:

► Full and compulsory coverage of all workers;

► Generally higher benefit levels with the weekly maximum to equal not less than ⅔ of the state's average weekly wage;

► Full coverage of occupational diseases including those caused by radiation;

► Full payment of medical costs and provisions for complete rehabilitation and retraining of permanently disabled workers;

► Free choice of physician by the injured employee;

► Insurance through a state-operated workmen's compensation fund rather than private companies;

► Non-political administration aimed at swift and certain payment of benefits with judicial review strictly limited to substantial questions of law.

(See back of W.C. Leaflet)

Union Admin

Stewards record accidents
See Sheet — aim at less than 3 day abs.

Attys — "retainer" or arrangement to meet regularly — Regular night — Answer questions
Cond to injured — Basic rights — Seek Counsel

Co. report immediately to Union (in the K)
Any case that reports to Ind. Com.
Still leaves the un-reported cases

Witnesses

To Accident
Report to Co. & Nurse
— Read what is written
Request for "panel" of M.D.'s

Co. may take pix, etc.

The better the Union program, more responsible the Co.

Nature of Unions (from Otto Kahn-Freund's Trade Union Democracy & the Law)

Tends to equate participation with Dem. at opening
Shows that bigness, affluence, reliance on Technicians, achievement lessens participation

Unions have most problems of dem in common with other organizations including political org.
But there is less choice in whether someone is "a wrong sort" this is not of difference
So Unions not comparable to other org. — more like political

2 main roles of Unions in dem — "Constitutional" roles
1) Pressure — and especially pressure in a party
2) "Legislation" — Viewing Col. Barg. as legis — the principle laws relating to how people make a living.
Legally prohibited in U.S.; Politically protected in Britain

So justifies public concern in internal affairs
But balance need to have interest representation & a fighting organization (Strike is a part of Col. Barg.)
Perhaps L-G, attack of adversaries of unions, may have good result of consolidating union democracy.
Danger of moving from public interest in a priv. interest exercising a pub. function and making Unions into a part of govt'l machinery.

Points for a Local Union Workmen's Compensation Program

1. Every steward should investigate all injruies in his department. He should see that:
   a. Injury is reported to the company authorities, at once.
   b. Employee receives immediate medical attention.
   c. He (the Steward) makes a full record of the injury including name of the injured, address, date, time, description of the injury, and other details.

2. A committee of the local should be designated to carry the responsibility for workmen's compensation cases in the local -- either an existing committee or a new committee -- such as a Welfare Committee, Health & Safety Committee, Union Counseling Committee, Workmen's Compensation Committee, etc.

3. A copy of the Steward's Injury Report should go to the committee handling workmen's compensation cases.

4. The committee should investigate case at once to see that the injured member:
   a. Receives proper medical attention
   b. Receives all benefits immediately due him.
   c. Receives information about legal rights and instruction in procedure.

5. Member should be instructed to contact committee when company proposes a settlement or in six months.

6. Committee record of the case should be filed so that case will be checked again in six months and contact with member can again be made to see what progress is made on the case, so legal time limits do not expire.

7. At the time of final settlement member and the committee should get together so that offer can be reviewed in the light of legal rights of member and so that he has opportunity to obtain legal counsel, if necessary.

8. The Steward should also follow through on each case he has reported and see that either the committee is taking care of it or see that necessary assistance is available.

9. Committee should carry on an educational campaign in local as to member's rights and benefits under the Workmen's Compensation law using the membership meetings, publications, bulletins, and other means available. They should also thoroughly learn the law and its interpretation and follow proposed changes in the law and recommend improvements to their local and international unions (here specific example cases will be important).

Training in the Use of Artificial Limbs Provided
Rehabilitation

M. DEATH BENEFITS PAID TO WIFE AND DEPENDENTS AND BURIAL EXPENSES PROVIDED

Death Benefits to the Widow
Extra Benefits to Dependent Children
Division Among Other Dependents and Parents
Burial Expenses of $500

N. BENEFITS MAY BE INCREASED OR DECREASED IF VIOLATION FOUND

The "Safe Place" Statute
15% Increase in Benefits if Employer Violates Safety Codes
15% Decrease in Benefits if Employee Violates Safety Codes
15% Decrease Because of Intoxication
Double or Treble Damages if Minors Are Illegally Employed

O. FILING A WORKMEN'S COMPENSATION CLAIM WHERE THERE IS NO DISPUTE

Steps in a Non-Disputed Claim
Returning to Work Problems
1. An Employer May be Fined for Refusing to Re-employ Employee
2. When is the Employee Able to Return to Work?
3. Further Compensation Due if Recurrence of Injury or Disease

P. STIPULATION-OF-FACTS AGREEMENT AND COMPROMISE AGREEMENT

Stipulation-of-facts Agreement
Administrative Procedure
Compromise Agreement

Q. HEARING

To Request a Hearing, An "Application for Adjustment of Claim" Must Be Filed
Insurance Company or Employer Response to Application
Hearing Is Scheduled
Consulting With A Workmen's Compensation Examiner
Legal and Union Representation
Physical Examination and Medical Testimony
Employees May Submit Doctor's Report 15 Days Before Hearing
Employee's Doctor Can Appear As Witness on His Behalf
Other Witnesses
Examiner's Award

R. APPEALS

Appeal for Commission Review
Appeal to the Circuit Court of Dane County
Appeal to Supreme Court of Wisconsin

S. WHO DOES AND DOES NOT COME UNDER THE WORKMEN'S COMPENSATION LAW

Automatic Coverage
Voluntary Coverage
Employees of Sub-Contractors or Loaned Employees
Employees Who Are Not Protected Under the Law

T. IF A "THIRD PARTY" IS THE CAUSE OF ACCIDENT, HE MAY BE SUED IN COURT

GUIDE TO WISCONSIN'S WORKMEN'S COMPENSATION LAW
(Prepared by Ruth Zubrensky, School for Workers,
The University of Wisconsin Extension Division)

A. WISCONSIN PASSED THE FIRST WORKMEN'S COMPENSATION LAW IN 1911

The first state workmen's compensation law in the country was passed by the Wisconsin Legislature in 1911. Its purpose was to furnish reasonable benefits to an employee who was injured on the job. Such benefits consisted of (a) compensation for medical treatment necessary because of the injury and (b) compensation for lost wages and for permanent injury or (c) in case of death immediate compensation to his dependents. In 1919 the law was amended to include compensation for occupational disease. Another purpose of the law was to cut down on industrial accidents by making the employer pay for workmen's compensation. The thought was that by making injuries expensive for the employer, this would stimulate him to find ways to cut down on the number of accidents by introducing safety devices and safety measures.

B. BEFORE 1911 A WORKER HAD TO SUE HIS EMPLOYER IN COURT TO COLLECT DAMAGES

Prior to the enactment of the workmen's compensation law, the only way an injured employee could recover any of his expenses was to start a law suit against his employer and try to collect damages through the courts. (Unless the employer was willing to pay medical costs and lost wages out of his own pocket). The court's attitude, dating back to English common law, was that a person could not recover money for an injury unless the injury was caused through the fault of the employer and no one else. If the individual employee was at fault, or a fellow-worker, or if no one was at

fault, the employee could not collect. So that collecting damages for an industrial injury was often a long, costly, bitter contest between the employer and the employee to prove who was at fault.

C. WORKMEN'S COMPENSATION IS PART OF SOCIAL WELFARE LEGISLATION

In the early 1900's the feeling grew that a worker should not have to bear the total cost or burden of an industrial accident alone. Should not society, through legislation, make provision for the injured worker regardless of fault? Workmen's compensation legislation was the beginning of what we now call social welfare legislation -- the protection through governmental action, of the individual in society against such common risks as industrial accident, old age, unemployment and illness. The cost of industrial accident and disease became the responsibility of the employer in particular and society in general. The employer, by figuring the cost of workmen's compensation in his over-all cost of production, passes the cost on to the consumer. Therefore, society as a whole bears the ultimate cost, but the initial cost is the employer's.

D. EMPLOYER MUST BE "SELF-INSURED" OR TAKE OUT INSURANCE POLICY

The workmen's compensation law directs the employer to take out insurance against the day when one or more of his employees may be injured or suffer disease arising out of the employment situation. Most employers carry insurance with a commercial insurance company. Insurance companies do the actual paying out of medical expenses and weekly benefits to the injured employee or dependents and play a major role in settling compensation cases. Where employers are self-insured, benefits are paid directly to the injured employee or dependents.

E. INJURY DEFINED IN THE LAW AS ANY MENTAL OR PHYSICAL HARM

The workmen's compensation law defines an injury as mental or physical harm of any kind whether due to accident or disease, including accidental damage to or destruction of artificial members, dental appliances and teeth. In addition, where there has been personal injury, hearing aids and eye glasses may be replaced.

Mental Harm

Examples of mental harm are nervous disorders, hysteria, traumatic neurosis and effects of brain hemorrhage caused by an industrial accident.

Physical Harm or Injury

Common types of industrial injuries are bruises, burns, scalds, cuts, fractures, crushing injuries, hernias, sprains, strains, stiffness, amputation, loss or paralysis of part of the body, sudden loss of hearing, sudden loss of vision, disfigurement.

Occupational Disease (May Include Deterioration of Bodily Function)

Examples of certain types of occupational disease are dermatitis (skin trouble), infection, silicosis, tuberculosis, pneumonia, undulent fever, lead poisoning and respiratory disease. In addition, occupational disease includes deterioration of bodily function or loss of hearing caused by exposure over a period of time to conditions which result in physical damage or occupational deafness. Hernia and back trouble caused by repetitive motion or repeated strain over a period of time may be considered an occupational disease under the law.

Eye Glasses and Hearing Aids

Eye glasses and hearing aids may be replaced only where there has also been a personal injury entitling the employee to medical treatment or payment of workmen's compensation benefits. Otherwise, if a pair

of glasses drops to the floor, with no personal injury, there is no payment nor replacement.

F. AN INJURY OR DISEASE MUST ARISE OUT OF EMPLOYMENT

The law states that a worker is entitled to workmen's compensation benefits, "where, at the time of injury, the employee is performing service growing out of and incidental to his employment." The employee must show that he was injured while doing some activity related in some way to his employment. In order to get workmen's compensation, injury or disease must arise out of the work situation and cannot be intentionally self-inflicted.

Injured on the Job

The most frequent types of accidents which occur on the job are where an employee is struck by a falling or moving object, where he slips or falls, or where he strains himself or over-exerts himself in his work. Workmen's compensation should be paid for all these types of cases. However, sometimes the facts are in dispute and the employer or insurance company will question or deny the claim. (See later discussion of Stipulation-of-facts Agreements, Compromise Agreements and Hearings).

Injured While Going to and from Work

The only time that an employee can be compensated for an injury which happens on his way to or from work is if it occurs on company owned property.

Injured on Company Steps or on Company Owned Parking Lot

Injuries which occur on the steps leading to the company or on a customary path through the employer's property, or in a company owned parking lot are compensable. For example, an employee who was on his way home from work after a heavy snow storm was injured in a company parking lot while putting chains on his car. He was entitled to compensation.

Injured While Attending to Personal Needs

The general rule is that an employee who is injured at work while attending to his personal needs, such as smoking, eating, getting refreshments or going to the lavoratory is paid workmen's compensation. These functions are necessary for the employee to be able to continue to work. He is not leaving the course of his employment and is considered still on the job. However, if the employee's departure from his job is so great that it becomes apparent that the employee meant to abandon his job temporarily, he is not paid compensation.

Injured during lunch time, wash-up time

An employee injured on the employer's premises during his lunch hour, during wash-up time or while changing clothes is covered by the law.

Injured While Doing Something of a Strictly Private Nature

Where an employee is injured in the performance of an act which he has undertaken to further his own strictly private purpose or to satisfy his own curiosity, and it is apparent that he has abandoned his job for the time being, if what he is doing is not within the scope of his employment, he is not covered by the law. For example, an employee who wanted to see how strong he was by stopping the shaft of a revolving motor and was injured while doing it was not entitled to workmen's compensation.

Injured While Off Company Premises, But Still Taking Orders

An injury occurring away from the company premises, but while the employee is still performing service for the employer and under the direction and control of the employer is compensable. If the employee is being transported by the employer when injured he will be entitled to benefits whether or not he is on the employer's property. An employee whose employment requires him to travel is

considered to be performing services at all times while on a trip, except as he steps aside to do some personal act. He is covered while traveling in trains, cabs, or while in eating places and hotels provided he has not deviated for a private personal purpose.

Traffic accidents are compensable

A teamster or delivery man who is injured in a traffic accident or while unloading merchandise at a different company can be compensated.

Injured During Horseplay or Fighting

The circumstances surrounding the horseplay or fighting will determine if an injured worker can be compensated. If the injured employee was the one who started the horseplay or was the aggressor in the fight, it is unlikely that he will be compensated. On the other hand, if an employee is injured as the result of the "sportive acts" of others, or was attacked without provocation, the decision will be more favorable.

Injured Because of Self-Inflicted Wound

The law provides that if an injury is intentionally self-inflicted, it is not compensable (the extreme case being suicide).

G. A WORKER MUST GIVE NOTICE OF HIS INJURY TO HIS EMPLOYER

When a person is injured or suffers a disease because of his work, his immediate goal is to have it taken care of; to get the proper first aid treatment or medical attention. But it should not be forgotten along the way, that notice of injury and the need for medical attention must be given to the employer. Even minor injuries should be reported because they may develop into something serious later on. As a general rule an injury should be reported immediately so that medical treatment may be

given promptly and that a later claim will not be doubted. A very late report may cause the employer to doubt that the injury occurred at all.

Time Limit of Two Years

The law provides that an injured worker should give notice to his employer within 30 days of any injury received. However, if no notice is given within 30 days, it is still possible to give notice any time within 2 years of the date of the injury or disease, or the date the worker first realized that such injury or disease was caused by his work. As long as the employer receives notice within 2 years and if the employer was not misled by the fact that he did not get earlier notice, benefits are payable. Dependents in death cases also have two years to file a workmen's compensation claim.

Six Year Statute of Limitation

In cases where an employee has stopped receiving weekly compensation benefits for temporary or permanent disability and the injury or disease causes recurring symptoms, he may re-open his claim any time within six years from the date of injury or disease or from the date that compensation was last paid. However, the six-year statute of limitation does not apply where a compromise agreement has been made or where a final award has been issued after a hearing. Where medical treatment will be required beyond the six year statute, and there has been no compromise or final award, the employee can file a formal application for a hearing which will have the effect of keeping his claim open indefinitely. (See later discussion of compromise agreements and hearings.)

Giving Proper Notice to the Employer

When an employee is injured or has contracted a disease because of his work, he should report it at once to his employer directly or

through a foreman or other designated official. Giving notice to a company nurse is sufficient. However, mere notice that an employee became sick while at work is not considered "actual notice of injury." The employer must be notified as to what happened at work which caused the injury or sickness. Notice can be given verbally or in writing. It should include the time, date, circumstances surrounding the injury or the first appearance of an occupational disease and the need for medical attention.

Telling the Union

Because of the difficulties that may later arise in claiming workmen's compensation, it is an excellent idea to notify the union steward or union representative of any injury or disease so that he may help or act as an agent should the need arise.

Keep a Written Record of How the Accident Happened

Because many complications may arise in a workmen's compensation claim and because the amount of benefits are determined based on the individual facts of the case, it is very important that the affected employee keep a written record from the beginning. In addition, if the case ever goes to a hearing, it will be important that the employee's testimony be consistent with his earlier accounts of the accident such as his report to the panel doctor. (See later discussion of hearings.)

List of Needed Information:

1. The date of injury or first indication of an occupational disease. The date is very important.
2. The type of accident such as struck by an object, over-exertion.

3. The nature of the injury or disease such as cut, sprain, hernia, asphyxia.
4. The part of the body affected such as finger, low back, whole body system.
5. The kind of action that was taking place such as lifting, carrying.
6. The source of injury such as machinery, object, hot or flammable substance.
7. The weight of the object causing the injury.
8. Physical symptoms such as sharp pain, stiffness, loss of motion, rash.
9. How long the symptoms lasted and if and when they recurred. (dates)
10. All doctors seen and on what dates.
11. Names of any witnesses who saw the accident.
12. All money spent on doctors, examinations, treatment, medicines, transportation. (Be sure to get receipts.)
13. All days and parts of days lost from work because of the disability.
14. Keep any statement made to an insurance company representative. (See later discussion of steps in a non-disputed claim.)
15. Keep copies of any agreement or final receipt signed for a workmen's compensation claim.

H. UNLIMITED MEDICAL, HOSPITAL AND SURGICAL TREATMENT PAID FOR

An employee who is injured at work or suffers from an occupational disease is entitled to be paid for unlimited medical, surgical and hospital treatment including: a) all doctor bills, b) all hospital and sanatorium

bills, c) all medicines, d) medical and surgical supplies (such as trusses), e) crutches and artificial limbs, f) training in the use of artificial limbs, g) lost time and travelling expenses, in submitting to treatment or examination.

All medical expenses must be paid for by the employer no matter how long or costly, or whether or not weekly benefits are also due for temporary or permanent disability. (See later discussion of weekly benefits paid for temporary and permanent disability.) If an injury results in the need for medical treatment where there has been no lost time, no lost wages and no disability, the employee is still entitled to be paid for medical treatment, alone. Necessary medical expenses are paid unless the claim has been settled through a compromise agreement or a final order as a result of a hearing. (See later discussion of compromise agreements and hearings.)

I. SELECTION OF A DOCTOR IS LIMITED TO A "PANEL" DOCTOR

Every employer is required to provide a list of "panel" doctors, meaning a reasonable number of competent and impartial doctors ready to undertake the treatment of any of his employees. The employee must make his choice of doctors from this list, making sure to notify his employer of his selection and any one change of doctors thereafter. Some employers maintain an "open" panel of doctors.

Employee Allowed Second Choice from Panel of Doctors

If the employee is not satisfied with the first panel doctor, he is allowed to make one more choice. However, he must notify his employer of this second choice and cannot change doctors on his own. This provision, to allow one change of doctors, recognizes that if the employee does not have confidence in his attending physician, his recovery may be delayed and no employee should have to be treated by

a physician whom he distrusts or dislikes for whatever reason. It should be noted that if the employee's first or second choice of doctors is a general practitioner and the "G.P." refers him to one or more specialist, or if he sees several doctors in one partnership or clinic, these are all considered "one" doctor under the law. After changing doctors once, any further change must be upon request and approval of the Industrial Commission.

Many Employers Maintain an "Open Panel" of Doctors

As a practical matter, most employers and insurance companies in Wisconsin have an "open panel" agreement with the State Medical Society. The effect of this agreement in most cases is that an employee may see any doctor he wishes to who is willing to treat compensation cases. Here, again, the employee is limited to his initial selection and one change of doctors. Failure to notify his employer of his initial selection or to clear any change of doctors can lead to a disputed claim and the possibility of the injured employee having to pay for the entire cost of treatment.

Certain Treatment, Including Chiropractor, Not Paid For

If a person goes to his own personal doctor who is not on the "panel," medical expenses will not be paid unless there has been prior approval by the employer or insurance company. Expenses will not be paid for treatment by a physical therapist, masseur, or chiropractor, unless the treatment is ordered by a medical doctor or unless the employer or insurance company specifically agrees in advance to pay for such treatment. Christian Science treatment may be provided instead of medical treatment unless the employer has filed notice with the commission not to approve of such treatment.

Can Go to Any Doctor in an Emergency

In an emergency situation, an employee can go to any doctor for treatment. He should notify his employer and see a panel doctor as soon as possible.

Never Turn Down Reasonable Medical Treatment or Examination

Upon request, a worker should submit promptly to reasonable treatment or examination by any doctor named by the employer or insurance company. The law states that no compensation is payable for the death or disability of an employee if his death was caused by or his disability aggravated by an unreasonable refusal or neglect to submit to or follow reasonable medical or surgical treatment. However, an employee has the right to refuse hazardous treatment or major surgery.

J. WEEKLY BENEFITS PAID FOR TEMPORARY AND PERMANENT DISABILITY

In addition to medical, hospital and doctors' expenses, the workmen's compensation law provides for the payment of weekly benefits in the case of temporary and permanent disability.

Waiting Period Requirement of 3 Days for Temporary Disability

In order to eliminate minor claims for temporary disability, the law requires a 3 day waiting period for all short claims of 10 days or less. (Sundays are not included in the 3 days or 10 days unless the employee usually works on Sundays.) Temporary disability benefits are not paid for the day of injury, either.

If the employee is still physically unable to work 11 days after the day of injury, then he gets compensation for the entire period including the first 3 day waiting period. So that payment for the 11th day will include

all days of disability up to that date (not including the day of injury).

Example of Waiting Period and Partial Week of Benefits

A worker who is injured on Monday is entitled to benefits for the time he was disabled starting with Friday of that same week. If he is still unable to work on the following Saturday (11 days later not counting Sunday) he gets benefits for the first 3 day waiting period, namely Tuesday, Wednesday and Thursday of the first week.

If compensation is due for any part of a week, each day of disability is paid for at the rate of 1/6th of the weekly benefits. (See later discussion of amount of weekly benefits.)

Exception to the Waiting Period If Also Permanent Disability

If an injury causes both temporary and permanent disability, there is no waiting period for the temporary disability benefits. Both temporary and permanent disability benefits start from the first day. Minor amputations causing a day or two loss of work are often overlooked and payment made only for the permanent partial disability caused by the amputation. But temporary benefits are also payable.

Temporary Total Disability

Almost all workmen's compensation cases initially fall into the category of temporary total disability -- which covers the period immediately after injury. This is the period of treatment and healing before it can be determined whether or not there is any permanent disability. Temporary total disability benefits are paid 1) when the person is unable to work and has a total loss of wages; 2) when the person is still recovering and is able to do some type of work, but where he goes back to his employer and the employer is unable to provide him with the type of work he can do.

Duration: Temporary total disability benefits are paid until the employee's condition has become stabilized and treatment and convalescence is not likely to result in more improvement.

Amount: Temporary total disability benefits amount to either 70% of the employee's own average weekly wage or 70% of the maximum average weekly wage provided for in the law at the time of injury. In the 1963-65 Text of the Law the highest benefit amount for temporary total disability is $64.00 per week. (See later discussion of method of figuring weekly benefits.)

Example: If an employee averages $80.00 per week, he is entitled to benefits of $56.00. (70% of $80 is $56). If he averages $125 per week, he is entitled to benefits of $64 which is the maximum granted. (70% of $125 is over $64, but the employee is only entitled to the maximum set forth in the law.)

Temporary Partial Disability

Temporary partial benefits are paid when an employee is working at a lesser paying job because of the temporary effects of an industrial accident or disease. Benefits are paid when the employee has had to take a wage cut because of the disabling effects of the injury or disease and while he is still convalescing or undergoing treatment. Temporary partial benefits are paid in proportion to his wage loss.

Duration: Temporary partial disability benefits are paid until the employee's condition becomes stabilized and treatment and convalescence is not likely to result in more improvement.

Amount: Temporary partial disability benefits are paid in the same proportion to what the employee is entitled to for temporary total benefits as the proportion of his wage loss bears to his former average weekly wage.

Example: If an employee had been earning $125 per week and returns to work at $100 per week, he is taking a 20% wage loss. At $125 per week, he would be entitled to the maximum temporary total benefit of $64 per week (see previous discussion). Applying this same 20% to $64 gives the amount of temporary partial benefits, or $12.80 per week (20% of $64 is $12.80).

Permanent Partial Disability

Permanent loss of limb or long-lasting physical or mental incapacities have a profound effect upon a worker, long after the temporary injury is healed. When an employee is left with a permanent loss of part of his body or a permanent physical impairment, he is entitled to a certain sum of money, in the form of weekly benefits beyond the cost of medical care and the temporary disability payments that he may have received during a healing period. Payments under permanent partial disability are not related to wage loss. In fact, the actual payments are usually paid after the worker has returned to work. The number of weeks of payment allowed depends upon the severity and kind of disability, the more serious the disability, the more weeks of payment. It also depends upon the age of the employee and is reduced if he is over 50 years old. (See later discussion on reduction of permanent partial disability benefits if 51 years or older.)

Duration of Permanent Partial Benefits Determined in One of Two Ways:

1. Number of Weeks Paid According to a Schedule of Injuries

The law sets forth a schedule of injuries by listing parts of the body affected and the number of weeks of benefits allowed for the loss of each such part of the body (loss through amputation or paralysis). This schedule states the number of weeks of benefits which are to be paid for each such loss.

Example: Loss of vision of one eye calls for 250 weeks of compensation; loss of hand at the wrist, 400 weeks; loss of foot at the ankle, 250 weeks; loss of thumb at the proximal joint, 100 weeks; etc.

2. Non-Scheduled Injuries Are Paid as a Percent of 1000 Weeks

For injuries which leave a permanent loss in bodily function, but are not listed on the schedule of injuries (such as internal injuries to the head, back or torso), a medical estimate has to be made as to the amount of permanent loss of bodily function and then taken as a percentage of 1000 weeks. (1000 weeks is an arbitrary figure representing total disability.)

Example: An employee who suffered a herniated disc to his back is found by the doctors to have a 10% permanent partial disability due to the back injury. He is entitled to 100 weeks of permanent partial disability benefits. (10% of 1000 weeks is 100 weeks.)

Amount: Permanent partial benefits for both scheduled and non-scheduled injuried amount to either 70% of the employee's own average weekly wage or 70% of a maximum average weekly wage provided for in the law at the time of

injury. In the 1963-65 Text of the Law the highest benefit amount for permanent partial disability is $44.50 per week. (Note, this is lower than for temporary total disability benefits.)

Reduction of Permanent Partial Benefits if 51 Years or Older

An unusual feature of the Wisconsin law is the provision for reduction of benefits if 51 years of age or older in the paynent of permanent partial disability benefits. It was assumed that the older worker had fewer years of employment left and that his wage loss, by reason of permanent partial disability, would therefore be less. The law provides for a 2½% reduction in the number of weeks a person can draw benefits for each year beginning with age 51 for scheduled and non-scheduled injuries. The maximum reduction is 50% of the number of weeks which an employee would ordinarily be entitled to if he were not 51 years of age or older. After the age of 70 years there is no further reduction

Example: If a 59 year old man loses a hand, which according to the schedule of injuries would pay 400 weeks of benefits this is reduced to 310 weeks because of his age.

Permanent Total Disability

In case of extremely serious injury, which substantially handicaps a man from ever finding work again, the law provides that weekly benefits be paid for life. The law defines a permenent total injury as the loss of both eyes, or the loss of both arms, or the loss of both legs, or the loss of an arm and a leg and other extreme conditions to be determined by the Industrial Commission. The provisions of this clause are applied automatically. Therefore, benefits are payable for life no matter whether or not the employee subsequently finds work.

Duration: Permanent total disability payments are paid for life.

Amount: Permanent total disability benefits amount to either 70% of the employee's own average weekly wage or 70% of the maximum average weekly wage set forth in the law at the time of injury. The maximum benefits during 1963-65 was $64 per week. (See later discussion on method of figuring weekly benefits.)

Method of Figuring Weekly Benefits

In figuring weekly benefits, the law states that an injured employee is entitled to either 70% of his "own" average weekly wage or 70% of the maximum average weekly wage provided for in the law at the time of injury. What is this maximum average weekly wage? The 1963-65 Text of the Law provided for two maximums: the first maximum is $91.43 for purposes of figuring temporary total disability benefits, permanent total disability benefits, and death benefits; the second maximum is $63.57 for purposes of figuring permanent partial disability benefits. Taking 70% of these figures gives $64.00 per week and $44.50 per week respectively. These, then, become the highest weekly benefit amounts an employee can draw under the present law. This provision of the law, negates, in part, the other provision of the law allowing an employee to draw 70% of his "own" average weekly wage. If his "own" average weekly wage is higher than the maximum provided for in the law, he cannot collect on the basis of his higher average. The Wisconsin Legislature usually amends the law to raise the maximum average weekly wage provided for in the law every biennial session. But the person already drawing workmen's compensation does not benefit from any subsequent change in the law. The date of the injury or disease fixes

the benefit amount. This is important in permanent total and permanent partial cases where payments may extend over many years.

K. PAYMENT FOR OCCUPATIONAL DEAFNESS, DISFIGUREMENT, NON-DISABLING SILICOSIS, MULTIPLE INJURIES AND BENEFITS TO WORKERS ALREADY HANDICAPPED

Workmen's compensation benefits for occupational deafness, disfigurement, non-disabling silicosis, multiple injuries and to workers already handicapped are all given separate treatment in the law.

Occupational Deafness

Pioneer work has been done in the State of Wisconsin in recognizing loss of hearing as an occupational disease. Benefits are allowed if prolonged exposure to noise causes permanent partial or permanent total loss of hearing.

Disfigurement

Benefits may be payable if an employee is disfigured about the face, head, neck, hands or arm, through an industrial accident, which will probably cause wage loss or cause loss of employment.

Non-Disabling Silicosis

Benefits are allowed if an employee is laid off or it is inadvisable for him to continue working because of non-disabling silicosis.

Multiple Injuries Paid for at a "Stepped Up Rate"

In case an accident causes more than one permanent injury, such as loss of two fingers, the number of weeks of permanent partial benefits are paid for at a "stepped up" rate, that is, the total number of weeks will equal more than the combined weeks for each such loss as listed in the schedule of injuries.

Workers Already Handicapped May Get Extra Benefits from 2nd Injury Fund

If a worker is already handicapped for whatever reason and is in an

industrial accident entitling him to at least 250 weeks of permanent partial benefits, he may be entitled to additional benefits from a special "2nd Injury" fund maintained by the State for this purpose. Benefits are paid out of this 2nd Injury Fund when an employee has a pre-existing disability such as birth defect, bad heart, weak eyes, previous injury which if it were caused by an industrial accident would entitle him to 250 weeks of benefits. If he now sustains an industrial injury entitling him to 250 weeks of benefits, he is not only entitled to these weeks but an additional number of weeks equal to either, 1) the number of weeks his pre-existing disability would bring were it an industrial injury or 2) the number of weeks which is payable for his current injury whichever of these two are the lesser number of weeks. These additional weeks are financed through employer contributions of $1500 any time one of his employees loses a hand, arm, foot, leg or eye. The purpose of this special Second Injury Fund is to promote the employment of handicapped workers and to compensate the employee for the seriousness of the combined disabilities.

L. TRAINING AND REHABILITATION FOR HANDICAPPED WORKERS

Wisconsin law recognizes its obligation for the training of handicapped workers so that they can again become self-supporting members of the community.

Training in the Use of Artificial Limos Provided

In cases of amputation after injury, temporary disability benefits extend during any reasonable period it takes to be trained in the efficient use of artificial limbs. The cost of training may be substantial but there is no stated limit to the number of weeks of such benefits.

Rehabilitation

If an employee has suffered from any serious industrial injury or disease making it difficult or impossible for him to do the work he previously performed, he may receive up to 40 weeks of additional benefits while he takes rehabilitation instruction under the supervision of the Vocational Rehabilitation Department. In addition to the 40 weeks, he may receive the cost of transportation and maintenance if the worker must go outside his own community for such training. The Workmen's Compensation Department attempts to refer all seriously handicapped persons to the Vocational Rehabilitation Department (any person who is more than 10% disabled is a likely candidate for rehabilitation). Any employee wishing to apply for vocational training may do so on his own by notifying either department. Adequate expenditures for good medical care and rehabilitation are very important in reducing the extent of final injury and restoring the individual to society with as much potential as possible.

M. DEATH BENEFITS PAID TO WIFE AND DEPENDENTS AND BURIAL EXPENSES PROVIDED

If an industrial accident or occupational disease causes death, or if a worker dies while he is entitled to permanent total disability benefits, the law provides for the payment of death benefits to a wife, husband, parent or close relative. In addition, extra benefits are paid to dependent children. If there is no husband, wife or totally dependent parent, death benefits are divided among other dependents.

Death Benefits to the Surviving Wife or Husband

If there is a surviving wife or husband, death benefits are paid to her or him and all other relatives are excluded (except children who get additional benefits). Death benefits vary according to the employee's

earnings up to a maximum of $18,286 as set forth in the 1963-65 Text of the Law. Death benefits are payable monthly over a period of 8 years. In case there is a widow and dependent children, the Industrial Commission has the right to reassign death benefits to the children should the widow remarry.

Extra Benefits to Dependent Children

Children 16 years or under living with the employee at the time of injury may receive additional benefits from a state fund created for that purpose (or over 16 years if the child is mentally or physically incapacitated). The amount of benefits varies with the age of each child.

Death Benefits to Parent or Other Close Relatives

If there is no surviving spouse, and the employee was totally supporting his parents or other close relatives, such parent or relatives are entitled to the full amount of death benefit. If parents are not wholly dependent, but have maintained friendly relations with the deceased, they are allowed $2000.

Burial Expenses of $500

In all cases where death results from an industrial accident or disease the employer or his insurance company must pay burial expenses up to $500.

No Reduction in Permanent Total or Death Benefits Because of Age

The provision for reduction of benefits when an employee is 51 years of age or over does not apply to permenent total benefits or death benefits.

N. BENEFITS MAY BE INCREASED OR DECREASED IF VIOLATION FOUND

There are several provisions in the law for increasing or decreasing weekly benefits and death benefits which are important in enforcing both the

safety codes of the State of Wisconsin and the child labor laws.

The "Safe Place" Statute

Under Wisconsin law, the "safe place" statute imposes an absolute duty on the part of the employer to do everything reasonably necessary to furnish a safe place to work and to protect the life, health, safety and welfare of his employees. The employer's failure to meet safety standards or to comply with the safety codes of the State can increase the amount of workmen's compensation benefits the employer must pay.

15% Increase in Benefits if Employer Violates Safety Codes

If injury is caused by reason of a violation by the employer of the "safe place" statute, or of a safety order, or because of failure of an employer reasonably to enforce compliance by employees with a safety order, 15% increased compensation becomes payable to the employee or his dependents.

15% Decrease in Benefits if Employee Violates Safety Codes

If an employee willfully violates or fails to follow rules for his safety, or to use safety devices which the law requires, compensation may be decreased by 15%. Compensation is not reduced if the use of such safety device is not enforced by the employer.

15% Decrease Because of Intoxication

If an injury occurs because of the employee's intoxication, compensation may be decreased by 15%.

Double or Treble Damages if Minors Are Illegally Employed

The law provides that all illegally employed minors have the protection of the workmen's compensation law. If a minor is working without a permit and is injured, the employer must pay double the amount of benefits that would normally be paid. This additional amount must be paid by the

employer, himself, rather than his insurance company, as a form of penalty. If an injured minor is illegally employed in an occupation which is prohibited to minors, the employer must pay triple the amount. Double compensation is limited to $5000 and treble compensation to $7500.

O. FILING A WORKMEN'S COMPENSATION CLAIM WHERE THERE IS NO DISPUTE

One of the major purposes of the workmen's compensation law is to bring about the speedy payment of claims. To help do this, the law provides for certain administrative rules which are designed to hasten the process and protect the parties involved. Under Wisconsin law, the employer or insurance company takes the inititative in paying out the first benefit check in a non-disputed case. The Workmen's Compensation Department insures that the correct payments are made by requiring full reports from employers, insurance companies and doctors, and by careful examination of the evidence.

Steps in a Non-Disputed Claim

1. When the employee is injured or finds he has an occupational disease, he gets needed medical attention. He sees a panel doctor as soon as possible and continues treatment as long as necessary.

2. The employee gives immediate notice of injury to his employer, preferably in 30 days, but certainly within two years.

3. The employer or insurance company files a report within four days of the injury with the Workmen's Compensation Department. This report is called "Employer's First Report of Injury or Disease." The employee does not get a copy of this report.

4. The Workmen's Compensation Department sets up a file on the case and sends the employee an information sheet together with a "promptness of payment" postcard. The employee should return the postcard when he gets his first check.

5. The doctor sends a medical report on the nature of the injury or disease to the employer or insurance company.

6. The insurance company usually sends an adjuster to the employee's home to find out the details of the accident. The worker will want to give a complete statement, particularly all of the physical symptoms and pains connected with the disability. If there is any doubt about the statement, he need not sign it. (It is sometimes used against an employee at a hearing.) However, if it is accurate and complete he should sign it. He must be given a copy of the statement he signs.

7. If there is no disagreement about the claim, the insurance company or employer will start paying benefits. Checks come directly from the insurance company or employer.

8. The employer or insurance company sends the Workmen's Compensation Department a follow-up report within eleven days showing that payment of benefits have begun, or showing the reasons why not.

9. The employee gets his first check, usually within fifteen days after the date of injury. If he does not, he should write the Workmen's Compensation Department, State Office Building, Madison, Wisconsin. Insurance companies compete with each other to see who has the best record of promptness of first payment.

10. At the end of the period of disability the insurance company usually writes a letter to the employee informing him that payments will be stopped as of a certain date.

11. When the employee has received all of his benefits, he will be asked to sign a form entitled "receipt of final payment." He signs this if he agrees that he has been paid properly and that he is sufficiently recovered to resume his former work. An employee may safely

sign a receipt for final payment because his claim remains open for six years from the last payment.

12. The employer and insurance company make out a last "supplementary" report and send one copy to the Workmen's Compensation Department and give one copy to the employee when final payment has been made.

13. A physician's report must accompany the final report and a copy must be given to the employee if there has been any payment for permanent disability or if the temporary disability exceeds three weeks.

14. An employee is entitled to the final report and the physician's report, and should request it if it is not automatically given to him.

Returning to Work Problems

1. An Employer May be Fined for Refusing to Re-Employ the Employee

After an employee's claim for workmen's compensation is over, he has a right to a job, but no guarantee of a job. This is one of the weakest and more unfortunate clauses in the law. Under this provision of the law, an employer who unreasonably refuses to rehire an employee may be fined up to $500. (The Workmen's Compensation Department must request that the State's Attorney General's office begin forfeiture action against the employer.) But even if the employer is fined, nothing in the law compels an employer to take an employee back to work.

2. When Is the Employee Able to Return to Work?

There may be a difference of opinion as to when the employee is sufficiently recovered to return to work. If the employee does not feel up to it, or has been advised by his personal doctor not to return yet, he should notify the Workmen's Compensation Department--he still may be entitled to benefits. However, returning to work is often the best therapy in regaining the use of part of the body and in regaining

the confidence and ability to work again.

3. Further Compensation Due if Recurrence of Injury or Disease

If the effects of an injury or disease recur any time in the six years following the last date of payment, the claim can be reopened, (where there has been no award issued as the result of a compromise agreement or hearing).

P. STIPULATION-OF-FACTS AGREEMENT AND COMPROMISE AGREEMENT

Many questions can arise in a workmen's compensation claim before the employer or insurance company is willing to pay or is ordered to pay benefits by the Industrial Commission. Such questions include, whether or not the injury or disease arose out of and because of work, whether it was aggravated by nonwork causes, whether it caused a permanent condition, and the extent of permanent disability. All of these questions may be disputed by the insurance company, lawyers, doctors and the employee. Short of going to a hearing over the claim, there are two types of agreements that can be reached if both parties prefer to settle without a hearing; one is a stipulation-of-fact agreement and the second is a compromise agreement. Both types must be submitted to the Industrial Commission for review. The Commission will either affirm, set aside, or modify the agreement and direct payment in the form of an order or award.

Stipulation-of-Facts Agreement

In cases where it seems advantageous to both sides to pin down or "freeze" the facts, this can be done by a stipulation-of-facts agreement. This agreement commits each side to something that they might not want to concede, otherwise. For instance, it will state the percentage of permanent partial disability which will eliminate further controversy over this point. Or in cases where there is to be a lengthy period of

payment, it obligates both sides to accept the agreed upon number of weeks. The worker (or dependents in fatal cases) should make sure that all the facts are stated to his satisfaction as to percentage of permanent disability and number of weeks of payment. The insurance company cannot claim, at a later date, that the disability actually amounted to a lesser amount, unless they can bring proof within one year of the agreement. The advantage to a worker of this type of agreement is that the insurance company and employer has only one year to request that the Industrial Commission reopen and review the case. However, the employee still has six years to reopen the claim should there be a recurrence of his injury or disease.

Compromise Agreement to be Signed Only as Last Resort

In some cases, where there is a doubt about the claim or there is a dispute about the extent of disability and uncertainty on both sides how the case would turn out as a result of a hearing, a compromise agreement is entered into. This type of agreement can be dangerous because the employee is not allowed to reopen his claim after one year and the Industrial Commission rarely reviews or changes this type of settlement. Unless an actual dispute arises, the parties should not attempt to make a compromise agreement, but should stipulate to the facts without using the word "compromise." For all practical purposes the case is closed for all time with the signing of a compromise agreement.

Q. DISPUTED CLAIMS AND HEARINGS

A disputed claim exists where an employee or surviving spouse or dependent believes he is entitled to certain workmen's compensation benefits for which the employer or insurance company deny liability. The employer's or insurance

company's unwillingness to pay benefits may arise because of an honest difference of opinion among witnesses or a conflict of medical testimony between doctors. If there is no settlement the law provides that the case go to a hearing held before a hearing examiner representing the industrial commission. (Only about 5% of all claims go to a hearing.) The examiner is there to get the facts in the case. He bases his decision on the testimony of both parties and the doctor's reports submitted in the case. In most cases, the insurance company or employer is represented by an attorney and other expert witnesses. The employee, too, must be willing to prepare himself and get expert help in his effort to present and develop his case. There is only one opportunity to present a case. There is only one hearing. Should the injured employee lose that, he cannot start over again. Therefore, it is extremely important not to enter a hearing until all of the necessary evidence is ready and available for presentation.

To Request a Hearing, An "Application for Adjustment of Claim" Must be Filed

When an employer or an employee wants to request a hearing, he must file three copies of a form entitled "Application for Adjustment of Claim" with the Workmen's Compensation Department. This form can be obtained from the Workmen's Compensation Department, State Office Building, Madison, Wisconsin or Milwaukee, Wisconsin. The form must be filled out in triplicate and returned to one of the above offices. The Workmen's Compensation Department then sends one copy to the employer or his insurance company for an answer.

Insurance Company or Employer Responds to Application

A person is not sure that a hearing will be necessary unless the insurance company or employer decides to answer this application. They do this

by filling out another form entitled "Admission of Service and Answer to Application" setting forth the reasons why they will oppose the claim. The employee and (or) his lawyer should use this form as the basis for preparing for the hearing, concentrating on the points which the insurance company denies.

Hearing is Scheduled

After an insurance company denies liability, the Workmen's Compensation Department sets a hearing date. The date and place are usually set according to the worker's request in his claim. Both parties are notified at least 10 days in advance. If the worker is not ready for the hearing he should notify the Workmen's Compensation Department immediately. Hearings are semi-judicial proceedings, but are fairly informal. Witnesses are sworn in as in a courtroom and either party may cross-examine the other. A stenographer records all the testimony.

Consulting with a Workmen's Compensation Examiner

At any time an employee (or dependents of an employee) can consult with an examiner of the Workmen's Compensation Department in person in Milwaukee or Madison or by writing or a long distance phone call. If there is any question on how to proceed or how to prepare for a hearing, he should feel free to consult with the staff of examiners.

Legal Representation and Legal Fees

In all but the simplest cases, it is a good idea for an employee to be represented by a lawyer in a hearing before an examiner. Unions often advise injured members to seek legal aid both before attempting to settle a claim with an employer and before appearing at a hearing. An attorney is entitled to legal fees of 20% of the amount of benefits in dispute or, if there is no net gain over the amount the employer

offered, he is entitled to up to $100 to be determined by the Industrial Commission according to the amount of work involved in the case.

Physical Examinations and Medical Testimony

One of the most common types of cases which go to a hearing occurs where there is a conflict of medical testimony. There may have already been a number of examinations and reports at the time of the hearing. (The employer has the right to ask that the employee be examined and re-examined any reasonable number of times. In some cases the employee may be re-examined several times by doctors on both sides.) The employee has the right to have his own personal doctor or specialist submit a medical report on his behalf, or to have him appear as a witness for him at the hearing.

Employee May Submit Doctor's Report 15 Days Before Hearing

The law provides that a physician or surgeon can fill out a report on a special form to be supplied by the Workmen's Compensation Department upon request (form WC-16-b entitled "Physician's Report on Accident or Industrial Disease) and if such form is submitted to the Workmen's Compensation Department at least 15 days before the hearing, it can be used as direct testimony just as if the doctor were there in person. The purpose of this provision is to equalize to a degree the opportunity for parties to present medical testimony. The cost of appearance of medical witnesses, is, at times prohibitive to employees. Under this provision, the burden of producing the physicians for cross-examination is imposed upon the employer or insurance company. But it is up to the employee to ask his doctor to submit Form A-16b and see to it that he does.

Employee's Doctor Can Appear As Witness On His Behalf

It is up to the employee to bring his own doctor or specialist to appear on his behalf. He must pay for the doctor's appearance, independent of any other medical costs he may be entitled to.

Other Witnesses

The employee has to pay for the expense of any witness he wants to appear on his behalf. (See discussion of employee's doctor as a witness above). The employee should make sure that his witness is informed of the time and place of the hearing. He should through preparation make sure that he and his witnesses do not contradict each other with respect to the details of the case.

Examiner's Award

The examiner will gather all the facts at the hearing. He can order an examination by a doctor not connected with the case if he thinks necessary. After the final hearing, the examiner issues an award or order which states the amount of disability and how much compensation is to be paid. The award prevents the employee from claiming benefits in the future should further disability arise except in the case of occupational disease, where no showing of disability was found. The examiner may also issue an award denying benefits.

R. APPEALS

Either party has the right to appeal the award of an examiner. The appeals follow this order: 1) appeal for Commission review 2) appeal to the Circuit Court of Dane County and 3) appeal to the Supreme Court of Wisconsin.

Appeal for Commission Review

If a worker wishes to appeal the examiner's award, he must file an

"Appeal for Commission Review" form within 20 days of the mailing date of the examiner's award. On this form he states where he differs with the examiner's award. The full three-member Industrial Commission will decide the case for or against the worker. The worker will receive a copy of the Commission's decision.

Appeal to the Circuit Court of Dane County

After the Industrial Commission has decided the case, any further appeal is directly to the Circuit Court of Dane County (no other court handles workmen's compensation cases). Such appeal must be made within 30 days. A lawyer should be consulted to carry forth the case, since only questions of law are taken up by the Circuit Court. If the employee loses the court case, he will have to pay the court costs. If the employee wins, the court can assign costs as it sees fit.

Appeal to Supreme Court of Wisconsin

Only exceptional cases would be appealed to the Supreme Court. An employee has 30 days to appeal after the judgment of the Circuit Court.

S. WHO DOES AND DOES NOT COME UNDER THE WORKMEN'S COMPENSATION LAW

Basically, all employees who work for an employer who employs three or more employees are covered or protected by the provisions of the workmen's compensation law. Others may not be protected.

Automatic Coverage

All employers with three or more employees must cover their employees under the law. All state offices and sub-divisions of the State including counties, cities, villages, school districts must pay workmen's compensation to its employees or elected officials if they are injured or get an occupational disease because of work. All farmers

who employ six or more people on twenty or more days in a calendar year must cover their workers under the law.

Voluntary Coverage

An employer who employs fewer than three employees may, nevertheless, become subject to the law in any of these three ways:

1. By filing with the Industrial Commission a written statement of election.
2. By employing three or more persons at any time without previously having filed a notice of non-election.
3. By securing a workmen's compensation policy.

Employees of Sub-Contractors or Loaned Employees

A contractor who is subject to the workmen's compensation law is liable for injuries to an employee of his subcontractor who is not subject. The purpose of this section is to prevent employers from relieving themselves of liability by doing business through individual contractors what they would otherwise have their own employees do.

Employees Who Are Not Protected Under the Law

Federal employees, railroad workers and certain other employees are not covered by the State law but have protection under the federal laws. Unemployed workers do not have protection under the law. Volunteer workers, such as members of a church serving a church supper, do not have protection under the law.

T. IF A "THIRD PARTY" IS THE CAUSE OF ACCIDENT, HE MAY BE SUED IN COURT

If a person is hurt by negligence of a "third party" (such as an outside contractor doing work in the plant) he may receive workmen's compensation and

also sue the "third party." He will receive at least one-third of the net amount recovered from the third party. All costs of collection, including attorney's fees, are taken out before division of proceeds is made. The insurance company or employer is then repaid the amount paid or to be paid as compensation, and if any balance remains that also is paid to the employee. Action against a third party is usually by joint action of the employer or his insurance company and the injured employee.

EXTENT OF PROTECTION UNDER WORKMEN'S COMPENSATION LAWS

	Compulsory Law	No Numerical Exemption	Farm Employment Covered	Full Coverage of Occ. Diseases	Rehabilitation Division Within W.C. Agency	Maintenance Benefits During Rehabilitation	Full Medical Care For Accidental Injuries	Full Medical Care For Occupational Diseases	W.C. LSB-1/66

STATE Comparison To Standards

YARDSTICK FOR WORKMEN'S COMPENSATION LAWS

Administrators of Workmen's Compensation Laws in the States and Provinces of the United States and Canada have agreed to the following goals or standards for benefits to persons injured on the job. Most of these are also the standards recommended by the U. S. Department of Labor and the AFL-CIO.

1. Compulsory Coverage. If the law permits either the employer or the employee to reject workmen's compensation coverage, it does not meet the accepted standards. The uncovered worker, left to his own resources in securing workmen's compensation benefits, is not apt to be as successful in securing adequate compensation for his injury. Generally, small employers lack the financial resources to protect the injured worker unless they are required to carry compensation insurance by law.

2. No Numerical Exemptions. Unless the law applies to all employers regardless of the number of employees, it falls short of protecting all who work for a living. All employers of one or more employees should be covered. Even when a compulsory law is adopted, provisions providing for exemptions of employers with small numbers of workers have circumvented the law in most states. The retention of numerical exemptions stand as a formidable obstacle against labor's efforts to make workmen's compensation an effective program.

3. Coverage of Agricultural Workers. Agriculture is one of the most hazardous kinds of employment. The objection that difficulties of administration require the exemption of farmers and small firms has been proven false by the states that now cover them. Experience has shown that there is no reason to exempt this hazardous area from coverage.

4. Full Coverage of Occupational Diseases. It should not make any difference whether a worker is injured by an accident or injured on his job by a hazard peculiar to the employment. Thirty states cover all occupational diseases. The remainder covered only "scheduled" diseases which means that the worker is protected only for those diseases specifically mentioned in the law. A broad schedule of diseases does not resolve the problem. Schedules of occupational disease tend to become obsolete. Periodic revision fails to keep pace with the rapid changes in work technology. The only sure way to protect the worker is to specify that all occupational diseases are included without enumerating them.

5. Rehabilitation Division Within the Workmen's Compensation Agency. The rehabilitation of an occupationally injured worker should be the special responsibility of the workmen's compensation agency. It is vitally important that the rehabilitation of an injured worker begin immediately and that medical and rehabilitation care be adequately supervised from its inception. The lack of prompt action and supervision can mean the difference between restoring a worker to his full, productive potential and his remaining a cripple for life.

6. Maintenance Benefits During Rehabilitation. One of the basic objectives of workmen's compensation is the restoration of an injured worker to his greatest potential. The injured worker who has suffered a severe wage loss frequently finds it financially impossible to undergo vocational and physical rehabilitation when it requires an additional outlay of funds. Even when full compensation benefits are paid to workers who undergo rehabilitation, such expenses as travel, maintenance away from home, tuition, equipment, etc. may make it impossible for the injured worker to undergo rehabilitation. Maintenance benefits are essential, for

unless rehabilitation begins soon after injury, full physical restoration may be prevented.

7.&8. Full Medical Benefits for Accidental Injury or Occupational Disease. It is unreasonable to attach either time or dollar limits to medical benefits. The injured worker should not have to bear a portion of the medical cost of his occupational injury or disease. Recovery and prompt restoration of an injured worker depends largely on the medical care he receives. Every worker should be entitled to complete care to speed his recovery, to encourage rehabilitation, and to reduce the chance of possible permanent injury.

9. Supervision of Medical Care. The purpose of the compensation system should be to restore the worker to maximum physical well being and to his job as soon as possible. Successful achievement of this objective requires that the administrative agency be given the responsibility by statute to supervise medical care in order to insure accuracy of diagnosis and proper treatment.

10. Free Choice of a Qualified Physician. There are several desirable goals in choosing a physician. The first is the confidential nature of the doctor-patient relationship and the desirability of the patient trusting the doctor. Free choice also eliminates the possibility of a doctor, who is employed or paid by an employer or insurance carrier, from letting this relationship influence his medical opinion. The second is the need to achieve the maximum standards of rehabilitation by permitting compensation administrators sufficient supervision of medical care to insure that medical services are adequate and that the physician freely chosen is qualified.

11. Broad type Coverage for Handicapped Persons Under a Second Injury Fund. Unless an adequate second injury fund is adopted, workmen's compensation handicaps the handicapped in obtaining employment. All but 4 states have special funds in the workmen's compensation program to insure that an employer who hires handicapped workers will not, in the event a handicapped employee is disabled, face higher workmen's compensation costs than he would if the employee had not been handicapped at the time of hire. Any additional liability resulting from the combined disability is paid from the second injury fund. Unfortunately, the great majority of these funds limit coverage to bodily loss or loss of use of a bodily member. Such laws do not provide protection for the vast majority of handicapped workers who suffer from such disabilities as epilepsy, polio, arthritis, heart disease, etc. A good second injury law should not disqualify any handicapped worker because of the type or cause of his disease.

12. The Time Limit for Serving Notice and Making Claim in Occupational Disease Cases Starts Running from the Time of the Worker's Knowledge or the Worker's Disability. Occupational disease frequently does not show up for many years after a worker leaves an employer. Thousands of workers are denied benefits under workmen's compensation because they fail to serve notice or make claim for compensation within the limited dates fixed by a workmen's compensation statute.

13. Waiting Period of Not More than 3 Days with Retroactive Benefits After Two Weeks or Less. A long waiting period forces the injured worker to bear a large portion of the financial burden of any injury. Most state laws provide than an employee will not be entitled to any compensation for the first week of disability until he has been disabled for 3 or 4 weeks. Since 75% of the temporary disability cases heal within 21 days, a large portion of injured workers will not be protected by this provision and will suffer a week's loss of pay without any form of compensation, and a small percentage replacement of total wage loss. A waiting period of three days with retroactive benefits within two weeks should be the maximum waiting period in any law.

14. Benefits Payable to the Widow Extend to Death or Remarriage and To The Children Until They Reach 18. The premise of workmen's compensation is to insure wage loss, not to determine a cash settlement for any single day or days. The family of a deceased worker is entitled to full economic protection.

15. Benefits for Permanent Total Disability Payable for Life or The Period of Disability. The injured worker who is permanently and totally disabled will normally not be able to participate in gainful employment for the rest of his life, and will undoubtedly require more assistance as he advances in age. The disability of a permanent and total injury does not end after a specified number of weeks. Neither should the benefits.

16. Double Benefits to Illegally Employed Minors. A reasonable assumption is that a minor will not have reached his full earning capacity at the time of injury. His compensation benefits will be at a lower amount than an older worker. This can work an extreme hardship on a young worker if the injury results in permanent total disability. Thus, it is only just to provide double benefits to minors injured while illegally employed. Provisions for double compensation also help to insure strict compliance with child-labor laws.

17. Maximum Cash Benefits in Your State Equal to at Least Two-Thirds of Your State's Average Weekly Wage in Covered Employment. The full value of the benefit provisions of most state workmen's compensation laws are denied injured workers by stated maximum amounts that an injured worker can receive. These maximum limitations originally were high enough that a large majority of injured workers could receive adequate benefits. There has been a lag between the normal rise in wages, the cost of living, and action by state legislatures to raise maximum benefit restrictions. For example, in 1940 only ten states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and only four of these less than 60 percent and none less than 50 percent.

18. Administration of the Workmen's Compensation Law by a State Agency. The administration of a workmen's compensation law should be placed in the hands of a department under a director who shall supervise all personnel necessary to assure that benefits intended under the law are fully and promptly provided the injured worker. Administration of a workmen's compensation law requires much effort in many complex areas such as medical care, rehabilitation, supervision of benefit payments, etc. Court administration is not adapted for these purposes.

19. Judicial Review Limited to Questions of Law. The purpose for the establishment of workmen's compensation laws was to take settlement claims as much as possible out of the courts and reduce litigation. One way to help reduce litigation is to give the administrative agency exclusive jurisdiction over questions of fact, with appeals to the courts limited to questions of law.

The above are minimum standards. The following pages show how the Workmen's Compensation Law of your state compares with these minimum standards.

School for Workers
University of Wisconsin

Points for a Local Union Workmen's Compensation Program

1. Every steward should investigate all injruies in his department. He should see that:
   a. Injury is reported to the company authorities, at once.
   b. Employee receives immediate medical attention.
   c. He (the Steward) makes a full record of the injury including name of the injured, address, date, time, description of the injury, and other details.

2. A committee of the local should be designated to carry the responsibility for workmen's compensation cases in the local -- either an existing committee or a new committee -- such as a Welfare Committee, Health & Safety Committee, Union Counseling Committee, Workmen's Compensation Committee, etc.

3. A copy of the Steward's Injury Report should go to the committee handling workmen's compensation cases.

4. The committee should investigate case at once to see that the injured member:
   a. Receives proper medical attention
   b. Receives all benefits immediately due him.
   c. Receives information about legal rights and instruction in procedure.

5. Member should be instructed to contact committee when company proposes a settlement or in six months.

6. Committee record of the case should be filed so that case will be checked again in six months and contact with member can again be made to see what progress is made on the case, so legal time limits do not expire.

7. At the time of final settlement member and the committee should get together so that offer can be reviewed in the light of legal rights of member and so that he has opportunity to obtain legal counsel, if necessary.

8. The Steward should also follow through on each case he has reported and see that either the committee is taking care of it or see that necessary assistance is available.

9. Committee should carry on an educational campaign in local as to member's rights and benefits under the Workmen's Compensation law using the membership meetings, publications, bulletins, and other means available. They should also thoroughly learn the law and its interpretation and follow proposed changes in the law and recommend improvements to their local and international unions (here specific example cases will be important).

Is Self-insurance permissible (~~[illegible]~~ to many outside in [illegible])

b) Until 1954, fissionable materials covered by govt only.

Beginning of private use

c) A wider general concern but lessening of training of people using materials —

d) Lowering of standards of permissible dosage

e) Originally AEC set up own insurance — and insured contractors

Partly due to original secrecy

Now being thrown onto state W.C.

What if safety "film badges" are put to extra exposure by worker to run up count, & vice v. where may lay

What is the injury ?

Can we ever do anything about genetic (next, or 2 generations)

Sterility

What is appropriate benefits — No loss of pay or loss of pay by transfer to non-radiation job.

Some of Unknowns

1) Any body tolerance at all

That any radiation may be harmful

2) Seriousness of cumulative exposure

3) How establish liability

4) Early death —

— determining cause

5) Hazard pay (But then does he get W.C)

6) If outside exposures a part of story

7)

Why Concerned

Problems of older employer in 2nd & 3rd employment under radiation — last employer generally liable, so will they fire older men.

Record 1944 — present AEC

less than 15 lost time accidents

6 deaths

Govt. protections excellent — no spacing

a) of expense for Safety — but now put, competition

Sharing of Costs

Workmen's Compensation

Wisconsin

Compulsory — States split about 50-50

Numerical exemption — 3

Agricultural exemptions — Selected coverage

Occupational Disease Coverage — full
by definition of "injury" as "physical or mental harm to an employee caused by accident or disease."

Ionizing Radiation Coverage — full

Accidental injury — full
Med. Benefits for Occupational Disease — full

Time limit for filing an Occupational Disease claim
2 yrs from date that worker knew or "ought to have" known of his disability & its relation to employment
Subsequent injury fund — Broad Coverage
Maintenance benefits during rehabilitation — Provided
Limits death payments

Workmens Compensation

Benefits for Permanent Total Disability
Benefits for life or period of disability.

Max. Weekly Benefit 60 – 66⅔% (61.54%)
of average weekly wage

Workmens Compensation
Dif from Unemployment

Remember disease coverage -
What does have Provided
Full hospital care
as long as needed - black lung

URWA
9 out of ten -
just started program
are being taken in

Many Benefits
Temp. totally disabled
Since May 16th 57 $54/week each month goes one off

On basis of 6 day week -
9/9 - each day off

Permanent Disable
(Full care during healing)
Schedule - starting at shoulder joint
Weekly values -
Complete loss
500 weeks
6 weeks - little finger
Easy cases above
Mangled arm - Doc. asses a disability value
20%, etc. of disability -

Who pays — employer

How long have to have worked
no time — except work while injured

* (No benefits for under 3 days) — why not bargain

But after 10th day go back and pick up first 3 days

But treatment or loss of function
Compensated for treatment or loss of function even though not time lost from work

How long before make a claim

2 years after injury if no treatment or claim

6 yrs if treatment, but no loss of time from accident

If benefits paid — case is open for six years from last benefit payment —

4 Date of accident fixes the benefit rate for all time —

Administration

* Not automatic

[Personnel adjusters come out to see if they can avoid paying

Major areas of argument

* Is man's trouble due to what he says (or did) happened to him on job —

Example After back injury (fall down stairs) "he's cured" subsequent troubles "arthritis" —

* "Blabbing Too Much"

Some of obstacles come from individuals "Blabbing too much in plant — to nurse Go in for heat treatment — Complain sore back — maybe goof off — But then comes injury and Co. doesn't recognize — Dr. may agree it was injury

* But then at hearing — questioned
Ever hurt back before
No previous treatment
Dr. Suggests
then —
Insurance Co. puts on the Nurse
with past hospital record —

General Advice

If have problem go to first aid or hospital — talk only about that injury
Don't volunteer information about prior injury) etc.

Nurse & Writing

Make sure if nurse ~~that~~ it writes something that it is what you said —
You may not have it come up until 2 years later — you may well have forgotten by then —
If need be establish taking in a witness — steward or Counselor — "to make the nurse honest" —

Witness

* Law provides choice of Dr.
Dr. - Choice Entitled to see their panel of physicians not just "Come into see the Dr."
You can select your own man from panel.

If he picks a the plant Dr. — then decide you have more serious problem —
you get 2nd choice —
Go to Co. ask for panel — and choose — if they fail to give choice, then you can go to your own choice —

(4) Witness on Dr. Choice Request

When making a request take a witness —
If there is a dispute, you may get stuck personally —

Blue Cross will not cover if it is your mistake if it is an industrial case.

Blue Cross will not cover your mistake

"SRA Clause" — in contracts
Non-industrial — injury or illness away
transplant —
No permanent disability coverage
Temporary benefits only.

Covered while on the job or on the premises — even helping
Be sure to report — Don't be the tough guy

(Otto, George
Nelson appointed to Ind. Com — not approved)
Currently examiner for Ind. Com —
Backed by Gillick)

Back cases —
Chiropractors —

applies here, too.

Foot cases
Chiropodists
Otto as examiner intervened to get
Insurance Co. approval after the fact
& after "cure" — Ins. Co. didn't
want to recognize —
Should make arrangements <u>before</u> you
go — otherwise you may just run
up the bill —

If need special Treatment

Permanent Partial Disability Schedule

102.52 In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified, at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11:

(1) The loss of an arm at the shoulder, 500 weeks;
(2) The loss of an arm at the elbow, 450 weeks;
(3) The loss of a hand, 400 weeks;
(4) The loss of a palm where the thumb remains, 275 weeks;
(5) The loss of a thumb and the metacarpal bone thereof, 125 weeks;
(6) The loss of a thumb at the proximal joint, 100 weeks;
(7) The loss of a thumb at the distal joint, 40 weeks;
(8) The loss of all fingers on one hand at their proximal joints; 225 weeks;
(9) Losses of fingers on each hand as follows:
  (a) An index finger and the metacarpal bone thereof, 60 weeks;
  (b) An index finger at the proximal joint, 50 weeks;
  (c) An index finger at the second joint, 30 weeks;
  (d) An index finger at the distal joint, 12 weeks;
  (e) A middle finger and the metacarpal bone thereof, 45 weeks;
  (f) A middle finger at the proximal joint, 35 weeks;
  (g) A middle finger at the second joint, 20 weeks;
  (h) A middle finger at the distal joint, 8 weeks;
  (i) A ring finger and the metacarpal bone thereof, 26 weeks;
  (j) A ring finger at the proximal joint, 20 weeks;
  (k) A ring finger at the second joint, 15 weeks;
  (l) A ring finger at the distal joint, 6 weeks;
  (m) A little finger and the metacarpal bone thereof, 28 weeks;
  (n) A little finger at the proximal joint, 22 weeks;
  (o) A little finger at the second joint, 16 weeks;
  (p) A little finger at the distal joint, 6 weeks;
(10) The loss of a leg at the hip joint, 500 weeks;
(11) The loss of a leg at the knee, 425 weeks;
(12) The loss of a foot at the ankle, 250 weeks;
(13) The loss of the great toe with the metatarsal bone thereof, 83-1/3 weeks;
(14) Losses of toes on each foot as follows:
  (a) A great toe at the proximal joint, 25 weeks;
  (b) A great toe at the distal joint, 12 weeks;
  (c) The second toe with the metatarsal bone thereof, 25 weeks;
  (d) The second toe at the proximal joint, 8 weeks;
  (e) The second toe at the second joint, 6 weeks;
  (f) The second toe at the distal joint, 4 weeks;
  (g) The third, fourth or little toe with the metatarsal bone thereof, 20 weeks;
  (h) The third, fourth or little toe at the proximal joint, 6 weeks;
  (i) The third, fourth or little toe at the second or distal joint, 4 weeks;
(15) The loss of an eye by enucleation or evisceration, 275 weeks;
(16) Total impairment of one eye for industrial use, 250 weeks;
(17) Total deafness from accident or sudden trauma, 333-1/3 weeks;
(18) Total deafness of one ear from accident or sudden trauma, 50 weeks.

PROJECT PROPOSAL: Injury Experience of Various Selected Wisconsin Occupations

The School for Workers expects to complete a report of settled Workmen's Compensation cases in Wisconsin covering a period from 1950 through 1962. The report, which is based upon statistics released annually by the Department of Statistics of the State Industrial Commission, is intended to provide workers and their representatives with a knowledge of injury statistics related to specific occupations they deal with. Hopefully, the report will allow workers and their unions to set up effective safety programs and bargain with their employers in a more effective manner. The report should also be of interest to Wisconsin employers, insurance carriers and possibly other governmental agencies.

Two additional reports are proposed, as follows:

1. Occupational injuries, reported by industry - This report is intended to overcome a shortcoming of the reports issued by the Department of Statistics; that is, that some occupations are found in so many divergent industries that gross statistics have little meaning in specific cases. The report would include statistics on number of deaths, permanent total disabilities, permanent partial disabilities, temporary disabilities, compensated time loss and total indemnities paid for each of approximately 200 selected occupations found in a variety of Wisconsin industries. The data would be taken from IBM cards prepared by the Statistics Department of the Industrial Commission, covering years 1950 through 1962.

2. Detail on injuries, reported by occupation - This report would be intended to provide workers with an understanding of the source, kind and nature of injuries incurred on specific occupations, as well as the part of body involved, the accident type and the amount of compensated lost time involved in specific cases. The report would be based on a random sampling of injury data between the years 1950 and 1962 for approximately 300 to 400 common Wisconsin occupations. The data would also be drawn from IBM cards prepared by the Statistics Department.

The Statistics Department of the Wisconsin Industrial Commission expressed considerable interest in the two projects described, but do not have sufficient staff or funds to undertake the project in the foreseeable future. They are willing, however, to allow us to borrow their IBM cards for reproduction if we are able to undertake the project.

The project, if approved, would require some faculty time, the services of a research assistant and the use of the University's 1604 computer, the 519 reproducer and the 101 sorter and counter. Since there are approximately 60,000 IBM cards involved, it will be necessary to purchase file space, since there is currently none available on campus. The Industrial Commission is willing to loan us a filing cabinet for a couple of months if we wish to go ahead with the project (since they are going to move to the new State Office Building in January, the IBM cards should be borrowed and reproduced this month, or else the project would have to wait until March or April).

The School for Workers will furnish faculty and research assistant time if the project is approved. Additional help in programming and running the computer and basic machines would be necessary; hopefully, the technical aspects of the project could be handled by Mr. Rathee, the Extension Division's statistician. The project would also require sufficient funds to include purchase of machine time and a file cabinet to store the cards.

Since there is a large amount of useful information stored in these cards, it is possible that other departments in Extension Division might be interested in projects involving Workmen's Compensation statistics.

George Hagglund
December 12, 1963

WORKMEN'S COMPENSATION

William Kuhl, Instructor, School for Workers

Background of Workmen's Compensation

The Wisconsin Workmen's Compensation Act took effect on May 3, 1911. Prior to its enactment a worker injured in the course of his employment could obtain indemnity for the injury and wage loss suffered only through instituting a successful damage suit against his employer. The injured worker's claim for damages was invariably adjudicated in accordance with the common law of employer's liability. This meant that he would collect damages from his employer only if he could prove to the satisfaction of the court that his employer had been at fault - that his negligence was the cause for the injury. The employer in his denial of negligence could use any of the following common law defenses: (1) contributory negligence - the worker could not recover damages if he himself had been negligent in any degree, regardless of the extent of the employer's negligence; (2) the fellow-servant doctrine - the worker could not recover if it could be shown that the injury had resulted from the negligence of a fellow worker; (3) assumption of risk - the injured worker could not recover if injury was due to an inherent hazard of the job of which he had, or should have had, advance knowledge. The result was that it was extremely difficult, time-consuming, and costly for an injured worker to recover by court action indemnity for his injury and wage loss suffered. While efforts were made in the latter years of the nineteenth century to restrict the application of these "common law employer liability" defenses, they proved to be of little value to the injured worker who sought to institute successful court proceedings. A new approach to meeting the cost of industrial injuries was necessary.

Workmen's compensation, like unemployment compensation and old age and survivor's insurance, is a type of social insurance. It seeks to insure that workers injured in the course of their employment receive defined compensatory benefits promptly, regardless of fault, and with a minimum of legal formality. In substituting a statutory indemnity procedure for the filing of a damage suit by the injured worker, it fixed the liability for an industrial injury on the employer without regard to fault. The basis for the common law doctrine of employer's liability was thus disregarded. Workmen's compensation is a declaration that injured workers shall receive predetermined indemnity for their injury and wage loss suffered as a matter of right. Compensation shall not be denied a worker injured in the course of his employment. While workmen's compensation legislation directs that the cost of industrial injuries shall be a liability of employers, it recognizes that such costs should be borne by society as a whole. This transfer of liability occurs when the employer in insuring his liability includes this cost in his over-all costs of production. Society in the role of consumers bears the cost of industrial injuries under workmen's compensation. Workmen's compensation is thus that type of social insurance which seeks to provide workers injured in the course of their employment with a minimum of economic protection.

1. What is the purpose of the Wisconsin Workmen's Compensation Act?

TO PROVIDE MEDICAL AND MONETARY BENEFITS TO ELIGIBLE EMPLOYEES WHO SUSTAIN AN INJURY ARISING OUT OF AND IN THE COURSE OF THEIR EMPLOYMENT, AND DEATH BENEFITS TO THEIR DEPENDENTS.

2. Who is covered by the Wisconsin Workmen's Compensation Act?

ALL EMPLOYEES WHO WORK FOR AN ESTABLISHED UNIT OF GOVERNMENT, A "PERSON, FIRM OR CORPORATION WHICH USUALLY EMPLOYS THREE OR MORE EMPLOYEES," OR A VOLUNTARILY COVERED EMPLOYER EXCEPT FARM LABORERS AND DOMESTIC SERVANTS.

Employee is defined to include:

"Every person in the service of another under any contract of hire, express or implied, all helpers and assistants of employes, whether paid by the employer or employe, if employed with the knowledge, actual or constructive, of the employer, including minors...but not including (a) farm laborers, (b) domestic servants..."

102.07 (4)

Employer is defined to include:

"(1) The state, each county, city, town, village, school district, sewer district, drainage district and other public or quasi-public corporations...

"(2) Every person, firm and private corporation ...who usually employs three or more employes...The provisions of this subsection shall not apply to farmers or to farm labor...

"(3) Every person, firm, and private corporation...to whom subsection (2) is not applicable, who has...elected to become subject to the provisions of this chapter..."

102.04

3. What conditions of liability must exist before an employee is eligible to receive workmen's compensation?

1) HE MUST HAVE SUSTAINED "AN INJURY"

"Injury" is defined as "mental or physical harm to an employe caused by accident or disease, and also damage to or destruction of artificial members, dental appliances, teeth and eyeglasses, but, in the case of eyeglasses, only if such damage or destruction resulted from accident which also caused personal injury entitling the employe to compensation therefor..."

102.01 (2)

2) HE AND HIS EMPLOYER, AT THE TIME OF THE INJURY, MUST HAVE BEEN SUBJECT TO THE COMPENSATION ACT
102.03 (1)(b)

3) HE, AT THE TIME OF INJURY, MUST HAVE BEEN "PERFORMING SERVICE GROWING OUT OF AND INCIDENTAL TO HIS EMPLOYMENT" (injured during his employment)
102.03 (1)(c)

4) THE INJURY MUST NOT HAVE BEEN "INTENTIONALLY SELF-INFLICTED"
102.03 (1)(d)

5) THE ACCIDENT OR DISEASE CAUSING INJURY MUST HAVE ARISEN "OUT OF HIS EMPLOYMENT" (injured because of his employment)
102.03 (1)(e)

4. What conditions will disqualify an injured employee from receiving workmen's compensation?

1) FAILURE TO NOTIFY THE EMPLOYER WITHIN 30 DAYS OF THE OCCURRENCE OF THE INJURY

"No claim for compensation shall be maintained unless, within 30 days after the occurrence of injury or within 30 days after the employe knew or ought to have known the nature of his disability and its relation to his employment, actual notice was received by the employer or by an officer, manager or designated representative of an employer." However, "absence of notice shall not bar recovery if it is found that the employer was not misled thereby."
102.12

2) FAILURE TO FILE FOR COMPENSATION WITHIN TWO YEARS FROM THE DATE OF INJURY OR DEATH (SIX YEARS IF ANY COMPENSATION WAS PAID)

"Regardless of whether notice was received, if no payment of compensation (other than medical treatment or burial expense) is made, and no application is filed with the commission within 2 years from the date of the injury or death, or from the date the employe or his dependent knew or ought to have known the nature of his disability and its relation to the employment, the right to compensation therefor shall be barred, except that the right to compensation shall not be barred if the employer knew or should have known, within the 2-year period, that the employe had sustained the injury on which claim is based."
102.12

"The right of an employe...or dependent to proceed under this section shall not extend beyond 6 years from the date of the injury or death or from the date that compensation (other than medical treatment or burial expenses) was last paid, (or would have been last payable if no advancement were made), whichever date is latest."

102.17 (4)

3) FAILURE TO SUBMIT TO A "REASONABLE EXAMINATION BY A PHYSICIAN PROVIDED" BY THE EMPLOYER

"Whenever compensation is claimed by any employe, he shall, upon the written request of his employer, submit to reasonable examination by a physician, provided and paid for by the employer, and shall likewise submit to examination from time to time by any physician selected by..(the Industrial Commission)... The employe shall be entitled to have a physician, provided by himself, present at any such examination. So long as the employe, after such written request of the employer, shall refuse to submit to such examination, or shall in any way obstruct the same, his right to begin or maintain any proceeding for the collection of compensation shall be suspended; and if he shall refuse to submit to such examination after direction by the commission...or shall in any way obstruct the same, his right to the weekly indemnity which shall accrue and become payable during the period of such refusal or obstruction, shall be barred."

102.13 (1)

6. What benefits does the Workmen's Compensation Act provide for injured employees?

1) THAT MEDICAL CARE WHICH IS "REASONABLY REQUIRED TO CURE AND RELIEVE...THE EFFECTS OF THE INJURY" (full medical benefits)

"The employer shall supply such medical, surgical and hospital treatment, medicines, medical and surgical supplies, crutches, artificial members, appliances, and training in the use of artificial members and appliances...as may be reasonably required to cure and relieve from the effects of the injury, and to attain efficient use of artificial members and appliances, and in case of his neglect or refusal reasonably to do so, or in emergency until it is practicable for the employe to give notice of injury, the employer shall be liable for the reasonable expense incurred by or on behalf of the employe

in providing the same. The employer shall also be liable for reasonable expense incurred by the employe for necessary treatment to cure and relieve him from the effects of occupational disease prior to the time that the employe knew or should have known the nature of his disability and its relationship to employment..."
102.42 (1)

"The employe shall have the right to make choice of his attending physician from a panel of physicians to be named by the employer...(The panel shall consist of) a reasonable number of competent and impartial physicians...Nothing contained in this section shall limit the right of the employe to make a second choice of physician from the panel of physicians named by the employer."
102.42 (2)

"No compensation shall be payable for the death or disability of an employe, if his death be caused, or insofar as his disability may be aggravated, caused or continued (a) by an unreasonable refusal or neglect to submit to or follow any competent and reasonable medical or surgical treatment, (b) or, in the case of tuberculosis, by his refusal or neglect to submit to or follow hospital or sanatorium treatment when found by the commission to be necessary. The right to compensation accruing during a period of refusal or neglect under (b) shall be barred, irrespective of whether disability was aggravated, caused or continued thereby."
102.42 (7)

2) MONETARY COMPENSATION IF THE INJURY "CAUSES DISABILITY" (monetary benefit for lost wages)

"If the injury causes disability, an indemnity shall be due as wages...after the employe leaves work as the result of the injury, and shall be payable weekly thereafter, during such disability."
102.43

A) WAITING PERIOD OF THREE CALENDAR DAYS UNLESS DISABILITY CONTINUES LONGER THAN TEN CALENDAR DAYS

"An indemnity shall be due as wages commencing with the fourth calendar day, exclusive of Sundays only, excepting where such employees work on Sunday, after the employe leaves work as the result of the injury...If the disability shall exist after ten calendar days from the date the employe leaves work as a result of the injury and

only if it so exist indemnity shall also be due and payable for the first three calendar days, exclusive of Sundays only, excepting where such employes work on Sunday."
102.43

B) AMOUNT OF WEEKLY INDEMNITY (amount of monetary compensation)

Total Disability

70% of the injured employe's average weekly earnings with a maximum weekly indemnity of $49.00 and a minimum indemnity of $8.75 for temporary total disability and $14 for permanent total disability.

"If the injury causes total disability, seventy per cent of the average weekly earnings during such total disability."
102.43 (1)

"The average weekly earnings for temporary disability shall be taken at not less than $12.50 nor more than $70; for permanent total disability or death at not less than $20 nor more than $70..."
102.11 (1)

"Daily earnings shall mean the daily earnings of the employe at the time of the injury in the employment in which he was then engaged. In determining daily earnings...overtime shall not be considered...The average weekly earnings shall be arrived at by multiplying the daily earnings by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury."
102.11 (1)(a)

"Average weekly earnings shall in no case be less than actual average earnings of the employe for the calendar weeks during the year before his injury within which the employe has been employed in the business, in the kind of employment and for the employer for whom he worked when injured..."
102.11 (1)(d)

"Average weekly earnings shall in no case be less than 30 times the normal hourly earnings, at the time of injury..."
102.11 (1)(f)

Permanent Partial Disability

70% of the injured employe's average weekly earnings with a maximum weekly indemnity of $37.00 and a minimum indemnity of $14.00

"Permanent partial disability not covered by the provisions of sections 102.52 to 102.56...shall be payable at the rate of 70 per cent of the average weekly earnings of the employe to be computed as provided in section 102.11."

102.44 (3)

"In cases included in the following schedule of permanent partial disabilities indemnity shall be paid... at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11."

102.52

"The average weekly earnings...for permanent partial disability (shall be taken) at not less than $20 nor more than $52.86."

102.11 (1)

Partial Disability

That per cent of the weekly indemnity rate for total disability which is the relationship of the actual wage loss of the injured employee to his average weekly wage.

"If the injury causes partial disability, during the partial disability, such proportion of the weekly indemnity rate for total disability as the actual wage loss of the injured employe bears to his average weekly wage at the time of his injury."

102.43 (2)

"If the disability period involves a fractional week, indemnity shall be paid for each day of such week, except Sundays only, at the rate of one-sixth of the weekly indemnity."

102.43 (4)

C) DURATION OF WEEKLY INDEMNITY (length of monetary compensation)

Temporary Disability

"If the injury causes total disability...during such total disability."

102.43 (1)

Permanent Total Disability

"In the case of permanent total disability aggregate indemnity shall be weekly indemnity for the period that he may live."

102.44 (2)

Permanent Partial Disability

a) Schedule of Permanent Partial Disabilities

Healing period plus the statutory specified number of weeks for the particular disability. The number of weeks is reduced if the injured employe is over 50.

"In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified..."

102.52

"In cases where the injured employe is above 50 years of age when injured the periods for which indemnity shall be payable...shall be reduced from those specified in section 102.52 by 2½ per cent for each year that the age of such employe exceeds 50, with no reduction in excess of 50 per cent."

102.53 (2)

b) Non-Scheduled Partial Disabilities

Per cent of permanent total disability as a per cent of 1000 weeks for employes 50 years of age or less. The number of weeks is reduced if the injured employe is over 50.

"For permanent partial disability not covered by the (law's schedule) the aggregate number of weeks of indemnity shall bear such relation to the number of weeks set out in paragraphs (a) and (b) as the nature of the injury bears to one causing permanent total disability...Such weekly indemnity shall be in addition to compensation for healing period and shall be for the period that he may live, not to exceed, however, these named limitations, to-wit:

(a) One thousand weeks for all persons 50 years of age or less.
(b) For each successive yearly age group, beginning with 51 years, the maximum

limitation shall be reduced by 2½ per cent per year, with no reduction in excess of 50 per cent."
102.44 (3)

D) REHABILITATION BENEFITS

"Temporary disability, during which compensation shall be payable for loss of earnings, shall include such period as may be reasonably required for training in the use of artificial members and appliances, and shall include such period as the employe may be receiving (vocational) instruction...Temporary disability on account of receiving instruction of the latter nature, and not otherwise resulting from the injury, shall not be in excess of 40 weeks."
102.43 (5)

E) DEATH BENEFITS FOR THE DEPENDENTS OF A DECEASED EMPLOYE

1) A person wholly dependent upon the deceased employe for support may receive a maximum death benefit of $14,000. The minimum death benefit payable is $4,000.

"Where death proximately results from the injury and the deceased leaves a person wholly dependent upon him for support, the death benefit shall equal four times his average annual earnings..."
102.46

"Death benefit, other than burial expenses, except otherwise provided, shall be paid in weekly installments corresponding in amount to fifty per cent of the weekly earnings of the employe, unless otherwise ordered by the commission."
102.48 (3)

2) Children of the deceased employe may receive a maximum death benefit of $3,733.33.

"Where the beneficiary...is the wife or husband of the deceased employe and is wholly dependent for support, an additional death benefit shall be paid... for each child by their marriage living at the time of the death of the employe, and who is likewise wholly dependent upon him for support. Such additional benefit shall be computed from the date of the death of the employe as follows: For the child one year of age or under...a sum equal to 1-1/15 times the average annual earnings of the deceased employe. For children in each successive yearly age group

the amount shall be reduced by one-sixteenth part of such sum, with no allowance for any child over 16 years of age at the death of the employe..."
102.49 (1)

3) Burial expenses with a maximum of $350.

"In all cases where death of an employe proximately results from the injury the employer or insurer shall pay the reasonable expense for burial, not exceeding $350."
102.50

F) INCREASED MONETARY COMPENSATION

1) Where the cause of injury is an employer violation of statutory safety regulations, compensation shall be increased by 15%.

"Where injury is caused by the failure of the employer to comply with any statute or any lawful order of the commission, compensation and death benefits as provided in this chapter shall be increased 15 per cent. Failure of an employer reasonably to enforce compliance by employes with such statute or order of the commission shall constitute failure by the employer to comply with such statute or order."
102.57

2) "When the injury is sustained by a minor illegally employed, compensation and death benefits shall be as follows:

a) "Double the amount otherwise recoverable, if the injured employe is a minor of permit age, and at the time of the injury is employed...without a written permit..."
102.60 (1)

b) Treble the amount otherwise recoverable where:

"The injured employe is a minor of permit age, and at the time of the injury is employed... without a permit in any place of employment ...for which the commission...has adopted a written resolution providing that permits shall not be issued."
102.60 (2)

"The injured employe is a minor of permit age, or over, and at the time of the injury is employed...at prohibited employment."
102.60 (3)

"The injured employe is a minor under permit age and illegally employed."
102.60

D) DECREASED MONETARY COMPENSATION

Where the injured employe wilfully failed to obey reasonable safety orders or was intoxicated, his compensation shall be reduced 15%.

"Where injury is caused by the wilful failure of the employe to use safety devices where provided in accordance with any statute or lawful order of the commission and adequately maintained, and their use is reasonably enforced, by the employer, or where injury results from the employe's wilful failure to obey any reasonable rule adopted by the employer for the safety of the employe and of which the employe has notice, or where injury results from the intoxication of the employe, the compensation and death benefit provided herein shall be reduced 15 per cent."
102.58

6. How is a disputed claim to workmen's compensation benefits adjudicated?

1) EMPLOYEE FILES A CLAIM

The injured employe must file with the Industrial Commission an application in writing stating the general nature of his claim.

2) PUBLIC HEARING ON THE CLAIM TO ASCERTAIN THE FACTS

The Industrial Commission shall conduct a public hearing on the application for claim of compensation within "40 days after the filing of such application." The hearing, whose purpose is to permit a determination of the "injury" facts, is conducted by a workmen's compensation examiner.

3) ISSUANCE OF AN ORDER IN REGARD TO THE CLAIM

The examiner after final hearing shall make "findings upon all the facts involved in the controversy," and shall issue an order "which shall state (a) determination as to the rights of the parties." The Industrial Commission may set aside, modify or change this order at any time within twenty days from the date thereof if it shall discover any mistake therein.

4) APPRAISAL OF THE ORDER

"Any party in interest who is dissatisfied with the...order ...may file a written petition with the industrial commission as a commission to review the findings or order...If no petition is filed within twenty days from the date that a copy of the...order...was mailed to the last known address of the parties in interest, such...order shall be considered the...order of the industrial commission as a body..."
102.18 (2)(3)

5) INDUSTRIAL COMMISSION REVIEW OF THE ORDER

"Within ten days after the filing of such petition with the commission the commission shall either affirm, reverse, set aside or modify such...order in whole or in part, or direct the taking of additional testimony. Such action shall be based on a review of the evidence submitted."
102.18 (3)

"The findings of fact made by the commission...shall...be conclusive; and the order...shall be subject to review only in the manner and upon the grounds following..."
102.23 (1)

6) CIRCUIT COURT REVIEW OF THE COMMISSION'S ORDER

"Within thirty days from the date of an order...made by the commission as a body...any party aggrieved thereby may commence, in the Circuit Court for Dane County, an action against the commission for the review of such order..."
102.23 (1)

"The court may confirm or set aside such order or award..."
102.23 (1)

7) SUPREME COURT REVIEW OF THE CIRCUIT COURT'S DECISION

The "commision, or any party aggrieved by a judgment entered upon the review of any order or award, may appeal therefrom within thirty days from the date of service by either party upon the other of notice of entry of judgment...All such appeals shall be placed on the calendar of the supreme court..."
102.25 (1)

Permanent Partial Disability Schedule

102.52 In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified, at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11:

(1) The loss of an arm at the shoulder, 500 weeks;
(2) The loss of an arm at the elbow, 450 weeks;
(3) The loss of a hand, 400 weeks;
(4) The loss of a palm where the thumb remains, 275 weeks;
(5) The loss of a thumb and the metacarpal bone thereof, 125 weeks;
(6) The loss of a thumb at the proximal joint, 100 weeks;
(7) The loss of a thumb at the distal joint, 40 weeks;
(8) The loss of all fingers on one hand at their proximal joints; 225 weeks;
(9) Losses of fingers on each hand as follows:
  (a) An index finger and the metacarpal bone thereof, 60 weeks;
  (b) An index finger at the proximal joint, 50 weeks;
  (c) An index finger at the second joint, 30 weeks;
  (d) An index finger at the distal joint, 12 weeks;
  (e) A middle finger and the metacarpal bone thereof, 45 weeks;
  (f) A middle finger at the proximal joint, 35 weeks;
  (g) A middle finger at the second joint, 20 weeks;
  (h) A middle finger at the distal joint, 8 weeks;
  (i) A ring finger and the metacarpal bone thereof, 26 weeks;
  (j) A ring finger at the proximal joint, 20 weeks;
  (k) A ring finger at the second joint, 15 weeks;
  (l) A ring finger at the distal joint, 6 weeks;
  (m) A little finger and the metacarpal bone thereof, 28 weeks;
  (n) A little finger at the proximal joint, 22 weeks;
  (o) A little finger at the second joint, 16 weeks;
  (p) A little finger at the distal joint, 6 weeks;
(10) The loss of a leg at the hip joint, 500 weeks;
(11) The loss of a leg at the knee, 425 weeks;
(12) The loss of a foot at the ankle, 250 weeks;
(13) The loss of the great toe with the metatarsal bone thereof, 83-1/3 weeks;
(14) Losses of toes on each foot as follows:
  (a) A great toe at the proximal joint, 25 weeks;
  (b) A great toe at the distal joint, 12 weeks;
  (c) The second toe with the metatarsal bone thereof, 25 weeks;
  (d) The second toe at the proximal joint, 8 weeks;
  (e) The second toe at the second joint, 6 weeks;
  (f) The second toe at the distal joint, 4 weeks;
  (g) The third, fourth or little toe with the metatarsal bone thereof, 20 weeks;
  (h) The third, fourth or little toe at the proximal joint, 6 weeks;
  (i) The third, fourth or little toe at the second or distal joint, 4 weeks;
(15) The loss of an eye by enucleation or evisceration, 275 weeks;
(16) Total impairment of one eye for industrial use, 250 weeks;
(17) Total deafness from accident or sudden trauma, 333-1/3 weeks;
(18) Total deafness of one ear from accident or sudden trauma, 50 weeks.

"WORKMEN'S COMPENSATION"

by Leonard S. Zubrensky, Esq.

I

HISTORY OF THE ACT

1838 -- One year after Lord Abinger announced fellow servant rule, Prussia enacted a law making railroads liable to employees for accidents from all causes.

1854 -- Prussia required employers in certain industries to contribute one half of sickness insurance premiums.

1884 -- Germany adopted first modern compensation system.

1897 -- England adopted its act.

German system was more comprehensive than U.S. (includes sickness) and employees contributed. British system similar to German.

U. S. has employer contribution only and U.S. has less comprehensive.

In 1902 Maryland passed a narrow cooperative accident fund for miners held unconstitutional in lower court decision.

Miners act passed in Montana 1909 and hazardous employment act New York 1910. Both held unconstitutional for taking property without due process under state and federal constitution. (liability without fault)

Wisconsin Act passed 1911, 1st state act to go into effect but not 1st state act passed.

1917 -- U.S. Supreme court held compulsory workmen's compensation acts constitutional.

Last State to adopt act Mississippi 1949.

Estimated that in 1960, 78.2% of all employees covered by compensation acts.

Exclusions are employers with less than three employees and farmers with less than six employees.

All employers three or more automatically covered but can elect to withdraw and be subject to suit for damages in state court.

All common law defenses abrogated assumption of risk, contributory negligence and fellow servant rule. Negligence need not be shown on behalf of employer or employer's employee.

II

ARISING OUT OF AND IN THE COURSE OF EMPLOYMENT

Unexplained accidents

Some states adopt the doctrine that unexplained fall cases are compensable. Wisconsin does not.

If cause of the fall is idiopathic (personal disease or weakness) compensation usually denied unless the employment makes a contribution to ultimate injury, i.e., claimant's job placing him on a height.

Unexplained fall Wisconsin not compensible Nielsen v. Industrial Commission 14 Wis 2nd 112 (1961) where chambermaid fell while returning to hotel from hotel laundry where she had eaten lunch. She could not explain why or how she fell.

However, where can be linked to positional risk theory - compensation awarded.

Claimant fell from platform two feet high and court awarded compensation.

Milwaukee Electric Ry & Light Co. v. Industrial Commission 212 Wis 227 (1933)

Unexplained death cases not compensible without proof that it was the result of employee's work or environment. Tewes v. Industrial Commission 194 Wis 489 (1927) Rick v. Industrial Commission 266 Wis 260 (1954)

When employee found dead under circumstances indicating that death took place within time and space limits of the employment, in absence of any evidence of what caused death, most courts will indulge a presumption or influence that the death arose out of employment, Larson's Workmen's Compensation Law (10.32) Wisconsin follows minority.

Where decedent had heart attack and no exertion shown - majority deny compensation.

(Not unexplained death - idiopathic instead)

Some courts make award even where there is simple unwitnessed heart attack. Priester v. Bynum 244 Miss 185 141 S. (2d) 246 142 S. (2d) 30 (1962).

There is a presumption against suicide.

III

ASSAULTS

Assaults are generally considered to be compensatory even where arising out of dispute between employees.

Exception is the aggressor defense.

Wisconsin holds minority view that initiation of the fight by claimant is alone enough to deprive him of benefits or of having claim fall into category of"arising out of employment". Vollmer v. City of Milwaukee, 254 Wis 162 (1948)

Three lines of reasoning:

A. Contrary to justice and law to compensate aggressor.
B. Fight started by aggressor arises out of own act of aggression and therefore, not out of employment.
C. By initiating hostilities, employee takes self out of course of employment.

IV

Pre-existing disease or infirmity does not disqualify a claim if the employment aggravated, accelerated or combined with the disease or infirmity to produce the death or disability for which compensation is sought. The employer takes the employee as he finds him.

> "Kroger Grocery & Baking Co. v. Industrial Comm'n, 239 Wis., 455, 1 N.W. 2d 802 (1942); M. & M. Realty Co. v. Industrial Comm'n, 267 Wis. 52, 64 N.W. 2d 413 (1954) (preexisting back weakness from prior injuries did not bar award for back injury); Chequamegon Forest Prod., Inc. v. Industrial Comm'n, 7 Wis. 2d 487, 96 N.W. 2d 706, (1959) (award which attributed 7½% permanent partial disability to a fall, as an estimate of the extent to which a preexisting osteoarthritic condition was aggravated, affirmed); Brown v. Industrial Comm'n, 9 Wis.2d 555, 101 N.W. 2d 788 (1960) (exertions and bending involved in performing the usual duties of a bricklayer were sufficient to herniate a previously diseased intervertebral disc." Larson's § 12.20

> "Wisconsin: City of Seymour v. Industrial Comm'n, 25 Wis. 2d 482, 131 N.W. 2d 323 (1964). Claimant's fall aggravated a preexisting spinal tumor. Compensation awarded. " Larson's 1966 Supplement Page 15.

Denials of compensation are usually the result of holdings that the evidence didn't support a finding that the employment contributed to the final result. Mrs. Drenk's Foods Inc. vs. Industrial Commission 8 Wis. 2d 192 (1959)

V

COURSE OF EMPLOYMENT

Going & Coming to Work

Compensation was denied where employee was struck by motorcycle while going to work and was twenty feet from entrance to employer's premises. The accident took place at the point where sidewalk intersected at driveway leading out of employer's premises. Krebs v. Industrial

Commission 200 Wis. 134 (1929).

With respect to journeying to and from meals on the premises of employer the basic rule is that the injury arises in the course of employment. Larson 15•50 Page 234, 235, but where employee leaves premises and struck by car while crossing street or otherwise injured, it is held not arising in the course of employment. Injury during non-paid lunch period on premises is compensatory. Racine Rubber Co. v. Industrial Commission 165 Wis 600 (1917).

Coffee Break Rule.

The operative principle is this:

If the employer, under all the circumstances including duration, shortness of the off-premises, distance, and limitations on off premises activity during the interval, can be deemed to have retained authority over the employee, the off premises injury may be found to be within the course of employment. Larson 15.54 Page 246, 274.

New York affirmed award where employee injured during coffee break sustained while returning to work after getting coffee at the "nearest place" across the street. 2 New York 2nd 949 142 N.E. 2nd 213, 162 New York 2nd 40 (1957).

Presence on Unauthorized Premises.

Will be denied benefits if injured employee is where he has no right to be. Exception is where employer knows of use of forbidden premises.

American Motors Corporation v. Industrial Commission 1 Wis 2nd 261 (1957) where foreman knew of the practice of resting on a stack of boxes and had never forbidden it. Sweeper electrocuted when entered transformer room undeterred by signs prohibiting, [redacted]. Denied.

Seaman Body Corp. v. Industrial Corp. 202 Wis. 13 (1930).

Seeking toilet facilities.

Held compensatory where employee fell into river. Milwaukee Western Fuel Co. v. Industrial Commission 159 Wis. 639 (1915).

Compensation generally paid if injured on premises after work and in process of washing up, taking shower or cleaning clothes. Also includes noon hour ball game on company premises.

Horseplay.

It is clearly established that the non-participating victim of horseplay may recover compensation. Badger Furniture Co. v. Champeau 195 Wis.134 (1928).

Intoxication and violation of known safety rule calls for 15% reduction. 102.58 Wis. Stats.

VI

INJURY FROM USUAL EXERTION

General rule is that when usual exertion leads to something actually breaking, herniating or letting go with an obvious mechanical structural change in the body, the injury is accidental.

Thiesen v. Industrial Commission 8 Wis. (2d) 144 (1959) Acute disc lesion compensatory although main cause of disability was natural physical degeneration incidental to advanced age.

Wisconsin follows majority rule on permitting benefits for gradual injury.

Occupational Disease

Any occupational disease caused by employment causing unemployment is covered under Wisconsin.

VII

BENEFITS

Temporary Total $68.00 per week.

Permanent Partial based on schedule. $44.50 per week. Based on percentage of disability compared to amputation or body as a whole. See 102.52 Wis. Stats.

Example, loss of an arm at Shoulder scheduled at 500 weeks.

500 X $44.50=$22,250.00 Ten percent loss of use would amount to $2,250.00

Where employee is above fifty years of age when injured, payments are reduced by 2½% for each year over fifty.

Disfigurement payment only where there is potential wage loss. Commission may allow such sum as it deems just not exceeding his average annual earnings. See 102.56 Wis. Stats.

Hospital and Medical Benefits

Section 102.42 (2) (3) provides for method of selection of physician which does not take into account the sacred doctor patient relationship and forces employee to forego seeing family doctor where not on panel.

Industrial Commission rule 80.21 provides for exchange of physician's reports where not voluntarily exchanged.

Respondent does not have right to examination of hospital records or treating physician's records as defendant in personal injury suit.

WC 16-B which is form for certified medical report may be used at hearing without presence of physician, if submitted to Industrial Commission within fifteen days prior to hearing. Industrial Commission

rule 80.22 (5).

VIII

THIRD PARTY ACTION

While claim for benefits under workmen's compensation law is exclusive remedy against employer, the injured employee may bring civil action against third party (other than employer) whose negligence caused the injury, i.e., subcontractor who is repairing building where employee works and employee injured due to subcontractor's negligence.

Division of funds in third party actions provides for one-third to attorney, one third of remainder to employee, then reimbursement to employer up to amount employer has paid out in benefits and medical expenses and balance if any to employee. Section 102.29 Wis. Stats.

IX

NOTICE AND CLAIM PERIOD

Purpose of notice is to enable employer to protect himself by prompt investigation and to provide treatment for injury.

Failure to give formal notice is usually no bar if employer has had actual or informal notice or if employee did not know that he sustained an industrial injury.

Section 102.12 provides for notice to employer within 30days after occurrence of injury or within 30 days after employer knew or ought to have known nature of disability. Statute is liberally construed and requires filing of claim within two years from date of injury or from date employee knew or ought to have known the nature of the disability, and its relation to the employment.

Milwaukee v. Industrial Commission 21 Wis (2d) 129 is latest case on notice. Discusses 30 day and 2 year requirement and holds that action not barred if employer not misled and if employer knew or should have known within two year period that employee sustained injury on which claim was based.

X

PROCEDURE FOR HEARING

Petitioner files original and three copies of application of adjustments of benefits with Industrial Commission in Madison. Claim forms are obtained either from Madison or Milwaukee office of Industrial Commission.

Hearing takes place before one examiner. Subpoenas available from Industrial Commission. Certified medical reports may be filed (form WC 16B) if submitted to Industrial Commission fifteen days before date of hearing.

Petition for review from findings and award of examiner must be filed within 20 days of date of findings and award. (102.18 Wis. Stats) Commission can modify, reverse or affirm.

XI

JUDICIAL REVIEW

Findings of fact made by Commission may be appealed if summons and complaint are served upon Industrial Commission within thirty days of date of Industrial Commission action. Industrial Commission must receive sufficient number of copies for all named defendants. (102.23 Wis. Stats.)

Appeal generally based on ground that the findings of fact by Commission do not support the order or award.

Supreme Court will affirm Industrial Commission findings of fact unless such findings are clearly against all credible evidence, or so inherently unreasonable as to not be entitled to any weight.

Northwestern Asbestos & Cork Co. v. Bartelt Asbestos Co. 21 Wis. (2d) 554. Findings of fact of Commission supported by credible evidence and reasonable inferences are conclusive. Duvick v. Industrial Commission (1964) 22 Wis. (2d) 155.

Weight and credibility of conflicting medical testimony in compensation case is for Industrial Commission VanValin v. Industrial Commission (1962) 15 Wis (2d) 362.

XII

AGREEMENTS & SETTLEMENTS

Compromise of dispute does not permit for reopening of case after one year. Stipulation permits case to be reopened within six years to claim additional compensation and medical treatment.

Stipulation governed by Industrial 80.10
Compromise governed by Industrial 80.03
See also Section 102.16 Wis. Stats.

XIII

DEATH BENEFITS

The dependent's right to death benefits is an independent right derived from statute and not from the rights of the decedent, accordingly, death benefits are not affected by compromises or releases executed by decedent or by claimant's failure to claim within statutory period.

See Section 102.46 - 102.49 Wis. Stats. Milwaukee Coke & Gas Co.

v. Industrial Commission (1915) 160 Wis. 247.

XIV

EVIDENCE

Signed statement must be given to employee. Recorded statement must be reduced to writing and copy given to employee. Failure to give employee copy of statement prohibits its use at hearing. Ind. 80.24.

Motion picture evidence permitted in Wisconsin.

Hospital records, if established by certificate, affidavit or testimony of supervising officer or person in charge of records or physician to be such record of patient in question and made in regular course of examination or treatment. See Section 102. 17 (1) (as) Wis. Stats.

XV

ATTORNEYS FEES

Twenty percent of amount in dispute. Where no dispute, and no hearing or appeal is taken, commission may award up to 10% but not to exceed $100.

XVI

STATE ACT VERSUS FEDERAL ACTS

Federal Employer's Liability Act covers railroad workers and permits recovery for pain and suffering but employee must prove employer's negligence. Contributory negligence no defense.

Longshoremen's & Harbor Worker's Act covers waterfront workers not covered by state act. Need not show employer negligence.

Federal workmen's Compensation Act covers all other federal employees and does not require proof of employer negligence.

LABOR'S ECONOMIC REVIEW

PUBLISHED BY AFL-CIO

Vol. 3, No. 8-9 August-September, 1958

In Brief

14,200 workers are killed annually on the job; 85,000 are permanently impaired; 1,823,000 are temporarily-totally disabled producing the goods and services providing the world's highest standard of living.

Workmen's compensation, the oldest of our social insurances, is failing to meet the needs of these injured workers. Rehabilitation is in order.

For less than an additional 2 cents per man-hour of labor, our society could provide a workmen's compensation program which would furnish medical care as long as needed, rehabilitation to the extent necessary to overcome as much of the disability as possible and cash benefits to provide a reasonable standard of living to all workers injured on the job.

20 Years in Retreat

WORKMEN'S COMPENSATION

On January 31, 1908, President Theodore Roosevelt asked the Congress to enact workmen's compensation legislation to protect United States Government employees injured on the job. In the same message, the President urged legislation to protect workers in private employment.

Within the year, Congress enacted the first law granting workmen's compensation benefits to a limited number of government employees.

Within a decade, most of the States had enacted workmen's compensation programs, and by 1948 all the States, Alaska, Hawaii and Puerto Rico had accepted workmen's compensation. As a consequence, American workers today believe when they are injured on the job that medical care will be furnished them as long as they need it, rehabilitation will be provided to the extent necessary to give them every opportunity to overcome as much of their disability as possible, and cash benefits will be paid in amounts adequate to maintain a reasonable standard of living for themselves and their family for the duration of the disability or dependency.

Unfortunately for the dependents of the 14,200 who were killed last year, the 85,000 permanently physically impaired and the 1,823,000 temporarily disabled to the extent that they were off the job at least one full day, workmen's compensation benefits failed to meet their needs.

Goals

Many organizations have reviewed the needs of workers who have sustained job-incurred injuries. A most concise definition of goals to meet the needs of injured workers has been prepared and adopted by the American Medical Association:

AMA

"1. Rehabilitation (including medical care) of the occupationally disabled;

"2. Assured, prompt and adequate indemnity for the occupationally disabled or their survivors; and

"3. Minimal costs to employers and society commensurate with the above provisions." [1]

In principle, the goals of labor and the goals of the American Medical Association and the International Association of Accident Boards and Commissions are the same.

In spite of the commendable efforts of the State Central Bodies of the AFL-CIO to gap the distance between the accepted goals of workmen's compensation and the benefits provided for job-injured workers by State legislation, the gap has not been bridged.

Today millions labor unprotected by workmen's compensation. Only three out of four workers are protected by workmen's compensation against the hazards of injury on the job. State legislatures have applied numerical exemptions; have failed to recognize the hazards of industrial disease; have bowed to the pressure of the agricultural industry; have declared certain industries non-hazardous; and in many States have made coverage voluntary. State administrative rulings and court decisions have often narrowed the area of statutory protection by interpretation. When these various exclusions of coverage are joined together, more than 15 million workers for one reason or another are unprotected by insurance against a job-sustained injury.

Coverage

Elective or Compulsory? Approximately one-half of the States provide compulsory workmen's compensation coverage. The remaining States permit election of coverage in one form or another. If the argument that compulsory coverage of all employers exposed State legislation to attack on the grounds of constitutionality were once true, such argument is no longer valid.

Today, the retention of elective coverage stands as a formidable weapon against labor's efforts to make workmen's compensation an effective program. Employers can and have threatened to escape coverage if benefits were improved. Workmen's compensation ought not to be a "catch what you can" program.

Numerical Exemptions. In the beginning it was thought that if small employers were included under workmen's compensation the administrative burden would be so heavy that prompt adjudication of claims would be impossible. The experience of 24 jurisdictions which make no exemptions based on the number of employees proves that numerical exemptions are unnecessary.

But today many States exempt employers of less than two to less than fifteen workers, the number varying in different jurisdictions. [2]

On the whole, small employers have insufficient assets to protect either the injured worker or the business without compensation insurance. Both should be protected; compulsory workmen's compensation should immediately be enacted in all States which provide numerical exemptions.

Agricultural Workers. The needs of an injured worker should not be determined by his occupation. Although agriculture is one of the more hazardous occupations in our society, agricultural workers (except in Ohio, Hawaii and Puerto Rico) labor unprotected. Eleven States extend limited coverage to agricultural workers. The remaining States and Territories place the risks of injury on the job on the men, women and children who contribute so substantially to our food supply.

Hazardous Employment. Twelve States still retain reference to "hazardous" and "extra-hazardous" employment in their workmen's compensation acts.

Although a number of State courts have recently broadened the scope of "hazardous" occupations, many persons injured on the job are denied compensation because the State limits compensation to hazardous occupations. The Supreme Court of Oklahoma recently held that a filling station unless operated in conjunction with a repair shop was not "hazardous."

[1] "Medical Relations in Workmen's Compensation," A Guide Adopted by the American Medical Association, December, 1955, p. 3.

[2] NOTE: "State Workmen's Compensation Laws," Bulletin 161 (Revised) U. S. Dept. of Labor, August 1957, is the most useful source for comparison of State laws.

Occupational Diseases. Mississippi, Wyoming and Montana make no provision for workmen's compensation for persons injured by an occupational disease. An additional 18 States and Territories limit coverage to a schedule of occupational diseases. Eleven States which extend full coverage of occupational diseases either do not pay benefits for partial disability or limit the benefits payable if the disease is asbestosis or silicosis. Moreover, time limitations for filing and other restrictive wording create legal barriers to compensation for many persons injured by an occupational disease.

Radiation Diseases. The rapidly increasing use of atomic energy for peaceful purposes has exposed many workers to injury different from the experience of other occupational diseases. Scientific experiments today indicate that exposure can kill directly, can bring death indirectly as by cancer, or bring death earlier without relation to known diseases. There is no experience under workmen's compensation to guide us in the protection of persons in the third category. However, for those killed directly or by causally related diseases, workmen's compensation can afford protection for workers and their families.

Today, no State can say: all workers other than casual are afforded protection against the hazards of injury on the job.

Medical Care

Cost of Medical Care. Foremost among the benefits of workmen's compensation should be the medical care furnished to the injured worker.

Although the students of workmen's compensation point out that the inclusion of medical benefits represents the most important progress made in the program over the 50-year period, it should be pointed out that one-fourth of the States still limit by amount or time the medical care furnished workers suffering "accidental" injuries and half of the States still limit the medical care for those injured by occupational disease. To deny further treatment to the individual workman who still needs medical care after being disabled for a period such as six months is nothing but a cruel abdication of responsibility.

Nor is cost the prohibitive factor to unlimited medical benefits. In 1953, the cost experience of States with statutory provisions for unlimited medical benefits which report to the National Council on Compensation Insurance indicated that medical and hospitalization benefits amounted to 23 cents for every $100 of covered payroll[3]—on the average, a little more than ½ cent an hour. At best, therefore, if we accept the national figures measuring the increased cost of medical and

hospitalization care, unlimited medical and hospitalization cost would not exceed at the outside more than three-fourths of a cent per hour or less than 30 cents for every $100 of covered payroll. For an almost negligible increase in cost, all States could furnish unlimited medical benefits to workers injured on the job.

Selection of Physician. The National Association of Manufacturers recently reaffirmed its position that it was in the welfare of injured employees that the company should retain the exclusive right to choose the doctor.

Three-fourths of all workers covered by workmen's compensation must today accept the doctor chosen by the employer or his insurance carrier.

The AFL-CIO opposes this position, because the doctor now has a patient who is in fact not his client. Many times a dispute arises (1) in determining whether or not the injury was causally connected with the occupation, or (2) in evaluating the extent of disability. The volume of conflicting medical testimony indicates that the client-doctor relation too often outweighs the doctor-patient relation.

The American Medical Association has recognized that the company-selected doctor relationship is ethically untenable. The A.M.A. has said: "Disabled employees should have the *right* to accept physicians' services provided by employers, *or to select* another attending physician from a register of all other physicians in the community *willing and qualified* to perform the essential services."[4]

Unlimited medical care is vital to any acceptable workmen's compensation program. The AFL-CIO, as recently as December 1957, stated that an injured worker should have free choice of a qualified doctor. Such a goal can be best implemented by a medical panel. Since the administrative agency has no personal or financial interest in the selection of willing and qualified doc-

[3] "Illustrative Nation-wide Cost Estimate for Workmen's Compensation Programs with Broader Coverage and Higher Benefit Levels," Research & Statistics, Note No. 2, 1955, U. S. Dept. of Health, Education and Welfare, p. 2.

[4] "Medical Relations in Workmen's Compensation," A.M.A., Dec. 1955, p. 4.

tors for medical panels, their appointment should be a responsibility of the administrative agency. To be sure, the appointments should be made in co-operation with the respective medical societies of the separate jurisdictions. As the adopted report of the A.M.A. points out, "The administrative agency must have more than adjudication and appeals functions; it must have an affirmative duty to see that the intent of the law is carried out." To gain co-operation with the medical profession and to achieve the best in medical care, every administrative agency should have a full-time medical director.

Rehabilitation. Workmen's compensation should be dedicated to the proposition that injured workmen should have every opportunity to overcome as much of their disability as possible. But few States have attempted to provide adequate rehabilitation programs.

Only 13 States, Alaska, Hawaii and the District of Columbia have provisions for special maintenance or other compensation of the injured worker during the rehabilitation period. Only Florida, Massachusetts, Minnesota, Missouri, New Jersey, New York, West Virginia and Hawaii have special rehabilitation divisions within their workmen's compensation agency. Only Oregon, Rhode Island, Washington and Puerto Rico have established rehabilitation centers to provide injured workers with modern rehabilitation care. Ohio through its exclusive State Fund provides rehabilitation care through a contractual arrangement with Ohio State University. Medical science has made great progress in the know-how of rehabilitation. The new knowledge and techniques should be put to use for disabled workers. All State compensation acts should provide maintenance benefits and rehabilitation provisions. State agencies should be empowered and given the necessary technical personnel to supervise their rehabilitation programs.

Sub-Standard Indemnity Benefits

The American labor movement believes that an injured worker and his family ought not be condemned to a substantial reduction in living standards during the rehabilitation period. Temporary-total disability is properly measured in wage loss. However, indemnity of permanent-partial and permanent-total impairment should be determined in relation to the injured worker's permanent impairment of earning capacity.

Temporary-total Indemnity Benefits. Most States provide that an injured worker shall receive benefit amounts between 60 and 66⅔ percent of his wage loss while suffering a temporary-total disability. However, the low maximum amounts which are also written into the laws make this impossible.

"In 1939 . . . half the laws provided a maximum of less than $20 a week and $25 was the highest amount payable under the State laws. These dollar maximums were nevertheless high enough so that, in virtually every State, a worker receiving the average weekly wage (as shown by unemployment insurance data) could receive under workmen's compensation the proportion of his wage loss specified in the statute. . . . Since 1939, all but seven States have increased their dollar maximum amounts by at least 75 percent; in 20 jurisdictions the increases have amounted to more than 100 percent. As of August 1957, three-fourths of the laws provided maximum weekly benefits (including allowances for dependents) of $35 or more, with 17 providing $45 or more.

"These higher maximums, however, had still not caught up with rising weekly wages, which had increased from 1939 to 1956 for the average worker covered under unemployment insurance by 210 percent—from $26.17 to $87.17.

"Consequently, *only* seven programs (including the system for Federal employees), with 9 percent of the covered workers, had weekly maximums that were high enough in 1957 to permit the statutory percentage to be effective for workers with average wages though not for many workers with higher-than-average wages." [5]

The left column of the chart on page 55 shows for each State the actual proportion of weekly wages that a worker in receipt of the average 1956 wage would have received in benefits during a period of total-temporary disability under the statutory percentages and maximums effective in August 1957.

In 1951, the U.S. Department of Labor calculated a City Worker's Family Budget to show how much was needed for what it called a "modest

[5] Skolnik, Alfred M., "Trends in Workmen's Compensation: Coverage, Benefits and Costs," Social Security Bulletin, Vol. 21, No. 8, August 1958, p. 11.

but adequate" standard of living. Recently, the AFL-CIO Research Department adjusted the 1951 figures for changes in prices and federal taxes since that date. Today, at least $4,656 a year must be earned by a city worker to support a family (wife and 2 children) on a "modest but adequate" standard of living. This means at least $90 a week.

The average weekly wage in 1956 was $81.17. "For the country as a whole, a single worker with average wages received a weekly rate of compensation, weighted by coverage, estimated at $38.96 or 48 percent of the nationwide average weekly wage." [6] 92.4 percent of single workers with average wages received less than 60 percent of their average weekly wage.

The years from 1939 to 1958 present a grim story of retreat for those who believe that workmen's compensation should provide cash benefits in amounts adequate to maintain a reasonable standard of living for the injured worker and his family.

Permanent-total Disability. Although the loss of adequate workmen's compensation is a serious problem to the worker temporarily but totally disabled, the hardship in most cases is short-lived. The worker, however, who suffers a permanent-partial or a permanent-total disability stands to suffer the remainder of his life. His benefits replace even a lesser amount of his wage loss.

Eighteen jurisdictions place a maximum dollar amount on indemnity benefits for a permanent-total disability. These maximums range from less than $9,000 to $20,000.

Seven States stipulate the maximum number of weeks for which benefits shall be paid. These vary from 400 weeks in Louisiana to 550 weeks in New Mexico. Twenty-five jurisdictions, therefore, stipulate a maximum amount either by dollars, by weeks or by both.

By this device, State legislatures have evaded their responsibility to the most seriously impaired workers and to their families.

The average incurred loss per case for permanent-total disability in 1954 was $16,758. While wages between 1939 and 1954 had increased 185 percent, the cost per case of permanent-total injury had increased only 178 percent.

Permanent-partial Disability. Most permanent-partial disabilities are compensated in accordance with a schedule of benefit amounts. One illustration will suffice to show the unbelievable range of benefit amounts paid by the various States for a single loss. For the loss of an arm (at shoulder) Wisconsin pays an amount equal to 500 times the injured worker's basic benefit amount; Vermont pays 170 weeks. Four States pay less than 200 weeks; 24 States pay 200 or more but less than 250; 12 States pay 250 or more but less than 300; 10 States pay 300 or more but less than 350; 1 State pays more than 350 weeks. Unfortunately, the basic wage is low in many States which pay benefits for a fewer number of weeks, thereby compounding the hardship.

In 1954, the average incurred loss for a *major permanent-partial* was $5,010. Major parts of a body bring bargain prices for an employer in today's workmen's compensation market.

Financing Workmen's Compensation

In 1956, total benefit payments, medical and compensation, amounted to $1,002 million. In 17 jurisdictions, representing two-fifths of the covered workers, these benefits amounted to less than ½ of 1 percent of covered payroll in 1956, and in 37 jurisdictions, representing 86.1 percent of the covered workers, amounted to less than 7/10 of 1 percent of covered payroll. [7] "Only in six States with 6 percent of covered employment did benefit payments absorb as much as 1 percent of payroll." [8] The right column of the chart on page 55 breaks down the benefits as percent of payroll by States.

The estimated cost of workmen's compensation to the employers as a percent of covered payroll in 1956 was .92 percent and in dollars amounted to $1,630 million. Substantially, general administration, policywriting, claims investigation and adjustment, safety, taxes and profit consumed the difference between $1,002 million in benefit payments and the $1,630 million set aside by employers.

Employers insure their risk either with a stock

[6] Skolnik, p. 12.

[7] Skolnik, p. 11.
[8] Skolnik, p. 9.

or mutual (private) carrier, with a State Fund (competitive or exclusive) or self-insure. Over the past ten year period the expense ratios of the mutual and stock companies have averaged respectively between three and four times as much as the exclusive and competitive State Funds. As a result, exclusive and competitive State Funds return a greater portion of the premium dollar to injured workers.

The attack against a workmen's compensation program geared to the needs of injured workers is spearheaded by the private insurance carriers. From the dollars paid by consumers for services and set aside by employers for injured workers comes the revenue to fight improved legislation.

In February 1957, the AFL-CIO said: "The time is overdue for a complete investigation of the generosity toward agents, brokers, officials and stockholders of insurance companies compared with the harsh treatment to injured workers. Employers should be required to testify as to why they have tolerated such exorbitant insurance costs—and this testimony laid beside the chronic excuses made by industry as to why it cannot pay decent benefits for the injured." State legislatures should be encouraged to make inquiry into the insurance of workmen's compensation at their regular sessions in 1959.

State Administration

Wyoming, New Mexico, Louisiana, Alabama and Tennessee administer their workmen's compensation laws through the courts. Forty-three States and all the Territories administer their laws through separate commissions or their labor department.

The inherent nature of the court system precludes supervision of medical care, rehabilitation, vocational rehabilitation, the assurance of prompt benefits, and the promotion of safety and health activities.

In 1956, total administrative costs were $17.4 million. Thirty-five percent of this total was met by legislative appropriation and 65 percent by assessments on the carriers (private, self-insurers and State Funds.)

Unfortunately, inadequate funds have crippled many State administrations from doing the job needed to be done. Recently, the Michigan Department of Workmen's Compensation was unable to hold referee hearings for 10 days because it had no funds to pay court stenographers.

On the whole, State administrators prefer to have departmental costs financed through assessments rather than legislative appropriation. Since general funds of States may be hard-put to meet rising costs of government, workmen's compensation may fare better if supported by an assessment against the insurance carriers.

Legislation Needed

In the beginning, workmen's compensation was a marked improvement over the common law. Legislatures have failed to fit their programs to the needs of injured workers.

To remedy the neglect, the Second Constitutional Convention of the AFL-CIO, December 1957, adopted the following objectives:

"Compulsory workmen's compensation must be extended to all workers. Provision must be made for free choice of a qualified doctor, full medical care, hospitalization and, when needed, rehabilitation. Weekly indemnity benefits must be established in amounts equal to at least two-thirds of average weekly wages during disability. And adequate provision must be made for dependents during dependency.

". . . establishment of a workmen's compensation department with right to appeal to an appeals board which has no administrative responsibilities and from which appeal on matters of law only can be made to the highest court in a State will provide a workable procedure to achieve equity and promptness in granting awards to workers injured on the job.

". . . workmen's compensation should be insured through an exclusive state fund in order that benefits can be made adequate at the least cost to society and that safety and rehabilitation programs can be coordinated with administrative efficiency.

"We support the enactment of a Federal Workmen's Compensation Act. Short of this the Congress of the United States should enact legislation fixing minimum standards of workmen's compensation."

This issue of Labor's Economic Review was prepared by Mr. Clinton Fair, Assistant Director, AFL-CIO Department of Social Security.

[Aug.-Sept., 1958]

States Can Afford to Do Better

[1] Lower figure represents benefit for single worker; higher figure represents benefit maximum all dependents.
[2] Benefits may not exceed period of time or amount indicated.
[3] Lower figure represents payments to widow only; higher figure represents benefit maximum all dependents.
[4] Additional benefits for dependents.
[5] Plus $2.30 for each totally dependent.
[6] "W" means payment to widow until death or remarriage; "C" means payment to children until 18. Some jurisdictions have variations of this general principle.
[7] Limited benefits for occupational disease in Arizona and Utah.
[8] Limited benefits for silicosis and asbestosis: Arkansas, Illinois, Maine, Nevada, Texas, Vermont. In West Virginia no allowance for medical treatment for silicosis.
[9] 250 weeks in cases of total dependency; 312.5 weeks in cases of surviving widow and one or more dependent minor children.
[10] Thereafter reduced benefits for children only until 18.
[11] Additional specific cases—rehabilitation, constant attendant, etc.
[12] Period may be extended; amount may be increased not to exceed $375.
[13] $1000 maximum for hospital service and supplies and $500 for medical and surgical services. Commission may authorize an additional $1000.
[14] In extreme cases, Commissioner may require employer to furnish care for a longer period. In case of silicosis, additional period is limited to 90 days.
[15] $35.00 for 13 weeks, then $40; plus $4 for each total dependent.
[16] Additional benefits for dependent child; in Massachusetts, benefits continue until 18, or over 18 if incapacitated, and to widows during periods they are not fully self-supporting.
[17] In case of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.
[18] A separate act provides for payment of $65 per month from public funds to persons totally disabled from silicosis, if they have been residents of Montana for 10 years.
[19] Benefits set in accordance with a "wage and compensation schedule."
[20] Initial amount for surgical and medical services limited to $450. In addition, hospital services, orthopedic appliances, and prostheses are allowed for first 6 months. Board may order further medical, surgical and hospital services after end of the first 6 month period.
[21] Also hospital benefits not to exceed $700.
[22] Full coverage permissible.
[23] Plus $2 for each dependent child under 21.
[24] May be extended for 1 year including the first 60 days.
[25] Under certain conditions, medical benefits terminate.
[26] Additional benefits payable from Children's Fund to widow for children under 16 (13% of widow's benefit is the weekly or monthly allowance made for each dependent child); or for children over 16 if mentally or physically incapacitated.

NOTE: For a more complete comparison of the laws, write to the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. for State Workmen's Compensation Laws (Bulletin 161, Revised) published by the Bureau of Labor Standards, U. S. Department of Labor. The above material based on that publication.

The Labor Month in Review

Workmen's Compensation and New Job Hazards

JOB HAZARDS are an abiding concern, but some recent events have imparted unaccustomed prominence to them. In mid-1967, Secretary of Labor Willard Wirtz, following disclosure that well over a hundred miners had died of lung cancer, established limits on the annual amount of ionizing radiation to which uranium miners may be exposed. Later that year, he issued an interim protective order covering youths in hazardous agricultural occupations. Early this year, the public became aware that a series of private medical studies extending back to 1960 had uncovered an apparent link between contact with asbestos and a rare fatal cancer.

These developments underscore the bizarre potential of technology and progress to generate hazards. As a result, the scope of workmen's compensation, which provides medical care and income for those injured in the line of economic duty, must be continually reconsidered.

New Hazards for Old. A generation ago, the atomic age was just hatching under a football stadium, farm jobs were less mechanized and embraced fewer chemicals, and there was barely a clinical description of the rare cancer (mesothelioma) frequently linked to contact with asbestos.

The ambivalent nature of economic development—bearing social blessings and banes at the same time—existed before the industrial revolution. Then the problem centered on mining and quarrying and the related grinding and polishing processes, and simple metallurgical activities. Silicosis—chronic disease of the lungs caused by breathing dust in mining, grinding, or polishing—is probably the oldest medically described job hazard.

Each wave of industrial and technological progress reduces or eliminates some hazards while bearing potential for more dangerous hazards. The factory system brought sweatshops, unprotected machinery, and unsanitary conditions; and industrial metallurgy introduced the hazards associated with iron, steel, and lead, and more recently, with beryllium, titanium, and cadmium. Another wave of widespread hazards arose with the petrochemical industries and the most recent group of hazards are those associated with newly harnessed sources of energy—radioactive materials, lasers, and ultraviolet rays.

Making Work Safe. Necessity was the mother of enactment of workmen's compensation laws, and before the industrial revolution there was no recognized necessity for them and for the goading effect they had on plant safety and hygiene. The spread of industrialism in the second half of the 19th century and the early decades of the 20th created conditions that clamored for the enactment of something to replace the uncertainties and stretchouts of employer liability laws and the common law. Workmen's compensation laws were passed, beginning with a limited Federal law in 1908 and the first of the State laws in 1911.

Under these laws, the touchstone for compensation is that the injury must "arise out of and in the course of employment." In application, the rules are far from clear-cut and, despite legislative shaping through definitions and other specific guidelines, findings are by no means certain.

Workmen's compensation laws are revised from time to time or interpreted to include impairments not considered when the laws were originally passed. There is a lag between the time an illness or impairment caused by a new process becomes evident and the time required by medical research to fix the cause with reasonable certainty. During the lag, injury and illness are not suspended, and compensation authorities and courts must grapple with questions of legality, cause, effect, and compensability.

Generally, the extension of coverage by amendment, administrative ruling, or judicial finding has moved from physical injury, to both physical injury and occupational disease (where a goodly proportion of the 54 U.S. laws currently rest), to all impairment arising in connection with the job. The latest frontier that workmen's compensation has crossed is compensation for mental or emotional disorder arising out of and in the course of employment.

PAGINATION INCORRECT

The Whole Man. Current medical concern with the health of the whole man promotes greater appreciation of mental health problems in industry. While physical injury on the job is much more widespread than mental trauma, public health officials and others interested in industrial health believe that mental and emotional problems eventually will supplant physical injuries as the most important job hazards.

Many physical job hazards have been eliminated, minimized, or controlled through cooperative action of medicine and engineering, backed by management, labor, and government. Mental and emotional problems arising in connection with the workplace are tougher to solve because the mechanics by which they occur are less understood.

Despite the unsettled state of the medical and engineering arts with respect to cause and prevention of mental and emotional reactions in connection with the job, authorities have to grapple with compensation cases based upon these claims. Writing in the *Yale Law Journal*, Marilyn Cohen characterized the general drift in the cases as predominantly involving the idea that the mental or emotional reaction must result from physical injury (such as loss of an eye) or a job-connected psychological shock that leads directly to the reaction.

However, the cases cited in the *Yale* article indicate the uncertain nature of the award in any specific case either because of provisions in the law or judicial interpretation. In a Nebraska case, the court denied compensation to an elevator operator who suffered a neurotic reaction as a result of spending a half hour in an elevator with a dying man. In a Florida case, the Court held that a nervous reaction resulting from a sideswipe by a truck was not compensable under the law. On the other side, in *Bailey* v. *American General Insurance Company*, a Texas ironworker was awarded compensation for psychoneurotic reaction that prevented his continued employment as an ironworker after he saw a partner plunge to his death.

Typically, the reported cases involve either or both of the requirements that the mental impairment arise out of a physical trauma or a specific psychological shock. But a landmark 1960 case in Michigan broke this tie, awarding compensation for "cumulative pressures" of the job.

At a General Motors plant, an assembly line machine operator had the task of sprucing up hub assemblies and putting them on a conveyor belt. He was unable to keep up with the tempo of the assembly line and his attempts to do so led to scrambled assemblies for which his foreman criticized him. He had a mental breakdown, and a compensation claim was entered. The referee, a divided appeals board, and a divided Michigan Supreme Court, in *Carter* v. *General Motors*, awarded compensation, although the court reduced the award from permanent to temporary disability. The dissenters on the court held that the decision was a clear break with precedent.

Expanding Scope. Commenting on *Carter*, Theodore C. Waters, an attorney with considerable experience representing employers in compensation cases, wrote that "[the case] is indicative of the trend . . . to make an employer responsible under the workmen's compensation laws for any and all human ills that may arise out of and in the course of employment." Whether or not this occurs, coverage under the statutes has already expanded substantially in tandem with new hazards and better understanding of old hazards.

Nowadays, the principle underlying workmen's compensation is well accepted. It is not yet fully accepted that the concept of injury or impairment "arising out of and in the course of employment" includes mental impairment. Nonetheless, the wall between physical injury (or occupational disease) and mental or emotional disturbance has been breached. If compensation trends in physical injury cases and in the troublesome heart cases are indicative of what the future holds for mental impairment cases, then the movement will be from narrowly construed to more broadly rendered compensation.

Regardless of how the compensation controversy shapes up, in the long run mental and emotional job hazards will have to be eliminated or at least minimized because they increase production costs. As it was put by Dr. Jean Felton and his University of California colleagues in a HEW publication on occupational medicine: "Plant safety was not achieved by adjusting people to lead poisoning. Neither will mental health in industry be accomplished by attempting to adjust workers to stresses which they clearly regard as intolerable. The worker will be restored to himself and to his work exactly as he was finally protected from toxic exposures: By determining his needs and adjusting the work environment accordingly. . . ."

BES No. U-141

Comparison of State Unemployment Insurance Laws

U.S. DEPARTMENT OF LABOR
W. Willard Wirtz, Secretary
MANPOWER ADMINISTRATION
BUREAU OF EMPLOYMENT SECURITY
Washington, D.C. 20210

Prof. Labor Legs: Workmen's Comp. FEB [1970]

by James O'Brien

Workmen's compensation is the oldest form of social insurance in this country—and it is also the most antiquated.

The system is based on the principle that the possibility of work injury is always present in the production of goods and services. It assumes that injury and disease can never be completely eliminated from the production process and concludes that since society benefits from the production of goods and services, society should bear the cost of adequately compensating the victims of work injuries and diseases. The cost of the system was to be treated as a production expense and added to the price of the product, and this cost was to be paid by the consumer of the goods or services.

The system was devised to meet three major objectives: to assure injured workers prompt payment of wage-loss and medical benefits; to limit employer liability to the degree stipulated in the law without raising the question of fault or negligence and to reduce the cost of industrial injuries to society by minimizing the loss of the injured worker's productive services and the burden on the community of supporting the injured worker and his family.

In terms of lost production, work injuries cost this nation over 200 million man-days each year. Man-days lost because of work injuries have been 5, 10 and even 14 times greater than time lost because of work stoppage in recent years.

Man-days lost because of work injuries have been 5, 10 and even 14 times greater than time lost because of work stoppage in recent years.

These alarming figures have stirred legislative interest. Occupational health and safety has become a matter of concern for legislators at both the state and national levels. However, concern will not improve the situation—it takes legislation. A first step should be substantial improvements in the workmen's compensation system at both the state and national levels.

Much greater federal participation is the foremost need. The most significant immediate step in this direction would be legislation establishing minimum federal standards for workmen's compensation. These federal standards should establish the minimum protection state laws would provide. The current widespread disparity in every aspect of the program can only be eliminated by a federal role in the program.

Coverage has been limited by elective laws that have been recognized for years as obsolete because of provisions allowing employers to reject coverage. Numerical exemptions, along with occupational and industry exclusions, have been recognized by responsible groups as a serious barrier to an effective system. However, these provisions still exist in many state laws.

It is estimated that the application of these provisions denies 20 percent of the work force the protection of the program—approximately 18 million workers are outside the system at this time. At the state level, legislative interest in improving the situation has been negligible. Agricultural, domestic and casual workers are still excluded from the program, as are workers in small firms in 18 states. Exclusions of this type are inconsistent with modern concepts of social insurance, and the failure of state legislatures to remedy this situation demonstrates how unresponsive the system is to the needs of an industrial economy.

The benefit structure—the core of the entire system—has deteriorated woefully in some states. The original goal of workmen's compensation was to restore to injured workers at least two-thirds of the wages lost due to industrial injuries. The gap between this objective and what the law actually provides is one of the most serious inadequacies of our present system.

The Virginia law provides an excellent example of this deterioration. The law specifies injured workers

James O'Brien is an assistant director in the AFL-CIO Department of Social Security.

PAGINATION INCORRECT

are to be paid a weekly benefit equal to 60 percent of their average weekly wage. It then limits the maximum benefit payable to $51 weekly. This limit denies the average worker a wage replacement benefit anywhere near the intended 60 percent.

The average weekly wage reported by employers covered under the Virginia Employment Security Act in 1968 was $107.55. Thus the average worker getting $51 actually would receive closer to 30 percent of his average weekly wage. The great majority of work injuries involve temporary total disability. During 1968, the average period of lost time in each temporary total disability case was 27 days—slightly more than three weeks.

In Virginia, if the average worker were unable to work for a period of three weeks, he would suffer a wage loss of $322.65 (three times $107.55). The workmen's compensation program would require the payment of benefits for only two weeks. His total wage replacement would be a mere $102 (two times $51). Injured workers under these conditions actually suffer a wage loss in excess of 66 percent of their average weekly wage, so Virginia workmen's compensation replaces less than 32 percent of the injured worker's lost wages. For workers earning in excess of the average weekly wage—skilled craftsmen and higher paid production workers—the loss is much greater.

This situation exists throughout the system. Under the circumstances outlined above, the wage replacement benefit in a number of state programs is similar. Based on 1968 state average weekly wage levels and workmen's compensation benefits the percent of lost wages replaced would not exceed 20 percent in Louisiana, 23 in Georgia, 26 in Indiana, 28 in Nebraska and North Carolina, 29 in South Dakota and 34 in South Carolina.

These examples reflect a part of the deterioration that has taken place within the benefit structure of the program. A glance at the benefit structure of the entire system presents a grim picture. The poverty index computed by the Social Security Administration for a family of four allows 25 cents per person for each meal and $1.40 a day for other essential living expenditures. A comparison of workmen's compensation benefits under the various laws reveals that in 31 states the maximum workmen's compensation is below the poverty standard. Thus regardless of wage-earning capacity or family living standards, injured workers are forced to try to maintain a home and family on a wage replacement benefit below a poverty level.

Medical Benefits are elementary to the workmen's compensation since a major goal of the system is the restoration of injured workers to productive employment. Most states have recognized the importance of medical care in speeding recovery, and their programs require complete medical care for injured workmen.

Other states, however, have been unwilling or unable to provide this basic protection to the workers covered by their program. Time or monetary amounts limit medical care under 26 state programs. Many of these states permit the state agency to extend the specified limits, but this procedure falls far short of the standard recommended by compensation authorities. Full medical care for work injuries is one of the workmen's compensation standards recommended by the AFL-CIO, employer representatives, insurance carriers, state workmen's compensation administrators and the U.S. Department of Labor.

Medical benefits limited in duration to 60 days, 10 weeks or 90 days are found in some state laws. Monetary limits of $1,300, $1,700 or $3,000 are imposed in other states. These limits are imposed despite the widespread attention to the rising costs of medical care in recent years. Limitations of this nature may force an injured worker to pay for a share of the medical care required by a work injury. And he must pay for this care with a poverty-level income benefit that replaces a mere 25 or 30 percent of his average weekly wage. These limitations also illustrate the failure of the system to respond to social and industrial changes. However, additional limitations in some states are of an even more serious nature.

Permanent Total Disability, the most serious type of work injury, usually involves paraplegia, loss of sight in both eyes or loss of two major limbs.

Every responsible organization and individual interested in improving workmen's compensation agrees that benefits for permanent total disability should be payable for the period of disability. Yet only 31 states provide this type of protection.

One of the continuing questions in workmen's compensation is how a state legislature can protect workers in cases of permanent total disability and simultaneously limit the duration of benefits to such short-term periods as 5, 8 or 10 years. The absolute limitation on the amount and duration of permanent disability benefits in state programs violates every element of human decency and compassion.

When the compensation limits expire in money or time, the employer or the insurance carriers simply drop the matter on the shoulders of family relatives, the relief rolls or otherwise on the community.

A number of state laws limit permanent total disability benefits to 500 weeks—less than 10 years. So a 30-year-old worker with a wife and two children would be dependent on public welfare by the time he is 40. The community would be saddled with an employer responsibility that involved four people—the injured worker, his wife and two children.

If the workmen's compensation system is to extend assured, prompt and adequate protection for injured workers and their families, the 500-week and similar limitations in permanent injury cases must be eliminated from state programs. The cost of removing this restriction would not be prohibitive. Only a very small percentage of work injuries—one-tenth of one percent—involves permanent total disability and this figure has remained fairly constant.

The seriousness of this problem is clearly reflected

in the proposed congressional amendments to expand the disability features of the Social Security program. The amendments would permit an individual to apply for Social Security disability benefits after three months of disability rather than after six months as currently specified in the law. These proposals would benefit seriously injured workers and their families as well as the communities now supporting the victims of industrial injuries or diseases.

Permanent Partial Disabilities furnish another example of the inequities perpetuated by the unresponsive nature of the compensation system. Injuries of this type are usually classified as schedule or non-schedule. Cases involving the back or head and nervous system are considered to be non-schedule. Cases involving the loss or the loss of the use of a limb, organ or function are compensated according to a specific schedule provided in the state law.

The state programs place a value on the various parts of the worker's body. All states have established maximum limitations on the number of weeks for which benefits can be paid and the amounts which can be paid in permanent partial disability cases. The amount payable is computed by multiplying the maximum number of weeks allowed for the lost limb by the worker's weekly benefit. The weekly benefit amount is, of course, subject to the other limiting provisions specified in the law. The lack of uniform criteria can lead to serious inequities.

The Federal Employes' Compensation Act (FECA) places a value on the eye of a worker that is approximately 5, 6 or even 10 times greater than the benefit provided in state schedules. The toe of a worker in Hawaii is valued at three times the toe of a worker in Oklahoma and twice the toe of a worker in Iowa. A thumb in Wisconsin has more than twice the value of a thumb in Iowa.

The loss of an arm in private employment in the District of Columbia is valued at less than one-fifth the same limb for a federal worker in the same city. The schedule compensation for the loss of an arm in some other jurisdictions is woefully inadequate by comparison with the schedule in other states and it is shameful when compared with the FECA schedule.

Workmen's compensation can never adequately compensate a worker for the loss of any body function or limb. However, injured workers are entitled to a much improved schedule of compensation than now exists in the 55 unrelated state programs. The absurdity of the wide range of schedule benefits shows in this table of selected state benefit amounts for schedule injuries:

	Maximum Benefit For Loss Of			
State	Arm	Thumb	Toe	Eye
Delaware	$ 12,500	$ 3,750	$ 750	$10,000
D.C.	21,840	5,250	1,120	11,200
Hawaii	35,100	8,437	1,800	18,000
Iowa	10,925	2,850	712	5,937
Oklahoma	10,625	2,550	425	4,250
Wisconsin	23,750	5,938	1,568	13,063
FECA	115,752	27,825	5,936	59,360

Rehabilitation is considered by some authorities to

WORKMEN'S COMPENSATION BENEFITS IN RELATION TO POVERTY LEVEL*

Maximum Weekly Benefits as a percent of Poverty Level
(Income for a Four Member Family**)

[1] FECA maximum benefit equals 633 percent of poverty index.

* Includes dependent allowances where payable.
** 1966 U.S. Department of Health, Education and Welfare Poverty Index for a four member family is $3,335 per year; on a weekly basis this equals $64.14.
Source: U.S. Department of Health, Education, and Welfare, Social Security Administration: "Social Security Bulletin," March 1968.

be a major component of workmen's compensation. The state legislation suggested by the Council of State Governments places major emphasis on rehabilitation. The Department of Labor, the Council of State Governments and the state administrators of workmen's compensation have all recommended the establishment of a rehabilitation division within state workmen's compensation agencies. These groups, along with insurance carriers and rehabilitation personnel, agree that early referral to rehabilitation services is desirable to accomplish maximum recovery. Workmen's compensation agencies receive initial notice of injuries and thus could encourage the injured worker to start rehabilitation soon after his injury.

Unfortunately, progress in meeting this recommended standard has been slow; less than one-half the states have established a rehabilitation division within their workmen's compensation agency. Monroe Berkowitz, in his 1967 study, The Processing of Workmen's Compensation Cases, states ". . . It is sad to observe that one can examine the processing of workmen's compensation cases in so many jurisdictions without encountering any specific rehabilitation procedures. Formal agreements between state agencies administering workmen's compensation and state agencies administering vocational rehabilitation are moldering from disuse. . ."

Another part of this problem is also being ignored by the states. A rehabilitation program involves medical care, counseling and guidance and retraining for the previous job, or possibly new job selection, training and placement. Even in some states where full compensation is paid, workers are required to meet the added expenses related to rehabilitation. The program may require payment of tuition, purchase of tools or equipment or payment of rent while living away from home in addition to the maintenance of the worker's family home or added transportation expenses.

Injured workers can seldom afford these added financial demands following a period of forced unemployment at a substantially reduced income. The financial strain frequently makes it impossible for workers to undertake physical and vocational rehabilitation. Adequate maintenance benefits are essential to the success of any rehabilitation program, but only 24 states make provisions for such benefits.

Fatal Injuries are declining in number. However, 14,300 fatal work injuries were reported by the National Safety Council for 1968.

The decline in fatal work injuries is a welcome trend but it is not a valid reason for neglecting the death benefit provisions of workmen's compensation. The widows and children of fatally injured workmen should be permitted to maintain themselves as family units at their accustomed standard of living. Benefits to widows should be provided until death or remarriage. Benefits for surviving dependent children should be provided until they reach at least 18, or 23 if they are pursuing higher education. Only 16 states provide this type of protection for the families of workers killed on the job.

Under the other state programs, the widow and children suffer tragic losses. Companionship, guidance and family counseling are lost forever, yet the potential lifetime income of the family is completely ignored in awarding death benefits. The maximum for a worker's life is $13,500 in Oklahoma; 300 weeks ($14,250) in Iowa; 350 weeks ($15,000) in Florida.

The cost of improving this aspect of the program would not be excessive. The number of deaths resulting from work injuries is small—less than one percent of all work injuries. Significant improvements could be made in the state programs without placing an unreasonable burden on the consuming public.

Occupational Disease must be given full statutory coverage if a state workmen's compensation law is to function as a viable mechanism.

Thirty-four state programs cover all occupational diseases. The remainder cover only enumerated diseases. This means the worker is protected only for diseases specifically mentioned in the law. A lengthy enumeration of diseases is inadequate because schedules of occupational diseases tend to become obsolete and periodic revision can't keep pace.

COMPARISON OF MAN-DAYS LOST TIME RESULTING FROM WORK INJURIES—WORK STOPPAGES
Selected Years: 1942-1968

Source: U.S. Department of Labor and National Safety Council.

New chemical processes are being introduced into industry at the rate of 500 or 600 each year. New devices such as the laser beam and the increasing use of radioactive substances and radioactive machines are exposing greater numbers of workers to occupational disease hazards.

Each year thousands of workers die from the ef-

West Virginia	66⅔	56 [6]	W,C-18-22 [4]	....	$3,000 [7]	Yes	Full
Wisconsin	70	73	400	20,858 [16]	F.P.	Yes	Full
Wyoming	66⅔	43.85-63.46	W,C-18 [4]	13,000-23,000	7	No	Limited
Federal Employees	66⅔-75	360-405	W,C-18-22 [4]	....	F.P.	Yes	Full

[1] The lower figure represents the benefit for a single worker; the higher the maximum for workers with dependents.

[2] Benefits may not exceed period of time or amounts indicated. F.P. indicates full payment of all medical aid and hospitalization required.

[3] Employer permitted to reject full coverage.

[4] "W" means payment to widow until death or re-marriage; "C" means payment to children until age specified. The higher figure represents age if child is attending approved educational institution. Alaska no age limit; Vermont continues benefits to dependent children regardless of age while they are regularly attending school, and to widows until age 62 if she is then entitled to social security, workmen's compensation benefits may cease, but benefits do not cease in any case until death, re-marriage, or 330 weeks have been paid; Massachusetts continues benefits to children over 18 if they are incapacitated.

[5] Plus an additional $10.00 per month if there are total dependents.

[6] Maximum weekly benefit amount 55 percent of 85 percent of the average wage as computed by the Employment Security Commission in Kentucky, 50 percent of statewide average weekly wage as reported under the State Employment Insurance Act in Vermont, and West Virginia; 55 percent in North Dakota; 60 percent in Rhode Island (but not less than $70.00); 66⅔ percent in Maine and New Jersey and 60 percent of the statewide average weekly wages of production workers in Connecticut.

[7] May be extended by commission without limit; in Kentucky justifiable need must be shown. The commission may authorize up to $25,000 in New Mexico, $21 000 in South Dakota, and extend benefits for three years in Viriginia.

[8] North Dakota provides an additional $5.00 weekly for each dependent, but total weekly benefit cannot exceed former net wages of injured worker.

[9] An additional $12,500 may be ordered by the court.

[10] Dollar maximum does not apply to children under 18, nor to unmarried children over 18 if they are incapable of self-support, nor to widow physically or mentally incapable of self-support.

[11] Disability benefits already made are deducted from death benefits payable. Minnesota limits deduction to $17,500.

[12] Maryland $55.00 for the first 42 days, thereafter ⅔ of statewide average weekly wage; in Ohio during the first 12 weeks of disability the amount is $63.00, but thereafter, the maximum amount drops to $56.00; in Montana benefit is reduced by $5.00 after 26 weeks; in Illinois benefit is reduced to $59.00-$71.00 after 64 weeks.

[13] Massachusetts and Rhode Island provide an additional $6.00 for each total dependent not to exceed average weekly wage of the injured worker. Vermont provides an additional $3.50 for each dependent child under 21.

[14] In cases of occupational disease, no time limit is imposed. If employee with occupational disease is able to continue work, while undergoing medical treatment, medical benefit is limited to $1,000. In cases of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.

[15] Medical and surgical cost during first 12 months; hospital treatment not to exceed prevailing charges for the same period; may be extended if employee's earning power would be substantially restored.

[16] Additional death benefits payable from the state fund for children.

[17] Reasonable medical and hospital services or other remedial care for 6 months and additional 6 month periods upon written request to the Commissioner. Commissioner may grant extension for additional aid.

[18] Reasonable medical, surgical and hospital treatment and supplies, crutches and apparatus including artificial members.

[19] Additional payments out of Medical Disaster Insurance Fund in excess of payments under Workmen's Compensation Act and Occupational Disease Act, maximum $35,000.

[20] Medical Care may be limited under special circumstances.

[21] Not under workmen's compensation law, but State Board of Vocational Rehabilitation authorized to furnish.

* Alabama $47.00, and $18,800 until July 1, 1970; Kentucky $49.00 until July 1, 1970.

fects of coal dust, asbestos, beryllium, lead, cotton dust, carbon monoxide, cancer-causing chemicals, dyes, radiation and pesticides. Other workers suffer long illnesses from the same causes. State legislators, no matter how conscientious can't keep state laws up to date when meeting once every two years. The only sure method of extending protection to workers is to specify that all occupational diseases are covered by the state program without enumerating them.

The lung cancer of uranium miners and the brown lung (byssinosis) of textile workers—both uncompensated—are examples of inadequate occupational disease coverage recently brought to public attention. Situations of this nature, coupled with unresponsive state attitudes, have led to increased interest in federal participation in the program. Congress this year enacted legislation to provide compensation for coal miners suffering from black lung in order to remedy a serious deficiency of this nature in the state programs.

This involves, as a minimum, the dissemination of information and publicity, enforcement of coverage and insurance requirements, supervision of claim settlements, hearing of contested claims, supervision of medical and rehabilitation provisions, promotion of safety and industrial hygiene and collection and analysis of complete records on accidents, claims settlements and benefit payments.

One of the fundamental objectives of our original workmen's compensation laws was to eliminate, as much as possible, the litigation or legal disputation involved in work injury issues. The substitute for the legal right to sue was supposed to be a simple administrative process. The state administrators were expected to make certain that injured workers obtained all their rights without the need for litigation.

Agency spokesmen constantly express their concern for injured workers and their families. They are always quoted as advocates of adequate workmen's compensation benefits and medical care, staunch supporters of accident prevention and great believers in vocational rehabilitation.

However, the record indicates that many state workmen's compensation administrations permit insurance carriers to perform most of the administrative functions related to the law. The carrier receives the claim for compensation, accepts it or denies it, controls payments and terminates benefits with little supervision by the state agency.

This lack of administrative concern for workers covered by a state program is difficult to understand. Many workers—especially young and unorganized workers—have little knowledge or opportunity to become informed on workmen's compensation matters. Far too often, injured workers get their compensation advice from company supervisors or insurance representatives. The least state agencies should do is notify every injured worker of his compensation rights.

The notice should be sent as a routine matter upon receipt of an injury report. It should state clearly and concisely the procedures the worker or his survivors should follow to establish a claim. If the state agency in New York, Wisconsin and elsewhere can provide this service to injured workers, all the state agencies should be able to provide similar services.

Federal participation is essential because of the continued laxity and unresponsiveness, particularly during the past 30 years, on the part of state administrators and legislators. That laxity is the major reason the AFL-CIO adopted a strong policy resolution at its last convention reaffirming its long standing support of federal workmen's compensation standards.

The states have had ample opportunity during the past 50 years to enact effective workmen's compensation legislation. AFL-CIO state affiliates have repeatedly urged passage of state legislation designed to modernize the program. In fact, to the extent the public has a voice in the program, they have indicated a clear desire for improvement. This was seen most recently during the 1968 elections in the state of Arkansas, when a workmen's compensation initiative designed to improve the Arkansas program was readily approved by the voters in that state.

Also in 1968, Congress looked at the state programs and found a need to provide more adequate workmen's compensation protection for law enforcement officers. As a result, Congress—reflecting public concern—extended the protection of the Federal Employes' Compensation Act to local and state law enforcement officers under limited conditions.

Currently there is interest in extending this protection to both policemen and firemen under any circumstances. This development clearly reflects a lack of confidence in the states to respond to society's need in this area of workmen's compensation. A similar concern is developing in regard to occupational diseases. Last year, legislation was introduced in Congress to provide workmen's compensation protection for uranium miners. This year legislation has been enacted to protect coal miners, but these provisions have only limited application and fail to provide the comprehensive reforms needed.

The need for a much greater federal voice in the workmen's compensation program has been recognized by some members of Congress. Legislation designed to establish minimum federal workmen's compensation standards was introduced in Congress in 1969 by Rep. Carl Perkins (D-Ky.) and others.

It would establish minimum federal standards that

ONE YEAR'S TOLL
On-The-Job Injuries in 1968

Source: National Safety Council.

state laws or employers would be required to meet. The standards would be based on the provisions of the Longshoremen's and Harbor Workers' Act.

This bill is the first proposal submitted to Congress that would establish minimum federal workmen's compensation standards, and it is, in the opinion of the AFL-CIO, a significant step in the right direction. It represents a partial response to the nation's interest in establishing and maintaining an adequate system of workmen's compensation. It would firmly commit the federal government to a partnership role in the program. It would strengthen the administration of many state programs, since the benefit structure of only 11 state programs and the FECA equal or exceed the provisions of the Longshore Act. It would also reduce the work-injury cost presently being imposed upon community resources.

The proposal represents only a partial solution, because the Longshoremen's and Harbor Workers' Act also needs to be improved. It meets many of the workmen's compensation standards recommended by the AFL-CIO and meets more of the standards than many of the state programs, but it fails to meet all of them. Therefore, the act itself deserves congressional attention.

This act was last amended in 1961. At that time it was considered a pace-setter among the states, but it has recently lost this position. The benefit structure has lagged behind changes in the wage levels of covered workers. The limitations on medical care are obsolete in terms of a modern compensation program. Workers should be given the right to select a physician of their own choice for treatment and the retroactive benefit period should be reduced.

These are some of the changes needed to modernize the Longshore Act in order to make it a meaningful workmen's compensation standard. If it is to be used as a federal standard, immediate legislative action is needed to restore this act to a place of prominence in the field of workmen's compensation.

Toward A Model Law—the AFL-CIO Program

The following minimum standards for an adequate workmen's compensation program are recommended by the AFL-CIO:

1. Compulsory coverage, with no exemptions for small firms.
2. Full coverage of agricultural workers.
3. Benefit levels sufficient to maintain a decent standard of living for injured workers and their dependents, with maximum weekly benefits of not less than two-thirds of the injured worker's average weekly wage.
4. Reciprocity of benefit rights between jurisdictions.
5. Time limits within which an employe must file a claim for occupational disease should be at least one year after the date of disablement and the worker has knowledge of the nature of his disability and its relation to his job.
6. Full statutory coverage of all occupational diseases.
7. Coverage of diseases caused by ionizing radiation.
8. Full medical benefits for job-incurred personal injuries and occupational diseases.
9. Full compensation protection under second injury funds.
10. Choice of qualified physician by injured workers.
11. The workmen's compensation agency should have the authority to supervise and control medical care.
12. The workmen's compensation agency should include a rehabilitation division which should promote full utilization and development of rehabilitation facilities for the benefit of injured workers.
13. Maintenance benefits during rehabilitation.
14. Administration under a state agency rather than by the courts.
15. An exclusive state compensation fund.
16. Benefits for the totally disabled for the period of disability.
17. In case of death, benefits should be paid to the widow until her death or remarriage and to children during their minority and to other dependents during the period of their inability to support themselves.
18. Minors under 18 who are injured on the job if employed in violation of any state law should be paid double benefits.
19. Prohibition of special contracts with employers whereby a worker with a specific physical defect waives his right to compensation in the event of subsequent injury.
20. Prohibition of lump-sum settlements and compromise of rights to full medical care under compromise and release settlements unless the workmen's compensation agency approves such a settlement on the advice of the appropriate state rehabilitation unit or agency.
21. Judicial review should be limited to consideration of the record of the workmen's compensation agency on questions of law only, without trial de novo. In addition, there should be an appeals board which has no administrative responsibilities and from which appeal on matters of law only can be made to the highest court in the state.

BLACK LUNG: TRAGEDY OF APPALACHIA

BY BERNARD ARONSON

Bernard Aronson is a staff writer for the Raleigh Register *of Beckley, West Virginia. His article here was produced under the auspices of the Southern Regional Council's Labor Education Project.*

Sometimes he coughs so hard at night I can't sleep, the bed shakes so.—Elizabeth Vanderpool, wife of Abraham Vanderpool, coal miner, Emma, Ky.

It is one thing to die at 75 of a stroke or a coronary after the productive life of a physician or U. S. Senator, and another thing to die after 20 years of breathlessness where you couldn't mount stairs without stopping two or three times.—Dr. Murray Hunter, testifying before the Senate Subcommittee on Labor hearings on the Federal Coal Mine Health and Safety Act.

If you visit Chester Fletcher at his home in Frozen Creek, Kentucky, more than likely he'll take you out to his shed to show you the painted outline of a fish he caught some years ago. Chester is proud of the fish.

Over 15 pounds. The largest of its kind caught around here.

But Chester doesn't go fishing anymore. Chester doesn't do much of anything anymore. And after you walk the fifteen feet back to the house with him and mount the stairs and watch him gag and choke and struggle to breathe, there's no need to ask why.

The symptoms are well known to anyone who travels in Appalachia. Chester was a coal miner all his life, and Chester has black lung.

Black lung—Coal Workers' Pneumoconiosis or "CWP" — is caused by breathing coal dust. Minute particles of coal dust accumulate in a miner's lungs over the years. Gradually, a sufferer finds himself short of breath. His work becomes exhausting beyond endurance. Even if a miner leaves the mines, the disease often gets progressively worse. In time, many miners become so short of breath that the mildest exertion, a walk up a hill, is an ordeal.

Eventually, black lung kills its victim. He dies from dust-induced emphysema or from heart failure because the victim's scarred lungs cannot transfer enough oxygen to the blood and the heart overexerts trying to pump increasingly greater amounts of blood through the lungs. There is no treatment or cure.

PAGINATION INCORRECT

Chester worked for $8 and $10 a day in the small truck mines that dot the mountains of his native eastern Kentucky. For most of those years, Chester operated a cutting machine which ripped the exposed coal from the seam. He compares the dust raised by the machine to "sawdust flying off a chain saw".

> I've cut in places so dry and so dusty that I couldn't see my buddy five feet away from me, just sort of see his light. Looked like a little lightning bug.

The mines didn't have many fans, Chester says, and the operators didn't "keep the air up".

> You'd get get down in that bad air and your chest would burn like it's on fire nearly and your heart thumps, seems like it's going to knock out of you. I really got dust, just about smother you down. And talk about a headache!

Why did Chester work under such conditions? The question has no meaning in an area like eastern Kentucky where coal mining is the only available work.

> It was go in and do that or lose your job, there was no choice.

Chester started to have lung trouble "about 15 years ago." His breathing got short and he had trouble keeping up with his work. Like most coal miners in Appalachia who develop the same symptoms, Chester stayed in the mines.

> I had to support the family; the kids weren't married off then. I had quite a bit of responsibility.

Despite a fourth grade education, Chester was of value to the coal industry because he knew how to repair the complicated machinery used in mining. His wife, Dulcenna, explains that his skills kept Chester from losing his job, even though he was no longer able to do the grueling manual labor involved in coal mining.

> He couldn't have worked if they hadn't shielded him for what he knowed. He always knew a lot about machinery. He can just pick up any machinery and go ahead with it. They'd keep him there for what he knowed; He was too sick for hard labor.

Chester recounts one way his employer lightened the load in order to retain him in the mines:

> Coming to work they had timber close to the mine (Used to hold up the roof of the mine). The man that owned the mine asked the men as they came along to bring the timber on their shoulder, but he told me, 'Chester, you don't have to.' Some of the boys raised sand about it. I couldn't help it. I said, 'Boys, I'd take one if I had strength and breath, but I ain't.'

His fellow miners urged Chester to quit. "But I couldn't. I hung on and suffered with the smothering six or eight months and I finally just had to give it up." Chester left the mines in 1961 when he was 60 years old.

Since that time he and Dulcenna have lived off an $80-a-month workmen's compensation award Chester received in 1966 after injuring his back while working on a federal light work program. The award will soon expire, leaving Chester and Dulcenna $56 a month old age Social Security on which to live.

Chester's lung trouble has become progressively worse since he left the mines.

> I can't survive hardly, can't do anything, just mope around the house.

Dulcenna says,

> The other day I was out there hoeing potatoes. He came out and just hoed two or three hills and he just went to going all to pieces trying to get his breath. He just threw the hoe down and tried to make it back to the house.

Though he has retired from the mines, Chester finds little comfort in his "leisure time".

> I like to hunt better than anybody, I guess, but sometimes I get a little too far from the house and I like not to make it back.

marched on the statehouse in Charleston to gain black lung compensation under the law. Now, BLA members from five states—West Virginia, Kentucky, Virginia, Ohio and Illinois—journey to Washington, D. C. to demand the promises of law be carried out.

The discontent is strongest in Appalachia, where denial rates are higher than in any other part of the country.

MINERS' CLAIMS DENIED AS OF APRIL 30, 1971 (Social Security figures)	
KENTUCKY	78%
OHIO	76%
VIRGINIA	72%
TENNESSEE	68%
WEST VIRGINIA	62%
NATIONWIDE	58%

Most of the claims[7] have been denied solely on the basis of a single chest x-ray. Chester Fletcher's claim is one of them.

THE X-RAY REQUIREMENT

The easiest way to reduce the incidence of pneumoconiosis that I know of, and the cheapest way, is to take lousy X-ray films.[8]—George Jacobsen, M.D., Chairman, Dept. of Radiology, University of Southern California School of Medicine, Los Angeles, Calif.

Chester Fletcher signed up for federal black lung benefits with hundreds of other miners in a makeshift Social Security office in the Hazard, Ky., high school gymnasium in January, 1970, less than two weeks after passage of the black lung program. Seven months later, Chester received a letter from the Social Security Administration instructing him to go for an X-ray examination.

> I went to the Hazard clinic and they just shoved me in there in front of the X-ray and just shot me like that. I guess it was a minute or so and over. I never saw a doctor or anything.
>
> Another six months went by.
>
> "The next thing I know I got this letter . . ."

Dated January 1971, the form letter from Social Security read:

> The evidence we received in your case, including chest X-ray, does not show that you have pneumoconiosis. You, therefore, do not meet the requirements of the law, and your claim must be denied.

The letter suggests that evidence other than X-ray findings was examined before the decision was made to deny Chester black lung benefits. In fact, no other evidence was requested in Chester's case, nor would it have been considered had it been submitted voluntarily. Unless a miner is willing to have a portion of his lung surgically removed in a painful operation known as a biopsy, his claim is judged entirely on X-ray evidence. usually a single chest exposure. (X-ray evidence does not guarantee benefits, however, unless the miner has the most advanced stage of black lung—PMF—progressive massive fibrosis, known as complicated black lung. In the absence of PMF, a miner with positive X-ray evidence must still prove his pneumoconiosis is disabling.)

---

[7]According to the First Annual Report to Congress on the Administration of Part B of Title IV of the Federal Coal Mine Health and Safety Act, Department of HEW, June, 1971 — 62.3% of black lung denials are based on failure to produce evidence of black lung. The percentage of medical denials based on negative X-ray is actually higher, because SSA included in their tabulation non-medical denials such as failure to prove employment in coal mining and denials based on withdrawn applications. (Table 5).

[8]P. 111, Papers and Proceedings of the National Conference on Medicine and the Federal Coal Mine Health and Safety Act of 1969, conducted by the Division of Environmental Health Sciences, School of Public Health, University of California, Berkeley, and the Department of Community Health Practice, Howard University College of Medicine, June 15-18, Washington, D.C.

PAGE (s) MISSING

The facts behind Chester's claim remain unknown to the agency that decided its fate—Chester's years in the mines, the dust, being shielded from heavy work. Even the fact that a local physician diagnosed silicosis[9] in 1966 had no bearing on Chester's claim, though silicosis is compensable under the black lung program as a dust disease of the lung caused by coal mining.

It is unlikely that those who set the standards which deny miners their black lung benefits have ever seen, as Dulcenna has seen,

> Many a miner cough and spit that out when they come out of the mines, big mouthfuls of that old black dust.

Cost-conscious administrators, who fear more "liberal" diagnostic standards would compensate "undeserving" claimants might be surprised to learn that the great majority of Appalachian miners who apply for black lung benefits left the mines reluctantly and would return if they could. Union mine wages—$34 to $37 a day—are good by mountain standards. But even Chester, who sometimes worked in small non-union, "doghole" mines for $10 a day, says,

> I wish I was able to make mine. I'd be pleased to do that.
>
> I tell you what's the truth. I get up there trying to walk up those streets and I'll stop and stand and lean up. I get ashamed of myself, people looking at me and me just . . .
>
> Chester doesn't finish the sentence.

A man with a fourth grade education, Chester Fletcher built a home, raised a family, and made it on his own by working in the mines. Now he is no longer able to work and a monthly check will never substitute for what he feels is his lost dignity.

Social Security officials never bothered to ask Chester why he no longer goes fishing or why he can't stand the tightness of a belt around his waist. They have never watched him climb the stairs to his house.

Chester Fletcher stepped in front of the X-ray machine at the Hazard clinic and 60 seconds later was denied black lung benefits.

□ □ □

> *The committee is of the belief that . . . the X-ray should not act as the sole determinant in denying a claim when other evidence may establish pneumoconiosis.* — House Committee on Education and Labor, Report No. 92-460—Black Lung Benefits — clarifying Congressional intent regarding diagnostic standards for the federal black lung benefits program.

Though the Social Security Administration (SSA) is empowered under Title IV to set "standards" for determining if a miner is totally disabled by black lung, the X-ray requirement set by SSA seems inconsistent with the intent of the law.

The reliability of X-ray evidence was debated before both House and Senate committees. Judging from the testimony, neither committee intended X-ray findings to be an absolute requirement for benefits. In the report of the Senate Committee on Labor, Senator Harrison Williams, the Chairman, quotes the Surgeon General's testimony that X-rays do not always reveal pneumoconiosis:

---

[9]The terms "black lung" and "coal worker's pneumoconiosis" were rarely used in American coal fields until recently. Silicosis was thought to be the only coal mining disease American miners suffered. It was not thought to be prevalent in bituminous (soft coal) fields, such as those in southern Appalachia. Most miners with lung troubles in Appalachia were diagnosed for non-compensable ailments such as miner's asthma, tuberculosis, and bronchitis. Miners who complained of shortness of breath were regularly diagnosed for "anxiety tension state". One radiologist in southern West Virginia says until five years ago, he regularly encountered chest X-rays from physicians that showed massive lung lesions labeled "normal miner's chest".

> The committee heard testimony to the effect that X-ray examination alone could not always establish the existence of pneumoconiosis. As the Surgeon General testified, frequently miners who have shown no X-ray evidence of the disease are found, in an autopsy, to have contracted the disease . . . —Senate Committee Report No. 91-411, Federal Coal Mine Health and Safety Act, pg. 21.

The following exchange from the House Labor Committee Hearings on the 1969 Coal Mine Health and Safety Act took place between Congressman Carl Perkins, Chairman of the House Committee on Education and Labor, and Dr. Raymond Moore, Associate Commissioner of the Environmental Health Control Administration, Department of Health, Education and Welfare:

> Chairman Perkins: . . . You are telling the committee that to correctly evaluate pneumoconiosis it is altogether necessary to examine all of the symptoms instead of relying on an X-ray . . . is that correct?
>
> Dr. Moore: Yes, sir, you are correct.

In the language of the Act, Congress clearly rejects the view—advanced by witnesses like Dr. Keith Morgan of the U. S. Public Health Service—that pneumoconiosis be defined as a disease that has a characteristic X-ray pattern (Senate Hearings, Part 2, pg. 737).

There is no mention of X-rays in the Act's definition of CWP as a "chronic dust disease of the lung arising out of employment in an underground coal mine."

In addition, Congress makes express provisions that a variety of means—in addition to X-ray—can be used to establish a claim.

> If a miner is suffering . . . from chronic dust disease of the lung which (A) when diagnosed by chest roentgenogram . . . yields one or more large opacities . . . (B) when diagnosed by biopsy or autopsy, yields massive lesions . . . (C) *when diagnosis is made by other means,* would be a condition which could reasonably be expected to yield results described in clause (A) or (B) . . . then there shall be an irrebuttable presumption that he is totally disabled due to pneumoconiosis . . . —From Title IV, Part B, Sec. 411(a) (3), Federal Coal Mine Health and Safety Act. (emphasis added).

The experiences of many black lung claimants with the reliability of X-rays have borne out Congress's refusal to make them an absolute requirement for benefits.

Howard Ray Massey of Ghent, West Virginia, a coal miner for 39 years, applied for benefits in January, 1970, and was sent to a mobile X-ray unit for a single chest X-ray. According to SSA, the X-ray was negative. Massey's claim was denied.

Massey appealed the decision. Social Security sent him a letter which said its expert radiologist had re-read the X-ray and found no pneumoconiosis. His appeal was denied.

Howard Massey searched through records of previous X-rays and found a series taken in 1967 by Dr. Charles Nelson, the chief radiologist at the Beckley Appalachian Regional Hospital (BARH), which clearly showed pneumoconiosis.

Ed Wyco, a former coal miner from Stanaford, West Virginia, says that local SSA officials told him there was no reason to appeal his denial. The X-ray taken at a nearby clinic had been negative. Therefore, Wyco didn't have black lung.

Wyco knew he had severe lung trouble from his years in the mines and went to the X-ray lab at BARH. This time, black lung showed up on the X-ray.

Dr. Nelson who X-rayed both Massey and Wyco will not do X-ray studies for the SSA using the limited examination they prescribe for black lung claimants. After X-raying more than 30 thousand

coal miners, he doesn't believe SSA's single-shot X-ray technique is sufficient to determine if a patient has X-ray evidence of pneumoconiosis.

An X-ray merely reveals shadows. In the case of black lung, the shadows produced by coal dust deposits on the lung can literally be tiny as a pinpoint, if they show up at all. The likelihood of their appearance often depends on the technical expertise of the radiologist.

Dr. Nelson, has developed a technique which helps black lung shadows show up on the X-ray film. In addition to the highest quality film, he uses a low kilovolt setting and a process known as a Valsalva maneuver which reduces the prominence of the blood vessels in the lung, vessels which otherwise obscure black lung shadows.

Miners receive a series of four X-rays at the Radiology Department of BARH. Each X-ray film is examined before the patient leaves. If a film is not as readable as possible, the X-ray is repeated.

Despite all of these efforts (none of which are made by the SSA) to get black lung shadows to appear on X-rays, the shadows do not always show up. The BARH radiology department has studied approximately 100 miners whose pneumoconiosis was only revealed after the second or third series of X-rays, and approximately a dozen whose black lung did not show up until the fourth X-ray series.

Dr. Nelson points out that some pneumoconiosis does not show up on X-rays at all. Often, he maintains, if a miner has severe emphysema, the emphysema obliterates black lung shadows. Other radiologists[10] support this claim. He adds that there is no evidence that X-ray findings correlate with disability. Studies on miners show little relation between disability and X-ray evidence of black lung.[11]

The question of X-ray diagnosis is still debated in the medical community. Many physicians maintain X-rays are the only

[10] "Black lung cannot be seen on conventional X-rays. An X-ray does not provide any reliable evidence for evaluation of pulmonary function or disturbed pulmonary function in early pneumoconiosis."—Dr. Eugene Pendergrass, past president of the Radiological Society of North America and Professor emeritus of radiology at the University of Pennsylvania, quote by Associated Press, March 3, 1969, *Charleston Gazette*, p. 3.

"Unfortunately, the tool of X-ray . . . is a rather crude tool, all it does is show shadows . . . the fact that we do not have positive X-ray evidence does not rule out that a patient or a miner does not have coal workers' pneumoconiosis." — W. A. Laqueur, M.D., Senate Hearings, Part 2, p. 702.

"Coal Workers Pneumoconiosis is characterized pathologically by the presence of focal deposits of dust in the interstitial tissues of the lung. Almost always these deposits are accompanied by focal emphysema. It is probable that in most instances these individual focal deposits are too small to cast a recognizable radiographic shadow. However, when they are present in sufficient number these foci superimpose and become radiographically visible. In other words, early in the course of CWP the chest roentgenogram may be entirely normal. As the disease progresses and the emphysema becomes marked, the concentration of focal deposits per unit volume of lung (profusion) diminishes. When the emphysema is extreme, the profusion may be such that again the focal deposits may be no longer radiologically recognizable." — letter from George Jacobson, M.D. Professor and Chairman, Dept. of Radiology, School of Medicine, University of Southern California, Los Angeles.

means short of biopsy or autopsy to diagnose pneumoconiosis. But though the debate is unresolved, the SAA continues to arbitrarily side with the most restrictive opinion against the claimant and contrary to the intent of the Congress.

In the meantime, disabled miners die every year from lung disease while appealing black lung denials.

DISABILITY REQUIREMENTS

. . . *In tests one should cover the broad spectrum of what an organ does. The lung definitely does more than just breathing. Therefore, specification of the ventilatory test which is used to diagnose smoking emphysema would be absolutely unjust in my opinion.*—W. A. Laqueur, M.D., Director of Laboratories, Chief Pathologist, Beckley Appalachian Regional Hospital. Testimony before Senate Subcommittee on Labor, Federal Coal Mine Health and Safety Act, Part 2., pg. 707.

If a man's whole future life is at stake you have to take the time and money to consider the whole person. —Dr. Bertram Carnow, Professor of Medicine and Chairman of the Dept. of Environmental Health, University of Illinois Medical School. (Commenting on the SSA's sole reliance on the ventilatory or simple breathing test for determining black lung disability.)—Quoted from the *Raleigh Register* newspaper, Beckley, W. Va., Sept. 12, 1971.)

Miners who meet SSA's X-ray requirement do not necessarily receive black lung benefits. In order to qualify for benefits, claimants must prove they are totally disabled due to pneumoconiosis. X-ray evidence of progressive massive fibrosis is automatically presumed proof of disability under the law.[12]. A small minority establish their disability under this automatic provision. The great majority of claimants who have X-ray evidence of black lung has to establish disability through additional medical tests.

Miners are disabled in a variety of ways by pneumoconiosis and a variety of different impairments are compensable under the regulations established by the SSA.[13] But a miner is only tested for one of the compensable impairments he may be suffering.

Claimants who overcome the X-ray requirement are sent for a ventilatory study known as a simple breathing test. It measures the ability of a person at rest to breathe air in and out. It is not a test designed particularly for black lung. Rather, it is a common test for obstructive lung diseases—such as bronchitis and smoking emphysema—which limit a person's breathing.

Extensive studies of disabled coal miners have found little correlation between miners' disability and the results of the simple breathing test.[14] These studies have shown the primary impairment in

[12]Title IV. Part B., Sec. 411 (c), (3) (A) 1969 Coal Mine Health and Safety Act.

[13]Federal Register, Vol. 35, No. 67, Tuesday, April 7, 1970, 404.421 lists six separate criteria a miner can satisfy to establish his pneumoconiosis is totally disabling.

[14]"Disabling respiratory insufficiency occurred in the absence of . . . significant ventilatory insufficiency. Impairment of oxygen transfer was commonly associated with disabling symptoms regardless of . . . ventilatory function." Respiratory Function in Southern Appalachian Coal Miners (See other studies listed in footnote 11).
"A single test of ventilation is inadequate to assess disability, and a wide range of tests measuring lung volumes, ventilation, diffusing capacity, and arterial oxygen saturation on exercise is needed." *Results of Respiratory Function Tests in Miners,* M. Catterall, M.D. and I. Hunter, M.D., *The Lancet,* Jan. 16, 1965.
"The pulmonary function tests most easily carried out clinically are not very sensitive and measure only the ventilatory function. Changes in ventilatory function are relatively minor in simple CWP and fail to correlate with radiographic changes" — *Coal Workers' Pneumoconiosis — State of Knowledge and Research Needs,* Environmental Health Sciences Advisory Council, June 17, 1969.

disabled coal miners to be an impairment of the lungs' ability to transfer oxygen to the blood. Black lung victims are able to breathe air in, but are unable to transfer enough vital oxygen to the bloodstream. Or as many miners put it, "I don't have any trouble getting my air in. It just doesn't do any good when it gets there."

According to Dr. Donald Rasmussen, Director of the Pulmonary Laboratory of the Beckley Appalachian Regional Hospital:

> Any meaningful assessment of respiratory function must include assessment of gas (oxygen) transfer . . . regardless of roentgenographic (X-ray) findings or ventilatory function.

The SAA acknowledges in its First Annual Report to Congress that miners suffer from impaired oxygen transfer.

> Breathing impairment may also result from reduction in an individual's capacity to transfer oxygen from his lungs into his blood stream where it is needed to provide energy for working. (pg. 22)

Although SSA compensates a miner who has a normal breathing test but whose oxygen transfer is impaired, it doesn't test a miner to see if he has this impairment. It relies exclusively on the simple breathing test, a test which reveals nothing about oxygen transfer.

According to Dr. John Rankin, Professor of Medicine and Chairman of the Department of Preventive Medicine at the University of Wisconsin, "A miner can have a perfectly normal breathing test and be severely disabled."

Rankin was one of a team of twelve medical specialists who examined a group of thirty miners at BARH pulmonary laboratory September 11, 1971 on a grant from the Field Foundation. All of the miners had been denied black lung benefits. Following the examinations, the team issued a statement which labeled as "unduly and unnecessarily restrictive" the SSA's sole reliance on the simple breathing test as a measure of disability. (The full statement and identification of signers appears on page 63. The statement used the technical term "spirometry" for simple breathing test.)

The SSA has never explained why it compensates miners for impaired oxygen transfer but doesn't test them to determine if they have the impairment. In its Annual Report to Congress (pg. 22), the SSA says:

> Medical resources to perform these tests are in extremely short supply in most of the areas in which black lung claimants are concentrated.

The contention is indisputable. There are no such resources available to black lung claimants in Eastern Kentucky. There is one such facility in southern West Virginia.

The SSA points out that coal miners are often disabled by an impairment of oxygen transfer. And the SSA accepts such an impairment as proof that a miner is totally disabled under the black lung benefits program. The SSA points out the tests needed to establish this disability are scarce in the areas where most black lung claimants live.

Somehow, from all of these facts the SSA has drawn the conclusion that it should simply ignore the need to test miners for this impairment. Roughly a third[15] of the miners whose black lung claims are denied are turned down on the basis of the simple breathing test without benefit of oxygen transfer tests the SSA maintains are necessary to determine disability.

ASSISTING THE CLAIMANT

Because the black lung program is new, is different from our regular

[15]The First Annual Report (Table 5) says that 29.8% of the claims denied are based on failure to prove pneumoconiosis is disabling. As explained in Footnote 7. The figure is not based on 100% if non-medical denials are excluded from the tabulation. The great majority of such denials are based on the simple breathing test only.

program, and has several quite unique features, the potential for applicant misunderstanding is high. Careful attention should be given, therefore, to promoting assistance and to providing understanding to claimants as necessary in pursuing their benefit rights.—Coal Miner's Benefit Manual, SSA Bureau of Disability Insurance, Transmittal No. 51, Coal Miner's Benefit Manual.

Some people want to know how I keep my school-girl figure so long... All they have to do to get theirs back is come to Perry County and try to sign up for something on Social Security.—Granny Hager, widow of a disabled coal miner, Perry County, Ky.

They've got it swept under the rug and the rug pulled over it—James Gilliam, disabled miner, Clay County, Ky.

Despite a professed intent to serve the claimant in every possible way, and despite the efforts of many conscientious workers at the local level, the SSA administers the black lung benefits with a heavy-handled paternalism and a bureaucratic passion for secrecy that frustrates more often than helps the claimant. The SSA's attitude is exemplified by the following passage from the Inter-agency Coal Miner's Benefits Manual instructing SSA personnel with regard to a claimant's request to see his black lung claim file:

> Material not revelant to the determination which may be harmful to the claimant's physical or mental well-being (should be) screened out before release or review of folder contents by the claimant.

Though the SSA places the burden of developing a claim on the claimant, it authorizes its personnel, who may have only the most fleeting involvement in a miner or widow's claim, to decide what the claimant should or should not see in his file.

Many miners have charged they have been denied the right to examine their files. Disabled miners in Logan County, W. Va., picketed the local Social Security office in 1971. Their list of demands included the right to examine their own claims files and be treated "like men, not dogs."

A claimant's chance for benefits is greatly increased if he understands all of the requirements under the law. But the SSA does not as a matter of policy inform claimants about the intricacies involved in applying for benefits. Miners, for instance, whose X-rays are read as negative are not told as a matter of course that they may obtain X-rays by a private radiologist nor are they encouraged to do so.

The disability requirements are particularly complex. Yet, the SSA's standard denial letter contains only the following information about disability. On the back of the letter under the heading "Further Information About Disability Requirements," the SSA informs the claimant that a miner may be considered totally disabled if:

> (1) because of the pneumoconiosis, he has a severe breathing impairment (as shown by special breathing tests) that prevents him from engaging in any substantial gainful work.
>
> or—
>
> (2) he has another severe impairment that results from pneumoconiosis

There is no mention of the fact that (1) the simple breathing test only measures one of several possible compensable impairments a miner may suffer, (2) that oxygen transfer tests are also accepted as proof of disability, or (3) that miners often do not qualify for benefits when tested on the simple breathing test, but qualify when tested for impaired oxygen transfer.

There is no mention at all that enlargement of the right side of the heart, and other heart conditions associated with pneumoconiosis, are accepted as proof

of disability, despite a normal breathing test. Ironically, many miners left the mines because of a heart condition; few realize certain heart abnormalities are a proof of disability under the federal black lung program.

There are virtually only two kinds of denial letters sent to miners. Denial is based on (1) lack of evidence of black lung and/or (2) lack of proof of disability. (2.0% are denied because a miner does not have proof he worked in the mines.) If a miner is denied because his X-ray is negative, his denial states under the heading "Reason for Denial":

> The evidence we received in your case, including chest X-ray, does not show that you have pneumoconiosis. You, therefore, do not meet the requirements of the law and your claim must be denied.

If the miner has a positive X-ray but fails to establish that he is totally disabled, the letter states:

> The evidence we received in your case shows that you have a pulmonary condition, but it does not show you are "totally disabled" from it. You, therefore, do not meet the requirements of the law and your claim must be denied.

The letters communicate little more than the fact that a claimant won't be receiving benefits. A miner denied for lack of a positive X-ray doesn't know what his X-ray revealed. The miner denied because he hasn't established disability has no inkling what additional evidence is needed to establish his disability. Many claimants appeal only to have their claims judged by the same evidence upon which the original claim was denied. It is little wonder the actions of the SSA are looked upon by black lung claimants in Appalachia as capricious and arbitrary, a mystery to be divined rather than the decisions of an agency mandated to serve the public.

DUST CONTROL

At work the miners are covered with dust. It's in their hair, their clothes, and their skin. The rims of their eyes are coated with it. It gets between their teeth and they swallow it. They inhale so much of it into their lungs that until they die they never stop spitting up coal dust. Some of the miners cough so hard they wonder if they have a lung left. —Black Lung, The Road to Dusty Death, by Loren E. Kerr, M.D.

There are no safe dust levels.—I. E. Buff, M.D.

The greatest killer of coal miners is the air they breath in the mines. The 1969 Coal Mine Health and Safety Act set the first limits on respirable coal dust in American mines. The U. S. Bureau of Mines is charged with enforcement of dust standards. Their record to date offers little grounds for hope that black lung will soon be eliminated from America's coal mines.

As defined by the act, respirable coal dust particles are 5 microns or less in size (a micron is one twenty-five thousandths of an inch). Effective June 30, 1970, the amount of such dust to which a miner may be exposed cannot exceed three milligrams per cubic meter of air. After December 30, 1972, the concentration cannot exceed 2 milligrams. (Operators who were unable to comply with the 3 milligram standard could obtain non-compliance permits for up to one year during which time the standard could not exceed 4.5 mg. Permits will also be granted after December 30, 1972, permitting non-compliance with the 2 mg. standard.)

In addition to requiring Bureau inspectors to take periodic dust samples, the act requires mine operators to submit dust samples to the Bureau for evaluation.

In November, 1970, a report prepared by Robert Kirk Jones, Industrial Hygienist for the Kentucky Department of Health, revealed some Kentucky coal miners were

breathing 201.73 mg.[16] of respirable coal dust, roughly 67 times the desired maximum of 3.0 and 45 times the permitted maximum of 4.5 mg.

The report, entitled *Airborne Dust Studies of Kentucky Coal Mines,* was based on 2,100 respirable dust samples from 860 underground coal mines. A total of 57.4% of the mines sampled exceeded the desired federal standard, and 42.2%[17] exceeded the maximum standard permitted under the law. Even foremen and superintendents were found to be breathing more than twice the permitted amount of respirable dust.

In May, 1971, the Government Accounting Office (GAO) released an 80-page implementation report on the Coal Mine Health and Safety Act which found that in the two Appalachian districts studied, 1% of the required health inspections had been performed by the Bureau as of December 31, 1970.[18] As of March 1, 1971, 22% of the mines in the Mt. Hope district (580 mines) and 42% of the mines in the Norton district (1,365 mines) had not initiated the dust sampling procedures that were required as of June 30, 1970.[19] In addition, 55% of the dust samples taken by mine operators were found to be unusable because (1) erroneous data was submitted, (2) samples were taken on shifts where production was less than 50% of normal production, (3) sampling equipment was "mishandled".[20]

By June 28, 1970, all mine operators were required to submit ventilation plans specifying the dust control practices employed in each mine. The GAO review found that "no ventilation plans had been approved by the required date". By December 7, 1970, 7% of the required plans in the Mt. Hope district and 11% of those in the Norton district had been approved.[21] According to GAO, ventilation plans approved by the Norton district "contained about half of the provisions".[22]

As of June 5, 1971, the Bureau of Mines reports that 19% of the 2,273 active underground coal mines have all of their sections in compliance with required respirable dust standards; 81% of the nation's coal mines exceed federal dust standards.

The Bureau also reports as of the same date that 1,535 mine sections had not begun to take dust samples and 1,297 sections had not completed a basic sampling cycle. The Bureau says it believes many of these sections are "paper sections" which are no longer active.[23]

"I never used to cough, but now I can't get rid of it . . . And the funny thing is that I spit . . . I spit . . ."

The rasping noise came from his throat again, and he spit another black blob.

"Is it blood?" Etienne finally had the courage to ask.

Bonnemort slowly wiped his mouth with the back of his hand.

"It's coal. I've got enough in my guts to heat me till the day I die. And I haven't set foot down there for the last five years. I guess I stored it up without even knowing it . . . ."
—From *Germinal,* a novel about French coal miners written in 1885 by Emile Zola

---

The passage from *Germinal* could have been written today by an American novelist writing about coal camps in Appalachia. Dr. Donald Rasmussen predicts disabling miners' lung disease of epidemic proportions in the near future among young miners who worked most of their years in the tremendous dust levels raised since the mines were automated in the 1950's. Miners in their thirties who are old men are not uncommon in Appalachia.

The tragedy is not simply that a quote from *Germinal,* written in 1885, is still timely today. The tragedy is that as long as coal is valued more than the lives of the men who mine it, the quote will remain timely.

NATIONAL COMMISSION ON STATE WORKMEN'S COMPENSATION LAWS
1825 K STREET, N. W.
WASHINGTON, DC 20006

November 19, 1971

FOR IMMEDIATE RELEASE

Public hearings in Atlanta, Georgia and in Washington, D. C. were announced today by the National Commission on State Workmen's Compensation Laws. The Atlanta hearing will open at 10:00 a.m. on January 10 and continue through January 11, 1972. The Washington hearing will open at 10:00 a.m. on January 24 and is scheduled to run through January 26 if three days are necessary to accommodate those wishing to testify.

The Atlanta hearing will be held in Room ~~1021~~ 556, ~~1776~~ 275 (Federal Bldg.) Peachtree Street, N. E., and the Washington hearing in Room 2010, New Executive Office Building, 726 Jackson Place, N. W.

The Commission's announcement invites interested persons to make oral or written presentations on the general question assigned to the Commission by the Occupational Safety and Health Act of 1970: whether state workmen's compensation laws provide an adequate, prompt, and equitable system of compensation. In addition, comments are solicited on research methods and information sources available to the Commission.

Persons interested in appearing at the Atlanta hearing must file a notice with the Commission at 1825 K Street, N. W., Washington, D.C. 20006 by December 27. For the Washington hearing the notice must ~~be filed by~~ January 5, 1972. The notice should identify the person and the group he represents, if any, the subject matter and approximate length of his presentation.

Established by the Occupational Safety and Health Act of 1970, the Commission has a broad mandate under the law to make an effective study and objective evaluation of the state workmen's compensation laws. The Commission is required to submit to the President and the Congress, not later than July 31, 1972, a final report containing its finding and conclusions, together with its recommendations.

Direct inquiries concerning this release to Mr. Ward Donohoe, The National Commission on State Workmen's Compensation Laws, 1825 K Street, N. W., Washington, D. C. 20006. 202-382-1056.

Dr. Emory F. Via, Director
Southern Regional Council, Inc.
52 Fairlie Street, N. W.
Atlanta, Georgia 30303

Dear Dr. Via:

The National Commission on State Workmen's Compensation Laws was established under the Occupational Safety and Health Act of 1970 in order to undertake an effective study and evaluation of workmen's compensation laws. The Commission is presently holding a series of hearings in various cities throughout the country to solicit opinions and information relating to our general mandate of whether State workmen's compensation laws provide an adequate, prompt, and equitable system of compensation. We would like to request your appearance before this Commission.

The Commission will be holding a hearing in Atlanta, Georgia on January 10 and 11. We know that you could make a valuable contribution to this hearing and hope very much that you will be able to testify. If you do desire to speak but find this date inconvenient, we would invite you to submit a written statement which would become a part of our formal record.

Please let me know as soon as possible whether you will be able to testify. In the meantime, I have enclosed for your convenience a copy of the Atlanta press release. I look forward to hearing from you soon.

Sincerely yours,

Peter S. Barth

WASHINGTON, DC 20006

December 30, 1971

JAN 3-1972

Dr. Emory F. Via, Director
Southern Regional Council, Inc.
52 Fairlie Street, N. W.
Atlanta, Georgia 30303

Dear Dr. Via:

This is in further reference to our letter of December 9 and Mr. Joseph Jacob's letter of December 23 concerning your appearance at the Commission's Atlanta public hearing to be held in Room 556, Federal Building, 275 Peachtree Street, N. E. on January 10 and 11, 1972.

The Commission has scheduled your appearance for Tuesday afternoon, January 11. Although we cannot give you a precise time, we estimate that the appearance will come between 1:00 and 2:00 P.M.

In order to provide time for the many individuals and organizations wishing to testify, and to permit adequate opportunity for questioning by the Commissioners, the witnesses are being asked to limit to 15 minutes the oral summarization of prepared statements. The full text of any prepared statement will, of course, be made a part of the hearing record.

If a prepared statement is reproduced we would urge you to provide us with at least 50 copies. Our experience has indicated that this number will cover the needs of the Commission and will provide copies for the press and other media representatives who will be covering the hearing. These copies should be delivered, prior to the witness' testimony, to Ward Donohoe, the Commission's Hearing Officer, who will be present in the hearing room at all sessions. If you wish to provide copies for the public in attendance, we suggest an additional 50 copies be brought to the hearing room.

Sincerely yours,

Peter S. Barth

Mr. Peter S. Barth, Executive Director
National Commission on State Workmen's
Compensation Laws
1825 "K" Street, N.W.
Washington, D.C. 20006

Dear Mr. Barth:

I am pleased to know that the Commission is holding hearings in Atlanta regarding workmen's compensation.

Unfortunately, I will be unable to present personal testimony during the hearings due to prior commitments out of town.

However, I will submit for the Commission's consideration an article on black lung and the difficulties encountered by its victims in claiming compensation. This, of course, is a state and federal problem. A copy of the article is enclosed. Copies will be supplied to Mr. Donohoe at the hearing.

The subject of your inquiry is an important one. I am sure others will testify to the general inadequacy of benefits, the special impact of low coverage or failure to cover on the poor, the fact that his latter affects blacks in our society especially, and that numerous improvements in administration still can be made in Southern states.

Thank you for your invitation to appear. I wish I could join in your deliberations.

Sincerely,

Emory F. Via, Director

[n.d.]

Is Workmen's Compensation Enough?

By Herbert E. Greenstone
Chairman, Public Information and Education Committee, National Association of Claimants' Compensation Attorneys of America

Many injured employees collect workmen's compensation benefits but ignore the possibility of obtaining additional damages through legal action against the party responsible for the accident. In failing to sue, workers frequently are depriving themselves of fair recompense for injuries.

But, you may ask, isn't workmen's compensation supposed to provide fair benefits? Wouldn't it be better to seek to improve workmen's compensation than to have workers involved in the intricacies of damage suits? These are fair questions. All of us want workmen's compensation improved, so that compensation is more realistically geared to present-day circumstances. Yet, improvements come slowly in workmen's compensation—and until it has been drastically upgraded, injured workers owe it to themselves and their families to study the courses of action that are open to them, and to seek proper financial redress for themselves and their dependents.

Workmen's compensation, it should be remembered, came into existence 50 years ago. It was a valuable and important forerunner of modern social legislation. In the years that followed, all the states adopted workmen's compensation statutes.

All these laws were based on the philosophy that the worker should receive benefits in case of an industrial accident, regardless of whose fault it was. The theory behind the laws was that the worker and his dependents needed help quickly — not two or three years later, if he were lucky enough to prove who was respon-

PAGINATION INCORRECT

sible for his accident. In compensation law, social policy set forth that there should be automatic payment to the injured worker, regardless of who was at fault.

Good Social Policy

Workmen's compensation was, and is, good social policy. Like the minimum wage law, workmen's compensation in effect puts a floor under benefit payments and sets as a minimum standard a series of compensation schedules. Without workmen's compensation, hundreds of thousands of workers would suffer loss each year through no fault of their own. But the parallel with minimum wage legislation should be carried a step further. The minimum wage law, valuable as it is, is no substitution for collective bargaining, and so workmen's compensation should not be looked upon as the only method of relief for the injured worker. Other supplementary efforts to win economic justice for the injured worker should not be ruled out just because there is a workmen's compensation statute on the books.

How may that supplementary relief be obtained? In accepting workmen's compensation, the employee gives up the right to sue his employer for any negligence on the part of the employer. However, many states permit the employee to sue an agent, servant, or employee of the employer. Many cases arise where negligence by a third party is the cause of accidents. For example, the employer has a stated policy about safety practices, but a third party—let's say a foreman or superintendent — gives orders that flout the safety rules. Who is responsible if a serious accident results? The company, or the superintendent, or both? But, lest the debate seem idle, the employee may have been seriously hurt, deprived of employment for a long period of time, faced with a possible loss of future earning power. And workmen's compensation does not pay big benefits.

Tort Law

In almost all jurisdictions, the injured worker has the right to pursue his claim against the negligent person responsible for the accident in which he sustained his injuries. His right to recover

damages is governed by what is called tort law. It has been said that the "law of torts exists for the purpose of preventing men from hurting one another." Two writers on the subject have pointed out, in an excellent article, that "one of the traditional objectives of tort law has been to deter unreasonably dangerous conduct and to promote the taking of reasonable precautions." Thus, the aim of tort law is not only to compensate the victims of accidents, but to seek to prevent accidents. Immunity breeds neglect, it has been pointed out many times, while liability encourages due care.

That's why it is so necessary that the worker come to know his rights under the law, to familiarize himself with the various aspects of "third party" action, and to take legal steps to receive all the benefits to which he is entitled as a result of an accident caused by the negligence of someone else.

Let's look at what has happened in various types of cases in which the courts have allowed workers to recover damages from third parties who were responsible for accidents that occurred on the job.

A truck driver in his vehicle on a public highway is struck as the result of the negligence of the driver of another vehicle. He has the right to make a claim upon his employer for workmen's compensation benefits, and to bring damage suit in the courts against the owner and operator of the other vehicle, if he can show that they were negligent.

Or suppose that a driver takes a new truck out of the employer's garage, and, after he has gone a short distance, the steering mechanism because of some defect causes his truck to careen off the road. The driver would of course be entitled to workmen's compensation for this accident, but he would also be able to sue the manufacturer of the vehicle, not only for negligence but also for breach of the warranty, proclaiming the truck as fit for service, under which the truck was sold to the man's employer.

Safe Conditions

In the construction industry, it is recognized that the owner of premises where work has to be performed has a duty to provide safe working conditions. Where a general contractor is involved, he too has a responsibility to maintain safe standards of construction and safe environmental conditions. In their absence, if an accident occurs, the employee has the right to sue the owner of the building, the general contractor, the subcontractor, or all of them together.

A leading case in New Jersey involved a pipefitter working at a factory where chrome products were manufactured. After working there for a time, the pipefitter contracted dermatitis — a

skin disease — as a result of exposure to the chrome. The New Jersey court permitted a third party action against the owner of the premises for failing to provide the employee with a safe place to work, for not having taken proper safeguards to protect employees from exposure to the chrome, and indeed for not having warned the worker about the danger of contracting chrome-poisoning.

Another type of case from New Jersey involved a route salesman who was permitted by the courts to recover damages from an assault and battery committed on him by the employee of another company, who drove up alongside his truck, threatened him unless he left the area, and subsequently beat him up. The court heard that the employer of the salesman who gave the beating had complimented his agent by saying: "It is a good thing you gave him a good beating, he won't bother our customers the next time." The injured man was able to collect not only damages to compensate him for his injuries, but punitive damages from both his assailant and the assailant's employer.

John Doe, in another case that has come to my attention, was injured in an accident arising out of and in the course of his employment, and he received certain injuries which required medical care and treatment. His employer, or the employer's insurance company, referred him to a doctor, who ordered surgery on an injured arm. Later on the worker contended that the doctor was negligent in his diagnosis and treatment, and that the negligence had resulted in permanent damage to the arm. The court permitted the worker to sue the doctor for medical malpractice.

Right to Compensation

In all these cases, let me make clear, in the worker's claim for workmen's compensation, the question of negligence by either the employee or the employer has no bearing. The employee has the right to recover workmen's compensation regardless of whether or not the accident is due to his own contributory negligence, or that of his employer.

In workmen's compensation, the employee gets a scale of bene-

fits based upon a certain percentage of his wages. Through the years, as wages have risen, the compensation benefits have trailed far behind. Today they do not come very close, in most instances, to providing a significant proportion of wages, so that family life may continue without serious economic impairment after the accident to the family breadwinner. In third party, or tort suits, on the other hand, the measure of recovery is payment to the injured employee of his total lost wages, an allowance for pain and suffering, disfigurement, medical expenses and the money value of any permanent disability.

Simple Remedy

If the employee's recovery through the third party suit is greater than the amount he received through workmen's compensation he is entitled to keep the difference, but the sum received in workmen's compensation must be repaid to the insurance company or the employer. The worker does not have the choice of either of two legal remedies—workmen's compensation or legal suit—but he does have the right to pursue both.

An injured workman should always have the right to recover damages based upon the negligence of a third party. The right to recover is based upon the principle that a wrongdoer must pay for the damages of another.

Management and industry have

a responsibility to provide safety measures. Most accidents do not just happen, but can be avoided by adherence to certain basic safety laws and principles. Accident prevention requires the exercise of safety, reasonable care, and prudence under the circumstances of a given case. The term "negligence" implies that there has been a failure to exercise the degree of care, caution, and prudence that a reasonable person would exercise under similar circumstances.

State safety laws are designed to provide proper safety measures to prevent accidents. A violation of these state safety laws is a sufficient basis on which to sue for negligence. If management and industry would embark on a safety program to prevent accidents, rather than cry out about the high costs of insurance to pay for workmen's compensation benefits,

they would do a lot towards the prevention of accidents.

Third party actions are not always cut and dried and do require a great deal of investigation and proper legal advice to the injured employee. Unlike the procedure under the workmen's compensation law, it is often necessary for an injured employee to bring his action within a fixed period of time, regardless of whether he is under the care of a doctor or not, since most states have statutes of limitations which bar actions for negligence after a certain time lapse.

While the workmen's compensation laws were designed to substitute a schedule of recoveries for the common law liability of the employer, the amount of these recoveries is far less than the sums allowed under common law principles. For example, an amputated foot may be worth approximately $7,000 in workmen's compensation (and in some states less), yet at common law a worker may recover more than 10 times that amount.

A worker who may be earning over $100 per week may recover in workmen's compensation approximately $35 to $40 per week as benefits if he is temporarily disabled from his work. If he is successful in a suit at common law, however, he is entitled to be reimbursed for his complete loss of wages. Therefore, it is important that the injured employee fully investigate the details of the

accident to determine whether or not it was the fault of a stranger or a third party. This involves many medical and legal problems and the employee should not hesitate to seek advice in this regard.

Hazards Growing

In our industrial society, the hazard of accident is constantly growing. As machines grow more complex, as our industry moves at faster speeds, as our highways become more crowded, the danger of accident lurks always in the immediate background. To the worker struck down by serious accident, the great benefits that our society has to offer are of no consequence unless he can recover his health—and unless he can avert financial hardship for his family in the process. That was the intent of workmen's com-

pensation when those foresighted reformers of half a century ago pushed through legislation to provide the payment of a substantial portion of a man's salary to his family when industrial accidents crippled his wage earning capacity.

But the principle has simply not stayed in the race with events. Workmen's compensation is not nearly good enough today, and the process of improving it is slow and fraught with legislative counterattacks from the opposition.

Certainly labor and its friends should work, and work hard, to have workmen's compensation payments made more realistic, so that the program will have some realistic relationship to its purposes. Workmen's compensation is of course tremendously valuable in the handling of small and routine accident cases, but in the vast majority of big, serious accidents, it simply does not make sufficient payment to the injured worker.

That is why I believe that workers and their unions should give increasing thought to the advisability of bringing about "third party" damage suits in the courts in order to win adequate recompense for the workers when the industrial accident brings a payment of $7,000 over 200 weeks; but in law suits in the courts, the same accident, where negligence is present, might win a recovery of between $25,000 and $50,000 — a more realistic payment in view of the damage to the worker's earning power than an amputation might cause.

Many big insurance companies have been seeking to cut the payments which juries award in ac-

cident cases. They have been directing a big campaign to influence potential jury members to be "reasonable" in their awards. The role of the jury in civil cases is a big and complex subject, which space does not permit discussing at length here; but it is clear that the jury is a fundamental part of our democratic heritage, and the whittling down of its field of action will not well serve the ideals of our democratic society.

Because the amount the jury awards in accident cases has been rising, as our standard of living and cost of living have also been on the upgrade, is no legitimate basis for preventing the jury from determining, on behalf of the whole society, how much an injured person should receive when he has been seriously injured. At times it seems that there is great interest in protecting from financial hurt everyone except the man who is injured on the job.

Accident Prevention

It is fundamental, of course, that an accident prevented is far better than a claim won, whether at workmen's compensation or in the courts. Accident rates can be brought much further by giving far greater thought and recognition to safety regulations. A small fraction of the money spent each year in compensation cases and damage awards would buy greater safety on the job, greater human happiness, greater family stability.

The best compensation, in other words, is the accident averted. But when the accident happens, the worker should have the right to fair, realistic workmen's compensation rather than a system 20 years behind the times. And if the facts of the case warrant, he should have the right, and use the right, to file a "third party" damage suit in the courts to get more adequate compensation for the accident that may reduce his earning power for life.

The farmers have lost a cumulative total of more than $23 billion in the past eight years in spite of their supposed political strength, and organized workers have been unable to get punitive features of the Taft-Hartley Act repealed, in spite of their alleged power and funds.

—James G. Patton, president, National Farmers' Union

DRE

WORKMEN'S COMPENSATION

William Kuhl, Instructor, School for Workers

Background of Workmen's Compensation

The Wisconsin Workmen's Compensation Act took effect on May 3, 1911. Prior to its enactment a worker injured in the course of his employment could obtain indemnity for the injury and wage loss suffered only through instituting a successful damage suit against his employer. The injured worker's claim for damages was invariably adjudicated in accordance with the common law of employer's liability. This meant that he would collect damages from his employer only if he could prove to the satisfaction of the court that his employer had been at fault - that his negligence was the cause for the injury. The employer in his denial of negligence could use any of the following common law defenses: (1) contributory negligence - the worker could not recover damages if he himself had been negligent in any degree, regardless of the extent of the employer's negligence; (2) the fellow-servant doctrine - the worker could not recover if it could be shown that the injury had resulted from the negligence of a fellow worker; (3) assumption of risk - the injured worker could not recover if injury was due to an inherent hazard of the job of which he had, or should have had, advance knowledge. The result was that it was extremely difficult, time-consuming, and costly for an injured worker to recover by court action indemnity for his injury and wage loss suffered. While efforts were made in the latter years of the nineteenth century to restrict the application of these "common law employer liability" defenses, they proved to be of little value to the injured worker who sought to institute successful court proceedings. A new approach to meeting the cost of industrial injuries was necessary.

Workmen's compensation, like unemployment compensation and old age and survivor's insurance, is a type of social insurance. It seeks to insure that workers injured in the course of their employment receive defined compensatory benefits promptly, regardless of fault, and with a minimum of legal formality. In substituting a statutory indemnity procedure for the filing of a damage suit by the injured worker, it fixed the liability for an industrial injury on the employer without regard to fault. The basis for the common law doctrine of employer's liability was thus disregarded. Workmen's compensation is a declaration that injured workers shall receive predetermined indemnity for their injury and wage loss suffered as a matter of right. Compensation shall not be denied a worker injured in the course of his employment. While workmen's compensation legislation directs that the cost of industrial injuries shall be a liability of employers, it recognizes that such costs should be borne by society as a whole. This transfer of liability occurs when the employer in insuring his liability includes this cost in his over-all costs of production. Society in the role of consumers bears the cost of industrial injuries under workmen's compensation. Workmen's compensation is thus that type of social insurance which seeks to provide workers injured in the course of their employment with a minimum of economic protection.

1. What is the purpose of the Wisconsin Workmen's Compensation Act?

TO PROVIDE MEDICAL AND MONETARY BENEFITS TO ELIGIBLE EMPLOYEES WHO SUSTAIN AN INJURY ARISING OUT OF AND IN THE COURSE OF THEIR EMPLOYMENT, AND DEATH BENEFITS TO THEIR DEPENDENTS.

2. Who is covered by the Wisconsin Workmen's Compensation Act?

ALL EMPLOYEES WHO WORK FOR AN ESTABLISHED UNIT OF GOVERNMENT, A "PERSON, FIRM OR CORPORATION WHICH USUALLY EMPLOYS THREE OR MORE EMPLOYEES," OR A VOLUNTARILY COVERED EMPLOYER EXCEPT FARM LABORERS AND DOMESTIC SERVANTS.

Employee is defined to include:

"Every person in the service of another under any contract of hire, express or implied, all helpers and assistants of employes, whether paid by the employer or employe, if employed with the knowledge, actual or constructive, of the employer, including minors...but not including (a) farm laborers, (b) domestic servants..."

102.07 (4)

Employer is defined to include:

"(1) The state, each county, city, town, village, school district, sewer district, drainage district and other public or quasi-public corporations...

"(2) Every person, firm and private corporation ...who usually employs three or more employes...The provisions of this subsection shall not apply to farmers or to farm labor...

"(3) Every person, firm, and private corporation...to whom subsection (2) is not applicable, who has...elected to become subject to the provisions of this chapter..."

102.04

3. What conditions of liability must exist before an employee is eligible to receive workmen's compensation?

1) HE MUST HAVE SUSTAINED "AN INJURY"

"Injury" is defined as "mental or physical harm to an employe caused by accident or disease, and also damage to or destruction of artificial members, dental appliances, teeth and eyeglasses, but, in the case of eyeglasses, only if such damage or destruction resulted from accident which also caused personal injury entitling the employe to compensation therefor..."

102.01 (2)

2) HE AND HIS EMPLOYER, AT THE TIME OF THE INJURY, MUST HAVE BEEN SUBJECT TO THE COMPENSATION ACT
102.03 (1)(b)

3) HE, AT THE TIME OF INJURY, MUST HAVE BEEN "PERFORMING SERVICE GROWING OUT OF AND INCIDENTAL TO HIS EMPLOYMENT" (injured during his employment)
102.03 (1)(c)

4) THE INJURY MUST NOT HAVE BEEN "INTENTIONALLY SELF-INFLICTED"
102.03 (1)(d)

5) THE ACCIDENT OR DISEASE CAUSING INJURY MUST HAVE ARISEN "OUT OF HIS EMPLOYMENT" (injured because of his employment)
102.03 (1)(e)

4. What conditions will disqualify an injured employee from receiving workmen's compensation?

1) FAILURE TO NOTIFY THE EMPLOYER WITHIN 30 DAYS OF THE OCCURRENCE OF THE INJURY

"No claim for compensation shall be maintained unless, within 30 days after the occurrence of injury or within 30 days after the employe knew or ought to have known the nature of his disability and its relation to his employment, actual notice was received by the employer or by an officer, manager or designated representative of an employer." However, "absence of notice shall not bar recovery if it is found that the employer was not misled thereby."
102.12

2) FAILURE TO FILE FOR COMPENSATION WITHIN TWO YEARS FROM THE DATE OF INJURY OR DEATH (SIX YEARS IF ANY COMPENSATION WAS PAID)

"Regardless of whether notice was received, if no payment of compensation (other than medical treatment or burial expense) is made, and no application is filed with the commission within 2 years from the date of the injury or death, or from the date the employe or his dependent knew or ought to have known the nature of his disability and its relation to the employment, the right to compensation therefor shall be barred, except that the right to compensation shall not be barred if the employer knew or should have known, within the 2-year period, that the employe had sustained the injury on which claim is based."
102.12

"The right of an employe...or dependent to proceed under this section shall not extend beyond 6 years from the date of the injury or death or from the date that compensation (other than medical treatment or burial expenses) was last paid, (or would have been last payable if no advancement were made), whichever date is latest."

102.17 (4)

3) FAILURE TO SUBMIT TO A "REASONABLE EXAMINATION BY A PHYSICIAN PROVIDED" BY THE EMPLOYER

"Whenever compensation is claimed by any employe, he shall, upon the written request of his employer, submit to reasonable examination by a physician, provided and paid for by the employer, and shall likewise submit to examination from time to time by any physician selected by..(the Industrial Commission)... The employe shall be entitled to have a physician, provided by himself, present at any such examination. So long as the employe, after such written request of the employer, shall refuse to submit to such examination, or shall in any way obstruct the same, his right to begin or maintain any proceeding for the collection of compensation shall be suspended; and if he shall refuse to submit to such examination after direction by the commission...or shall in any way obstruct the same, his right to the weekly indemnity which shall accrue and become payable during the period of such refusal or obstruction, shall be barred."

102.13 (1)

6. <u>What benefits does the Workmen's Compensation Act provide for injured employees?</u>

1) THAT MEDICAL CARE WHICH IS "REASONABLY REQUIRED TO CURE AND RELIEVE...THE EFFECTS OF THE INJURY" (full medical benefits)

"The employer shall supply such medical, surgical and hospital treatment, medicines, medical and surgical supplies, crutches, artificial members, appliances, and training in the use of artificial members and appliances...as may be reasonably required to cure and relieve from the effects of the injury, and to attain efficient use of artificial members and appliances, and in case of his neglect or refusal reasonably to do so, or in emergency until it is practicable for the employe to give notice of injury, the employer shall be liable for the reasonable expense incurred by or on behalf of the employe

in providing the same. The employer shall also be liable for reasonable expense incurred by the employe for necessary treatment to cure and relieve him from the effects of occupational disease prior to the time that the employe knew or should have known the nature of his disability and its relationship to employment..."
102.42 (1)

"The employe shall have the right to make choice of his attending physician from a panel of physicians to be named by the employer...(The panel shall consist of) a reasonable number of competent and impartial physicians...Nothing contained in this section shall limit the right of the employe to make a second choice of physician from the panel of physicians named by the employer."
102.42 (2)

"No compensation shall be payable for the death or disability of an employe, if his death be caused, or insofar as his disability may be aggravated, caused or continued (a) by an unreasonable refusal or neglect to submit to or follow any competent and reasonable medical or surgical treatment, (b) or, in the case of tuberculosis, by his refusal or neglect to submit to or follow hospital or sanatorium treatment when found by the commission to be necessary. The right to compensation accruing during a period of refusal or neglect under (b) shall be barred, irrespective of whether disability was aggravated, caused or continued thereby."
102.42 (7)

2) MONETARY COMPENSATION IF THE INJURY "CAUSES DISABILITY" (monetary benefit for lost wages)

"If the injury causes disability, an indemnity shall be due as wages...after the employe leaves work as the result of the injury, and shall be payable weekly thereafter, during such disability."
102.43

A) WAITING PERIOD OF THREE CALENDAR DAYS UNLESS DISABILITY CONTINUES LONGER THAN TEN CALENDAR DAYS

"An indemnity shall be due as wages commencing with the fourth calendar day, exclusive of Sundays only, excepting where such employees work on Sunday, after the employe leaves work as the result of the injury...If the disability shall exist after ten calendar days from the date the employe leaves work as a result of the injury and

only if it so exist indemnity shall also be due and payable for the first three calendar days, exclusive of Sundays only, excepting where such employes work on Sunday."
102.43

B) AMOUNT OF WEEKLY INDEMNITY (amount of monetary compensation)

Total Disability

70% of the injured employe's average weekly earnings with a maximum weekly indemnity of $49.00 and a minimum indemnity of $8.75 for temporary total disability and $14 for permanent total disability.

"If the injury causes total disability, seventy per cent of the average weekly earnings during such total disability."
102.43 (1)

"The average weekly earnings for temporary disability shall be taken at not less than $12.50 nor more than $70; for permanent total disability or death at not less than $20 nor more than $70..."
102.11 (1)

"Daily earnings shall mean the daily earnings of the employe at the time of the injury in the employment in which he was then engaged. In determining daily earnings...overtime shall not be considered...The average weekly earnings shall be arrived at by multiplying the daily earnings by the number of days and fractional days normally worked per week at the time of the injury in the business operation of the employer for the particular employment in which the employe was engaged at the time of his injury."
102.11 (1)(a)

"Average weekly earnings shall in no case be less than actual average earnings of the employe for the calendar weeks during the year before his injury within which the employe has been employed in the business, in the kind of employment and for the employer for whom he worked when injured..."
102.11 (1)(d)

"Average weekly earnings shall in no case be less than 30 times the normal hourly earnings, at the time of injury..."
102.11 (1)(f)

Permanent Partial Disability

70% of the injured employe's average weekly earnings with a maximum weekly indemnity of $37.00 and a minimum indemnity of $14.00

"Permanent partial disability not covered by the provisions of sections 102.52 to 102.56...shall be payable at the rate of 70 per cent of the average weekly earnings of the employe to be computed as provided in section 102.11."

102.44 (3)

"In cases included in the following schedule of permanent partial disabilities indemnity shall be paid... at the rate of 70 per cent of the average weekly earnings of the employe, to be computed as provided in section 102.11."

102.52

"The average weekly earnings...for permanent partial disability (shall be taken) at not less than $20 nor more than $52.86."

102.11 (1)

Partial Disability

That per cent of the weekly indemnity rate for total disability which is the relationship of the actual wage loss of the injured employee to his average weekly wage.

"If the injury causes partial disability, during the partial disability, such proportion of the weekly indemnity rate for total disability as the actual wage loss of the injured employe bears to his average weekly wage at the time of his injury."

102.43 (2)

"If the disability period involves a fractional week, indemnity shall be paid for each day of such week, except Sundays only, at the rate of one-sixth of the weekly indemnity."

102.43 (4)

C) DURATION OF WEEKLY INDEMNITY (length of monetary compensation)

Temporary Disability

"If the injury causes total disability...during such total disability."

102.43 (1)

Permanent Total Disability

"In the case of permanent total disability aggregate indemnity shall be weekly indemnity for the period that he may live."

102.44 (2)

Permanent Partial Disability

a) Schedule of Permanent Partial Disabilities

Healing period plus the statutory specified number of weeks for the particular disability. The number of weeks is reduced if the injured employe is over 50.

"In cases included in the following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where the employe is 50 years of age or less, for the period specified..."

102.52

"In cases where the injured employe is above 50 years of age when injured the periods for which indemnity shall be payable...shall be reduced from those specified in section 102.52 by 2½ per cent for each year that the age of such employe exceeds 50, with no reduction in excess of 50 per cent."

102.53 (2)

b) Non-Scheduled Partial Disabilities

Per cent of permanent total disability as a per cent of 1000 weeks for employes 50 years of age or less. The number of weeks is reduced if the injured employe is over 50.

"For permanent partial disability not covered by the (law's schedule) the aggregate number of weeks of indemnity shall bear such relation to the number of weeks set out in paragraphs (a) and (b) as the nature of the injury bears to one causing permanent total disability...Such weekly indemnity shall be in addition to compensation for healing period and shall be for the period that he may live, not to exceed, however, these named limitations, to-wit:

(a) One thousand weeks for all persons 50 years of age or less.
(b) For each successive yearly age group, beginning with 51 years, the maximum

n.d.

"WORKMEN'S COMPENSATION"

I

HISTORY & NATURE OF THE ACT

Germany adopted its act in 1884 and England in 1897. Both these countries have disability insurance which covers benefits to employees for non-industrial disability. Wisconsin adopted its act in 1911, covering only work connected disability.

New York, New Jersey, California and Rhode Island provide non-industrial disability benefits. The general rule is that the employees and employers share the cost of the premiums for non-industrial disability benefits.

Some unions negotiate these benefits.

A system which covers only disability arising out of employment encourages insurance carrier or employer resistance to bona fide claims for workmen's compensation.

Organized labor should seek legislature covering non-industrial disability.

II

THE THEORY OF THE ACT & HOW IT WORKS

A worker is entitled to workmen's compensation benefits, "where at the time of injury, the employee is performing service growing out of and incidental to his employment."

Employee must prove that he was injured while engaged in some activity related in some way to his employment.

Injured on the Job

Most frequent type of accident occurs on the job while employee is struck by falling or moving object, where he slips or falls or where he strains or over

exerts himself.

NOTE: Where employee slips or falls and cannot explain how or why, benefits will be denied.

NOTE: Employee should beware of giving statements to employer representative outside presence of attorney. If employee states, "I don't know what I slipped on," his case may be lost.

Injured While Going to and from Work

General Rule: Benefits paid only where injury takes place on company property, company steps or company owned parking lot.

Injured While Attending to Personal Needs

General Rule: Employee injured while eating lunch, on coffee break, going to toilet or during wash up time, if on company property, is entitled to benefits. Some exceptions where employee entitled to benefits while off company property.

Injured During Horseplay or Fighting

General Rule: Employee entitled to benefits unless he started the horseplay or was the aggressor in the fight.

III

GIVING PROPER NOTICE TO EMPLOYER

All injuries should be reported to employer immediately so as to dispel employer distrust. Especially true with back injury which at first may not appear very serious.

Obtain names and addresses of witnesses. It is also wise to notify union steward on date of injury for corroboration.

Notice & Filing Limitations

The law provides that an injured worker should give notice to his employer within thirty days of any industrial injury or occupational disease or within thirty days after employee knew or ought to have known the nature of his dis-

ability and its relationship to his employment.

Application must be filed with the Industrial Commission within two years from the date of the injury or death or from the date the employee or his dependant knew or ought to have known the nature of the disability, its relationship to his employment, unless employer knew or should have known within the two year period that the employee sustained the injury on which the claim is based.

Payment of compensation other than medical expenses is exception to above two year rule.

In any case, an employee must file his claim with the Industrial Commission within six years of the date of injury or disease or from the last date that compensation was paid -- (excludes medical expense payment.)

IV

KEEPING A WRITTEN RECORD

Employers and insurance carriers may contest a claim for a variety of reasons ranging from disbelief of injury to a desire to **minimize payment** of money.

While it is unrealistic to believe that every injured employee will keep a detailed record of his injury, the following list of information is helpful to an attorney in preparing for a workmen's compensation hearing.

1. The date of injury or first indication of an occupational disease. The date is very important.

2. The type of accident such as struck by an object, over-exertion, etc.

3. The nature of the injury or disease such as cut, sprain, hernia.

4. The part of the body affected such as a finger, low back, etc.

5. The kind of action that was taking place such as lifting, carrying, bending.

6. The source of injury such as machinery, hot or flammable substance.

7. The weight of the object causing the injury.

8. Physical symptoms such as sharp pain, stiffness, loss of motion, rash.

9. How long the symptoms lasted and if and when they recurred. (dates)

10. All doctors seen and on what dates.

11. Names of any witnesses who saw the accident or who the injured employee spoke to immediately following the injury.

12. All money spent on doctors, examinations, treatment, medicines, transportation. (Be sure to get receipts.)

13. All days and parts of days lost from work because of the disability.

14. Demand and keep any statement made to the employer or the insurance company representative.

15. Keep copies of any agreement of final receipt signed for a workmen's compensation claim.

V

UNLIMITED MEDICAL, HOSPITAL & SURGICAL EXPENSE PAID FOR

An injured employee who is injured at work or who suffers from occupational disease is entitled to unlimited hospital and medical attention, crutches, and artificial limbs and training in their use and lost time and traveling expense when undergoing treatment or examination.

However, employee must comply with employer's selection of medical panel of doctors and employer must sufficiently notify employees of panel and must have broad enough panel to satisfy Industrial Commission.

Some employers allow open panel of doctors.

Can go to any doctor in emergency.

Chiropractors not covered.

Employee should not reject reasonable examination or treatment where requested by employer.

VI

DISABILITY BENEFITS

Where employee misses less than ten days of work, he is not paid for first three days.

Temporary total disability payments are computed on 70 percent of employee's weekly wages with maximum of $68 per week.

Permanent partial disability based on scheduled benefits, i.e., loss of hand at wrist, 400 weeks. Ten per cent loss of use of hand would be 40 weeks. Maximum payment is $46 per week for permanent partial disability.

Reduction of permanent disability benefits by 2½ per cent for each year employee over 50 years of age. Maximum reduction 50 per cent.

Rehabilitation

Where employee has suffered from serious industrial injury or disease making it difficult or impossible to do his regular work, he may be eligible to receive up to 40 weeks of additional benefits while taking rehabilitation instruction.

Death Benefits

May vary in amount up to $19,430.00 (as of 1965), children under sixteen may be entitled to additional benefits and children over sixteen if mentally or physically incapacitated may be entitled to additional benefits.

Burial expenses up to $500 allowed.

No reduction in benefits because of age of deceased.

VII

BENEFITS MAY BE INCREASED OR DECREASED IF VIOLATION FOUND

Fifteen per cent increase if employer violates safety codes.

Employee or union can obtain copy of safety code by writing to Industrial Commission.

Safe Place Statute. Employer must do everything reasonably necessary and adopt and use methods and processes reasonably adequate, to protect the life, safety and welfare of his employees. If employer fails to comply with safe place statute, employee is entitled to fifteen per cent increase in benefits.

Employee loses fifteen per cent of benefits if injury occurs because of intoxication.

VIII

RETURNING TO WORK PROBLEMS

Employer may be fined up to $500 for refusing to re-employ injured employee. Each day's refusal could be considered a separate violation. Employee should make effort to return to work where employer or employer's physician make such request.

Further compensation due where recurrence of injury.

IX

STIPULATION VERSUS COMPROMISE

Where there is a dispute as to whether benefits are due, employee and employer can work out agreement before Commission.

If word stipulation is used, employee can reopen case within six year period should there be a recurrence or worsening of his injury or disease.

If word compromise is used, employee has only one year to reopen.

Employees advised to avoid compromise agreements, particularly where permanent disability involved.

X

DISPUTED CLAIMS & HEARINGS

Where employee desires a hearing, he must file an "Application for Adjustment of Claim" in triplicate with Industrial Commission. Forms can be obtained from Commission.

Where a claim is in dispute, an employee generally will be aided by retaining a lawyer. Attorney fees are 20 per cent of amount in dispute.

Employee must pay for medical examination and medical testimony even if successful in his claim.

This pamphlet is issued for the purpose of general information. It does not have the effect of law, regulation, or ruling.

Introduction

This pamphlet was written so that men and women who have tuberculosis or who have had it may know about public services they can get to help them back to work for pay. The States and the Federal Government share in giving their people these services. They call these services *vocational rehabilitation.*

OPPORTUNITIES FOR THE TUBERCULOUS was written as much for hospital patients as for patients who are not in hospitals. The National Tuberculosis Association helped this office to collect and arrange the information in this pamphlet. The Public Health Service also has reviewed and helped in the preparation of the publication. They and we hope that it will be helpful to each man and woman whose chance to work has been affected by tuberculosis.

This is what we should like you to know:

There is a way to make a comeback to work and to a happy life. Vocational rehabilitation is helping many to find that way. You can start your rehabilitation plans even when you have "active" tuberculosis *IF the doctor thinks this is safe for you.* Start as soon as your doctor says you may. There is no work which is as hard as "no work." You, and other men and women with tuberculosis, can look ahead, and plan ahead, for the day when you will have made *your* comeback.

MARY E. SWITZER,
Director,
Office of Vocational Rehabilitation.

Opportunities for the Tuberculous

You wouldn't think that tuberculosis gave you an "opportunity," would you? Having had tuberculosis, though, you may have your first opportunity to take stock of yourself and plan to work at the kind of job you can do best.

"Vocational rehabilitation" is what we are talking about. Vocational rehabilitation is a service which your State and Federal governments provide to civilian men and women who are sick or injured. It helps them get back to work for pay in jobs which they can do safely and well. It may give *you* the services you need to get back to the kind of work you used to do. It may help you to find other work which is safer for your health and which makes better use of your skills.

This vocational rehabilitation service isn't just a handout to people who have had bad luck. It's a Government investment in men and women who are important to themselves and their families and also to other men and women in this country. Your hometown and your country are better off when *you* are better off, and working happily and safely.

The sooner you use rehabilitation services, the better. Ask your doctor to let you know just when you can begin. Many people can start rehabilitation services even when their tuberculosis is "active." The doctor decides the time that is right for *you*.

What Services Can the Tuberculous Get?

There's hardly a service you *can't* get—if you really need that service to get over a job handicap! You can get services in a hospital, or outside. (People sometimes call treatment institutions "sanatoriums," but this pamphlet will always say "hospitals.") Services include:

1. **Complete physical examination to see how disabled you really are from tuberculosis, to find any other disabilities, to learn how much work you can do—and if your disability really keeps you from working. This is *free* to you.**
2. **Medical, surgical, psychiatric, and hospital services, as needed, to help you get over your disabilities. The rehabilitation counselor will explain when you can get these services. If you need them and there is no other way of paying for them, vocational rehabilitation money will meet the bill.**
3. **Prosthetic appliances, such as artificial arms or legs, braces, eyeglasses, and hearing aids, if needed. If you can't pay for them, Government money will.**
4. **Counseling and guidance to help you decide what job or business will be best for *you*. The counselor talks this over with you and helps you choose. You don't pay a cent for this.**
5. **Training for the *right* job, so you can learn to do it well. Training can be in schools, on a real job, through correspondence courses, or from a private teacher. It is generally *free*.**
6. **"Maintenance" money to live, and to get to and from places where you get rehabilitation services, if you cannot pay these necessary expenses.**
7. **Needed tools, equipment, licenses, or first stocks**

of goods to give you a start. If you can't pay for them, the rehabilitation agency will.

8. Finding a safe job for you—called "placement." Free.

9. "Followup," or keeping in touch with you, to make sure that you and your job are all right. This is free, too.

You may need one or several of these services. The ones you get, and the times at which you get them, depend on what *you* need.

Do YOU Need Rehabilitation Services?

Well, if you do, you're not alone. The National Tuberculosis Association estimates that about 250,000 people in the United States have active tuberculosis at any given time. There are probably 550,000 more people who have had tuberculosis and become well enough to work again. That makes 800,000 in all. Very few of these people have been without their problems, and one of their problems has often been getting back into the harness—either in a job or in taking care of a home. Nevertheless, more people are getting well from tuberculosis each year, and finding their way back. But you are interested in YOU, which is natural.

Maybe you are a man, over 45, and your friends say employers won't hire you. Maybe you did heavy work on a farm, in a coal mine, or on a construction job, and the doctor said, "No," when you asked him if you could go back to the job. Maybe you didn't have a chance to go very far in school. Maybe you think you won't be able to earn much again because you don't know how to do anything but the job you used to do. Maybe you feel you have to take a drink.

Or maybe you're a housewife with four children to look after, do the washing and ironing, clean the house, cook and scrub; and who then worries about where she'll end if she doesn't find a way of getting more rest. Or . . . maybe you've just never worked before.

Rehabilitation services can help people like this and many more people who have other problems. It is safe to say that the vocational rehabilitation agencies in this country could help about 100,000 people who have had tuberculosis.[1] Why not help your State rehabilitation agency to help you? Get in touch with it.

THEY "Made it" YOU Can, Too!

The work records of men and women who have had tuberculosis are good. Tuberculosis hasn't taken away their skills, their good common sense, their wish to get ahead. Maybe it *has* slowed them up a bit. Maybe some of them *have* had to change the kind of work they could do to stay well. But when they are working again in jobs that the doctors say are safe, they are good steady workers. They aren't often absent, and do not jump from job to job. The good part is that the tuberculous who have used rehabilitation agency services have much better health records, later, than those who have not. A rehabilitation counselor from New York State reported this after a study.[2]

NOW . . . ABOUT JOBS

What kinds of jobs can people who have had tuberculosis do? Hundreds of different kinds! Each person

[1] A study, in California, with which the Federal Office of Vocational Rehabilitation helped, showed that one of each two patients studied, in and out of hospitals, needed some rehabilitation services.

[2] Vocational Rehabilitation of the Tuberculous, by Sol L. Warren, Ph. D., National Tuberculosis Association, 1955. 193 pp.

is, of course, different. Each has certain amounts of schooling, experience, and ability which are His. All of these are important in jobs—for everyone. Tuberculosis does not change these things that are part of a person, but it *does* make it necessary for tuberculous people to work in jobs which are safe for their health. The doctor works with the rehabilitation counselor and you to be sure that the job in which you are "placed" (or "place yourself") is one in which you can be happy, and successful, and stay well.

In just one year—1956—State vocational rehabilitation agencies placed 7,045 men and women who had had tuberculosis in jobs. Some were helped to become managers; some, professional or semiprofessional workers; some, technical employees. Some did clerical or sales work; some, service jobs; some went into skilled, semiskilled, or unskilled jobs. There were telephone operators among them—and teachers, draftsmen, reporters, commercial artists, radio operators, farm workers, janitors, and stenographers. Employers hired them because they were confident they'd make good in their jobs. Workmen's Compensation laws didn't keep them from getting jobs, either.

WORKING FOR BETTER PAY

These men and women are working today—for they were helped to choose their jobs wisely. They have been able, ever since, to do them without being afraid that their work would be too much for their health. Some of these people found, for the first time in their lives, the jobs that were best for them.

The pay envelopes of these people who "made it" tell a story, too. After 7,045 people who had had tuberculosis were rehabilitated, they were earning much more money than they had earned before. About 9 out of 10 of them were earning no money

at all when they started getting rehabilitation services. One out of every eight had *never* worked. Others were earning money, but they were doing jobs which were not safe for their health.

After rehabilitation, 9 out of 10 of the 6,123 persons who had had no jobs when they started with rehabilitation services, were getting pay checks which averaged $2,445 per year—$2,445 *a year compared with no money at all before rehabilitation!* The average person who had had tuberculosis, and had been getting wages before starting rehabilitation, was earning $1,470 a year at that time. But after rehabilitation this average jumped to $2,560 a year.

These are facts. They prove that people who have rehabilitation services not only get back to work in hundreds of different kinds of jobs. They get ahead in their work.

Where Do YOU Come in?

Can *you* get these rehabilitation services? Why not? Let's face it! You have, or have had tuberculosis. That's not fun! What's more, tuberculosis is a "disability." But rehabilitation services are specially planned for people with disabilities. You are one of these people. *That's* where you come in! And it's a pretty good bet that you can get the services you need.

Sometimes, people with tuberculosis have to do things differently than they did them before they were sick—even in their work. Sometimes, with up-to-date medical treatment, people who have had tuberculosis can do most of the things they did before. This is often true if their old jobs and their fun did not put heavy strain on them.

If Your disability from tuberculosis keeps you from going back to your old job, or makes it hard

430960 O - 57 - 2

for you to get a new one which your doctor says is all right for your health, you should try to get rehabilitation services. Even if your doctor says you can go back to a job you know, but you are afraid to do that, rehabilitation services may help you—for the way you *feel* about working can help you to find a job or lose the chance of getting one. You are "eligible" for rehabilitation services, or should get them, if you:

1. **Have a disability which keeps you from working at a job which the doctor says is safe for your health;**
2. **Have a fair chance, with help, of getting a job which is all right;**
3. **Are of working age, or near it.**

Some people have other disabilities, added to their tuberculosis, such as heart disease, arthritis, diabetes, emotional illness, or even the habit of drinking too much. The State vocational rehabilitation agencies give services to help people get over such disabilities, too, if they keep people from working.

In all cases your State rehabilitation agency will decide who is eligible for service. You can help by answering the questions they have to ask you when you go to them.

Who Pays the Bill?

Anybody wants to know what things are going to cost, before buying them. That's just good business, so you will probably want to think about that, too. There's an old saying that "the best things in life are free." Many vocational rehabilitation services are free, too. They may be the best things in life for YOU.

Here's what you can get, without paying a cent: *Complete* physical examination to see just how much

work you can do, safely; a rehabilitation counselor's help in learning about the different kinds of jobs you can probably do, and in picking out one which you *want* to do; help in finding the job you've picked; the counselor's help, after you get that job, to be sure it's as *right* for you as you thought it would be.

You can also probably get free training for a job, if you need it. If you need special medical treatment services, artificial self-help appliances, help with living expenses while you receive other rehabilitation services, or tools or licenses for a job, and cannot manage to pay for these, the vocational rehabilitation agency helps pay for them.

It may pay the whole bill for some of these things, but you will be asked to pay as much as you can toward them.

Some Questions Are Necessary

In finding out how much you can pay for needed services which are not free, the rehabilitation counselor in the hospital, or outside, will have to ask you some personal questions about how much money you have. This is necessary, under Federal and State laws about these questions. But vocational rehabilitation wants to help you. So it will not ask you to bankrupt yourself or mortgage your future.

The information you give to the counselor will be kept confidential. Since it will not be told to other people without your consent, you can feel free in talking over your money problems with the counselor. The money which the State vocational rehabilitation agency spends in these ways, to help people who have had tuberculosis, has to be spent carefully. Some of the money comes from the Federal Government; some, from the State.

You, your family and friends, and other people who are taxpayers want this money to go to people who really need it and can be helped by it. Everyone (*you*, too) shares in helping the Government to get the

money it needs to run the country for the good of the people who live in it. Your biggest contribution, whether you can help pay the bill or not, will be in working along with the rehabilitation counselor, the doctor, and the other people who will help you get into safe work which you like.

Put Your Key in the Right Door!

If you go through "the door" of your State vocational rehabilitation agency you may be surprised to learn how many other doors it can help you to open. You won't be puzzled, though, because you'll learn just how to get to those other doors, and what to expect when you go through them.

The State vocational rehabilitation agency knows the places to go for different kinds of help, in your hometown and near it. It could never, by itself, give all the kinds of services needed by all the people who come to it. When you need a service to "get going" in a job, the agency will either provide this service or buy it for you from someone else.

If you need special medical service, the agency buys it from doctors, specialists, clinics, or hospitals. It buys training that you need from public, private, and correspondence schools; colleges and universities; or private teachers. Sometimes, *it buys training from an employer,* if the employer is willing to take you on, and train you while you work on a real job. If you get on-the-job training, you will work under special Government wage-and-hour rules and under the standards which organized labor approves. Also, you may need some help with family or personal worries. The rehabilitation agency gets service to help you with these problems from social service organizations and other places, if it cannot give these services to you itself.

Where To Go for Services

Wherever you are—in any State of this good country of ours, in the District of Columbia, Alaska, Hawaii, the Virgin Islands, or Puerto Rico—you can find a vocational rehabilitation agency. The States and Territories run these agencies. The Federal Government helps. The main office of the vocational rehabilitation agency is usually in the capital city of the State. There are generally local offices in other good-sized cities, too, so that people from anywhere in the State can get to them easily.

IF YOU ARE IN THE HOSPITAL, now, you may say, "Get to them *easily! How*—when I'm in bed most of the day?" You should *get* the rehabilitation services you need, though, *when you need them,* and when the doctor thinks *you* are ready for them. Remember? In order that this can happen, rehabilitation agencies often send counselors to tuberculosis hospitals, to talk with patients, explain services they can get, and start needed services as soon as it is safe to do so. Sometimes, there is a counselor on the hospital staff, too.

Get an Early Start

"Time is money" in rehabilitation. It will pay to start rehabilitation planning just as soon as the doctor says you may. Let him know that you are interested, so that he can tell you how to get the ball rolling. More and more doctors believe that patients should start their rehabilitation when they are still in the hospital. At last count, 7 out of every 10 tuberculosis patients served by vocational rehabilitation agencies were sent to them by hospitals and clinics. Patients think early service is a good idea, too. They say it makes them more anxious to do the things the doctors order, so they can really get busy again, as soon as possible. Then, too, patients know that when they use rehabilitation services, they have a much better chance of staying well, later.

But maybe you're not in a hospital—and never were! That doesn't make any difference. If you have tuberculosis, or have had it, you have a good chance of getting services from the vocational rehabilitation agency if you need them.

Ask your doctor for the address of the nearest rehabilitation agency office. Better still, look in the telephone directory for the address—but don't forget to let your doctor know that you are doing this. He can help, for he will have to let the counselor know that he approves a plan which will use some of your physical energy.

What's the Name of That Agency?

In most States the agency is called the *"Division* of Vocational Rehabilitation," but it may be called a *"Bureau"* or *"Commission."* Look up the section in the telephone book, headed by the name of your State, which lists your State agencies. If you do not find the agency under one of the three headings suggested, look under "Department of Education," for the rehabilitation agency is often a division of the State "department." (It's not a bad idea, either, to read down the whole list of State agencies, to learn of all the kinds of departments your State government has for its people.) If you still can't find the rehabilitation agency address, call your State or county tuberculosis association, State or county health office, public school department, or local welfare office. Other places from which you should be able to get information are hospitals, clinics, labor unions, the State employment service, or the local Red Cross chapter. At the back of this pamphlet you will find the address of the main office of each State agency, and the number of local offices, if any.

If the doctor thinks you should not spend the energy to visit the vocational rehabilitation agency, write to it. The agency rehabilitation counselors can often come to see patients in their homes if this is necessary.

The Start Is Important!

In rehabilitation, as in everything else, you'll never get anywhere unless you start. What really happens when you *do* "get going?" The steps in rehabilitation are simple. Here they are:

STEP 1.—*You start by getting in touch with your State vocational rehabilitation agency.* Start just as soon as your doctor gives you the green light. Follow the "ground rules" that you found on page 11 in "Where To Go for Rehabilitation Services."

STEP 2.—*Once the doctor says, "Okay," you are ready to see the rehabilitation counselor.* You'll find him a good friend who really wants to help. Of course *you* help, too, by telling him what you want to do, and what you *can* do—your schooling, work experience, skills, and health record. If you happen to need rehabilitation services that are not always free, the counselor will also need to know if you can pay something toward them.

The Checkup Again

STEP 3.—*A physical checkup!* Again? Yes, so that your doctor can be sure that the things you want to do are really going to help you get well and stay well. This time, you'll have a complete examination. Of course the doctor will check your chest—but you're more than a pair of lungs. He'll want to look over all of you, and maybe even call in a specialist or two. A thorough examination makes it safer for you in two ways. First, you can be sure that the plan you've picked is safe for your health. Second, if there is anything else the matter with you, you can get help for that disability, too. If you are in the hospital, the hospital doctor can examine you. If you are at home, probably your family doctor will do this. The complete examination helps to show just how much physical energy you can use. It helps to point the way to a safe job.

STEP 4.—*You and the counselor decide on your job "goal,"* or what kind of work will be best for you. You match what the job demands *from you,* against what *you have* to give the job—physical energy, skill, ability, and interest. Maybe you will need a short tryout period before you start real work or training. Maybe you will take some of those tests which help to find your special work skills. Perhaps some personal or family worries have come up, and you think things are "in a mess" but don't quite know what to do about them. The rehabilitation counselor knows where to get the services you need, wherever you are. He will go over your questions and your records with you so that you can come up with a good plan. You, the counselor, and the doctor will decide together on the kind of services you need and the time you should get them.

Kinds of Training

STEP 5.—Now comes training, if you need it! You can even start this in the hospital if the doctor says it is safe. If you've grown a bit rusty, you may need *brush-up* training. You may need training for your first job, or retraining for work that is different from what you did before. Maybe you will need extra training for work which the doctor, you, and the counselor pick because it will be better all around. You can get training in a public or private school, in a college or university, on the job, through a correspondence course, from a private teacher, or in several of these ways at the same time.

If you cannot pay for books or other needed training supplies, the State rehabilitation agency will help you get them. If you are not in a hospital, and need help with living expenses or carfare, the rehabilitation agency may help to take care of these costs, too.

Whatever the training, the doctor must know that it will not be too much of a strain. Your training must also be for a job which the doctor thinks is safe. During your training, you will get regular health checkups from your own doctor or in a public health clinic.

A Job . . . AND SUCCESS

STEP 6.—*And now for the job!* Not just *any* job—but the *right* job for you. In helping you with job placement, the counselor will work with you and your doctor. He will also work with the State employment service. They want to be sure that the job will be right for *your* abilities and *your* health, and that it will be a job which *you* like and can do.

STEP 7.—*Followup is the last step.* All along the rehabilitation road, you've been taking stock of yourself to see where you'd go and how you'd get there. Now, you and the counselor take stock again to see that your new job is really right for you. The counselor will get in touch with you after you are in your job to see that everything is going smoothly, that your boss is satisfied, and that your health is standing up. If a little change is needed along the way, the counselor will help you make it. You are rehabilitated when you have been in a satisfactory job long enough to prove that you can do it well and that your health is not suffering.

A Step at a Time . . . and You'll Make it.

HAPPY TRAVELING!

Address of State Offices

In States where a single address is listed, the agency conducts the rehabilitation program both for the blind and for the sighted disabled. The word "blind" in parentheses after an address indicates that the agency deals exclusively with the visually handicapped. See page 12 for the titles by which State agencies generally are known.

ALABAMA

416 State Office Building, Montgomery (17 local offices).

ALASKA

P. O. Box 2568, Juneau (four local offices).

UNITED STEELWORKERS OF AMERICA

PITTSBURGH, PENNSYLVANIA

DAVID J. McDONALD, President I. W. ABEL, Secretary-Treasurer
HOWARD R. HAGUE, Vice-President
ARTHUR J. GOLDBERG, General Counsel

WISCONSIN WORKMEN'S COMPENSATION DIGEST

EMPLOYEE INCLUDES:

All persons working regularly in private industry, having 3 or more employees. Employers of less than 3, farmers and employers of domestic servants, may elect to come under Workmen's Compensation Coverage. Also includes all persons employed by the state, its subdivisions and school districts. Further includes police and firemen when not otherwise provided for.

NOTICE OF INJURY AND LIMITATIONS FOR FILING CLAIMS

No claim for compensation shall be maintained unless, within 30 days after occurrence of injury or within 30 days after employee knew or ought to have known nature of his disability and its relation to his employment, actual notice was received by employer or by an officer, manager or designated representative of employer. If no representative has been designated by posters placed in one or more conspicuous places, then notice received by any superior shall be sufficient. Absence of notice shall not bar recovery if it is found that employer was not misled thereby. Regardless of whether notice was received, if no payment of compensation (other than medical treatment or burial expense) is made, and no application filed with the Commission within 2 years from date of injury or death, or from date employee or his dependent knew or ought to have known nature of the disability and its relation to the employment, the right to compensation therefor shall be barred, except that the right to compensation shall not be barred if employer knew or should have known, within the 2 year period, that employee had sustained the injury on which claim is based.

The limitations for occupational diseases arising out of employment are the same as for other injuries.

COMPENSATION — TEMPORARY DISABILITY

In case of temporary disability, aggregate indemnity shall not exceed amount payable in case of permanent total disability. Maximum $54.00 per week.

COMPENSATION — PARTIAL PERMANENT DISABILITY

For permanent partial disability, aggregate number of weeks of indemnity shall bear such relation to number of weeks set out below in paragraphs (a) and (b) as nature of injury bears to one causing permanent total disability and shall be payable at rate of 70% of average weekly earnings of employee. Maximum $40.00 per week. Such weekly indemnity shall be in addition to compensation for healing period and shall be for period that he may live, not to exceed, however, these named limitations:

(a) One thousand weeks for all persons 50 years of age, or less.

(b) For each successive year age group, beginning with 51 years, maximum limitation shall be reduced by 2½% per year, until minimum limit of 500 weeks shall be reached

COMPENSATION — PERMANENT TOTAL DISABILITY

In case of permanent total disability, aggregate indemnity shall be weekly indemnity for period he may live. Maximum $54.00 per week, minimum $8.75. Total blindness of both eyes, or loss of both arms at or near shoulder, or of both legs at or near hip, or of one arm at shoulder and one leg at hip, shall constitute permanent total disability. This enumeration shall not be exclusive but in other cases the Commission shall find the facts.

PERMANENT PARTIAL DISABILITY SCHEDULE

In cases included in following schedule of permanent partial disabilities indemnity shall be paid for the healing period, and in addition thereto, where employee is 50 years of age or less, $40.00 maximum and $8.75 minimum for the following periods:

LOSS OF	WEEKS
1. Arm at shoulder	500
2. Arm at elbow	450
3. Hand	400
4. Palm where thumb remains	275
5. Thumb and metacarpal bone thereof	125
6. Thumb at proximal joint	100
7. Thumb at distal joint	40
8. All fingers on one hand at proximal joints	225
9. Fingers on each hand as follows:	
(a) Index finger and metacarpal bone thereof	60
(b) Index finger at proximal joint	50
(c) Index finger at second joint	30
(d) Index finger at distal joint	12
(e) Middle finger and metacarpal bone thereof	45
(f) Middle finger at proximal joint	35
(g) Middle finger at second joint	20
(h) Middle finger at distal joint	8
(i) Ring finger and metacarpal bone thereof	26
(j) Ring finger at proximal joint	20
(k) Ring finger at second joint	15
(l) Ring finger at distal joint	6
(m) Little finger and metacarpal bone thereof	28
(n) Little finger at proximal joint	22
(o) Little finger at second joint	16
(p) Little finger at distal joint	6
10. Leg at hip joint	500
11. Leg at knee	425
12. Foot at ankle	250
13. Great toe with metatarsal bone thereof	83-1/3
14. Toes on each foot as follows:	
(a) Great toe at proximal joint	25
(b) Great toe at distal joint	12
(c) Second toe with metatarsal bone thereof	25
(d) Second toe at proximal joint	8
(e) Second toe at second joint	6
(f) Second toe at distal joint	4
(g) Third, fourth or little toe with metatarsal bone thereof	20
(h) Third, fourth or little toe at proximal joint	6
(i) Third, fourth or little toe at second or distal joint	4
15. Eye by enucleation or evisceration	275
16. Total impairment of one eye for industrial use	250
17. Total deafness from accident or sudden trauma	333-1/3
18. Total deafness of one ear from accident or sudden trauma	50

In case injury causes more than 1 permanent disability, period for which indemnity shall be payable for each additional equal or lesser disability shall be increased as follows:

a. In impairment of both eyes, by 200%;

b. In disabilities on same hand covered by Paragraph 9 in preceding schedule, by 100% for first equal or lesser disability and by 150% for 2nd and 3rd equal or lesser disabilities;

c. In disabilities on the same foot covered by Paragraph 14 in the preceding schedule, by 20%;

d. In all other cases by 20%;

e. The aggregate result as computed by *a*, and aggregate result for members on same hand or foot as computed by applying *b* and *c*, shall each be taken as a unit for applying *d* as between such units, and as between such units and each other disability.

In cases where injured employee is above 50 years of age when injured, period for which indemnity shall be payable, in addition to healing period, shall be reduced from those specified by 2½% for each year that age of such employee exceeds 50, up to 70 years of age, but not to exceed 50%.

DISFIGUREMENT

If you are so permanently disfigured about face, head, neck, hand or arm as to occasion potential loss of wage, the Commission may allow such sum for compensation as it deems just, not exceeding your average annual earnings.

MEDICAL, HOSPITAL EXPENSES AND SELECTION OF PHYSICIAN

Your employer shall supply such medical, surgical and hospital treatment, medicines, medical and surgical supplies, crutches, artificial members and appliances as may be reasonably required to cure and relieve you from effects of injury not to exceed period for which indemnity is payable.

The employee shall have the right to make choice of his attending physician from a panel of physicians to be named by employer.

Failure of employer to maintain a reasonable number of competent and impartial physicians, ready to undertake treatment of employee, and to permit employee to make choice of his attendant from among them, shall constitute neglect and refusal to furnish such attendance and treatment. The Commission may upon summary hearing permit an injured employee to make selection of a physician not on panel.

OCCUPATIONAL DISEASES

In any disease causing injury arising out of your employment you will receive the same amount of compensation as in accidental injury, except as to silicosis and other dust diseases. Give the same type of notice and file claim in same manner as in accidental injury. If silicosis causes disability or death, you receive same compensation as in accidental injury. However, if you have non-disabling silicosis or a loss of hearing due to prolonged exposure to noise in his employment and you are discharged or transferred by your employer the Commission may find it is inadvisable for you to continue in his employ and may order such compensation on account thereof as it may deem just not exceeding $3500.00. If after discharge you become disabled not because of additional exposure but due to exposure in employer's service, any amount which shall have been paid shall be credited against compensation found to be payable by such employer for disability caused by silicosis but shall not operate to reduce number of weeks provided under law for disability. Total occupational deafness: one ear, 36 weeks; both ears, 216 weeks.

COMPUTATION AT DEATH

Where death proximately results from injury and you leave a person wholly dependent upon you for support, death benefit shall equal 4 times your average annual earnings, but total amount paid as death benefit, shall not exceed 1000 weeks for any person 50 years of age or less. For each yearly group beginning with 51, maximum limitation is reduced by 2½% per year until minimum limit of 500 weeks shall be reached. Maximum death benefit $15,428.00. Maximum weekly benefit $54.00.

Each child by their marriage living at time of death of employee and who is wholly dependent upon him for support, such additional benefits shall be computed from date of death of employee as follows:

For child 1 year of age or under, a sum equal to average annual earnings of deceased employee; for children in each successive yearly age group, amount allowed shall be reduced by 1/18th part of such average annual earnings, with an allowance for any child up to 18 years of age at death of employee unless such child be physically or mentally incapacitated from earning, in which case the Commission shall make such allowance as the equities and necessities of case merit, not more however than amount payable on account of a child under 1 year of age.

If there is more than 1 person wholly or partially dependent, death benefit shall be divided between such proportion as the Commission shall determine to be just considering their ages and other facts bearing on such dependency.

If there are no total dependents, partial dependent receives compensation equal to same proportion of your weekly payments for the benefit of persons wholly de-

pendent as amount contributed by you to such partial dependent bears to your annual earnings at time of accident.

Unestranged parents residing in any of the territorial possessions of the United States are included as eligible for death benefits.

Death benefit payments are paid in weekly installments corresponding in amount to 50% of weekly earnings of employee until otherwise ordered by the Commission.

BURIAL ALLOWANCE

Your employer must pay funeral expenses, not to exceed $350.00, where death proximately results from injury. It is also provided where death results from causes other than the injury in a case of permanent total disability.

HERNIA

In hernia promptly report it to your employer as soon as you notice it, regardless of whether or not you are immediately disabled.

LUMP SUM PAYMENTS

Any time after 6 months from date of injury, the Commission may order payment in gross or in such manner as it may determine to the best interest of injured employee or his dependents. When payment in gross is ordered, the Commission shall fix gross amount to be paid based on present worth of partial payments, considering interest of 3% per annum. No lump sum settlement shall be allowed in any case of permanent total disability upon an estimated life expectancy, except upon consent of all parties, after hearing and finding by the Commission that the interest of injured employee will be conserved thereby.

COMPUTATION OF WAGES

Average weekly earnings for temporary disability shall be taken at not less than $12.50 nor more than $77.14 and for permanent disability or death shall be taken at not less than $20.00 nor more than $77.14, and for permanent partial disability at not less than $20.00 nor more than $52.86. Between these limits average weekly earnings shall be determined as follows:

Average weekly earnings shall be arrived at by multiplying daily earnings by number of days and fractional days normally worked per week at time of injury in the business operation of employer for particular employment in which employee was employed at time of this injury.

MINORS — ILLEGAL EMPLOYMENT

An employee under 18 years of age, illegally employed shall receive:

a. If permitted to work without a permit, double amount otherwise recoverable; not to exceed $5000.00.
b. If permitted to work without a permit at any employment in which the Commission has specified that no permit shall be issued, 3 times amount otherwise recoverable; not to exceed $7500.00.
c. If permitted to work at any prohibited employment, 3 times amount otherwise recoverable; not to exceed $7500.00.
d. If minor is under permit age and illegally employed, 3 times amount recoverable; not to exceed $7500.00.
e. Double or treble compensation shall not be payable unless employer sought to be charged knew or should have known that the minor was illegally employed by the contractor or sub-contractor.

HEARINGS IN DISPUTED CASES

Upon claim filed, hearing is had before an Examiner. From decision of Examiner an appeal can be filed with Commission. From decision of Commission an appeal can be taken to Circuit Court of Dane County, and from thence to Supreme Court of Wisconsin.

FINAL RECEIPT

A Final Receipt is an agreement between you and your employer that you have received your compensation in full. Do not sign a final receipt if you are still partially disabled. Be sure and procure a copy of final receipt, if you sign it.

The physically IMPAIRED

can be INSURED without penalty

IMPAIRED, EMPLOY

A Statement Concerning Your Casualty Insurance Program and the Physically Handicapped Worker

LET THIS BE UNDERSTOOD—there is no provision in workmen's compensation insurance policies or rates that penalizes an employer for hiring handicapped workers.

There appears to be much misinformation on this point. For many employers have been known to say they could not or would not hire disabled applicants because they had been advised that their insurance costs would be increased as a result. Nothing could be farther from the truth. Employers who have such ideas have simply been hoodwinked by scuttlebutt rumors that are easily circulated because of their sensationalism. It is much more difficult to gain acceptance of the cold, stark truth —because its honesty affords no opportunity for gossip.

Therefore, to erase any misunderstanding, these are the facts. Workmen's compensation insurance rates are determined by two factors. These are the relative hazards in a company's work and its accident experience. The formulae for determining premium rates do not take

ED – INSURED!

into consideration the kind of personnel hired. The insurance contract says nothing implied or direct about the physical condition of the workers an insured may hire.

It is true that a poor accident experience—that is, a relatively high number or cost of claims over a period of time—will cause an increase in an employer's compensation insurance rates. It is equally true that *if* a disabled worker would be more apt to have accidents and consequently suffer greater disability, as some people once believed, then an employer's insurance costs might eventually go up. ***But***, and this should not be forgotten, research studies conducted by governmental agencies; the Accident Prevention Department of the Association of Casualty and Surety Companies and the New York University Center for Safety Education which it endows, have shown that when placed at the proper jobs the handicapped have an accident experience that is as good as that of their able-bodied fellow workers—and is often superior. So then, this possibility for an increase in a employer's com-

— at the proper jobs
have an accident exp
or better than the ab

pensation insurance costs is nullified. In order to assist each industry to achieve proper placement and supervision of the handicapped and so to be of service to both employers and the physically impaired, the casualty insurance companies have prepared two booklets, "The Physically Impaired—A Guidebook to Their Employment", and "Supervising the Physically Impaired", which are free to anyone who requests them from his stock insurance carrier.

In addition, these studies have shown that the properly placed disabled are more reliable workers with an equal or better production record.

All this sums up to an important conclusion. As long as misinformation and untruths concerning the employability of the handicapped are permitted to be circulated, the chance for these workers to prove they can produce successfully will be denied them. But now you know that the frequently voiced objections to their employment—that is, insurance companies forbid it or insurance costs will rise—are unfair, false and illogical.

bs the handicapped
xperience as good
able-bodied worker.

The casualty insurance industry refuses to be accused of blocking the employment of the handicapped not only because such an accusation is unjustified, but also because it is even more harmful to the physically impaired than to the insurance companies.

FACTS ABOUT THE WISCONSIN WORKMEN'S COMPENSATION LAW

WITH 1959 AMENDMENTS

INDUSTRIAL COMMISSION OF WISCONSIN

MATHIAS F. SCHIMENZ
Chairman

R. G. KNUTSON
Commissioner

JOHN H. ROUSE
Commissioner

HELEN E. GILL
Secretary

RALPH E. GINTZ
Director of Workmen's Compensation

FACTS ABOUT THE WISCONSIN WORKMEN'S COMPENSATION LAW

1. Q: What is the Wisconsin Workmen's Compensation Act?
   A: It is the law which provides for medical and money benefits to employes injured by reason of their work, and for death benefits to their dependents.

2. Q: By whom is the act administered?
   A: By the Industrial Commission, Madison, Wisconsin.

INJURIES COVERED

3. Q: What injuries are covered?
   A: Mental and physical harm of all kinds, whether due to accident or disease, and also *accidental* damage to, or destruction of artificial members, dental appliances, and teeth, also eye glasses provided they are damaged in an accident which causes some personal injury, although slight.

4. Q: Are all occupational diseases covered?
   A: Yes, all diseases due to employment, such as silicosis, lead poisoning, hernia, dermatitis, and loss of hearing caused by exposure over a period of time to conditions which result in injury.

CONDITIONS OF LIABILITY

5. Q: What must an employe show to entitle him to benefits?

A: That he and his employer were subject to the compensation act; that he was injured while performing service for his employer; that the injury was not intentionally self-inflicted; and that his injury was caused by his work.

6. Q: Is an employe who is injured while merely going to or from work entitled to benefits?

A: Yes, but only if he is on the premises of his employer at the time, or on premises where his service is to be performed. If he is actually performing service for his employer, or is being transported by the employer when injured, and is hurt because of a hazard of service, he will be entitled to benefits whether or not he is on the employer's premises when hurt. An employe whose employment requires him to travel is deemed to be performing service at all times while on a trip, except as he steps aside to do some personal act. He is covered while traveling in trains, cabs, or while in eating places, hotels and other places of sojourn, provided he has not deviated for a private or personal purpose. Actions reasonably necessary for living, such as eating, bathing, etc., are not to be regarded as such deviation.

7. Q: What employers are subject to the act?

A: (1) All employers, except farmers, who have *at any time*, even momentarily, employed three or more persons in the course of a trade, business, profession or occupation and

have not elected not to be subject to the act; (2) all employers, except farmers, who usually employ three or more persons in the course of a trade, business, profession or occupation are compulsorily subject and may not withdraw; (3) all municipal divisions, such as the state, county, city, village and school district, regardless of the number of employes. Farmers and employers of domestic servants and other persons not employed in the business or trade of the employer are not subject but the employer may voluntarily become subject by election or by taking a policy of workmen's compensation insurance.

8. Q: Suppose the employer has two employes in one business and one in another, or two employes in one city and one in another?

A: The employer becomes subject to the act when he has three employes, whether in one or more businesses or locations.

9. Q: If an employer withdraws from the act, what is his liability in case of injury to an employe?

A: He may be sued in court, and upon a showing of negligence may be held liable for such damages as are determined by the court and jury.

10. Q: If an employer is subject to the act, may an employe sue in court for injury if he prefers?

A: No; when parties are subject to the act it is the only remedy between them for personal injury arising out of employment.

11. Q: What advantage is there in an employer electing to become subject to the compensation act?

A: He cannot be sued at common law for damages; he becomes liable for definite benefits and may insure his risk.

12. Q: If an employe works for a contractor who is not subject to the act, or who has no insurance, may the employe hold liable the principal employer for whom the contractor performs service?

A: Yes, provided the principal employer is subject to the act. He could not, for example, hold a farmer as principal employer unless the farmer had become subject to the act, nor could he hold a principal employer who had never employed more than two persons and had not become subject to the act.

EMPLOYES COVERED

13. Q: Who are employes subject to the act?

A: Those who work for anything of value but not persons who are working with no intention that payment shall be made for services.

14. Q: May minors receive compensation?

A: Yes. Minors under the act are competent to contract and receive compensation benefits, as are adults.

15. Q: May employes waive their benefits, that is, agree that in case of injury no benefits will be claimed?

A: No, except epileptics and those totally blind, and those only if they have given notice to the commission and the employer in advance, and

then only for such injuries as are caused by epilepsy or blindness. Any other agreement to waive benefits is illegal and absolutely void and of no effect.

WAGE BASIS

16. Q: On what basis is money compensation paid?

A: On the wage earned by the employe at the time of injury.

17. Q: What is the wage basis for compensation?

A: The normal full time wage at the time of injury in the employment in which the employe works at that time. Wage earned beyond normal full time hours is counted only if the employe has worked within six calendar weeks or more for the employer in whose employ he is injured, and then only if the average weekly wage earned is higher than the normal full time wage. For example, if the normal full time weekly wage is $20, but over a six week period the employe has put in overtime and earned $180, his actual average weekly wage is $30, and compensation is based on such wage. If, however, during the six week period the employe has lost a good deal of time and has earned only $120, or less, his wage will be $20 per week, based on normal full time.

18. Q: How is the wage of a part time worker fixed?

A: On the wage of a normal full time worker. If, for example, a part time worker performs service for one hour per day, and normal full time workers in the same type of employment work eight hours per

day, the part time worker's wage is to be taken on the basis of an eight hour day.

19. Q: What is the minimum weekly wage for compensation purposes?

A: Minimum weekly wage is $12.50 and minimum weekly compensation 70 per cent of that wage, or $8.75. Minimum compensation is payable no matter how small a wage the employe may earn. Minimum weekly wage is always at least 30 times the hourly rate if such wage amounts to more than $12.50 per week. Minimum weekly wage for permanent disability is $20, with weekly compensation 70 per cent of that wage, or $14.

20. Q: What is the maximum weekly wage?

A: Maximum wage is $77.14, and maximum compensation is $54.00 for temporary, permanent total, and death. For permanent partial disability maximum wage is $57.14, and maximum compensation is $40. No matter how high the wage, no employe can receive more than these amounts except as increased compensation because of violation of a safety order, or because illegal hiring of a minor may produce a higher amount.

21. Q: Are tips counted in determining wage?

A: All things of value, as board and room, tips, bonuses agreed upon, etc., are counted when they are part of the consideration for work.

22. Q: Must notice of injury be given to the employer in order to obtain compensation?

A: Notice must be given within 30 days from the date of injury, or the right to compensation may be barred. In-

jury should be reported immediately, or as soon as possible to the foreman or other designated person to avoid doubt being thrown on a later claim, and also so that medical treatment may be promptly given.

23. Q: Suppose notice is not given within 30 days?

A: Claim may still be established if the employer was not misled by failure to give notice. If the employer can show he was misled benefits will not be payable.

FILING OF CLAIMS

24. Q: How soon must claim be made where no compensation has been paid?

A: Application for adjustment of claim must be filed with the Industrial Commission within two years from the date of injury unless compensation has been paid, when the application may be made within six years from the date of the last payment of compensation. The time for filing application may be extended to six years if it can be shown that the *employer* knew or ought to have known within the two year period that the employe had sustained an injury even without actual resulting disability at the time.

25. Q: Suppose the employe does not learn within two years that an occupational disease was caused by his work?

A: The time is then extended for two years from the time he knew or should have known of the connection between his disease and his work, but is not extended beyond six years from the last day of work before his disability commences.

26. Q: When claim for compensation is made, has the employer a right to have physical examination of an employe made by a doctor?

A: Yes, in order to learn the extent and character of the employe's disability, so that he may know whether or not to pay compensation. If the employe fails to submit to reasonable examination as requested from time to time, his compensation may be suspended. Applicant may have his own doctor present at the time of examination if he wishes. If the examination is considered unreasonable, the matter may be submitted to the commission for decision. The employe is entitled to compensation for time lost and to his traveling expense, if any, in submitting to examination.

27. Q: Suppose a dispute arises as to liability and the parties wish to settle on a basis agreeable to them?

A: They may do so, but always subject to the commission's approval. If the commission does not approve settlement, it has no effect, and further claim may be made. All compromise agreements are subject to review by the Industrial Commission within one year.

Have apply to Ch

WHO BEARS COST?

28. Q: May an employer charge the employe for the cost of compensation insurance or benefits?

A: No; the law makes that illegal and provides penalties.

29. Q: Should an employe sign receipt for compensation?

A: Yes, but the signing of receipt does not prevent him from claiming and

recovering additional compensation even though the receipt may state that the amount paid is in final settlement.

HEARING PROCEDURE

30. Q: In case of dispute what may the employe do to obtain compensation?

A: He may file his application for adjustment of claim with the Industrial Commission, Madison, Wisconsin. Blank forms are supplied by the commission upon request. After application is filed, hearing is set as soon as possible at a selected center, as close to applicant's residence as possible, upon notice given at least 10 days in advance to all interested parties.

31. Q: Must the applicant be represented at hearing by attorney?

A: No; the law provides he may appear in person, by agent or by attorney.

32. Q: If an employe is not represented by attorney, who assists him in bringing out the facts?

A: The commission's examiner who conducts the hearing will ask questions of all witnesses present at the hearing.

33. Q: Is there any limitation as to attorney's fee?

A: The law allows an attorney to charge up to 20% of the amount recovered, unless there is no dispute and no need for hearing, when the fee charged cannot exceed 10% and not more than $100 in any case.

34. Q: Who must pay the attorney's fee?

A: The person making claim must pay the fee from the compensation which is awarded. It is well to have a clear understanding in advance with the

attorney as to the fee to be charged.

35. Q: May a union representative represent an employe at hearing?

A: Yes; any person, upon proper showing, may obtain permission from the examiner to represent a claimant.

36. Q: Must the applicant have witnesses at hearings?

A: Witnesses are not needed as to points not in dispute. As to points in dispute appearance of witnesses should be arranged. Each party must bear the expense of producing his own witnesses. If there is question as to what witnesses are needed, and no lawyer is retained, the commission may be consulted at the time of filing application, or as long as possible before hearing.

37. Q: Are doctors' reports admissible as evidence for the employe?

A: Yes, of doctors licensed and practicing in Wisconsin and of doctors outside Wisconsin to whom the claimant had been sent for examination or treatment by the employer or insurance company. These must be notarized and filed with the commission at least 15 days before the time of hearing. If possible, they should be presented at the time application is filed. Forms are supplied by the commission for this purpose.

38. Q: Who conducts hearings and decides cases?

A: Examiners of the Industrial Commission.

APPEALS

39. Q: May there be appeal from the examiner's findings?

A: Yes, to the Industrial Commission as a body. This must be done within

20 days from the date of the order made by the examiner after hearing. If petition for review is not filed within 20 days from that date, the commission and the court loses jurisdiction.

40. Q: What further appeals are possible, after appeal to the commission?

A: One to the Circuit Court of Dane County within 30 days from the order of the commission as a body, and to the Supreme Court within 30 days from the judgment of the Circuit Court.

EXEMPTION FROM DEBT

41. Q: May compensation be assigned?

A: No; neither can it be taken for debt, either by garnishee action or otherwise. It is not necessary to report compensation payments for income tax purposes, as income tax is not charged on workmen's compensation benefits.

LIABILITY FOR COMPENSATION

42. Q: Who pays compensation?

A: Most employers carry insurance so that the insurance company pays benefits. Some employers are "self-insurers" and pay compensation directly. In either case, the employer is primarily responsible for payment.

43. Q: Are employers required to insure their compensation liability?

A: All employers subject to the act are required to insure unless excused by the Industrial Commission on a showing of financial ability to pay claims. Only a small number of employers are "self-insurers." Failure of employers to insure unless excused calls for heavy penalties.

44. Q: If a person is hurt by negligence of a "third party" may he take compensation and also sue the third party?

A: Yes. He will then receive his full compensation benefits and also one-third of the net amount recovered from the third party. All costs of collection, including attorney's fees, are taken out before division of proceeds is made. The insurance company or employer is then repaid the amount paid or to be paid as compensation, and if any balance remains that also is paid to the employe. Action against a third party is usually by joint action of the employer or his insurance carrier and the injured employe.

MEDICAL BENEFITS

45. Q: What are the benefits under the act?

A: (1) Medical treatment; (2) compensation for lost time, wage and disability; (3) death benefit; (4) maintenance during rehabilitation training.

46. Q: What medical benefits are provided?

A: Every sort of medical or hospital treatment **reasonably necessary.** Treatment by a doctor of osteopathy or a chiropodist (foot doctor is included. Treatment by a masseur or physical therapist is included when prescribed by a regularly qualified physician. Artifiicial limbs and appliances of all kinds when needed are also to be provided but are not required to be replaced. Employes are entitled to compensation for lost time and for necessary traveling expense when submitting to treatment.

46a. Q: Is treatment by a chiropractor provided?

A: There is no liability for chiropractic treatment unless such is prescribed by a regularly qualified physician.

46b. Q: Is Christian Science treatment provided?

A: Christian Science treatment may be provided in lieu of medical treatment unless the employer has filed notice with the commission not to provide such treatment.

47. Q: Is there any limit as to time or amount of medical and hospital benefits?

A: Absolutely none, except treatment must be reasonably necessary and the expense must be reasonable.

48. Q: Who supplies the physician?

A: The employer or insurance company must give the employe his choice from a reasonable number of doctors to be listed on a panel. The employe is also entitled to a second choice of physician if he is dissatisfied with the first physician chosen. The commission may, in addition, permit choice of some other doctor upon proper showing.

49. Q: What is a "reasonable number" of physicians?

A: That is to be determined by the commission in each case. Most employers list a very wide choice. If the employe believes the employer does not list an adequate number, or that proper treatment is not being given, he should take the matter up with the commission.

50. Q: Must the employe give notice to the employer that he needs treatment?

A: Yes; otherwise he must bear the expense himself, except that in case of emergency the employer becomes

liable for the reasonable value of necessary treatment before the time that it is possible to give notice. In case of occupational disease he may recover the reasonable expense of treatment incurred before he knew that his work caused his condition, even though notice is not given.

51. Q: Need artificial members, when worn out, be replaced?

A: No; only one suitable member is required to be supplied. If the member supplied is not suitable, a suitable one must be supplied.

52. Q: Suppose the employe refuses medical treatment?

A: If he refuses reasonable treatment he will lose his rights to compensation so far as his refusal results in greater disability.

PAYMENT AND BASIS OF COMPENSATION

53. Q: When does compensation commence?

A: On the 11th day after the date of injury. There is no compensation for the first three days following the day of first disability except as hereafter noted. For example, an employe who is injured and leaves work on the first day of the month is entitled to compensation only for such disability as results on and after the fifth day of the month. The first payment is due on the eleventh day for such disability as has then resulted, and weekly thereafter during disability. If there is disability following the tenth day after the day of first disability, compensation is also payable for the first three days. If compensation is not received within two weeks after injury, the employe should inform the commission.

54. Q: Are Sundays counted in the first three days?

A: No, unless the employe works on Sundays. Sundays are, however, counted in the running of the ten day period.

55. Q: What money payments of compensation are to be made?

A: Seventy per cent of weekly wage during total disability but not more than $54.00 for temporary disability, permanent total disability, and death, and $40 for permanent partial disability, nor less than $8.75 in any case of temporary total disability, nor $14.00 in case of permanent partial disability or death.

56. Q: Suppose an employe earns $100 per week?

A: No matter how large his wage, the highest compensation payable is $54.00 per week, as stated in previous answer.

57. Q: Suppose there is disability which causes only partial wage loss?

A: Proportionate compensation is then paid; for half wage loss half of compensation payable for total disability is to be paid. If total disability calls for $54 compensation half wage loss calls for $27.

58. Q: Is compensation payable for all days lost?

A: For each day except Sunday one-sixth of weekly compensation is payable. That is true whether the employe works on Sundays or more or less than six days per week.

59. Q: Suppose disability prevents a man from ever earning again?

A: He receives compensation for the rest of his life.

60. Q: Suppose disability will always remain to the head or body but some work can be done?

A: Compensation is then paid for a limited number of weeks, dependent on age, but never for more than 1000 weeks in addition to the "healing period". To illustrate, if 50% disability results to one 50 years of age or under, compensation is payable for 500 weeks, if 25% disability, to 250 weeks, etc. In cases of persons over 50 years of age, the basic number of weeks for permanent partial disability to the head or body decreases by 2½% each year until age 70, at which age there is no further reduction.

REHIRING OF EMPLOYE

61. Q. Is an employer required to rehire an employe injured in the course of employment?

A: Yes, unless the employer can show reasonable cause for failure to do so.

DEATH BENEFITS

62. Q: Who is entitled to receive death benefits?

A: Only persons named in the compensation act, including husband, wife, children 18 or under, grandchildren, parents, brothers and sisters, and members of family.

63. Q: How much death benefit can be paid?

A: The largest payment (in case of total dependency) is $15,428, and the smallest $4000.

64. Q: Suppose a person is receiving compensation for permanent disability and then dies from some cause other than injury?

A: Of the balance remaining unpaid, up to $350 is applied on burial expense. The remainder becomes pay-

able to dependents not, however, in a sum greater than such dependents would have received if death had resulted from injury.

65. Q: What may parents receive as death benefit?

A: If they were on friendly terms with the son or daughter, $2,000 is paid as death benefit. However, if parents are totally dependent they may receive as much as $4000 to $15,428 varying with the wage of the employe.

66. Q: What may other dependents receive?

A: They may receive the amount which they might have expected to receive from the employe as contribution to support but not more than $15,428 in any case.

67. Q: In addition to death benefit is burial expense payable?

A: Yes, but not more than $350.

68. Q: What is the provision for additional payments to children of a widow who herself is to receive benefits?

A: Children 16 or under living with the employe at the time of injury may receive benefits from a state fund created for that purpose. The amount varies with age up to a total of $4,114 for one child, and is payable at the rate of 13 per cent for each child of the weekly amount paid to the widow or widower.

METHOD OF PAYMENT

69. Q: Are benefits payable in installments or in one sum?

A: The purpose of compensation payments is to replace wage loss as and

when it occurs. All compensation, including death benefit, is to be paid in installments as are wages unless a showing is made to the commission that interests of the employe or dependent will be conserved by more rapid or lump sum payments.

70. Q: Do employes or dependents lose compensation if they receive a lump sum payment?

A: As payments are normally due only in installments, 3% compound interest is charged when payments are made more rapidly or in one sum.

SCHEDULES OF BENEFITS

71. Q: In case of loss of a member such as a hand, arm, leg, foot, eye, etc., how is compensation paid?

A: Schedules in the act provide payment for a certain number of weeks for loss by amputation, as of toes, arms, feet, etc., and for loss of vision or hearing. Loss of an arm at the shoulder, for example, calls for payment to a person aged fifty or under of 500 weeks' compensation in addition to compensation for healing period. Loss of vision of one eye calls for 250 weeks' compensation; loss of hand at the wrist 400 weeks; loss of foot at the ankle 250 weeks; loss of thumb at the proximal joint 100 weeks, etc.

72. Q: Does it make a difference whether the right or left member is lost?

A: No, the amount is the same in either case.

73. Q: Does age make a difference?

A: There are reductions of 2½% for each year after age 50 in the number of weeks allowed. For example, one aged 60 when injured will have

compensation reduced by 25% in the number of weeks allowed with no further reduction after age 70.

74. Q: In case of loss of members is healing period paid in addition to the number of weeks allowed by schedule?

A: Yes, in all cases compensation is paid for the actual necessary healing period, based on necessary wage loss during temporary disability up to the time the condition has become stationary and permanent disability can be fixed.

75. Q: Suppose there is not loss by amputation but stiffness or other disability?

A: A proportionate number of weeks is then payable. If, for example, the loss of use is one-half of the arm, 250 weeks would be paid instead of 500.

76. Q: Where more than one member, such as finger, arm, hand, leg, etc., is affected is there special provision?

A: Yes, additional amounts are allowed for multiple injuries.

DISFIGUREMENT BENEFITS

77. Q: Suppose disfigurement results?

A: Additional compensation up to $3,857 may be paid for disfigurement of the face, head, neck, hand or arm. It must be shown, however, that the disability is such as probably will cause wage loss—this because the employe is unable to obtain work or must accept a lower wage because of disfigurement.

INCREASED AND DECREASED COMPENSATION

78. Q: Suppose it can be shown that the employer or employe was negligent?

A: Negligence makes no difference as to payment of compensation except as there may be violation of a safety order.

79. Q: May compensation be increased for any reason?

A: Yes. The law requires the employer to furnish a safe place to work and to comply with orders of the Industrial Commission as to safety. If injury is caused by reason of a violation by the employer of the "safe place" statute, or of a safety order, or because of failure of an employer reasonably to enforce compliance by employes with a statute or order, 15% increased compensation becomes payable to the employe or his dependents.

80. Q: May compensation be decreased for any reason?

A: Yes, if the employe *wilfully* fails to follow rules for his safety or to use safety devices which the law requires, adequately maintained and the use of which is enforced compensation may be decreased 15%. If injury occurs because of intoxication, compensation is also decreased 15%.

81. Q: What about illegal employment of minors?

A: If an employer is required to have a permit to hire a minor and no permit is obtained, the employe will receive double compensation for his injury. If he is employed at prohibited employment (whether or not he has a permit), he will receive

treble compensation. Under provision of the Child Labor law, certain employments have been prohibited to minors of certain ages.

82. Q: Who pays such increased compensation?

A: It must be paid by the employer himself and not by the insurance company, except if the employer is shown to be insolvent.

PRE-EXISTING DISABILITY

83. Q: Suppose an employe already has disability and injury causes additional disability?

A: If disabilities are sufficiently serious, that is, if such as to call for payment of at least 250 weeks of compensation for each disability, he may receive additional payments from a fund set up in the state treasury for that purpose. The employer thus pays only for the disability caused by his work, and the fund pays additional compensation.

REHABILITATION BENEFITS

84. Q: What about rehabilitation benefits?

A: If the employe has a type of injury which makes it difficult or impossible for him to do work previously performed, he may, during a period not exceeding 40 weeks, receive expenses of travel and costs of maintenance, provided rehabilitation instructions are received elsewhere than at the place of his residence. During the period of rehabilitation compensation is continued on the basis of wage loss.

85. Q: Is there provision for training in the use of artificial limbs?

A: Yes, during such period applicant will continue to receive compensation and is entitled to all training and expenses necessary to attain efficient use of artificial members and appliances.

REPORT OF INJURY BY EMPLOYE

86. Q: What should an employe do when he suffers injury?

A: He should report at once to his employer directly, or through a foreman or designated person; he should submit promptly to all necessary first aid and medical treatment; he should submit to medical examination by the employer's doctor from time to time as requested; if compensation is not promptly paid, he should notify the Industrial Commission.

Many slight injuries produce serious results because first aid or medical treatment is not immediately procured. Many claims are hard to prove because immediate notice of injury was not given to the employer.

HOW TO OBTAIN INFORMATION

87. Q: If an employe has doubt as to his rights or duties, what should he do?

A: He should promptly submit his question to the Workmen's Compensation Division, Industrial Commission, Madison, Wisconsin, or if at Milwaukee he may consult the commission's examiner at 794 North Jefferson Street.

ILLINOIS WORKMEN'S COMPENSATION ACT
1957 AND 1959 AMENDMENTS

Following are most of the Illinois Workmen's Compensation Act amendments which went into effect July 11, 1957, and July 21, 1959. Most of the revisions increase benefits under the Act, and the changes below are listed under the subject headings to which they apply. The page numbers refer to the pages in the ILIR BULLETIN where the benefits are described.

1. Fatal Injuries (pages 17-19)

Minimum and maximum death benefits were again increased in 1959.

Compensation for Accidental Injuries Resulting in Death

If 9.25 times average annual wage is --	Widow and no children	Children under 18: 1 child	2 children	3 children	4 or more children
$9,000 or less	$9000	$9950	$10,140	$10,330	$10,330
Over $9000 and less than $12,250	9.25 times average annual wage	9.25 times average annual wage + $950[a]	9.25 times average annual wage + $1140	9.25 times average annual wage + $1330	9.25 times average annual wage + $1330
Over $12,250	$12,250	$12,750	$13,500	$14,500	$15,000
Special provisions					
$12,250-$12,650		$12,650	$13,180	$13,750	
$12,250-$13,180			$13,180	$13,750	
$12,250-$13,750				$13,750	
Over $12,650		$12,750[b]			
Over $13,180		$12,750	$13,500		
Over $13,750		$12,750	$13,500	$14,500	

a This amount may not exceed $12,250. b Maximum amounts.

2. Temporary Total Disability (pages 19-21)

New minimum benefit is $25.50 and new maximum is $45.00, in 1959 amendments.

Weekly Workmen's Compensation Benefits

	Minimum	Maximum
Single, or married with no children	$25.50	$45.00
1 child	34.75	46.00
2 children	37.25	48.00
3 children	38.50	50.00
4 or more children	39.00	51.00

If a worker's temporary total disability lasts for more than 21 (formerly 28) days, he is also paid for the first seven days of his disability. The amendment was made in 1959.

An employer may pay compensation to an injured employee before the worker files his claim, and such payment has sometimes been held as an admission of liability by the employer. A 1959 amendment clarifies this point by stating that payment of compensation is not an admission of liability.

3. Permanent Partial Disability (pages 21-22)

Weekly permanent partial disability payments were reduced in 1957 and now range from 65-80 per cent of the difference between the average weekly wage the employee received before his accident and his average weekly wage after his accident.

Permanent Partial Disability Benefits

Single, or married with no children	65 per cent
1 child	70 per cent
2 children	75 per cent
3 or more children	80 per cent

4. Specific Loss (pages 22-23)

Employers are required to furnish artificial limbs, in cases of amputation, and 1957 amendments require the employer to pay for replacing or refitting such limbs, when necessary, during a period of 30 months after the time when the limb was first fitted. No changes were made in the specific loss schedule.

5. Permanent Total Disability (pages 23-24)

If a worker is disabled by a complete loss by amputation or by a permanent and complete loss of the use of two major members, his annual pension is equal to 15 per cent (formerly 12 per cent) of the amount his dependents would receive as a death benefit. In other, nonspecific, cases, a pension equals 12 per cent (formerly 8 per cent) of the death benefit. The amendment was made in 1957.

6. Special (Second Injury) Fund (pages 19, 24)

In all cases when a fatally injured employee leaves dependents, the employer is required to pay $400 into the State's Special Fund. This amount is in addition to compensation paid to the worker's dependents. If the fatally injured employee leaves no dependents, the employer is required to pay only a maximum of $500 burial expense and nothing into the Special Fund.

In all cases where an employee suffers a complete loss by amputation or a permanent and complete loss of use of an eye, foot, leg, arm, or hand, the employer is required to pay $200 into the Special Fund, in addition to compensation paid to the employee.

In case of a compromise settlement of a claim for accidental injury resulting in death, the payment into the Special Fund shall be the same proportion of $400 as the amount of the compromise settlement bears to the maximum amount payable in a case where the fatally injured employee died leaving only a widow.

Beginning July 1, 1959, the Industrial Commission will examine the Special Fund every six months. When the total amount in the Fund reaches $150,000, employer payments into the Fund will be cut in half. When the total amount reaches $250,000, employer payments will cease. If the amount in the Fund later decreases to $200,000, half-payments will resume, and if it decreases to $150,000, full payments will again be required.

7. Automatic Coverage (pages 7-8)

Four types of enterprises were added to the "extra-hazardous" list in 1957. Coverage is compulsory for the employer in places were liquor is served, beauty shops, restaurants, and plants where atomic radiation is used.

INDUSTRIAL COMMISSION OF WISCONSIN

Unemployment Compensation Department

Facts about

CLAIMING UNEMPLOYMENT BENEFITS

under Wisconsin's U. C. Law

January 1960

This folder answers the questions commonly asked by an employe when filing his first claim for unemployment benefits.

Another folder, as to how benefits are figured, will be mailed to you later—if and when you become eligible for your first benefit check.

KEEP a RECORD of each benefit CHECK you get.

---

1. Must I register and claim each week?

   Yes. You can't get credit for a week of no wages unless you:

   a. report during that week; and also
   b. after that week is over, turn in your claim form covering that week.

2. How much work is needed to qualify for UC benefits?

   18 weeks of "covered" employment in the 52 weeks before your last lay off.

3. When is the first benefit check due?

A few days after the third weekly claim.

a. The first week is a "waiting period" without benefits.

b. The second week will be paid for, but only after it is over and reported.

c. In the third week, you report about the second week. The check can usually be mailed a few days later.

4. How many benefit weeks can be paid?

Not over 34 from one employer. You need 45 weeks of work (over 10 months) to qualify for the maximum number of checks.

5. How many benefit weeks for less than 45 weeks of work?

Roughly 7/10 of your first 20 work-weeks, plus 8/10 of any additional work-weeks.

6. How much will my weekly benefit rate be?

About half your own average weekly wage. The top weekly rate is $47, until July 1960.

7. Can I draw benefits if I do some work in a week?

Yes, if you earn less than your weekly benefit rate.

8. If I worked for more than one employer, are my benefits figured separately from each employer?

Yes, you receive a separate "determination" based on your work for each employer. Benefits are paid first from the last covered employer.

9. Can benefits be based on federal employment or on service in the armed forces?

   Yes. Ask about it at the employment office.

10. When do benefit rights end, based on past work for an employer?

    52 weeks after you last worked for him.

11. What happens if my employer claims that I should not get benefits; for example, if he claims I quit or was discharged?

    Your benefits are held up while we investigate the facts. We get both your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. We send a copy to you, and one to the employer.

12. What if I think that decision is wrong?

    You (or the employer) can appeal the decision within the time limit it shows. An appeal means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

13. Can I be paid while I can't work, or while I don't want a job?

    No.

14. How about a job offer?

    Take it, unless there's a reason for refusing it which would be accepted as "good cause" under the Wis. UC Law. The same thing is true if the employment office tells you about a job opening —go see the employer.

15. What happens if I refuse a job?

    If you don't have "good cause," the law stops (or postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

16. If I work, what kind should I report?

Report ALL your WORK and WAGES each week you report even though you haven't been paid yet. Report the total pay earned, not just the take home pay.

17. Is it wrong not to report wages I earn or not to report a job offer?

Definitely yes. It is a clear case of fraud whenever a worker—while claiming benefits—fails to report:

a. Any work or any wages or any other kind of pay he has coming; or

b. Any job offer.

18. What is the penalty for fraud?

a. Jail—up to 30 days for each week's fraud.

b. Court fines—up to $100 for each fraud.

c. Recovery of any fraud benefits.

d. Benefit losses—up to 3 benefit weeks cancelled for each fraud week.

19. Can a pregnant woman draw benefits?

She can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before childbirth, or 4 weeks after.

20. Who should cash my benefit checks?

No one but you should endorse and cash your benefit checks. Each UC check requires you to identify yourself when you are cashing it.

21. Who pays contributions to finance UC benefits?

Employers only.

May 25, 1961

STATEMENT OF GOVERNOR OTTO KERNER

ON WORKMEN'S COMPENSATION AGREED BILL

On March 10, 1961, I appeared with the Director of Labor, Robert Johnston, and the members of the Illinois Industrial Commission before the initial meeting of representatives of management and of labor to discuss workmen's compensation legislation for this legislative session in the State. They were again about to begin their biannual consideration of changes in the Illinois Workmen's Compensation Act and the Illinois Occupational Diseases Act, to be jointly recommended by them to the Legislature and to the Governor. I pointed out to the conferees at that time that three-fourths of our entire labor force in the state would be affected by their deliberations, and I urged that particular attention be given to the level of weekly compensation benefits and of death benefits as well as the provisions concerning totally disabled workers.

The conferees then began their deliberations which have extended over many weeks. Representing the employers of the state was a committee consisting of James Garrison of the Caterpillar Tractor Company, Joliet, Chairman; Douglas Stevenson of Chicago, Co-Chairman, and including Al Smith, a Chicago attorney and Carter Harrison, an attorney from Benton, Illinois.

Chairman of the labor group was Reuben G. Soderstrom, President of the Illinois State AFL-CIO, and it included Stanley L. Johnson and Maurice McElligott, Executive Vice-President and Secretary-Treasurer, respectively, of the state labor federation, and a legal advisory committee of attorneys, consisting of Irving Greenfield, chairman, Hugh McCarthy, Co-Chairman, Lester Asher, Harold A. Katz and Bernard Kleiman, all of Chicago, Michael Hannegan of West Frankfort, and Jasper E. Wenzel of Gillespie, Illinois. A true measure of the confidence reposed in the conferees over the years is shown by the fact that Illinois legislatures and Governors in the past have without exception enacted their recommendations into law.

Last night at a meeting here in Springfield the conferees reached final agreement on changes to be recommended in the Illinois Workmen's Compensation and Occupational Diseases Acts. I am pleased to advise that under this agreement significant improvements will result in these humane laws, including real progress in the areas to which I particularly directed attention. The changes in the law as recommended by the labor-management conferees are as follows:

I. Weekly Compensation Rates

An increase of approximately 15% in weekly benefit rates has been agreed to by the Representatives of industry and labor in the state. The effect on the rate schedule of the agreement will be as shown in this table:

Marital Status	Present Maximum Weekly Rates	New Schedule of Maximum Rates	Dollar Increase
Single	$45.00	$51.00	$ 6.00
Married - no children	45.00	52.00	7.00
One child under 18	46.00	53.00	7.00
Two children under 18	48.00	55.00	7.00
Three children under 18	50.00	57.00	7.50
Four children under 18	51.00	61.00	10.00

This will result in corresponding increases of approximately 15% in all cases involving "specific loss" of use of "members" or parts of the body, such as a hand or a finger or a leg or a foot injury.

II. Death Benefits

Increases of from $1,250 to $2,500 have been agreed to in death cases, as follows:

Marital Status	Benefit Maximum	Proposed Maximum	Increase
Widow	$12,250.00	$13,500.00	$1,250.00
One child under 18	12,750.00	14,000.00	1,250.00
Two children under 18	13,500.00	15,000.00	1,500.00
Three children under 18	14,500.00	16,000.00	1,500.00
Four children under 18	15,000.00	17,500.00	2,500.00

Under our compensation act this will result in corresponding increases in the amount recoverable in cases involving permanent total disability and permanent partial disability.

Two other proposed changes will also affect death cases:

(1) It has been agreed that in all death cases a $500 burial allowance will be paid. At the present time, the burial allowance is payable only where the employee leaves surviving no dependents.

(2) Where a childless widow remarries, the allowable death benefit will continue to drop 50%, but instead of the weekly rate decreasing one-half for the full remaining period, it will continue at the same weekly rate but only for half as many weeks.

— Previously she lost almost all of remained

III. Loss of Sight-Eye Cases

An increase of 10 weeks in the maximum recovery for loss of sight in either eye has been agreed to from 140 to 150 weeks for loss of sight without enucleation, from 150 to 160 weeks in the case of enucleation of the eye. Combined with the increase in weekly compensation rates, this will mean in the case of a worker with two dependent children who loses the sight of one eye without enucleation in an industrial accident, an increase from the present $6720 to a total of $8250 under the proposed schedule. I know of no more deserving group than those who have suffered industrial eye injuries which permanently impair their vision.

IV. Atomic Radiation

A worker will have five years rather than three years from the date of last exposure to radiation within which to assert a claim under the Illinois Occupation Diseases Act. Since the grave effects of exposure to the hazards of radiation may be slow in manifesting themselves, I am glad that an additional period of two years will be allowed within which a claim for compensation may be filed.

V. Regulation of Claims Adjustment Companies

A new provision will bring workmen's compensation claims adjustment companies under some of the same regulatory provisions now applicable to insurance companies.

VI. Damaged Artificial Members and Dentures

Where an artificial member or prosthetic appliance is damaged as a result of an industrial accident, the employer will be obligated to replace it. Where dentures are damaged, they will under the agreement be replaced by the employer if there was also bodily damage to the employee in the same accident.

VII. Credit for Weekly Payments

The most credit that an employer will be entitled to receive for payment to an employee while disabled from work will under the agreement reached, be the amount of the applicable weekly compensation rate, and an excess cannot be credited against other compensation which may be payable to the employee under the Act.

These changes will vitally affect the great bulk of the working people of the state. As a result of this agreement an additional $9,000,000 will be paid to injured employees in the state in the next biennium. It is perhaps not generally recognized that there are over 40,000 work injury claims in Illinois each year. With the improved operation of the factory inspection

division and the industrial hygiene unit in the Department of Labor, I hope that a significant reduction in accident rates in the state will occur to the benefit of both industry and labor.

I congratulate all of the representatives of both management and labor in the state for the fine way in which they have given their time and energies in this most complex but important field affecting that group in the state most needy and deserving--the industrially injured and maimed. This agreement proves once again how labor and management, working together through enlighted self-interest, and cooperating for the common good, can accomplish so much for the welfare of our state. On behalf of the people of the State of Illinois, I am most gratified by this agreement on workmen's compensation, and particularly so since this mutual proposal comes on the heels of an excellent agreed bill in unemployment compensation that I have already signed into law.

This agreement on workmen's compensation, will result in real and lasting improvements in our Workmen's Compensation Act and our Occupational Diseases Act. I heartily recommend its speedy enactment into law by the General Assembly under bi-partisan sponsorship. I hope that the joint Workmen's Compensation Subcommittee of the Legislature, which materially assisted in this agreement being reached, will join in sponsoring this bill when its drafting has been completed. The members of the joint legislative Sub-committee are: Senator Merritt Little, Chairman; Representative Nathan J. Kinally, Vice-Chairman; Senator Robert Cherry, Senator Dennis Collins, Representative T. MacDowning, Senator Marshall Korshak, Senator Lillian E. Schlagenhauf, Representative Allen J. Dixon, Representative George E. Dolezal, Representative Andrew A. Euzzino, Representative Joseph J. Lelivelt, and Representative Carl W. Soderstrom.

and SELF-INSURED EMPLOYERS

Re: 1961 Amendments to the Workmen's Compensation Act

Gentlemen:

Chapter 269, Laws of 1961, which effects certain amendments to the Wisconsin workmen's compensation act, was signed by the Governor on July 17, 1961, and was published on July 25, 1961. Both the Bill 431, S. and the Act indicate an effective date the first of the month following publication, so it becomes effective at 12:01 A.M. August 1, 1961. These amendments were recommended by the Workmen's Compensation Advisory Committee, composed of representatives of labor, industry, insurance carriers and the public. A synopsis of the changes which will apply to injuries occurring on and after August 1, 1961, are set forth below.

Subsection 102.11 (1). The maximum weekly wage for temporary disability, permanent total disability and death is increased to $85.72. This increases the maximum weekly compensation from $54 to $60, and the maximum death benefit from $15,428 to $17,144. Compensation for permanent partial disability is increased from $40 to $42.75 per week, based upon an average weekly wage of $61.07, or more.

Subsection 102.03 (2). The legislative intent that workmen's compensation shall be the exclusive remedy between the parties is clarified by adding the words "and the workmen's compensation insurance carrier" to the end of this subsection.

Subsection 102.17 (1) (as). Amendment is made to allow either verified or certified medical report.

Subsection 102.17 (4). In cases of injury or death caused by exposure to ionized radiation the statute of limitations is extended to 25 years.

Subsection 102.565. The maximum allowance for nondisabling silicosis is increased to $7,000.

Yours very truly,

Ralph E. Gintz

Ralph E. Gintz, Director
Workmen's Compensation Division

INDUSTRIAL
COMMISSION
OF WISCONSIN

FACTS ABOUT THE WISCONSIN WORKMEN'S COMPENSATION LAW

With Amendments
to September 1, 1961

INDUSTRIAL COMMISSION of WISCONSIN

MATHIAS F. SCHIMENZ
Chairman

R. G. KNUTSON
Commissioner

CARL E. LAURI
Commissioner

HELEN E. GILL
Secretary

RALPH E. GINTZ
Director of Workmen's Compensation

FACTS ABOUT THE WISCONSIN WORKMEN'S COMPENSATION LAW

1. Q: What is the Wisconsin Workmen's Compensation Act?
   A: It is the law which provides for medical and money benefits to employes injured by reason of their work, and for death benefits to their dependents.
2. Q: By whom is the act administered?
   A: By the Industrial Commission, Madison, Wisconsin.

INJURIES COVERED

3. Q: What injuries are covered?
   A: Mental and physical harm of all kinds, whether due to accident or disease, and also *accidental* damage to, or destruction of artificial members, dental appliances, and teeth, also eye glasses provided they are damaged in an accident which causes some personal injury, although slight.
4. Q: Are all occupational diseases covered?
   A: Yes, all diseases due to employment, such as silicosis, lead poison-

ing, hernia, dermatitis, and loss of hearing, caused by exposure over a period of time to conditions which result in injury.

CONDITIONS OF LIABILITY

5. Q: What must an employe show to entitle him to benefits?

   A: That he and his employer were subject to the compensation act; that he was injured while performing service for his employer; that the injury was not intentionally self-inflicted; and that his injury was caused by his work.

6. Q: Is an employe who is injured while merely going to or from work entitled to benefits?

   A: Yes, but only if he is on the premises of his employer at the time, or on premises where his service is to be performed. If he is actually performing service for his employer, or is being transported by the employer when injured, and is hurt because of a hazard of service, he will be entitled to benefits whether or not he is on the employer's premises when hurt. An employe whose employment requires him to travel is deemed to be performing service at all times while on a trip, except as he steps aside to do some personal act. He is covered while traveling in trains, cabs, or while in eating places, hotels and other places of sojourn, provided he has not deviated for a private or personal purpose. Actions reasonably necessary for living, such as eating, bathing, etc., are not to be regarded as such deviation.

7. Q: What employers are subject to the act?

   A: (1) All employers, except farmers, who have *at any time*, even mo-

mentarily, employed three or more persons in the course of a trade, business, profession or occupation and have not elected not to be subject to the act; (2) all employers, except farmers, who usually employ three or more persons in the course of a trade, business, profession or occupation are compulsorily subject and may not withdraw; (3) all municipal divisions, such as the state, county, city, village and school district, regardless of the number of employes. Employers of domestic servants and other persons not employed in the business or trade of the employer are not subject but the employer may voluntarily become subject by taking a policy of workmen's compensation insurance. (4) A farmer who employs 6 or more employes on 20 or more days in a calendar year becomes subject to the act. Other farmers may voluntarily elect to come under the law by taking out workmen's compensation insurance. Certain specified close relatives are not counted as employes in determining whether the farmer is subject.

8. Q: Suppose the employer has two employes in one business and one in another, or two employes in one city and one in another?

A: The employer becomes subject to the act when he has three employes, whether in one or more businesses or locations.

9. Q: If an employer withdraws from the act, what is his liability in case of injury to an employe?

A: He may be sued in court, and upon a showing of negligence may be held liable for such damages as are determined by the court and jury.

10. Q: If an employer is subject to the act, may an employe sue in court for injury if he prefers?

A: No; when parties are subject to the act it is the only remedy between them for personal injury arising out of employment.

11 Q: What advantage is there in an employer electing to become subject to the compensation act?

A: He cannot be sued at common law for damages; he becomes liable for definite benefits and may insure his risk.

12. Q: If an employe works for a contractor who is not subject to the act, or who has no insurance, may the employe hold liable the principal employer for whom the contractor performs service?

A: Yes, provided the principal employer is subject to the act. He could not, for example, hold a farmer as principal employer unless the farmer had become subject to the act, nor could he hold a principal employer who had never employed more than two persons and had not become subject to the act.

EMPLOYES COVERED

13. Q: Who are employes subject to the act?

A: Those who work for anything of value but not persons who are working with no intention that payment shall be made for services.

14. Q: May minors receive compensation?

A: Yes. Minors under the act are competent to contract and receive compensation benefits, as are adults.

15. Q: May employes waive their benefits, that is, agree that in case of injury no benefits will be claimed?

A: No, except epileptics and those totally blind, and those only if they have given notice to the commission and the employer in advance, and then only for such injuries as are caused by epilepsy or blindness. Any other agreement to waive benefits is illegal and absolutely void and of no effect.

WAGE BASIS

16. Q: On what basis is money compensation paid?

A: On the wage earned by the employe at the time of injury.

17. Q: What is the wage basis for compensation?

A: The normal full time wage at the time of injury in the employment in which the employe works at that time. Wage earned beyond normal full time hours is counted only if the employe has worked within six calendar weeks or more for the employer in whose employ he is injured, and then only if the average weekly wage earned is higher than the normal full time wage. For example, if the normal full time weekly wage is $60, but over a six week period the employe has put in overtime and earned $450, his actual average weekly wage is $75, and compensation is based on such wage. If, however, during the six week period the employe has lost a good deal of time and has earned only $360, or less, his wage will be $60 per week, based on normal full time.

18. Q: How is the wage of a part time worker fixed?

A: On the wage of a normal full time worker. If, for example, a part time worker performs service for one hour per day, and normal full time workers in the same type of employment work eight hours per day, the part time worker's wage is to be taken on the basis of an eight hour day.

19. Q: What is the minimum weekly wage for compensation purposes?

A: Minimum weekly wage is $12.50 and minimum weekly compensation 70 per cent of that wage, or $8.75. Minimum compensation is payable no matter how small a wage the employe may earn. Minimum weekly wage is always at least 30 times the hourly rate if such wage amounts to more than $12.50 per week. Minimum weekly wage for permanent disability is $20, with weekly compensation 70 per cent of that wage, or $14.

20. Q: What is the maximum weekly wage?

A: Maximum wage is $85.72, and maximum compensation is $60 for temporary, permanent total, and death. For permanent partial disability maximum wage is $61.07, and maximum compensation is $42.75. No matter how high the wage, no employe can receive more than these amounts except as increased compensation because of violation of a safety order, or because illegal hiring of a minor may produce a higher amount.

21. Q: Are tips counted in determining wage?

A: All things of value, as board and room, tips, bonuses agreed upon, etc., are counted when they are part of the consideration for work.

22. Q: Must notice of injury be given to the employer in order to obtain compensation?

A: Notice must be given within 30 days from the date of injury, or the right to compensation may be barred. Injury should be reported immediately, or as soon as possible to the foreman or other designated person to avoid doubt being thrown on a later claim, and also so that medical treatment may be promptly given.

23. Q: Suppose notice is not given within 30 days?

A: Claim may still be established if the employer was not misled by failure to give notice. If the employer can show he was misled benefits will not be payable.

FILING OF CLAIMS

24. Q: How soon must claim be made where no compensation has been paid?

A: Application for adjustment of claim must be filed with the Industrial Commission within two years from the date of injury unless compensation has been paid, when the application may be made within six years from the date of the last payment of compensation. The time for filing application may be extended to six years if it can be shown that the *employer* knew or ought to have known within the two year period that the employe had sustained an injury even without actual resulting disability at the time.

25. Q: Suppose the employe does not learn within two years that an occupational disease was caused by his work?

A: The time is then extended for two years from the time he knew or should have known of the connection between his disease and his work, but is not extended beyond six years from the last day of work before his disability commences.

26. Q: When claim for compensation is made, has the employer a right to have physical examination of an employe made by a doctor?

A: Yes, in order to learn the extent and character of the employe's disability, so that he may know whether or not to pay compensation. If the employe fails to submit to reasonable examination as requested from time to time, his compensation may be suspended. Applicant may have his own doctor present at the time of examination if he wishes. If the examination is considered unreasonable, the matter may be submitted to the commission for decision. The employe is entitled to compensation for time lost and to his traveling expense, if any, in submitting to examination.

27. Q: Suppose a dispute arises as to liability and the parties wish to settle on a basis agreeable to them?

A: They may do so, but always subject to the commission's approval. If the commission does not approve settlement, it has no effect, and further claim may be made. All compromise agreements are subject to review by the Industrial Commission within one year.

WHO BEARS COST?

28. Q: May an employer charge the employe for the cost of compensation insurance or benefits?

A: No; the law makes that illegal and provides penalties.

29. Q: Should an employe sign receipt for compensation?

A: Yes, but the signing of receipt does not prevent him from claiming and recovering additional compensation even though the receipt may state that the amount paid is in final settlement.

HEARING PROCEDURE

30. Q: In case of dispute what may the employe do to obtain compensation?

A: He may file his application for adjustment of claim with the Industrial Commission, Madison, Wisconsin. Blank forms are supplied by the commission upon request. After application is filed, hearing is set as soon as possible at a selected center, as close to applicant's residence as possible, upon notice given at least 10 days in advance to all interested parties.

31. Q: Must the applicant be represented at hearing by attorney?

A: No; the law provides he may appear in person, by agent or by attorney.

32. Q: If an employe is not represented by attorney, who assists him in bringing out the facts?

A: The commission's examiner who conducts the hearing will ask questions of all witnesses present at the hearing. (See 36. Q. and A.)

33. Q: Is there any limitation as to attorney's fee?

A: The law allows an attorney to charge up to 20% of the amount recovered, unless there is no dispute and no need for hearing, when the fee charged cannot ex-

ceed 10% and not more than $100 in any case.

34. Q: Who must pay the attorney's fee?

A: The person making claim must pay the fee from the compensation which is awarded. It is well to have a clear understanding in advance with the attorney as to the fee to be charged.

35. Q: May a union representative represent an employe at hearing?

A: Yes; any person, upon proper showing, may obtain permission from the examiner to represent a claimant.

36. Q: Must the applicant have witnesses at hearings?

A: Witnesses are not needed as to points not in dispute. As to points in dispute appearance of witnesses should be arranged. Each party must bear the expense of producing his own witnesses. If there is question as to what witnesses are needed, and no lawyer is retained, the commission may be consulted at the time of filing application, or as soon as possible before hearing.

37. Q: Are doctors' reports admissible as evidence for the employe?

A: Yes, of doctors licensed and practicing in Wisconsin and of doctors outside Wisconsin to whom the claimant had been sent for examination or treatment by the employer or insurance company. These must be notarized or certified, on forms provided by the commission, and filed with the commission at least 15 days before the time of hearing. They should be presented at the time application is filed, or as soon thereafter as possible. Forms are supplied by the commission on request.

38. Q: Who conducts hearings and decides cases?

A: Law examiners of the Industrial Commission.

APPEALS

39. Q: May there be appeal from the examiner's findings?

A: Yes, to the Industrial Commission as a body. This must be done within 20 days from the date of the order made by the examiner after hearing. If petition for review is not filed within 20 days from that date, the commission and the court loses jurisdiction.

40. Q: What further appeals are possible, after appeal to the commission?

A: One to the Circuit Court of Dane County within 30 days from the order of the commission as a body, and to the Supreme Court within 30 days from notice of entry of judgement of the Circuit Court.

EXEMPTION FROM DEBT

41. Q: May compensation be assigned?

A: No; neither can it be taken for debt, either by garnishee action or otherwise, except for Federal Income Tax. It is not necessary to report compensation payments for income tax purposes, as income tax is not charged on workmen's compensation benefits.

LIABILITY FOR COMPENSATION

42. Q: Who pays compensation?

A: Most employers carry insurance so that the insurance company pays benefits. Some employers are "self-insurers" and pay compensation directly. In either case, the employer is primarily responsible for payment.

43. Q: Are employers required to insure their compensation liability?

A: All employers subject to the act are required to insure unless excused by the Industrial Commission on a showing of financial ability to pay claims. Only a small number of employers are "self-insurers." Failure of employers to insure unless excused calls for heavy penalties.

44. Q: If a person is hurt by negligence of a "third party" may he take compensation and also sue the third party?

A: Yes. He will then receive his full compensation benefits and also one-third of the net amount recovered from the third party. All costs of collection, including attorney's fees, are taken out before division of proceeds is made. The insurance company or employer is then repaid the amount paid or to be paid as compensation, and if any balance remains that also is paid to the employe. Action against a third party is usually by joint action of the employer or his insurance carrier and the injured employe.

MEDICAL BENEFITS

45. Q: What are the benefits under the act?

A: (1) Medical treatment; (2) compensation for lost time, wage and disability; (3) death benefit; (4) maintenance during rehabilitation training.

46. Q: What medical benefits are provided?

A: Every sort of medical or hospital treatment reasonably necessary. Treatment by a doctor of osteopathy or a chiropodist (foot doctor) is included. Treatment by a

masseur or physical therapist is included when prescribed by a regularly qualified physician. Artificial limbs and appliances of all kinds when needed are also to be provided but are not required to be replaced. Employes are entitled to compensation for lost time and for necessary traveling expense when submitting to treatment.

46a. Q: Is treatment by a chiropractor provided?

A: There is no liability for chiropractic treatment unless such is prescribed by a regularly qualified physician.

46b. Q: Is Christian Science treatment provided?

A: Christian Science treatment may be provided in lieu of medical treatment unless the employer has filed notice with the commission not to provide such treatment.

47. Q: Is there any limit as to time or amount of medical and hospital benefits?

A: Absolutely none, except treatment must be reasonably necessary and the expense must be reasonable.

48. Q: Who supplies the physician?

A: The employer or insurance company must give the employe his choice from a reasonable number of doctors to be listed on a panel. The employe is also entitled to a second choice of physician if he is dissatisfied with the first physician chosen. The commission may, in addition, permit choice of some other doctor upon proper showing.

49. Q: What is a "reasonable number" of physicians?

A: That is to be determined by the commission in each case. Most employers list a very wide choice. If

the employe believes the employer does not list an adequate number, or that proper treatment is not being given, he should take the matter up with the commission.

50. Q: Must the employe give notice to the employer that he needs treatment?

A: Yes; otherwise he must bear the expense himself, except that in case of emergency the employer becomes liable for the reasonable value of necessary treatment before the time that it is possible to give notice. In case of occupational disease he may recover the reasonable expense of treatment incurred before he knew that his work caused his condition, even though notice is not given.

51. Q: Need artificial members, when worn out, be replaced?

A: No; only one suitable member is required to be supplied. If the member supplied is not suitable, a suitable one must be supplied.

52. Q: Suppose the employe refuses medical treatment?

A: If he refuses reasonable treatment he will lose his rights to compensation so far as his refusal results in greater disability.

PAYMENT AND BASIS OF COMPENSATION

53. Q: When does compensation commence?

A: On the 11th day after the date of injury. There is no compensation for the first three days following the day of first disability except as hereafter noted. For example, an employe who is injured and leaves work on the first day of the month is entitled to compensation only for such disability as results on and after the fifth day

of the month. The first payment is due on the eleventh day for such disability as has then resulted, and weekly thereafter during disability. If there is disability following the tenth day after the day of first disability, compensation is also payable for the first three days. If compensation is not received within two weeks after injury, the employe should inform the commission.

54. Q: Are Sundays counted in the first three days?

A: No, unless the employe works on Sundays. Sundays are, however, counted in the running of the ten day period.

55. Q: What money payments of compensation are to be made?

A: Seventy per cent of weekly wage during total disability but not more than $60 for temporary disability, permanent total disability, and death, and $42.75 for permanent partial disability, nor less than $8.75 in any case of temporary total disability, nor $14.00 in case of permanent partial disability or death.

56. Q: Suppose an employe earns $100 per week?

A: No matter how large his wage, the highest compensation payable is $60 per week, as stated in previous answer.

57. Q: Suppose there is disability which causes only partial wage loss?

A: Proportionate compensation is then paid; for half wage loss half of compensation payable for total disability is to be paid. If total disability calls for $60 compensation half wage loss calls for $30.

58. Q: Is compensation payable for all days lost?

A: For each day except Sunday one-sixth of weekly compensation is payable. That is true whether the employe works on Sundays or more or less than six days per week.

59. Q: Suppose disability prevents a man from ever earning again?

A: He receives compensation for the rest of his life.

60. Q: Suppose disability will always remain to the head or body but some work can be done?

A: Compensation is then paid for a limited number of weeks, dependent on age, but never for more than 1000 weeks in addition to the "healing period". To illustrate, if 50% disability results to one 50 years of age or under, compensation is payable for 500 weeks, if 25% disability, to 250 weeks, etc. In cases of persons over 50 years of age, the basic number of weeks for permanent partial disability to the head or body decreases by 2½% each year until age 70, at which age there is no further reduction.

REHIRING OF EMPLOYE

61. Q: Is an employer required to rehire an employe injured in the course of employment?

A: No, but if an employer refuses to rehire such an employe without good cause, or if the employer discriminates against such an employe, the employer is subject to a forfeiture of $50 to $500 in an action by the State of Wisconsin.

DEATH BENEFITS

62. Q: Who is entitled to receive death benefits?

A: Only persons named in the compensation act, including husband, wife, children 18 or under, grandchildren, parents, brothers and sisters, and members of family.

63. Q: How much death benefit can be paid?

A: The largest payment (in case of total dependency) is $17,144, and the smallest $4000.

64. Q: Suppose a person is receiving compensation for permanent disability and then dies from some cause other than injury?

A: Of the balance remaining unpaid, up to $350 is applied on burial expense. The remainder becomes payable to dependents not, however, in a sum greater than such dependents would have received if death had resulted from injury.

65. Q: What may parents receive as death benefit?

A: If they were on friendly terms with the son or daughter, $2000 is paid as death benefit. However, if parents are totally dependent they may receive as much as $4000 to $17,144 varying with the wage of the employe.

66. Q: What may other dependents receive?

A: They may receive the amount which they might have expected to receive from the employe as contribution to support but not more than $17,144 in any case.

67. Q: In addition to death benefit is burial expense payable?

A: Yes, but not more than $350.

68. Q: What is the provision for additional payments to children of a widow who herself is to receive benefits?

A: Children 16 or under living with the employe at the time of injury

may receive benefits from a state fund created for that purpose. The amount varies with age up to a total of $4,571 for one child, and is payable at the rate of 13 per cent for each child of the weekly amount paid to the widow or widower.

METHOD OF PAYMENT

69. Q: Are benefits payable in installments or in one sum?

A: The purpose of compensation payments is to replace wage loss as and when it occurs. All compensation, including death benefit, is to be paid in installments as are wages unless a showing is made to the commission that interests of the employe or dependent will be conserved by more rapid or lump sum payments.

70. Q: Do employes or dependents lose compensation if they receive a lump sum payment?

A: As payments are normally due only in installments, 3% compound interest is charged when payments are made more rapidly or in one sum.

SCHEDULES OF BENEFITS

71. Q: In case of loss of a member such as a hand, arm, leg, foot, eye, etc., how is compensation paid?

A: Schedules in the act provide payment for a certain number of weeks for loss by amputation, as of toes, arms, feet, etc., and for loss of vision or hearing. Loss of an arm at the shoulder, for example, calls for payment to a person aged fifty or under of 500 weeks' compensation in addition to compensation for healing period. Loss of vision of one eye calls for 250 weeks' compensation; loss

of hand at the wrist 400 weeks; loss of foot at the ankle 250 weeks; loss of thumb at the proximal joint 100 weeks, etc.

72. Q: Does it make a difference whether the right or left member is lost?

A: No, the amount is the same in either case.

73. Q: Does age make a difference?

A: There are reductions of 2½% for each year after age 50 in the number of weeks allowed. For example, one aged 60 when injured will have compensation reduced by 25% in the number of weeks allowed with no further reduction after age 70.

74. Q: In case of loss of members is healing period paid in addition to the number of weeks allowed by schedule?

A: Yes, in all cases compensation is paid for the actual necessary healing period, based on necessary wage loss during temporary disability up to the time the condition has become stationary and permanent disability can be fixed.

75. Q: Suppose there is not loss by amputation but stiffness or other disability?

A: A proportionate number of weeks is then payable. If, for example, the loss of use is one-half of the arm, 250 weeks would be paid instead of 500.

76. Q: Where more than one member, such as finger, arm, hand, leg, etc., is affected is there special provision?

A: Yes, additional amounts are allowed for multiple injuries.

DISFIGUREMENT BENEFITS

77. Q: Suppose disfigurement results?

A: Additional compensation up to $4,286 may be paid for disfigurement of the face, head, neck, hand or arm. It must be shown, however, that the disability is such as probably will cause wage loss—this because the employe is unable to obtain work or must accept a lower wage because of disfigurement.

INCREASED AND DECREASED COMPENSATION

78. Q: Suppose it can be shown that the employer or employe was negligent?

A: Negligence makes no difference as to payment of compensation except as there may be violation of a safety order.

79. Q: May compensation be increased for any reason?

A: Yes. The law requires the employer to furnish a safe place to work and to comply with orders of the Industrial Commission as to safety. If injury is caused by reason of a violation by the employer of the "safe place" statute, or of a safety order, or because of failure of an employer reasonably to enforce compliance by employes with a statute or order, 15% increased compensation becomes payable to the employe or his dependents.

80. Q: May compensation be decreased for any reason?

A: Yes, if the employe *willfully* fails to follow rules for his safety or to use safety devices which the law requires, adequately maintained and the use of which is enforced compensation may be decreased 15%. If injury occurs because of intoxication, compensation is also decreased 15%.

81. Q: What about illegal employment of minors?

A: If an employer is required to have a permit to hire a minor and no permit is obtained, the employe will receive double compensation for his injury. If he is employed at prohibited employment (whether or not he has a permit), he will receive treble compensation. Under provision of the Child Labor law, certain employments have been prohibited to minors of certain ages.

82. Q: Who pays such increased compensation?

A: It must be paid by the employer himself and not by the insurance company, except if the employer is shown to be insolvent.

PRE-EXISTING DISABILITY

83. Q: Suppose an employe already has disability and injury causes additional disability?

A: If disabilities are sufficiently serious, that is, if such as to call for payment of at least 250 weeks of compensation for each disability, he may receive additional payments from a fund set up in the state treasury for that purpose. The employer thus pays only for the disability caused by his work, and the fund pays additional compensation.

REHABILITATION BENEFITS

84. Q: What about rehabilitation benefits?

A: If the employe has a type of injury which makes it difficult or impossible for him to do work previously performed, he may, during a period not exceeding 40 weeks, receive expenses of travel and costs of maintenance, provided rehabilitation instructions are

received elsewhere than at the place of his residence. During the period of rehabilitation compensation is continued on the basis of wage loss.

85. Q: Is there provision for training in the use of artificial limbs?

A: Yes, during such period applicant will continue to receive compensation and is entitled to all training and expenses necessary to attain efficient use of artificial members and appliances.

REPORT OF INJURY BY EMPLOYE

86. Q: What should an employe do when he suffers injury?

A: He should report at once to his employer directly, or through a foreman or designated person; he should submit promptly to all necessary first aid and medical treatment; he should submit to medical examination by the employer's doctor from time to time as requested; if compensation is not promptly paid, he should notify the Industrial Commission.

Many slight injuries produce serious results because first aid or medical treatment is not immediately procured. Many claims are hard to prove because immediate notice of injury was not given to the employer.

HOW TO OBTAIN INFORMATION

87. Q: If an employe has doubt as to his rights or duties, what should he do?

A: He should promptly submit his question to the Workmen's Compensation Division, Industrial Commission, Madison, Wisconsin, or if at Milwaukee he may consult the commission's examiner at 794 North Jefferson Street.

Mr. Emory Via
School for Workers
University of Wisconsin
Madison, Wisconsin

Dear Emory:

Yes, I will be in Beloit on November 9. I would be glad to send you copies of our bulletin for distribution in advance, if you think the people in the class will actually do the reading and if you will tell me how many you need. I am glad that you were able to get Bernie Kleiman for at least one session. How many Illinois people are there in the class?

Sincerely,

Phil

FARMERS SUBJECT TO THE WISCONSIN WORKMEN'S COMPENSATION LAW

Bill 432, S. was enacted as Chapter 387, Laws of 1961, effective January 1, 1962. Farmers who have 6 or more employes on any 20 different days during a calendar year will become subject and will be required to provide workmen's compensation insurance beginning 10 days after the 20th such day. In other words, farmers who regularly have 6 or more employes beginning January 1, 1962, will become subject and will be required to provide such insurance by January 30, 1962. Those who do not regularly have 6 or more employes upon that date but who subsequently have 6 or more employes will become subject on the 10th day after the 20th day of such employment within a calendar year.

For the purpose of determining the number of employes, but only for that purpose, the parents, spouse, child, brother, sister, son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law of a farmer shall not be deemed to be his employes. Also, farm laborers working on an exchange basis shall not be deemed to be employes of the farmer to whom their labor is being furnished in exchange. These classes of persons may qualify for workmen's compensation benefits if they sustain injury while at work and the farmer employer is subject to the law.

Farmers with fewer than 6 employes may voluntarily elect to come under the law by obtaining a policy of workmen's compensation insurance. Over 1,100 farmers elected to become subject and to carry insurance previous to this 1961 amendment.

Farmers who do not carry workmen's compensation insurance may be sued by civil action for damages to an employe who is injured while at work. Farmers who are subject but who do not carry insurance are personally responsible under the terms of the compensation act, and the usual personal exemptions do not apply. A farmer who fails to have insurance coverage when he is subject to the law is also subject to fine of $10 to $100 for each day of such failure.

Insurance may be obtained from any insurance company authorized to write compensation insurance within Wisconsin or through the Wisconsin Compensation Rating Bureau at 623 North Second Street, Milwaukee, Wisconsin. An employer who becomes subject to this law continues to be subject until withdrawal is effected, as provided by Subsection 102.05 (1), even though he has less than 6 employes.

REG/OS

Effective August 27, 1965 Wisconsin's Fair Employment Practices Law was amended to prohibit discrimination not only because of age, race, creed, color, sex, national origin or ancestry, but to also include discrimination because of "handicap".

In addition, Section 111.32 (5)(f) of the statutes has been created to read:

> "The prohibition against discrimination because of handicap does not apply to failure of an employer to employ or to retain as an employe any person who because of a handicap is physically or otherwise unable to efficiently perform, at the standards set by the employer, the duties required in that job. An employer's exclusion of a handicapped employe from life or disability insurance coverage, or reasonable restriction of such coverage, shall not constitute discrimination."

FAIR EMPLOYMENT

111.31 (1) The practice of denying employment and other opportunities to, and discriminating against, properly qualified persons by reason of their age, race, creed, color, sex, national origin or ancestry, is likely to foment domestic strife and unrest, and substantially and adversely affect the general welfare of a state by depriving it of the fullest utilization of its capacities for production. The denial by some employers and labor unions of employment opportunities to such persons solely because of their age, race, creed, color, sex, national origin or ancestry, and discrimination against them in employment, tends to deprive the victims of the earnings which are necessary to maintain a just and decent standard of living, thereby committing grave injury to them.

(2) It is believed by many students of the problem that protection by law of the rights of all people to obtain gainful employment, and other privileges free from discrimination because of age, race, creed, color, sex, national origin or ancestry, would remove certain recognized sources of strife and unrest, and encourage the full utilization of the productive resources of the state to the benefit of the state, the family, and to all the people of the state.

(3) In the interpretation and application of this subchapter, and otherwise, it is declared to be the public policy of the state to encourage and foster to the fullest extent practicable the employment of all properly qualified persons regardless of their age, race, creed, color, sex, national origin or ancestry. All the provisions of this subchapter shall be liberally construed for the accomplishment of this purpose.

111.32 Definitions. When used in this chapter:

(1) The term "labor organization" shall include any collective bargaining unit composed of employes.

(2) The term "employes" shall not include any individual employed by his parents, spouse, or child.

(3) The term "employer" shall not include a social club, fraternal or religious association not organized for private profit.

(4) The term "Commission" means the industrial commission of the state of Wisconsin.

(5) (a) The term "discrimination" means discrimination because of age, race, color, sex, creed, national origin or ancestry, by an employer individually or in concert with others against any employe or any applicant for employment in regard to his hire, tenure or term, conditions or privilege of employment, and by any labor organization against any member or applicant for membership, and also includes discrimination on any of said grounds in the fields of housing, recreation, education, health and social welfare.

(b) It is discrimination because of age:

1. For an employer, labor organization, or person in the fields of housing, recreation, education, health and social welfare, or any licensing agency, because an individual is between the ages of 40 and 65, to refuse to hire, employ, admit, or license, or to bar or to terminate from employment such individual, or to discriminate against such individual in promotion, compensation or in terms, conditions or privileges of employment;

2. For any employer, licensing agency or employment agency to print or circulate or cause to be printed or circulated any statement, advertisement or publication, or to use any form of application for employment or to make any inquiry in connection with prospective employment, which implies or expresses any limitation, specification or discrimination respecting individuals between the ages of 40 and 65, or any intent to make such limitation, specification or discrimination.

3. For any employer, licensing agency or employment agency to discharge or otherwise discriminate against any person because he has opposed any discriminatory practices under this section or because he has made a complaint, testified or assisted in any proceeding under this section.

(c) Nothing in this subsection shall be construed to prevent termination of the employment of any person physically or otherwise unable to perform his duties, nor to affect any retirement policy or system of any employer where such policy or system is not a subterfuge to evade the purposes of this subsection, nor to preclude the varying of insurance coverage according to an employe's age; nor to prevent the exercise of an age distinction with respect to employment of persons in capacities in which the knowledge and experience to be gained might reasonably be expected to aid in the development of capabilities required for future advancement to supervisory, managerial, professional or executive positions.

(d) Exceptions in sex discrimination. The prohibition against discrimination because of sex does not apply to the exclusive employment of one sex in positions where the nature of the work or working conditions provide valid reasons for hiring only men or women, or to a differential in pay between employes which is based in good faith on any factor other than sex.

(e) Exception in age discrimination. The prohibition against discrimination because of age shall not apply to hazardous occupations including, without limitation because of enumeration, law enforcement or fire fighting.

111.33 Industrial Commission To Administer. Sections 111.31 to 111.38 shall be administered by the industrial commission. The commission shall have authority from time to time to make, amend and rescind such rules

and regulations as may be necessary to carry out this chapter. The commission may, by one or more of its members, or by such agents or agencies as it may designate, conduct in any part of this state any proceeding, hearing, investigation, or inquiry necessary to the performance of its functions. The commission shall at the end of every year make a report in writing to the government, stating in detail the work it has done and its recommendations, if any.

111.34 Advisory Committee. The governor shall appoint an advisory committee consisting of 7 members. Two shall be representatives of labor organizations, one to be chosen from each of the 2 major labor organizations of the state, 2 members shall be representatives of business and industrial management, and the remaining 3 members shall be representative of the public at large. The term of members shall be for 3 years. The members of the committee shall elect their own chairman. The commission may refer to such committee for study and advice on any matter relating to fair employment. Such committee shall give consideration to the practical operation and application of this chapter and may report to the proper legislative committee its view on any pending bill relating to the subject matter of this chapter. Members of the committee shall receive no salary or compensation for services on said committee, but shall be entitled to reimbursement for necessary expenses.

111.35 Investigation and Study of Discrimination. The commission shall:

(1) Investigate the existence, character, causes and extent of discrimination in this state and the extent to which the same is susceptible of elimination.

(2) Study the best and most practicable ways of eliminating any discrimination found to exist, and formulate plans for the elimination thereof by education or other practicable means.

(3) Publish and disseminate reports embodying its findings and the results of its investigations and studies relating to discrimination and ways and means of reducing or eliminating it.

(4) Confer, co-operate with and furnish technical assistance to employers, labor unions, educational institutions and other public or private agencies in formulating programs, educational and otherwise, for the elimination of discrimination.

(5) Make specific and detailed recommendations to the interested parties as to the methods of eliminating discrimination.

(6) Transmit to the legislature from time to time, recommendations for any legislation which may be deemed desirable in the light of the commission's findings as to the existence, character and causes of any discrimination.

111.36 Commission Powers. (1) The commission may receive and investigate complaints charging discrimination or discriminatory practices in particular cases, and give publicity to its findings with respect thereto.

(2) In carrying out the provisions of this subchapter the commission and its duly authorized agents are empowered to hold hearings, subpoena witnesses, take testimony and make investigations in the manner provided in chapter 101. The commission or its duly authorized agents may privilege witnesses testifying before them under the provisions of this subchapter against self-incrimination.

(3) If the commission finds probable cause to believe that any discrimination as defined in this subchapter has been or is being committed, it shall immediately endeavor to eliminate the practice by conference, conciliation or persuasion. In case of failure so to eliminate the discrimination, the commission shall issue and serve a written notice of hearing, specifying the nature of the discrimination which appears to have been committed, and requiring the person named, hereinafter called the "respondent" to answer the complaint at a hearing before the commission. The notice shall specify a time of hearing not less than 10 days after service of the complaint, and a place of hearing within either the county of the respondent's residence or the county in which the discrimination appears to have occurred. The testimony at the hearing shall be taken down by a reporter appointed by the commission. If, after hearing, the commission finds that the respondent has engaged in discrimination, the commission shall make written findings and recommend such action by the respondent as will effectuate the purpose of this subchapter and shall serve a certified copy of the findings and recommendations on the respondent together with an order requiring the respondent to comply with the recommendations, the order to have the same force as other orders of the commission and be enforced as provided in ch. 101. Any person aggrieved by noncompliance with the order shall be entitled to have the same enforced specifically by suit in equity. If the commission finds that the respondent has not engaged in discrimination as alleged in the complaint, it shall serve a certified copy of its findings on the complainant together with an order dismissing the complaint.

(4) It is unlawful for any organization or person referred to in s. 111.32 (1), (2) and (3) or for any employment agency which undertakes to procure employes or opportunities to work, to engage in any discrimination pursuant to this subchapter.

(5) If an order issued under sub. (3) is unenforceable against any labor organization in which membership is a privilege, the employer with whom such labor organization has an all-union shop agreement shall not be held accountable under this chapter, when such employer is not responsible for the discrimination.

111.37 Judicial Review. Findings and orders of the Commission under this subchapter shall be subject to review under ch. 227.

Union negotiations in recent years have concentrated on fringe benefits and job security. In the area of fringe benefits, not only has the magnitude of the benefits continued to swell but new ground has been broken. Health programs now cover mental health, dental and vision care and drug costs.

The new areas of coverage have been added even as existing programs have been liberalized. The improvements include more hospital days covered under Blue Cross or insurance contracts, increased fee schedules under Blue Shield or cash indemnity surgical insurance, the extension of health insurance to cover doctor bills and catastrophic illness, liberalized benefit formulas for retirement and disability under pension plans.

Some sense of the scope of fringe benefits may be gained when it is realized they have been growing by about $1 billion annually in recent years. According to Social Security Administration estimates, total employer and employe contributions under fringe benefit plans rose from $7 billion in 1954 to $15.6 billion in 1963.

But if labor has had extraordinary success in the past 20 years in raising such great sums for health benefits, it has fared less well in winning full value for the health care dollar.

For experience has revealed such practices as unnecessary hospitalization, unnecessary surgery and inefficient use of expensive doctor time and of diagnostic and therapeutic equipment.

As a strong case in point, a recent medical audit disclosed that 98 percent of the operations for tonsils and adenoids at a community hospital were medically unjustified; 50 percent of the hysterectomies were unnecessary. This audit by the School of Public Health of the University of California at Los Angeles has been confirmed by impartial studies elsewhere.

Thus serious questions are raised about the quality of health care being negotiated.

As health benefit coverage has spread, it has become increasingly clearer that the fee-for-service method of payment has stimulated quantity rather than quality care.

Clear criteria should be applied by unions, therefore, especially in view of the extension of benefits to the new areas of mental health, dental, vision and drug care.

The criteria could include these main points:

- Does the method of financing efficiently meet the needs of those covered or does it "distort" the pattern of services and waste funds?
- Does the program provide complete benefits, including preventive care as well as treatment for illness?
- Are the services integrated so that care is based on the interrelationship of the different disciplines of psychiatry, dentistry, optometry and pharmacology?
- Are the services easily accessible to the membership?

What Is Insurance?

The word "insurance" is used differently in different contexts. There is social insurance, which is the principle of making a series of small payments when you are well and earning money and then getting back a large sum when needed because of some emergency such as sickness, unemployment or retirement. There are the principles of commercial insurance, which place emphasis on covering catastrophic-type risks which can be precisely defined and which are beyond

COLLECTIVE BARGAINING *Report*

Prepared by Department of Social Security
Reprinted from September 1965
AFL-CIO AMERICAN FEDERATIONIST

the control of the insured. The principles of commercial insurance require that both the occurrence of the risk and its cost will not substantially increase because of the fact that the risk is insured. Blue Cross and Blue Shield, as well as the private carriers, are all examples of financial mechanisms which conform to the principles of commercial insurance.

Not sufficiently well understood is that the financial mechanism of commercial insurance can cause a massive distortion in the distribution of medical and professional services in the direction of over-use of covered definable "risks" as against uncovered and undefinable services. The result is a "bias" in favor of hospitalization and surgery, together with under-coverage and under-use of preventive care, nursing home and home nursing care and other out-patient services. This is a very inefficient use of the health care dollar.

Commercial insurance causes a distortion of medical services to fit the concepts of "insurable risk" rather than having the financial mechanism fit the needs of people for medical services.

However, there are other financial mechanisms. Taxation is one. Another financial mechanism is prepayment. How is prepayment different from commercial insurance? Prepayment differs from insurance in that the union or group of consumers contracts directly with the providers of service. The physicians, psychiatrists, dentists, optometrists or pharmacists contract to render such services as are necessary for a sum of money deemed sufficient to cover their expenses. It should be noted that under this arrangement no definitions of service are necessary. Moreover, no third party is required either. A third party may be utilized for some administrative services as a matter of convenience, but it is not necessary. Therefore, there need be no claims, no claim processing or other overhead expenses not connected with providing the health services.

Of particular importance is that this arrangement is not possible where those providing the professional services insist upon payment from the patient on a fee-for-service basis. If the cost is prepaid, there cannot be a fee paid for each service as well. The professional staff under a direct service prepayment program must, therefore, be paid under some other method of remuneration. Payment is usually by salary or by the "capitation" method. The latter method reimburses the professional according to the number of people he treats—not by the number of services.

Insurance and the New Programs

None of the dental, drug, vision and mental health programs fit the commercial insurance concept of "insurable risk." Take dental, drug and vision benefits, for example. Expenditures for these services are not catastrophic in nature. They tend to be rather routine. They may be burdensome in the case of a person with a chronic disease who has a continuing need for drugs, but the need is not sudden or unexpected.

For dental care, the cost of prevention is less than the cost of treatment. But going to the dentist for routine examinations and early detection of cavities is completely under the control of the person seeking care and is, therefore, not insurable under the concept of commercial insurance. Vision care requires a periodic eye examination and the fitting of prescribed lenses to correct vision defect; again, a service completely under the control of the patient.

It might appear, at first look, that mental illness could fit the concept of "insurable risk" since insanity certainly is catastrophic—both financially and sociologically. However, in the case of mental illness, the problem is primarily one of definition. Unless the insurance carrier can define the risk, he cannot price the coverage. Mental illness runs the gamut from being just "different" to being psychotic. No psychologist or psychiatrist has ever been able to draw a fine line between the various categories of mental illness. Neither are the methods of treatment well defined. Too little is known concerning the effectiveness of one method of treatment as against another.

Nothing could be more detrimental to the future development of economical and effective methods of treatment than to provide commercial insurance coverage for only a limited spectrum of the need, for in such

THE RISE IN DENTAL PREPAYMENT COVERAGE
Coverage by Type of Plan, 1960-65

Source: U. S. Public Health Service.

cases the insured portion of services would be utilized to the neglect of the uninsured services.

A sound view is taken by the National Institute of Mental Health which states that, in the new comprehensive community health centers, "Patients will no longer be fitted into a treatment pattern, but rather the treatment will be individually tailored to the patient's needs, as he progresses from early diagnosis through a continuity of treatment and back to a productive life in his community."

The various mental health, dental, drug and vision programs that have been developed through collective bargaining reflect these problems.

1. Dental Care Programs

Dental prepayment programs are now growing very rapidly. The number of persons covered as of 1965 is now approaching 2 million, according to the U.S. Public Health Service. Coverage has more than doubled since 1960. Labor is the major force exerting pressure to extend dental care benefits.

In reviewing the progress in dental prepayment programs, one significant fact stands out. Left to their own initiative, unions established a pattern of direct service plans and either employed their own dentists or contracted with a dentist or dental group for services. In 1960, for example, more than three out of every four people covered by prepaid dental plans received benefits from direct service programs. Most of the growth in coverage since 1960 has been in Dental Service Corporation and commercial insurance plans. Now the number of people covered under third party arrangements exceed the number under direct service.

Affiliates of a substantial number of international unions are providing direct service dental care benefits. Of special interest, however, is where dental care is included as one of the services of a union or community health center. Locals of the Clothing Workers, Laborers and Meat Cutters have integrated programs in some locations. The community-wide comprehensive health plans do not generally include dental care as part of their programs. Group Health Association in Washington, D. C., recently offered its membership a dental plan for children, but enrollment is on an individual basis and coverage is at extra cost.

Dental Service Corporations

The first Dental Service Corporation was organized by the Washington State Dental Society in 1954. The Dental Service Corporation, like its counterpart in medicine, Blue Shield, is a non-profit corporation organized and controlled by the profession. Most of the governing boards of the Dental Service Corporations are comprised only of dentists.

As of January 1, 1965, dental service corporations had been established in 23 states and enabling legislation had been passed in an additional eight states. Only nine of these dentist-sponsored plans are in active operation, however, and enrollment to date is highly concentrated in two states: California and New York. Other states with active plans include Colorado, Connecticut, Hawaii, Michigan, Ohio, Oregon and Washington.

The active Dental Service Corporations currently enroll only groups. Their contracts are experience-rated. Dental services are provided by participating dentists who sometimes are and sometimes are not required to accept a fee schedule in full payment for services rendered to subscribers. Dentists in the DSC programs receive payments on a fee-for-service basis.

A step forward in comparison to Blue Shield is that most, if not all, of the active Dental Service Corporation plans are policing the quality of care. This is accomplished through a system of spot audits where the charts, X-rays and dental records are reviewed by a committee of dentists for adequacy and quality of the work performed. The advantage of professional control over the quality of care is an important advantage that the Dental Service Corporation has over a commercial insurance indemnity policy.

Without consumer representation, the Dental Service Corporation plans can hardly be expected to effectively control dental fees. It is for this reason that the AFL-CIO negotiated an understanding with the American Dental Association which incorporated as one of ten principles that the governing boards of dental prepayment plans should include consumer and public representatives.

The largest group contract with a Dental Service Corporation was negotiated by the Machinists and Aerospace Workers with the Aerojet-General Corporation in 1963. About 35,000 members and 81,000 dependents are included in the program, which now covers most dental expenses, except orthodontics, with a lifetime $25 deductible per patient and with 20 percent co-insurance.

Dental Insurance Contracts

About a dozen commercial insurance companies have contracts providing coverage for dental care. Except for the Aetna Life Insurance Company and the Continental Casualty Company, however, most of the carriers have only one contract. In addition, a specialized non-profit dental insurance corporation, the Group Health Dental Insurance, Inc., is offering dental insurance to labor and to other groups in New York State as well as to individuals.

Some of the union trust funds pay indemnity benefits directly from the health and welfare fund. Involved

in such self-administered indemnity plans are the Bakery and Confectionery Workers, the Distillery Workers, the International Brotherhood of Electrical Workers, the Retail, Wholesale and Department Store Union and the Retail Clerks.

Worthy of special mention are several "dual choice" programs. In these, members of the union are given a choice of receiving dental care from a direct service clinic operated by or under contract with the union or receiving their care from a private dentist. In the latter case, the fee-for-service dentist may be reimbursed through a Dental Service Corporation, through an insurance company or through indemnity payments by the health and welfare fund. Several locals of the Retail Clerks in California have dual choice programs.

2. Psychiatric Programs

Coverage for mental illness under traditional Blue Cross, Blue Shield and commercial health insurance has been increasing.

However, such coverage is usually surrounded by more restrictions than for physical illness. For example, a Blue Cross certificate covering 90 days of hospitalization for a physical disability may only cover 21 days for a mental disability. Coverage for out-patient treatment is typically surrounded by restrictions and limitations either in the form of days of care, number of visits, dollar maximums or method of treatment. A major medical policy which pays 80 percent of medical expenses (after a deductible) for physical illness may only pay 50 percent for mental illness, with a maximum of 50 psychiatric visits per year limited to $20 of covered expense per visit. Many Blue Cross and commercial insurance contracts will only pay benefits for electro-shock or other narrowly "defined" methods of treatment.

In spite of increased pressure by unions to provide insurance coverage for mental as well as physical conditions, insurance companies so far have exhibited little enthusiasm in extending this form of coverage except under major medical. The principal reason for this reluctance is that they are having difficulty in fitting mental illness into the traditional commercial insurance mold of "insurable risk."

Experience with major medical coverage for mental and nervous conditions underscores the inappropriateness of this mechanism for financing mental health services. The deductible and co-insurance features in these policies effectively deter the average member from using the services at all! They effectively provide a barrier to early diagnosis and treatment.

Even where the benefit is used, it is used wastefully. When care is needed, the member typically goes to a psychiatrist for treatment on a single patient to single doctor basis, which costs (at minimum rates) about $25 per hour.

If the day ever comes when going to a doctor for a mental condition is as accepted as going to a doctor for a physical condition, there would not be enough psychiatrists to meet the need on a face-to-face basis. Surveys indicate that from 10 to 23 percent of the population have mental symptoms severe enough to need treatment. However, only about one out of ten people in need of treatment actually seeks it. If people were successfully educated to seek treatment when they need it, the cost of such insurance would be prohibitive under traditional treatment methods. If utilization is discouraged by deductibles, co-insurance, limitations, definitions and maximums, it is of little value to the membership.

It is worthy of mention that union experience with deductibles and co-insurance is that they are a more effective deterrent to lower paid workers than to highly paid professional and managerial employes. The $25 psychiatric visit still costs $12.50 under major medical, assuming 50 percent co-insurance, after the deductible has been met. This is no small sum for people of moderate means.

Recent studies by Dr. Robert Reiff and Dr. Frank Riessman, who have been associated with the mental health program of the National Institute of Labor Education, indicate face-to-face introspective therapy is a therapeutic technique not particularly suited to the needs of many people afflicted with mental illness. As stated by Dr. Reiff:

"Treatment methods which place heavy reliance on the use of some form of social interaction . . . as a technique of treatment, rather than on individual face-to-face psychotherapy, appear to be more effective . . ." with some groups.

"We have in mind such techniques as group therapy of various kinds, role playing, family treatment and work therapy programs."

Direct Service Mental Health Programs

At least some locals of most AFL-CIO unions probably are involved with mental illness benefits with either the "Blues" or the "commercials." However, several very significant direct service mental health programs have been sponsored by AFL-CIO unions.

Under the stimulus of the Federal Employes Health Benefits Act and of the mental health benefits provided by the Auto Worker contracts, the comprehensive plans such as Kaiser Permanente and the Health Insurance Plan of Greater New York are planning programs to supplement their physical health services.

Group Health Association of Washington, D. C.,

provides diagnosis and short-term therapy for its subscribers, who include the AFL-CIO headquarters staff and Local 689 of the Amalgamated Transit Union. Both are dual choice plans.

One of the best mental health programs in the country is that of Local 770 of the Retail Clerks in Los Angeles, undertaken in cooperation with the Southern Permanente Group (Kaiser Plan). Psychiatric services are rendered at several centers which are open day and night. The union's welfare fund contracts for the service on a prepaid basis and the membership is encouraged to use the plan through the union's official journal and education program.

Originally, cases in Local 770 were accepted on referral by the member's personal physician. This restriction has since been eliminated. A member now can just "drop in" without referral and without any out-of-pocket cost for the first visit. Subsequent visits, if required, are subject to a $2 fee per visit up to a maximum of $20 per month per family. By eliminating the charge for the first visit, the member is encouraged to get "off his chest" anything that is bothering him, whether it be that he can't get along with his wife or junior's anti-social behavior or a death in the family.

Any method of treatment is employed which, in the opinion of the psychiatrist, is most appropriate to the needs of the patient. Out-patient treatment techniques include group and family therapy, role playing, drug therapy and work therapy. Sometimes the job is a maior cause of nervous tension and the employer may be contacted to make appropriate modifications in the job situation. Forty-five days of in-hospital care is also included in the plan.

In short, the Retail Clerks' mental health program is built upon four basic principles: 1. immediate service (no waiting lists); 2. continuity of care; 3. flexibility of treatment approaches and methods; 4. comprehensiveness of care. Face-to-face therapy is provided when deemed appropriate, but by stressing early treatment the more expensive therapeutic methods have been minimized. The important thing is that such a full range of services can only be made available through a unified clinical and administrative program. This comprehensive mental health program is financed by a 2 cents per hour employer contribution to the health and welfare fund and by a $2 per visit fee.

Another exciting direct service program which provides comprehensive out-patient mental health services is the Eleanor Roosevelt Union Health Guidance Center in Chicago. This project was initiated by the Labor Education Division of Roosevelt University, supported by a federal grant from the National Institute of Mental Health and arranged in cooperation with union health centers sponsored by affiliates of four international unions. They are the Building Service Employes, the Clothing Workers, the Ladies' Garment Workers and the Meat Cutters.

This program places emphasis on new treatment methods designed to keep the patient on his job, with his family and in the community. This helps avoid the stigma all too often associated with people who have had to be institutionalized. Another goal is to educate the members to overcome their resistance to seeking early treatment.

The Sidney Hillman Health Center of the Amalgamated Clothing Workers recently started a direct service mental health program. The goal is to assure the availability of the entire spectrum of mental health services to the membership. Treatment is available during all daytime hours and at least two evenings a week. Special emphasis will be placed on the appropriate role of the union and of community mental health and rehabilitation facilities in providing comprehensive services. Toward this objective, the health center has contracted with the Mt. Sinai and Maimonides Hospitals for hospital and evening clinic services.

One feature of the program is the involvement of so-called "indigenous" non-professionals in treatment. Union officials and shop chairmen try to maintain or reintegrate emotionally ill workers on the job.

The most recent significant gain in mental health coverage for union members resulted from the contracts negotiated last year by the United Auto Workers. The UAW agreements with Ford, Chrysler and General Motors, as well as with other employers, provide mental health benefits as follows:

1. 45 days of in-hospital treatment (including treatment in a night care center).
2. A maximum of $400 per patient per calendar year for any of the following out-patient services:
   - Psychiatric office visits for treatment.
   - Treatment in an approved out-patient or day care program.
   - Visits by members of the patient's family for counseling service in either the doctor's office or approved out-patient facility.
   - Group psychotherapy in the doctor's office or in an approved facility.
   - Electro-shock therapy in an approved facility.
   - Psychological testing when prescribed by a physician.

While these benefits are quite broad, payment is made through a third party, primarily Blue Shield. It would therefore appear the UAW program is essentially commercial insurance against the costs of mental illness expenditures, which would normally reimburse private practitioners on a fee-for-service basis. In such case, most Auto Workers needing care could be expected to go to a private psychiatrist for face-to-face treatment.

Unfortunately, most of the publicity in regard to the UAW program has emphasized the benefits without regard to how the benefits are to be provided. What has gone unpublicized is that the agreement also provides that the carriers, the employers and the UAW are pledged to work in cooperation to make such arrangements as are feasible to provide these benefits on a direct service basis. The benefits are to be provided, where possible, through such organized settings as the

comprehensive group practice prepayment health programs, including the Community Health Association in Detroit, Kaiser Permanente on the West Coast and others, or through the community mental health centers as have been authorized by the Community Mental Health Centers Act of 1963.

The benefits are underwritten by a third party as a matter of convenience, because such direct service arrangements cannot be implemented simultaneously throughout the country for all UAW members. In short, it is a dual choice program.

Community Mental Health Centers

The Community Mental Health Centers Act as passed in 1963 provided money only for mental health centers. However, the law was amended this year to include funds for the initial staffing of the centers. The federal matching grants are made available to the states as their plans are approved by the U.S. Public Health Service. To date, 17 states have submitted plans, of which three have been approved and 14 are in various stages of approval. The three approved plans are for Kansas, Minnesota and Missouri.

When fully developed, the comprehensive community health centers will offer a broad range of services, including: (1) diagnosis, (2) out-patient as well as in-patient treatment, (3) partial hospitalization, including day, night and weekend care, (4) rehabilitative services, (5) both pre- and post-mental hospital care, including foster home placement, home visiting and half way houses and (6) training programs.

The legislation also provides grants to the states for planning. Additional funds are made available for the construction of facilities for the care and treatment of the mentally retarded.

As the state programs are developed and the facilities constructed and staffed, organized labor will have an unparalleled opportunity to develop direct service programs in cooperation with the emerging mental health centers. The Clothing Workers' program in New York may be able to provide useful guidelines as to how unions can utilize and supplement community mental health services.

3. Vision Care Programs

A number of unions have negotiated some type of coverage for eye care. Typically, the benefits are financed by employer contributions to a health and welfare trust fund. A rather broad range of programs have been developed. In some, arrangements have been made with one or more optometrists to provide eye examinations and glasses at a discount. As such, these are discount rather than prepayment plans.

Among the prepayment plans, coverage varies considerably. Some programs provide eye examinations on either a direct service (contract) or fee-for-service basis, leaving the actual purchase of lenses and frames up to the member. Some programs cover eye examinations and the lenses, but not the frames. Some cover the lenses and also prepay for the frames up to a stipulated amount.

The comprehensive health plans, as well as most of the union health centers, usually provide not only eye examinations but also the services of an ophthalmologist—a medical specialist in the treatment of eye disease—as an integral part of the health program. The purchase price of glasses (lenses and frames) are typically up to the member as an out-of-pocket item, but may be provided at a discount. The health plans usually employ one or more optometrists who are under the direction and supervision of an ophthalmologist or of the center's department of ophthalmology.

Unions having such direct service programs include those unions now operating a health center, such as the Ladies' Garment Workers, the Clothing Workers, the Hotel and Restaurant Workers, the Retail Clerks, the Longshoremen, the Seafarers, the Maritime Workers, the Meat Cutters, the Building Service Employes and others. The railroad brotherhoods have one of the oldest programs, with vision care one of the services provided through their chain of hospitals.

Numerous other unions receive vision care services through one of the community-wide comprehensive plans, such as Kaiser Permanente, Health Insurance Plan of Greater New York, Community Health Association (Detroit) and Community Health Foundation (Cleveland).

Also of interest are several specialized eye-care centers where vision care is also provided on a direct service basis. One such center was sponsored by the Bucks County Central Labor Council and another by the Lancaster Central Body in Pennsylvania. Both are open to all AFL-CIO affiliates. A similar arrangement, the Union Eye Care in Chicago was sponsored by the Building Service Employes, but is open to all interested unions in the city. About 90 locals participate in the program. The Retail Clerks and Amalgamated Meat Cutters were the sponsors of an eye care center in Cleveland which has open enrollment. There are also direct service eye-care centers in New York, Baltimore, Philadelphia and Detroit.

Vision Service Corporations

Similar in concept to Blue Shield and the Dental Service Corporations are the Vision Service Corporations sponsored by the optometric profession.

These corporations contract with unions or consum-

ers to provide eye examinations, prescribe lenses and reimburse participating optometrists on a fee-for-service basis. The typical VSC contract also prepays a stipulated amount, such as $10, towards the cost of frames.

Vision Service Corporation enabling acts have been passed in 18 states but only three VSCs are actually operating. These are in California, Washington and New York. The California Vision Services, Inc., has signed up locals of the Bricklayers, Laborers, Lithographers, Masters, Mates and Pilots, Photo Engravers, Retail Clerks, Roofers and Sheet Metal Workers. Membership in the Washington VSC is mainly Teamsters; in New York an International Brotherhood of Electrical Workers' local has signed a VSC contract.

Insurance company interest in this field has been minimal. There are only three or four vision programs administered by a commercial carrier. A local of the Retail Clerks has a plan underwritten by the Occidental Insurance Company.

Self-Administered and Discount Programs

Another program that has substantial enrollment is one administered by a professional consulting group. Health and welfare trusts of some 25 international unions contract for vision service from the professional administrator who in turn contracts with some 100 optometrists in private practice to provide the services.

The optometrist is reimbursed on a fee-for-service basis but the fee schedules are substantially below those normally charged by the profession. The participating optometrists agree to accept the fee schedule in full payment for their services and the administrator polices both their performance under the contract as well as the quality of care.

This program has been able to provide family coverage for about 35 cents per month per member. The service includes eye examinations, the lenses and the cost of the less expensive frames.

A number of unions pay indemnity benefits out of a self-administered trust. As there is no risk, a "risk taker" or third party is not necessary if the program is adequately financed and efficiently administered. Unions known to be involved in such self-administered programs include the Laborers, the Iron Workers and the Plumbers.

In Los Angeles, a number of optometrists have sponsored a discount program. This is not, of course, a prepayment plan, but it does provide eye examinations, prescriptions and frames at reduced rates.

4. Drug Programs

If there is a 20th century equivalent to the primitive witch doctor, the successor to the role is most likely to be drugs. It is one of the paradoxes of modern scientific medicine that, through the use of powerful drugs, curative miracles are almost commonplace. Antibiotics have proven effective against many formerly fatal diseases. Effective chemotherapy has been developed for some mental conditions. It is with some reason, therefore, that the lay person attributes almost supernatural powers to drug therapy.

Consumers spend over $1 billion annually on self-administered medication. This includes expenditures for vitamins, pain relievers, tranquilizers, energizers and medication for "iron poor blood" and many other patent medicines.

While many drugs sold over the counter and without a prescription have value in the treatment of a specific condition, their use should be indicated by an appropriate medical diagnosis. There is a vast difference between taking medicine and treating disease. Many patent medicines characteristically act to suppress symptoms rather than provide a cure. As such, their use can be dangerous. To the extent that symptoms are relieved, effective treatment may be postponed.

While commercialization in over-the-counter drugs

PROFITEERING IN DRUGS

Wholesale Prices of Some Drugs Compared by Brand and Generic Names

*Average of 5 representative prices.
Source: U. S. Department of Health, Education, and Welfare.

manipulates the fears and superstitions of the public, commercialism in prescription drugs is just as serious. In this case, the patient can be victimized through his doctor. The large pharmaceutical manufacturers profit greatly when doctors prescribe by brand rather than generic name.

The generic name for a drug is the official name of a drug compound as established by the federal Food, Drug and Cosmetic Act. However, each drug manufacturer may select a trade name under which the company promotes the sale of its product. If the trade name of the drug can be substituted in the doctor's mind for the generic name, price competition can be eliminated. So successful have the major pharmaceutical houses been in "educating" the doctors that, according to the late Senator Estes Kefauver, most doctors prescribe by brand name.

A really effective drug program cannot, therefore, realistically separate the cost problem from the medical problem. *An effective drug program requires medical as well as pharmaceutical controls.*

Medical controls, however, mean more than just restricting benefits to prescribed drugs. Because of commercialism in the marketing of over-the-counter drugs, prepayment would lead to over-utilization of vitamin pills, tranquilizers, pain relievers and such. A common feature of all drug prepayment plans, therefore, is that they limit benefits to prescribed drugs. But this, alone, does not provide either an economical drug program or a medically sound one. Many doctors are as "drug happy" as some patients. It does not stop the doctor from prescribing "placebos," from indulging in shotgun drug therapy in place of making an adequate diagnosis or from prescribing by brand name.

The drug programs which really come to grips with both the economic and the medical problems are those which are an integral part of a prepaid direct service health program.

An example is the drug program of the Group Health Cooperative of Puget Sound, to which a number of unions belong. A committee of the medical staff and the chief pharmacist develop a formulary for use by all of the doctors. The physicians are educated to use this formulary, which includes drugs by generic name whenever possible.

Where brand name drugs are necessary (some brands are protected by patent), the least expensive brand is purchased. The formulary is under continuous review by the committee so that new and effective drugs can be added and superseded drugs eliminated. The committee keeps the entire medical staff up-to-date on the latest results of drug research which may warn of newly discovered side effects or contra-indications. Quite a contrast to education by drug detail men! The cost of the program comes to about 50 cents per person per month.

Group Health Association in Washington, D. C., also covers drugs in its most comprehensive health contract. Its drug benefits have a deductible of $50 per member per year, with 80 percent co-insurance.

The pharmacies associated with the various health centers of the Clothing Workers, the Ladies' Garment Workers, the Hotel and Restaurant Workers, as well as some of the community-based comprehensive plans such as the Community Health Association (Detroit), the Community Foundation (Cleveland), the various Kaiser Foundation plans and others have the advantage of medical controls, but do not attempt to cover drugs in the premium charges. Rather, they sell drugs at a discount, but the discount is often substantial where the doctors are trained in generic prescribing.

In addition to programs operated by or in connection with a medical center, unions have sponsored or are participating in three additional types of drug programs. These are: prepayment plans, with a discount or without a discount; mail order and discount plans; union or consumer-operated pharmacy.

In Summary

It is a principle of good health care, as well as economical care, that the various specialties in medicine and the paramedical professions should be integrated to treat the whole person. Fragmentation of services often means poor care and high cost. One estimate says over $75 million a year is wasted on diagnostic tests in search of the physical causes of what, in fact, turn out to be mental or emotional illnesses.

Thus the proliferation of separate prepayment mechanisms should be cause for concern. This is particularly true for financial arrangements such as the professional Dental and Vision Service Corporations (and Blue Shield) and indemnity insurance, which reimburse professionals either directly or indirectly on a fee-for-service basis. These mechanisms only shuffle dollars and cannot effectively control fees.

Salaried professionals under direct service plans, in contrast, are free to concentrate their talents and energies on what they have been trained for—the practice of medicine, psychiatry, dentistry, optometry or pharmacology. These professionals do not have to carry the burden of setting fees, making collections, keeping books, reading financial reports and carrying on the chores of a health business.

Comprehensive direct service programs are best suited to provide integrated care for the whole person. And this means better care at a lower cost.

THE INCIDENCE OF PULMONARY DISEASE IN INDUSTRY
as seen by the

State of Wisconsin
Department of Industry, Labor and Human Relations

Joseph C. Fagan, Chairman

Five years ago, the words "pulmonary disease" would have brought to mind such occupational diseases as silicosis, asbestosis, tuberculosis.

Today, we have to consider the broader term "respiratory infections, not elsewhere classified" (now, isn't that an awkward term -- but we're stuck with it for statistical purposes until we can come up with something better), because of our present inability to separate the respiratory infections, caused by the new chemicals and processes, into neat categories. For example, we have the relatively new problem of TDI (toluene diisocyanate) which affects various parts of the respiratory system -- sometimes it strikes the nose and throat, sometimes the bronchial tubes and/or lungs are affected, and sometimes the entire respiratory system is involved.

First, let's consider the older, better known pulmonary diseases. In Wisconsin, the law bringing occupational diseases under our Workmen's Compensation Act became effective in 1919 (the first effective workmen's compensation law in the United States was enacted by the Wisconsin legislature in 1911).

The single most costly occupational disease in Wisconsin has been the pulmonary disease known as silicosis (we include silico-tuberculosis in this category). From 1919 through 1966, over 900 silicosis claims have been adjudged compensable or approved as compromises, with total indemnity and medical expenses of almost seven million dollars.

No claim for silicosis was made until 1921. From 1921 through 1930, 120 claims were presented, an average of only 12 a year. During the next two years, 112 claims were filed. The peak years of 1933 and 1934 saw the number of claims rise from 190 to 321. This last jump in claims can be attributed almost entirely to three things:

First, the depression brought on a large number of claims filed by out-of-work employes who had been exposed to silica and were hopeful of finding some way to raise money. Some attorneys of that day also saw a chance to make a little money by encouraging the filing of silicosis claims. (In fact, some researchers have referred to them as "ambulance chasers" -- being an attorney, myself, I'm sure that only the humanitarian aspects swayed them!)

Secondly, the insurance carriers became alarmed when it became known that the total incurred losses resulting from silicosis claims (as reported by the largest writer of compensation insurance in Wisconsin) rose from one-fifth of one percent of the total of all claims of policies expiring in the year 1930 to ten percent of the total of all claims registered by the policies expiring in the year 1932. This led insurance carriers to insist on medical examinations of the employes of their policyholders, and to refuse to insure if there remained in the employ any one who was found to have any stage of silicosis. Employes so discharged or refused employment usually filed claims for silicosis.

In the third place, the actions of one self-insurer and one insured company added to the number of claims. One of the self-insured iron mining companies became interested in the silicosis problem and had all of its men examined. Where dangerous conditions were found, settlements were made with the workers. Where silicosis was found in incipient stages, minor settlements were made, even though no disability

was present. Many small compromise settlements were thus made to avoid prolonged litigation. One of the insured companies in the metal industry group, before moving out of the state, had all of its men examined for silicosis and encouraged every worker with any stage or symptom of silicosis to file claim against the insurance carrier. As a result, this insurance company paid out over $180,000, mostly in compromise settlements.

By 1935, the number of claims had decreased to 104; in 1936, only 46 claims for disability due to silicosis were brought before the Commission. The bulk of the claims during the years 1931 through 1936 was made up of nonfatal cases, many of them noncompensable. Likewise, the nonfatal compromised cases were very numerous in those years; in many, the disability was very slight and the compromise settlements were frequently for small amounts.

In the years 1921 through 1936, 1,174 formal hearings were held on silicosis cases alone. 750 cases required hearings; 143 did not. The majority of the hearings were held between 1932 and 1936. The noncompensable cases required a higher average number of hearings per case than the compensable or compromised cases.

Many cases were rejected because of a ruling by the Wisconsin Supreme Court that a case was not compensable unless time or wage loss was experienced during the period of employment with the employer against whom the claim was filed. While this undoubtedly brought the cost down, it resulted in meritorious claims being barred. Subsequent amendments to our Act have clarified this point. As the law now reads, "Time of injury, occurrence of injury, or date of injury is the date of the accident which caused the injury, or in the case of disease the last day of work for the last employer whose employment caused disability****."

The spate of silicosis and other occupational disease claims during the depression period, although costly, did create an awareness of occupational diseases. This resulted in substantial efforts to control the known hazards. Plant sanitation and medical check-ups became commonplace. In Wisconsin, we have now reached the point where we stress 90 percent education and only 10 percent enforcement.

The other major pulmonary diseases that crop up in our workmen's compensation statistics are tuberculosis, pneumonia, pneumonitis, asbestosis and pneumoconiosis, not elsewhere classified.

Our statistical history of tuberculosis as an occupational disease goes back to 1919. There have been no significant variations in the number of cases from year to year. Most of the cases have been incurred in hospitals and allied health services. Two hundred claims have been compensated through 1966, with indemnity and medical costs of over $700,000.

For the other four pulmonary diseases referred to above, our statistical history covers the years 1937 through 1966 (unfortunately, data on compromise settlements are not available for any occupational disease for the years 1937 through 1943). The number of cases compensated and total indemnity and medical aid were, respectively: pneumonia, 37 and $32,767; pneumonitis, 19 and $6,319; asbestosis, 11 and $198,784; pneumoconiosis, not elsewhere classified, 8 and $65,098.

Considering all pulmonary diseases discussed above, the total known number of cases was over 2,000; total known indemnity and medical costs, almost eight million dollars. Silicosis accounted for almost 46 percent of the cases and over 84 percent of the indemnity and medical costs.

The above sounds like a small amount when one considers that in Pennsylvania, where miners disabled by pneumoconiosis are paid from state funds, payments in fiscal 1966 totalled over 27 million dollars.

The State of New York is now "gathering detailed evidence about lung diseases, how they work, and how they affect the lungs, the tissue and the way they function," according to a pamphlet called "The Fight Against Dust Diseases" (issued by the Division of Industrial Hygiene, Morris Kleinfeld, M.D., Director). The following are quotes from this pamphlet:

> "During the past three years, more than 600 workmen have been given lung examinations by the Division's testing program. ***** We use an epidemiological approach. We study all facets of the disease to try and get a natural history of the disease. We attempt to detect and evaluate early changes in lung function -- any early evidence of disability. ***** The lung-testing work of the Division of Industrial Hygiene in Buffalo a couple of years ago was the achievement that sold the men of Local 30 (The International Association of Heat and Frost Insulators and Asbestos Workers, AFL-CIO) on the program. Among fewer than 200 asbestos workers tested at that time, the Division located 19 cases of lung disease. Mr. Dwyer said Local 30 is discussing the possibility of following through on the results of the Syracuse study by establishing a continuing study of its own. The union's primary concern is the health of its men. A continuing lung-testing program in which the men's lungs were tested at intervals would enable the group to discover evidence of illness early."

The common hazards of silica dust and asbestos are pretty well known. However, how many are prepared to measure exposure to crystalline free silica which may be used rather incidentally in an operation at a plant that is not normally considered to be a dusty industry? Silica flour is used, for example, as a filler in some paint mixtures.

Talc and soapstone powders have been found to produce disabling pneumoconiosis in lesser concentrations than dusts made up of silicates, with the result that no more than 20 million particles per cubic foot of air is considered safe. These two materials often have some quartz content, sometimes as much as 20 percent; thus, exposure should be limited to 10 million particles per cubic foot of air.

Exposure to amorphous silica should also be limited to 20 million particles per cubic foot of air. When subjected to a calcining operation, the exposure may have to be limited to 7 million particles per cubic foot of air.

It is not my intention to lecture on threshold limits; the above was mentioned to emphasize the fact that we have a lot to learn yet even about exposure to silica dusts.

Let's change the subject slightly -- what about those repiratory infections, not elsewhere classified by our Statistical Division?

From 1937 through 1966, over 800 cases cost almost a quarter of a million dollars. The majority of the claims arose from contact with toxic and noxious substances, such as dusts and chemicals.

It will be a different story from now on. We have a backlog of unsettled cases which are costing in the millions of dollars -- one self-insured employer, alone, has paid out more than one million dollars. It is almost impossible to pinpoint in every case the exact part of the respiratory system involved; we do know that, in many of the cases, the doctors are seeking to find out the long-term affect on the lungs.

New chemicals and processes have brought about this situation. Silica and asbestos have long been recognized as cripplers and killers; but who, five years ago, would have been prepared to listen to a discussion of epoxy resins, methyl ethyl ketone plasticizers, toluene diisocyanate (and other tongue twisters), in conjunction with pulmonary diseases?

To enlarge on my theme a bit: the incidence of silicosis was traditionally limited to a relatively few industries and occupations -- in fact, in some industries a hacking cough was a sign that a man had a job. The new hazards can be found in almost any industry, in almost any occupational classification -- yes, even in the home. Progress is wonderful, but the exotic new chemicals and powerful new pesticides are endangering the health -- and the lives -- of many of our workers, both on-the-job and off-the-job. As one newspaper article put it: "Some people are really allergic to work -- and it's not their fault."

So, what are we doing about it?

In 1965, we held several conferences on the hazards of exposure to the various chemical processes and epoxy compounds. These meetings were attended by representatives of government, industry and labor. We secured the cooperation of all concerned in our efforts to pursue a medical and preventive approach with the idea of educating the public, industry and labor, without causing hysteria.

For the past few years, an extensive study has been carried out by two doctors from the University of Wisconsin Medical School: Dr. Louis W. Chosy, Instructor of Medicine and Dr. John Rankin, Professor of Medicine. A National Institutes of Health grant supports their research. Working closely with affected Wisconsin employers, they have personally treated several hundred cases involving respiratory conditions resulting from exposure to glues, insulators, adhesives, foam plastics, etc.

As explained by Dr. Chosy, "These resinous compounds have been developed by moedern chemistry. Chemically and simply speaking, scientists developed the new compounds by adding different chemical ingredients to a basic 'polymer' molecule under varying conditions. The materials are highly 'reactive' only while they are first being used. After a glue dries, it is no longer reactive and therefore causes no one any trouble. There are many industrial uses of the new compounds. They are used, for example, in adhesives which can bind metal or effectively encase electrical circuits."

"In almost every case studied," said Dr. Chosy, "the affected persons' ailments were initially diagnosed as sinus trouble, pneumonia, chronic bronchitis, or asthma -- all of which may be side effects of exposure to polymer compounds. With added exposure, respiratory problems may become more severe, resulting in ear infections, sinus inflammation, or bronchial pneumonia. The full range of exposure effects is not completely understood. The best treatment for exposure is to keep away from the compounds. This poses a special problem for the workman whose job requires contact with resinous materials. And complete recovery may require prolonged absence from exposure. And, re-exposure, even after 'recovery' starts the problem over again, often quicker than the first time."

"These polymers may be encountered by the scientist in his electronics lab, the laborer in a lumber mill, the sportsman repairing his fiber glass boat, or even the captive husband painting the house," he said.

What is the answer for the industrial and home users of these products?

"Largely," said Dr. Chosy, "the answer is education in the dangers of indiscriminate use of these adhesives and resinous compounds as well as urging industry to give closer attention to the potential medical problems of their workers. In well-ventilated plants where resinous compounds are used, workers usually are not affected. Contact with these new materials could conceivably become an increasing problem for the man on the street. These compounds are used in a variety of products -- such as epoxy paints, enamels, lacquers and glues -- primarily designed for home use."

Our safety inspectors have also been working closely with some of the employers who have had the misfortune of using a chemical process without understanding the medical problems that would ensue. We have the power of increasing workmen's compensation benefits by 15 percent, which the employer himself must pay, but we prefer to work with the employer to help him solve his problems, rather than shaking a big stick at him. This cooperation has in turn brought about more willingness, on the part of the employer, to dig back into the absence records of his employes to see if their absences were due to colds, or due to new production processes.

Our largest workmen's compensation carrier, Employers Mutual Liability Insurance Company of Wisconsin, has set up an industrial hygiene laboratory equipped with the latest electronic devices used in chemical analysis. To quote, in part, from one of their recent pamphlets:

> "Analytical chemistry has been revolutionized in recent years by the development of instruments which have rendered obsolete the slow, laborious and costly methods of classical quantitative analysis.
>
> "Our new lab has more than $30,000 worth of equipment, including such devices as an atomic absorption spectrophotometer, a gas chromatograph, and a recording ultraviolet spectrophotometer. This equipment enables us to give one or two days service to policyholders on most samples.
>
> "Our senior industrial hygienist collects air samples with a midget impinger, which pulls a measured volume of air through a chemical solution that traps TDI fumes. TDI, an ingredient of the polyurethane foam, can produce respiratory symptoms in very small atmospheric concentrations. He measures the intensity of the dye's color by using a visible light range spectrophotometer, which determines what percent of a beam of light is transmitted by the dye solution. This is an indicator of the concentration of TDI in the solution.
>
> "He uses curves on a graph and a slide rule to convert the percentage given by the spectrophotometer into the concentration of TDI in the air sample. The concentration is expressed in parts per million.
>
> "In the plant's laboratory, he adds certain reagents to the solution through which the air sample passed. If any TDI is present, the chemicals will react to form a blue-red azo dye."

Our workmen's compensation records show that quite a few Wisconsin employers have become aware of the problems of certain new production processes and have corrected the processes. In these plants, the affected workers were given the choice of staying at their old job or transferring to a different part of the plant -- many transferred. Some sought jobs elsewhere, on advice of their physicians. Some are still being paid workmen's compensation. We have had cases where a worker who has transferred to another part of the plant comes in contact with others who are working with the "clean" process -- in lunch rooms, etc. -- and becomes disabled again. Once felled by TDI, some affected workers cannot stand a whiff of it; one such employe has claimed that other workers bring it out on their clothes and back come her old difficulties.

Not enough doctors are aware that these new materials are causing respiratory problems. If a given doctor sees only isolated cases, he is apt to consider his patient's illness as a chronic one, rather than one due to his work.

The most critical problem right now is that millions of workers work for small companies that have neither in-plant services nor an awareness of potential hazards. In the United States, plants that employ less than 500 workers (the kind that usully offer no health services) constitute 98 percent of all working establishments, and employ two-thirds of the working force. Services that a 100,000 - man company can provide may cost a 500 - man company much more per worker. As a result, smaller companies tend to neglect medical services. This is the biggest unsolved problem in occupational health.

The smaller companies have no safety directors, no industrial hygienists. To whom can they turn when they contemplate changing production processes? We are trying to change their thinking of us as an enforcement agency; we urge them to come to us for help. We would far rather pursue preventive measures than wait for our workers to come to us for workmen's compensation.

I'd like to recommend that you all read an article that appeared in the March 1962 issue of the magazine "Occupational Hazards" -- "Chemicals: Danger Looms While Industry Booms." In it is brought out an extremely important point (the entire article is excellent): "What should be included in the labels used for proprietary chemical products?"

At the present time, it is not always possible to determine from the label whether or not a potent sensitizer, a corrosive, a primary irritant, or a harmless substance is included in the product. How much does it mean to the ordinary user to read on a label: "Use in a well-ventilated area." At home, or in a small plant, one would think it enough to open a few windows and place a few fans around. Where is the warning that the products can cause respiratory difficulty or dermatitis?

Unless warnings and precautions are <u>clearly</u> stated on labels, the manufacturers and, under some conditions, the sellers of proprietary chemicals are liable for injuries and property damage that result from their use. However, this means little to the worker who is disabled or fatally injured through improper use of a chemical -- improper use because the label did not state clearly what precautions should be taken.

Unfortunately, too, many chemical producers manufacture formulas for sale through distributors who may ignore labeling requirements. The only answer, as I see it, is to wage a nationwide compaign to establish strict labeling requirements, and then to follow through with strict enforcement.

Where does all this leave us?

For awhile, we thought we had some of our pulmonary disease problems licked. At least, we thought we recognized the hazards. Now we have the challenge of new occupational health hazards, new concepts of considering the whole man, rather than the injured portion of the body. We have had two nondisabling silicosis cases, for instance, in which the original disease has brought on mental illness -- unable to find a job in the only work he knows and unwilling to learn another trade, brooding has brought on mental illness which incapacitates the man entirely.

Some occupational health experts have begun to press for "environmental health" -- an approach designed to cover all the physical and mental stresses affecting the "whole man" on or off the job. Many think that industry's responsibility is far more extensive than thought previously. In the opinion of most experts, job health has improved tremendously since the days of the sweat shops and dust-filled shops. The incidence of some occupational diseases has been drastically reduced.

But, we must face the fact that the potential threat to the health and well-being of our workers has never been greater. Although industry is spending unprecedented amounts of money to protect its employes from all known hazards, today's technological advances are creating problems faster than we can handle them.

This is the challenge that faces us now. We must keep abreast of all new developments; we must find a way to help the smaller plants; we must have better labeling; the toxicity of each new chemical or process must be established before it can be put into use.

1/ COVERING INDEMNITY, DEATH BENEFITS AND MEDICAL COSTS ONLY; THE ESTIMATED COST OF CONTRACT MEDICAL CASES IS INCLUDED.

EXPLANATIONS

Healing period = actual time lost from work, due to work injury or occupational disease, counting 6 days to the week.

* * * * *

Compensable time = number of days for which indemnity (workmen's compensation) is due and payable, according to the provisions of the Workmen's Compensation Act of Wisconsin, counting 6 days to the week.

* * * * *

Compensable cases (regular settlements) include all cases, except compromise cases, in which indemnity (workmen's compensation) is due and payable.

* * * * *

Compromise cases include all cases in which a compromise of liability (under the Workmen's Compensation Act of Wisconsin) is made by the employer and the employee. All compromises may be reviewed, set aside, modified or confirmed by the Wisconsin Industry, Labor and Human Relations Commission upon application of either party within one year from the date of the compromise. The amount of the compromise settlement includes both indemnity and medical aid.

* * * * *

nec = not elsewhere classified.

* * * * *

One occupational disease may be found spelled two ways in this release -- pneumoconiosis. Part of the release was typed before it was discovered that the spelling had changed from pneumonoconiosis to pneumoconiosis.

* * * * *

The reader will note that "nec" and "not reported" show up quite frequently in our statistical tables. It is unfortunate, but there are still too many employers who do not report to us the exact chemical, chemical process or other source of occupational disease. In some cases, it is carelessness; in others, lack of precise knowledge on the part of the employer; in still others, an unwillingness to admit the true source, partly due to a fear of adverse publicity.

* * * * *

In the various tables where alphabetic letters are in parentheses after a number, the letter denotes how many permanent total disability cases were included. For example, (A) includes 1 permanent total disability case; (B) includes 2 permanent total disability cases; etc.

A/ INCLUDES SILICOSIS AND SILICO-TUBERCULOSIS CASES.

1/ COMPROMISE CASES INCLUDE ALL CASES IN WHICH A COMPROMISE OF LIABILITY (UNDER THE WORKMEN'S COMPENSATION ACT OF WISCONSIN) IS MADE BY THE EMPLOYER AND EMPLOYEE. ALL COMPROMISES MAY BE REVIEWED, SET ASIDE, MODIFIED OR CONFIRMED BY THE WISCONSIN DEPARTMENT OF INDUSTRY, LABOR AND HUMAN RELATIONS UPON APPLICATION OF EITHER PARTY WITHIN ONE YEAR FROM THE DATE OF COMPROMISE. THE AMOUNT OF SETTLEMENT INCLUDES BOTH INDEMNITY AND MEDICAL AID.

* COMPROMISE DATA ARE NOT AVAILABLE FOR YEARS 1937 THROUGH 1943.

NOTE: THE SMALL AMOUNT OF MEDICAL AID SHOWN FOR CERTAIN YEARS SUGGESTS THAT THE ACTUAL TOTAL AMOUNT OF MEDICAL AID PAID IS NOT ALWAYS REPORTED.

TABLE 192.16

TABLE 188.27

SELECTED COMPENSABLE OCCUPATIONAL DISEASE CASES SETTLED IN 1966

OCCUPATIONAL DISEASE INDUSTRY	OCCUPATION	SOURCE	KIND OF DISABILITY	HEALING PERIOD	COMPEN-SABLE TIME	AMOUNT OF INDEMNITY PAID	AMOUNT OF MEDICAL AID PAID
AMPUTATION, AS RESULT OF OCCUPATIONAL DISEASE (ALL CASES)							
MFG. INDUSTRIAL CONTROLS	MOLDER	LUBRICATING, CUTTING OIL AND GREASE	PPD	-	38	$ 280	$ 120
ADVERTISING	HANDBILL DISTRIBUTOR	COLD WEATHER	PPD	71	372	559	372
FREEZING, FROSTBITE (SELECTED CASES)							
GASOLINE SERVICE STATIONS	FILLING STATION ATTENDANT	COLD WEATHER	T	27	27	200	45
AUTOMOBILE SERVICES, EXCEPT REPAIR	AUTO WASHER	COLD WEATHER	T	70	70	551	142
	AUTO WASHER	COLD WEATHER	T	42	42	368	436
SPORTS PROMOTERS AND COMMERCIAL OPERATORS, AND MISCELLANEOUS AMUSEMENT AND RECREATION SERVICES	NOT REPORTED	COLD WEATHER	PPD	128	129	1,263	1,379
OCCUPATIONAL LOSS OF HEARING (ALL CASES)							
PLUMBING, HEATING AND AIR CONDITIONING	CONSTRUCTION LABORER, NEC.	REPEATED NOISE	PPD	-	293	2,169	-
STEEL FOUNDRIES	JANITOR	REPEATED NOISE	PPD	-	633	4,698	-
MFG. IRON AND STEEL FORGINGS	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	369	2,733	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	253	1,938	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	288	2,208	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	420	3,118	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	108	799	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	104	769	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	467	3,110	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	280	2,076	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	413	3,062	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	431	3,196	-
	INSPECTOR	REPEATED NOISE	PPD	-	130	966	-
	INSPECTOR	REPEATED NOISE	PPD	-	392	2,910	-
	SHEAR OPERATOR	REPEATED NOISE	PPD	-	280	2,076	-
MFG. SHEET METAL WORK	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	248	1,843	-
MFG. FARM MACHINERY AND EQUIPMENT	CHIPPER	REPEATED NOISE	PPD	-	128	946	-
MFG. CONSTRUCTION MACHINERY AND EQUIPMENT	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	609	4,520	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	96	736	-
	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	408	3,028	-
MFG. MECHANICAL POWER TRANSMISSION EQUIPMENT, EXCEPT BALL AND ROLLER BEARINGS	FACTORY LABORER, NEC.	REPEATED NOISE	PPD	-	136	1,043	-

3-69

Area wages and living costs

Some high wage areas have lower living costs than areas with comparatively low wages

JAMES N. HOUFF

WAGES AND LIVING COSTS vary considerably among the Nation's metropolitan areas, but there is no consistent relationship between them. In fact, reversals of the expected pattern are common—some areas with relatively high wages have much lower living costs than areas where wages are comparatively low. These observations arise from a study of pay levels and living costs in 28 metropolitan areas in 1966–67.

Area differences

Historically, wages have been much lower in the South than in the remainder of the country.[1] The difference, however, is far greater for unskilled workers than for those with acquired skills, as shown in table 1. Among the 28 areas studied, earnings for unskilled plant workers ranged from 24 percent above the national average in San Francisco-Oakland to 25 percent below in Atlanta; the corresponding spread for skilled maintenance workers was from 13 percent above in the San Francisco area to 19 percent below the national average in Portland, Me. Average hourly earnings of skilled maintenance workers were 5 percent or more above the national level in each of the four west coast areas, and in Chicago, Detroit, and Milwaukee; at the national average in Baltimore, Houston, and Pittsburgh; and below the all-metropolitan areas' average in each of the remaining southern areas, and in Boston, Cincinnati, Denver, Green Bay, Philadelphia, Portland, Me., and Wichita.

Considerably different area ranking results when living costs are compared. Although living costs were relatively low in all of the southern areas except Washington, and high in most of the high-wage areas, several exceptions are apparent. Living costs in Boston, for example, were exceeded only by those in the New York-Northeastern New Jersey area; but the area ranked 23d for wages paid to skilled maintenance workers. Conversely, Detroit, with the second highest level of skilled wages, ranked 21st according to living costs.

Living costs in the New York area were 9 percent above the average for all metropolitan areas. Wages of skilled maintenance workers there, however, were only slightly above the national level, being exceeded in one-half of the areas studied.

Living costs in three southern areas (Atlanta, Dallas, and Houston) were approximately 10 percent below the average for all metropolitan areas. Wages of skilled workers in Houston equaled the national average and were 6 percent higher than those in Atlanta and almost 10 percent above those in Dallas. Although wages of skilled maintenance workers were nearly the same in Houston and the New York area, living costs in New York exceeded those in Houston by 22 percent.

Average wages of skilled maintenance workers were only slightly more in Boston than in Atlanta; living costs in this New England area, however, were 20 percent greater than in Atlanta.

To illustrate the association, or lack of it, between living costs and wage levels among the areas, indexes of relative advantage $\left\{\frac{\text{wage relative}}{\text{budget cost relative}}\right\}$ are shown in table 1. If differences in living costs compensated perfectly for differences in wage level, then the indexes of relative advantage would be 100. However, the indexes reveal that the range for the relative advantage estimates is nearly the same as for the wage relatives themselves. For instance, the relative advantage for skilled maintenance workers ranges from 82 to 115, while the wage relatives for this occupational group range from 81 to 113. The gain is most pronounced for a few southern areas.[2]

James N. Houff is an economist in the Division of Occupational Wage Structures, Bureau of Labor Statistics.

[1] See H. M. Douty, "Wage Differentials: Forces and Counterforces," *Monthly Labor Review*, March 1968, pp. 74–81.

[2] The weakness of the association can be measured by the low correlation between living costs and wage levels. The r^2 of .08, indicating that 8 percent of the variability in wages is associated with variability in budget costs, is not statistically significant.

Monthly Labor Review 3-69

PAGINATION INCORRECT

It is clear that the relative advantage enjoyed by skilled maintenance workers in the South does not extend to the unskilled group.[3] The index for unskilled plant workers in Houston (87) differs substantially from that for skilled maintenance workers there (112). Atlanta, in the indexes for the unskilled group, ranks below Boston and Portland, Me., but the relative advantage index for skilled labor in Atlanta was considerably higher than those for the two New England areas.

Causes of wage differences

Area differences in wages for similarly employed workers are frequently more the result of factors other than differences in living costs as measured by the City Worker's Family Budget.[4]

Wages have historically tended to be lowest in the South and highest on the west coast and the highly industrialized cities of the North Central region. This, at least to some extent, reflects differences in the availability of labor in these regions when the relative wage levels were first established. As the South began emerging from an agricultural economy, it had a surplus of labor. The development of industry on the west coast, however, had its beginnings with a shortage of labor.

Other factors, of course, help explain area wage differentials. One of the most important of these is a difference in industrial composition. The high

[3] The lack of budget costs at income levels similar to the family income levels of unskilled plant workers makes comparison difficult. The Bureau is currently developing estimates of the spring 1967 costs of the moderate standard budget and of budgets for a lower and a higher living standard. Comparative living cost indexes based on the lower standard budget will be more appropriate for use with wage data for unskilled plant workers. Examination of preliminary data for the Spring 1967 moderate standard budget indicates that new data will not change the fact that little correlation exists between wages and living costs.

[4] See *City Worker's Family Budget for a Moderate Living Standard, Autumn 1966* (BLS Bulletin 1570-1). See also Jean C. Brackett and Helen H. Lamale, "Area Differences in Living Costs," in *Proceedings of the Social Statistics Section 1967 Annual Meetings, American Statistical Association*, Washington, D.C. pp. 144-148.

[1] The wage data for skilled maintenance and unskilled plant workers relate to average hourly earnings excluding premium pay for overtime and for work on weekends, holidays, and late shifts. Earnings for office clerical workers relate to regular straight-time salaries paid for standard workweeks.

[2] Indexes of relative advantage show the association, or lack thereof, between living costs and earnings levels of selected occupational groups among the areas studied. These indexes were computed by dividing the area wage relative by the budget cost relative, and multiplying the result by 100.

[3] Standard Metropolitan Statistical Areas (SMSA) as defined by the Bureau of the Budget with the following exceptions: (1) The Standard Consolidated Area (SCA) is used for the New York-Northeastern New Jersey area in both the earnings and budget cost indexes except that the New Jersey portion of the SCA does not include Middlesex and Somerset counties in the earnings indexes. (2) The Chicago area relates to the Chicago SMSA in the wage comparisons, but relates to the Chicago-Northwestern Indiana Standard Consolidated Area (Chicago SMSA and Gary-Hammond-East Chicago SMSA) in the budget cost indexes; and (3) The Los Angeles-Long Beach area relates to the Los Angeles-Long Beach SMSA in the budget cost indexes, but relates to the combined SMSA's of Los Angeles-Long Beach and Anaheim-Santa Ana-Garden Grove in the wage comparisons.

wage level in Detroit, for example, reflects the influence of the auto industry which is concentrated in that area. Houston has a higher level of wages than most of the other southern areas covered by this study, probably because of the location there of such high-wage industries as chemicals and petroleum refining. Variations in the extent of collective bargaining, size of establishment, and size of community also have their influences on the level of earnings in an area.

Factors influencing living costs

Living costs, on the other hand, are determined by a different set of factors. The City Worker's Family Budget measures the annual income required by a self-supporting family of a specific size, age, composition, residence, and employment status to maintain a moderate living standard. Thus, it measures not only the cost of various goods and services but takes into account area differences with respect to how such a living standard is achieved—either by custom or necessity. Expenditures for clothing, housing, and heating are, for example, necessarily higher in some northern cities than in those of the South since the need for heavy clothes, well-insulated houses, and fuel is greater.

Factors such as regional food preferences, differences in State and local taxes, and variations in prices of consumer goods are also important in explaining the difference in living costs from place to place. Of course, the level of wages has some influence on living costs, but it is by no means the chief determinant.

Trends and outlook

Area wage relationships have remained relatively stable for several years. Although comparable data are available for only a few of the 28 areas covered by the study, the relative wage levels for maintenance workers in these areas have remained about the same since 1951. (See table 2.)

Changes in area relationships over the 15-year period were greater for living costs[5] than for wages of maintenance workers. At least part of the reported differences, however, is due to changes in the housing component of the City Worker's Family Budget. Previously, rental costs were based on average rents for all units meeting the adequacy criteria. In the autumn 1966 budget, however, rental costs were based on a narrower range of dwelling unit quality. As a result, the published cost for rental housing in Atlanta (the most extreme example), was only 18 percent higher in 1966 than the estimate published in 1951, whereas the total budget costs for renter families in Atlanta has increased by nearly 90 percent over the 15-year period. In contrast, New York's rental housing costs have gone up by about 81 percent and total budget costs have risen 122 percent since 1951. However, it should be noted that in New York (used as the base for the computation in the table), rent control was in effect in 1951 but by 1966 covered relatively fewer units.

H. M. Douty indicated in his study of regional wage differentials[6] that "It is unlikely that the southern wage differential, however, measured, will disappear in the near future." The forces that may eventually close the wage gap work slowly. Similarly, area differences in living costs are not expected to change materially over the short run.

Table 2. Indexes of average earnings[1] for maintenance workers and total cost of city worker's family budget,[2] 1951 and 1966–67

[New York = 100]

Area	Earnings[1] of maintenance workers		Cost of city worker's family budget[2]	
	1951	1966–67	1951	1966
San Francisco-Oakland	112	112	104	105
Chicago	107	106	102	97
Dayton	104	103	(3)	93
Baltimore	94	99	103	95
Boston	92	94	103	100
Atlanta	91	93	106	90
Dallas	87	90	(3)	91

[1] Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.
[2] Rental families only.
[3] Data not available.

Scope and method

The areas covered by the study include those for which current information was available for both wages and living costs. Each area consists of one or more Standard Metropolitan Statistical Areas, as defined by the Bureau of the Budget.

[5] Living costs comparisons in this instance are limited to renter families as this was the only measure used in the 1951 budget; data for homeowner families were included in the 1966 budget but separate data are available for renter families.

[6] Douty, op. cit., p. 80.

Information on wage levels was obtained from individual reports issued in connection with the Bureau of Labor Statistics' 1966–67 study of occupational earnings in metropolitan areas.[7] These studies cover all establishments in the area of a specified employment size in six major industry divisions.[8] The wage data relate to average straight-time hourly earnings for plant workers and weekly salaries for office workers. The averages exclude premium pay for overtime and for work on weekends, holidays, and late shifts. Data in this article are provided separately for three occupational groups: Skilled maintenance workers, unskilled plant workers, and office clerical workers. The first group, however, provides the best comparison with living costs data. Earnings of skilled maintenance workers more nearly approach the income level required by the standard budget established to measure living costs.

Information on living costs was obtained from the City Worker's Family Budget which provides estimates of the annual cost in autumn 1966 for a moderate living standard for a "well-established" family of four in the middle stage of the family life cycle. Cost estimates are available for the urban U.S. average and separately for the urban part of 39 metropolitan areas. The comparative indexes based on this budget reflect not only the differences among areas in price levels but also climatic or regional differences in the quantities and types of items required to provide the specified standard of living, and differences in State and local taxes.

Average earnings for each of the three occupational groups and the cost of the City Worker's Family Budget for each area have been expressed as a percent of the averages for all Standard Metropolitan Statistical Areas combined.

[7] This program which annually develops separate information for 85 metropolitan areas also provides data for all of the Nation's metropolitan areas combined. See *Wages and Related Benefits, Part II: Metropolitan Areas, United States and Regional Summaries, 1966–67* (BLS Bulletin 1530–87, 1968).

[8] Includes manufacturing; transportation, communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and selected services.

INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS

WORKMEN'S COMPENSATION IN ILLINOIS

BULLETIN

AFL-CIO SAFETY PROGRAM

LET'S PUT A UNION

The trade union label is a symbol of labor-management cooperation. The time is here and now to put a "union label" on the safety movement of America.

What would a "union label" on America's safety movement mean?

First, it would mean widespread cooperation between management and labor in joint efforts to reduce the annual toll of some 14,000 deaths and 2,000,000 lost-time accidents which occur with sickening regularity in the occupational life of America.

Second, it would mean widespread adoption of the labor movement's approach to safety and occupational health based upon this three-pronged program:

- Labor-management relations
- Training and education in safety
- Legislation

Today America continues to make progress through tragedy in matters of safety and occupational health. With every catastrophe America inches ahead in its safety effort. Between tragedies America relapses into its customary, sluggish "safety campaigns" characterized more by oratory and exhortation than by action and progress.

Today the labor movement is ready, able and willing to make progress through its three-pronged attack upon unsafe and unhealthful conditions on-and-off the job.

It's time for a change! And that change can come if the labor movement continues to make progress based upon its own effective three-pronged approach.

Progress in safety requires action—cooperative action. The 1959 Convention of the AFL-CIO recognized this fact when it declared:

> "That the AFL-CIO establish through its Standing Committee on Safety and Occupational Health an AFL-CIO Trade Union Safety Movement."

LABEL ON SAFETY!

A trade union safety movement demonstrates its belief in cooperation by calling on each AFL-CIO affiliate to make a common effort to achieve safety and occupational health. This demonstration of the benefits of cooperation stimulates cooperation between management and labor.

A trade union safety movement enables each affiliate to contribute its knowledge and experience to all other affiliates.

A trade union safety movement informs conventions of the AFL-CIO on matters of safety and health affecting the lives of American workers and implements policies adopted by the conventions.

A trade union safety movement demonstrates that progress can be made by joint action of labor and management.

A trade union safety movement improves methods of training and education among trade unionists by uniting common experiences of its affiliated member unions.

A trade union safety movement works for the achievement of national safety legislation recommended by the AFL-CIO conventions.

A trade union safety movement aids all trade unions which participate in the various national safety organizations such as the National Safety Council, the American Standards Association, and others, to which employers, engineers, safety and health specialists now belong or attend.

A trade union safety movement demonstrates that:

- American labor is actively interested in safety and occupational health.
- American labor is ready to cooperate with management in a positive three-pronged action program.
- American labor is not satisfied to "make progress through tragedy" in the field of safety and occupational health.

A Trade Union Safety Movement

AFL-CIO Resolution in Safety and Occupational Health Adopted by 3rd Constitutional Convention, September 1959.

1. That the AFL-CIO establish through its Standing Committee on Safety and Occupational Health an AFL-CIO trade union safety movement.

2. That the AFL-CIO shall hold annually its National Conference on Safety and Occupational Health and invite all National and International Unions, State Bodies and Departments to participate.

3. That such conferences shall be conducted by the AFL-CIO Standing Committee on Safety and Occupational Health and dedicated to the principle of cooperation between labor and management so that progress shall be achieved by positive prevention of accidental death and injuries rather than through tragedy.

4. Such conferences shall be called upon to develop practical programs in which collective bargaining relations, legislation and education shall be utilized to support safe and healthful working conditions.

5. That all National and International Unions be urged to negotiate safety and health clauses in their contracts and seek to implement such clauses through joint labor-management committees.

6. That subcommittees on industrial diseases be established. Each subcommittee would concern itself with such specific diseases as occupational deafness, dermatitis, radiation burns, inhalation of dusts, gases and vapors and others.

7. That Federal legislation shall be obtained establishing Federal standards for safety and occupational health and Federal Grants-in-Aid should be made available to those States willing to adopt such Federal standards and to implement them by effective administration.

8. That Federal legislation be enacted to maintain exclusive Federal control over the unique hazards created by atomic energy and thus insure rigid enforcement of those health and safety regulations necessary to protect workers and the general public.

9. That State legislation be adopted based upon the principle of flexible codes to promote, establish and maintain safe and healthful working places through effective safety and occupational health programs.

10. State legislation shall be enacted to provide adequate finances to administer and enforce necessary safety and health legislation.

11. The AFL-CIO and its affiliates shall be urged to cooperate in national and community programs aimed at off-the-job hazards, especially in the field of traffic safety.

12. All trade union organizations shall be urged to join the National Safety Council and to cooperate with the American Standards Association so that the labor movement shall be heard in these national safety forums.

Vocational REHABILITATION

Designed to train the handicapped for employment

NOT A GIFT

BUT A LIFT

STATE OF WISCONSIN

State Board of Vocational and Adult Education

C. L. Greiber, Director

REHABILITATION DIVISION

John A. Kubiak, Chief

WHAT IS VOCATIONAL REHABILITATION?

Vocational Rehabilitation is a public service established for the purpose of helping handicapped persons enter employment.

WHO IS HANDICAPPED?

Any person is handicapped who has a disability which substantially interferes with suitable employment. The disability may exist from birth or may be the result of illness or accident.

WHO IS ELIGIBLE?

Any resident of Wisconsin of employable age is eligible, who has a disability which constitutes a **substantial** handicap to employment and who may reasonably be expected to obtain work after receiving vocational rehabilitation services.

HOW DOES IT BENEFIT THE HANDICAPPED?

It provides the following services to help overcome the handicap:

- Counseling and guidance
- Medical examination
- Medical, surgical, psychiatric and hospital treatment
- Artificial limbs, braces, hearing aids
- Occupational and physical therapy
- Training — school, on-the-job, apprenticeship, tutorial, correspondence
- Living costs during treatment and training
- Transportation
- Supplies
- Equipment
- Placement assistance

WHAT IS THE COST TO THE HANDICAPPED PERSON?

Medical examinations, counseling and guidance, without cost to the client. Vocational training costs are generally provided. Other services such as medical care, maintenance, transportation, supplies and equipment are furnished on the basis of financial need.

HOW DOES IT BENEFIT THE EMPLOYER?

Employers have found it to be good business to employ handicapped workers whose abilities have been analyzed and who are adequately prepared to give first-rate performance on a carefully selected job. These workers tend to become well adjusted in their work situations and they do a good productive job, faithfully and steadily, without undue risk to themselves or to others.

HOW DOES IT BENEFIT THE COMMUNITY?

Vocational Rehabilitation increases earning capacity; assures greater security for the disabled; eliminates or reduces costs of dependency; converts tax consumers to tax producers; enables rehabilitation clients to assume their rightful place in family and community affairs.

HOW CAN THESE SERVICES BE OBTAINED?

Handicapped persons desiring rehabilitation services, or interested individuals wishing to report the names of handicapped persons, are advised to contact the nearest district or local office, or the state office in Madison.

18. Administration of the Workmen's Compensation Law by a State Agency
19. Judicial Review Limited to Questions of Law

1/ A checkmark indicates the state workmen's compensation law contains such a provision.

Let's Have A NATIONAL

HEALTH FUND

By Leo Perlis, Director, AFL-CIO Community Service Activities

OFTEN in the case of a national issue affecting the well-being of the American people, there comes a time when only the clear, sharp light of understanding can illumine the way to a solution. Such is the need today in America's war against disease.

Recent years have seen the development of a problem—epic in scope—in the nation's health field.

Should national health agencies continue to compete for the charity dollar or become a part of the long-accepted principle of federated fund-raising? Would the health cause be served better by the present disease-by-disease approach or should the total health of the whole man be the prime focus in fund-raising, planning, research and treatment?

With the advent of this problem, battle lines have been formed, extreme positions have been taken, arbitrary decisions have been the order of the day. A cloud of confused thinking has descended upon this complex issue to the point where the basic values have become obscured.

This, then, is the problem area with which the AFL-CIO Community Services Committee is concerned in one of its priority programs for the year 1959—the establishment of a National Health Fund.

IT IS truly unfortunate that many national voluntary health agencies which have done yeoman service are currently under attack from so many quarters—management, labor, newspapers, magazines and citizen groups.

Much credit must go to these national health agencies for their pioneer efforts in pinpointing the single disease and arousing people to action. In like fashion, they influenced government attitudes toward the health field. For the most part, these agencies were created because of government laxity. Here again, they showed the way, as evidenced by the rise in government support for health in the past decade. This increased support is largely due to the groundwork laid by the agencies.

Look, for example, at the fact that a total of only $8,124,000 was appropriated to the National Institutes of Health of the U.S. Public Health Service, Department of Health, Education and Welfare, in the 1947-48 fiscal year. Compare this with the total appropriation to all the health institutes for the 1958-1959 fiscal year which was $193,441,000. Compare also the fact that in 1948-49 the government allocated only $14,500,000 to the National Cancer Institute, while ten years later the Cancer Institute's appropriation was $55,923,000.

The current Cancer Institute appropriation is more than twice the amount of the total appropriation for all the national health institutes in the 1948-49 fiscal year.

We can only applaud the constructive educational job the voluntary health agencies have done. We recognize that, historically, it was necessary for these agencies to develop as they did—on their own.

The labor movement believes, however, that the time has arrived to put the human body back together again. The time is with us when the extremes must be shunned in favor of a logical, common sense method that will serve all the people.

We believe this method is the National Health Fund.

The importance of the National Health Fund concept stands out even more graphically when the extremes are scrutinized.

First is the isolationism propounded by the voluntary health agencies. This is based on their concentration on one disease which they believe is the best way of raising more money.

The second extreme is the one set forth by the field of federated fund-raising which calls for funds to be raised in local communities for health purposes and then turned over to the Medical Research Program of the National Fund for Medical Education.

The third extreme would come about through one strong agency absorbing the functions of existing health agencies until it becomes, in

effect, a pseudo-national health fund. This extreme brings with it the raiding of other agencies and their jurisdictions.

Labor believes it has sound reasons for avoiding this trio of extremes.

THE isolationism of the health agencies encourages, rather than eliminates, the waste and inefficiency that accompany a multiplicity of campaigns.

Raising funds and transmitting them through the Medical Research Program simlpy establishes another agency with the separate campaigns continuing in local communities. Also under this plan the contributor believes he is giving for treatment, training and research when actually he will be giving for research and only partly for training. Treatment is not included in MRP.

The third extreme can accomplish few positive results with the exception of strengthening an already strong agency to the detriment of other agencies.

The AFL-CIO Community Services program specifically calls for the establishment of a voluntary federation of existing national voluntary health agencies for the purposes of raising funds once a year for all, allocating funds on the basis of relative needs and coordinating basic medical research.

This has been labor's position for many years. An editorial to this effect appeared in a labor publication as far back as 1945. The AFL-CIO Executive Council early in 1957 called for the establishment of a national fund of this type.

A National Health Fund could raise money for all the health agencies in a united way either through community chests and united funds or through its own once-a-year independent drive for funds. A National Health Fund would provide a means for closer collaboration between the voluntary and governmental agencies in the health field. It would also make for closer liaison internationally.

A NATIONAL fund would not eliminate the existing organizations. There would still be an American Cancer Society, an American Heart Association and the rest. It would not replace or substitute for these agencies. Instead, it would be their campaign and budgeting organization and a channel for basic medical research. This would then leave the agencies free to pursue their most important functions—public education and information, research, treatment and service.

The board of a National Health Fund must be representative of all the people, but the scientific aspects of the Fund must be in the hands of competent, professional people. Equally important is the fact that the allocation of funds must be based on sound, professional advice.

Perhaps the greatest single element behind the opposition to a National Health Fund is fear. The health agencies express fear because it is new and has not been tried. They are afraid they will lose or jeopardize their programs. The federation field fears that a National Health Fund may become so powerful in local communities that it will upset the balance between the welfare and health fields.

In reality, there are many precedents which should serve to prove these fears groundless. The National War Fund successfully federated foreign relief and defense needs. The Community Chest movement initially and later the United Fund movement testify to the validity of properly organized federated efforts.

The health agencies fear that their needs will not be fully understood and their positions thereby weakened if they enter into federated campaigns is likewise without fundation. It is our belief they would come to united funds and community chests from a position of strength rather than weakness. Any agency that has popular support and an effective program has little to fear in the federation process.

The fear that is prevalent, too, in terms of federation's ability to raise

the greater sums needed to include the health agencies is, in our opinion, unsubstantiated by experience.

The growth and development of federation carried with it sweeping evidence of the willingness and ability of the American contributor to give more when the need for more was proved to his satisfaction. The substantial and often amazing gains made in community after community over the years cannot be ignored.

Last year a total of $423 million was raised by united fund and community chest campaigns across the land. The voluntary health drives raised a total of more than $147 million. It is our sincere belief that the impact of the health agencies' entrance into federation would see approximately $250 millions raised for health purposes—which is over $100 million more than they now raise. These additional funds could be used to advantage in the war on disease.

At the present time the key to dispelling this variety of fears most effectively can be found in experimentation. Why not take one or several communities where voluntary health agencies agree to test a National Health Fund in two succesive campaigns? Gradually this experimentation could be expanded to include the state and later the nation. This system may have its failings, but it would be a concrete move in a positive direction.

This is the goal the AFL-CIO Community Service Activities seek in its priority program for a National Health Fund.

To implement our program, we are beginning at the local level. CSA is urging every state and local central labor body to adopt a clear-cut resolution stating its position regarding a National Health Fund. Local community services committees are being asked to send letters with copies of these resolutions to all health agencies through the central labor bodies. requesting these local health chapters to contact their national organization and urge them to join in creating a National Health Fund.

Through CSA, labor will also push for cities and towns to inaugurate programs of experimentation, for central labor unions to recommend that their united funds study the health fund idea and for labor groups to secure publicity so that the general public will have an opportunity to weigh and discuss the merits of the health fund plan.

Every technique of citizen education and community organization at CSA's command will be used to enable the National Health Fund concept to penetrate the murky haze that now cloaks this national health issue. And throughout every phase of CSA's action program, we shall not be working alone but will be cooperating with local labor groups, local health agencies, local citizen organizations and local chests, funds and planning bodies.

It is our hope that this priority program of AFL-CIO Community Services will be a worthwhile contribution to the public good and will have a profound effect in the war against disease.

It is our hope, too, that those forces most directly affected on the fund-raising side of this problem will listen to the voice of labor as it strives to be heard above the clamor and clash of the organizational battles in health.

For, without doubt, fund-raising is only a means to an end. Our greatest concern should be with the end product — research, training, education and service.

It goes without saying that the end never justifies the means. But would not the end be even better if we used more proper means?

COPE *Campaign Supplement* October 24, 1960

(Discussed here are issues of interest in understanding the 1960 political campaign.)

DRUG MONOPOLY: QUICK KILL WITH THE FAST PILL

Cruelest of the monopolies which gouge American consumers is the not-so-ethical drug industry. Behind the glossy publicity about wonder drugs, is a cold-eyed economic and political operation which regards human ills and agonies as a special situation designed for quick profits at the expense of the most helpless people in America.

Evidence presented to the Kefauver Anti-Monopoly subcommittee revealed that—

(1) the ethical drug industry pays off, after taxes, twice as much profits as the average of all industry;

(2) drug costs are so high some people are driven back into insane asylums because they cannot afford the medication that would enable them to live as normal human beings;

(3) aged Americans are forced to go without food to pay for exorbitantly priced drugs;

(4) heaviest single cost item in drugs, after the profit to the company, is the cost of advertising;

(5) most drug company research is designed to gimmick up a drug—not to improve it but to insure monopoly control over the drug;

(6) a second major objective of drug company research is to add a meaningless feature to make it appear that last year's version is obsolete (the application of the tail-fin principle to drugs);

(7) the Federal Food and Drug Administration (FDA) intended as the consumer's protection against dangerous and adulterated drugs and mislabeling is not able to perform its task, and in some cases was unwilling to as the result of corruption by the drug companies;

(8) drug prices for identical drugs were four to five times as high in the U.S. as in other countries with the consequence that the U.S. Government is sometimes forced to purchase its needs abroad for its purposes;

(9) costly advertising and publicity by the unethical drug companies deceive doctors, lead to the unwarranted use of many drugs, and are closely tied to stock market manipulations;

(10) unethical practices of the drug companies depend on government protection which is made possible by the close tie between the industry and the Republican Party.

Obstructors: In an attempt to suppress these facts, the Republican Party fielded a three-man team of blockers and obstructors who used every tactic available to them to shut off the inquiry. Headed by Republican Senate Leader Everett Dirksen (Ill.) and manned by Alexander Wiley (R., Wis.) and Roman Hruska (R., Neb.) the Republicans ran interference by seeking to choke off the investigation by a motion on the Senate floor, by filibustering against the clock in committee, by acting as defense attorneys for drug company witnesses, and by heckling. John Butler (R., Md.) took the floor of the Senate to attack the work of the committee.

One money motive behind the Republican defense of the unethical drug industry is evident from the Gore Committee report on campaign contributions in 1956. Drug company officials gave $149,700 to the GOP, only $4,000 to the Democrats.

Here are the sworn facts reported to the Kefauver hearings by drug company officials, medical investigators and U.S. Government officials.

False Advertising About Research: Drug companies claim their high prices are due to the high cost of research. Fact is, the Kefauver group learned that of the $400 million spent in 1957 for drug research in the U.S., *the Government spent 62 per cent of the total, while only 32 per cent came from the companies.* Major breakthroughs did not come from the drug companies. Insulin, penicillin, streptomycin and the Salk polio vaccine were developed by Government agencies—or, in the case of the Salk vaccine, with funds from the March of Dimes *(though five large companies split the profits on sales of the Salk vaccine).*

Dr. Frederick Meyers of the University of California Medical Center said drug company "research" is intended either to find a market for foreign drugs or to change an existing drug just enough to make a new chemical that can be patented. Cortisone was cited by a Johns Hopkins University pharmacologist as a drug that has undergone little or no improvement despite the widely advertised claims for "new" anti-arthritic drugs.

High Cost of the Hard Sell: Seymour Blackman, head of Premo Pharmaceutical Laboratories, testified that of the $2½ billion annual sale of ethical drugs, $750 million go for advertising and promotion and $750 million go to drug company profits. A spokesman for Parke, Davis reported that in 1958 the drug companies paid for almost *4 billion pages of advertising, 750 million direct mail impressions* and more than *20 million personal calls on physicians and pharmacists.*

Gifford Upjohn of the Upjohn Company testified that 28.6 per cent of every dollar in sales went to advertising and promotion, about 9 per cent for research, and about 27 per cent for manufacturing costs. Specific figures on one anti-arthritic drug, Prednisone, came out like this: Raw materials and labor 8 per cent, research 8½ per cent, sales and promotion 33 per cent.

Promotion costs include cocktail parties, steak dinners, and wining and dining—and, sometimes, travel expenses—for doctors. *Promotion cost for one drug, Achromycin, cost $2,447,000 in its first year.*

Detailing and Brainwashing: Advertising and promotion by the unethical drug companies are aimed at doctors and not consumers. Objective is to get doctors to prescribe the branded drug of a particular company, even if the drug under its chemical name is cheaper.

Detailers visit doctors and druggists with samples and expensive literature designed to exploit the ignorance and gullibility of doctors too busy and without facilities to check on the claims of the companies. Upjohn, a leading drug company, for example, employs 1,000 detailers (salesmen), out of a total work force of 5,700.

Information supplied by the detailers to doctors is often false and misleading. A former research director for a major drug company declared, "The Food and Drug Administration does not attempt to verify the claims made for any particular drug providing that . . . broad tolerance

and safety limits have been established . . . claims (are based) on extremely and unobjective observations . . . and there is nothing in the law to prevent the manufacturer from ignoring unfavorable reports. . . ." Many of the reports on drugs which appear in medical journals are written, specialists reported, *in the advertising agencies.*

Consequence of all this is to brainwash doctors and make it impossible for them to sort out the truth and to protect their patients from the dangers of new and inadequately tested drugs. Additional pressure is put on doctors by spotting announcements of new drugs in Time magazine, the Reader's Digest and the Wall Street Journal. This only leads patients to demand the drugs of their doctors, but also ties into the stock market manipulations of drug company officials.

Fifth Column for the Drug Industry: Two Government agencies have the specific responsibility for policing the drug industry, the Food and Drug Administration (FDA) and the Federal Trade Commission (FTC). The FTC, whose job is to watch monopoly practices, actually has been loaded with company lawyers. Their interests and careers, of course, are tied up with Big Business. This is the agency with which Sherman Adams, President Eisenhower's chief assistant, intervened so effectively on behalf of Bernard Goldfine, the Boston get-rich-quick promoter.

The FDA, which, for many years, was internationally famous for its incorruptibility, became a victim of the Republican Big Business morality. Dr. Henry Welsh, for example, head of the agency's anti-biotic division, quit only recently after the Kefauver subcommittee revealed that he got $287,000 in income for several years from the drug companies he was supposed to regulate. Articles published by him were edited by the drug companies, and then used by them to promote their products.

Big Money Gouged from Little People: Profits in the drug industry made the unethical drug companies favorites for Wall Street speculators. Smith, Kline and French has *doubled its profits every four years since 1950.* Earnings went from $5 million in 1950 to $20.8 million in 1958. Ten thousand dollars worth of stock bought in 1948 paid off $254,183 in dividends and capital gains by 1959. Merck's profits jumped from *$11 million per year in 1953 to $28 million in 1958.*

Company officials collect through a tax loophole in stock options. Thus President Henry Hoyt of Carter Products got part of his pay in the right to buy stock below the market price. When the stock tripled in value his option paid off *$1,242,000 in gain after taxes.* He still has a deal which is worth an additional $828,000 to him when he wants to collect. This is in addition to his $100,000-a-year salary. Similar schemes operate in Merck and Schering, big drug companies.

High Cost of Drugs Is in the Gouging: The drug story—like the steel, auto and bread reports—shows that the high cost of drugs has nothing to do with wages. Labor costs in the drug industry are negligible, a fourth those of Europe. Thus 833,000 American workers in the U.S. chemical industry produce $25 billion worth of chemicals a year while it takes 1,400,000 European workers to produce $10 billion of chemicals in the same time. Despite the labor cost advantage, however, U.S. drugs are *4 to 10 times as costly as the same drugs overseas.*

A tranquilizer, Chlorpromazine, developed by a French company and sold under license in the U.S. under the trade name Thorazine, costs $5.05 for a bottle of 50 in the U.S., 77 cents in France, $1.62 in Italy, and $2 in Brazil. The "cost-of-research" explanation does not work because the French developed the drug, and the U.S. company only sells it.

Adm. William Knickerbocker, testifying for the U.S. Military Medical Supply Agency, told how the U.S. saved millions of dollars on drug costs by *going to Italy* to buy its supplies.

Secret Ingredient in Drug Prices: Each of the American monopolies has its own tricks, and some they all share. Control of distribution facilities and intensive promotion freeze the small drug companies out of the markets. The big companies all obligingly charge the same price for identical products, even when sold under different brand names.

For instance, the anti-arthritic, Prednisone, is sold by Schering as Metacorten, by Merck as Deltra, and by Upjohn as Deltasone. All are sold wholesale to druggists for $17.90 per 100 tablets. When the U.S. Government negotiates with the big companies to buy these drugs *they all come up with the same price.*

But when it buys on competitive bids, the small companies get a chance. The competition exposes the racket. Thus Schering and Merck charged the U.S. *$136 per 100 tablets* of Prednisone on negotiated sales. When competitive bidding was tried, another company came in and delivered the same drug for *$20.98 per 1,000 tablets—or more than 83 per cent less.*

Brand names and the unethical ethics of the drug industry make it impossible for consumers to beat the monopolies without substantial reform. When a doctor prescribes a brand-named drug, the druggist cannot substitute the same drug sold under its true name. By "snowing" doctors into using the brand names, the companies make doctors tools of their price conspiracy.

For example, a *non-brand name* penicillin costs *$3.75 per 100.* The same drug under a *brand name* cost *$14.75 per 100.* What's true of penicillin is true of practically every drug from Miltown to aspirin. Just to show much could be squeezed out of the price of drugs, take Prednisone, which sells for 28 cents a pill. Total cost of making the pill—including raw materials, labor and packing—is *1½ cents.* It sells wholesale for *18 cents,* and comes to the aching patient over the drug counter at *28 cents.*

Competition Is Silly: When Kefauver asked why there was no competition in the drug industry, a drug company president replied that competition was "silly." They don't stop there, however. The American Association of Retired Workers became alarmed because its members were unable, because of the cost, to fill prescriptions they needed to alleviate pain. So it set up two non-profit drug stores, one in the District of Columbia and one in California. Here it provided drugs for cost plus 25 per cent. But three drug companies, Lederle, Merrell and Parke, Davis—refused to supply drugs for the operation. Up another alley, the companies launched steps to make this kind of low-cost drug operation *illegal.*

How to Fight the Drug Monopoly: Best way to fight the drug monopoly is to get a Congress and an administration which will *strengthen the Food and Drug Administration* and the law under which it operates, and that will demand that the *Federal Trade Commission* enforce laws against monopolies and monopoly practices.

Second, *doctors must be educated to prescribe drugs by their true names* and not by their brand names.

Third, *doctors have to be educated to the price of drugs* so that they will take into account the ability-to-pay of their patients before overloading them with expensive prescriptions. One suggestion is that all literature advertising drugs show the price to the consumer.

Fourth, *patent laws should be revised* so that drugs discovered with public funds can be made and sold by any qualified company.

Of all American industries, the drug industry most directly affects human well-being. Today its objective is the *"quick kill with the fast pill."* The job of restraining the killers is political.

AMENDMENTS TO THE GEORGIA EMPLOYMENT SECURITY LAW SUBSEQUENT TO MARCH, 1960

1964 Amendments

Section 9 (c) amended, effective March 4, 1964, as follows:

"Money credited to the account of this State in the Unemployment Trust Fund by the Secretary of the Treasury of the United States of America pursuant to section 903 of the Social Security Act, as amended, may be requisitioned and used in the payment of expenses incurred for the administration of this Act pursuant to a specific appropriattion by the legislature, provided that the expenses are incurred and the money is requisitioned after the enactment of an appropriation law which:

"(A) specifies the purposes for which such money is appropriated and the amount appropriated therefor,

"(B) limits the period within which such money may be expended to a period ending not more than two years after the date of the enactment of the appropriation law,

"(C) limits the amount which may be used during a twelve-month period beginning on July 1 and ending on the next June 30 to an amount which does not exceed the amount by which (i) the aggregate of the amounts credited to the account of this State pursuant to section 903 of the Social Security Act, as amended, during the same twelve-month period and the nine preceding twelve-

month periods, exceeds (ii) the aggregate of the amounts used pursuant to this subsection and charged against the amounts credited to the account of this State during any of such ten twelve-month periods. For the purposes of this subsection, amounts used during any such twelve-month period shall be charged against equivalent amounts which were first credited and which are not already so charged; except that no amount used for administration during any such twelve-month period may be charged against any amount credited during such a twelve-month period earlier than the ninth preceding such period."

Section 10 added new paragraph, effective April 1, 1964, as follows:

"The director shall exercise all authority granted by law to the Commissioner of Labor which the Commissioner of Labor may delegate to him in writing with respect to the collection of contributions, or taxes, due under this Chapter. He shall execute all documents and papers, including assessments for taxes, executions for taxes, jeopardy assessments, and all other documents necessary in the performance of such duties and the exercise of such authority. Any such tax execution, assessment, or other document signed and executed by the director of the Employment Security Agency shall be of the same force and effect as if signed and executed by the Commissioner of Labor."

Section 14 (e) amended effective April 1, 1964, as follows:

"(e) Execution for collection of tax; affidavit of illegality.—In addition to any other method provided by law for the collection of contributions, any contribution not paid when

due, including any interest, penalty and costs thereon, may be collected by the Commissioner of Labor, by and with the same authority as is contained in sections 92-3306 and 92-8443 of the Code of Georgia Annotated providing for the collection of taxes by the State Revenue Commissioner. If any contribution, or tax, imposed by this Chapter is not paid within 10 days after notice and demand from the Commissioner of Labor, the Commissioner shall issue an execution directed to the sheriff, or his lawful deputies, of any county of the State, requiring said officer to levy upon and sell the real or personal property of any delinquent taxpayer, found within his county, in sufficient amount to satisfy the said execution so issued, together with penalties, interest, and all costs of executing and collecting the said execution, and to return such execution to the Commissioner of Labor, together with all such sums collected under and by virtue thereof, by a time to be therein specified, not more than 60 days from the date of the execution. The sheriff of any such county shall, within 10 days after the receipt of any such execution from the Commissioner of Labor, file the same, together with his entry of levy, with the clerk of the superior court of the county of the taxpayer's residence, and it shall thereupon be the duty of the clerk of the superior court to enter the said execution on the general execution docket of the superior court of said county in the same manner and form as prescribed by the general laws of the State of Georgia relating to executions issued by the superior court of this State, and said execution when so docketed shall become a lien on the title to and interest in all real and personal property of the said taxpayer against whom the said execu-

tion was issued in the same manner as if the said judgment had been duly issued from the superior court of taxpayer's residence and duly recorded on the general execution docket: Provided that nothing herein contained shall prevent the Commissioner of Labor from having said fi. fa. entered upon the general execution docket prior to the time the same is turned over to the sheriff for collection and when said fi. fa. is so entered on the general execution docket it shall be entitled to all the priorities accorded to other tax executions under the general law of this State, from the date of record. The sheriff shall thereupon proceed upon the same in all respects, with like effect and under the same rules as prescribed by the general laws relating and with respect to executions issued by any superior court of this State or other court of record, and shall be entitled to the same fees for his services in executing and collecting the said execution as allowed by law for like services to be collected under any superior court execution. In the event that any taxpayer may desire to contest the said execution, he may do so by filing an affidavit of illegality with the levying officer at the time of the levy, arresting the same as now prescribed by the general laws relating to the filing of affidavits of illegality, and when said affidavit of illegality is so filed and the tax is paid or bond for the eventual condemnation money is given it shall be the duty of the levying officer to return the said execution, together with the affidavit of illegality bond, and in case of personal property, bond for the forthcoming of the property, to the clerk of the superior court of the county of the taxpayer or defendant in execution, and the superior court of the said county shall then and there, at the first or next term,

cause the said issue so made to be tried by a jury in the superior court of the county of the residence of the taxpayer, under the same rules of law and evidence as prevail in this State. It shall be the duty of counsel for the Employment Security Agency to represent the Commissioner of Labor when any such cases or contests made by affidavits of illegality are filed in any county or any legal action in courts results from the issuance of any execution. The Commissioner of Labor, with respect to the administration of the Employment Security Law and the collection of contributions thereunder, shall have all of the rights, authority and prerogatives provided the State Revenue Commissioner for securing reports and the collection of taxes as contained in Title 92 of the Code of Georgia Annotated."

Section 14 (f) added, effective April 1, 1964, as follows:

"(f) Taxes made personal debt; attachment and garnishment; levy.—All contributions, or taxes, under this chapter are hereby made a personal debt of the person required hereunder to file the returns or to pay the taxes imposed hereby. The Commissioner of Labor, or his authorized representative, may attach the property of a delinquent taxpayer on any ground provided by section 8-101 of the Code of Georgia Annotated or on the ground that the taxpayer is liquidating his property in an effort to avoid payment of the tax. The Commissioner of Labor, or his authorized representative, may use garnishment to collect the tax imposed by this Chapter. Garnishment may be issued by the Commissioner of Labor in the same manner as is provided for the issuance of garnishment by tax collectors in Chapter 92-75 of the Code

of Georgia Annotated. In case of neglect or refusal by a taxpayer to pay any taxes under this Chapter due the State, the Commissioner of Labor, or his authorized representative, may levy upon all property and rights to property, except such as are exempt by law, belonging to such taxpayer, for the payment of the sum due, with interest and penalty for nonpayment, and also of such further sum as shall be sufficient for the fees, costs and expenses of such levy. The Commisioner of Labor, or his authorized representative, may levy and conduct judicial sales in the manner now provided for sales by sheriffs and constables. Levy, in the case of personal property, shall be advertised 10 days before the date of sale, which advertisement shall designate the time and place of sale, giving a reasonable description of the property to be sold, and be posted in three public places in the county, and inserted at least one time in the newspaper in which sheriff's sales in such county are advertised. The sales shall be at the courthouse of the county in which the property levied on is situated, and be between the hours of 10 a.m. and four o'clock p.m. In the event the levy is upon real property, the said Commissioner of Labor, or his authorized representative, after making said levy, shall make a return of such levy on the execution to the sheriff of the county in which the property is located, and such sheriff shall proceed to advertise and sell the same as required by law."

Nothing in this Act shall be construed to affect executions heretofore issued by the State Revenue Commissioner for delinquent taxes due the State of Georgia under the provisions of the Georgia Employment Security Law and all executions, affidavits of illegality,

suits and other proceedings relating to taxes or contributions pursuant to the Georgia Employment Security Law shall be prosecuted by the Commissioner of Labor to final judgment and conclusion. (Act No. 879, Section 5, effective April 1, 1964)

Section 3 (b) amended, effective July 1, 1966, as follows:

"(b) Weekly Benefit

"(l) Amount—

"An individual's "weekly benefit amount" shall be the amount appearing in Column B in the table of this section on the same horizontal line on which appears in Column A of said table the total insured wages paid such individual in that quarter of his base period in which such total wages were highest, provided insured wages were paid such individual during two or more quarters of his base period and the total of such wages equals or exceeds the amount shown in Column C of the table on the same line.

COLUMN A	COLUMN B	COLUMN C
Wages Paid in Highest Quarter of Base Period	Weekly Benefit Amount	Qualifying Wages in Base Period
$ 175.00 - $ 199.99	$ 8	$ 288
200.00 - 224.99	9	324
225.00 - 249.99	10	360
250.00 - 274.99	11	396
275.00 - 299.99	12	432
300.00 - 324.99	13	468
325.00 - 349.99	14	504
350.00 - 374.99	15	540
375.00 - 399.99	16	576
400.00 - 424.99	17	612
425.00 - 449.99	18	648
450.00 - 474.99	19	684
475.00 - 499.99	20	720
500.00 - 524.99	21	756
525.00 - 549.99	22	792
550.00 - 574.99	23	828
575.00 - 599.99	24	864
600.00 - 624.99	25	900
625.00 - 649.99	26	936
650.00 - 674.99	27	972
675.00 - 699.99	28	1,008
700.00 - 724.99	29	1,044
725.00 - 749.99	30	1,080

950.00 - 974.99	39	1,404
975.00 - 999.99	40	1,440
1,000.00 - 1,024.99	41	1,476
1,025.00 - 1,049.99	42	1,512
1,050.00 and over	43	1,548

"The foregoing Benefit Table shall be effective with benefit year beginning July 1, 1966, and through June 30, 1967.

"Provided, there shall be added to the foregoing Benefit Table two (2) additional steps effective with benefit years beginning July 1, 1967 increasing the Weekly Benefit

Amount to a maximum of forty-five dollars ($45.00), with the Benefit Table remaining the same except for the last step and the two additional steps which shall then read:

Column A	Column B	Column C
$1,050.00 - $1,074.99	$43	$1,548
1,075.00 - 1,099.99	44	1,584
1,100.00 and over	45	1,620

"Provided, however, that benefits shall not be paid for any week during which the employee is engaged in picketing or is a participant in a picket line at the factory, establishment, or other premises at which he is, or was last, employed, even though the stoppage of work shall have ceased and operations have been resumed.

"(2) Duration—

"Any otherwise eligible individual shall be entitled during any benefit year to a total amount of benefits equal to twenty-six (26) times his weekly benefit amount or one-fourth (¼) of his wages for insured work paid during the base period, whichever is the lesser; provided that such total amount of benefits, if not a multiple of the weekly benefit amount, shall be adjusted to the nearest multiple of the weekly benefit amount."

Section 4 (c) amended, effective April 1, 1966, as follows:

"Provided further, that satisfactory attendance and satisfactory progress in a training course approved by the Employment Security Agency shall be evidence of availability and an otherwise eligible individual shall not be ineligible to receive benefits while attending such training course."

Section 5 added new paragraph, lettered (g), effective April 1, 1966, as follows:

"(g) Who is attending a training course as provided in Section 4(c) of the Act (Section 54-609 Ga. Ann. Code) and voluntarily quits attending such course without good cause, shall be disqualified for benefits under the provisions of Section 5 (a) (Section 54-610 (a) Ga. Ann. Code) providing for a disqualification for voluntarily quitting a job."

Section 7 (c), Paragraph (2), added new paragraph lettered (D), effective April 1, 1966, as follows:

"(D) If an individual's employment was terminated by the retirement of the individual pursuant to a retirement or lump-sum retirement pay plan under which the age of mandatory retirement has been agreed upon by the employer and his employees or by the bargaining agent representing such employees, any such benefits paid to such individuals shall be charged against the fund and not against the account of the employer."

Section 7 (c), paragraph (5), added new paragraph, effective April 1, 1966, as follows:

"Provided however, that as of any computation date, any employer who has failed to file by the end of the month following any computation date (unless the time for filing reports has been extended under Section 16 (e) (Section 54-632.1 Ga. Ann. Code)) all required reports with respect to employment and wages paid together with such other information as is necessary to compute his contribution rate under this section, shall not be eligible for a reduced rate but shall be assigned the standard rate of 2.7 per centum if his account shows an excess of con-

tributions paid over benefits charged, or the maximum rate of 4.2 per centum if his account shows an excess of benefits charged over contributions paid. Such rate shall remain effective until the end of the calendar year for which such rate has been assigned.", so that said paragraph (5) of subsection (c) of Section 7, when so amended, shall read as follows:

"(5) For the year 1942 and each calendar year thereafter, employers shall be classified in accordance with their actual experience in the payment of contributions, and with respect to benefits charged against their accounts, with a view of fixing such contribution rates as will reflect such benefit experience. Each employer's rate for any calendar year shall be determined on the basis of his record as of the computation date for that calendar year.

"Provided, however, that as of any computation date, any employer who has failed to file by the end of the month following any computation date (unless the time for filing reports has been extended under Section 16 (e) (Section 54-632.1 Ga. Ann. Code)) all required reports with respect to employment and wages paid together with such other information as is necessary to compute his contribution rate under this section, shall not be eligible for a reduced rate but shall be assigned the standard rate of 2.7 per centum if his account shows an excess of contributions paid over benefits charged, or the maximum rate of 4.2 per centum if his account shows an excess of benefits charged over contributions paid. Such rate shall remain effective until the end of the calendar year for which such rate has been assigned."

Section 7 (c), paragraph 7 (iv), amended effective April 1, 1966, as follows:

"(iv) The term "computation date" means December 31, of each calendar year with respect to rates applicable to the succeeding calendar year for each employer whose account could have been chargeable with benefits throughout the twelve consecutive calendar months period ending on the "computation date"; provided, however, that any corporation, partnership, individual, or other legal entity, who acquires by purchase, merger, consolidation, or other means, substantially all of the business, or assets thereof, of any employer, and who thereafter continues such acquired business, shall be deemed to be a successor to the predecessor from whom such business was acquired for purposes of Section 7, and, if not already an employer prior to such acquisition, shall become an employer on the date of such acquisition. The successor shall succeed to the employment benefit experience record of the predecessor. If the successor is not already an employer at the time of such acquisition, the rate of contributions applicable at such time to the predecessor unit shall continue to be applicable to the successor as to contributions payable based on wages of employees, of such acquired unit only, until the time hereinafter stipulated, but if the successor is already an employer at the time of such acquisition, the rate of contributions applicable to the successor at the time of the acquisition shall continue to be applicable to the successor after the acquisition until the time hereinafter stipulated. In either case, such rate, or rates, shall continue in effect until the first day of the next calendar quarter immediately following such acquisition, at which time it

shall be the duty of the Commissioner to compute a rate based upon the combined employment benefit experience record of the predecessor and successor, subject to the provisions of subsection (6) (i) hereof, which rate shall be applicable to the successor from the first day of such quarter until the next computation date hereunder. Commencing with the next calendar quarter after acquisition, the employment experience of the former employer and the successor employer shall be combined, and the rate of the successor for such quarter and thereafter shall be based on such combined experience. All rates thereafter shall be computed on the basis of such combined employment benefit experience records. The Commisioner shall prescribe by regulation the notice to be given of such acquisition. The provisions of this subparagraph shall apply to all contributions payable by a successor, regardless of whether or not such succesor acquired the business, or assets thereof, from his predecessor prior or subsequent to the effective date of this subparagraph.

"It is further provided that in cases where a corporation, partnership, individual, or other legal entity acquires any clearly indentifiable or segregable portion of the business of an employer, and such successor is an employer at the time of the acquisition, or becomes an employer before or within the two calendar quarters immediately following the quarter in which the acquisition was made, or within one complete calendar quarter after the passage of this Act, whichever is later, the Commissioner shall upon notice of such acquisition and with the mutual consent of both parties, transfer to such successor the portion of the predecessor's payroll records

and experience rating records which are attributable to the portion of the business which was acquired. The Commissioner shall prescribe by regulation the period within which notification of such acquisition shall be given and the method by which the experience to be transferred shall be computed. The experience rating records of the predecessor employer, as thus computed, shall be used as the basis for the contribution rate of the successor; provided that, where the successor is an employer the experience rating records transferred shall be combined with his experience rating records effective as of the first day of the next calendar quarter immediately following such acquisition, at which time it shall be used to compute a rate based upon the combined experience of the predecessor and successor. Nothing in this subparagraph shall be construed to authorize or require that refund of any sums lawfully paid into the trust fund created by Section 9 (a), or to otherwise use any of the same except to pay compensation benefits, provided, that if and when the Federal Social Security Law or any other Federal Unemployment Compensation Law should in the future be so amended as to: (1) Reduce the basic period of time experience for reduced rating or (2) give to war veterans the benefit of time in the service in computing said base period or (3) allow war veterans concessions in computing base period experience by adding that served in one employing entity to that served in another employing entity, whether successor or not, then the Commissioner of Labor is hereby authorized to give effect to any or all such amendments for the benefit of Georgia employers by Executive Order."

Section 7 (c), paragraph 8, amended effective April 1, 1966, as follows:

"(8) If on the last day of any calendar quarter the balance in the Unemployment Compensation Trust Fund is less than one hundred fifty million dollars ($150,000,000), each employer whose rate of contribution is computed in accordance with subsection (c) of Section 7, shall have an additional rate of 0.5 per centum added to such computed rate, but not to exceed a cumulative contribution rate of 4.2 per centum. Such additional rate shall become effective on his taxable payroll on the first day of the immediately following calendar quarter and shall continue in effect until the last day of that calendar year.

"Provided, however, that if on the last day of any calendar year the balance in the Unemployment Compensation Trust Fund is less than one hundred twenty-five million dollars ($125,000,000), the additional rate shall be 1.0 per centum effective on the first day of the next calendar year, and shall continue in effect until the last day of that calendar year.

"Provided further, that if on the last day of any calendar year the balance in the Unemployment Compensation Trust Fund is less than one hundred million dollars ($100,000,000), the additional rate shall be 1.5 per centum effective on the first day of the next calendar year and shall continue in effect until the last day of that calendar year.

"Provided further, that if on the last day of any calendar year, the balance in the Unemployment Compensation Trust Fund is less than seventy-five million dollars ($75,000,000), the additional rate shall be 2.0 per centum effective on the first day of the next

calendar year and shall continue in effect until the last day of that calendar year.

"Notwithstanding any other provision herein, any additional rate imposed by this section shall be in addition to the computed rate each year for eligible employers, but not to exceed a cumulative contribution rate of 4.2 per centum. The provisions of this paragraph (8) of subsection (c) of Section 7 shall operate prospectively as and when in the future said conditions shall be found to exist.

"The Commissioner will give notice to each employer of any rate change by reason of the above provisions."

Section 14 (b), paragraph (1), added new paragraph, effective April 1, 1966, as follows:

"(l) If, after due notice, any employer defaults in any payment of contributions or interest thereon, the amount due, including any penalty, may be collected by civil action in the name of the Commissioner, and the employer adjudged in default shall pay the cost of such action. Civil actions brought under this Section to collect contributions, interest or penalty thereon from an employer shall be heard by the court at the earliest possible date and shall be entitled to preference upon the calendar of the court over all other civil actions except petitions for judicial review under this Act and cases arising under the Workmen's Compensation Law of this State, and other actions to which the State is a material party, which are now given precedence.

"Any employer failing to make return or to pay the contributions levied under this Chapter for a period of ninety days after the end of the calendar quarter for which the re-

ports and contributions are due, and who has not ceased to be an employer as provided therein, may be enjoined from employing individuals in employment as defined in this Chapter upon the complaint of the Commissioner, or his designate, in the Superior Court of any county in which said employer may be doing business; and such employer so failing to make return or to pay contributions levied hereunder shall be enjoined from employing individuals in employment until such return shall have been made and the contributions shown to be due thereunder paid to the Commissioner."

Section 19 (h) (7) (M) amended effective March 2, 1966, as follows:

"Section 19(h) (7) (M). Service performed by an individual for an employer as an insurance agent or as an insurance solicitor or as a licensed real estate salesman, if all such service performed by such individual for such employer is performed for the remuneration solely by way of commission."

Section 19 (n) added new paragraph, numbered (3), effective July 1, 1966, as follows:

"(n) "Wages" means all remuneration for personal services, including commissions and bonuses and the cash value of all remuneration paid in any medium other than cash. The reasonable cash value of remuneration in any medium other than cash shall be estimated and determined in accordance with the rules prescribed by the Commissioner, provided, that the term "wages" shall not include, ***:

"(3) Payments made after July 1, 1966 as commission by a real estate broker to a licensed real estate salesman exclusively for the sale of real property; and"

Workmen Comp.

VIRGINIA'S WORKMEN'S COMPENSATION LAW

HOW DOES IT COMPARE?

Prepared For

The Virginia State AFL-CIO

by the

AFL-CIO Department of Social Security

February 1969

SUMMARY

The Virginia workmen's compensation law meets only three of the workmen's compensation standards recommended by the U.S. Department of Labor and the AFL-CIO. This is a shocking indictment of the Virginia law in view of the inadequate benefit levels, and the fact that workmen's compensation protection in Virginia costs on the average less than 50 cents per $100. of payroll.

The benefit structure of the Virginia law has lagged woefully behind increases in the state wage level. The maximum weekly benefit in 1940 equaled 74.9 percent of the Virginia average weekly wage. Today, the maximum weekly benefit equals only 51.0 percent of this average.

The large numerical exemption permitted under the law, the exclusion of agricultural workers and others, the failure to provide full medical care or compulsory occupational disease coverage, and the limited protection afforded survivors in fatal work injury cases represent some of the more glaring deficiencies in the Virginia law that should be corrected without delay.

The cost burden on Virginia employers for workmen's compensation has been light. Where the need is so great, and the cost is so small, there is every obligation for the State to act.

A COMPARISON OF VIRGINIA'S WORKMEN'S COMPENSATION ACT

The need for standards to serve as a guide for state legislators concerned with workmen's compensation issues has been generally recognized by the major groups interested in this subject. The Council of State Governments has published suggested legislation on workmen's compensation to assist state legislators. Minimum workmen's compensation standards have been recommended by the organization representing state workmen's compensation administrators (the IAIABC), the U.S. Department of Labor, and the AFL-CIO. The recommended standards are outlined in the attached document entitled "Yardstick For Workmen's Compensation Laws."

Virginia meets only three of these recommended standards. This is a rather shocking indictment of the Virginia law in view of the inadequate benefit levels, and the fact that workmen's compensation protection in Virginia (and elsewhere) is a relatively inexpensive item.

Department of Labor data (Table II) show that workmen's compensation costs less per hour than any other non-wage monetary benefit except sick leave. More recent data are available, but we do not consider it as reliable as the Department of Labor information. However, it also reveals workmen's compensation to be a very low cost item for employers. This information published by the United States Chamber of Commerce (Table III) indicates employers pay three times more for rest periods than they pay for workmen's compensation protection.

Total workmen's compensation benefit costs are extremely low in Virginia. Table IV shows that total benefits under the law cost less than 50 cents per $100. of payroll. This figure is well below the cost of the workmen's compensation program in a number of Virginia's neighboring states including:

Maryland	70 to 79 cents
West Virginia	70 to 79 cents
Tennessee	60 to 69 cents
Kentucky	50 to 59 cents
District of Columbia	50 to 59 cents

Workmen's compensation benefits in Virginia have deteriorated noticeably in relation to the statewide average weekly wage. (See Table I and Charts I and II). The maximum weekly benefit for temporary total disability in 1940 was equal to 74.9 percent of the Virginia weekly wage. Today, the maximum weekly benefit equals only 51.0 percent of the average weekly wage. This present maximum weekly benefit level effectively denies any injured worker earning more than $77.00 weekly a benefit equal to the minimum recommended standard.

The need to improve Virginia's law in terms of benefits, coverage, rehabilitation, occupational disease coverage, medical care, and second injuries in addition to other areas is great. The numerical exemption in the Virginia law -- employers of less than seven workers -- is one of the highest in the nation. Numerical exemption are indefensible provisions in the workmen's compensation law of a modern industrial state. Workers in

small plants need this protection more than workers in larger firms. Small firms quite often have no formal safety programs, and they lack the financial resources to protect workers in the event of a serious injury.

The failure of the Virginia law to cover agricultural workers is another serious deficiency in the program. Agriculture is today recognized as one of the most hazardous industries in our nation. The early misgivings concerning the administrative problems involved in covering these workers have been largely dispelled by the experience of jurisdictions that have extended coverage to these workers. Agricultural workers and domestic workers comprise a large element in the Virginia workforce -- approximately 300,000 people. These workers are subject to the same hazards as others, and the consequences of a work injury are just as serious for them and their families. They need, and should be entitled to, the protection of the Virginia workmen's compensation program.

Full protection against occupational disease should be enacted without delay. The existing provision that permits employers to reject full occupational disease coverage should be eliminated from the Virginia law. Over 500 new chemicals are introduced into industry each year. Radioactive substances and radioactive devices are being introduced into industry with increasing rapidity. A modern industrial injury law must take these developments into account.

The absence of rehabilitation provisions in the Virginia law is another serious deficiency. A rehabilitation division should be established within the workmen's compensation agency. Maintenance benefits during rehabilitation such as tuition, books, equipment, tools, travel expenses, living expenses, and other costs related to the successful undertaking of a rehabilitation program should be provided.

Virginia's neighboring states of West Virginia, Maryland, and the District of Columbia have enacted legislation designed to promote the rehabilitation of injured workers in order to return the victims of work injury to gainful employment as rapidly as possible.

The limitation on medical care in the Virginia law is unreasonably strict. There is a definite trend in other states toward unlimited medical care for victims of work related injuries. All of Virginia's neighboring states including Maryland, Delaware, North Carolina, West Virginia and the District of Columbia have already moved in this direction and enacted provisions in their law to provide full medical care.

The limited benefits provided by the Virginia law in fatal work injury cases is another serious deficiency. The law should be amended to provide benefits in fatal cases to a surviving widow during widowhood, and to surviving children until they reach the age of eighteen years, or until they complete their education if they are a student at an institution of higher education.

The absence of a second injury fund under the Virginia workmen's compensation program is inexcusable. All other states in the Region, and all but four states in the United States, have established second injury funds under their workmen's compensation laws. A second or subsequent injury fund is a special fund established within the workmen's compensation system to ensure that a handicapped worker who suffers a subsequent injury on the job will receive full compensation to cover the resultant disability, at the same time ensuring that the employer need pay only the benefits that are due for the second injury. The second injury fund pays the difference between what the worker actually receives in a compensation from the last employer and the compensation he receives for the disability due to the combined injuries.

The second injury fund concept is an attempt to encourage employers to hire handicapped individuals. It limits the employers' liability in case of subsequent work injury and provides maximum workmen's compensation protection to handicapped workers and their families.

There are a number of states in the Region that have enacted workmen's compensation laws that meet more of the recommended standards than the Virginia law:

the District of Columbia law meets	11 standards
the Delaware law meets	8 standards
the Maryland law meets	10 standards
the West Virginia law meets	10 standards

Each of these states have also established broad second injury funds under their programs. In addition, the benefit structure -- both income and medical -- in each state program is superior to that provided in the Virginia law.

The cost of meeting the standards has not placed an excessive burden upon the industries operating in these states, and improving the Virginia law would not necessarily increase the cost of its program. There are a variety of factors that influence the cost of workmen's compensation, and some are more important than others. However, an adequate program -- one that meets most if not all the recommeded standards is not necessarily the most costly. Table IV shows that some jurisdictions that have established workmen's compensation programs recognized as among the best in the country -- Connecticut, Wisconsin, the Federal Government -- have kept the costs of the program at a minimum. In fact, the cost of their programs are identical with cost of the Virginia program.

One of the major reasons the cost of workmen's compensation insurance is higher in one state than another is the hazardous nature of the industry in the state and not the liability of the law. The cost of the program is determined by a number of factors in addition to compensation and medical benefits. An important cost factor is expense loading. Expense loading is the term used to describe the portion of the insurance premium set aside to meet the following insurance firm expenses:

Commissions, Brokerage, and Field Supervision

Adjustment of Claims and Litigation

Salaries and Office Expenses

Contingencies and Profits

Taxes

Accident Prevention and Safety Engineering
and Safety services for employers.

State approved expense loadings are established uniformly for all carriers and usually reflect the costs of the carriers with the highest expenses. This substantially reduces competition between carriers and raises costs unnecessarily.

Recently published data -- October 1966 -- for the year 1964 shows state funds -- exclusive and competitive -- devote 9.4 percent of premiums to expenses. Nonparticipating stock insurance companies, participating stock insurance companies, and mutual insurance companies devote 35 percent of premiums, 26 percent of premiums, and 27 percent of premiums, respectively to expenses.

The single largest expense category for nonparticipating and participating stock insurance companies is acquisition, field supervision, and collection expense. The largest expense category for mutual insurance companies is investigation and adjustment of claims.

The AFL-CIO feels that if state funds can return such a large portion of their premiums to injured workers, while private carriers burden the workmen's compensation system with 25 to 30 percent overhead, state laws can be substantially improved without increasing costs to employers.

The argument that increased workmen's compensation costs will deter industry from moving into a state, or encourage others to leave, has been exaggerated. Workmen's compensation costs are such a small percentage of total fringe costs, they are not a serious consideration for an industry when deciding a question of location.

The cost of workmen's compensation is directly related to incurred losses, and the opportunity to reduce these costs is directly related to improving and enforcing existing safety laws.

MAJOR AFL-CIO STANDARDS FOR
A GOOD WORKMEN'S COMPENSATION LAW

Comparison with Recommended Standards 1/

MINIMUM STANDARDS	Virginia
Compulsory coverage and no numerical exemptions	
Agricultural workers covered in the same manner as other workers	
Full statutory coverage of all occupational diseases	
Workmen's Compensation agency has a rehabilitation division	
Maintenance benefits during rehabilitation	
Full medical benefits for both occupational injury and disease	
Workmen's Compensation agency has authority to supervise and control medical care	X
Choice of qualified physician by injured worker	
Broad second injury fund	
Adequate time for filing occupational disease claims	X
Death benefits to a widow until death or remarriage	
Benefits for the totally disabled for the period of disability	
Illegally employed minors under 18 who are occupationally injured should be paid double benefits	
Maximum compensation for temporary total disability not less than 66 2/3% of average state wage	
Administration by a state agency	X
Exclusive state compensation fund	

1/ A checkmark indicates the state Workmen's Compensation Law contains such a provision.

YARDSTICK FOR WORKMEN'S COMPENSATION LAWS

Administrators of Workmen's Compensation Laws in the States and Provinces of the United States and Canada have agreed to the following goals or standards for benefits to persons injured on the job. Most of these are also the standards recommended by the U. S. Department of Labor and the AFL-CIO.

1. Compulsory Coverage. If the law permits either the employer or the employee to reject workmen's compensation coverage, it does not meet the accepted standards. The uncovered worker, left to his own resources in securing workmen's compensation benefits, is not apt to be as successful in securing adequate compensation for his injury. Generally, small employers lack the financial resources to protect the injured worker unless they are required to carry compensation insurance by law.

2. No Numerical Exemptions. Unless the law applies to all employers regardless of the number of employees, it falls short of protecting all who work for a living. All employers of one or more employees should be covered. Even when a compulsory law is adopted, provisions providing for exemptions of employers with small numbers of workers have circumvented the law in most states. The retention of numerical exemptions stand as a formidable obstacle against labor's efforts to make workmen's compensation an effective program.

3. Coverage of Agricultural Workers. Agriculture is one of the most hazardous kinds of employment. The objection that difficulties of administration require the exemption of farmers and small firms has been proven false by the states that now cover them. Experience has shown that there is no reason to exempt this hazardous area from coverage.

4. Full Coverage of Occupational Diseases. It should not make any difference whether a worker is injured by an accident or injured on his job by a hazard peculiar to the employment. Thirty states cover all occupational diseases. The remainder covered only "scheduled" diseases which means that the worker is protected only for those diseases specifically mentioned in the law. A broad schedule of diseases does not resolve the problem. Schedules of occupational disease tend to become obsolete. Periodic revision fails to keep pace with the rapid changes in work technology. The only sure way to protect the worker is to specify that all occupational diseases are included without enumerating them.

5. Rehabilitation Division Within the Workmen's Compensation Agency. The rehabilitation of an occupationally injured worker should be the special responsibility of the workmen's compensation agency. It is vitally important that the rehabilitation of an injured worker begin immediately and that medical and rehabilitation care be adequately supervised from its inception. The lack of prompt action and supervision can mean the difference between restoring a worker to his full, productive potential and his remaining a cripple for life.

6. Maintenance Benefits During Rehabilitation. One of the basic objectives of workmen's compensation is the restoration of an injured worker to his greatest potential. The injured worker who has suffered a severe wage loss frequently finds it financially impossible to undergo vocational and physical rehabilitation when it requires an additional outlay of funds. Even when full compensation benefits are paid to workers who undergo rehabilitation, such expenses as travel, maintenance away from home, tuition, equipment, etc. may make it impossible for the injured worker to undergo rehabilitation. Maintenance benefits are essential, for

unless rehabilitation begins soon after injury, full physical restoration may be prevented.

7.&8. Full Medical Benefits for Accidental Injury or Occupational Disease. It is unreasonable to attach either time or dollar limits to medical benefits. The injured worker should not have to bear a portion of the medical cost of his occupational injury or disease. Recovery and prompt restoration of an injured worker depends largely on the medical care he receives. Every worker should be entitled to complete care to speed his recovery, to encourage rehabilitation, and to reduce the chance of possible permanent injury.

9. Supervision of Medical Care. The purpose of the compensation system should be to restore the worker to maximum physical well being and to his job as soon as possible. Successful achievement of this objective requires that the administrative agency be given the responsibility by statute to supervise medical care in order to insure accuracy of diagnosis and proper treatment.

10. Free Choice of a Qualified Physician. There are several desirable goals in choosing a physician. The first is the confidential nature of the doctor-patient relationship and the desirability of the patient trusting the doctor. Free choice also eliminates the possibility of a doctor, who is employed or paid by an employer or insurance carrier, from letting this relationship influence his medical opinion. The second is the need to achieve the maximum standards of rehabilitation by permitting compensation administrators sufficient supervision of medical care to insure that medical services are adequate and that the physician freely chosen is qualified.

11. Broad type Coverage for Handicapped Persons Under a Second Injury Fund. Unless an adequate second injury fund is adopted, workmen's compensation handicaps the handicapped in obtaining employment. All but 4 states have special funds in the workmen's compensation program to insure that an employer who hires handicapped workers will not, in the event a handicapped employee is disabled, face higher workmen's compensation costs than he would if the employee had not been handicapped at the time of hire. Any additional liability resulting from the combined disability is paid from the second injury fund. Unfortunately, the great majority of these funds limit coverage to bodily loss or loss of use of a bodily member. Such laws do not provide protection for the vast majority of handicapped workers who suffer from such disabilities as epilepsy, polio, arthritis, heart disease, etc. A good second injury law should not disqualify any handicapped worker because of the type or cause of his disease.

12. The Time Limit for Serving Notice and Making Claim in Occupational Disease Cases Starts Running from the Time of the Worker's Knowledge or the Worker's Disability. Occupational disease frequently does not show up for many years after a worker leaves an employer. Thousands of workers are denied benefits under workmen's compensation because they fail to serve notice or make claim for compensation within the limited dates fixed by a workmen's compensation statute.

13. Waiting Period of Not More than 3 Days with Retroactive Benefits After Two Weeks or Less. A long waiting period forces the injured worker to bear a large portion of the financial burden of any injury. Most state laws provide than an employee will not be entitled to any compensation for the first week of disability until he has been disabled for 3 or 4 weeks. Since 75% of the temporary disability cases heal within 21 days, a large portion of injured workers will not be protected by this provision and will suffer a week's loss of pay without any form of compensation, and a small percentage replacement of total wage loss. A waiting period of three days with retroactive benefits within two weeks should be the maximum waiting period in any law.

14. Benefits Payable to the Widow Extend to Death or Remarriage and To The Children Until They Reach 18. The premise of workmen's compensation is to insure wage loss, not to determine a cash settlement for any single day or days. The family of a deceased worker is entitled to full economic protection.

15. Benefits for Permanent Total Disability Payable for Life or The Period of Disability. The injured worker who is permanently and totally disabled will normally not be able to participate in gainful employment for the rest of his life, and will undoubtedly require more assistance as he advances in age. The disability of a permanent and total injury does not end after a specified number of weeks. Neither should the benefits.

16. Double Benefits to Illegally Employed Minors. A reasonable assumption is that a minor will not have reached his full earning capacity at the time of injury. His compensation benefits will be at a lower amount than an older worker. This can work an extreme hardship on a young worker if the injury results in permanent total disability. Thus, it is only just to provide double benefits to minors injured while illegally employed. Provisions for double compensation also help to insure strict compliance with child-labor laws.

17. Maximum Cash Benefits in Your State Equal to at Least Two-Thirds of Your State's Average Weekly Wage in Covered Employment. The full value of the benefit provisions of most state workmen's compensation laws are denied injured workers by stated maximum amounts that an injured worker can receive. These maximum limitations originally were high enough that a large majority of injured workers could receive adequate benefits. There has been a lag between the normal rise in wages, the cost of living, and action by state legislatures to raise maximum benefit restrictions. For example, in 1940 only ten states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and only four of these less than 60 percent and none less than 50 percent.

18. Administration of the Workmen's Compensation Law by a State Agency. The administration of a workmen's compensation law should be placed in the hands of a department under a director who shall supervise all personnel necessary to assure that benefits intended under the law are fully and promptly provided the injured worker. Administration of a workmen's compensation law requires much effort in many complex areas such as medical care, rehabilitation, supervision of benefit payments, etc. Court administration is not adapted for these purposes.

19. Judicial Review Limited to Questions of Law. The purpose for the establishment of workmen's compensation laws was to take settlement claims as much as possible out of the courts and reduce litigation. One way to help reduce litigation is to give the administrative agency exclusive jurisdiction over questions of fact, with appeals to the courts limited to questions of law.

The above are minimum standards. The following pages show how the Workmen's Compensation Law of your state compares with these minimum standards.

TABLE II

EMPLOYERS EXPENDITURES FOR COMPENSATION OF PRODUCTION AND RELATED WORKERS IN MANUFACTURING INDUSTRIES BY REGION - 1962

Compensation Practice	Cost (cents per hour paid for)[1] United States	North east	South	North Central	West

EXCLUSIVE STATE FUNDS

The AFL-CIO by convention resolution has endorsed the principle of the exclusive state fund. The resolution reads in part as follows:

> "Resolved: That the AFL-CIO recognizes that the workmen's compensation laws must be overhauled if they are to meet the needs for which they were originally designed, and to meet the challenges of our rapidly changing industrial society; and calls upon all national and international unions to give increased support to state central bodies in their efforts to obtain the following objectives:
>
> 15. An exclusive state compensation fund....."

The cost record of the private insurance carriers clearly indicates the superiority of the exclusive state funds. For example, for the years 1950 - 60, administrative costs of exclusive state funds averaged 6.5% of premiums to expenses. During the same period, the ratio of expenses incurred to net premiums earned for non-participating stock companies, participating stock companies, and mutual companies averaged approximately 37%, 28%, and 25% respectively.

There are several reasons for the wide differential in costs between exclusive state funds and private insurance coverage. Exclusive state funds are non-profit and do not have to use money to maintain a large sales force, or compete by means of expensive advertising. However, the most important factor has been the excessive expense loading used by insurance companies. Expense loading is the portions of the rate set aside to meet anticipated underwriting expenses or overhead. State approved expense loadings are established uniformly for all companies and usually reflect the expenses of the insurance carriers with the highest expenses. This reduces competition between insurance companies and raises costs unnecessarily. Two standard expense loading factors are in general use by insurance companies in the field of workmen's compensation, namely, 37% or 40% of the gross premium charged. Although the expense loading factors may vary among states, the following comparison gives a clear and substantially accurate picture:

	High	Low	Average
Cost of acquiring risk (commissions, brokerage, advertising, etc.)	17.5%	17.5%	17.5%
Claims Adjustment	10.0%	8.0%	9.0%
Inspection and rating bureau	4.0%	2.5%	3.25%
Premium taxes	3.5%	2.0%	2.75%
General expenses and auditing	9.5%	6.5%	8.0%
Totals	44.5%	36.5%	40.5%

Comparative loss ratios of private carriers, 1950 - 1960 bear out the fact that the loss ratio of incurred losses to earned premium has very carefully approximated the expense loading factors of forty percent.

more....

Table V - Comparative loss ratios, private carriers, 1950 - 1960

(Amounts in Millions)

Year	Direct writings related to direct losses paid (2)			Earned premiums related to incurred losses (3)

2. Data for 1950-58 from "Spectator: Insurance by States of Fire Marine, Casualty, Surety and Miscellaneous Lines" annual issues. 1959 and 1960 data compiled from published and unpublished reports of State insurance commissions.
3. From National Council on Compensation Insurance, "Insurance Expenses Exhibit (Countrywide)", annual issues.
4. Disregards dividends to policyholders but allows for premium discounts and retrospective rating.
5. Source: - Social Security Bulletin, June, 1962.

The record of the private insurance carriers is one reason Arthur J. Altmeyer, former U. S. Social Security Commissioner, has stated:

> "I believe until we move a considerable distance in the direction of the States themselves assuming responsibility either directly through exclusive State funds or through a State-wide mutual insurance company we shall find it impossible not only to provide adequate benefits to all workers and adequate protection to all employers, but we shall find it impossible to carry on as effectively as we should accident prevention and rehabilitation programs."

An exclusive state fund is one of the most difficult improvements to secure in a workmen's compensation law. However, it is only by continued effort that success will be achieved. We hope that many state central bodies will sponsor exclusive State fund legislation at the next session of their state legislatures.

WORKMEN'S COMPENSATION LAW

[1967?]

How Does It Compare?

HOW MUCH DO YOU KNOW ABOUT --

WORKMEN'S COMPENSATION
(This is a questionnarie, not a test)

IF YOU GET INJURED ON THE JOB - REPORT your injury to your employer as soon as you are able. Find out from your UNION if you must serve a written notice and make a claim for benefits.

The AFL-CIO thinks that we've got to work to improve state laws -- and we also need a federal law, passed by Congress, to raise the level of payments and eliminate unfair practices.

1. If a worker is temporarily injured in your plant, what is the maximum weekly benefit he can get under your state law? $_____a week

2. Will all his medical expenses be paid ☐ Yes ☐ No

   If not, how much will be paid?_____

3. Will he be allowed to choose a qualified doctor?_____

   If not, who selects his doctor?_____

4. If a worker is injured, who pays him the benefits .....

   ☐ the Company

   ☐ an insurance company from which his employer has bought insurance

   ☐ a fund set up by the state, to which the Company contributes

   Suppose a worker is "permanently disabled" in some ways (for example, he can't lift his arm above the shoulder anymore) will your State provide him rehabilitation benefits?_____

5. An arm at the shoulder is worth $35,100 in Hawaii. Do you know what an arm at the shoulder is worth in your State?_____

6. If a worker is killed on the job does his family get death benefits?_____

   How much?_____ For how long?_____ _____

7. Are these death benefits ☐ higher than death benefits in other States?

   ☐ lower

   ☐ average

8. Whether a worker is disabled because of an accident or because of an occupational disease, he is still disabled. Does your law provide full occupational coverage? _____

YARDSTICK FOR WORKMEN'S COMPENSATION LAWS

Administrators of Workmen's Compensation Laws in the States and Provinces of the United States and Canada have agreed to the following goals or standards for benefits to persons injured on the job. These are also the standards recommended by the U. S. Department of Labor.

1. Compulsory Coverage. If the law permits either the employer or the employee to reject workmen's compensation coverage, it does not meet the accepted standards. The uncovered worker, left to his own resources in securing workmen's compensation benefits, is not apt to be as successful in securing adequate compensation for his injury. Generally, small employers lack the financial resources to protect the injured worker unless they are required to carry compensation insurance by law.

2. No Numerical Exemptions. Unless the law applies to all employers regardless of the number of employees, it falls short of protecting all who work for a living. All employers of one or more employees should be covered. Even when a compulsory law is adopted, provisions providing for exemptions of employers with small numbers of workers have circumvented the law in most states. The retention of numerical exemptions stand as a formidable obstacle against labor's efforts to make workmen's compensation an effective program.

3. Coverage of Agricultural Workers. Agriculture is one of the most hazardous kinds of employment. The objection that difficulties of administration require the exemption of farmers and small firms has been proven false by the states that now cover them. Experience has shown that there is no reason to exempt this hazardous area from coverage.

4. Full Coverage of Occupational Diseases. It should not make any difference whether a worker is injured by an accident or injured on his job by a hazard peculiar to the employment. Thirty states cover all occupational diseases. The remainder covered only "scheduled" diseases which means that the worker is protected only for those diseases specifically mentioned in the law. A broad schedule of diseases does not resolve the problem. Schedules of occupational disease tend to become obsolete. Periodic revision fails to keep pace with the rapid changes in work technology. The only sure way to protect the worker is to specify that all occupational diseases are included without enumerating them.

5. Rehabilitation Division Within the Workmen's Compensation Agency. The rehabilitation of an occupationally injured worker should be the special responsibility of the workmen's compensation agency. It is vitally important that the rehabilitation of an injured worker begin immediately and that medical and rehabilitation care be adequately supervised from its inception. The lack of prompt action and supervision can mean the difference between restoring a worker to his full, productive potential and his remaining a cripple for life.

6. Maintenance Benefits During Rehabilitation. One of the basic objectives of workmen's compensation is the restoration of an injured worker to his greatest potential. The injured worker who has suffered a severe wage loss frequently finds it financially impossible to undergo vocational and physical rehabilitation when it requires an additional outlay of funds. Even when full compensation benefits are paid to workers who undergo rehabilitation, such expenses as travel, maintenance away from home, tuition, equipment, etc. may make it impossible for the injured worker to undergo rehabilitation. Maintenance benefits are essential; for

unless rehabilitation begins soon after injury, full physical restoration may be prevented.

7.&8. Full Medical Benefits for Accidental Injury or Occupational Disease. It is unreasonable to attach either time or dollar limits to medical benefits. The injured worker should not have to bear a portion of the medical cost of his occupational injury or disease. Recovery and prompt restoration of an injured worker depends largely on the medical care he receives. Every worker should be entitled to complete care to speed his recovery, to encourage rehabilitation, and to reduce the chance of possible permanent injury.

9. Supervision of Medical Care. The purpose of the compensation system should be to restore the worker to maximum physical well being and to his job as soon as possible. Successful achievement of this objective requires that the administrative agency be given the responsibility by statute to supervise medical care in order to insure accuracy of diagnosis and proper treatment.

10. Free Choice of a Qualified Physician. There are several desirable goals in choosing a physician. The first is the confidential nature of the doctor-patient relationship and the desirability of the patient trusting the doctor. Free choice also eliminates the possibility of a doctor, who is employed or paid by an employer or insurance carrier, from letting this relationship influence his medical opinion. The second is the need to achieve the maximum standards of rehabilitation by permitting compensation administrators sufficient supervision of medical care to insure that medical services are adequate and that the physician freely chosen is qualified.

11. Broad type Coverage for Handicapped Persons Under a Second Injury Fund. Unless an adequate second injury fund is adopted, workmen's compensation handicaps the handicapped in obtaining employment. All but 4 states have special funds in the workmen's compensation program to insure that an employer who hires handicapped workers will not, in the event a handicapped employee is disabled, face higher workmen's compensation costs than he would if the employee had not been handicapped at the time of hire. Any additional liability resulting from the combined disability is paid from the second injury fund. Unfortunately, the great majority of these funds limit coverage to bodily loss or loss of use of a bodily member. Such laws do not provide protection for the vast majority of handicapped workers who suffer from such disabilities as epilepsy, polio, arthritis, heart disease, etc. A good second injury law should not disqualify any handicapped worker because of the type or cause of his disease.

12. The Time Limit for Serving Notice and Making Claim in Occupational Disease Cases Starts Running from the Time of the Worker's Knowledge or the Worker's Disability. Occupational disease frequently does not show up for many years after a worker leaves an employer. Thousands of workers are denied benefits under workmen's compensation because they fail to serve notice or make claim for compensation within the limited dates fixed by a workmen's compensation statute.

13. Waiting Period of Not More than 3 Days with Retroactive Benefits After Two Weeks or Less. A long waiting period forces the injured worker to bear a large portion of the financial burden of any injury. Most state laws provide than an employee will not be entitled to any compensation for the first week of disability until he has been disabled for 3 or 4 weeks. Since 75% of the temporary disability cases heal within 21 days, a large portion of injured workers will not be protected by this provision and will suffer a week's loss of pay without any form of compensation and a small percentage replacement of total wage loss. A waiting period of three days with retroactive benefits within two weeks should be the maximum waiting period in any law.

14. Benefits Payable to the Widow Extend to Death or Remarriage and To The Children Until They Reach 18. The premise of workmen's compensation is to insure wage loss, not to determine a cash settlement for any single day or days. The family of a deceased worker is entitled to full economic protection.

15. Benefits for Permanent Total Disability Payable for Life or The Period of Disability. The injured worker who is permanently and totally disabled will normally not be able to participate in gainful employment for the rest of his life, and will undoubtedly require more assistance as he advances in age. The disability of a permanent and total injury does not end after a specified number of weeks. Neither should the benefits.

16. Double Benefits to Illegally Employed Minors. A reasonable assumption is that a minor will not have reached his full earning capacity at the time of injury. His compensation benefits will be at a lower amount than an older worker. This can work an extreme hardship on a young worker if the injury results in permanent total disability. Thus, it is only just to provide double benefits to minors injured while illegally employed. Provisions for double compensation also help to insure strict compliance with child-labor laws.

17. Maximum Cash Benefits in Your State Equal to at Least Two-Thirds of Your State's Average Weekly Wage in Covered Employment. The full value of the benefit provisions of most state workmen's compensation laws are denied injured workers by stated maximum amounts that an injured worker can receive. These maximum limitations originally were high enough that a large majority of injured workers could receive adequate benefits. There has been a lag between the normal rise in wages, the cost of living, and action by state legislatures to raise maximum benefit restrictions. For example, in 1940 only ten states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and only four of these less than 60 percent and none less than 50 percent.

18. Administration of the Workmen's Compensation Law by a State Agency. The administration of a workmen's compensation law should be placed in the hands of a department under a director who shall supervise all personnel necessary to assure that benefits intended under the law are fully and promptly provided the injured worker. Administration of a workmen's compensation law requires much effort in many complex areas such as medical care, rehabilitation, supervision of benefit payments, etc. Court administration is not adapted for these purposes.

19. Judicial Review Limited to Questions of Law. The purpose for the establishment of workmen's compensation laws was to take settlement claims as much as possible out of the courts and reduce litigation. One way to help reduce litigation is to give the administrative agency exclusive jurisdiction over questions of fact, with appeals to the courts limited to questions of law.

The above are minimum standards. The following pages show how the Workmen's Compensation Law of your state compares with these minimum standards.

MAJOR AFL-CIO STANDARDS FOR A GOOD WORKMEN'S COMPENSATION LAW

Comparison with Recommended Standards 1/

MINIMUM STANDARDS	FLORIDA
Compulsory coverage and no numerical exemptions	
Agricultural workers covered in the same manner as other workers	
Full statutory coverage of all occupational diseases	X
Workmen's Compensation agency has a rehabilitation division	
Maintenance benefits during rehabilitation	
Full medical benefits for both occupational injury and disease	X
Workmen's Compensation agency has authority to supervise and control medical care	
Choice of qualified physician by injured worker	
Broad second injury fund	
Adequate time for filing occupational disease claims	X
Death benefits to a widow until death or remarriage	
Benefits for the totally disabled for the period of disability	X
Illegally employed minors under 18 who are occupationally injured should be paid double benefits	
Maximum compensation for temporary total disability not less than 66 2/3% of average state wage	
Administration by a state agency	X
Exclusive state compensation fund	

1/ A checkmark indicates the state Workmen's Compensation Law contains such a provision.

Florida	89.5%	61.5%	47.0%	43.6%	48.9%

[1]Figures for 1967 based on latest available 1966 wage data.

SUMMARY

The workmen's compensation law of Florida meets only eight of the AFL-CIO recommended standards. This is a rather shocking indictment of the Florida law in view of the inadequate benefit levels and the fact that the cost of workmen's compensation protection in Florida, on the average, is less than $1.00 on each $100 dollars of payroll. This cost is below the 1966 national average of $1.02 for each $100 dollars of payroll.

Workmen's compensation benefits have deteriorated noticeably during the past quarter century in Florida. The pronounced erosion of benefit levels in Florida between 1940 and 1965 has destroyed the original concept of workmen's compensation system -- replacement of 66 2/3 percent of lost wages -- for most workers in the state.

The legislated adjustments in workmen's compensation income benefits have lagged far behind increases in the state wage level. The maximum weekly benefit in 1940 equaled 89.5% of the Florida average weekly wage. However, since 1940 the maximum weekly benefit has declined steadily as a percent of the average weekly wage. Today, it represents less than 50.0% of the state average weekly wage.

The maximum weekly benefit for temporary total disability is higher in the neighboring states of Georgia and South Carolina. The workmen's compensation protection afforded surviving dependents in cases of fatal work injury are higher in many states in the South including Alabama, South Carolina, Virginia, and Kentucky.

There is no principle so universally accepted in theory and so universally ignored in fact as the concept of adequately providing for industrially injured workers and their families. The cost burden of Florida employers for workmen's compensation has been light. Where the need is so great, and the cost is so small, there is every obligation for the State to act.

EXCLUSIVE STATE FUNDS

The AFL-CIO by convention resolution has endorsed the principle of the exclusive state fund. The resolution reads in part as follows:

"Resolved: That the AFL-CIO recognizes that the workmen's compensation laws must be overhauled if they are to meet the needs for which they were originally designed, and to meet the challenges of our rapidly changing industrial society; and calls upon all national and international unions to give increased support to state central bodies in their efforts to obtain the following objectives:

15. An exclusive state compensation fund....."

The cost record of the private insurance carriers clearly indicates the superiority of the exclusive state funds. For example, for the years 1950 - 60, administrative costs of exclusive state funds averaged 6.5% of premiums to expenses. During the same period, the ratio of expenses incurred to net premiums earned for non-participating stock companies, participating stock companies, and mutual companies averaged approximately 37%, 28%, and 25% respectively.

There are several reasons for the wide differential in costs between exclusive state funds and private insurance coverage. Exclusive state funds are non-profit and do not have to use money to maintain a large sales force, or compete by means of expensive advertising. However, the most important factor has been the excessive expense loading used by insurance companies. Expense loading is the portions of the rate set aside to meet anticipated underwriting expenses or overhead. State approved expense loadings are established uniformly for all companies and usually reflect the expenses of the insurance carriers with the highest expenses. This reduces competition between insurance companies and raises costs unnecessarily. Two standard expense loading factors are in general use by insurance companies in the field of workmen's compensation, namely, 37% or 40% of the gross premium charged. Although the expense loading factors may vary among states, the following comparison gives a clear and substantially accurate picture:

	High	Low	Average
Cost of acquiring risk (commissions, brokerage, advertising, etc.)	17.5%	17.5%	17.5%
Claims Adjustment	10.0%	8.0%	9.0%
Inspection and rating bureau	4.0%	2.5%	3.25%
Premium taxes	3.5%	2.0%	2.75%
General expenses and auditing	9.5%	6.5%	8.0%
Totals	44.5%	36.5%	40.5%

Comparative loss ratios of private carriers, 1950 - 1960 bear out the fact that the loss ratio of incurred losses to earned premium has very carefully approximated the expense loading factors of forty percent.

The record of the private insurance carriers is one reason Arthur J. Altmeyer, former U. S. Social Security Commissioner, has stated:

> "I believe until we move a considerable distance in the direction of the States themselves assuming responsibility either directly through exclusive State funds or through a State-wide mutual insurance company we shall find it impossible not only to provide adequate benefits to all workers and adequate protection to all employers, but we shall find it impossible to carry on as effectively as we should accident prevention and rehabilitation programs."

An exclusive state fund is one of the most difficult improvements to secure in a workmen's compensation law. However, it is only by continued effort that success will be achieved. We hope that many state central bodies will sponsor exclusive State fund legislation at the next session of their state legislatures.

Workmen's Compensation

RESOLUTION NO. 251 - Adopted by the Seventh Constitutional Convention, AFL-CIO, Bal Harbour, Florida, December, 1967.

Workmen's compensation, our oldest form of social insurance, is now approaching its 60th anniversary. Our system is based on the principle that since accidents are attributable to production, their costs should be borne by the society that benefits from the production. Our workmen's compensation system is also based on the principle that by providing prompt monetary and medical benefits to injured workers, it will not only benefit them and their families but the cost to society is less, because it reduces to a minimum the loss of the injured worker's productive services and the burden of supporting the workers and his family.

Defects were recognized in the early laws, right from the start, but future legislative action was expected to correct many of these deficiencies. We regret that, in the main, these hopes have not been realized in state legislation.

The United States Congress took steps to correct deficiencies in the Federal Employes Compensation Act in 1966. The Congress passed a number of amendments to this Act that substantially improved the workmen's compensation protection provided for federal workers and their families.

The President, at the time he signed the amendments into law, urged the other jurisdictions to examine their laws in the light of the amendments to the Federal Act. At the same time, he urged them to take the action necessary to assure all American workers and their families adequate workmen's compensation protection. Congress is now giving consideration to the President's recommendation in pending legislation which would substantially improve the Longshoremen's and Harbor Workers' Act. The proposed amendments would enhance workmen's compensation protection for longshoremen, workers in the District of Columbia, and other workers covered by this Act.

Unfortunately, despite the persistent efforts of the AFL-CIO state labor bodies, few state legislatures have demonstrated a similar concern for injured workmen.

Compulsory coverage, without numerical exemptions, is still the exception rather than the rule. Coverage for agricultural workers has been shamefully ignored despite the recognized hazardous nature of employment in agriculture.

The original goal of workmen's compensation legislation was to restore to injured workers at least two-thirds of their wage losses due to industrial injuries. The gap between this objective and what the law actually provides for injured workers reflects one of the most serious inadequacies of our present system. In cases of temporary total disability, maximum benefit amounts in the majority of states deny many workers a benefit equal to two-thirds of their average weekly wage.

In many states the statutory maximum weekly benefit level is less than 50 percent of the statewide average weekly wage. The inadequacy of benefits for more serious injuries resulting in permanent disability is even worse, since these inadequate benefits can result in a lifetime of deprivation for workers and their families.

Only 20 states provide cash benefits to a widow until her death or remarriage, and for children until they reach 18 years of age. Only a very few states continue benefits to dependent children continuing their education beyond the age of 18.

One-third of our states fail to cover all occupational diseases. In addition, workers are frequently denied compensation under existing occupational disease coverage because of restrictive time limits within which they must file a claim.

Because 22 states still fail to provide full medical benefits, a worker in any one of these states may have to bear a portion of the medical cost for occupational injury or disease.

Rehabilitation programs are provided in only about one-half of our workmen's compensation laws and even many of these are not fully satisfactory.

The poor administration of some laws is another burden the present system has placed upon injured workers. Greater attention should be given to the collection and distribution of information concerning the operation of the system, investigation and enforcement of coverage, closer supervision of claims settlements, adjudication of contested claims, supervision of rehabilitation and medical care, safety promotion, and statistical analysis of the work of the state agencies.

These glaring inadequacies are but a few of the many problems that exist within our present system of workmen's compensation. They reflect the need for greater federal participation in the system and the need for minimum federal standards if injured workers and their families are to receive adequate workmen's compensation protection. Despite valiant efforts by AFL-CIO state central bodies which have for years been leaders in the struggle to improve existing laws, the results have been all too meager. We are convinced that lasting improvement in workmen's compensation can be achieved only by a determined effort at the federal level including the establishment of federal minimum standards respecting the main features of state laws. Therefore, be it

RESOLVED: That the AFL-CIO continues to recognize that our workmen's compensation laws must be overhauled if they are to fulfill the needs for which they were originally designed, and to meet the challenges of our rapidly changing industrial society; and calls upon all of our affiliated unions to give increased support to state central bodies in their efforts to obtain the following minimum standards in state laws:

1. Compulsory coverage with no numerical exemptions.

2. Coverage of agricultural workers in the same manner as other employes.

3. Benefit levels sufficient to maintain a decent standard of living for injured workers and their dependents, with weekly benefits of not less than two-thirds of the injured worker's average weekly wage.

4. Reciprocity of benefit rights between jurisdictions.

5. Time limits within which an employe must file a claim for occupational disease should be at least one year after the date when employe has knowledge of the nature of his disability and its relation to his job and until after disablement.

6. Full statutory coverage of all occupational diseases.

7. Coverage of diseases caused by ionizing radiation.

8. Full medical benefits for job-incurred personal injuries and occupational diseases.

9. Full compensation protection under second injury funds.

10. Free choice of qualified physician by injured workers.

11. The workmen's compensation agency to have the authority to supervise and control medical care of injured workers.

12. The workmen's compensation agency to include a rehabilitation division which should promote full utilization and development of rehabilitation facilities for the benefit of injured workers.

13. Maintenance benefits during rehabilitation.

14. Administration under a state agency rather than by the courts.

15. An exclusive state compensation fund.

16. Benefits for the totally disabled for the period of disability.

17. In case of death, benefits to be paid to the widow until her death or remarriage, and to children at least during their minority, and to other dependents during the period of their inability of self-support.

18. Minors under 18 who are injured on the job if employed in violation of any state law to be paid benefits double those otherwise payable.

19. Prohibition of special contracts with employers whereby a worker with a specific physical defect waives his right to compensation in the event of a subsequent injury.

20. Prohibition of lump-sum settlements and compromise of rights to full medical care under compromise and release settlements unless the workmen's compensation agency approves such a settlement on the advice of the appropriate state rehabilitation unit or agency.

21. Judicial review to be limited to consideration of the record of the workmen's compensation agency on questions of law only without trial de novo. In addition, there should be an appeals board which has no administrative responsibilities and from which appeal on matters of law only can be made to the highest court in the state (this standard is based on the assumptions that the administration of the state law is of a quality that assures adequate protection to injured workmen, and that jury trials and trials de novo will continue until administration of state laws reaches a level that fully protects the rights of all injured workers and their families).

RESOLVED: That the AFL-CIO urge the Congress to enact without delay the pending amendments to the Longshoremen's and Harbor Workers' Act.

RESOLVED: That we reaffirm our request to the Department of Labor to upgrade its efforts to improve workmen's compensation laws by developing and sponsoring legislation establishing minimum federal standards for workmen's compensation.

RESOLVED: That this convention renews its pledge to support the enactment of a Federal Workmen's Compensation Act. But, short of this, we urge the Congress of the United States to enact legislation establishing federal minimum standards that will provide meaningful protection to injured workers and their families.

HUMAN REHABILITATION

Resolution No. 253 - Adopted by the Seventh Constitutional Convention, AFL-CIO, Bal Harbour, Florida, December, 1967.

In spite of great progress in legislation, rehabilitation techniques, and public awareness and support, the major portion of the difficult job of rehabilitating the handicapped still remains. Individuals who in earlier years would have had brief life expectancies are now living into old age with chronic disabling and handicapping conditions. New hazards and changing technology are also contributing to the increase in the incidence of disability. While rehabilitation programs are expanded in hopes of restoring the handicapped to useful employment, medical science is expanding the number of the handicapped by prolonging human life, and changing technology is adding new barriers to their employment.

Rehabilitation is becoming increasingly important to labor because it is a concept that is influencing the whole health and welfare field. Organized labor working with the National Institutes on Rehabilitation and Health Services had sponsored numerous rehabilitation conferences and has successfully established a number of labor rehabilitation projects. Organized labor also has participated actively in the work of the National Advisory Council on Vocational Rehabilitation, the President's Committee on Employment of the Handicapped and similar national and state committees, as well as on the community level to promote rehabilitation and hiring of the handicapped. The Social and Rehabilitation Service of the Department of Health, Education and Welfare should help to provide more comprehensive rehabilitation services to a wider range of the population. We commend the progress that has been made by both public and voluntary agencies in rehabilitating the disabled.

This greater recognition of the need for comprehensive services to the handicapped through the integrated efforts of a number of agencies will contribute to continued progress. Yet much more must be done. Therefore, be it

RESOLVED: That all state and local bodies support legislative action matching maximum amounts of state funds to available federal appropriations for rehabilitation programs and cooperate with State Vocational Rehabilitation Agencies.

That affiliated bodies actively participate im programs to rehabilitate union members and to support community rehabilitation programs.

That prohibition against discrimination in the employment of the handicapped be included in fair employment practices clauses of collective bargaining agreements.

That the experience of such labor rehabilitation projects as that of the Sidney Hillman Health Center in New York City, the New York City Central Labor Council, and the Iowa Federation of Labor should be widely disseminated and affiliated bodies should work closely with, support and promote the efforts of the National Institutes on Rehabilitation and Health Services to hold rehabilitation conferences and to establish labor rehabilitation projects.

WORKMEN'S COMPENSATION LAWS

[1967?]

How They Compare?

HOW MUCH DO YOU KNOW ABOUT --

WORKMEN'S COMPENSATION
(This is a questionnarie, not a test)

IF YOU GET INJURED ON THE JOB - REPORT your injury to your employer as soon as you are able. Find out from your UNION if you must serve a written notice and make a claim for benefits.

The AFL-CIO thinks that we've got to work to improve state laws -- and we also need a federal law, passed by Congress, to raise the level of payments and eliminate unfair practices.

1. If a worker is temporarily injured in your plant, what is the maximum weekly benefit he can get under your state law? $_____a week

2. Will all his medical expenses be paid ☐ Yes ☐ No

   If not, how much will be paid?_____

3. Will he be allowed to choose a qualified doctor?_____

   If not, who selects his doctor?_____

4. If a worker is injured, who pays him the benefits .....

   ☐ the Company

   ☐ an insurance company from which his employer has bought insurance

   ☐ a fund set up by the state, to which the Company contributes

   Suppose a worker is "permanently disabled" in some ways (for example, he can't lift his arm above the shoulder anymore) will your State provide him rehabilitation benefits?_____

5. An arm at the shoulder is worth $35,100 in Hawaii. Do you know what an arm at the shoulder is worth in your State?_____

6. If a worker is killed on the job does his family get death benefits?_____

   How much?_____ For how long?_____

7. Are these death benefits ☐ higher than death benefits in other States?

   ☐ lower

   ☐ average

8. Whether a worker is disabled because of an accident or because of an occupational disease, he is still disabled. Does your law provide full occupational coverage? _____

opeiu #2 afl-cio

YARDSTICK FOR WORKMEN'S COMPENSATION LAWS

Administrators of Workmen's Compensation Laws in the States and Provinces of the United States and Canada have agreed to the following goals or standards for benefits to persons injured on the job. These are also the standards recommended by the U. S. Department of Labor.

1. Compulsory Coverage. If the law permits either the employer or the employee to reject workmen's compensation coverage, it does not meet the accepted standards. The uncovered worker, left to his own resources in securing workmen's compensation benefits, is not apt to be as successful in securing adequate compensation for his injury. Generally, small employers lack the financial resources to protect the injured worker unless they are required to carry compensation insurance by law.

2. No Numerical Exemptions. Unless the law applies to all employers regardless of the number of employees, it falls short of protecting all who work for a living. All employers of one or more employees should be covered. Even when a compulsory law is adopted, provisions providing for exemptions of employers with small numbers of workers have circumvented the law in most states. The retention of numerical exemptions stand as a formidable obstacle against labor's efforts to make workmen's compensation an effective program.

3. Coverage of Agricultural Workers. Agriculture is one of the most hazardous kinds of employment. The objection that difficulties of administration require the exemption of farmers and small firms has been proven false by the states that now cover them. Experience has shown that there is no reason to exempt this hazardous area from coverage.

4. Full Coverage of Occupational Diseases. It should not make any difference whether a worker is injured by an accident or injured on his job by a hazard peculiar to the employment. Thirty states cover all occupational diseases. The remainder covered only "scheduled" diseases which means that the worker is protected only for those diseases specifically mentioned in the law. A broad schedule of diseases does not resolve the problem. Schedules of occupational disease tend to become obsolete. Periodic revision fails to keep pace with the rapid changes in work technology. The only sure way to protect the worker is to specify that all occupational diseases are included without enumerating them.

5. Rehabilitation Division Within the Workmen's Compensation Agency. The rehabilitation of an occupationally injured worker should be the special responsibility of the workmen's compensation agency. It is vitally important that the rehabilitation of an injured worker begin immediately and that medical and rehabilitation care be adequately supervised from its inception. The lack of prompt action and supervision can mean the difference between restoring a worker to his full, productive potential and his remaining a cripple for life.

6. Maintenance Benefits During Rehabilitation. One of the basic objectives of workmen's compensation is the restoration of an injured worker to his greatest potential. The injured worker who has suffered a severe wage loss frequently finds it financially impossible to undergo vocational and physical rehabilitation when it requires an additional outlay of funds. Even when full compensation benefits are paid to workers who undergo rehabilitation, such expenses as travel, maintenance away from home, tuition, equipment, etc. may make it impossible for the injured worker to undergo rehabilitation. Maintenance benefits are essential; for

unless rehabilitation begins soon after injury, full physical restoration may be prevented.

7.&8. Full Medical Benefits for Accidental Injury or Occupational Disease. It is unreasonable to attach either time or dollar limits to medical benefits. The injured worker should not have to bear a portion of the medical cost of his occupational injury or disease. Recovery and prompt restoration of an injured worker depends largely on the medical care he receives. Every worker should be entitled to complete care to speed his recovery, to encourage rehabilitation, and to reduce the chance of possible permanent injury.

9. Supervision of Medical Care. The purpose of the compensation system should be to restore the worker to maximum physical well being and to his job as soon as possible. Successful achievement of this objective requires that the administrative agency be given the responsibility by statute to supervise medical care in order to insure accuracy of diagnosis and proper treatment.

10. Free Choice of a Qualified Physician. There are several desirable goals in choosing a physician. The first is the confidential nature of the doctor-patient relationship and the desirability of the patient trusting the doctor. Free choice also eliminates the possibility of a doctor, who is employed or paid by an employer or insurance carrier, from letting this relationship influence his medical opinion. The second is the need to achieve the maximum standards of rehabilitation by permitting compensation administrators sufficient supervision of medical care to insure that medical services are adequate and that the physician freely chosen is qualified.

11. Broad type Coverage for Handicapped Persons Under a Second Injury Fund. Unless an adequate second injury fund is adopted, workmen's compensation handicaps the handicapped in obtaining employment. All but 4 states have special funds in the workmen's compensation program to insure that an employer who hires handicapped workers will not, in the event a handicapped employee is disabled, face higher workmen's compensation costs than he would if the employee had not been handicapped at the time of hire. Any additional liability resulting from the combined disability is paid from the second injury fund. Unfortunately, the great majority of these funds limit coverage to bodily loss or loss of use of a bodily member. Such laws do not provide protection for the vast majority of handicapped workers who suffer from such disabilities as epilepsy, polio, arthritis, heart disease, etc. A good second injury law should not disqualify any handicapped worker because of the type or cause of his disease.

12. The Time Limit for Serving Notice and Making Claim in Occupational Disease Cases Starts Running from the Time of the Worker's Knowledge or the Worker's Disability. Occupational disease frequently does not show up for many years after a worker leaves an employer. Thousands of workers are denied benefits under workmen's compensation because they fail to serve notice or make claim for compensation within the limited dates fixed by a workmen's compensation statute.

13. Waiting Period of Not More than 3 Days with Retroactive Benefits After Two Weeks or Less. A long waiting period forces the injured worker to bear a large portion of the financial burden of any injury. Most state laws provide than an employee will not be entitled to any compensation for the first week of disability until he has been disabled for 3 or 4 weeks. Since 75% of the temporary disability cases heal within 21 days, a large portion of injured workers will not be protected by this provision and will suffer a week's loss of pay without any form of compensation, and a small percentage replacement of total wage loss. A waiting period of three days with retroactive benefits within two weeks should be the maximum waiting period in any law.

14. Benefits Payable to the Widow Extend to Death or Remarriage and To The Children Until They Reach 18. The premise of workmen's compensation is to insure wage loss, not to determine a cash settlement for any single day or days. The family of a deceased worker is entitled to full economic protection.

15. Benefits for Permanent Total Disability Payable for Life or The Period of Disability. The injured worker who is permanently and totally disabled will normally not be able to participate in gainful employment for the rest of his life, and will undoubtedly require more assistance as he advances in age. The disability of a permanent and total injury does not end after a specified number of weeks. Neither should the benefits.

16. Double Benefits to Illegally Employed Minors. A reasonable assumption is that a minor will not have reached his full earning capacity at the time of injury. His compensation benefits will be at a lower amount than an older worker. This can work an extreme hardship on a young worker if the injury results in permanent total disability. Thus, it is only just to provide double benefits to minors injured while illegally employed. Provisions for double compensation also help to insure strict compliance with child-labor laws.

17. Maximum Cash Benefits in Your State Equal to at Least Two-Thirds of Your State's Average Weekly Wage in Covered Employment. The full value of the benefit provisions of most state workmen's compensation laws are denied injured workers by stated maximum amounts that an injured worker can receive. These maximum limitations originally were high enough that a large majority of injured workers could receive adequate benefits. There has been a lag between the normal rise in wages, the cost of living, and action by state legislatures to raise maximum benefit restrictions. For example, in 1940 only ten states had maximum benefit levels for temporary total disability less than two-thirds of the state's average weekly wage and only four of these less than 60 percent and none less than 50 percent.

18. Administration of the Workmen's Compensation Law by a State Agency. The administration of a workmen's compensation law should be placed in the hands of a department under a director who shall supervise all personnel necessary to assure that benefits intended under the law are fully and promptly provided the injured worker. Administration of a workmen's compensation law requires much effort in many complex areas such as medical care, rehabilitation, supervision of benefit payments, etc. Court administration is not adapted for these purposes.

19. Judicial Review Limited to Questions of Law. The purpose for the establishment of workmen's compensation laws was to take settlement claims as much as possible out of the courts and reduce litigation. One way to help reduce litigation is to give the administrative agency exclusive jurisdiction over questions of fact, with appeals to the courts limited to questions of law.

The above are minimum standards. The following pages show how the Workmen's Compensation Law of your state compares with these minimum standards.

MAJOR AFL-CIO STANDARDS FOR
A GOOD WORKMEN'S COMPENSATION LAW

Comparison with Recommended Standards 1/

MINIMUM STANDARDS	Georgia
Compulsory coverage and no numerical exemptions	
Agricultural workers covered in the same manner as other workers	
Full statutory coverage of all occupational diseases	
Workmen's Compensation agency has a rehabilitation division	
Maintenance benefits during rehabilitation	
Full medical benefits for both occupational injury and disease	
Workmen's Compensation agency has authority to supervise and control medical care	X
Choice of qualified physician by injured worker	
Broad second injury fund	
Adequate time for filing occupational disease claims	
Death benefits to a widow until death or remarriage	
Benefits for the totally disabled for the period of disability	
Illegally employed minors under 18 who are occupationally injured should be paid double benefits	
Maximum compensation for temporary total disability not less than 66 2/3% of average state wage	
Administration by a state agency	X
Exclusive state compensation fund

EXCLUSIVE STATE FUNDS

The AFL-CIO by convention resolution has endorsed the principle of the exclusive state fund. The resolution reads in part as follows:

"Resolved: That the AFL-CIO recognizes that the workmen's compensation laws must be overhauled if they are to meet the needs for which they were originally designed, and to meet the challenges of our rapidly changing industrial society; and calls upon all national and international unions to give increased support to state central bodies in their efforts to obtain the following objectives:

15. An exclusive state compensation fund....."

The cost record of the private insurance carriers clearly indicates the superiority of the exclusive state funds. For example, for the years 1950 - 60, administrative costs of exclusive state funds averaged 6.5% of premiums to expenses. During the same period, the ratio of expenses incurred to net premiums earned for non-participating stock companies, participating stock companies, and mutual companies averaged approximately 37%, 28%, and 25% respectively.

There are several reasons for the wide differential in costs between exclusive state funds and private insurance coverage. Exclusive state funds are non-profit and do not have to use money to maintain a large sales force, or compete by means of expensive advertising. However, the most important factor has been the excessive expense loading used by insurance companies. Expense loading is the portions of the rate set aside to meet anticipated underwriting expenses or overhead. State approved expense loadings are established uniformly for all companies and usually reflect the expenses of the insurance carriers with the highest expenses. This reduces competition between insurance companies and raises costs unnecessarily. Two standard expense loading factors are in general use by insurance companies in the field of workmen's compensation, namely, 37% or 40% of the gross premium charged. Although the expense loading factors may vary among states, the following comparison gives a clear and substantially accurate picture:

	High	Low	Average
Cost of acquiring risk (commissions, brokerage, advertising, etc.)	17.5%	17.5%	17.5%
Claims Adjustment	10.0%	8.0%	9.0%
Inspection and rating bureau	4.0%	2.5%	3.25%
Premium taxes	3.5%	2.0%	2.75%
General expenses and auditing	9.5%	6.5%	8.0%
Totals	44.5%	36.5%	40.5%

Comparative loss ratios of private carriers, 1950 - 1960 bear out the fact that the loss ratio of incurred losses to earned premium has very carefully approximated the expense loading factors of forty percent.

The record of the private insurance carriers is one reason Arthur J. Altmeyer, former U. S. Social Security Commissioner, has stated:

> "I believe until we move a considerable distance in the direction of the States themselves assuming responsibility either directly through exclusive State funds or through a State-wide mutual insurance company we shall find it impossible not only to provide adequate benefits to all workers and adequate protection to all employers, but we shall find it impossible to carry on as effectively as we should accident prevention and rehabilitation programs."

An exclusive state fund is one of the most difficult improvements to secure in a workmen's compensation law. However, it is only by continued effort that success will be achieved. We hope that many state central bodies will sponsor exclusive State fund legislation at the next session of their state legislatures.

Workmen's Compensation

RESOLUTION NO. 251 - Adopted by the Seventh Constitutional Convention, AFL-CIO, Bal Harbour, Florida, December, 1967.

Workmen's compensation, our oldest form of social insurance, is now approaching its 60th anniversary. Our system is based on the principle that since accidents are attributable to production, their costs should be borne by the society that benefits from the production. Our workmen's compensation system is also based on the principle that by providing prompt monetary and medical benefits to injured workers, it will not only benefit them and their families but the cost to society is less, because it reduces to a minimum the loss of the injured worker's productive services and the burden of supporting the workers and his family.

Defects were recognized in the early laws, right from the start, but future legislative action was expected to correct many of these deficiencies. We regret that, in the main, these hopes have not been realized in state legislation.

The United States Congress took steps to correct deficiencies in the Federal Employes Compensation Act in 1966. The Congress passed a number of amendments to this Act that substantially improved the workmen's compensation protection provided for federal workers and their families.

The President, at the time he signed the amendments into law, urged the other jurisdictions to examine their laws in the light of the amendments to the Federal Act. At the same time, he urged them to take the action necessary to assure all American workers and their families adequate workmen's compensation protection. Congress is now giving consideration to the President's recommendation in pending legislation which would substantially improve the Longshoremen's and Harbor Workers' Act. The proposed amendments would enhance workmen's compensation protection for longshoremen, workers in the District of Columbia, and other workers covered by this Act.

Unfortunately, despite the persistent efforts of the AFL-CIO state labor bodies, few state legislatures have demonstrated a similar concern for injured workmen.

Compulsory coverage, without numerical exemptions, is still the exception rather than the rule. Coverage for agricultural workers has been shamefully ignored despite the recognized hazardous nature of employment in agriculture.

The original goal of workmen's compensation legislation was to restore to injured workers at least two-thirds of their wage losses due to industrial injuries. The gap between this objective and what the law actually provides for injured workers reflects one of the most serious inadequacies of our present system. In cases of temporary total disability, maximum benefit amounts in the majority of states deny many workers a benefit equal to two-thirds of their average weekly wage.

In many states the statutory maximum weekly benefit level is less than 50 percent of the statewide average weekly wage. The inadequacy of benefits for more serious injuries resulting in permanent disability is even worse, since these inadequate benefits can result in a lifetime of deprivation for workers and their families.

Only 20 states provide cash benefits to a widow until her death or remarriage, and for children until they reach 18 years of age. Only a very few states continue benefits to dependent children continuing their education beyond the age of 18.

One-third of our states fail to cover all occupational diseases. In addition, workers are frequently denied compensation under existing occupational disease coverage because of restrictive time limits within which they must file a claim.

Because 22 states still fail to provide full medical benefits, a worker in any one of these states may have to bear a portion of the medical cost for occupational injury or disease.

Rehabilitation programs are provided in only about one-half of our workmen's compensation laws and even many of these are not fully satisfactory.

The poor administration of some laws is another burden the present system has placed upon injured workers. Greater attention should be given to the collection and distribution of information concerning the operation of the system, investigation and enforcement of coverage, closer supervision of claims settlements, adjudication of contested claims, supervision of rehabilitation and medical care, safety promotion, and statistical analysis of the work of the state agencies.

These glaring inadequacies are but a few of the many problems that exist within our present system of workmen's compensation. They reflect the need for greater federal participation in the system and the need for minimum federal standards if injured workers and their families are to receive adequate workmen's compensation protection. Despite valiant efforts by AFL-CIO state central bodies which have for years been leaders in the struggle to improve existing laws, the results have been all too meager. We are convinced that lasting improvement in workmen's compensation can be achieved only by a determined effort at the federal level including the establishment of federal minimum standards respecting the main features of state laws. Therefore, be it

RESOLVED: That the AFL-CIO continues to recognize that our workmen's compensation laws must be overhauled if they are to fulfill the needs for which they were originally designed, and to meet the challenges of our rapidly changing industrial society; and calls upon all of our affiliated unions to give increased support to state central bodies in their efforts to obtain the following minimum standards in state laws:

1. Compulsory coverage with no numerical exemptions.

2. Coverage of agricultural workers in the same manner as other employes.

3. Benefit levels sufficient to maintain a decent standard of living for injured workers and their dependents, with weekly benefits of not less than two-thirds of the injured worker's average weekly wage.

4. Reciprocity of benefit rights between jurisdictions.

5. Time limits within which an employe must file a claim for occupational disease should be at least one year after the date when employe has knowledge of the nature of his disability and its relation to his job and until after disablement.

6. Full statutory coverage of all occupational diseases.

7. Coverage of diseases caused by ionizing radiation.

8. Full medical benefits for job-incurred personal injuries and occupational diseases.

9. Full compensation protection under second injury funds.

10. Free choice of qualified physician by injured workers.

11. The workmen's compensation agency to have the authority to supervise and control medical care of injured workers.

12. The workmen's compensation agency to include a rehabilitation division which should promote full utilization and development of rehabilitation facilities for the benefit of injured workers.

13. Maintenance benefits during rehabilitation.

14. Administration under a state agency rather than by the courts.

15. An exclusive state compensation fund.

16. Benefits for the totally disabled for the period of disability.

17. In case of death, benefits to be paid to the widow until her death or remarriage, and to children at least during their minority, and to other dependents during the period of their inability of self-support.

18. Minors under 18 who are injured on the job if employed in violation of any state law to be paid benefits double those otherwise payable.

19. Prohibition of special contracts with employers whereby a worker with a specific physical defect waives his right to compensation in the event of a subsequent injury.

20. Prohibition of lump-sum settlements and compromise of rights to full medical care under compromise and release settlements unless the workmen's compensation agency approves such a settlement on the advice of the appropriate state rehabilitation unit or agency.

21. Judicial review to be limited to consideration of the record of the workmen's compensation agency on questions of law only without trial de novo. In addition, there should be an appeals board which has no administrative responsibilities and from which appeal on matters of law only can be made to the highest court in the state (this standard is based on the assumptions that the administration of the state law is of a quality that assures adequate protection to injured workmen, and that jury trials and trials de novo will continue until administration of state laws reaches a level that fully protects the rights of all injured workers and their families).

RESOLVED: That the AFL-CIO urge the Congress to enact without delay the pending amendments to the Longshoremen's and Harbor Workers' Act.

RESOLVED: That we reaffirm our request to the Department of Labor to upgrade its efforts to improve workmen's compensation laws by developing and sponsoring legislation establishing minimum federal standards for workmen's compensation.

RESOLVED: That this convention renews its pledge to support the enactment of a Federal Workmen's Compensation Act. But, short of this, we urge the Congress of the United States to enact legislation establishing federal minimum standards that will provide meaningful protection to injured workers and their families.

SUMMARY

The workmen's compensation law of Alabama meets only 1 of the AFL-CIO recommended standards; the Georgia law meets only 2 standards, and the Mississippi law meets 3 standards. This is a shocking indictment of the workmen's compensation laws in these states in view of inadequate benefit levels and the fact that workmen's compensation protection on the average cost less than 1 cent of each payroll dollar -- less than .6 of a cent in Alabama and Georgia.

Workmen's compensation benefits have deteriorated noticeably during the past quarter century in each state. The pronounced erosion of benefit levels in Alabama and Georgia during the 1940's and early 1950's has destroyed the original concept of the workmen's compensation system for many workers.

The benefit levels in Alabama and Georgia have consistently lagged behind the statewide average weekly wage since 1940 and in Mississippi since 1950.

There is no principle so universally accepted in theory and so universally ignored in fact as the concept of adequately providing for industrially injured workers and their families. The average cost burden of workmen's compensation for employers in these states has been light. Where the need is so great and the cost is so small, there is every obligation for the States to act.

HUMAN REHABILITATION

Resolution No. 253 - Adopted by the Seventh Constitutional Convention, AFL-CIO, Bal Harbour, Florida, December, 1967.

In spite of great progress in legislation, rehabilitation techniques, and public awareness and support, the major portion of the difficult job of rehabilitating the handicapped still remains. Individuals who in earlier years would have had brief life expectancies are now living into old age with chronic disabling and handicapping conditions. New hazards and changing technology are also contributing to the increase in the incidence of disability. While rehabilitation programs are expanded in hopes of restoring the handicapped to useful employment, medical science is expanding the number of the handicapped by prolonging human life, and changing technology is adding new barriers to their employment.

Rehabilitation is becoming increasingly important to labor because it is a concept that is influencing the whole health and welfare field. Organized labor working with the National Institutes on Rehabilitation and Health Services had sponsored numerous rehabilitation conferences and has successfully established a number of labor rehabilitation projects. Organized labor also has participated actively in the work of the National Advisory Council on Vocational Rehabilitation, the President's Committee on Employment of the Handicapped and similar national and state committees, as well as on the community level to promote rehabilitation and hiring of the handicapped. The Social and Rehabilitation Service of the Department of Health, Education and Welfare should help to provide more comprehensive rehabilitation services to a wider range of the population. We commend the progress that has been made by both public and voluntary agencies in rehabilitating the disabled.

This greater recognition of the need for comprehensive services to the handicapped through the integrated efforts of a number of agencies will contribute to continued progress. Yet much more must be done. Therefore, be it

RESOLVED: That all state and local bodies support legislative action matching maximum amounts of state funds to available federal appropriations for rehabilitation programs and cooperate with State Vocational Rehabilitation Agencies.

That affiliated bodies actively participate im programs to rehabilitate union members and to support community rehabilitation programs.

That prohibition against discrimination in the employment of the handicapped be included in fair employment practices clauses of collective bargaining agreements.

That the experience of such labor rehabilitation projects as that of the Sidney Hillman Health Center in New York City, the New York City Central Labor Council, and the Iowa Federation of Labor should be widely disseminated and affiliated bodies should work closely with, support and promote the efforts of the National Institutes on Rehabilitation and Health Services to hold rehabilitation conferences and to establish labor rehabilitation projects.
